**Subject**: RE: NYS Wadsworth Center COVID-19 Test

Hi Dan and Wendi,

This right of reference is important to get this and additional assays based on the CDC through the EUA process quickly. The other two companies we discussed today will be similar.

I believe a simple email stating (b) (5) (b) (5)

Hope this helps.

Thanks in advance!

Best,
Tim

All,

Thanks for your patience as we worked through a number of rapid-fire tasks today. I've attached the following documents for your review:

1)Therapeutics one pager
2)Vaccines one pager
3)Diagnostics one pager
4)Two overview slides: talking points and graphic

Please add information that is missing and return the documents by 0900 tomorrow (Wednesday). I'll adjudicate comments and make edits once I receive input from each Agency. I understand that all need to go through ASPR and NIAID clearance tomorrow.

Thanks again for your input and your patience as we polished these documents as much as possible today.

Best,
Christy

**Subject:** White House Request-Due COB tomorrow (Tuesday)

All,

We have received a request from the White House Task Force. We need to provide the S1 with three one-pagers, one each for diagnostics, vaccines, and therapeutics. ASPR also wants a single slide showing product development for all three, close collaboration between agencies, etc. we will also put together a slightly longer deck with more detail around the one-pagers.

I've asked Rosemary to coordinate the diagnostic one-pager.

BARDA will take the pen on the one pager, but we are going to have pieces coming in from DoD and NIAID. The attached word document is a very rough outline. Below is what we are thinking in terms of specifics:

AMERICAN OVERSIGHT

<< File: outline1 hm.docx >>
*mRNA – blurb on moderna, listing other mRNA (e.g.,* (b) (4) ***NIAID***

*Adenovirus – blurb on* (b) (4) *listing other adeno (e.g.,* (b) (4) *)* ***BARDA***
*nanoparticle– blurb on* (b) (4) ***NIAID***
*Live-attenuated – blurb on* (b) (4) ***NAIID***
*Others as needed.*

***Therapeutics –*** *by type.*
*Here I'm thinking just a slide with boxes for broad-spectrum antivirals, host-targeted, approved/repurposed and mAbs* ***(BARDA)***
*Another slide on potential timeline for remdesivir trial, including Chinese enrollment.* ***(JPEO)***

*Broad-spectrum antiviral –* (b) (4) *(big focus – JPEO),* (b) (6) ***based on*** (b) (6) ***content)***
*Host-targeted –****BARDA***
*Approved-FDA –* (b) (4) ***NIAID***
*mAbs:*
- (b) (4) – ***BARDA***
- (b) (4) – ***NIAID***
- (b) (4) – ***NIAID***
- (b) (4) – ***NIAID***

I recognize the challenge in this approach, but just do not see a better approach with the time we have. I need the first draft of the one pagers by about noon tomorrow, so we can start dropping in pieces and working on the flow. I've copied Hilary so she can weigh in with any thoughts.

**Brian,**

Could I ask you to pull together the one pager for the therapeutics, with Kim or her designee providing the specific information on host-target Regeneron efforts? And could I also lean on you to take an initial stab (working with Amy) on what a single comprehensive view might look like? I have no idea where to even start.

**Ruben,**

Could I ask you to pull together the vaccine one-pager?

For all of these, we're going for bullet format, lots of white space.

We can chat tomorrow a.m., but I wanted to get this out to you tonight in case some of you had time/wanted to get a jump.

Thanks.

Robert

# FACT SHEET FOR HEALTHCARE PROVIDERS

**CDC - 2019-nCoV Real-Time RT-PCR Diagnostic Panel** **XXX x, 202** **2019 Novel Coronavirus (2019-nCoV)**

This Fact Sheet informs you of the significant known and potential risks and benefits of the emergency use of the Centers for Disease Control and Prevention (CDC) 2019-nCoV Real-Time RT-PCR Diagnostic Panel.

Testing is to be conducted on specimens from people who meet CDC criteria for 2019-nCoV testing, available at CDC's webpage, *Information for Healthcare Professionals* (see links provided in "Where can I go for updates and more information" section). The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel should be ordered only to presumptively detect 2019-nCoV infection. If outside the U.S., testing should follow appropriate public health authority consultation and/or guidance for the diagnosis and reporting of 2019-nCoV infection. All information and guidance, including for 2019-nCoV laboratory testing, may change as more data is gathered on this virus. Please check the CDC's 2019 Novel Coronavirus, webpage (see links provided in "Where can I go for updates and more information" section) regularly for the most current information.

**All patients whose specimens are tested with this assay will receive the Fact Sheet for Patients: CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel**

**What are the symptoms of 2019-nCoV?**
Most patients with confirmed 2019-nCoV infection appear to develop fever and/or symptoms of acute respiratory illness (e.g., cough, difficulty breathing). However, limited information is currently available to characterize the full spectrum of clinical illness associated with 2019-nCoV infection. Signs and symptoms may appear any time from 2 to 14 days after exposure to 2019-nCoV virus. The median incubation period is unknown at this time.

Public health officials have identified cases of 2019-nCoV in the United States, which may pose risks for public health. To date most cases of 2019-nCoV infection outside of China have been directly or indirectly linked through residence in or travel to Wuhan City, China or close contact with an individual suspected or confirmed to be ill with 2019-nCoV. Please check the CDC webpage for the most up to date information.

Comment [SKE1]: CDC please update with new information as as appropriate – we should include that human-to-human transmission with close contacts has been observed.

**This test is to be performed only using respiratory specimens collected from individuals who meet CDC criteria for 2019-nCoV testing.**

**What do I need to know about 2019-nCoV testing?**
Current information on 2019-nCoV infection for healthcare providers, including case definitions and infection control, is available at CDC's webpage, *Information for Healthcare Professionals* (see links provided in "Where can I go for updates and more information" section).

- The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel can be used to test upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, bronchoalveolar lavage, sputum, lower respiratory tract aspirate, nasopharyngeal wash/aspirate or nasal aspirate).
- The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel should be ordered for the presumptive detection of 2019-nCoV in individuals who meet CDC criteria for 2019-nCoV testing.
- The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is authorized for use in laboratories designated by CDC as qualified, and in the U.S., certified under CLIA to perform high complexity tests.

Specimens should be collected with appropriate infection control precautions following CDC *Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings (2007).*

Use appropriate personal protective equipment when collecting and handling specimens from individuals suspected of being infected with 2019-nCoV as outlined in the CDC *Interim Laboratory Biosafety Guidelines for Handling and Processing Specimens Associated with*

**Report Adverse events,** including problems with test performance or results, to MedWatch by submitting the online FDA Form 3500 ([ HYPERLINK "https://www.accessdata.fda.gov/scripts/medwatch/index.cfm?action=reporting.home" ]) or by calling **1-800-FDA-1088**

AMERICAN OVERSIGHT

*2019 Novel Coronavirus (2019-nCoV)*. These specimens are only shipped for analysis to laboratories designated by CDC as qualified for analysis. For additional information, refer to CDC *Interim Guidelines for Collecting, Handling, and Testing Clinical Specimens from Patients Under Investigation (PUIs) for 2019 Novel Coronavirus (2019-nCoV) (*see links provided in "Where can I go for updates and more information" section).

**What does it mean if the specimen tests positive for 2019-nCoV?**
A positive test result for 2019-nCoV indicates that RNA from 2019-nCoV was detected, and the patient is presumptively infected with 2019-nCoV and presumed to be contagious. Laboratory test results should always be considered in the context of clinical observations and epidemiological data in making a final diagnosis and patient management decisions. Patient management should follow current CDC guidelines.

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel has been designed to minimize the likelihood of false positive test results. However, in the event of a false positive result, risks to patients could include the following: a recommendation for quarantine of the patient, monitoring of household or other close contacts for symptoms, patient isolation that might limit contact with family or friends and may increase contact with other potentially 2019-nCoV infected patients, limits in the ability to work, the delayed diagnosis and treatment for the true infection causing the symptoms, unnecessary prescription of a treatment or therapy, or other unintended adverse effects.

All laboratories using this test must follow the recommended standard confirmatory testing and reporting guidelines according to their appropriate public health authorities.

**What does it mean if the specimen tests negative for 2019-nCoV?**
A negative test result for this test means that 2019-nCoV RNA was not present in the specimen above the limit of detection. However, a negative result does not rule out 2019-nCoV infection and should not be used as the sole basis for treatment or patient management decisions. A negative result does not exclude the possibility of 2019-nCoV infection.

When diagnostic testing is negative, the possibility of a false negative result should be considered in the context of a patient's recent exposures and the presence of clinical signs and symptoms consistent with 2019-nCoV infection. The possibility of a false negative result should especially be considered if the patient's recent exposures or clinical presentation indicate that 2019-nCoV infection is likely, and diagnostic tests for other causes of illness (e.g., other respiratory illness) are negative. If 2019-nCoV infection is still suspected based on exposure history together with other clinical findings, re-testing should be considered in consultation with public health authorities.

Risks to a patient of a false negative include: delayed or lack of supportive treatment, lack of monitoring of infected individuals and their household or other close contacts for symptoms resulting in increased risk of spread of 2019-nCoV within the community, or other unintended adverse events.

**What is an EUA?**
The United States (U.S.) FDA has made this test available under an emergency access mechanism called an Emergency Use Authorization (EUA). The EUA is supported by the Secretary of Health and Human Service's (HHS's) declaration that circumstances exist to justify the use of in vitro diagnostics (IVDs) under EUA for the detection and/or diagnosis of 2019-nCoV.

An IVD made available under an EUA has not undergone the same type of review as an FDA-approved or cleared IVD. However, based on the totality of scientific evidence available, it is reasonable to believe that this IVD may be effective in the detection of 2019-nCoV.

The EUA for this test is in effect for the duration of the 2019-nCoV emergency, unless terminated or revoked (after which the test may no longer be used). An FDA approved or cleared IVD should be used instead of an IVD under EUA, when applicable and available.

**Comment [RVB2]:** Seems to be contradictive. "must" follow "recommended". If they are recommended why would they have to follow?

**Report Adverse events,** including problems with test performance or results, to MedWatch by submitting the online FDA Form 3500 ([ HYPERLINK "https://www.accessdata.fda.gov/scripts/medwatch/index.cfm?action=reporting.home" ]) or by calling **1-800-FDA-1088**

AMERICAN OVERSIGHT

# FACT SHEET FOR PATIENTS

**CDC - 2019-nCoV Real-Time RT-PCR Diagnostic Panel** **XXX x, 202** **2019 Novel Coronavirus (2019-nCoV)**

You are being given this Fact Sheet because your sample(s) were tested for the 2019 novel coronavirus (2019-nCoV) using the Centers for Disease Control and Prevention (CDC) 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Testing was done because you meet CDC criteria for 2019-nCoV testing.

This Fact Sheet contains information to help you understand the risks and benefits of using this test for the diagnosis of 2019-nCoV infection. After reading this Fact Sheet, if you have questions or would like to discuss the information provided, please talk to your healthcare provider.

- **For the most up to date information on 2019-nCoV please visit the CDC 2019 Novel Coronavirus webpage:**
- [ HYPERLINK "https://www.cdc.gov/nCoV" ]

**What is 2019-nCoV Infection?**
2019-nCoV infection is caused by the 2019-nCoV. The 2019-nCoV infection can cause severe respiratory illness in humans and was recently idenitifed in Wuhan, China. Limited information is available to characterize the spectrum of clinical illness associated with 2019-nCoV. 2019-nCoV likely spreads to others when a person shows signs or symptoms of being sick (e.g., fever, coughing, sneezing, difficulty breathing, etc.).

**What is the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel?**

The test is designed to detect 2019-nCoV in respiratory specimens, for example nasal or oral swabs.

**Why was my sample tested?**
Your sample(s) were tested because your healthcare provider believes you may have been exposed to 2019-nCoV based on your signs and symptoms (e.g., fever, cough, sneezing, difficulty breathing), and because:

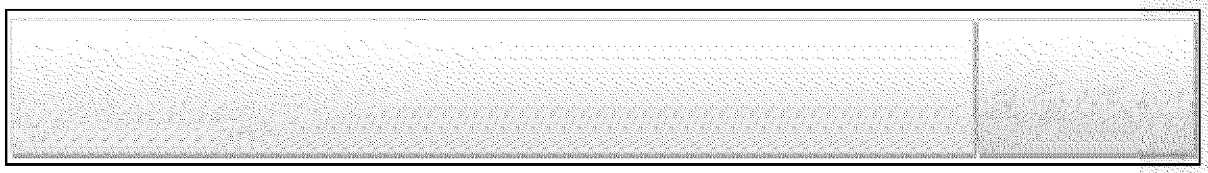
- You live in or have recently traveled to a place where 2019-nCoV infection is known to occur, and/or
- Because you have been in close contact with an individual suspected of or confirmed to have 2019-nCoV infection.

The sample(s) collected from you were tested to help find out whether you may be infected with 2019-nCoV.

**What are the known and potential risks and benefits of the test?**
Potential risks include:

- Possible discomfort or other complications that can happen during sample collection.
- Risk that the test result is incorrect (see below for more information).

Potential benefits include:



- The results, along with other information, can help your healthcare provider make informed recommendations about your care.
- The results of this test may help limit the spread of 2019-nCoV to your family and others in your community.

**What does it mean if I have a positive 2019-nCoV test result?**

**Where can I go for updates and more information?** The most up-to-date information on 2019-nCoV is available at the CDC General webpage: [ HYPERLINK "https://www.cdc.gov/nCoV" ]. In addition, please also contact your healthcare provider with any questions/concerns.

AMERICAN OVERSIGHT

If you have a positive test result, it is very likely that you are infected with 2019-nCoV. Therefore, it is also likely that you may be placed in isolation to avoid spreading the virus to others. There is a very small chance that this test can give a positive result that is wrong (a false positive result). However, your healthcare provider will work with you to determine how best to care for you based on the test results along with other factors of your medical history, such as symptoms, possible exposures, and geographic location of places you have recently traveled.

**What does it mean if I have a negative test result?**
A negative test result means that 2019-nCoV was not found in your sample. For 2019-nCoV, a negative test result for a sample collected while a person has symptoms usually means that 2019-nCoV did not cause your recent illness.

It is possible for this test to give a negative result that is incorrect (false negative) in some people with 2019-nCoV infection, meaning you could possibly still have an infection with 2019-nCoV even though the test is negative. Therefore, while a negative test most likely means you do not have 2019-nCoV infection, your healthcare provider will consider the test result together with all other aspects of your medical history (such as symptoms, possible exposures, and geographical location of places you have recently traveled) in deciding how to care for you.

It is important that you work with your healthcare provider to help you understand the next steps you should take.

**Is this test FDA-approved or cleared?**
No. This test is not yet approved or cleared by the United States (U.S.) FDA. When there are no FDA-approved or cleared tests available, and other criteria are met, FDA can make tests available under an emergency access mechanism called an Emergency Use Authorization (EUA). The EUA for this test is supported by the Secretary of Health and Human Service's (HHS's) declaration that circumstances exist to justify the use of in vitro diagnostics under EUA for the detection and/or diagnosis of 2019-nCoV. This EUA will remain in effect (meaning this test can be used) for the duration of the 2019-nCoV emergency, unless it is terminated or revoked by FDA (after which the test may no longer be used).

**Comment [SKE1]:** CDC are you okay with this language?

**Where can I go for updates and more information?** The most up-to-date information on 2019-nCoV is available at the CDC General webpage: [ HYPERLINK "https://www.cdc.gov/nCoV" ]. In addition, please also contact your healthcare provider with any questions/concerns.

**Subject:** USG Strategy needed for Diagnostics 2019-nCoV

CoV Dx Team,
I have been asked to coordinate the drafting of a USG strategy for CoV diagnostics, this will be used to brief up, including possibly to the NSC. Some of you will remember we had to do this for Zika in 2016. As expected , turn around is short, expectation is to have this ready early next week. Vaccine and Therapeutics groups are doing same, it is my understanding that everything will be vetted and approved through the official 2019-nCoV MCM Task Force that includes senior representative from every agency.

Using what we did for Zika as a template, I have started drafting, and will share draft later today, but wanted to give you a heads up so you can start working.
To speed things along, I ask:
1. Review the proposed goals below – are these acceptable – please suggest edits/revisions. Send your input back today - just at the WG level now, vetting with leadership will come later.
2. Please provide by ~~Monday morning~~ COB today a draft brief summary of what you are currently doing, and what you plan to do if funding is made available.

Current activities
(b) (5)

Plan if funding is available
- (b) (5)

3. Please provide ~~Monday morning~~ COB today by a list of any key challenges (other than access to samples/viruses) that you think need to be highlighted.
- Development of reference material for traceability purposes
- Develop material for initial laboratory verification purposes

We are also working on some landscape graphics to include.
Let me know if you have any questions. Thanks so much for your understanding and responsiveness!!
Rosemary

**Subject:** USG Strategy needed for Diagnostics 2019-nCoV

CoV Dx Team,
I have been asked to coordinate the drafting of a USG strategy for CoV diagnostics, this will be used to brief up, including possibly to the NSC. Some of you will remember we had to do this for Zika in 2016. As expected , turn around is short, expectation is to have this ready early next week. Vaccine and Therapeutics groups are doing same, it is my understanding that everything will be vetted and approved through the official 2019-nCoV MCM Task Force that includes senior representative from every agency.

Using what we did for Zika as a template, I have started drafting, and will share draft later today, but wanted to give you a heads up so you can start working.
To speed things along, I ask:

(b) (5)

Current activities

(b) (5)

Plan if funding is available

- (b) (5)

3. Please provide ~~Monday morning~~ COB today by a list of any key challenges (other than access to samples/viruses) that you think need to be highlighted.
- Development of reference material for traceability purposes
- Develop material for initial laboratory verification purposes

We are also working on some landscape graphics to include.
Let me know if you have any questions. Thanks so much for your understanding and responsiveness!!
Rosemary

Dear Steve,

FDA agree with use of "Product Information Sheet" rather than Instructions for Use and do not have any additional comments on the box/vial labels.
Please make sure to submit the developed product information sheet as part of your labeling package with the EUA submission (should include Instructions for use, product information sheet, final box/vial labels) and make sure it includes instructions to the end user for obtaining the full Instructions for Use document.

Best regards
Kim

**Subject:** RE: EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Hi Kim,

Based on our discussion yesterday, we've made edits to the current draft for your consideration. In addition we're including an example of the in silico cross-reactivity analysis approach and would appreciate your feedback. The overall strategy would be as follows:

BLASTn analysis queries with the 2019-nCoV rRT-PCR assays primers and probes will be performed against public domain nucleotide sequences (more detail regarding parameters are included in the attached document). Database search parameters will follow a strategy to demonstrate the potential for cross-reactivity depending on the target of the design.

AMERICAN OVERSIGHT

1. BLASTn analysis query excluding all coronavirus sequences.

1. BLASTn analysis query including coronaviruses, but excluding human SARS and bat SARS coronaviruses

Perhaps we can have another call once you've reviewed so that we can discuss further.

Regards,
Steve

**Subject:** RE: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Dear All,

Please find attached some draft fact sheets for patients and HCP. In MERS-CoV we also had a contacts FS (for asymptomatic that had a contact risk) but didn't seem to apply to the 2019-nCoV at this time.

I also made some minor comments to the draft intended use in the attached.

Let me know if you have any questions

Best regards
Kim

Hi Kim,

I apologize for the delay, we would like to change to "AND" so that testing is only performed when both S&S and epi risk are met.

Thank you for catching that.

Regards,
Steve

I have one question about the intended use:

Do you want (b) (4) AND (b) (4) or AND/OR (b) (4) Just checking as I work on the fact sheets. The intended use you sent said "and/or"

Thanks
Best regards
Kim

**Subject:** RE: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

**Subject:** FW: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

**Subject:** RE: Regulatory discretion - Need to confirm process and next steps
**Importance:** High

Dear Anita,

AMERICAN OVERSIGHT

FDA and CDC have been working interactively together on CDC's request for an Emergency Use Authorization (EUA) for its 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens. At this time, there is no *in vitro* diagnostic test approved, cleared or authorized for such use.

On January 30th, CDC notified FDA that it would like to distribute the test to certain laboratories so that they can use the test prior to issuance of an EUA. This would help to address the significant public health concerns raised by the infectious disease at this early stage, and may help to prevent the spread of the infectious disease by addressing the high testing demands currently being faced by CDC.

We understand that CDC would like to distribute the 2019-nCoV Real-Time RT-PCR Diagnostic Panel kit, and any components, to laboratories designated by CDC as qualified and, in the United States, such laboratories will be certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests. We also understand that CDC will ask each of the state laboratories to send positive samples and (b) (5) negative samples to CDC for further validation testing.

Based on our understanding of the facts and the public health concerns at issue here – specifically, that there is currently no other test available to respond to this emergency and that CDC is actively pursuing EUA authorization – at this time, FDA does not intend to object to the distribution and use of this test as described above. We ask that you please send the name and address of the specific laboratory(ies) that will be performing testing to the FDA/CDRH MCM Team Lead, Kim Sapsford (Kim.Sapsford@fda.hhs.gov) and the Director of the Division of Microbiology Devices, Uwe Scherf (Uwe.Scherf@fda.hhs.gov).

Kind regards,
Uwe

**Importance:** High

Hi Liz,
When we spoke last week, we considered options to rapidly make lab reagents available for 2019-nCoV testing. We are actively working to get the EUA submitted. However, we are now at a point where CDC would like for reagents to test for 2019-nCoV to be placed at public health labs at the state/local level. I have a draft request asking to use existing statutory authority 564B for us to preposition the reagents for testing and also to request regulatory discretion for these test to be used in limited laboratories.

AMERICAN OVERSIGHT

Is there a specific process in which we need to make this ask? I believe you mentioned this may just be an email – if so, should I run this by you or Uwe to double check the accuracy of how and what we are asking? Also, who should this request be made to?

We would like to submit this to you tomorrow. Please call my cell when you get a moment if this is easier to talk through.
Best,
Anita
4044332667

+ Wendi who is now overseeing lab activities for the response.

Colleagues,

Attached are the initial drafts of the Therapeutics strategy and the Diagnostics strategy documents for your review. I will forward the Vaccines strategy document when I receive it. Please share with the SMEs whom you want to join us on the Strategy call on Monday.

We would like to have your initial comments and edits back NLT noon on Sunday (2/2) so that I can compile them and share with Robert and the group in advance of the teleconferen << File: CoV Therapeutics USG Interagency Strategy v1.docx >> << File: CoV Diagnostics USG Interagency Strategy v1.docx >> ce on Monday.

Thank you,
Christy

**Subject:** NSC request nCoV MCM Task Force strategy

All,

AMERICAN OVERSIGHT

The NSC has requested the nCoV MCM Task Force's strategy for MCM development for 2019-nCoV. We propose using the attached Strategy for Zika Vaccine Development that was used in 2016 as the template for the nCoV Strategy for MCM Development. If you are all in agreement on this approach, BARDA will initiate a

draft today and send to all of you for review. In parallel, we will work with NIAID and DoD to update the figures and tables in the document. If you have information or updates to incorporate, please share them with Robert and me today (they can also be incorporated in the review stage).

We are targeting Tues 2/4 at 0900 to receive all written comments from Task Force leads and their SMEs, and Wed 2/5 at 1500 to have a finalized document. To accomplish this task as efficiently as possible, we would like to have a smaller Task Force Working Group call on Monday to discuss the draft. Ideally, the Strategy Working Group will be composed of all of the Task Force leads and the SMEs that you identify as being essential to this task. Please send me the names of the 2-4 SMEs from your team whom you would like to include in the Strategy Working Group today so that I can schedule the discussion.

We apologize for the tight timeline on this request.

Best,
Christy

Dear Steve,

FDA agree with use of "Product Information Sheet" rather than Instructions for Use and do not have any additional comments on the box/vial labels.
Please make sure to submit the developed product information sheet as part of your labeling package with the EUA submission (should include Instructions for use, product information sheet, final box/vial labels) and make sure it includes instructions to the end user for obtaining the full Instructions for Use document.

Best regards
Kim

**Subject:** RE: EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Hi Kim,

Based on our discussion yesterday, we've made edits to the current draft for your consideration. In addition we're including an example of the in silico cross-reactivity analysis approach and would appreciate your feedback. The overall strategy would be as follows:

BLASTn analysis queries with the 2019-nCoV rRT-PCR assays primers and probes will be performed against public domain nucleotide sequences (more detail regarding parameters are included in the attached document). Database search parameters will follow a strategy to demonstrate the potential for cross-reactivity depending on the target of the design.

1. BLASTn analysis query excluding all coronavirus sequences.
1. BLASTn analysis query including coronaviruses, but excluding human SARS and bat SARS coronaviruses

Perhaps we can have another call once you've reviewed so that we can discuss further.

Regards,
Steve

Dear All,

Please find attached some draft fact sheets for patients and HCP. In MERS-CoV we also had a contacts FS (for asymptomatic that had a contact risk) but didn't seem to apply to the 2019-nCoV at this time.

I also made some minor comments to the draft intended use in the attached.

Let me know if you have any questions

Best regards
Kim

Hi Kim,

I apologize for the delay, we would like to change to "AND" so that testing is only performed when both S&S and epi risk are met.

Thank you for catching that.

Regards,
Steve

I have one question about the intended use:

Do you want (b) (4) AND (b) (4) or AND/OR (b) (4) Just checking as I work on the fact sheets. The intended use you sent said "and/or"

Thanks
Best regards
Kim

**Subject:** RE: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

**Subject:** FW: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

Dear Julie, Steve and Steve,

FDA also agrees with your pre-positioning proposal to distribute tests and control to the LRN labs and public health labs before the EUA authorization.

One nuance, are you also planning to provide the device outside of the US?

**Subject:** RE: EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Hi Kim,

Based on our discussion yesterday, we've made edits to the current draft for your consideration. In addition we're including an example of the in silico cross-reactivity analysis approach and would appreciate your feedback. The overall strategy would be as follows:

BLASTn analysis queries with the 2019-nCoV rRT-PCR assays primers and probes will be performed against public domain nucleotide sequences (more detail regarding parameters are included in the attached document). Database search parameters will follow a strategy to demonstrate the potential for cross-reactivity depending on the target of the design.

1. BLASTn analysis query excluding all coronavirus sequences.
1. BLASTn analysis query including coronaviruses, but excluding human SARS and bat SARS coronaviruses

Perhaps we can have another call once you've reviewed so that we can discuss further.

Regards,
Steve

**Subject:** EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Dear All,

Please find attached the draft CDC EUA template – I have tried to fill out as much CDC information as possible for you - based on what you have provided me so far. I suggest that we plan to touch base early next week – please let me know if there are times/days when you are not fully booked – we can accommodate on our end – and I will set something up.

Let me know if you have any questions – I will be monitoring email.
Best regards
Kim

Dear All,

Please find attached some draft fact sheets for patients and HCP. In MERS-CoV we also had a contacts FS (for asymptomatic that had a contact risk) but didn't seem to apply to the 2019-nCoV at this time.

I also made some minor comments to the draft intended use in the attached.

Let me know if you have any questions

Best regards
Kim

I have one question about the intended use:

Do you want (b) (4) AND (b) (4) or AND/OR (b) (4) Just checking as I work on the fact sheets. The intended use you sent said "and/or"

Thanks
Best regards
Kim

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases

AMERICAN OVERSIGHT

are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

**Subject:** RE: draft CDC EUA template

Julie,

They look good, only one final point: The standalone paragraph:

AMERICAN OVERSIGHT

*Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens from the same patient may be necessary to detect the virus.*

Is now redundant since the updated language with '(types and time points) ' has been added in the paragraph starting: "Negative results ……..

So I deleted the redundant paragraph. See file attached.

These are all the documents we need.

As mentioned earlier the documents we would expect to see in the EUA request package are:

- CDC Cover Letter
- EUA Template
- Labeling:
  - Final Instructions for Use/Package Insert (let us know which you choose)
  - Final Product Information Sheet
  - Final Verification Requirements
  - Final Box and Vial Labels
- Fact Sheets:
  - HCP Fact Sheet
  - Patient Fact Sheet
- Appendix – include any line data and additional information (bioinformatic analysis) used to support the summary information in the EUA template

Thanks, Uwe

Good morning all,

Thank you for reviewing the EUA template so quickly. We appreciate your feedback and have incorporated all of your suggested changes in the EUA template and the instructions for use. I've attached the tracked changes versions and clean versions of both.

We would like to send the documents, understanding that the LoD table will need to go into the EUA template and the instructions for use, for CDC clearance this afternoon. Is that acceptable to you? What other documents do you need from us?

Thanks,
Julie

**Subject:** RE: draft CDC EUA template
**Importance:** High

Dear Julie,

Please find attached DMD's comments in the EUA template, looks good, we just need the LoD data. We inserted them in the clean version for ease of viewing. Once the LoD is finalized we recommend dropping the EUA template performance section into your instructions for use performance section.

We would also like to request the following limitation addition/change in the IFU:

New:

- Performance of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel has only been established in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate).

And maybe strengthen the negative results one by combining two of the current limitations with the addition in green:

- Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens (types and time points) from the same patient may be necessary to detect the virus.

Julie, also when are you planning to send the complete package for CDC clearance – in parallel with our review or after we have reviewed and say it is good.

Let us know if have any questions.

Best regards
Uwe

Hi all,

Here is the latest version of the CDC EUA template. We believe that the only data set missing is the limit of detection study, which we will have for you tomorrow, likely in the afternoon. I've attached both a tracked changes version which captures all of our combined edits and a clean version from which we can work if you agree with all of our combined edits.

Please let us know if there are additional questions. We will be available all day tomorrow to discuss.

Thanks,
Julie

Dear Julie,

Please find attached the HCP and Patient Fact Sheets, there were a number of changes resulting from the updated intended use and the additional internal review at FDA so I haven't didn't include a redline – but let me know if you need it I can send it along.

Let me know if you have any questions
Best regards
Kim

**Subject:** Clean instruction for use and question regarding in silico analyses
**Importance:** High

Hi all,

Attached is the clean instructions for use without the performance data. There is one screen shot that needs to be replaced.

We have another question regarding the presentation of the in silico analyses (also attached). We have discussed the approach, and we'd like your feedback on how you would like the data summarized. The data will be sent as an appendix with the submission along with the rest of our data.

We appreciate your help!
Thanks,
Julie

**Subject:** RE: EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Hi Kim,

Based on our discussion yesterday, we've made edits to the current draft for your consideration. In addition we're including an example of the in silico cross-reactivity analysis approach and would appreciate your feedback. The overall strategy would be as follows:

BLASTn analysis queries with the 2019-nCoV rRT-PCR assays primers and probes will be performed against public domain nucleotide sequences (more detail regarding parameters are included in the attached document). Database search parameters will follow a strategy to demonstrate the potential for cross-reactivity depending on the target of the design.

1. BLASTn analysis query excluding all coronavirus sequences.
1. BLASTn analysis query including coronaviruses, but excluding human SARS and bat SARS coronaviruses

Perhaps we can have another call once you've reviewed so that we can discuss further.

Regards,
Steve

**Subject:** RE: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Hi Kim,

I am forwarding two documents with the preliminary information spoken about this afternoon in regard to labels, proposed intended use, device description, and draft performance evaluation plan.

AMERICAN OVERSIGHT

Thanks so much for the help!

Regards,
Steve

**Subject:** RE: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

I know right - have a good weekend, if you need anything let me know - I will be monitoring email and working on documents.

It would be helpful to know what extraction methods and PCR instruments CDC will be claiming with the EUA.

Best regards
Kim

**Subject:** FW: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

**Importance:** High

Good morning all,

Thank you for reviewing the EUA template so quickly. We appreciate your feedback and have incorporated all of your suggested changes in the EUA template and the instructions for use. I've attached the tracked changes versions and clean versions of both.

We would like to send the documents, understanding that the LoD table will need to go into the EUA template and the instructions for use, for CDC clearance this afternoon. Is that acceptable to you? What other documents do you need from us?

Thanks,
Julie

**Subject:** RE: draft CDC EUA template
**Importance:** High

Dear Julie,

Please find attached DMD's comments in the EUA template, looks good, we just need the LoD data. We inserted them in the clean version for ease of viewing. Once the LoD is finalized we recommend dropping the EUA template performance section into your instructions for use performance section.

We would also like to request the following limitation addition/change in the IFU:

New:

- Performance of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel has only been established in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate).

AMERICAN OVERSIGHT

And maybe strengthen the negative results one by combining two of the current limitations with the addition in green:

- Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens (types and time points) from the same patient may be necessary to detect the virus.

Julie, also when are you planning to send the complete package for CDC clearance – in parallel with our review or after we have reviewed and say it is good.

Let us know if have any questions.

Best regards
Uwe

Hi all,

Here is the latest version of the CDC EUA template. We believe that the only data set missing is the limit of detection study, which we will have for you tomorrow, likely in the afternoon. I've attached both a tracked changes version which captures all of our combined edits and a clean version from which we can work if you agree with all of our combined edits.

Please let us know if there are additional questions. We will be available all day tomorrow to discuss.

Thanks,
Julie

**Subject:** RE: Clean instruction for use and question regarding in silico analyses

Dear Julie,

Please find attached the final redline (FYI) and clean Patient and HCP facts sheets for you to send forward for CDC clearance.
In addition, below is an outline of the main items we would expect to see in the EUA request package:

- CDC Cover Letter
- EUA Template
- Labeling:
  - Final Instructions for Use/Package Insert (let us know which you choose)
  - Final Product Information Sheet
  - Final Verification Requirements
  - Final Box and Vial Labels
- Fact Sheets:
  - HCP Fact Sheet
  - Patient Fact Sheet
- Appendix – include any line data and additional information (bioinformatic analysis) used to support the summary information in the EUA template

Let me know if you have any questions

**Subject:** RE: Regulatory discretion - Need to confirm process and next steps
**Importance:** High

Dear Anita,

FDA and CDC have been working interactively together on CDC's request for an Emergency Use Authorization (EUA) for its 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens. At this time, there is no *in vitro* diagnostic test approved, cleared or authorized for such use.

On January 30th, CDC notified FDA that it would like to distribute the test to certain laboratories so that they can use the test prior to issuance of an EUA. This would help to address the significant public health concerns raised by the infectious disease at this early stage, and may help to prevent the spread of the infectious disease by addressing the high testing demands currently being faced by CDC.

We understand that CDC would like to distribute the 2019-nCoV Real-Time RT-PCR Diagnostic Panel kit, and any components, to laboratories designated by CDC as qualified and, in the United States, such laboratories will be certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests. We also understand that CDC will ask each of the state laboratories to send positive samples and (b) (5) negative samples to CDC for further validation testing.

Based on our understanding of the facts and the public health concerns at issue here – specifically, that there is currently no other test available to respond to this emergency and that CDC is actively pursuing EUA authorization – at this time, FDA does not intend to object to the distribution and use of this test as described above. We ask that you please send the name and address of the specific laboratory(ies) that will be performing testing to the FDA/CDRH MCM Team Lead, Kim Sapsford (Kim.Sapsford@fda.hhs.gov) and the Director of the Division of Microbiology Devices, Uwe Scherf (Uwe.Scherf@fda.hhs.gov).

Kind regards,
Uwe

**Importance:** High

Hi Liz,
When we spoke last week, we considered options to rapidly make lab reagents available for 2019-nCoV testing. We are actively working to get the EUA submitted. However, we are now at a point where CDC would like for reagents to test for 2019-nCoV to be placed at public health labs at the state/local level. I have a draft request asking to use existing statutory authority 564B for us to preposition the reagents for testing and also to request regulatory discretion for these test to be used in limited laboratories.

Is there a specific process in which we need to make this ask? I believe you mentioned this may just be an email – if so, should I run this by you or Uwe to double check the accuracy of how and what we are asking? Also, who should this request be made to?

We would like to submit this to you tomorrow. Please call my cell when you get a moment if this is easier to talk through.
Best,
Anita
4044332667

+ Wendi who is now overseeing lab activities for the response.

Dear All,

Please find attached some draft fact sheets for patients and HCP. In MERS-CoV we also had a contacts FS (for asymptomatic that had a contact risk) but didn't seem to apply to the 2019-nCoV at this time.

I also made some minor comments to the draft intended use in the attached.

Let me know if you have any questions

Best regards
Kim

AMERICAN OVERSIGHT

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064

AMERICAN OVERSIGHT

At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

Good morning all,

Thank you for reviewing the EUA template so quickly. We appreciate your feedback and have incorporated all of your suggested changes in the EUA template and the instructions for use. I've attached the tracked changes versions and clean versions of both.

We would like to send the documents, understanding that the LoD table will need to go into the EUA template and the instructions for use, for CDC clearance this afternoon. Is that acceptable to you? What other documents do you need from us?

Thanks,
Julie

**Subject:** RE: draft CDC EUA template
**Importance:** High

Dear Julie,

Please find attached DMD's comments in the EUA template, looks good, we just need the LoD data. We inserted them in the clean version for ease of viewing. Once the LoD is finalized we recommend dropping the EUA template performance section into your instructions for use performance section.

AMERICAN OVERSIGHT

We would also like to request the following limitation addition/change in the IFU:

New:

- Performance of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel has only been established in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate).

And maybe strengthen the negative results one by combining two of the current limitations with the addition in green:

- Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens (types and time points) from the same patient may be necessary to detect the virus.

Julie, also when are you planning to send the complete package for CDC clearance – in parallel with our review or after we have reviewed and say it is good.

Let us know if have any questions.

Best regards
Uwe

**Subject:** draft CDC EUA template

Hi all,

Here is the latest version of the CDC EUA template. We believe that the only data set missing is the limit of detection study, which we will have for you tomorrow, likely in the afternoon. I've attached both a tracked changes version which captures all of our combined edits and a clean version from which we can work if you agree with all of our combined edits.

Please let us know if there are additional questions. We will be available all day tomorrow to discuss.

Thanks,
Julie

**Subject:** RE: Clean instruction for use and question regarding in silico analyses

Dear Julie,

Please find attached the final redline (FYI) and clean Patient and HCP facts sheets for you to send forward for CDC clearance.
In addition, below is an outline of the main items we would expect to see in the EUA request package:

- CDC Cover Letter
- EUA Template
- Labeling:
  - Final Instructions for Use/Package Insert (let us know which you choose)
  - Final Product Information Sheet
  - Final Verification Requirements
  - Final Box and Vial Labels
- Fact Sheets:
  - HCP Fact Sheet
  - Patient Fact Sheet
- Appendix – include any line data and additional information (bioinformatic analysis) used to support the summary information in the EUA template

Let me know if you have any questions
Best regards
Kim

Hi – my 2 cents - (b) (5)

This is first I am hearing of this meeting w/NSC – if it is a PCC then they will want agency representation at assistant secretary level – especially if it is an in-person only meeting – so we will have to ensure FDA representative is fully prepped. If there is a call in it's typically in the SCIF by SVTC – so still a challenge to get folks in the room b/c of clearances. thx

**Subject:** Landscape slides for NSC - need your review

Coronavirus team,
BARDA and NIH have been asked to provide the interagency MCM slides for a meeting with the NSC. I have updated the Dx set, attached for your review. Only slides 3+4 will go forward to NSC, the others are informational to help us track what's going on. At the request of leadership, the published assays and reagents have been separated from Dx assays in development for reagent/kit distribution.
WHO removed the links to the assays from Charite, HKU and China CDC. The Charite and HKU groups, with PHE and others, just jointly published information on their assay in Eurosurveillance (https://www.eurosurveillance.org/content/10.2807/1560-7917.ES.2020.25.3.2000045)

Please reply:
Slides 3+4 - are these OK, is anything missing?
Other slides: any corrections or new info to add?

Many thanks for your continued support in meeting the expectations for information,
Rosemary

**Subject:** RE: EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Hi Kim,

Based on our discussion yesterday, we've made edits to the current draft for your consideration. In addition we're including an example of the in silico cross-reactivity analysis approach and would appreciate your feedback. The overall strategy would be as follows:

BLASTn analysis queries with the 2019-nCoV rRT-PCR assays primers and probes will be performed against public domain nucleotide sequences (more detail regarding parameters are included in the attached document). Database search parameters will follow a strategy to demonstrate the potential for cross-reactivity depending on the target of the design.

1. BLASTn analysis query excluding all coronavirus sequences.
1. BLASTn analysis query including coronaviruses, but excluding human SARS and bat SARS coronaviruses

Perhaps we can have another call once you've reviewed so that we can discuss further.

Regards,
Steve

Dear All,

Please find attached the draft CDC EUA template – I have tried to fill out as much CDC information as possible for you - based on what you have provided me so far. I suggest that we plan to touch base early next week – please let me know if there are times/days when you are not fully booked – we can accommodate on our end – and I will set something up.

Let me know if you have any questions – I will be monitoring email.
Best regards
Kim

Dear All,

Please find attached some draft fact sheets for patients and HCP. In MERS-CoV we also had a contacts FS (for asymptomatic that had a contact risk) but didn't seem to apply to the 2019-nCoV at this time.

I also made some minor comments to the draft intended use in the attached.

Let me know if you have any questions

Best regards
Kim

I have one question about the intended use:

Do you want (b) (4) AND (b) (4) or AND/OR (b) (4) Just checking as I work on the fact sheets. The intended use you sent said "and/or"

Thanks
Best regards
Kim

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

**Subject:** FW: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases

AMERICAN OVERSIGHT

are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

**Subject:** Regulatory discretion - Need to confirm process and next steps
**Importance:** High

Hi Liz,
When we spoke last week, we considered options to rapidly make lab reagents available for 2019-nCoV testing. We are actively working to get the EUA submitted. However, we are now at a point where CDC would like for reagents to test for 2019-nCoV to be placed at public health labs at the state/local level. I have a draft request asking to use existing statutory authority 564B for us to preposition the reagents for testing and also to request regulatory discretion for these test to be used in limited laboratories.

Is there a specific process in which we need to make this ask? I believe you mentioned this may just be an email – if so, should I run this by you or Uwe to double check the accuracy of how and what we are asking? Also, who should this request be made to?

We would like to submit this to you tomorrow. Please call my cell when you get a moment if this is easier to talk through.
Best,
Anita
4044332667

+ Wendy who is now overseeing lab activities for the response.

**Attachments**: PI - CDC 2019-nCoV rRT-PCR Dx Panel_draft 31JAN20 CLEAN DMD_SR (002) 02FEB20-DMD.docx; PI - CDC 2019-nCoV rRT-PCR Dx Panel_draft 31JAN20 CLEAN DMD_SR (002) 02FEB20 CLEAN_DMD.docx

Julie,

They look good, only one final point: The standalone paragraph:

*Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens from the same patient may be necessary to detect the virus.*

Is now redundant since the updated language with '(types and time points) ' has been added in the paragraph starting: "Negative results ……..

So I deleted the redundant paragraph. See file attached.

These are all the documents we need.

As mentioned earlier the documents we would expect to see in the EUA request package are:

- CDC Cover Letter
- EUA Template
- Labeling:
  - Final Instructions for Use/Package Insert (let us know which you choose)
  - Final Product Information Sheet
  - Final Verification Requirements
  - Final Box and Vial Labels
- Fact Sheets:
  - HCP Fact Sheet
  - Patient Fact Sheet
- Appendix – include any line data and additional information (bioinformatic analysis) used to support the summary information in the EUA template

AMERICA'S FRONTLINE DOCTORS OVERSIGHT

Thanks, Uwe

**Importance:** High

Good morning all,

Thank you for reviewing the EUA template so quickly. We appreciate your feedback and have incorporated all of your suggested changes in the EUA template and the instructions for use. I've attached the tracked changes versions and clean versions of both.

We would like to send the documents, understanding that the LoD table will need to go into the EUA template and the instructions for use, for CDC clearance this afternoon. Is that acceptable to you? What other documents do you need from us?

Thanks,
Julie

**From:** Scherf, Uwe <Uwe.Scherf@fda.hhs.gov>
**Sent:** Sunday, February 2, 2020 9:34 AM
**To:** Villanueva, Julie M. (CDC/DDID/NCEZID/DPEI) <jfv3@cdc.gov>; Sapsford, Kim E (FDA/CDRH) <Kim.Sapsford@fda.hhs.gov>; Li, Li (CDRH) (FDA/CDRH) <Li.Li2@fda.hhs.gov>; Burke, Stephen A. (CDC/DDID/NCIRD/ID) (CTR) <gky2@cdc.gov>

**Subject:** RE: draft CDC EUA template
**Importance:** High

Dear Julie,

Please find attached DMD's comments in the EUA template, looks good, we just need the LoD data. We inserted them in the clean version for ease of viewing. Once the LoD is finalized we recommend dropping the EUA template performance section into your instructions for use performance section.

We would also like to request the following limitation addition/change in the IFU:

New:

- Performance of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel has only been established in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate).

And maybe strengthen the negative results one by combining two of the current limitations with the addition in green:

- Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens (types and time points) from the same patient may be necessary to detect the virus.

AMERICAN OVERSIGHT

Julie, also when are you planning to send the complete package for CDC clearance – in parallel with our review or after we have reviewed and say it is good.

Let us know if have any questions.

Best regards
Uwe

**Subject:** draft CDC EUA template

Hi all,

Here is the latest version of the CDC EUA template. We believe that the only data set missing is the limit of detection study, which we will have for you tomorrow, likely in the afternoon. I've attached both a tracked changes version which captures all of our combined edits and a clean version from which we can work if you agree with all of our combined edits.

Please let us know if there are additional questions. We will be available all day tomorrow to discuss.

Thanks,
Julie

**Subject:** RE: Clean instruction for use and question regarding in silico analyses

AMERICAN OVERSIGHT

Dear Julie,

Please find attached the final redline (FYI) and clean Patient and HCP facts sheets for you to send forward for CDC clearance.
In addition, below is an outline of the main items we would expect to see in the EUA request package:

- CDC Cover Letter
- EUA Template
- Labeling:
  - Final Instructions for Use/Package Insert (let us know which you choose)
  - Final Product Information Sheet
  - Final Verification Requirements
  - Final Box and Vial Labels
- Fact Sheets:
  - HCP Fact Sheet
  - Patient Fact Sheet
- Appendix – include any line data and additional information (bioinformatic analysis) used to support the summary information in the EUA template

Let me know if you have any questions
Best regards
Kim

**Subject:** Clean instruction for use and question regarding in silico analyses
**Importance:** High

Hi all,

Attached is the clean instructions for use without the performance data. There is one screen shot that needs to be replaced.

We have another question regarding the presentation of the in silico analyses (also attached). We have discussed the approach, and we'd like your feedback on how you would like the data summarized. The data will be sent as an appendix with the submission along with the rest of our data.

We appreciate your help!
Thanks,
Julie

Hi – my 2 cents -(b) (5)

This is first I am hearing of this meeting w/NSC – if it is a PCC then they will want agency representation at assistant secretary level – especially if it is an in-person only meeting – so we will have to ensure FDA representative is fully prepped. If there is a call in it's typically in the SCIF by SVTC – so still a challenge to get folks in the room b/c of clearances. thx

**Subject:** Landscape slides for NSC - need your review

Coronavirus team,
BARDA and NIH have been asked to provide the interagency MCM slides for a meeting with the NSC. I have updated the Dx set, attached for your review. Only slides 3+4 will go forward to NSC, the others are informational to help us track what's going on. At the request of leadership, the published assays and reagents have been separated from Dx assays in development for reagent/kit distribution.
WHO removed the links to the assays from Charite, HKU and China CDC. The Charite and HKU groups, with PHE and others, just jointly published information on their assay in Eurosurveillance (https://www.eurosurveillance.org/content/10.2807/1560-7917.ES.2020.25.3.2000045)

Please reply:
Slides 3+4 - are these OK, is anything missing?
Other slides: any corrections or new info to add?

Many thanks for your continued support in meeting the expectations for information,
Rosemary

**Subject:** RE: Regulatory discretion - Need to confirm process and next steps
**Importance:** High

Dear Anita,

FDA and CDC have been working interactively together on CDC's request for an Emergency Use Authorization (EUA) for its 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens. At this time, there is no *in vitro* diagnostic test approved, cleared or authorized for such use.

On January 30th, CDC notified FDA that it would like to distribute the test to certain laboratories so that they can use the test prior to issuance of an EUA. This would help to address the significant public health concerns raised by the infectious disease at this early stage, and may help to prevent the spread of the infectious disease by addressing the high testing demands currently being faced by CDC.

We understand that CDC would like to distribute the 2019-nCoV Real-Time RT-PCR Diagnostic Panel kit, and any components, to laboratories designated by CDC as qualified and, in the United States, such laboratories will be certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests. We also understand that CDC will ask each of the state laboratories to send positive samples and (b) (5) negative samples to CDC for further validation testing.

AMERICAN OVERSIGHT

Based on our understanding of the facts and the public health concerns at issue here – specifically, that there is currently no other test available to respond to this emergency and that CDC is actively pursuing EUA authorization – at this time, FDA does not intend to object to the distribution and use of this test as described above. We ask that you please send the name and address of the specific laboratory(ies) that will be performing testing to the FDA/CDRH MCM Team Lead, Kim Sapsford (Kim.Sapsford@fda.hhs.gov) and the Director of the Division of Microbiology Devices, Uwe Scherf (Uwe.Scherf@fda.hhs.gov).

Kind regards,
Uwe

Hi Liz,
When we spoke last week, we considered options to rapidly make lab reagents available for 2019-nCoV testing. We are actively working to get the EUA submitted. However, we are now at a point where CDC would like for reagents to test for 2019-nCoV to be placed at public health labs at the state/local level. I have a draft request asking to use existing statutory authority 564B for us to preposition the reagents for testing and also to request regulatory discretion for these test to be used in limited laboratories.

Is there a specific process in which we need to make this ask? I believe you mentioned this may just be an email – if so, should I run this by you or Uwe to double check the accuracy of how and what we are asking? Also, who should this request be made to?

We would like to submit this to you tomorrow. Please call my cell when you get a moment if this is easier to talk through.
Best,
Anita

**Subject:** RE: Regulatory discretion - Need to confirm process and next steps
**Importance:** High

Dear Anita,

FDA and CDC have been working interactively together on CDC's request for an Emergency Use Authorization (EUA) for its 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens. At this time, there is no *in vitro* diagnostic test approved, cleared or authorized for such use.

AMERICAN OVERSIGHT

On January 30th, CDC notified FDA that it would like to distribute the test to certain laboratories so that they can use the test prior to issuance of an EUA. This would help to address the significant public health concerns raised by the infectious disease at this early stage, and may help to prevent the spread of the infectious disease by addressing the high testing demands currently being faced by CDC.

We understand that CDC would like to distribute the 2019-nCoV Real-Time RT-PCR Diagnostic Panel kit, and any components, to laboratories designated by CDC as qualified and, in the United States, such laboratories will be certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests. We also understand that CDC will ask each of the state laboratories to send positive samples and (b) (5) negative samples to CDC for further validation testing.

Based on our understanding of the facts and the public health concerns at issue here – specifically, that there is currently no other test available to respond to this emergency and that CDC is actively pursuing EUA authorization – at this time, FDA does not intend to object to the distribution and use of this test as described above. We ask that you please send the name and address of the specific laboratory(ies) that will be performing testing to the FDA/CDRH MCM Team Lead, Kim Sapsford (Kim.Sapsford@fda.hhs.gov) and the Director of the Division of Microbiology Devices, Uwe Scherf (Uwe.Scherf@fda.hhs.gov).

Kind regards,
Uwe

Agree,

The only other item I found: The standalone paragraph:

Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens from the same patient may be necessary to detect the virus.

Can now be deleted since the updated language with '(types and time points) ' is now added in the paragraph; "Negative results ……..

Otherweise, look really good.

Good morning all,

Thank you for reviewing the EUA template so quickly. We appreciate your feedback and have incorporated all of your suggested changes in the EUA template and the instructions for use. I've attached the tracked changes versions and clean versions of both.

We would like to send the documents, understanding that the LoD table will need to go into the EUA template and the instructions for use, for CDC clearance this afternoon. Is that acceptable to you? What other documents do you need from us?

Thanks,
Julie

**Subject:** RE: draft CDC EUA template
**Importance:** High

Dear Julie,

Please find attached DMD's comments in the EUA template, looks good, we just need the LoD data. We inserted them in the clean version for ease of viewing. Once the LoD is finalized we recommend dropping the EUA template performance section into your instructions for use performance section.

We would also like to request the following limitation addition/change in the IFU:

New:

AMERICAN OVERSIGHT

- Performance of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel has only been established in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate).

And maybe strengthen the negative results one by combining two of the current limitations with the addition in green:

- Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens (types and time points) from the same patient may be necessary to detect the virus.

Julie, also when are you planning to send the complete package for CDC clearance – in parallel with our review or after we have reviewed and say it is good.

Let us know if have any questions.

Best regards
Uwe

Dear Julie,

Please find attached the final redline (FYI) and clean Patient and HCP facts sheets for you to send forward for CDC clearance.
In addition, below is an outline of the main items we would expect to see in the EUA request package:

- CDC Cover Letter
- EUA Template
- Labeling:
  - Final Instructions for Use/Package Insert (let us know which you choose)
  - Final Product Information Sheet
  - Final Verification Requirements
  - Final Box and Vial Labels
- Fact Sheets:
  - HCP Fact Sheet
  - Patient Fact Sheet
- Appendix – include any line data and additional information (bioinformatic analysis) used to support the summary information in the EUA template

Let me know if you have any questions
Best regards

**Subject:** Scheduling 2019-nCoV Dx WG call

AMERICAN OVERSIGHT

Diagnostics Colleagues,
In case you haven't heard, an interagency Novel Coronavirus MCM Task Force has been established, there was a kick-off call for agency leads yesterday. Although informal workgroups have been busy, including this Dx group, I've been asked to convene a Dx WG for more formal coordination. The Task Force leads should be reaching out to give you more details, they may adjust the members on the group, but in the meantime I would like to have a call tomorrow or Monday if at all possible. The call would give us an opportunity to share agency efforts to support diagnostics for 2019-nCoV, outline key gaps and challenges to Dx development. I will send updated landscape slides later today.
**Please respond ASAP to let me know which times below work for you**. I'll send an invite based on time that works best for as many of you as possible.
Thanks very much for this and all the information you have been sharing in this response,
Rosemary

**Subject:** Landscape slides for NSC - need your review

Coronavirus team,
BARDA and NIH have been asked to provide the interagency MCM slides for a meeting with the NSC. I have updated the Dx set, attached for your review. Only slides 3+4 will go forward to NSC, the others are

AMERICAN OVERSIGHT

informational to help us track what's going on. At the request of leadership, the published assays and reagents have been separated from Dx assays in development for reagent/kit distribution.
WHO removed the links to the assays from Charite, HKU and China CDC. The Charite and HKU groups, with PHE and others, just jointly published information on their assay in Eurosurveillance (https://www.eurosurveillance.org/content/10.2807/1560-7917.ES.2020.25.3.2000045)

Please reply:
Slides 3+4 - are these OK, is anything missing?
Other slides: any corrections or new info to add?

Many thanks for your continued support in meeting the expectations for information,
Rosemary

Hi Kim and Li,

We are able more information regarding catlog/part numbers on our vial labels and box labels. I think on a previous response from Kim you were satisfied with these labels. We'd like to confirm that before we start printing in our manufacturing process.

Thanks!

Talk to you in just a couple of minutes.

Regards,
Steve

**Subject:** RE: EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Hi Kim,

Based on our discussion yesterday, we've made edits to the current draft for your consideration. In addition we're including an example of the in silico cross-reactivity analysis approach and would appreciate your feedback. The overall strategy would be as follows:

AMERICAN OVERSIGHT

- BLASTn analysis queries with the 2019-nCoV rRT-PCR assays primers and probes will be performed against public domain nucleotide sequences (more detail regarding parameters are included in the attached document). Database search parameters will follow a strategy to demonstrate the potential for cross-reactivity depending on the target of the design.

1. BLASTn analysis query excluding all coronavirus sequences.
1. BLASTn analysis query including coronaviruses, but excluding human SARS and bat SARS coronaviruses

Perhaps we can have another call once you've reviewed so that we can discuss further.

Regards,
Steve

Dear All,

Please find attached the draft CDC EUA template – I have tried to fill out as much CDC information as possible for you - based on what you have provided me so far. I suggest that we plan to touch base early next week – please let me know if there are times/days when you are not fully booked – we can accommodate on our end – and I will set something up.

Let me know if you have any questions – I will be monitoring email.
Best regards
Kim

Dear All,

Please find attached some draft fact sheets for patients and HCP. In MERS-CoV we also had a contacts FS (for asymptomatic that had a contact risk) but didn't seem to apply to the 2019-nCoV at this time.

I also made some minor comments to the draft intended use in the attached.

Let me know if you have any questions

Best regards
Kim

**Subject:** RE: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

**Subject:** FW: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

**Subject:** RE: Intended use wording

Dear Julie,
We made one small update and deleted the word 'current' from the sentence: "*from individuals who meet* (b) (5) *CDC criteria for 2019-nCoV testing.*"

So, the final Intended Use FDA is comfortable with now reads as follow:

**Final Intended Use:**
The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is a real-time RT-PCR test intended for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from

AMERICAN OVERSIGHT

individuals who meet CDC criteria for 2019-nCoV testing. Testing is limited to qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.

Results are for the presumptive identification of 2019-nCoV RNA. The 2019-nCoV RNA is generally detectable in upper and lower respiratory specimens during infection. Positive results are indicative of active infection with 2019-nCoV but do not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

Testing with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is intended for use by trained laboratory personnel who are proficient in performing real-time RT-PCR assays. The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is only for use under a Food and Drug Administration's Emergency Use Authorization

Please let me know if you have any questions.
Uwe

Dear Steve,

AMERICAN OVERSIGHT

FDA agree with use of "Product Information Sheet" rather than Instructions for Use and do not have any additional comments on the box/vial labels.

Please make sure to submit the developed product information sheet as part of your labeling package with the EUA submission (should include Instructions for use, product information sheet, final box/vial labels) and make sure it includes instructions to the end user for obtaining the full Instructions for Use document.

Best regards
Kim

Hi Kim and Li,

We are able more information regarding catlog/part numbers on our vial labels and box labels. I think on a previous response from Kim you were satisfied with these labels. We'd like to confirm that before we start printing in our manufacturing process.

Thanks!

Talk to you in just a couple of minutes.

Regards,
Steve

Dear Steve,

Great thank you – we will review and discuss.
Please include Li Li (cc'd) on all communications going forward – he will be the Lead Reviewer on your submission
Is there a good tentative time for a follow-up call tomorrow that would work for CDC?

Best regards
Kim

**Subject:** RE: EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Hi Kim,

Based on our discussion yesterday, we've made edits to the current draft for your consideration. In addition we're including an example of the in silico cross-reactivity analysis approach and would appreciate your feedback. The overall strategy would be as follows:

BLASTn analysis queries with the 2019-nCoV rRT-PCR assays primers and probes will be performed against public domain nucleotide sequences (more detail regarding parameters are included in the attached document). Database search parameters will follow a strategy to demonstrate the potential for cross-reactivity depending on the target of the design.

1. BLASTn analysis query excluding all coronavirus sequences.

1. BLASTn analysis query including coronaviruses, but excluding human SARS and bat SARS coronaviruses

Perhaps we can have another call once you've reviewed so that we can discuss further.

Regards,
Steve

Dear All,

Please find attached the draft CDC EUA template – I have tried to fill out as much CDC information as possible for you - based on what you have provided me so far. I suggest that we plan to touch base early next week – please let me know if there are times/days when you are not fully booked – we can accommodate on our end – and I will set something up.

Let me know if you have any questions – I will be monitoring email.
Best regards
Kim

Dear All,

Please find attached some draft fact sheets for patients and HCP. In MERS-CoV we also had a contacts FS (for asymptomatic that had a contact risk) but didn't seem to apply to the 2019-nCoV at this time.

I also made some minor comments to the draft intended use in the attached.

Let me know if you have any questions

Best regards
Kim

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

**Subject:** FW: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases

AMERICAN OVERSIGHT

are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

Hi Kim and Li,

I am forwarding our draft Package Insert minus performance data sections for a first look. We will forward the one-pager product information sheet once we have that draft.

I am also forwarding a list of clinical specimens that CDC has tested with the panel so far. (b) (5) [redacted]

Regards,
Steve

Dear Steve,

AMERICAN OVERSIGHT

FDA agree with use of "Product Information Sheet" rather than Instructions for Use and do not have any additional comments on the box/vial labels.
Please make sure to submit the developed product information sheet as part of your labeling package with the EUA submission (should include Instructions for use, product information sheet, final box/vial labels) and make sure it includes instructions to the end user for obtaining the full Instructions for Use document.

Best regards
Kim

Hi Kim and Li,

We are able more information regarding catlog/part numbers on our vial labels and box labels. I think on a previous response from Kim you were satisfied with these labels. We'd like to confirm that before we start printing in our manufacturing process.

Thanks!

Talk to you in just a couple of minutes.

Regards,
Steve

**Subject:** RE: EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Hi Kim,

Based on our discussion yesterday, we've made edits to the current draft for your consideration. In addition we're including an example of the in silico cross-reactivity analysis approach and would appreciate your feedback. The overall strategy would be as follows:

BLASTn analysis queries with the 2019-nCoV rRT-PCR assays primers and probes will be performed against public domain nucleotide sequences (more detail regarding parameters are included in the attached document). Database search parameters will follow a strategy to demonstrate the potential for cross-reactivity depending on the target of the design.

1. BLASTn analysis query excluding all coronavirus sequences.

1. BLASTn analysis query including coronaviruses, but excluding human SARS and bat SARS coronaviruses

Perhaps we can have another call once you've reviewed so that we can discuss further.

Regards,
Steve

Dear All,

Please find attached the draft CDC EUA template – I have tried to fill out as much CDC information as possible for you - based on what you have provided me so far. I suggest that we plan to touch base early next week – please let me know if there are times/days when you are not fully booked – we can accommodate on our end – and I will set something up.

Let me know if you have any questions – I will be monitoring email.
Best regards
Kim

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

**Subject:** FW: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases

AMERICAN OVERSIGHT

are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

**Subject:** RE: EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Dear Steve,

FDA agree with use of "Product Information Sheet" rather than Instructions for Use and do not have any additional comments on the box/vial labels.
Please make sure to submit the developed product information sheet as part of your labeling package with the EUA submission (should include Instructions for use, product information sheet, final box/vial labels) and make sure it includes instructions to the end user for obtaining the full Instructions for Use document.

Hi Kim and Li,

We are able more information regarding catlog/part numbers on our vial labels and box labels. I think on a previous response from Kim you were satisfied with these labels. We'd like to confirm that before we start printing in our manufacturing process.

Thanks!

Talk to you in just a couple of minutes.

Regards,
Steve

**Subject:** RE: EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Hi Kim,

Based on our discussion yesterday, we've made edits to the current draft for your consideration. In addition we're including an example of the in silico cross-reactivity analysis approach and would appreciate your feedback. The overall strategy would be as follows:

BLASTn analysis queries with the 2019-nCoV rRT-PCR assays primers and probes will be performed against public domain nucleotide sequences (more detail regarding parameters are included in the attached document). Database search parameters will follow a strategy to demonstrate the potential for cross-reactivity depending on the target of the design.

1. BLASTn analysis query excluding all coronavirus sequences.
1. BLASTn analysis query including coronaviruses, but excluding human SARS and bat SARS coronaviruses

Perhaps we can have another call once you've reviewed so that we can discuss further.

Regards,
Steve

Dear All,

Please find attached the draft CDC EUA template – I have tried to fill out as much CDC information as possible for you - based on what you have provided me so far. I suggest that we plan to touch base early next week – please let me know if there are times/days when you are not fully booked – we can accommodate on our end – and I will set something up.

Let me know if you have any questions – I will be monitoring email.
Best regards
Kim

Dear All,

Please find attached some draft fact sheets for patients and HCP. In MERS-CoV we also had a contacts FS (for asymptomatic that had a contact risk) but didn't seem to apply to the 2019-nCoV at this time.

I also made some minor comments to the draft intended use in the attached.

Let me know if you have any questions

Best regards
Kim

Hi Kim,

I am forwarding two documents with the preliminary information spoken about this afternoon in regard to labels, proposed intended use, device description, and draft performance evaluation plan.

Thanks so much for the help!

Regards,
Steve

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

I know right - have a good weekend, if you need anything let me know - I will be monitoring email and working on documents.

It would be helpful to know what extraction methods and PCR instruments CDC will be claiming with the EUA.

Best regards
Kim

**Subject:** FW: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

**Subject:** RE: 2/10/20 6 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

Enclosed the 2/10/20 6 AM update

**Status of activities on diagnostics**:

- Issue with rapid verification and implementation of CDC's 2019-nCoV Real-Time RT-PCR Diagnostic Panel in handful of public health labs:
  - CDC informed FDA yesterday afternoon that (b)(4) has been notified that some laboratories have observed performance issues during verification testing, particularly with the N3 part of the assay showing sporadic aberrant reactivity in the negative controls. CDC is aware of these reports and is investigating.
  - Conference call with CDC has been scheduled for today 2 PM to discuss the issue and any investigation so far.

**New roadblocks/challenges/delays:**

- Delay of verification and implementation of CDC's nCoV assay is some public health labs. DMD will determine specific numbers and any CDC investigations at conference call Monday at 2 PM.

AMERICAN OVERSIGHT

**Enclosed also the compiled activities over the weekend which have been previously communicated:**

**Status of activities on diagnostics previously reported for 2/8/20 @ 2/9/20**:

- A total of 41 IVD Developers have requested and received EUA review template, additional requests (2) are pending clarification about the device technology.
- Conference call with CDC: CDC intends to add (b)(5) automated extraction methods to their EUA ((b)(4) Roche MagNA Pure 24), to support larger number of State Public Health labs who are only using these instruments. DMD/CDC agreed on (b)(5) . CDC expects to submit amendment in next 2 weeks.
- On 2/6/20 CDC started shipping CDC's 2019-nCoV PCR assay (b)(5) public health labs that are strategically located in US and to other public health labs in states with confirmed cases.
- CDC via their IRR (International Reagent Resource) is accepting orders for CDC's 2019-nCoV tests from qualified laboratories.
  - This includes (b)(4) qualified U.S. laboratories [state & local public health labs and (b)(4) labs]
  - (b)(4) qualified international labs, such as the (b)(4) laboratories.
  - CDC test will not be available in U.S. hospitals or other primary care settings.
- (b) (5)

- Phone call scheduled with FDA/BARDA/CDC on Monday to address issues regarding timeline for virus inactivation and availability of (b)(5) for commercial developers.

- CDRH was contacted by small app developer who intends to create a nCoV screening app for lay users and physicians to identify individuals who may have been infected with the 2019 nCoV. The intended output under consideration is a risk status with recommendation for prevention education, **self-quarantine**, self-care, online medical consultation, or **if high risk recommendation for a laboratory or hospital visit**.
  - Delicate intended use from the public health perspective in an outbreak situation
  - DMD is following up on actions taken towards apps during the Zika outbreak
  - DMD will contact app developer to get further information and clarification on the ap

**New roadblocks/challenges/delays:**

- For commercial developers: (b)(5)
  - Issues will be addressed during FDA/BARDA/CDC call scheduled for Monday
  - (b)(5)

Li – once you have reviewed the template can you convert it to your Lead memo – we send the lead memo up to OCET/OCC (mainly as an FYI).
Note the template is our document now and doesn't need to go back to CDC with any changes
Any changes to the labeling – we need their concurrence/revised version to send up to OCET/OCC

Thanks
Best regards
Kim

# EMERGENCY USE AUTHORIZATION (EUA)

## EUA INTERACTIVE REVIEW TEMPLATE FOR MOLECULAR-BASED SINGLE TARGET TESTS FOR 2019 NOVEL CORONAVIRUS (2019-nCoV)

## GENERAL INFORMATION ABOUT THIS TEMPLATE

- Text highlighted in yellow *[Text]* should be completed by the IVD developer (sponsor) as applicable to their specific test. Text in **bold** outlines the Food and Drug Administration (FDA) suggestions and clarifications for the sponsors' consideration when completing the required information in a specific section.

- This is a EUA interactive review template for Pre-EUA/EUA submissions concerning molecular-based single target tests for detection of 2019 Novel Coronavirus (2019-nCoV), Wuhan, China. If you are developing a multiplex molecular-based assay for the detection and differentiation of nucleic acids from a panel of microorganisms, please review Appendix A for FDA recommendations.

- This is a EUA interactive review template for Pre-EUA/EUA submissions and not a guidance document. The template is subject to change as we learn more about the 2019-nCoV disease and its risk-benefit profile. Recipients will receive notice and updated templates as they become available.

- This EUA interactive review template is an FDA internal document and any proprietary information provided within the template and during the interactive review process will remain confidential as it does in a regular FDA premarket submission.

- Feedback provided by FDA during the interactive review of your pre-EUA/EUA is subject to change as we learn more about the 2019-nCoV disease and the risk-benefit profile evolves to address unmet public health needs.

- Prior to a potential authorization FDA will require developers of molecular-based tests to assess traceability of their test to an FDA-recommended reference material panel if available at the time. Specific details about the traceability study and the FDA-recommended reference material panel will be provided by the Lead Reviewer assigned to the Pre-EUA submission once the analytical and clinical evaluation data has been reviewed and found to be acceptable.

- Please be reminded that tests for the detection of 2019-nCoV or 2019-nCoV infection must not be distributed and/or used for clinical diagnoses without premarket clearance, approval, or EUA by the FDA. Clinical samples for 2019-nCoV testing should be sent to the appropriate public health laboratories until the IVD device subject of this Pre-EUA submission has received authorization from the FDA.

- Clinical specimens may be required to support the EUA request. Furthermore, please note that applicable regulations for human subject protection do apply under the

AMERICAN OVERSIGHT

EUA. Please refer to the Clinical Evaluation section of this document for more details.

- If authorized, the EUA means that this 2019-nCoV IVD is temporarily authorized for use until the public health emergency is terminated or the EUA is revoked by the FDA.

    - FDA recommends that you consider registration and listing your EUA product once you have been issued an EUA. If this is problematic, please notify the Agency during your Pre-EUA.
    - The EUA is not a pathway to permanent marketing of your device. Therefore, we strongly recommend that you consider, in addition to an EUA, a traditional premarket submission for your IVD so that your device can still be legally marketed after termination of the emergency declaration. We recommend that you identify as soon as possible in the Pre-EUA review process any consideration of moving your product forward towards De Novo/510(k) clearance. If so some of our feedback to you may take such a long-term goal into consideration in order to prevent additional testing where it may not be needed. Therefore, please consider submitting a Pre-Submission to inquire what studies would be required for a premarket approval/ clearance of your 2019-nCoV IVD. Details on how to submit a Pre-Submission to the Agency are outlined in the FDA guidance document: *Requests for Feedback and Meetings for Medical Device Submissions: The Q-Submission Program.* [ HYPERLINK "https://www.fda.gov/regulatory-information/search-fda-guidance-documents/requests-feedback-and-meetings-medical-device-submissions-q-submission-program" ]

## A. EXECUTIVE SUMMARY (as of 3rd February 2020)

Primer Design, a Novacyt Group company, is developing a molecular diagnostic assay for detection of the novel coronavirus 2019-nCoV originating in Wuhan, China. Primer Design are asking FDA to consider Emergency Use Authorization of this assay.

## B. PURPOSE FOR SUBMISSION

Emergency Use Authorization (EUA) request for distribution and/or use of the 2019 nCoV virus to diagnostic laboratories for the *in vitro* qualitative detection of RNA from the 2019-nCoV in high quality nucleic acid extract from the following specimen types, e.g., nasopharyngeal/oropharyngeal swabs,from patients who meet CDC 2019-nCoV clinical criteria (e.g., signs and symptoms associated with 2019-nCoV infection) and CDC novel coronavirus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated) to aid in the diagnosis of 2019-nCoV infection.

**ATTN:** Division Director: Dr. Uwe Scherf, OHT7-OIR/OPEQ/CDRH/FDA

**RE:** Request for Pre-Emergency Use Authorization (Pre-EUA) of the Primerdesign 2019-nCoV

**Dear Dr. Scherf,**

Primer Design Ltd is submitting a Pre-Emergency Use (Pre-EUA) for the Primerdesign 2019-nCoV so we can obtain feedback from FDA concerning the studies and/or testing outlined in our Pre-Emergency Use Authorization (Pre-EUA) submission package.

The Primerdesign 2109-nCoV is a qRT-PCR assay designed for the *in vitro* qualitative detection of RNA from the 2019-nCoV in high quality nucleic acid extract from respiratory specimens, e.g., nasopharyngeal/oropharyngeal swabs, from patients who meet CDC 2019-nCoV clinical criteria (e.g., signs and symptoms associated with 2019-nCoV infection) and CDC novel coronavirus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated) to aid in the diagnosis of 2019-nCoV infection.

Attached to this letter is the first draft of our device EUA Interactive Review Template for FDA review as a Pre-EUA. One hard copy of the signed EUA Cover Letter and one electronic copy are enclosed. Also, these documents have been sent to you via email.

In case you should have any questions regarding the information provided and/or need additional information/data from us please contact me immediately either via email navin.nauth-misir@novacyt.com or phone +44 (0)7590 689939.

Sincerely,

Megan,

AMERICAN OVERSIGHT
We just got word from CDC that they are possibly submitting their EUA package tonight or some time tomorrow. If the data look good the review division will be able to get the package towards FDA clearance the same day.

What information do you need to update and finalize the press release?

Sorry for this super short notice, everything is moving super-fast.

Best, Uwe

**Subject:** RE: Potential diagnostic EUA for coronavirus PR

Megan,

Attached please find the intended use of the CDC assay. Could you please update the draft based on this information.

The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is a real-time RT-PCR test intended for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing. Testing is limited to qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.

Results are for the presumptive identification of 2019-nCoV RNA. The 2019-nCoV RNA is generally detectable in upper and lower respiratory specimens during infection. Positive results are indicative of active infection with 2019-nCoV but do not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

Testing with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is intended for use by trained laboratory personnel who are proficient in performing real-time RT-PCR assays. The CDC 2019-Novel

AMERICAN OVERSIGHT

Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is only for use under a Food and Drug Administration's Emergency Use Authorization

Hi Uve. Hope all is well over there on the east coast.

I finally had a 3 minute call with my boss (Doug Bryant, CEO at Quidel) and he asked me to explore one thing with you about pursuing an EUA for the novel Coronavirus that emerged in China. Can you spare 5 minutes any time soon? I know you must be overwhelmed, if not with this, then 100 other things.

Best wishes. john

PS: If you prefer, I could call Dr. Kim Sapsford-Medinitz, but my boss asked me to call you! Forgive me for that. ☺

**Subject**: RE: WHO EPI-WIN Update on 2019-NCoV - 27.01.2020 and questions about developing tests for the virus

Sally,

Yes, IVD companies should contact CDRH-EUA-Templates@fda.hhs.gov. to receive the review template. It is ready to go and describes the studies. If you talk to any company please emphasize that they should work with us on some of the details regarding LoD and clinical evaluation. Alternative options are considered (in discussion with FDA) depending on availability of materials at the time of validation studies.

The link leads directly to us, and we make the introduction form the Division level, with the review template and a submission letter template.

Government agencies are all working hard to make specimens or a panel available, but nothing concret has emerged yet.

Look forward to see you on Monday, actually would like to chat on the phone with you about the last session sometime later this week or over the weekend.

Best, Uwe

Hello Uwe,

Attached is what WHO are distributing to update countries on the status of the 2019-NCoV outbreak.
Was asked to pass this information on to the appropriate individuals at FDA by my contacts at WHO.
You are probably getting this through other channels but sending it in case you are not.

AMERICAN OVERSIGHT

I am beginning to get enquiries from IVD developers who are planning to make tests for the 2019 -NCoV virus and, I see that CDC are distributing primers and probes for molecular tests and information on how to run their version of a test , but have not seen a Declaration of Emergency from HHS published yet.

However, it looks as though this may be in the works, as FDA's website (below) indicates an IVD company to contact CDRH-EUA-Templates@fda.hhs.gov.

Is that a correct assumption?

Is that link leading them to someone in DMD who will send a template for either a molecular or serological test or how are you getting info. out to developers and who should they contact?

Also the fact that this already seems widespread may mean that FDA/CDC/NIH are not planning to make specimens or a panel available.

Correct or not?

Best regards and see you on Monday,

Sally

"Being able to quickly and accurately diagnose patients infected with the novel coronavirus is an essential step in helping patients identify the need for care and mitigate the spread of the virus to additional individuals. Currently, there are no commercially available products that are authorized to detect novel coronavirus; however, the FDA is actively working to facilitate the development and availability of diagnostics that can detect this virus. The agency is working with public health partners to advance and share the reference materials necessary to facilitate diagnostic development.

The FDA is also requesting that diagnostic test sponsors interested in potential EUA for tests to detect 2019-nCoV contact CDRH-EUA-Templates@fda.hhs.gov for further information and templates."

**Subject**: Urgent - CDC EUA package received

**Importance**: High

Jeff, Denise, Anna, Tim, and Michael,

AMERICAN OVERSIGHT

CDC just submitted their EUA package to request authorization for their 2019-Novel Coronavirus (2019-nCoV) assay. DMD staff has reviewed most of the data package already and will finish the review of the outstanding data as expeditiously as possible. I want to provide a clear update on how long that process could take and next steps once we have completed our review.

(b)(5) [redacted] We have been closely coordinating with OMA and they already have drafted a press release so that we are ready to make an announcement if an EUA can be issued tomorrow.
I will keep this group updated.

Thank you all in advance for your patience and help.

Best,

Uwe

**Sent:** Friday, January 31, 2020 4:10 PM
**To:** Scherf, Uwe <Uwe.Scherf@fda.hhs.gov>
**Subject:** CDC
**Importance:** High

Hi Uwe,

Would you please respond to Anita Patel's email from last night, copying all on that email and adding me to the cc line, with the OCC-cleared text below.

Thanks,
Ellen

FDA and CDC have been working interactively together on CDC's request for an Emergency Use Authorization (EUA) for its 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens. At this time, there is no *in vitro* diagnostic test approved, cleared or authorized for such use.

On January 30th, CDC notified FDA that it would like to distribute the test to certain laboratories so that they can use the test prior to issuance of an EUA. This would help to address the significant public health concerns raised by the infectious disease at this early stage, and may help to prevent the spread of the infectious disease by addressing the high testing demands currently being faced by CDC.

We understand that CDC would like to distribute the 2019-nCoV Real-Time RT-PCR Diagnostic Panel kit, and any components, to laboratories designated by CDC as qualified and, in the United States, such laboratories will be certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests. We also understand that CDC will ask each of the state laboratories to send positive samples and (b) (5) negative samples to CDC for further validation testing.

Based on our understanding of the facts and the public health concerns at issue here – specifically, that there is currently no other test available to respond to this emergency and that CDC is actively pursuing EUA authorization – at this time, FDA does not intend to object to the distribution and use of this test as described above. We ask that you please send the name and address of the specific laboratory(ies) that will be performing testing to the FDA/CDRH MCM Team Lead, Kim Sapsford (Kim.Sapsford@fda.hhs.gov) and the Director of the Division of Microbiology Devices, Uwe Scherf (Uwe.Scherf@fda.hhs.gov).

Megan,

We just got word from CDC that they are possibly submitting their EUA package tonight or some time tomorrow. If the data look good the review division will be able to get the package towards FDA clearance the same day.

What information do you need to update and finalize the press release?

Sorry for this super short notice, everything is moving super-fast.

Best, Uwe

**Subject:** RE: Potential diagnostic EUA for coronavirus PR

Megan,

Attached please find the intended use of the CDC assay. Could you please update the draft based on this information.

The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is a real-time RT-PCR test intended for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing. Testing is limited to qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.

Results are for the presumptive identification of 2019-nCoV RNA. The 2019-nCoV RNA is generally detectable in upper and lower respiratory specimens during infection. Positive results are indicative of active infection with 2019-nCoV but do not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

Testing with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is intended for use by trained laboratory personnel who are proficient in performing real-time RT-PCR assays. The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is only for use under a Food and Drug Administration's Emergency Use Authorization

**Subject:** RE: Follow-up for EUA for nCoV

John,

Thanks you for the messages. I discussed the information you provided with my team. Based on what you described we encourage you to submit your data via the pre-EUA. To my knowledge you already received the template. Thank you for reaching out to us. WE also heard BEI might be the organization to contact to obtain virus.

Please let me know if you have any questions.

Best, Uwe

**Subject:** 2019-nCov

# *COMMONWEALTH of VIRGINIA*

## *Department of Health*

## 2019-nCoV

January 28, 2020

Dear Colleague,

The novel coronavirus (2019-nCoV) outbreak that began in Wuhan City, China continues to rapidly evolve. The Centers for Disease Control and Prevention (CDC) considers the immediate risk of 2019-nCoV infection to the American public to be low based on available information. On January 27, CDC raised the travel advisory for China to the highest level, Level 3 (Avoid Nonessential Travel). CDC recommends that travelers avoid all nonessential travel to China.

AMERICAN OVERSIGHT

Chinese health officials have reported more than two thousand infections with 2019-nCoV. Additional cases have been identified in an increasing number of countries. In the United States, five cases have been confirmed in four states (WA, IL, CA, AZ) as of January 27 at 5:00 PM. The number of confirmed cases will likely increase in the coming weeks.

On January 26, we announced three Patients Under Investigation (PUI) in the central (2) and northern (1) health planning regions of Virginia. A PUI is an individual who meets both clinical and epidemiologic criteria for 2019-nCoV. Two of the three PUIs have since tested negative and are not cases. As of January 27, there are no confirmed cases of 2019-nCoV in Virginia.

Symptoms have included fever, cough and shortness of breath. Based on what we know about other coronaviruses, symptoms may appear anywhere from two to 14 days after exposure. The severity has ranged from mild to severe, including some deaths. Based on preliminary information, older adults with underlying health conditions might be at increased risk of severe disease. Person-to-person spread of 2019-nCoV is occurring in China. It is unclear how easily or sustainably this virus is spreading between people. Investigations are ongoing to learn more and we expect clinical guidance to be revised. On January 17, 2020, CDC issued updated interim guidance to assist U.S. healthcare providers in the identification, evaluation, and reporting of a PUI for 2019-nCoV infection. Clinicians are advised to do the following:

1. Check the VDH Novel Coronavirus Webpage for the most up-to-date guidance.
2. Obtain a detailed travel history for patients with fever or acute respiratory illness.
3. If a patient meets the criteria of a PUI:

- Ask the patient to wear a surgical mask as soon as the PUI is identified.
- Evaluate the patient in a private room with the door closed, ideally in an airborne infection isolation room if available.
- Use standard, contact and airborne precautions, and eye protection (e.g., goggles or face shield).
- Immediately notify infection control personnel and your local health department.

The Virginia Department of Health will consult with CDC and Virginia's Division of Consolidated Laboratory Services (DCLS) about testing.

- Currently, 2019-nCoV testing is only available at CDC. Three specimen types (lower respiratory tract, upper respiratory tract, and serum specimens) are recommended for testing. If possible, more specimens (e.g., stool, urine) should be collected and stored until CDC determines if these should be tested.
- For biosafety reasons, virus isolation in cell culture or initial characterization of viral agents recovered in cultures of specimens from a PUI is not recommended.
- DCLS guidance regarding biosafety precautions, specimen collection and submission, and testing is available on the VDH Novel Coronavirus Webpage.

Emergency Medical Services (EMS) staff are advised to do the following:

1. Obtain a detailed travel history for patients with fever or acute respiratory illness.
2. EMS providers who believe a patient is a PUI should place a surgical mask on the patient as soon as possible. EMS providers should utilize standard precautions, contact precautions, airborne precautions, and use eye protection (e.g., goggles or a face shield) when treating and transporting the patient.
3. Transport of PUIs should be to the closest appropriate facility with an airborne infection isolation room, if possible. Hospitals should be notified before arrival that the patient is a PUI. After the transport is complete, decontaminate the ambulance work surfaces and equipment with an EPA-registered virucidal hospital disinfectant and follow the manufacturer's recommendations for use-dilution (i.e., concentration), contact time, and care in handling.

For more information on this evolving situation, please visit the VDH Novel Coronavirus Webpage and the CDC Novel Coronavirus 2019 website. These webpages will be updated as new information becomes available.

Sincerely,

M. Norman Oliver, MD, MA

Hi Bill,

Yes, Title 42 Appointees may earn OT since they do not receive Market Pay. However, it would depend on their current salary and that would determine the # of hours they could actually work.

Uwe,

AMERICAN OVERSIGHT

Please send your signed request to Jennifer Draper or Karen Colleli and they will verify the employee's eligibility.

Thanks

Uwe,
I am not sure that we can authorize individuals under Title 42 for OT. I have removed Anna Mielech and authorized all others on the form attached. If we get the OK for Anna, we can complete another form or add her back.

Lesa and/or Daniel, can we authorize OT for Title 42?

Bill

Uwe,
I am supportive of OT pay and would be happy to authorize. Before I can sign the form, I need the grade/step information filled in as that information determines eligibility for OT pay (i.e. certain series/grades are not eligible for OT). Therefore, I can't formally authorize it until I know the grade of the individuals for whom you are requesting OT. Looping in Lesa/Daniel. Not sure who is in the best position to quickly provide that info (OPEQ operations or OIR).
Thanks
Bill

AMERICAN OVERSIGHT

Dear Bill,

As you have seen from the DMD updates and the information in the press, the 2019-nCoV situation has been very challenging.

Our interactive review and teleconferences indicated that CDC will send CDRH a completed EUA review template any time soon. The staff has been fabulous and supporting the program 200%. I am anticipating CDC data to be reviewed over the weekend and a complete EUA review package next week. As soon as the emergency is declared we anticipate additional documents from commercial sponsors. This work is on top of the regular review work and I feel obliged to assure appropriate compensation for my staff. Attached please find the request form for overtime for your consideration.

Thanks, Uwe

# INSTRUCTIONS FOR COMPLETING FORM FDA 211

Overtime Work (within the provisions of Federal Personnel Manual Supplement 990-1) may be authorized only by officials to whom the necessary authority has been delegated (see FDA Staff Manual Guide 1430.5). Overtime or Holiday Pay will not be paid, nor compensatory time granted, without appropriate authorization. Requests should be initiated on Form FDA 211, "Overtime, Compensatory Time, and Holiday Pay Request and Authorization," and completed as follows:

| Item | Explanation |
|---|---|
| 1-3 | Self-explanatory, to be filled out by requesting official. A requesting official can be the employee, timekeeper, Administrative Officer, or supervisor. |
| 4 | If space is required for additional names of those working overtime, another Form FDA 211 should be filled out in its entirety. If more than one form is used for the same request, the forms should be clipped so that they are processed concurrently.<br><br>Only the "requested" side of the columns should be filled out by the requesting official in item 4d.<br><br>A check mark or "x" should be placed in the appropriate column of item 4e indicating the desired compensation. |
| 5-7 | Self-explanatory, to be filled out by requesting official. |
| 8 | To be filled out by authorizing official.<br><br>After evaluation (and adjustment if necessary), the authorizing official will sign to approve or disapprove the request. If disapproved, the request is returned to the requesting official. If approved, the request is returned to the requesting official who should then forward the document to the applicable timekeepers (and Budget Officer if required).<br><br>The timekeeper will enter hours worked in the appropriate column of item 4d. Hours worked are to be based on data which the employee provides on the bi-weekly time report and cannot exceed hours "requested." If hours worked exceed hours "requested," only the authorizing official may increase the "requested" amount and must initial the modification. |

Draft email to CDC – I need to leave for (b) (6) so please send when you are ready:

Dear Julie,

Please find attached DMD's comments in the EUA template, looks good, we just need the LoD data. We inserted them in the clean version for ease of viewing. Once the LoD is finalized we recommend dropping the EUA template performance section into your instructions for use performance section.

We would also like to request the following limitation addition/change in the IFU:

New:

- Performance of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel has only been established in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate).

And maybe strengthen the negative results one by combining two of the current limitations with the addition in green:

- Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens (types and time points) from the same patient may be necessary to detect the virus.

Let us know if have any questions
Best regards

AMERICAN OVERSIGHT

**Importance:** High

When we send the template back to CDC, we will take a break.

So to get an final estimate: when it comes in with the LOD data, how much time will you need to review and sign off on the review template and the Instructions for use? I am asking it because if we need several hours and it comes in late in the evening we will wait until tomorrow to authorize.

Please give me an estimate how long you will need for final review?

**Subject**: 1/29/20 6 AM update

Good morning Jeff, Elizabeth, Elle, Bill, Tim,

Enclosed the 1/29/20 6 AM update:

**Status of activities on diagnostics**:

- Additional IVD Developers, Abbott Diagnostics, Roche Molecular Diagnostics and BioMérieux, have requested and received EUA review template.
- Contacted companies with cleared respiratory panels that detect human coronaviruses to perform bioinformatic analysis against released 2019-nCoV genome sequences
  - Assess whether test predict cross-reactivity
- Received Feedback from BireFire/BioMérieux, they agreed to post Technical not of their webpage so we can link from FDA landing page directly to information

**New roadblocks/challenges/delays:**

- Need clarification on (b)(5) [redacted]
  - based on telecom on 1/28/20 3 PM, CDC has additional information available – pending data will assess whether addition testing is required. Without additional information conclusion is currently not possible.

**Summary of sponsors requested and received review template:**

- (b) (4) [redacted] (1/17/20)
- Inbios International (1/23/20)
- Quest Diagnostics (1/24/20)
- Quidel (1/25/20)
- Luminex (1/28/20)
- Qiagen (1/28/20)
- Abbott Diagnostics (1/28/20)
- Roche Molecular Diagnostics (1/28/20)

Dear All,

Attached is the draft Letter of authorization for CDC – there are still a number of things that need to be updated as CDC haven't finalized the intended use and I don't have all the assay details yet……but it is a start. I based on the CDC H7N9 re-authorization letter and the most recent EUA (Chembio Ebola EUA).
Let me know if you have questions.

Best regards
Kim

AMERICAN OVERSIGHT

I drafted some point for Rosemary which we can send tomorrow. Any additional points that come to your mind? I am fine with the goals.

Thanks, Uwe

**Subject:** USG Strategy needed for Diagnostics 2019-nCoV

CoV Dx Team,
I have been asked to coordinate the drafting of a USG strategy for CoV diagnostics, this will be used to brief up, including possibly to the NSC. Some of you will remember we had to do this for Zika in 2016. As expected , turn around is short, expectation is to have this ready early next week. Vaccine and Therapeutics groups are doing same, it is my understanding that everything will be vetted and approved through the official 2019-nCoV MCM Task Force that includes senior representative from every agency.

Using what we did for Zika as a template, I have started drafting, and will share draft later today, but wanted to give you a heads up so you can start working.
To speed things along, I ask:
1. Review the proposed goals below – are these acceptable – please suggest edits/revisions. Send your input back today - just at the WG level now, vetting with leadership will come later.
2. Please provide by ~~Monday morning~~ COB today a draft brief summary of what you are currently doing, and what you plan to do if funding is made available.

Current activities

- Developed pre-EUA Review template for nucleic acids available by request under CDRH-EUA-Templates@fda.hhs.gov
- Provided template to 19 IVD sponsors
- Interactive review of pre-EUA submitted by sponsors
- Proactive drafting of documents requires for EUA authorization (e.g., Letter of Authorization, Fact sheet for HCP & Patients)
- Requested cross-reactivity prediction assessment of sponsors with cleared devices with respiratory devices
- Establishing LOINC codes for 2019-nCoV molecular tests to advance outbreak surveillance through advanced data interoperability

Plan if funding is available

- Development of FDA reference material for traceability purposes
-

3. Please provide ~~Monday morning~~ COB today by a list of any key challenges (other than access to samples/viruses) that you think need to be highlighted.

- Development of reference material for traceability purposes
- Develop material for initial laboratory verification purposes

**Proposed goals:**
Leveraging individual federal agency roles and expertise, USG interagency collaborative efforts are underway to achieve the following 2019-nCov diagnostic strategic goals:

- Expand 2019-nCoV testing capacity by providing the CDC Real-Time RT-PCR Assay for Detection 2019-Novel Coronavirus under EUA to public health and DoD laboratories.
- Rapidly advance the development of specific and sensitive commercial molecular assays to detect 2019-nCoV in clinical samples for use in the U.S. under EUA, and outside the U.S.

AMERICAN OVERSIGHT

(b) (5)

- Identify, collect, produce, and distribute necessary development reagents and materials including viruses, antigens, clinical samples and reference panels for test validation.
- Define and communicate to developers the FDA regulatory pathways for development, approval or clearance, and emergency use of coronavirus assays.

**Subject**: 2019-nCoV 1/31/20 6 AM update

Jeff, Elizabeth Ellen, Bill and Tim,

1/31/20 6 AM update

**Status of activities on diagnostics**:

- Interactive review with CDC continues - clinical data evaluation finalized - awaiting analytical and bioinformatics analysis
- Documents for authorization being sent to OCET/OCC for final review:
  - Letter of Authorization
  - Fact sheet for HCP and Patient
- FDA requested bioinformatic analysis by sponsors with cleared respiratory panels to assess prediction of cross-reactivity to 2019-nCoV. 2 out of 4 sponsors completed assessment, no cross-reactivity predicted.
- A total of 19 IVD Developers have requested and received EUA review template. **See list below**
- DMD participated on call with CDC and the American Clinical Laboratory Association (ACLA) - provided brief overview of how to obtain the FDA EUA template for 2019-nCoV.
- Dr. Brittany Goldberg, Senior Medical Officer in DMD volunteered to join delegation of experts to support WHO 2019-nCoV Team in China

**New roadblocks/challenges/delays:**

- None [previously outstanding issue on clinical study resolved]

**Summary of sponsors requested and received review template: TOTAL 19**

**Subject:** RE: Exercise of Enforcement Discretion

Ellen,

Attached please find my comments. The exercise of enforcement discretion will ONLY be for testing in certain labs before the EUA is authorized. The shipment and validation is covered under a new provision added by PAHPRA, and permits pre-positioning of MCMs without FDA approval when the product(s) is intended to be held (and not used) for emergency use (section 564B), allowing stakeholders to prepare for rapid deployment of MCMs during an emergency. Which is the case here. I made edits to capture the testing aspect in the attachment.

Uwe – is below okay for the DMD OCET SITREP (items in red are to let the Commissioner know information is confidential) – due to OCET by 3 pm
Thanks
Kim

**DMD SITREP Jan 24, 2020**

- Additional IVD Developer has requested and received EUA review template [Inbios International]
- Interactive review with CDC continues – final box and vial labels were reviewed, and cross reactivity study designs finalized.
- BioFire/Biomerieux provided a technical note to customers informing them that their current cleared assays, that include detection of other coronavirus species, are not predicted, based on bioinformatic analysis, to cross-reactivity with the 2019-novel coronavirus, FDA plans to link to this information and encourage other manufactures of cleared respiratory multiplex tests to perform similar analysis and provide this information to customers [e.g., (b)(4), (b)(5) Inc].
- Initial call held with (b)(4), (b)(5)

**Subject:** Daily 2 PM update

Jeff,

**Status of activities on diagnostics**:

- OCET and OCC support Center recommendation to exercise enforcement discretion to allow CDC to (b)(5) their test
- Additional IVD Developer has requested and received EUA review template [Inbios International]
- Updating FDA 2019-nCoV landing webpage to provide information on cleared respiratory devices on predicting cross-reactivity to 2019-nCoV. BioFire/Biomerieux provided technical note to customer, FDA plans to link to this information and encourage other manufactures of cleared respiratory tests to perform similar analysis and provide this information. [e.g., (b)(4), (b)(5) ]

**New roadblocks/challenges/delays:**

- Considerations for (b)(5) – initial phone call with (b) (4), (b) (5) and OCET at 3 PM today

Best, Uwe

Uwe,
I am not sure that we can authorize individuals under Title 42 for OT. I have removed Anna Mielech and authorized all others on the form attached. If we get the OK for Anna, we can complete another form or add her back.

Lesa and/or Daniel, can we authorize OT for Title 42?

Bill

**Subject:** RE: Request for overtime pay

Uwe,
I am supportive of OT pay and would be happy to authorize. Before I can sign the form, I need the grade/step information filled in as that information determines eligibility for OT pay (i.e. certain series/grades are not eligible for OT). Therefore, I can't formally authorize it until I know the grade of the individuals for whom you are requesting OT. Looping in Lesa/Daniel. Not sure who is in the best position to quickly provide that info (OPEQ operations or OIR).
Thanks
Bill

Dear Bill,

As you have seen from the DMD updates and the information in the press, the 2019-nCoV situation has been very challenging.

Our interactive review and teleconferences indicated that CDC will send CDRH a completed EUA review template any time soon. The staff has been fabulous and supporting the program 200%. I am anticipating CDC data to be reviewed over the weekend and a complete EUA review package next week. As soon as the emergency is declared we anticipate additional documents from commercial sponsors. This work is on top of the regular review work and I feel obliged to assure appropriate compensation for my staff. Attached please find the request form for overtime for your consideration.

Thanks, Uwe

**Subject:** RE: Pre-EUA IVD template request

Dear John,

Thank you for your email. Please find attached the current EUA Interactive Review Template draft for molecular-based assays for the detection of 2019-novel coronavirus (2019-nCoV). I suggest when you are ready, the first step is to populate this draft template with the information and data that you currently have about your device and sent it back to us for review as a Pre-EUA submission (to be sent to the Document Control Center). The Pre-EUA review is an interactive process, so we will provide feedback after receiving and reviewing the information provided. The draft review template is a shared "work-in-progress" document which you will populate with information and data as obtained and which we will review and provide feedback to you.

I have also attached a draft cover letter you can use to submit your Pre-EUA for detection of 2019-nCoV to FDA (it includes the address for the Document Control Center). Please include in your Pre-EUA submission package:

- The populated EUA Review Template draft
- FDA Form 3514 (https://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM080872.pdf) - under type of submission please check "other" and specify Pre-EUA.

One hard copy of the signed EUA Cover Letter and one electronic copy of you Pre-EUA submission package (including the EUA Review Template - MS word document) should be enclosed in your Pre-EUA submission to FDA, and we also request that you submit the information requested via electronic mail to myself Kim.Sapsford@fda.hhs.gov, as well as carbon copying (cc:) the following email addresses:

- Division Director: Dr Uwe Scherf, email address: Uwe.Scherf@fda.hhs.gov;
- Branch Chief: Dr Tamara Feldblyum, email address: Tamara.Feldblyum@fda.hhs.gov

Please be reminded that ***in the U.S. a test*** for the detection of 2019-nCoV or to diagnoses 2019-nCoV infection must not be distributed and/or used for clinical diagnosis without premarket clearance, approval, or EUA by the FDA.
NOTE: The EUA Interactive Review Template from the FDA is considered an internal working document and must not be distributed outside of your organization.

Please let me know if you have any questions, we look forward to working with you,
Best regards,
Kim

AMERICAN OVERSIGHT

Kim,

I am sorry it looks like there is a slight difference of the listed Intended Use in versus in the in the normal document. Jennifer still has after

CDC criteria for 2019-nCoV testing, **pursuant to section 564 of the Federal Food, Drug, and Cosmetic Act (the Act) (21 U.S.C. 360bbb-3)**.

Just to be 100% sure, and I checked the other documents with just the intended use, this wording in green only in the authorization letter and not in the intended use? Correct?

**Subject:** RE: Wuhan/touching base

Dear Mike, good to hear from you.

We are accepting Pre-EUA submissions. Please find attached the current EUA Interactive Review Template draft for molecular-based assays for the detection of 2019-novel coronavirus (2019-nCoV). As you have in the past, I suggest the first step is to populate this draft template with the information and data that you currently have about your device and sent it back to us for review as a Pre-EUA submission (to be sent to the Document Control Center).

I have also attached a draft cover letter you can use to submit your Pre-EUA for detection of 2019-nCoV to FDA. Please include in your Pre-EUA submission package:

- The populated EUA Review Template draft
- FDA Form 3514 (https://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM080872.pdf) - under type of submission please check "other" and specify Pre-EUA.

One hard copy of the signed EUA Cover Letter and one electronic copy of you Pre-EUA submission package (including the EUA Review Template - MS word document) should be enclosed in your Pre-EUA submission to FDA, and we also request that you submit the information requested via electronic mail to Kim Sapsford at Kim.Sapsford@fda.hhs.gov, as well as carbon copying (cc:) the following email addresses:

AMERICAN OVERSIGHT

- Division Director: Dr Uwe Scherf, email address: Uwe.Scherf@fda.hhs.gov;

- Branch Chief: Dr Tamara Feldblyum, email address: Tamara.Feldblyum@fda.hhs.gov

Please be reminded that ***in the U.S. a test*** for the detection of 2019-nCoV or to diagnoses 2019-nCoV infection must not be distributed and/or used for clinical diagnosis without premarket clearance, approval, or EUA by the FDA. NOTE: The EUA Interactive Review Template from the FDA is considered an internal working document and must not be distributed outside of your organization.

Please let me know if you have any questions as you look through the template, we look forward to working with you on your Pre-EUA submission.

Kind regards,
Uwe

**To:** St. Pierre, Don J. <don.st.pierre@fda.hhs.gov>
**Subject:** Wuhan/touching base

Hi Don,

I suspect that if DHHS declares an emergency, then we likely working together again on an authorization for a lab testing service (and not a distributed kit). I thought it might be a good idea to reach out ahead of time and make contact.

I wanted to let you know that Quest Diagnostics is working with CDC (via ACLA I believe), that Quest is considering a Wuhan assay (I presume a PCR), and Quest is aware of the emergency use authorization process if Quest develops an assay and if an emergency is declared.

I saw that Alberto transitioned to other opportunities a couple of years ago. Could you let me know who is leading the Microbiology team now?

And if an emergency is declared, could you let me know who has been assigned as lead reviewer? I will then share with the team here at Quest.

Thank you.

Michael

AMERICAN OVERSIGHT

# EMERGENCY USE AUTHORIZATION (EUA)

## EUA INTERACTIVE REVIEW TEMPLATE FOR MOLECULAR-BASED SINGLE TARGET TESTS FOR 2019 NOVEL CORONAVIRUS (2019-nCoV)

## GENERAL INFORMATION ABOUT THIS TEMPLATE

- Text highlighted in yellow ***[Text]*** should be completed by the IVD developer (sponsor) as applicable to their specific test. Text in **bold** outlines the Food and Drug Administration (FDA) suggestions and clarifications for the sponsors' consideration when completing the required information in a specific section.

- This is a EUA interactive review template for Pre-EUA/EUA submissions concerning molecular-based single target tests for detection of 2019 Novel Coronavirus (2019-nCoV), Wuhan, China. If you are developing a multiplex molecular-based assay for the detection and differentiation of nucleic acids from a panel of microorganisms, please review Appendix A for FDA recommendations.

- This is a EUA interactive review template for Pre-EUA/EUA submissions and not a guidance document. The template is subject to change as we learn more about the 2019-nCoV disease and its risk-benefit profile. Recipients will receive notice and updated templates as they become available.

- This EUA interactive review template is an FDA internal document and any proprietary information provided within the template and during the interactive review process will remain confidential as it does in a regular FDA premarket submission.

- Feedback provided by FDA during the interactive review of your pre-EUA/EUA is subject to change as we learn more about the 2019-nCoV disease and the risk-benefit profile evolves to address unmet public health needs.

- Prior to a potential authorization FDA will require developers of molecular-based tests to assess traceability of their test to an FDA-recommended reference material panel if available at the time. Specific details about the traceability study and the FDA-recommended reference material panel will be provided by the Lead Reviewer assigned to the Pre-EUA submission once the analytical and clinical evaluation data has been reviewed and found to be acceptable.

- Please be reminded that tests for the detection of 2019-nCoV or 2019-nCoV infection must not be distributed and/or used for clinical diagnoses without premarket clearance, approval, or EUA by the FDA. Clinical samples for 2019-nCoV testing should be sent to the appropriate public health laboratories until the IVD device subject of this Pre-EUA submission has received authorization from the FDA.

- Clinical specimens may be required to support the EUA request. Furthermore, please note that applicable regulations for human subject protection do apply under the

AMERICAN OVERSIGHT

EUA. Please refer to the Clinical Evaluation section of this document for more details.

- If authorized, the EUA means that this 2019-nCoV IVD is temporarily authorized for use until the public health emergency is terminated or the EUA is revoked by the FDA.

    - FDA recommends that you consider registration and listing your EUA product once you have been issued an EUA. If this is problematic, please notify the Agency during your Pre-EUA.
    - The EUA is not a pathway to permanent marketing of your device. Therefore, we strongly recommend that you consider, in addition to an EUA, a traditional premarket submission for your IVD so that your device can still be legally marketed after termination of the emergency declaration. We recommend that you identify as soon as possible in the Pre-EUA review process any consideration of moving your product forward towards De Novo/510(k) clearance. If so some of our feedback to you may take such a long-term goal into consideration in order to prevent additional testing where it may not be needed. Therefore, please consider submitting a Pre-Submission to inquire what studies would be required for a premarket approval/ clearance of your 2019-nCoV IVD. Details on how to submit a Pre-Submission to the Agency are outlined in the FDA guidance document: *Requests for Feedback and Meetings for Medical Device Submissions: The Q-Submission Program.* [ HYPERLINK "https://www.fda.gov/regulatory-information/search-fda-guidance-documents/requests-feedback-and-meetings-medical-device-submissions-q-submission-program" ]

## A. EXECUTIVE SUMMARY (as of X/XX/20XX)

## B. PURPOSE FOR SUBMISSION

Emergency Use Authorization (EUA) request for distribution and/or use of the ***[test name]*** to ***[indicate labs, if applicable]*** for the *in vitro* qualitative detection of RNA from the 2019-nCoV in ***[add all claimed specimen types, e.g., nasopharyngeal/oropharyngeal swabs, sputa, BAL, stool, and serum, etc.]*** from patients who meet CDC 2019-nCoV clinical criteria (e.g., signs and symptoms associated with 2019-nCoV infection) and CDC novel coronavirus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated) to aid in the diagnosis of 2019-nCoV infection.

## C. MEASURAND

AMERICAN OVERSIGHT

Specific nucleic acid sequences from the genome of the 2019-nCoV [***please specify the targeted gene(s) of the pathogen***].

## D. APPLICANT

***[Official name, address and contact information of applicant]***

## E. PROPRIETARY AND ESTABLISHED NAMES

Proprietary Name - ***[test name]***
Established Name - ***[test name]***

## F. REGULATORY INFORMATION

***Approval/Clearance Status:***
The ***[test name]*** test is not cleared, CLIA waived, approved, or subject to an approved investigational device exemption.

***Product Code:***
[XXX – FDA will complete]

## G. PROPOSED INTENDED USE

***1) Intended Use:***
**The proposed IU will be finalized based on the data and recommendations from Public Health authorities at the time of authorization – example text is provided below for a qualitative molecular test that detects organism RNA but may be adapted according to the specific emergency situation addressed by the device.**

[***Test name***] is a [***specify test technology such as, real-time RT-PCR test***] intended for the qualitative detection of nucleic acid from the 2019-nCoV in [***describe all the specimen types***] from individuals meeting CDC 2019-nCoV clinical criteria (e.g., clinical signs and symptoms associated with 2019-nCoV infection) in conjunction with CDC 2019-nCoV epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated). Testing is limited to [***laboratories - certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. §263a, to perform high complexity tests, or by similarly qualified non-U.S. laboratories***].

Results are for the identification of 2019-nCoV RNA. The 2019-nCoV RNA is generally detectable in [***name specimen type***] during the acute phase of infection. Positive results

AMERICAN OVERSIGHT

are indicative of active infection. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

The ***[test name]*** is intended for use by **[*include intended user, e.g., trained clinical laboratory personnel specifically instructed and trained in the techniques of real-time PCR and in vitro diagnostic procedures*]**. The ***[test name]*** is only for use under the Food and Drug Administration's Emergency Use Authorization.

***2) Special Conditions for Use Statements:***

For prescription use only
For in vitro diagnostic use only

***3) Special Instrument Requirements:***

The ***[test name]*** test is to be used with the [***list all RT-PCR Instruments, software requirements, automated extraction instruments***].

## H. DEVICE DESCRIPTION AND TEST PRINCIPLE

**Example text has been added under each of the sub-headings below for a fluorescence based rRT-PCR test for detection of organism RNA. If a different test principle is used by the test for the detection of a specific analyte please modify the description accordingly to capture the salient points in each of the sub-headings below. Please note that for new investigative technologies FDA may request additional detailed information so we can adequately assess the risks and benefits associated with the device.**

***1) Product Overview/Test Principle:***

**Describe the technology of the test and how this technology works to identify the measurand, the instruments employed/required to perform the test from sample collection to result (include all claimed extraction and PCR detection instruments), and the specimen types for which you claim to have specific performance characteristics as described below. If applicable, list all primer and probe sets and briefly describe what they detect. Please include the nucleic acid sequences for all primers and probes used in the test. Please indicate if the test uses biotin-Streptavidin/avidin chemistry in any of the steps for coupling reagents. Please note that an alignment with available reference genomes for different strains of the target pathogen is requested as part of the inclusivity evaluation (Section N).**

The ***[test name]*** is a real-time reverse transcription polymerase chain reaction (rRT - PCR) test. The 2019-nCoV primer and probe set(s) is designed to detect RNA from

AMERICAN OVERSIGHT

the 2019-nCoV in ***[list all the specimens]*** from patients who meet CDC 2019-nCoV clinical criteria (e.g., signs and symptoms associated 2019-nCoV infection) in conjunction with CDC 2019-nCoV epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated).

2) ***Description of Test Steps:***

**List and describe in detail all the steps of the test sequentially from specimen collection to detection.**

Nucleic acids are isolated and purified from ***[specimens]*** using ***[please describe the method(s) of extraction (please specify the specimen input volume for extraction and/or test, the nucleic acid elution volume and whether isolation/purification is manual and/or automated)].*** The purified nucleic acid is reverse transcribed using ***[enzyme mix/kits – please specify the input volume of purified nucleic acid added to the rRT-PCR reaction mix]*** into cDNA which is then subsequently amplified in ***[please describe the instrument(s) and enzyme mix]***. In the process, the probe anneals to a specific target sequence located between the forward and reverse primers. During the extension phase of the PCR cycle, the 5' nuclease activity of Taq polymerase degrades the probe, causing the reporter dye to separate from the quencher dye, generating a fluorescent signal. With each cycle, additional reporter dye molecules are cleaved from their respective probes, increasing the fluorescence intensity. Fluorescence intensity is monitored at each PCR cycle by ***[please describe the detection instrument(s)]***.

3) ***Control Material(s) to be Used with [test name]:***

**List all control materials (provided with the test kit and/or required but not provided with the test kit and describe what they are, how they are expected to work, where in the testing process they are used, and the frequency of use. If a control is commercially available, provide supplier's name and catalog number or other identifier; if your device relies on external controls that are manufactured by a third party please note that these controls should also be validated within your analytical and clinical studies described below in Section (N).**

Controls that will be provided with the test kit include:

a) A "no template" (negative) control is needed to ***[describe need]*** and is used ***[describe use – please also specify frequency of use]***

b) A positive template control is needed to ***[describe need]*** and is used ***[describe use – please specify the concentration of the positive control relative to the LoD of your test (note that ideally the positive control concentration should be such that it is close to the LoD of your test) and also specify frequency of use]***

AMERICAN OVERSIGHT

c) An extraction control ***[describe control]*** is needed to ***[describe need]*** and is used ***[describe use – please also specify frequency of use].*** **Please note that if the no template control and positive control, are taken through the entire sample processing procedure, including the extraction, then a separate extraction control is not required**.

d) An internal control ***[describe control]*** is needed to ***[describe need]*** and is used ***[describe use]***.

Controls that are required but not provided with the test kit include ***[describe control – provide recommended sources of the control materials – either a separate control kit for purchase that you the applicant develops or a control material that can be purchased from a third party].*** This/these control(s) is/are needed to ***[describe need]*** and is used ***[describe use – please also specify frequency of use]***.

**Please note that any control recommended to be used with your device (provided with the kit or not) needs to be validated in the context of your analytical and clinical study (i.e., you will need to run these controls as part of your studies). In instances where control material is not readily available through 3rd party vendors (which is often the case at the beginning of an outbreak) FDA may request that you include suitable control material with your device. Please note that external control materials are considered particularly important in the context of EUA devices because often GMP requirements for the manufacture of the EUA device are waived in emergency situations and reagent stability studies are limited. Hence the external controls offer some assurance of EUA test performance in the hands of the end user.**

## I. INTERPRETATION OF RESULTS

All test controls should be examined prior to interpretation of patient results. If the controls are not valid, the patient results cannot be interpreted. **Please describe if a Ct cutoff is used as part of your testing algorithm and/or if the end user is required to review fluorescent curves for weakly positive samples before final interpretation. Although not typical for molecular-based tests, if the test result involves the use of an algorithm/calculation, for example a ratio value, when determining the final patient test result, please include a detailed description and any additional calibration materials that may be required.**

1) ***[Test name] Controls – Positive, Negative and Internal***

**Describe in detail the expected results generated, including acceptance criteria, for all the controls described in detail in Section H above. Describe the measured values (if applicable) for valid and invalid controls and outline the recommended actions the laboratory should take in the event of an invalid control result.**

AMERICAN OVERSIGHT

2) ***Examination and Interpretation of Patient Specimen Results:***

**Describe when clinical specimen test results should be assessed and outline the criteria for test validity**. **Example text**: Assessment of clinical specimen test results should be performed after the positive and negative controls have been examined and determined to be valid and acceptable. If the controls are not valid, the patient results cannot be interpreted.

**Clearly indicate how to interpret numeric test values (if applicable) as positive or negative for presence of the 2019-nCoV. Indicate if the end user is required to review fluorescent curves for weakly positive samples before final interpretation and how to identify indeterminate/inconclusive results (if they exist) results and how the user should resolve them, e.g. if repeat testing may be required.**

**When applicable, provide a table clearly describing the possible combinations of test result values for each primer/probe set, and how they should be combined into a final interpretation of the result for your test. If the test produces result that will be used as part of a CDC recommended testing algorithm, please indicate what follow-up testing/process should be conducted, if applicable.**

## J. PRODUCT MANUFACTURING

**Please note that if you are developing a test for use at a single site (i.e., a laboratory developed test LDT), some of the information requested in this section may not be applicable. Please contact FDA for additional guidance for an emergency use LDT.**

The ***[test name]*** has been validated using only the components referenced in this submission and shall not be changed without prior concurrence from the FDA.

*1)* ***Overview of Manufacturing and Distribution:***

The product will be manufactured at [***manufacturer's name and FDA registration number (if applicable) or laboratory name if an LDT***] by [***manufacturer name, or laboratory name if an LDT***] personnel consistent with practices for the production of **[*types of devices*]** based on [***type of quality system****]. Material manufactured by [***manufacturer's name, or laboratory name if an LDT***] may be bottled and kitted by [***packager name***] manufacturing facility.

***Under the Emergency Use Authorization (EUA) most of the 21 CFR 820 Quality System Regulation (QSR) requirements can be waived for the duration of the EUA. FDA expects that developers follow comparable practices as much as possible and may consider previous compliance history when determining whether or not to waive certain QSR requirements for a specific product. Please note adverse events, as per 21 CFR Part 803, have to be reported for authorized devices (see Section R).**

AMERICAN OVERSIGHT

The current manufacturing capabilities include the ability to manufacture approximately **[*please insert the approximate number of units/products that can currently be manufactured per week at the manufacturing facility*]** products per week, however in the event of a surge in demand this could be increased to **[*please insert the approximate maximum number of units/products that could potentially be manufactured per week at the manufacturing facility if there was a surge in demand*]** product per week within a **[*please specify in weeks/months the expected timeframe required to increase product production if required*]** timeframe.

The product will be distributed by **[*please describe the distribution plan for the product and list all current distributors*]**.

2) ***Components Included with the Test***

Components manufactured by [***manufacturer's name and FDA registration number (if applicable)***] and supplied with the test include:

**List all components and reagents provided for your test, including a description of the primers and probes, volumes, concentrations, quantities, buffer components, etc.**

3) ***Components Required But Not Included with the Test***

Components required but not included with the test:

**List all components and reagents not included with the test that must be supplied by the user to perform the test, with specific supplier names and catalog numbers or other identifiers for obtaining these components and reagents. Please include here all specific consumables that were validated for use with your device, that are not interchangeable with other products and that are needed to guarantee device performance as established in the EUA validation studies listed in Section N below.**

4) ***Testing Capabilities***

**Briefly describe current sample throughput capacity, total time required to perform the test (from clinical specimen collection, specimen transport to result), and number of tests that can be performed per instrument run and per day.**

5) ***Reagent Stability:***

**Briefly describe stability test plan for *[test name]* reagents and include any accelerated stability information if available. Please note that reagent stability studies do not need to be completed at the time of EUA issuance, however the study design should be agreed upon during interactive review and the stability studies started immediately following authorization, if not before. When designing your stability study, we have some general recommendations that are outlined in Appendix B, for your consideration.**

AMERICAN OVERSIGHT

## K. PERFORMANCE EVALUATION

**If you plan to claim multiple target analytes to aid in differential diagnosis or you plan to claim multiple RT-PCR instruments and/or extraction methods, please refer to Appendix A and C, respectively, more information. Please note that any omission of a requested study in this document should be documented and justified.**

### *1) Analytical Sensitivity:*

a) *Limit of Detection (LoD):* **You should determine the LoD of the device utilizing the entire test system from sample preparation to detection for each clinical matrix claimed. Please note that claims for additional anticoagulants, for blood specimens, can be supported by a matrix equivalency study as outlined in Section N, subsection 3 below. The LoD is determined using dilutions of live propagated and titered 2019-nCoV stocks (CFU/mL or PFU/mL) spiked into a relevant clinical matrix. If wild-type virus is not available at the time of your validation studies, please contact FDA to discuss a potential alternative. Please note that if available please also provide Genomic Equivalent Copies (GEC)/mL units for the stock solutions used and include an explanation on how they were determined. Please note that LoD studies should be performed with live organisms, as described above. If you plan to use inactivated organism in your LoD determination you should describe how the material was inactivated and perform a study to determine whether the inactivation process impacted the LoD of the device.**

**First a tentative LoD must be established through limiting dilutions of the prepared material with 3-5 replicate measurements. Please note for all the analytical studies described in Section N that require replicate testing, one replicate equates to one independent extraction and PCR detection. Once a tentative LoD is established, the LoD should be confirmed by preparing at least 20 additional replicates at the LoD concentration and demonstrating that the organism was detected with a minimum 95% positivity (19/20). If this confirmatory study achieves a positivity of 100%, then a lower concentration needs to be tested (with 20 replicates) until <100% positivity is obtained.**

**Please use the following format when submitting LoD information and data:**

LoD studies determine the lowest detectable concentration of 2019-nCoV at which approximately 95% of all (true positive) replicates test positive. The LoD was determined by limiting dilution studies using characterized samples.

**List/describe the following in this section:**

- **Titers and strains of the 2019-nCoV stocks used for the LoD study and describe how the organism stocks were prepared and how the titers were determined.**

AMERICAN OVERSIGHT

- **The dilution factor and number of serial dilutions of the characterized 2019-nCoV that were tested to determine the LoD for each primer and probe set.**
- **The nucleic acid extraction/purification method.**
- **The real time PCR instrument.**

Serial dilutions of the characterized 2019-nCoV were then tested in **[*number of replicates (i.e., recommend that sample is extracted independently three-five times and each extraction tested once)*]** replicates. The lowest concentration at which all [*number of replicates*] replicates were positive was treated as the tentative LoD for each test. The LoD of each test was then confirmed by testing [*number of replicates (at least 20 recommended)*] with concentrations at the tentative limit of detection. The final LoD of each test was determined to be the lowest concentration resulting in positive detection of [*number of positive replicates (at least 19 out of 20 replicates)*]. [*Include analysis of LoD results, indicating the final LoD for each test*]

**Tentative LoD: [*Please provide a summary of the data for each strain tested]* example table 2019-nCoV stocks is provided below:**

| 2019-nCoV Strain Tested | Stock 2019-nCoV Titer | Serial 10-Fold Dilution Factor | Concentration in Dilution Tested [Include Units] | Replicate 1 $C_t$ | Replicate 2 $C_t$ | Replicate 3 $C_t$ | Replicate 4 $C_t$ | Replicate 5 $C_t$ | Call Rate | Lowest Concentration with Uniform Positivity per Analyte | Limit of Detection (LoD) per Virus Strain |
|---|---|---|---|---|---|---|---|---|---|---|---|
| *Example: [analyte]* | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |

b) FDA Sensitivity Evaluation: The analytical sensitivity of the test has to be further assessed by evaluating an FDA-recommended reference material using an FDA developed protocol if applicable and/or when available. Details will be provided during the Pre-EUA interactive review.

c) *Reactivity/Inclusivity:* Reactivity of the ***[test name]*** was evaluated for additional isolates of 2019-nCoV.

**Reactivity: *[test name]* example table below**

| 2019-nCoV Strain/Isolate | Source/Sample Type* | Concentration | Ct** |
|---|---|---|---|
| | | | |
| | | | |
| | | | |

AMERICAN OVERSIGHT

| | | | |
|---|---|---|---|
| | | | |

***Please list source of material used for wet testing and sample type tested (i.e., organism – live or inactivated, purified nucleic acid – whole genome etc.).**
**** If your technology does not produce Ct values, please include instead the signal output for your specific device technology.**

**At a minimum, the strain used in your LoD evaluation should be listed here (multiple isolates of the same 2019-nCoV strain that was used for the LoD studies can also be included if available). If additional isolates are not available at the time of your validation studies, please discuss with FDA. Each isolate should be tested at or near the LoD (no more than 3x LOD) of the test, spiked into clinical matrix utilizing the entire test system, including extraction. If you plan to claim more than one type of clinical matrix, we recommend that you perform this study in the most challenging clinical matrix, testing a minimum of 3 replicates. In addition, the wet testing should be accompanied by extensive inclusivity *in silico* analysis of the test primer and probes with all known strains/isolates (past/present) of 2019-nCoV (including the strain/isolate used for wet testing).**

## 2) *Analytical Specificity:*

a) *Cross-Reactivity:* Cross-reactivity of the ***[test name]*** was evaluated using both *in silico* analysis and by testing whole organisms **[*pathogen*]** (concentration) or purified nucleic acid from other ***[describe organisms]*** (concentration/reaction).

**Cross-Reactivity: *[test name]* example table for wet tested organisms below**

| Virus/Bacteria/Parasite | Strain | Source/ Sample type | Concentration | Ct Values* |
|---|---|---|---|---|
| | | | | |
| | | | | |
| | | | | |

***If your technology does not produce Ct values, please include instead the signal output for your specific device technology.**

**Cross-reactivity studies are preformed to demonstrate that the test does not react with related pathogens, high prevalence disease agents and normal or pathogenic flora that are reasonably likely to be encountered in the clinical specimen. The FDA Tables 1 and 2, below are intended to recommend simulate testing of patients having infections with organisms which cause similar symptoms to those observed at the onset of 2019-nCoV infection. The FDA Tables also include other organisms and strains which have significant genetic similarity and therefore a higher likelihood of cross-reacting with 2019-nCoV specific reagents. Also included in the FDA Tables are recommended unclaimed organisms/strains which are likely to be endemic to the currently affected area should be included in cross-reactivity testing since these organisms/strains will be an important aspect of the differential diagnosis of 2019-nCoV infection.**

AMERICAN OVERSIGHT

**FDA Table 1 Cross-Reactivity: List of Organisms to be wet-tested and analyzed *in silico* (for tests detecting 2019-nCoV) in respiratory material or blood specimens**

| Other high priority pathogens from the same genetic family | High priority organisms likely in the circulating area |
|---|---|
| Human coronavirus 229E | Adenovirus (e.g. C1 Ad. 71) |
| Human coronavirus OC43 | Human Metapneumovirus (hMPV) |
| Human coronavirus HKU1 | Parainfluenza virus 1-4 |
| Human coronavirus NL63 | Influenza A |
| SARS-coronavirus | Influenza B |
| MERS-coronavirus | Enterovirus (e.g. EV68) |
| | Respiratory syncytial virus |
| | Rhinovirus |
| | *Chlamydia pneumonia* |
| | *Haemophilus influenzae* |
| | *Legionella pneumophila* |
| | *Mycobacterium tuberculosis* |
| | *Streptococus pneumonia* |
| | *Streptococcus pyrogenes* |
| | *Bordetella pertussis* |
| | *Mycoplasma pneumoniae* |
| | *Pneumocystis jirovecii* (PJP) |
| | Pooled human nasal wash - *to represent diverse microbial flora in the human respiratory tract* |
| | |

**FDA Table 2 Cross-Reactivity: List of Organisms to be analyzed *in silico* (for tests detecting 2019-nCoV) in respiratory material or blood specimens:**

| Other high priority pathogens from the same genetic family | High priority organisms, including organisms commonly found in the clinical matrix |
|---|---|
| | Influenza C |
| | Parechovirus |
| | *Candida albicans* |
| | *Corynebacterium diphtheriae* |
| | *Legionella non-pneumophila* |
| | *Bacillus anthracosis* (Anthrax) |
| | *Moraxella cararrhalis* |
| | *Neisseria elongate and miningitidis* |
| | *Pseudomonas aeruginosa* |
| | *Staphylococcus epidermis* |
| | *Staphylococcus salivarius* |
| | *Leptospirosis* |

AMERICAN OVERSIGHT

| | |
|---|---|
| | *Chlamydia psittaci* |
| | *Coxiella burneti (Q-Fever)* |
| | *Streptococcus aureus* |
| | |

***In silico* analysis should be performed on all potentially cross-reactive organisms outlined in the FDA Tables 1 and 2 above. You should provide the result summary of the *in silico* blast analysis (tabular format) evaluating whether there is any significant amplification of non-target sequences that could either result is cross-reactivity or potentially interfere with the detectability of the actual target analyte. As such we are asking that you provide individual blast results (non-truncated alignments) for each of the primers and probes used in your device with potential cross-reacting organisms. Please provide for our review the percent sequence homology for each organism relative to the target analyte primers/probes in your test. Please use the example table below when presenting the results of *in silico* analysis in your submission:**

**Results of *In Silico* Analysis**

| Pathogen | Strain | GenBank Acc# | % Homology Test FP (i.e. 0-100%) | % Homology Test RP | % Homology Test Probe |
|---|---|---|---|---|---|
| | | | | | |
| | | | | | |

**The analysis should include multiple representative strains from GenBank for each organism. If *in silico* analysis reveals other potential cross-reactants (i.e., ≥80% homology between one of your primers or the probe to any of the sequences of listed potential cross reactants), you should carefully review the alignments and determine based on the positions of the homologous stretches and mismatches if additional cross-reactivity and/or interference (please refer to item b below – microbial interference studies) wet testing will be required to rule out cross-reactivity or interference of that organism that may affect the performance of your device. In these circumstances if wet-testing is omitted you should include an explanation as to why *in silico* generated data is not clinically relevant (irrelevant isolate, location/extent of match within primer/probe, etc.), or why the performance of your test would not be impacted.**

**Organisms in FDA Table 1 should be wet tested in addition to the *in silico* analysis. Omissions from wet-testing should be discussed with FDA and supported by a well-documented justification that includes a due diligence attempt to obtain the live or inactivated organisms (and/or purified nucleic acid – which is acceptable for cross reactivity evaluation for an EUA).**

AMERICAN OVERSIGHT

**The wet testing evaluation should reflect test specimens prepared at the highest clinically relevant level of organism (i.e., a minimum of $10^6$ CFU/ml or higher for bacteria and $10^5$ $TCID_{50}$/mL or PFU/ml or higher for viruses) and should be tested with a minimum of three replicates per organism test specimen. Test specimens can be prepared by spiking cultured isolates/inactivated organisms/ purified nucleic acids (whole genome) into negative clinical matrix and determining cross reactivity based on triplicate replicates. If you plan to claim more than one type of clinical matrix, please note that if significant differences in LoD are observed for the different clinical matrices this may warrant this study being performed in more than one clinical matrix.**

**If you plan to claim non-blood or non-respiratory clinical specimen types for diagnostic use with your device, e.g., stool specimens, etc., please consult FDA for more information on additional organisms that may be recommended for cross-reactivity testing, common examples are provided below for stool specimens (FDA Table 3):**

**FDA Table 3: Organisms to be analyzed for non-blood clinical specimens:**

| **Stool** |
|---|
| *Escherichia coli* |
| *Lactobacillus* |
| *Bacillus* spp. |
| *Clostridium* Spp. |
| *Enterobacter* |
| *Enterococcus* |
| Fusobacterium |
| Bacteroidetes |
| Bifidobacterium |
| Ruminococcus |
| |

b) *Microbial Interference Studies:* **If *in silico* analysis reveals ≥ 80% homology between the cross-reactivity microorganisms and your test primers/ probe(s), we recommend that you either perform (1) a microbial interference study with 2019-nCoV and the microorganisms that your test primers/ probe(s) have homology to, (2) as an alternative to the microbial interference study, you may provide justification as to why (e.g., amount of primer(s)/ probe(s) included in your master mix) the performance of your test would not be impacted by the presence of a causative agent of a clinically significant co-infection, or (3) explain why the *in silico* results are clinically irrelevant. In the case of the microbial interference study, interference should be evaluated using samples spiked at a low 2019-nCoV concentration, at 3x LoD, and a high interferent level (either microorganisms or nucleic acids purified from them), to represent the worst-case scenario, with a minimum of 3 replicates. If you plan to claim more than**

AMERICAN OVERSIGHT

**one type of blood clinical matrix, please note that if significant differences in LoD are observed for the different clinical matrices this may warrant this study being performed in more than one clinical matrix. If the LoDs are similar in the blood clinical matrices the study should be performed in the most challenging matrix, i.e., whole blood. In addition, if you are claiming blood and non-blood clinical specimens you may be required to perform this study in more than one clinical matrix. If interference is observed at the level tested, an additional titration study should be performed to determine the highest microorganism interferent level the 2019-nCoV test can tolerate.**

**c)** *Endogenous Interference Substances Studies*: **The extent of testing for endogenous interference substances depends on the matrix that is claimed for the device as well as on the technology of the device, e.g., if a nucleic extraction procedure is performed prior to testing or not. For EUA we do not typically ask for interference studies for tests that use conventional PCR and/or well-established extraction methods prior to testing (e.g., Boom method and column-based extraction methods).**

**For extraction procedures that are new or for nucleic acid-based technologies that are different from conventional PCR (e.g., various isothermal methods), we expect testing of potential interferents. The impact of interfering substances should be evaluated over the expected clinical range of the potentially interfering substance. Potential sources of endogenous interference include, but are not limited to, the ones listed in the tables below. It is important to note that the evaluation of interference and the generation of false negative results should be done using samples containing the analyte at or near the LoD and should not exceed 3x LoD. You should test a minimum of 3 replicates per substance. If you plan to claim more than one type of clinical matrix, please note that if significant differences in LoD are observed between the different clinical matrices this may warrant this study being performed in more than one clinical matrix. Biotin interference poses a risk to laboratory tests that incorporate the free biotin-streptavidin capture method. Therefore, please review this safety communication [ HYPERLINK "https://www.fda.gov/medical-devices/safety-communications/fda-warns-biotin-may-interfere-lab-tests-fda-safety-communication" ] and the following [ HYPERLINK "onenote:http://sharepoint.fda.gov/orgs/CDRH-IVD/Orgs/DMD/DMD%20OneNotes/Language/Analytical%20Studies/Interference.one" \l "DRAFT%20guidance%20-%20Testing%20for%20Biotin%20Interference%20in%20In%20Vitro%20Diagnostic%20Devices&section-id={39D67316-5AE2-4791-958F-9387D384D6FA}&page-id={9298F00C-7C39-43CB-9EBA-29E5BC08BB6E}&end" ] ([ HYPERLINK "http://sharepoint.fda.gov/orgs/CDRH-IVD/Orgs/DMD/_layouts/OneNote.aspx?id=%2Forgs%2FCDRH-IVD%2FOrgs%2FDMD%2FDMD%20OneNotes%2FLanguage&wd=target%28Analytical%20Studies%2FInterference.one%7C39D67316-5AE2-4791-958F-**

AMERICAN OVERSIGHT

**9387D384D6FA%2FDRAFT%20guidance%20-%20Testing%20for%20Biotin%20Interference%20in%20In%20Vitro%7C9298F00C-7C39-43CB-9EBA-29E5BC08BB6E%2F%29" ]) to determine if biotin interference testing may be warranted for your device. We also recommend you consult with FDA prior to initiating biotin interference testing, if applicable.**

**The tables below indicate the potentially interfering substances that may be found in blood and respiratory specimens. For other non-blood specimen types, such as stool, the list of substances could be expanded – please consult with FDA.**

**Interfering Substances: *[test name]* Example table below for evaluation of interfering substances for the ability to generate false *positive* results:**

| Potential Interfering Substance | Concentration | Results (Detected X/3) |
|---|---|---|
| **Respiratory Specimens** | | |
| Mucin: bovine submaxillary gland, type I-S | | |
| Blood (human) | | |
| Nasal sprays or drops | | |
| Nasal corticosteroids | | |
| Nasal gel | | |
| FluMist | | |
| Homeopathic allergy relief medicine | | |
| Throat lozenges, oral anesthetic and analgesic | | |
| Anti-viral drugs | | |
| Antibiotic, nasal ointment | | |
| Antibacterial, systemic | | |
| **Blood Specimens** | | |
| Hemoglobin | 10 mg/mL* | |
| Bilirubin Conjugated | 0.4 mg/mL* | |
| Bilirubin Unconjugated | 0.4 mg/mL* | |
| Serum proteins (e.g., Human Serum Albumin) | 60 mg/mL* | |
| Triglycerides | 15 mg/mL* | |
| Cholesterol | 4 mg/mL* | |
| Human Anti-mouse Antibody (HAMA) | 800 ng/mL* | |
| Rheumatoid Factor | 2000 IU/mL* | |

*Taken from the recently-updated 3rd edition of CLSI guideline EP07, Interference Testing in Clinical Chemistry (Section 3.4.2) which now defers to CLSI EP37, Supplemental Tables for Interference Testing in Clinical Chemistry for the recommended concentrations for testing common endogenous substances (Table 2) and have subsequently updated a number of the recommended testing concentrations.

**Interfering Substances: *[test name]* Example table below for evaluation of interfering substances for the ability to generate false *negative* results:**

AMERICAN OVERSIGHT

| Bilirubin Unconjugated | 0.4 mg/mL* | | |
| Serum proteins (e.g., Human Serum Albumin) | 60 mg/mL* | | |
| Triglycerides | 15 mg/mL* | | |
| Cholesterol | 4 mg/mL* | | |
| Human Anti-mouse Antibody (HAMA) | 800 ng/mL* | | |
| Rheumatoid Factor | 2000 IU/mL* | | |

*Taken from the recently-updated 3rd edition of CLSI guideline EP07, Interference Testing in Clinical Chemistry (Section 3.4.2) which now defers to CLSI EP37, Supplemental Tables for Interference Testing in Clinical Chemistry for the recommended concentrations for testing common endogenous substances (Table 2) and have subsequently updated a number of the recommended testing concentrations.

### 3) *Matrix Equivalency (if applicable):*

**A matrix equivalency study may be used to support certain specimen type claims that were not evaluated during the clinical study (e.g., serum versus plasma, use of different anticoagulants, use of difference swab types or viral transport media, etc.). Please note that LoD and clinical specificity studies are required for all claimed matrices. The matrix in which the clinical studies are conducted is the comparator. All other matrices are to be shown to be equivalent to the comparator matrix. We request a minimum of 40 paired samples each obtained from individual persons; negative (10 samples), low positive (1.5-2xLoD, 20 samples), and moderate positive (5-10xLoD, 10 samples) samples should be tested. Positive samples are prepared by spiking paired negative clinical matrix with the same amount of target analyte. Please note that individual (and not pooled) samples should be used in this study.**

AMERICAN OVERSIGHT

4) ***Comparative Limit of Detection (LoD) of the Test vs. the Comparator Method:***

**A comparative LoD study may be required to support use of a comparator method in your clinical evaluation that has not been validated with a specific specimen type. The comparative LoD study should be conducted testing the same dilution series using both, your test and the comparator you chose in parallel (to dilution endpoints for both tests), 3-5 replicates per dilution level are sufficient for this study.**

5) ***Specimen Stability and Fresh-frozen Testing:***

**A specimen stability study may be required to support specimen stability claims in the instructions for use outside of those typically outlined in CSLI standards. A fresh/frozen and/or freeze/thaw study may be required to support the use of frozen specimens if they are used as part of the clinical evaluation. Please consult with FDA concerning an appropriate study design prior to initiating any studies.**

6) ***Clinical Evaluation:***

**This section should describe the clinical study used to evaluate the performance of your test. Please note that the exact requirements for the clinical evaluation will be very dependent on, access to 2019-nCoV disease clinical specimens at the time of the studies and the nature of the emergency. Our general clinical study evaluation recommendations for respiratory and serum clinical specimens are outlined below. If you are interested in claiming additional specimen types, for example, stool, please contact FDA for current recommendations. Please note these clinical study recommendations may be subject to change as we continue to learn about the 2019-nCoV disease or as the risk benefit analysis changes.**

**The clinical performance in general should be evaluated for each unique claimed clinical specimen type - with the exception of claims that can be supported by a matrix equivalency study (outlined in Section 3 above). The performance characteristics should ideally be established using a clinical study with a limited number of prospective samples. If a prospective study is not feasible, an acceptable alternative would be to test retrospectively collected 2019-nCoV nucleic acid negative and positive specimens from patients, accompanied by some basic information such as, the specimen collection date, date of onset of symptoms (if present/known), tests used to identify 2019-nCoV nucleic acid positive specimens, etc. Depending on the nature of the disease, if no prospective or retrospective specimens are**

AMERICAN OVERSIGHT

**available at the time of your pre-EUA submission for the 2019-nCoV disease we may accept a fully contrived clinical evaluation. The clinical evaluation should be comprised of a minimum of 100 negative individually collected specimens and 50 individual positive specimens (prospective, retrospective and/or contrived). Use of pooled specimens are not acceptable for the clinical evaluation of your test. Please see FDA Table 5 for more details. Please note that if a fully contrived clinical study is used to support your Pre-EUA submission, additional clinical testing of a limited number of natural clinical positive specimens and potentially negative specimens from the endemic region, if available, may be required at the time when this Pre-EUA transitions to an EUA as a result of an Emergency declaration for 2019-nCoV disease.**

AMERICAN OVERSIGHT

## FDA Table 5: Clinical study Recommendations:

| Details | Study Including Prospective/ Retrospective Specimens | Fully Contrived Sample Study |
|---|---|---|
| Minimum Number of Positive Specimens | 50<br><br>The number of natural (prospective/retrospective) positive clinical specimens should be at least 25 (collected from symptomatic patients in the 2019-nCoV disease endemic region(s)) and, if necessary, may be supplemented with contrived samples to generate the total of 50 positive specimens. Contrived samples should be prepared as described in the fully contrived sample study column. | 50<br><br>The contrived positive samples should be made in individual negative clinical matrix collected from subjects from a non-endemic population (pooled matrix is not acceptable for the clinical evaluation). Please note that the negative clinical matrix used for spiking should be confirmed negative by your test device prior to spiking. Half of the contrived positive samples can be prepared by spiking the 2019-nCoV at LoD and the remaining contrived positive samples should cover the range of the test up to and not higher than 5 x LoD.<br><br>Negative respiratory specimens: Can be archived/retrospective samples collected from US patients with signs and symptoms of respiratory infection.<br><br>Negative blood specimens: Can be collected from healthy subjects from non-endemic areas. |
| Minimum Number of Negative Specimens | 100<br><br>Note: In general, for EUA the 100 individual negative samples can be collected from; (1) archived/retrospective samples collected from US patients with signs and symptoms of respiratory infection for respiratory specimens, and (2) healthy subjects from non-endemic areas for blood specimens, that are "expected 2019-nCoV disease negative". Note these negative specimens can be used to also prepare any contrived positive specimens used in support of the clinical evaluation of the test.<br><br>Please note this recommendation is dependent on the current outbreak situation and is subject to change as we learn more about the 2019-nCoV disease/outbreak. If the outbreak situation for 2019-nCoV disease is primarily outside of the continental U.S. (OUS) it may be beneficial to consider collecting negative specimens that represent 50% endemic and 50% non-endemic regions. If negative specimens are collected from the endemic region of the 2019-nCoV disease these should be tested with the same comparator chosen for the positive specimens (more details provided below). For non-endemic collected specimens you can compare to the expected "negative" result. | |
| Recommended Comparator Method | Positive: Positive percent agreement should be calculated in comparison to a EUA PCR test (please see the following website for the most recent list of FDA authorized 2019-nCoV | Positive: Compare to expected result.<br><br>Negative: See Minimum Number of Negative Specimens row |

AMERICAN OVERSIGHT

| | | |
|---|---|---|
| for percent agreement performance calculations | tests: [ HYPERLINK "https://www.fda.gov/MedicalDevices/Safety/EmergencySituations/ucm161496.htm" ]. If no EUA test available at the time of your EUA submission, please consult with FDA about your choice of comparator method – which ideally should be a well validated PCR test with comparable sensitivity to your subject device. Please note that a well validated PCR test should include evaluation of the tests LoD, inclusivity, exclusivity, interference and any clinical testing.<br><br>Negative: See Minimum Number of Negative Specimens row | |
| Comparator Method Note 1 | Please note when using natural clinical specimens, the comparator method must be validated for the specimen type claimed – if not you should perform a Comparative Limit of Detection (LoD) of the Test vs. the Comparator Method study, as explained above (Section 4), to support its use as a comparator method in your clinical study. | N/A |
| Comparator Method Note 2 | Any occurrences of false results should be investigated with an additional validated PCR test and/or targeted sequencing, and the results of the discordant analysis can be footnoted in your final performance table but cannot be used to change the final performance calculations. | |
| Natural Clinical Specimens IRB/Informed Consent Note | For clinical specimens collected to support the EUA request, please note that sample collection needs to adhere to all applicable rules of human subject protection; as such, sample collection needs IRB approval, which includes review of the informed consent forms. Samples need to be collected with informed consent. If leftover de-identified samples are used, FDA exercises enforcement discretion regarding the informed consent requirement if the specimen collection meets the criteria described in the FDA Guidance on Informed Consent for In Vitro Diagnostic Device Studies Using Leftover Human Specimens that are Not Individually Identifiable ([ HYPERLINK "http://www.fda.gov/cdrh/oivd/guidance/1588.pdf" ]).<br>**Note that IRB approval is still required even if leftover de-identified samples are used in your study.** | |
| Additional Studies Warning | N/A | If fully contrived samples were used in your Pre-EUA submission, additional testing of natural clinical specimens may be requested, if available, to support transition of the Pre-EUA to EUA as a result of an Emergency declaration. |
| Testing Approach Note 1 | Please note all clinical specimens (natural and contrived) should be evaluated in accordance with your proposed diagnostic algorithm, including retesting when appropriate. We understand the limited nature of natural specimens may preclude retesting. In instances were retesting is indicated but not performed, for the purposed of performance evaluation, initial results will be analyzed for performance and equivocal/indeterminate results count against your final performance. | |
| Testing Approach Note 2 | Specimens should be tested in a blinded fashion, e.g., positive and negative samples should be mixed and blinded to the end user, end user should also be blinded to the results of any comparator method testing. | |

AMERICAN OVERSIGHT

**When you describe your clinical study please indicate/include:**

- **How the specimens were generated/collect/sourced**
- **If the study was fully prospective, mix of prospective, retrospective and/or contrived or fully contrived**
- **The rationale for the concentrations/specimens selected (if using contrived or 3-party sourced specimens)**
- **The total number of specimens tested**
- **The specimen types (clinical matrix)**
- **A summary of the study results**

**In the case of real-time PCR tests, please provide the line data in an Excel file as part of the Pre-EUA submission for each specimen (please indicate for each specimen if it was prospective, retrospective or contrived and the clinical matrix it represents); the data should include the $C_T$ values (for the specimen and the controls) and call/result for your device and, in the case of the natural clinical specimens, the comparator method results should be included as well.**

## L. UNMET NEED ADDRESSED BY THE PRODUCT

**This section will be finalized by FDA based on the state of the emergency at the time of authorization and based on recommendations from Public Health authorities at that time. Example text is provided below but may be adapted according to the specific emergency situation that is addressed by the device and the need at the specific time of the outbreak.**

[Outline background of pathogen, disease and current outbreak]

[Outline details of the disease such as the following:

- likely sources of transmission
- likely symptoms – if any
- Prevalence of symptomatic disease (what fraction of infection results in symptomatic disease)]

Laboratories in the United States are in need of diagnostic tools for use in the 2019-nCoV emergency for rapid diagnosis of acute 2019-nCoV infection.

A public health emergency has been declared by the Secretary of Health and Human Services (HHS) on [Month Day, YEAR] justifying the authorization of emergency use of *in vitro* diagnostic tests for detection of 2019-nCoV and/or diagnosis of 2019-nCoV infection.

The ***[test name]*** can augment clinically important laboratory evidence for individuals with active infection. The 2019-nCoV nucleic acid is generally detectable in [name

AMERICAN OVERSIGHT

specimen type] during the acute phase of infection (approximately [7] days following onset of symptoms, if present) [and possibly for longer in other specimen types].

Under emergency use authorization (EUA), ***[applicant name]*** plans to distribute the test or accept sample for testing with the ***[test name]*** for the detection of nucleic acid from 2019-nCoV in clinical specimens collected from individuals meeting CDC's 2019-nCoV clinical and/or epidemiological criteria. This EUA request for the ***[test name]*** is intended to expand domestic readiness within the United States and its territories by expanding diagnostic testing capabilities for 2019-nCoV during public health emergency.

FDA consulted with subject matter experts within HHS on the public health needs for diagnostic devices to detect 2019-nCoV nucleic acid. It is FDA's conclusion that there currently exists a public health need for such devices, i.e., that there is no adequate, approved (cleared), and available alternative to the ***[test name]*** for 2019-nCoV detection during the public health emergency.

## M. APPROVED/CLEARED ALTERNATIVE PRODUCTS

Currently no methods for the detection of the 2019-nCoV have been approved/ cleared by FDA.

## N. RISKS AND BENEFITS:

**The Risks and Benefits section should be updated according to your specific device, some example language is given below but should be tailored to the device and the disease.**

Risks

The ***[test name]*** has been designed to minimize the likelihood of false test results. However, should false results occur, they may present risks to patients:

- False positive result:
  - A false positive 2019-nCoV result could [***update based on the pathogen***].
  - A false positive result in the context of the current public health emergency could lead to misallocation of resources used for surveillance and prevention.
  - A false positive result could delay correct diagnosis and initiation of appropriate treatment for the actual cause of patient illness.
- False negative result:
  - Although a negative result does not rule out 2019-nCoV infection, a false negative has the potential to result in initiation of inappropriate treatment and a delay in correct diagnosis.
  - A false negative result can trigger a waste of health care resources, as additional evaluations are pursued in the effort to establish the true diagnosis.
  - A false negative results can contribute to further spread of the disease.

Benefits

AMERICAN OVERSIGHT

The primary benefit of distributing the ***[test name]*** for clinical use is that it provides a relatively fast diagnostic method for symptomatic patients, which enables faster intervention.

- True positive test results provide support for the diagnosis of a 2019-nCoV infection. The results can be used in conjunction with clinical and epidemiological information to guide patient management.
- Distribution of the factsheets can help healthcare professionals and the public learn more about 2019-nCoV disease and how to avoid acquiring it.

Risk Assessment

- Negative results may not preclude a 2019-nCoV infection. It is emphasized that the ***[test name]*** should not be used as the sole basis for treatment or other patient management decisions. The clinical features of the illness and the type and risk of exposure must be considered pivotal to making patient management decisions. A negative test should not be interpreted as definitive, if other aspects of the patient's clinical presentation or recent epidemiologic exposures indicate such is likely, and diagnostic tests for other diseases are negative.
- False negative results due to failure of PCR are minimized by the presence of controls that monitor nucleic acid extraction and PCR efficiency.
- Risk of patient discomfort or harm during sample collection is minimal.

Risk-Benefit Assessment

The risks posed by use of the ***[test name]*** are mitigated by:

- Use of the ***[test name]*** in conjunction with other laboratory, epidemiological, and clinical evaluation tools
- Distribution of Healthcare Provider and Patient fact sheets.
- Post-market studies/reporting or conditions of Authorization.

Based on these factors, the potential benefits from the use of the ***[test name]*** are expected to outweigh the risks.

## O. FACT SHEET FOR HEALTHCARE PROVIDERS AND PATIENTS:

**Include proposed Fact Sheets for Patients and Healthcare Providers**

## P. INSTRUCTIONS FOR USE/ PROPOSED LABELING/PACKAGE INSERT:

**Include Instructions for Use, Box Labels, Vial Labels and any other proposed labeling.**

## Q. RECORD KEEPING AND REPORTING INFORMATION TO FDA:

AMERICAN OVERSIGHT

[***Manufacturer name***] will track adverse events and report to FDA under 21 CFR Part 803. A website is available to report on adverse events, and this website is referenced in the Fact Sheet for Health Care providers as well as through the [***Manufacturer name***] Product Support website: [***Include link to Website***]. Each report of an adverse event will be processed according to [***Manufacturer name]***'s Non-Conformance Reporting Requirements, and Medical Device Reports will be filed with the FDA as required. Through a process of inventory control, [***Manufacturer name]*** will also maintain records of device usage/purchase. [***Manufacturer name]*** will collect information on the performance of the test, and report to FDA any suspected occurrence of false positive or false negative results of which [***Manufacturer name]*** becomes aware. [***Manufacturer name]*** will maintain records associated with this EUA and ensure these records are maintained until notified by FDA. Such records will be made available to FDA for inspection upon request.

## R. ADMINISTRATIVE INFORMATION:

**Interactive Review Log:** Please use the table below to document interactive review with FDA and include interactions initiated by either FDA or yourself

| **Date** | **Type of Interaction** (phone/ email/ formal submission-DCC) | **Brief Description** (e.g., questions asked/ feedback from FDA received / any word documents included) |
|---|---|---|
| [X] | [X] | [X] |
| | | |
| | | |

## S. FDA ADMINISTRATIVE INFORMATION:

**This section will be finalized by the FDA Lead Reviewer upon completion of the review process and documents the interactive review of this submission and any conclusions resulting from the interactive review.**

1) **Summary of Interactive Review – Lead Reviewer to use this section to highlight any major issues solved during interactive review.**
2) **Final Conclusions for Interactive Review -** It is FDA's conclusion that there currently exists a public health need for such devices, i.e., that there is no adequate, approved (cleared), and available alternative to the ***[test name]*** for [pathogen] detection during the public health emergency. **Conclusion should include an outline the unique features of the device compared to currently issued EUA's under the declaration, if applicable.**
3) **Upon competition of this section the Lead Reviewer should also sign this document and save the file as the final Decision Memorandum.**

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

## APPENDIX A – Multiplex Panels Under EUA:

An emergency declaration by the HHS Secretary is typically specific for a pathogen/disease (i.e., there is a publicly declared health emergency involving a particular etiologic agent). Therefore, the EUA pathway is only applicable for testing patients with signs/symptoms/risk of exposure for that single agent in a given emergency. FDA has occasionally allowed limited additional target pathogens to be claimed for EUA devices, but panel members must be relevant to the event/disease outbreak subject of the specific emergency declaration. When determining whether to issue an EUA for a multiplex panel FDA takes into consideration the utility of the test (multiplex pathogen detection as an aid in differential diagnosis), clearance/approval status of IVDs for the other panel members, whether the proposed Intended Use fits within the HHS emergency declaration and the how the multiplex panel would fit into current public health authority patient testing algorithm recommendations. We recommend you contact FDA for specific feedback if you plan to claim multiple target analytes as part of your EUA test. If it is determined that a multiplex test is beneficial to the emergency response, please note that analytical and clinical evaluations for each of the target analytes will be required.

## APPENDIX B – General Study Design Recommendations for Reagent Stability:

- For EUAs you may follow the current FDA recognized CLSI Standard EP25 – Evaluation of Stability of In Vitro Diagnostic Reagents; Approved Guideline when evaluating the suitability of stability study designs. If you are planning to pursue a De Novo/510(k) for your device we recommend discussing in more detail your stability design to facilitate potential use of the EUA data in your regular premarket submission.
- Please note that use of only the positive controls is not acceptable for reagent stability evaluation because controls are usually formulated at a moderate positive level. For all the stability evaluations in addition to your external positive and negative controls and the no-template control you should include for the EUA evaluation at least one sample, that should be prepared by spiking negative clinical matrix at an analyte concentration of 3-5xLoD.
- If you are claiming multiple blood clinical specimen types in which similar LoDs are determined, you should use the most challenging clinical matrix for this study.
- Please note we typically recommend your stability study design includes the evaluation of at least 5 replicates. You should also evaluate, if available, 3 different lots of reagents.
- You should design your study to provide data for a timeframe that is about 10% longer than the one to be claimed – for example; a claim of 18 months should be supported by stability data out to 20 months and a claim of 7 days should include stability data out to 8 days.
- FDA considers 15-30°C to represent room temperature conditions. Ideally you should evaluate stability at both 15°C and 30°C, however, for the purposes of the EUA evaluation at 30°C is acceptable as the worse-case scenario.
- Shelf-Life Stability- Unopened kit:
    - You should evaluate real-time kit stability studies with unopened kits stored at the claimed storage temperature for your test.

AMERICAN OVERSIGHT

  - Accelerated stability evaluations for unopened kits is acceptable for EUA submissions while the real-time studies are on-going. However, please note real-time stability data is required to support regular pre-market submissions and for the final claim of an EUA.
- Shipping Stability - Unopened kit: Study should evaluate the anticipated handling and shipping times and temperatures expected for unopened kits.
- In-use/Opened Kit Stability: Depending on your device your stability study design should also support in-use stability of the kit reagents once the kit has been opened, e.g., storage at 2-8 $^{o}$C for 7 days. This includes on board stability once reagents have been placed on the instrument (if applicable).
- Inverted stability (if applicable): Study should support inverted stability for of kits.
- Freeze-thaw Stability: If you recommend aliquoting the reagents to meet the end-users needs following the initial thaw this recommendation should be supported by a freeze-thaw stability study, including the specific number of allowed freeze-thaw cycles.
- FDA analysis recommendations for real time stability studies are as follows:
  - Baseline of the study (t=0 of stability study) should not exceed a month from bottling
  - Clear baselines should be described (e.g., a month from bottling) for each stability claim under each study
  - Claims should be determined based on regression analysis. Any %change (%shift) from time zero (baseline) should be calculated between the target claim and the zero-time as (Ttest-Tbaseline)/ Tbaseline*100 with 95%CI using the regression equation obtained from plotting the mean values. When formulating your acceptance criteria for evaluating the shift from baseline you should consider the reproducibility of your device. However, generally, that the shift at the target claim due to storage cannot exceed 10-15%. The target stability is the next to last tested point that was within +/- 10% of time zero.
  - Acceptance criterion may be different, depending on the test samples analyte concentration distribution in the intended use population and the risk, in other words, the impact of false results to public health.

**APPENDIX C – Claiming Multiple Instruments and/or Extraction Methods:**

If you wish to claim multiple instruments and/or extraction methods for use with your test, please review the study recommendations provided below and contact FDA for any additional feedback. Please note that these analytical and clinical evaluation recommendations are based on the assumption that the elution volumes from the extraction methods and PCR volumes on the different RT-PCR instruments are identical.

- Limit of Detection (LoD): Please note that these studies should be repeated for each clinical matrix claimed in the Intended Use. Pick one RT-PCR instrument and determine the tentative LoD (using 5 replicates in 10-fold dilution) followed by the confirmatory LoD (20 replicates spiked at tentative LoD) for each extraction method on the chosen instrument. Note: If you detect 20/20 replicates in your confirmatory LOD study you should test the next lower concentration, using a 3-fold dilution, until

AMERICAN OVERSIGHT

you achieve a hit rate of <20/20.

- If the different extraction methods yield the same LoD (≤3xLOD) on the RT-PCR instrument chosen for initial testing, pick one extraction method for further LoD determination on the remaining RT-PCR instruments and follow the recommendations below.
- If the extraction methods do not yield the same LoD on the chosen RT-PCR instrument, please choose the extraction method with the worst LoD for further comparison of the LoD on all RT-PCR instruments.

For all other RT-PCR instruments you should use the following adaptive LoD study design:

- Please perform a refined tentative LoD study with 5 replicates at 0.5x, 1x, and 1.5 to 2x LoD. If you detect 4/5 replicates as positive at all the tested levels, you need to include the next higher concentration (i.e., 3x LoD). If you obtain 5/5 replicates at 0.5x LoD, you need to test the next lower concentration (i.e., 0.25x LoD). You will test in this manner until you find the lowest concentration that gives you 5/5 positive results for the tested RT-PCR instrument. This concentration should be used for a confirmatory LoD study for the given RT-PCR instrument using 20 replicates.

Final reported LoD: Please list all RT-PCR instruments with their respective LoDs if different LoDs are obtained. LoDs are considered comparable if they are between 1-3xLoD. These studies should be repeated for each clinical matrix claimed in the Intended Use.

- Interference Substances Studies (if applicable): Pick one extraction method and RT-PCR instrument combination, preferably the one with the worst overall LoD (if one or more of the RT-PCR instruments has a different LoD).

- Inclusivity Testing: For the inclusivity testing, pick one extraction method and RT-PCR instrument combination, preferably the one with the worst overall LoD (if one or more of the RT-PCR instruments has a different LoD).

- Exclusivity Testing: For exclusivity, you can perform this study using any extraction/instrument combination.

- Clinical study: If equivalency of the RT-PCR instruments is shown in an LoD study that tests and confirms that the LoD is the same or very similar for all of the RT-PCR instruments (between 2-3xLoD), then you can pick one RT-PCR instrument for your clinical study provided that the RT-PCR instruments in question are known to FDA for other *in vitro* diagnostic devices. If you find that one or more RT-PCR instruments machines has/have a different LoD, you should pick the extraction method / RT-PCR instrument combination with the worst LoD.

Note, if there are differences in the extraction input volume, extraction elution volume

AMERICAN OVERSIGHT

and PCR input volume (extracted nucleic acid) then the LoD should be confirmed, for each.

**Subject:** RE: Request for overtime pay

Uwe,
I am supportive of OT pay and would be happy to authorize. Before I can sign the form, I need the grade/step information filled in as that information determines eligibility for OT pay (i.e. certain series/grades are not eligible for OT). Therefore, I can't formally authorize it until I know the grade of the individuals for whom you are requesting OT. Looping in Lesa/Daniel. Not sure who is in the best position to quickly provide that info (OPEQ operations or OIR).
Thanks
Bill

Dear Bill,

As you have seen from the DMD updates and the information in the press, the 2019-nCoV situation has been very challenging.

Our interactive review and teleconferences indicated that CDC will send CDRH a completed EUA review template any time soon. The staff has been fabulous and supporting the program 200%. I am anticipating CDC data to be reviewed over the weekend and a complete EUA review package next week. As soon as the emergency is declared we anticipate additional documents from commercial sponsors. This work is on top of the regular review work and I feel obliged to assure appropriate compensation for my staff. Attached please find the request form for overtime for your consideration.

Thanks, Uwe

Hi Bill,

Yes, Title 42 Appointees may earn OT since they do not receive Market Pay. However, it would depend on their current salary and that would determine the # of hours they could actually work.

Uwe,

Please send your signed request to Jennifer Draper or Karen Colleli and they will verify the employee's eligibility.

Thanks

**Subject:** RE: Potential diagnostic EUA for coronavirus PR

Megan,

Attached please find the intended use of the CDC assay. Could you please update the draft based on this information.

The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is a real-time RT-PCR test intended for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing. Testing is limited to qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.

Results are for the presumptive identification of 2019-nCoV RNA. The 2019-nCoV RNA is generally detectable in upper and lower respiratory specimens during infection. Positive results are indicative of active infection with 2019-nCoV but do not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

Testing with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is intended for use by trained laboratory personnel who are proficient in performing real-time RT-PCR assays. The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is only for use under a Food and Drug Administration's Emergency Use Authorization

Hi Uwe,

Thanks for the info . I will pass it on to anyone who asks me about developing a test for 2019-NCoV.

I am open tomorrow or Friday to talk about the last session on Monday.

Let me know what is best for you.

Best,

Sally

On Jan 28, 2020, at 12:32 PM, Scherf, Uwe <Uwe.Scherf@fda.hhs.gov> wrote:

Sally,

Yes, IVD companies should contact CDRH-EUA-Templates@fda.hhs.gov. to receive the review template. It is ready to go and describes the studies. If you talk to any company please emphasize that they should work with us on some of the details regarding LoD and clinical evaluation. Alternative options are considered (in discussion with FDA) depending on availability of materials at the time of validation studies.

The link leads directly to us, and we make the introduction form the Division level, with the review template and a submission letter template.

Government agencies are all working hard to make specimens or a panel available, but nothing concret has emerged yet.

Look forward to see you on Monday, actually would like to chat on the phone with you about the last session sometime later this week or over the weekend.

Best, Uwe

Hello Uwe,

Attached is what WHO are distributing to update countries on the status of the 2019-NCoV outbreak.
Was asked to pass this information on to the appropriate individuals at FDA by my contacts at WHO.
You are probably getting this through other channels but sending it in case you are not.

I am beginning to get enquiries from IVD developers who are planning to make tests for the 2019 -NCoV virus and, I see that CDC are distributing primers and probes for molecular tests and information on how to run their version of a test , but have not seen a Declaration of Emergency from HHS published yet.

However, it looks as though this may be in the works, as FDA's website (below) indicates an IVD company to contact CDRH-EUA-Templates@fda.hhs.gov.

Is that a correct assumption?

Is that link leading them to someone in DMD who will send a template for either a molecular or serological test or how are you getting info. out to developers and who should they contact?

Also the fact that this already seems widespread may mean that FDA/CDC/NIH are not planning to make specimens or a panel available.

Correct or not?

Best regards and see you on Monday,

Sally

"Being able to quickly and accurately diagnose patients infected with the novel coronavirus is an essential step in helping patients identify the need for care and mitigate the spread of the virus to additional individuals. Currently, there are no commercially

AMERICAN OVERSIGHT

available products that are authorized to detect novel coronavirus; however, the FDA is actively working to facilitate the development and availability of diagnostics that can detect this virus. The agency is working with public health partners to advance and share the reference materials necessary to facilitate diagnostic development.

The FDA is also requesting that diagnostic test sponsors interested in potential EUA for tests to detect 2019-nCoV contact CDRH-EUA-Templates@fda.hhs.gov for further information and templates."

**Subject:** RE: RE Intended Use

I like it without the 'current' much better.

So the final intended use now is as follow. Please quality control one final time before I send it to Julie and Steve.

Thanks, Uwe

**Final Intended Use:**
The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is a real-time RT-PCR test intended for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing. Testing is limited to qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.

Results are for the presumptive identification of 2019-nCoV RNA. The 2019-nCoV RNA is generally detectable in upper and lower respiratory specimens during infection. Positive results are indicative of active infection with 2019-nCoV but do not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

Testing with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is intended for use by trained laboratory personnel who are proficient in performing real-time RT-PCR assays. The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is only for use under a Food and Drug Administration's Emergency Use Authorization

**Subject:** FLAGGING for awareness/review - coronavirus - briefing points for Denise Hinton ahead of E&C subcommittee briefing tomorrow

Good evening – flagging for your awareness and review (and apologies if I have missed anyone!) briefing points that have been developed with OCET, OL, and OMA input. As an fyi, many of the TP's were pulled from our website or cleared info from the past few days. **As the briefing is at 9:45 am tomorrow morning – we are asking to get back any comments to correct technical inaccuracies before 9 am tomorrow.** Apologies for the short turnaround and Many thanks!

**Subject:** blood test for nCoV?

Hi Gina, Kim,

Quick question – Scott Gottlieb's editorial today describes a diagnostic blood test for nCoV that 'relies on detecting parts of the virus' genome in the blood'. Is this a cell-free RNA assay? In my landscaping I haven't heard of anyone testing blood, just respiratory specimens.

**Subject:** RE: LOINC Coronavirus...

Steve,

The Indication for use is in it's final draft, see below. Based on this updated information, what would be the recommended LOINC code?

It is a NAT assay (b) (5) ?

Here the IU:
The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is a real-time RT-PCR test intended for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals meeting CDC 2019 novel coronavirus (2019-nCoV) clinical criteria (e.g., clinical signs and symptoms associated with 2019-nCoV infection) in conjunction with CDC 2019-nCoV epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated). Testing is limited to qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.

**Subject:** LOINC Coronavirus...

Uwe, attached are two Coronavirus related files: an Excel spreadsheet with the complete records for all 118 Coronavirus entries in LOINC, and a PDF report which is a subset of each record that is likely easier to read. (I am aware that some fields are cutoff.) Even with no familiarity with LOINC, you can see it will be straightforward to find a few example records that should be exactly what's needed once the descriptive information is changed to fit the current outbreak virus. (Also attached is the LOINC manual and the Micro guide just FYI, but honestly I don't see why you'd want to get into the weeds for a one-time task, especially since we have Michael anyway. )

Be glad to go over this Monday. I'm sure we could work with CDC to develop exactly the LOINC records needed, or, even better (especially given the amount of FDA support), we can likely have a LOINC specialist with CDC on the phone and get this done pronto. (There is a form in a program called RELMA that makes the submission process very straightforward; I don't have it on my FDA computer [it needs installation] but Michael certainly does.)

Kim,

This is very delicate wording and haven't had a chance to think this through. With current authorization CDC get a number of specimens types and can validate other going forward. We also have not worked out the support response for such a case.

So, no, we will not include that sentence into the current authorization.

Thanks, Uwe

Hi there! I'm a DO3 RPM, but was curious if your department anticipates needing assistance in the next few months, given the concerns with 2019 nCoV.
Is there an opportunity for volunteers?

Kind regards,

**Subject**: Request for overtime pay
**Attachments**: ucm030757_DMD_nCoV.pdf

Dear Bill,

As you have seen from the DMD updates and the information in the press, the 2019-nCoV situation has been very challenging.

Our interactive review and teleconferences indicated that CDC will send CDRH a completed EUA review template any time soon. The staff has been fabulous and supporting the program 200%. I am anticipating CDC data to be reviewed over the weekend and a complete EUA review package next week. As soon as the emergency is declared we anticipate additional documents from commercial sponsors. This work is on top of the regular review work and I feel obliged to assure appropriate compensation for my staff. Attached please find the request form for overtime for your consideration.

Thanks, Uwe

5. **SPECIFIC DESCRIPTION OF TASK** *(Do not use general description, i.e., "typing," "filing")*
In timely support of the current outbreak of the 2019 novel coronavirus (nCoV) regarding pre-EUA and EUA submissions from government organizations like CDC, BARDA, and DoD to expeditiously authorize diagnostics tests for the detection of nCoV via the Emergency Use Authorization Autority.

6. **REASONS FOR NOT COMPLETING TASK DURING REGULAR HOURS**
The urgency of the 2019-nCoV outbreak requires constant instant responses to government stakeholders and IVD developers like CDC and commercial entities. This additional work is on top of the regular regulator review under MDUFA timelines and workload exceeds what staff can provide in 40 hours of their regular working hours.

7. **COMPLETED BY REQUESTING OFFICIAL** *(from box 3)*
a. DO YOU ANTICIPATE THE NEED FOR OVERTIME IN SUBSEQUENT PAY PERIODS FOR THIS TASK?
☒ Yes *(If "Yes," complete 7b.)* ☐ No
b. DESCRIBE STEPS TAKEN BY REQUESTOR TO REDUCE OR AVOID FURTHER OVERTIME
Review resources from other Branches of DMD will be used, however, specialized knowledge of the EUA process of the above listed individual might be required pending progression of the 2019-nCoV outbreak in the US.

# INSTRUCTIONS FOR COMPLETING FORM FDA 211

Overtime Work (within the provisions of Federal Personnel Manual Supplement 990-1) may be authorized only by officials to whom the necessary authority has been delegated (see FDA Staff Manual Guide 1430.5). Overtime or Holiday Pay will not be paid, nor compensatory time granted, without appropriate authorization. Requests should be initiated on Form FDA 211, "Overtime, Compensatory Time, and Holiday Pay Request and Authorization," and completed as follows:

| Item | Explanation |
|---|---|
| 1-3 | Self-explanatory, to be filled out by requesting official. A requesting official can be the employee, timekeeper, Administrative Officer, or supervisor. |
| 4 | If space is required for additional names of those working overtime, another Form FDA 211 should be filled out in its entirety. If more than one form is used for the same request, the forms should be clipped so that they are processed concurrently.<br><br>Only the "requested" side of the columns should be filled out by the requesting official in item 4d.<br><br>A check mark or "x" should be placed in the appropriate column of item 4e indicating the desired compensation. |
| 5-7 | Self-explanatory, to be filled out by requesting official. |
| 8 | To be filled out by authorizing official.<br><br>After evaluation (and adjustment if necessary), the authorizing official will sign to approve or disapprove the request. If disapproved, the request is returned to the requesting official. If approved, the request is returned to the requesting official who should then forward the document to the applicable timekeepers (and Budget Officer if required).<br><br>The timekeeper will enter hours worked in the appropriate column of item 4d. Hours worked are to be based on data which the employee provides on the bi-weekly time report and cannot exceed hours "requested." If hours worked exceed hours "requested," only the authorizing official may increase the "requested" amount and must initial the modification. |

AMERICAN OVERSIGHT

Dear Angela,

Thank you for your email. Please find attached the current EUA Interactive Review Template draft for molecular-based assays for the detection of 2019-novel coronavirus (2019-nCoV). I suggest when you are ready, the first step is to populate this draft template with the information and data that you currently have about your device and sent it back to us for review as a Pre-EUA submission (to be sent to the Document Control Center). The Pre-EUA review is an interactive process, so we will provide feedback after receiving and reviewing the information provided. The draft review template is a shared "work-in-progress" document which you will populate with information and data as obtained and which we will review and provide feedback to you.

I have also attached a draft cover letter you can use to submit your Pre-EUA for detection of 2019-nCoV to FDA (it includes the address for the Document Control Center). Please include in your Pre-EUA submission package:

- The populated EUA Review Template draft
- FDA Form 3514 (https://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM080872.pdf) - under type of submission please check "other" and specify Pre-EUA.

One hard copy of the signed EUA Cover Letter and one electronic copy of you Pre-EUA submission package (including the EUA Review Template - MS word document) should be enclosed in your Pre-EUA submission to FDA, and we also request that you submit the information requested via electronic mail to myself Kim.Sapsford@fda.hhs.gov, as well as carbon copying (cc:) the following email addresses:

- Division Director: Dr Uwe Scherf, email address: Uwe.Scherf@fda.hhs.gov;
- Branch Chief: Dr Tamara Feldblyum, email address: Tamara.Feldblyum@fda.hhs.gov

Please be reminded that ***in the U.S. a test*** for the detection of 2019-nCoV or to diagnoses 2019-nCoV infection must not be distributed and/or used for clinical diagnosis without premarket clearance, approval, or EUA by the FDA.

NOTE: The EUA Interactive Review Template from the FDA is considered an internal working document and must not be distributed outside of your organization.

Please let me know if you have any questions, we look forward to working with you,

Best regards,

Kim

**Subject**: RE: Potential diagnostic EUA for coronavirus PR

Megan,

Timing update:

CDC could not provide the outstanding analytical data last. Their updated estimate now is this afternoon. Again, the DMD review team is standing by to review the package expeditiously when it arrives. Even when the data look good, not sure it can happen tonight, it looks good definitely tomorrow.

Best, Uwe

Megan,

We just got word from CDC that they are possibly submitting their EUA package tonight or some time tomorrow. If the data look good the review division will be able to get the package towards FDA clearance the same day.

What information do you need to update and finalize the press release?

Sorry for this super short notice, everything is moving super-fast.

Best, Uwe

**Subject:** RE: Potential diagnostic EUA for coronavirus PR

Megan,

Attached please find the intended use of the CDC assay. Could you please update the draft based on this information.

The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is a real-time RT-PCR test intended for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing. Testing is limited to qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.

Results are for the presumptive identification of 2019-nCoV RNA. The 2019-nCoV RNA is generally detectable in upper and lower respiratory specimens during infection. Positive results are indicative of active infection with 2019-nCoV but do not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

Testing with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is intended for use by trained laboratory personnel who are proficient in performing real-time RT-PCR assays. The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is only for use under a Food and Drug Administration's Emergency Use Authorization

Dear Elizabeth

Couple of comments/edits for your consideration.
Please let me know if you have any questions.

As we have done in the past the Emergency determination/declaration authorizing use of IVDs for the 2019-nCoV will be timed with the EUA request package for the first diagnostic (in this case as in the past this is CDC)

Best regards
Kim

Kim,

This is very delicate wording and haven't had a chance to think this through. With current authorization CDC get a number of specimens types and can validate other going forward. We also have not worked out the support response for such a case.

So, no, we will not include that sentence into the current authorization.

AMERICAN OVERSIGHT

Thanks, Uwe

Dear Uwe, Tamara and Li,

During our TTFED discussion, we talked about including the following in the IFU – limitations section

(b)(5) [redacted] requests should be submitted to FDA directly (CDRH-EUA-Reporting@fda.hhs.gov) and the test manufacturer.

It was to address (b)(5) [redacted].

What are your thoughts?

Best regards
Kim

**Subject**: Feedback on (b) (5) - DMD - 2019-nCoV update

Dear Jeff, Bill, Tim and Courtney,

Feedback requested: (b) (5)

Please let me know whether you support this recommendation.

Also, in past emergencies, we worked directly with OCET on EUA package requests (draft documents) and cc CDRH as the final package moves up to OCET and the Commissioner. Please let me know, whether under the new OPEQ/CDRH structure this is still the approach we should take or whether OPEQ/CDRH wants to be involved in the review of the EUA request package. We would like to know so we can factor this into the review timelines. If so, please recommend individuals we should bring up to speed – given the time sensitive nature of these EUA requests.

General update: From the "AMA updates on Coronavirus" call that happened this morning, it appears based on the current case numbers that the mortality rate is about 2.5%. There are current 5 US airports that established screening. The travel alert was updated to a level 3 (highest rating).
CDC is testing 3 alert cases - individuals from the same family – test results are pending, 46 other individuals are also under investigation.

DARPA is involved to support the development of additional diagnostic platforms, but currently all specimens go to CDC for testing. There is consideration of sending sequencing out to LRN, however, CDC expect to have an assay ready to go in 2 weeks. A number of vaccines are in development based on MERS-CoV and SARS but there is a need for wild-type virus for the development of animal models. Funding is under discussion.

AMERICAN OVERSIGHT

In addition, we had a call CDC today to clarify data requirements to support their EUA request. CDC shares data constantly and anticipates a more complete data package for CDRH review very early next week. In other updates WHO have determined at this point that the Wuhan coronavirus is not yet a public health emergency of international concern.

Best, Uwe

**Subject:** RE: Cut-off change - lot release testing criteria

Hi Uwe,
For clarification the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel consists of two separate boxes. Box #1 contains the primers and probes as described below:

**2019-nCoVEUA-01 Box #1: Primers and Probes**

| *Reagent Label* | *Part #* | *Description* | *Quantity / Tube* | *Reactions / Tube* |
|---|---|---|---|---|
| 2019-nCoV_N1 | RV202001 | 2019-nCoV_N1 Combined Primer/Probe Mix | 22.5 nmol | 1000 |

AMERICAN OVERSIGHT

| | | | | |
|---|---|---|---|---|
| 2019-nCoV_N2 | RV202002 | 2019-nCoV_N2 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N3 | RV202003 | 2019-nCoV_N3 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| RP | RV202004 | Human RNase P Forward Primer/Probe Mix | 22.5 nmol | 1000 |

Primer and probes from three individual boxes that were randomly selected after kit assembly were tested as presented in the powerpoint file provided earlier.

Also as requested, please find attached the QC testing process of primer/probe reagents at bulk and post-fill analysis.

We hope this helps to clarify the data presented and addresses your request.
Thank you very much.

**Subject:** APHL Letter for FDA

Dear Wendi and Ren:

I am writing to let you know that the APHL Board of Directors approved sending a letter urging the FDA Commissioner to consider enforcement discretion to allow governmental public health laboratories the ability to create and implement a laboratory developed test (LDT) for the detection of SARS-CoV-2 (COVID-19). In the letter we state that to the extent possible, public health laboratories could work together to:

- Utilize a standard protocol or use a limited set of protocols
- Purchase reagents including primers and probes from a common source
- Utilize a standard validation panel
- Recommend a minimum standard validation approach
- Enable confirmation at another PHL while cases remain sporadic. It is also possible to consider the use of LRN advanced labs to serve as a confirmatory lab if resources are available to do so.

AMERICAN OVERSIGHT

We recognize that not all PHL's will develop and implement an LDT. If PHL's decided against the use of an LDT for whatever reason, they could: 1) wait for the availability of the new CDC replacement kit, 2) coordinate with a PHL that has developed an LDT (this is not uncommon for PHLs to work together), or 3) use a commercially available assay once approved by FDA under an EUA.

We recognize the gravity of the current COVID-19 situation across the globe and wish to have greater diagnostic capability for both surveillance and for patient diagnosis across the United States, hence this extraordinary and rare request.

We will let you know the outcome of our communication with FDA, which is attached. The letter was sent to the FDA Commissioner, copy to his chief of staff; Dr. Redfield, copy to Dr. Jernigan.

Sincerely,

Scott Becker

AMERICAN OVERSIGHT

APHL ASSOCIATION OF PUBLIC HEALTH LABORATORIES

February 24, 2020

Stephen M. Hahn, MD
Commissioner of Food and Drugs
Food and Drug Administration
10903 New Hampshire Avenue
Silver Spring, MD 20993-0002

Dear Commissioner Hahn,

On behalf of our nation's state and local public health laboratories (PHLs), we are writing to urge you to consider enforcement discretion to allow this select group of governmental laboratories the ability to create and implement a laboratory developed test (LDT) for the detection of SARS-CoV-2 (COVID-19). We recognize the gravity of the current COVID-19 situation across the globe and wish to have greater diagnostic capability for both surveillance and for patient diagnosis across the United States, hence this extraordinary and rare request.

While we appreciate the many efforts underway at CDC to provide a diagnostic assay to our member labs under the Emergency Use Authorization (EUA), this has proven challenging and we find ourselves in a situation that requires a quicker local response. We are now many weeks into the response with still no diagnostic or surveillance test available outside of CDC for the vast majority of our member laboratories. While we understand that the EUA process is open to PHLs, we believe a more expeditious route is needed at this time.

To the extent possible, public health laboratories could work together to:

- Utilize a standard protocol or use a limited set of protocols
- Purchase reagents including primers and probes from a common source
- Utilize a standard validation panel
- Recommend a minimum standard validation approach
- Enable confirmation at another PHL while cases remain sporadic. It is also possible to consider the use of LRN advanced labs to serve as a confirmatory lab if resources are available to do so.

We recognize that not all PHL's will develop and implement an LDT. If PHL's decided against the use of an LDT for whatever reason, they could: 1) wait for the availability of the new CDC replacement kit, 2) coordinate with a PHL that has developed an LDT (this is not uncommon for PHLs to work together), or 3) use a commercially available assay once approved by FDA under an EUA.

We look forward to discussing this request with you and your staff as soon as possible. If you have questions, please contact Scott Becker at 301-526-5704 or via email at scott.becker@aphl.org.

Sincerely,

Grace Kubin

AMERICAN OVERSIGHT

# Senate HELP Bipartisan Staff Briefing on Supply Chain: Follow-up Questions

## Drugs

1. **How many FDA-registered drug manufacturing sites (including manufacturing sites that produce active pharmaceutical ingredients (API) and finished dosage form sites) are located in China? Of those, how many of those sites are located in Hubei Province?**

(b) (5)

2. **Of the 25 drug manufacturing sites in Hubei Province, how are finished dosage form manufacturing sites and how many manufacture API?**

(b) (5)

3. **Of those drug manufacturing sites registered with FDA, does FDA have information regarding the status of operation (ie, fully operational, less than fully operational, not operating) about each site? If so, please provide details.**

(b) (5)

4. **How many FDA-registered drug manufacturing sites in Hubei Province experienced some sort of closure related to the coronavirus outbreak?**

(b) (5)

AMERICAN OVERSIGHT

5. **Dr. Woodcock's October 2019 testimony notes that 13% as of August 2019 of the API manufacturers that supply the U.S. are located in China. What does FDA know about the status of these manufacturing sites? (on the 2/18 call, FDA indicated that China sourced 18% of the U.S. supply of API – please confirm which number is correct)**

(b) (5)

7. **What percent of the U.S. supply of API and finished dosage form drugs is manufactured domestically? Please provide what is known about the domestic manufacturing capacity for generics, small molecule, or biologics, if possible.**

(b) (5)

## Devices

8. **Of the 4,000 device manufacturing sites in China, how many are in Hubei Province? Does FDA have information regarding the status of operation (ie, fully operational, less than fully operational, not operating) about each site?**

(b) (5)

AMERICAN OVERSIGHT

(b) (5)

9. **On the 2/18 call, FDA indicated that the 4,000 device manufacturers included contract manufacturers, contract sterilizers, and finished product manufacturers – does this also include manufacturers of component parts for medical devices?**

(b) (5)

10. **What type of medical products do these manufacturing sites produce? What percentage is manufactured for the U.S. market (general percentage)?**

(b) (5)

11. **Of those device manufacturing sites registered with FDA, does FDA have information regarding the status of operation (ie, fully operational, less than fully operational, not operating) about each site? If so, please provide details.**

(b) (5)

12. **Have these manufacturing sites indicated whether they will experience delays in the manufacturing of devices or components of their devices? If so, does FDA have estimates regarding the level of delay/shortage (both for a whole device or a certain component of the device)?**

(b) (5)

AMERICAN OVERSIGHT

(b) (5)

[redacted]

**13. Is there any precedent for device shortages? If so, what is the typical approach for mitigating a device shortage?**

(b) (5)

[redacted]

AMERICAN OVERSIGHT

**14. Of the U.S. supply of medical devices and medical supplies, what percent is manufactured domestically? Please provide what is known about the domestic manufacturing capacity for medical devices such as masks and other PPE, needles, syringes, or other medical devices that may be needed for the domestic response to coronavirus, if possible.**

(b) (5)

**Drugs and Devices**

**15. Does China's FDA collect information about the status of drug or device manufacturing facilities? If so, does China share that information with the US government**

(b) (5)

Jeff,

OL just sent additional intel and suggestions for tomorrow's briefing, below. As noted, all Senate HELP Health LAs will be invited. OL is asking that (b) (5) [redacted] I do concur with OL that you should be prepared for COVID-19 questions outside the Senate bipar list.

AMERICAN OVERSIGHT

I've also highlighted the point from staff below that they will appreciate context for the numbers.

Please note, (b) (5) [redacted]

(b) (5) [redacted]

Please do let me know if you have any questions or concerns on the overall plan for tomorrow, and if there is anything else you want to be sure we cover during tomorrow's 9 am prep.

Best,

Jennifer

AMERICAN OVERSIGHT

Ken and Jennifer,

The committee staff is planning to invite all HELP LA's to the briefing, and we should expect additional questions in the drug and device space, outside of the QA doc to come up. Margaret did state that walking through the questions sounds good, and providing a general update would be nice for folks on the phone that haven't heard one from FDA. She also stated "In general, all the numbers you all shared, while they are very helpful, it would be also great to have in context – for example, where we have the number of facilities in China, do we also have the number of facilities globally? Recognizing there is a volume component there too."

We can discuss more at the prep, but regarding an update, (b) (5) [redacted]

(b) (5) [redacted]

These are just suggestions. There are a million TP's floating around, many of which you have generated, so we won't send any unless you request them.

Thanks,
Prakash

AMERICAN OVERSIGHT

FDA U.S. FOOD & DRUG ADMINISTRATION

Febuary 4, 2020

Robert R. Redfield, MD
Director
Centers for Disease Control and Prevention
1600 Clifton Rd., MS D-14
Atlanta, GA 30333

Dear Dr. Redfield:

This letter is in response to your request that the Food and Drug Administration (FDA) issue an Emergency Use Authorization (EUA) for emergency use of the Centers for Disease Control and Prevention (CDC) 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing, pursuant to Section 564 of the Federal Food, Drug, and Cosmetic Act (the Act) (21 U.S.C. §360bbb-3). Testing is limited to qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.[1]

On Feburary 4, 2020, pursuant to Section 564(b)(1)(C) of the Act, the Secretary of the Department of Health and Human Services (HHS) determined that there is a public health emergency that has a significant potential to affect national security or the health and security of United States citizens living abroad, and that involves the 2019-nCoV. Pursuant to Section 564 of the Act, and on the basis of such determination, the Secretary of HHS then declared that circumstances exist justifying the authorization of emergency use of in vitro diagnostics for detection and/or diagnosis of the novel coronavirus (2019-nCoV) subject to the terms of any authorization issued under Section 564(a) of the Act.[2]

Having concluded that the criteria for issuance of this authorization under Section 564(c) of the Act are met, I am authorizing the emergency use of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel (as described in the scope Section of this letter (Section II)) in individuals who

[1] For ease of reference, this letter will refer to "qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests" as "authorized laboratories."

[2] U.S. Department of Health and Human Services, *Determination of a Public Health Emergency and Declaration that Circumstances Exist Justifying Authorizations Pursuant to Section 564(b) of the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. § 360bbb-3*. Feburary 4, 2020.

AMERICAN OVERSIGHT

meet CDC criteria for 2019-nCoV testing for the presumptive detection of 2019-nCoV by authorized laboratories, subject to the terms of this authorization.

**I. Criteria for Issuance of Authorization**

I have concluded that the emergency use of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in individuals who meet CDC criteria for 2019-nCoV testing meets the criteria for issuance of an authorization under Section 564(c) of the Act, because I have concluded that:

1. The 2019-nCoV can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus;

2. Based on the totality of scientific evidence available to FDA, it is reasonable to believe that the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel may be effective in diagnosing 2019-nCoV infection, and that the known and potential benefits of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, when used for diagnosing 2019-nCoV infection, outweigh the known and potential risks of such product; and

3. There is no adequate, approved, and available alternative to the emergency use of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel for diagnosing 2019-nCoV infection.[3]

**II. Scope of Authorization**

I have concluded, pursuant to Section 564(d)(1) of the Act, that the scope of this authorization is limited to the use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel by authorized laboratories for the presumptive detection of 2019-nCoV in individuals who meet CDC criteria for 2019-nCoV testing.

**The Authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel**

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is for the presumptive detection of 2019-nCoV RNA in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate), and other authorized specimens collected from individuals who meet CDC criteria for 2019-nCoV testing. The testing procedure consists of nucleic acid extraction and purification from the human specimen using authorized extraction methods/instruments followed by real time RT-PCR, where the RNA is reverse transcribed into cDNA and then amplified using the primer sets and detected using specific probes. The real time reverse transcriptase (RT)-PCR is performed on the FDA cleared Applied Biosystems 7500 Fast Dx Real-Time PCR Instrument with SDS 1.4 software, or other authorized instruments or software.

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel includes the following materials or other authorized materials:

[3] No other criteria of issuance have been prescribed by regulation under Section 564(c)(4) of the Act.

AMERICAN OVERSIGHT

- 2019-nCoV_N1, 2019-nCoV_N2 and 2019-nCoV_N3 vials containing primers and probes that target the nucleocapsid (N) gene and are designed for both universal detection of SARS-like coronavirus as well as specific detection of the 2019-nCoV
- RP vial containing the internal control primers and probes that target the Human RNase P gene
- nCoVPC vial containing the 2019-nCoV positive control used in the assay

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel also requires the use of additional authorized materials and authorized ancillary reagents that are not included with the test but are commonly used in clinical laboratories and are described in the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Instructions for Use.

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel requires the following control materials, or other authorized control materials; all controls listed below must generate expected results in order for a test to be considered valid, as outlined in the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Instructions for Use:

- Human Specimen Control (HSC): A human cell culture preparation used as an extraction control and positive control for the RNase P primer and probe set that is extracted and tested concurrently with each specimen extraction run.
- Positive Control for 2019-nCoV (nCoVPC): Run with each batch of specimens. Monitors for failures of rRT-PCR reagents and reaction conditions.
- No Template Control (NTC): Nuclease-free water included in each run. Monitors for reagent and system contamination.
- RNase P (RP) control in clinical samples: The RP primer and probe set is included in each run to test for human RNase P, which controls for specimen quality and demonstrates that nucleic acid was generated by the extraction process.

The above described CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, when labeled consistently with the labeling authorized by FDA, entitled "CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel Instructions for Use" (available at https://www.fda.gov/medical-devices/emergency-situations-medical-devices/emergency-use-authorizations), which may be revised by CDC in consultation with, and with concurrence of, the Division of Microbiology Devices (DMD)/Office of Health Technology 7 Office of In Vitro Diagnostics and Radiological Health (OHT7-OIR)/Office of Product Evaluation and Quality (OPEQ)/Center for Devices and Radiological Health (CDRH), is authorized to be distributed to and used by authorized laboratories under this EUA, despite the fact that it does not meet certain requirements otherwise required by applicable federal law.

The above-described CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is authorized to be accompanied by the following information pertaining to the emergency use, which is required to be made available to healthcare providers and patients:

- Fact Sheet for Healthcare Providers: CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel

AMERICAN OVERSIGHT

- Fact Sheet for Patients: CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel

I have concluded, pursuant to Section 564(d)(2) of the Act, that it is reasonable to believe that the known and potential benefits of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel when used for the presumptive detection of 2019-nCoV and used consistently with the Scope of Authorization of this letter (Section II), outweigh the known and potential risks of such a product.

I have concluded, pursuant to Section 564(d)(3) of the Act, based on the totality of scientific evidence available to FDA, that it is reasonable to believe that the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel may be effective in the presumptive detection of 2019-nCoV, when used consistently with the Scope of Authorization of this letter (Section II), pursuant to Section 564(c)(2)(A) of the Act.

FDA has reviewed the scientific information available to FDA, including the information supporting the conclusions described in Section I above, and concludes that the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, when used for detection of the 2019-nCoV in the specified population (as described in the Scope of Authorization of this letter (Section II)), meets the criteria set forth in Section 564(c) of the Act concerning safety and potential effectiveness.

The emergency use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel under this EUA must be consistent with, and may not exceed, the terms of this letter, including the Scope of Authorization (Section II) and the Conditions of Authorization (Section IV). Subject to the terms of this EUA and under the circumstances set forth in the Secretary of HHS's determination under Section 564(b)(1)(C) described above and the Secretary of HHS's corresponding declaration under Section 564(b)(1), the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel described above is authorized to detect 2019-nCoV in individuals who meet CDC criteria for 2019-nCoV testing.

This EUA will cease to be effective when the HHS declaration that circumstances exist to justify the EUA is terminated under Section 564(b)(2) of the Act or when the EUA is revoked under Section 564(g) of the Act.

**III. Waiver of Certain Requirements**

I am waiving the following requirements for the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel during the duration of this EUA:

- Current good manufacturing practice requirements, including the quality system requirements under 21 CFR Part 820 with respect to the design, manufacture, packaging, labeling, storage, and distribution of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel

- Labeling requirements for cleared, approved, or investigational devices, including labeling requirements under 21 CFR 809.10 and 21 CFR 809.30, except for the

AMERICAN OVERSIGHT

intended use statement (21 CFR 809.10(a)(2), (b)(2)), adequate directions for use (21 U.S.C. 352(f)), (21 CFR 809.10(b)(5), (7), and (8)), any appropriate limitations on the use of the device including information required under 21 CFR 809.10(a)(4), and any available information regarding performance of the device, including requirements under 21 CFR 809.10(b)(12)

**IV. Conditions of Authorization**

Pursuant to Section 564(e) of the Act, I am establishing the following conditions on this authorization:

**Centers for Disease Control and Prevention (CDC)**

A. CDC will notify DMD/OHT7-OIR/OPEQ/CDRH in advance of any changes to the CDC criteria for 2019-nCoV testing.

B. CDC will make available the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel with the authorized labeling only to authorized laboratories. CDC may request changes to the authorized labeling. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

C. CDC will provide to authorized laboratories the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Fact Sheet for Healthcare Providers and the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Fact Sheet for Patients. CDC may request changes to the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Fact Sheet for Healthcare Providers and the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Fact Sheet for Patients. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

D. CDC will make available on its website the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Fact Sheet for Healthcare Providers and the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Fact Sheet for Patients.

E. CDC will inform authorized laboratories and relevant public health authorities of this EUA, including the terms and conditions herein, and any updates made to the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, authorized labeling and authorized Fact Sheets.

F. CDC will ensure that the authorized laboratories using the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel have a process in place for reporting test results to healthcare providers and relevant public health authorities, as appropriate.

G. Through a process of inventory control, CDC will maintain records of test usage.

H. CDC will collect information on the performance of the test. CDC will report to FDA any suspected occurrence of false positive and false negative results and significant

AMERICAN OVERSIGHT

deviations from the established performance characteristics of the test of which CDC becomes aware.

I. CDC is authorized to make available additional information relating to the emergency use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel that is consistent with, and does not exceed, the terms of this letter of authorization.

J. CDC may request new Fact Sheets to accompany the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, if appropriate, and may request changes to such Fact Sheets. Such requests will be made by CDC in consultation with, and require concurrence of, Office of Counterterrorism and Emerging Threats (OCET)/Office of the Chief Scientist (OCS)/Office of the Commissioner (OC) and DMD/OHT7-OIR/OPEQ/CDRH.

K. CDC may request the addition of other instruments and associated software for use with the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

L. CDC may request the addition of other extraction methods for use with the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

M. CDC may request the addition of other specimen types for use with the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

N. CDC may request the addition and/or substitution of other control materials for use with the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

O. CDC may request the addition and/or substitution of other ancillary reagents and materials for use with the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

P. CDC will evaluate the analytical limit of detection and assess traceability[4] of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel with any FDA-recommended reference material(s). After submission to FDA and DMD/OHT7-OIR/CDRH's review of and concurrence with the data, CDC will update its labeling to reflect the additional testing. Such labeling updates will be made in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

Q. CDC will track adverse events and report to FDA under 21 CFR Part 803.

[4] Traceability refers to tracing analytical sensitivity/reactivity back to an FDA-recommended reference material.

AMERICAN OVERSIGHT

**Authorized Laboratories**

R. Authorized laboratories will include with reports of the results of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, all authorized Fact Sheets. Under exigent circumstances, other appropriate methods for disseminating these Fact Sheets may be used, which may include mass media.

S. Authorized laboratories will perform the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel as outlined in the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel Instructions for Use. Deviations from the authorized procedures, including the authorized RT-PCR instruments, authorized extraction methods, authorized clinical specimen types, authorized control materials, authorized other ancillary reagents and authorized materials required to perform the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel are not permitted.

T. Authorized laboratories will have a process in place for reporting test results to healthcare providers and relevant public health authorities, as appropriate.

U. Authorized laboratories will collect information on the performance of the test and report to DMD/OHT7-OIR/OPEQ/CDRH (via email: CDRH-EUA-Reporting@fda.hhs.gov) and CDC (respvirus@cdc.gov) any suspected occurrence of false positive or false negative results and significant deviations from the established performance characteristics of the test of which they become aware.

V. All laboratory personnel using the test must be appropriately trained in RT-PCR techniques and use appropriate laboratory and personal protective equipment when handling this kit, and use the test in accordance with the authorized labeling.

**CDC and Authorized Laboratories**

W. CDC and authorized laboratories will ensure that any records associated with this EUA are maintained until otherwise notified by FDA. Such records will be made available to FDA for inspection upon request.

**Conditions Related to Advertising and Promotion**

X. All advertising and promotional descriptive printed matter relating to the use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel shall be consistent with the Fact Sheets and authorized labeling, as well as the terms set forth in this EUA and the applicable requirements set forth in the Act and FDA regulations.

Y. All advertising and promotional descriptive printed matter relating to the use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel shall clearly and conspicuously state that:

- This test has not been FDA cleared or approved;

AMERICAN OVERSIGHT

- This test has been authorized by FDA under an EUA for use by authorized laboratories;
- This test has been authorized only for the detection of nucleic acid from 2019-nCoV, not for any other viruses or pathogens; and
- This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of emergency use of in vitro diagnostic tests for detection and/or diagnosis of 2019-nCoV under Section 564(b)(1) of the Act, 21 U.S.C. § 360bbb-3(b)(1), unless the authorization is terminated or revoked sooner.

No advertising or promotional descriptive printed matter relating to the use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel may represent or suggest that this test is safe or effective for the detection of 2019-nCoV.

The emergency use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel as described in this letter of authorization must comply with the conditions and all other terms of this authorization.

**V. Duration of Authorization**

This EUA will be effective until the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection and/or diagnosis of 2019-nCoV is terminated under Section 564(b)(2) of the Act or the EUA is revoked under Section 564(g) of the Act.

Sincerely,

Denise M. Hinton

AMERICAN OVERSIGHT

# FACT SHEET FOR HEALTHCARE PROVIDERS

**CDC - 2019-nCoV Real-Time RT-PCR Diagnostic Panel** **February 4, 2020**

**2019 Novel Coronavirus (2019-nCoV)**

This Fact Sheet informs you of the significant known and potential risks and benefits of the emergency use of the Centers for Disease Control and Prevention (CDC) 2019-nCoV Real-Time RT-PCR Diagnostic Panel.

Testing is to be conducted on specimens from people who meet CDC criteria for 2019-nCoV testing, available at CDC's webpage, *Information for Healthcare Professionals* (see links provided in "Where can I go for updates and more information" section). The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel should be ordered only to presumptively detect 2019-nCoV infection. If outside the U.S., testing should follow appropriate public health authority consultation and/or guidance for the diagnosis and reporting of 2019-nCoV infection. All information and guidance, including for 2019-nCoV laboratory testing, may change as more data is gathered on this virus. Please check the CDC's 2019 Novel Coronavirus, webpage (see links provided in "Where can I go for updates and more information" section) regularly for the most current information.

**All patients whose specimens are tested with this assay will receive the Fact Sheet for Patients: CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel**

**What are the symptoms of 2019-nCoV?**
Most patients with confirmed 2019-nCoV infection have developed fever and/or symptoms of acute respiratory illness (e.g., cough, difficulty breathing). However, limited information is currently available to characterize the full spectrum of clinical illness associated with 2019-nCoV infection. Based on what is known about MERS-CoV and SARS-CoV, signs and symptoms may appear any time from 2 to 14 days after exposure to 2019-nCoV virus. The median incubation period is unknown at this time.

Public health officials have identified cases of 2019-nCoV infection in the United States, which may pose risks for public health. To date most reported cases of 2019-nCoV infection outside of China have been directly or indirectly linked through residence in or travel to Wuhan City, China. There also are reports of human to human transmission through close contact with an individual confirmed to be ill with 2019-nCoV in countries outside China. Please check the CDC webpage for the most up to date information.

**This test is to be performed only using respiratory specimens collected from individuals who meet CDC criteria for 2019-nCoV testing.**

**What do I need to know about 2019-nCoV testing?**
Current information on 2019-nCoV infection for healthcare providers, including case definitions and infection control, is available at CDC's webpage, *Information for Healthcare Professionals* (see links provided in "Where can I go for updates and more information" section).

- The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel can be used to test upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, bronchoalveolar lavage, sputum, lower respiratory tract aspirate, nasopharyngeal wash/aspirate or nasal aspirate).
- The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel should be ordered for the presumptive detection of 2019-nCoV in individuals who meet CDC criteria for 2019-nCoV testing.
- The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is authorized for use in qualified laboratories designated by CDC and in the U.S., certified under CLIA to perform high complexity tests.

Specimens should be collected with appropriate infection control precautions following CDC *Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings (2007).*

Use appropriate personal protective equipment when collecting and handling specimens from individuals suspected of being infected with 2019-nCoV as outlined in the CDC *Interim Laboratory Biosafety Guidelines for Handling and Processing Specimens Associated with*

**Report Adverse events,** including problems with test performance or results, to MedWatch by submitting the online FDA Form 3500 (https://www.accessdata.fda.gov/scripts/medwatch/index.cfm?action=reporting.home) or by calling **1-800-FDA-1088**

AMERICAN OVERSIGHT

# FACT SHEET FOR HEALTHCARE PROVIDERS

**CDC - 2019-nCoV Real-Time RT-PCR Diagnostic Panel** **February 4, 2020**

**2019 Novel Coronavirus (2019-nCoV)**

*2019 Novel Coronavirus (2019-nCoV)*. These specimens are only shipped for analysis to laboratories designated by CDC as qualified for analysis. For additional information, refer to CDC *Interim Guidelines for Collecting, Handling, and Testing Clinical Specimens from Patients Under Investigation (PUIs) for 2019 Novel Coronavirus (2019-nCoV)* (see links provided in "Where can I go for updates and more information" section).

**What does it mean if the specimen tests positive for 2019-nCoV?**
A positive test result for 2019-nCoV indicates that RNA from 2019-nCoV was detected, and the patient is presumptively infected with 2019-nCoV and presumed to be contagious. Laboratory test results should always be considered in the context of clinical observations and epidemiological data in making a final diagnosis and patient management decisions. Patient management should follow current CDC guidelines.

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel has been designed to minimize the likelihood of false positive test results. However, in the event of a false positive result, risks to patients could include the following: a recommendation for isolation of the patient, monitoring of household or other close contacts for symptoms, patient isolation that might limit contact with family or friends and may increase contact with other potentially 2019-nCoV infected patients, limits in the ability to work, the delayed diagnosis and treatment for the true infection causing the symptoms, unnecessary prescription of a treatment or therapy, or other unintended adverse effects.

All laboratories using this test must follow the standard confirmatory testing and reporting guidelines according to their appropriate public health authorities.

**What does it mean if the specimen tests negative for 2019-nCoV?**
A negative test result for this test means that 2019-nCoV RNA was not present in the specimen above the limit of detection. However, a negative result does not rule out 2019-nCoV infection and should not be used as the sole basis for treatment or patient management decisions. A negative result does not exclude the possibility of 2019-nCoV infection.

When diagnostic testing is negative, the possibility of a false negative result should be considered in the context of a patient's recent exposures and the presence of clinical signs and symptoms consistent with 2019-nCoV infection. The possibility of a false negative result should especially be considered if the patient's recent exposures or clinical presentation indicate that 2019-nCoV infection is likely, and diagnostic tests for other causes of illness (e.g., other respiratory illness) are negative. If 2019-nCoV infection is still suspected based on exposure history together with other clinical findings, re-testing should be considered in consultation with public health authorities.

Risks to a patient of a false negative include: delayed or lack of supportive treatment, lack of monitoring of infected individuals and their household or other close contacts for symptoms resulting in increased risk of spread of 2019-nCoV within the community, or other unintended adverse events.

**What is an EUA?**
The United States (U.S.) FDA has made this test available under an emergency access mechanism called an Emergency Use Authorization (EUA). The EUA is supported by the Secretary of Health and Human Service's (HHS's) declaration that circumstances exist to justify the use of in vitro diagnostics (IVDs) under EUA for the detection and/or diagnosis of 2019-nCoV.

An IVD made available under an EUA has not undergone the same type of review as an FDA-approved or cleared IVD. However, based on the totality of scientific evidence available, it is reasonable to believe that this IVD may be effective in the detection of 2019-nCoV.

The EUA for this test is in effect for the duration of the 2019-nCoV emergency, unless terminated or revoked (after which the test may no longer be used). An FDA approved or cleared IVD should be used instead of an IVD under EUA, when applicable and available.

**Report Adverse events,** including problems with test performance or results, to MedWatch by submitting the online FDA Form 3500 (https://www.accessdata.fda.gov/scripts/medwatch/index.cfm?action=reporting.home) or by calling **1-800-FDA-1088**

AMERICAN OVERSIGHT

# FACT SHEET FOR PATIENTS

**CDC - 2019-nCoV Real-Time RT-PCR Diagnostic Panel** **February 4, 2020**

**2019 Novel Coronavirus (2019-nCoV)**

You are being given this Fact Sheet because your sample(s) were tested for the 2019 novel coronavirus (2019-nCoV) using the Centers for Disease Control and Prevention (CDC) 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Testing was done because you meet CDC criteria for 2019-nCoV testing.

This Fact Sheet contains information to help you understand the risks and benefits of using this test for the diagnosis of 2019-nCoV infection. After reading this Fact Sheet, if you have questions or would like to discuss the information provided, please talk to your healthcare provider.

- **For the most up to date information on 2019-nCoV please visit the CDC 2019 Novel Coronavirus webpage:**
- **https://www.cdc.gov/nCoV**

**What is 2019-nCoV Infection?**
2019-nCoV infection is caused by the 2019-nCoV. The 2019-nCoV infection can cause mild to severe respiratory illness in humans and was recently idenitifed in Wuhan, China. Limited information is available to characterize the spectrum of clinical illness associated with 2019-nCoV. 2019-nCoV likely spreads to others when a person shows signs or symptoms of being sick (e.g., fever, coughing, sneezing, difficulty breathing, etc.).

**What is the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel?**
The test is designed to detect 2019-nCoV in respiratory specimens, for example nasal or oral swabs.

**Why was my sample tested?**
Your sample(s) were tested because your healthcare provider believes you may have been exposed to 2019-nCoV based on your signs and symptoms (e.g., fever, cough, difficulty breathing), and because:

- You live in or have recently traveled to a place where transmission of 2019-nCoV is known to occur, and/or
- Because you have been in close contact with an individual suspected of or confirmed to have 2019-nCoV infection.

The sample(s) collected from you were tested to help find out whether you may be infected with 2019-nCoV.

**What are the known and potential risks and benefits of the test?**
Potential risks include:

- Possible discomfort or other complications that can happen during sample collection.
- Risk that the test result is incorrect (see below for more information).

Potential benefits include:

- The results, along with other information, can help your healthcare provider make informed recommendations about your care.
- The results of this test may help limit the spread of 2019-nCoV to your family and others in your community.

**What does it mean if I have a positive 2019-nCoV test result?**
If you have a positive test result, it is very likely that you are infected with 2019-nCoV. Therefore, it is also likely that you may be placed in isolation to avoid spreading the virus to others. There is a very small chance that this test can give a positive result that is wrong (a false

**Where can I go for updates and more information?** The most up-to-date information on 2019-nCoV is available at the CDC General webpage: **https://www.cdc.gov/nCoV**. In addition, please also contact your healthcare provider with any questions/concerns.

AMERICAN OVERSIGHT

# FACT SHEET FOR PATIENTS

**CDC - 2019-nCoV Real-Time RT-PCR Diagnostic Panel** **February 4, 2020**

**2019 Novel Coronavirus (2019-nCoV)**

positive result). However, your healthcare provider will work with you to determine how best to care for you based on the test results along with other factors of your medical history, such as symptoms, possible exposures, and geographic location of places you have recently traveled.

**What does it mean if I have a negative test result?**
A negative test result means that 2019-nCoV was not found in your sample. For 2019-nCoV, a negative test result for a sample collected while a person has symptoms usually means that 2019-nCoV did not cause your recent illness.

It is possible for this test to give a negative result that is incorrect (false negative) in some people with 2019-nCoV infection, meaning you could possibly still have an infection with 2019-nCoV even though the test is negative. Therefore, while a negative test most likely means you do not have 2019-nCoV infection, your healthcare provider will consider the test result together with all other aspects of your medical history (such as symptoms, possible exposures, and geographical location of places you have recently traveled) in deciding how to care for you.

It is important that you work with your healthcare provider to help you understand the next steps you should take.

**Is this test FDA-approved or cleared?**
No. This test is not yet approved or cleared by the United States (U.S.) FDA. When there are no FDA-approved or cleared tests available, and other criteria are met, FDA can make tests available under an emergency access mechanism called an Emergency Use Authorization (EUA). The EUA for this test is supported by the Secretary of Health and Human Service's (HHS's) declaration that circumstances exist to justify the use of in vitro diagnostics under EUA for the detection and/or diagnosis of 2019-nCoV. This EUA will remain in effect (meaning this test can be used) for the duration of the 2019-nCoV emergency, unless it is terminated or revoked by FDA (after which the test may no longer be used).

**Where can I go for updates and more information?** The most up-to-date information on 2019-nCoV is available at the CDC General webpage: **https://www.cdc.gov/nCoV**. In addition, please also contact your healthcare provider with any questions/concerns.

## Intended Use

The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is a real-time RT-PCR test intended for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing. Testing is limited to qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.

Results are for the presumptive identification of 2019-nCoV RNA. The 2019-nCoV RNA is generally detectable in upper and lower respiratory specimens during infection. Positive results are indicative of active infection with 2019-nCoV but do not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

Testing with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is intended for use by trained laboratory personnel who are proficient in performing real-time RT-PCR assays. The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is only for use under a Food and Drug Administration's Emergency Use Authorization.

## Summary and Explanation

An outbreak of pneumonia of unknown etiology in Wuhan City, Hubei Province, China was initially reported to WHO on December 31, 2019. Chinese authorities identified a novel coronavirus (2019-nCoV), which has resulted in thousands of confirmed human infections in multiple provinces throughout China and exported cases in several Southeast Asian countries and more recently the United States. Cases of severe illness and some deaths have been reported.

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is a molecular *in vitro* diagnostic test that aids in the detection and diagnosis 2019-nCoV and is based on widely used nucleic acid amplification technology. The product contains oligonucleotide primers and dual-labeled hydrolysis probes (TaqMan®) and control material used in rRT-PCR for the *in vitro* qualitative detection of 2019-nCoV RNA in respiratory specimens.

The term "qualified laboratories" refers to laboratories in which all users, analysts, and any person reporting results from use of this device should be trained to perform and interpret the results from this procedure by a competent instructor prior to use. CDC will limit the distribution of this device to laboratories whose users have successfully completed a training course provided by CDC instructors or designees.

## Principles of the Procedure

The oligonucleotide primers and probes for detection of 2019-nCoV were selected from regions of the virus nucleocapsid (N) gene. The panel is designed for both universal detection of SARS-like coronaviruses (one primer/probe set) as well as specific detection of the 2019-nCoV (two primer/probe sets). An additional primer/probe set to detect the human RNase P gene (RP) in control samples and clinical specimens is also included in the panel.

AMERICAN OVERSIGHT

RNA isolated and purified from upper and lower respiratory specimens is reverse transcribed to cDNA and subsequently amplified in the Applied Biosystems 7500 Fast Dx Real-Time PCR Instrument with SDS version 1.4 software. In the process, the probe anneals to a specific target sequence located between the forward and reverse primers. During the extension phase of the PCR cycle, the 5' nuclease activity of Taq polymerase degrades the probe, causing the reporter dye to separate from the quencher dye, generating a fluorescent signal. With each cycle, additional reporter dye molecules are cleaved from their respective probes, increasing the fluorescence intensity. Fluorescence intensity is monitored at each PCR cycle by Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software.

Detection of viral RNA not only aids in the diagnosis of illness but also provides epidemiological and surveillance information.

## Summary of Preparation and Testing Process

AMERICAN OVERSIGHT

## Materials Required (Provided)

### 2019-nCoVEUA-01 Box #1: Primers and Probes

| *Reagent Label* | *Part #* | *Description* | *Quantity / Tube* | *Reactions / Tube* |
|---|---|---|---|---|
| 2019-nCoV_N1 | RV202001 | 2019-nCoV_N1 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N2 | RV202002 | 2019-nCoV_N2 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N3 | RV202003 | 2019-nCoV_N3 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| RP | RV202004 | Human RNase P Forward Primer/Probe Mix | 22.5 nmol | 1000 |

### Box #2: Positive Control

| *Reagent Label* | *Part #* | *Description* | *Quantity* | *Notes* |
|---|---|---|---|---|
| nCoVPC | RV202005 | 2019-nCoV Positive Control (nCoVPC)<br>For use as a positive control with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel procedure. The nCoVPC contains noninfectious positive control materials supplied in a dried state and must be resuspended before use. nCoVPC consists of *in vitro* transcribed RNA. nCoVPC will yield a positive result with each assay in the 2019-nCoV Real-Time RT-PCR Diagnostic Panel including RP. | 4 tubes | Provides (800) 5 µL test reactions |

## Materials Required (But Not Provided)

### Human Specimen Control (HSC)

| Description | Quantity | CDC Catalog No. |
|---|---|---|
| Manufactured by CDC. For use as an RNA extraction procedural control to demonstrate successful recovery of RNA as well as extraction reagent integrity. The HSC consists of noninfectious (beta-Propiolactone treated) cultured human cell materials supplied as a liquid suspended in 0.01 M PBS at pH 7.2-7.4. | 10 vials x 500uL | KT0189 |

### rRT-PCR Enzyme Mastermix Options

| Reagent | Quantity | Catalog No. |
|---|---|---|
| TaqPath™ 1-Step RT-qPCR Master Mix, CG (ThermoFisher) | 1000 reactions | A15299 |
| | 2000 reactions | A15300 |

### RNA Extraction Options

| Instrument/Manufacturer | Extraction Kit | Catalog No. |
|---|---|---|
| QIAGEN | QIAmp DSP Viral RNA Mini Kit | 50 extractions: 61904 |
| QIAGEN EZ1 Advanced XL | EZ1 DSP Virus Kit | 48 extractions: (62724)<br>Buffer AVL (19073) |

AMERICAN OVERSIGHT

| Instrument/Manufacturer | Extraction Kit | Catalog No. |
|---|---|---|
| | | EZ1 Advanced XL DSP Virus Card (9018703) |

## Equipment and Consumables Required (But Not Provided)

- Vortex mixer
- Microcentrifuge
- Micropipettes (2 or 10 µL, 200 µL and 1000 µL)
- Multichannel micropipettes (5-50 µl)
- Racks for 1.5 mL microcentrifuge tubes
- 2 x 96-well -20°C cold blocks
- 7500 Fast Dx Real-Time PCR Systems with SDS 1.4 software (Applied Biosystems; catalog #446985 or #4406984)
- Extraction systems (instruments): QIAGEN EZ1 Advanced XL
- Molecular grade water, nuclease-free
- 10% bleach (1:10 dilution of commercial 5.25-6.0% hypochlorite bleach)
- DNA*Zap*™ (Ambion, cat. #AM9890) or equivalent
- RNAse AwayTM (Fisher Scientific; cat. #21-236-21) or equivalent
- Disposable powder-free gloves and surgical gowns
- Aerosol barrier pipette tips
- 1.5 mL microcentrifuge tubes (DNase/RNase free)
- 0.2 mL PCR reaction plates (Applied Biosystems; catalog #4346906 or #4366932)
- MicroAmp Optical 8-cap Strips (Applied Biosystems; catalog #4323032)

## Warnings and Precautions

- For *in vitro* diagnostic use (IVD).
- For emergency use only.
- Follow standard precautions. All patient specimens and positive controls should be considered potentially infectious and handled accordingly.
- Do not eat, drink, smoke, apply cosmetics or handle contact lenses in areas where reagents and human specimens are handled.
- Handle all specimens as if infectious using safe laboratory procedures. Refer to Interim Laboratory Biosafety Guidelines for Handling and Processing Specimens Associated with 2019-nCoV https://www.cdc.gov/coronavirus/2019-nCoV/lab-biosafety-guidelines.html.
- Specimen processing should be performed in accordance with national biological safety regulations.
- If infection with 2019-nCoV is suspected based on current clinical and epidemiological screening criteria recommended by public health authorities, specimens should be collected with appropriate infection control precautions.
- Performance characteristics have been determined with human upper respiratory specimens and lower respiratory tract specimens from human patients with signs and symptoms of respiratory infection.

AMERICAN OVERSIGHT

- Perform all manipulations of live virus samples within a Class II (or higher) biological safety cabinet (BSC).
- Use personal protective equipment such as (but not limited to) gloves, eye protection, and lab coats when handling kit reagents while performing this assay and handling materials including samples, reagents, pipettes, and other equipment and reagents.
- Amplification technologies such as PCR are sensitive to accidental introduction of PCR product from previous amplifications reactions. Incorrect results could occur if either the clinical specimen or the real-time reagents used in the amplification step become contaminated by accidental introduction of amplification product (amplicon). Workflow in the laboratory should proceed in a unidirectional manner.
    - Maintain separate areas for assay setup and handling of nucleic acids.
    - Always check the expiration date prior to use. Do not use expired reagent. Do not substitute or mix reagent from different kit lots or from other manufacturers.
    - Change aerosol barrier pipette tips between all manual liquid transfers.
    - During preparation of samples, compliance with good laboratory techniques is essential to minimize the risk of cross-contamination between samples, and the inadvertent introduction of nucleases into samples during and after the extraction procedure. Proper aseptic technique should always be used when working with nucleic acids.
    - Maintain separate, dedicated equipment (e.g., pipettes, microcentrifuges) and supplies (e.g., microcentrifuge tubes, pipette tips) for assay setup and handling of extracted nucleic acids.
    - Wear a clean lab coat and powder-free disposable gloves (not previously worn) when setting up assays.
    - Change gloves between samples and whenever contamination is suspected.
    - Keep reagent and reaction tubes capped or covered as much as possible.
    - Primers, probes (including aliquots), and enzyme master mix must be thawed and maintained on cold block at all times during preparation and use.
    - Work surfaces, pipettes, and centrifuges should be cleaned and decontaminated with cleaning products such as 10% bleach, "DNA*Zap*™" or "RNase AWAY®" to minimize risk of nucleic acid contamination. Residual bleach should be removed using 70% ethanol.
- RNA should be maintained on cold block or on ice during preparation and use to ensure stability.
- Dispose of unused kit reagents and human specimens according to local, state, and federal regulations.

## Reagent Storage, Handling, and Stability

- Store all dried primers and probes and the positive control, nCoVPC, at 2-8°C until re-hydrated for use. Store liquid HSC control materials at ≤ -20°C.
- Always check the expiration date prior to use. Do not use expired reagents.
- Protect fluorogenic probes from light.
- Primers, probes (including aliquots), and enzyme master mix must be thawed and kept on a cold block at all times during preparation and use.
- Do not refreeze probes.
- Controls and aliquots of controls must be thawed and kept on ice at all times during preparation and use.

AMERICAN OVERSIGHT

## Specimen Collection, Handling, and Storage

Inadequate or inappropriate specimen collection, storage, and transport are likely to yield false test results. Training in specimen collection is highly recommended due to the importance of specimen quality. CLSI MM13-A may be referenced as an appropriate resource.

- Collecting the Specimen
  - Refer to Interim Guidelines for Collecting, Handling, and Testing Clinical Specimens from Patients Under Investigation (PUIs) for 2019 Novel Coronavirus (2019-nCoV) https://www.cdc.gov/coronavirus/2019-nCoV/guidelines-clinical-specimens.html
  - Follow specimen collection devices manufacturer instructions for proper collection methods.
  - Swab specimens should be collected using only swabs with a synthetic tip, such as nylon or Dacron®, and an aluminum or plastic shaft. Calcium alginate swabs are unacceptable and cotton swabs with wooden shafts are not recommended. Place swabs immediately into sterile tubes containing 2-3 ml of viral transport media. NP and OP specimens should be kept in separate vials.
- Transporting Specimens
  - Specimens must be packaged, shipped, and transported according to the current edition of the International Air Transport Association (IATA) Dangerous Goods Regulation. Follow shipping regulations for UN 3373 Biological Substance, Category B when sending potential 2019-nCoV specimens. Store specimens at 2-8°C and ship overnight to CDC on ice pack. If a specimen is frozen at -70°C or lower, ship overnight to CDC on dry ice.
- Storing Specimens
  - Specimens can be stored at 2-8°C for up to 72 hours after collection.
  - If a delay in extraction is expected, store specimens at -70°C or lower.
  - Extracted nucleic acid should be stored at -70°C or lower.

## Specimen Referral to CDC

Referring a specimen to the CDC

- Ship all specimens overnight to CDC.
- Ship frozen specimens on dry ice and non-frozen specimens on cold packs.
- Refer to the International Air Transport Association (IATA - www.iata.org) for requirements for shipment of human or potentially infectious biological specimens. Follow shipping regulations for UN 3373 Biological Substance, Category B when sending potential 2019-nCoV specimens.
- Prior to shipping, notify CDC Division of Viral Diseases (see contact information below) that you are sending specimens.

AMERICAN OVERSIGHT

FDACDRH p3-AC-002636

FDA-CVD-SHURENJ-000201200107 MULTI-HHS-20-0522-B, 20-0523-A-003325

- Send all samples to the following recipient:

Centers for Disease Control and Prevention
c/o STATT
Attention: Dr. Stephen Lindstrom (Unit 84)
1600 Clifton Rd., Atlanta, GA 30329-4027
Phone: (404) 639-1587

**The emergency contact number for CDC Emergency Operations Center (EOC) is 770-488-7100.**

## Reagent and Controls Preparation

**Primer and Probe Preparation:**

1) Upon receipt, store dried primers and probes at 2-8°C.
2) Precautions: These reagents should only be handled in a clean area and stored at appropriate temperatures (see below) in the dark. Freeze-thaw cycles should be avoided. Maintain cold when thawed.
3) Using aseptic technique, suspend dried reagents in 1.5 mL of nuclease-free water (50X working concentration) and allow to rehydrate for 15 min at room temperature in the dark.
4) Mix gently and aliquot primers/probe in 300 µL volumes into 5 pre-labeled tubes. Store a single aliquot of primers/probe at 2-8°C in the dark. Do not refreeze (stable for up to 4 months). Store remaining aliquots at ≤ -20°C in a non-frost-free freezer.

**2019-nCoV Positive Control (nCoVPC) Preparation:**

1) Precautions: This reagent should be handled with caution in a dedicated nucleic acid handling area to prevent possible contamination. Freeze-thaw cycles should be avoided. Maintain on ice when thawed.
2) Resuspend dried reagent in each tube in 1 mL of nuclease-free water to achieve the proper concentration. Make single use aliquots (approximately 30 µL) and store at ≤ -70°C.
3) Thaw a single aliquot of diluted positive control for each experiment and hold on ice until adding to plate. Discard any unused portion of the aliquot.

**Human Specimen Control (HSC) (not provided)**

1) Human Specimen Control (HSC) must be extracted and processed with each specimen extraction run.
2) Refer to the Human Specimen Control (HSC) package insert for instructions for use.

**No Template Control (NTC) (not provided)**

1) Sterile, nuclease-free water
2) Aliquot in small volumes
3) Used to check for contamination during specimen extraction and/or plate set-up

AMERICAN OVERSIGHT

## General Preparation

**Equipment Preparation**

Clean and decontaminate all work surfaces, pipettes, centrifuges, and other equipment prior to use. Decontamination agents should be used including 5% bleach, 70% ethanol, and *DNAzap*™ or *RNase AWAY*® to minimize the risk of nucleic acid contamination.

## Nucleic Acid extraction

Performance of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is dependent upon the amount and quality of template RNA purified from human specimens. The following commercially available RNA extraction kits and procedures have been qualified and validated for recovery and purity of RNA for use with the panel:

**Qiagen QIAamp® DSP Viral RNA Mini Kit**

Recommendation(s): Utilize 100 µL of sample and elute with 100 µL of buffer or utilize 140 µL of sample and elute with 140 µL of buffer.

**Qiagen EZ1 Advanced XL**

Kit: Qiagen EZ1 DSP Virus Kit and Buffer AVL (supplied separately) for offboard lysis
Card: EZ1 Advanced XL DSP Virus Card
Recommendation(s): Add 120 µL of sample to 280 µL of pre-aliquoted Buffer AVL (total input sample volume is 400 µL). Proceed with the extraction on the EZ1 Advanced XL. Elution volume is 120 µL.

Manufacturer's recommended procedures (except as noted in recommendations above) are to be followed for sample extraction. HSC must be included in each extraction batch.

***Disclaimer: Names of vendors or manufacturers are provided as examples of suitable product sources. Inclusion does not imply endorsement by the Centers for Disease Control and Prevention.***

## Assay Set Up

**Reaction Master Mix and Plate Set Up**

Note: Plate set-up configuration can vary with the number of specimens and work day organization. NTCs and nCoVPCs must be included in each run.

1) In the reagent set-up room clean hood, place rRT-PCR buffer, enzyme, and primer/probes on ice or cold-block. Keep cold during preparation and use.
2) Thaw 4X Reaction Mix prior to use.
3) Mix buffer, enzyme, and primer/probes by inversion 5 times.
4) Centrifuge buffer and primers/probes for 5 seconds to collect contents at the bottom of the tube, and then place the tube in a cold rack.
5) Label one 1.5 mL microcentrifuge tube for each primer/probe set.
6) Determine the number of reactions (N) to set up per assay. It is necessary to make excess reaction mix for the NTC, nCoVPC, HSC (if included in the RT-PCR run), and RP reactions and for pipetting error. Use the following guide to determine N:

AMERICAN OVERSIGHT

- If number of samples (n) including controls equals 1 through 14, then N = n + 1
- If number of samples (n) including controls is 15 or greater, then N = n + 2

7) For each primer/probe set, calculate the amount of each reagent to be added for each reaction mixture (N = # of reactions).

**TaqPath™ 1-Step RT-qPCR Master Mix**

| Step # | Reagent | Vol. of Reagent Added per Reaction |
|---|---|---|
| 1 | Nuclease-free Water | N x 8.5 µL |
| 2 | Combined Primer/Probe Mix | N x 1.5 µL |
| 3 | TaqPath™ 1-Step RT-qPCR Master Mix (4x) | N x 5.0 µL |
| | **Total Volume** | **N x 15.0 µL** |

8) Dispense reagents into each respective labeled 1.5 mL microcentrifuge tube. After addition of the reagents, mix reaction mixtures by pipetting up and down. ***Do not vortex***.
9) Centrifuge for 5 seconds to collect contents at the bottom of the tube, and then place the tube in a cold rack.
10) Set up reaction strip tubes or plates in a 96-well cooler rack.
11) Dispense 15 µL of each master mix into the appropriate wells going across the row as shown below (**Figure 1**):

**Figure 1: Example of Reaction Master Mix Plate Set-Up**

| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **A** | N1 | N1 | N1 | N1 | N1 | N1 | N1 | N1 | N1 | N1 | N1 | N1 |
| **B** | N2 | N2 | N2 | N2 | N2 | N2 | N2 | N2 | N2 | N2 | N2 | N2 |
| **C** | N3 | N3 | N3 | N3 | N3 | N3 | N3 | N3 | N3 | N3 | N3 | N3 |
| **D** | RP | RP | RP | RP | RP | RP | RP | RP | RP | RP | RP | RP |
| **E** | | | | | | | | | | | | |
| **F** | | | | | | | | | | | | |
| **G** | | | | | | | | | | | | |
| **H** | | | | | | | | | | | | |

12) Prior to moving to the nucleic acid handling area, prepare the No Template Control (NTC) reactions for column #1 in the assay preparation area.
13) Pipette 5 µL of nuclease-free water into the NTC sample wells (**Figure 2**, column 1). Securely cap NTC wells before proceeding.
14) Cover the entire reaction plate and move the reaction plate to the specimen nucleic acid handling area.

AMERICAN OVERSIGHT

FDACDRH p3-AC-7-002659

FDA-CVD-SHURENJ-00020121 MULTI-HHS-20-0522-B, 20-0523-A-003328

**Nucleic Acid Template Addition**

1) Gently vortex nucleic acid sample tubes for approximately 5 seconds.
2) Centrifuge for 5 seconds to collect contents at the bottom of the tube, and then place the tube in a cold rack.
3) After centrifugation, place extracted nucleic acid sample tubes in the cold rack.
4) Samples should be added to columns 2-11 (column 1 and 12 are for controls) to the specific assay that is being tested as illustrated in **Figure 2**. Carefully pipette 5.0 µL of the first sample into all the wells labeled for that sample (i.e. Sample "S1" down column #2). *Keep other sample wells covered during addition. Change tips after each addition.*
5) Securely cap the column to which the sample has been added to prevent cross contamination and to ensure sample tracking.
6) Change gloves often and when necessary to avoid contamination.
7) Repeat steps #3 and #4 for the remaining samples.
8) If necessary, add 5 µL of Human Specimen Control (HSC) extracted sample to the HSC wells (**Figure 2**, column 11). Securely cap wells after addition. NOTE: Per CLIA regulations, HSC must be tested at least once per day.
9) Cover the entire reaction plate and move the reaction plate to the positive template control handling area.

**Assay Control Addition**

1) Pipette 5 µL of nCoVPC RNA to the sample wells of column 12 (**Figure 2**). Securely cap wells after addition of the control RNA.

***NOTE:*** *If using 8-tube strips, label the TAB of each strip to indicate sample position.* ***DO NOT LABEL THE TOPS OF THE REACTION TUBES!***

*2)* Briefly centrifuge reaction tube strips for 10-15 seconds. After centrifugation return to cold rack.

***NOTE:*** *If using 96-well plates, centrifuge plates for 30 seconds at 500 x g, 4°C.*

## Create a Run Template on the Applied Biosystems 7500 Fast Dx Real-time PCR Instrument (Required if no template exists)

If the template already exists on your instrument, please proceed to the **RUNNING A TEST** section.

1) Launch the Applied Biosystems 7500 Fast Dx Real-time PCR Instrument by double clicking on the Applied Biosystems 7500 Fast Dx System icon on the desktop.
2) A new window should appear, select **Create New Document** from the menu.

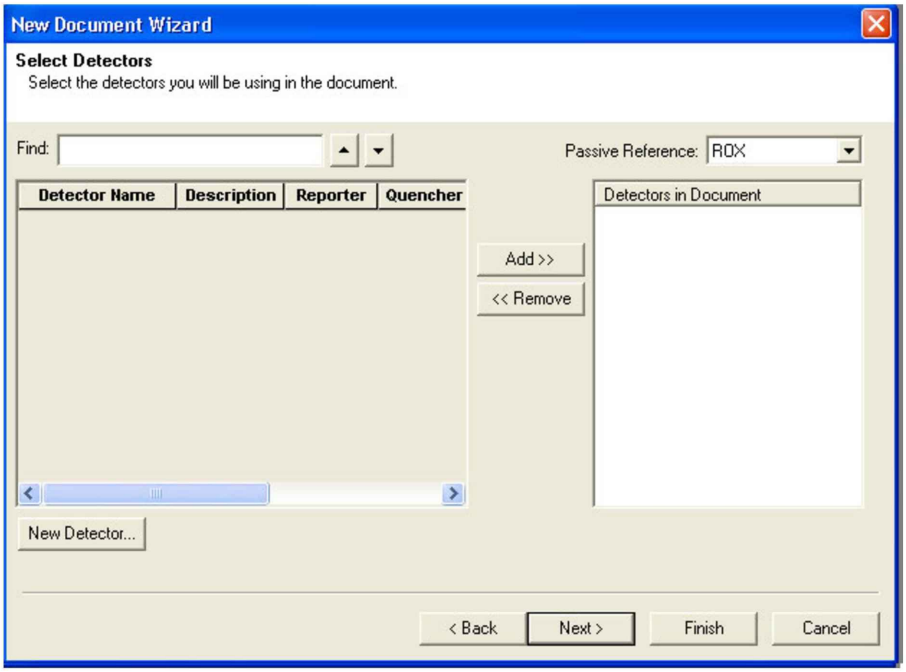

**Figure 3. New Document Wizard Window**

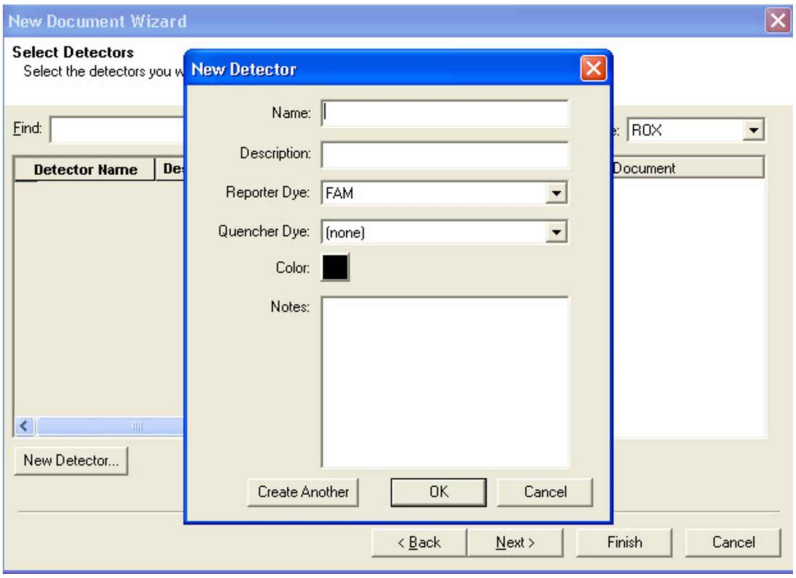
3) The **New Document Wizard** screen in **Figure 3** will appear. Select:
   a. Assay: **Standard Curve (Absolute Quantitation)**
   b. Container: **96-Well Clear**
   c. Template: **Blank Document**
   d. Run Mode: **Standard 7500**
   e. Operator: ***Your Name***
   f. Comments: **SDS v1.4**
   g. Plate Name: ***Your Choice***
4) After making selections click **Next** at the bottom of the window.



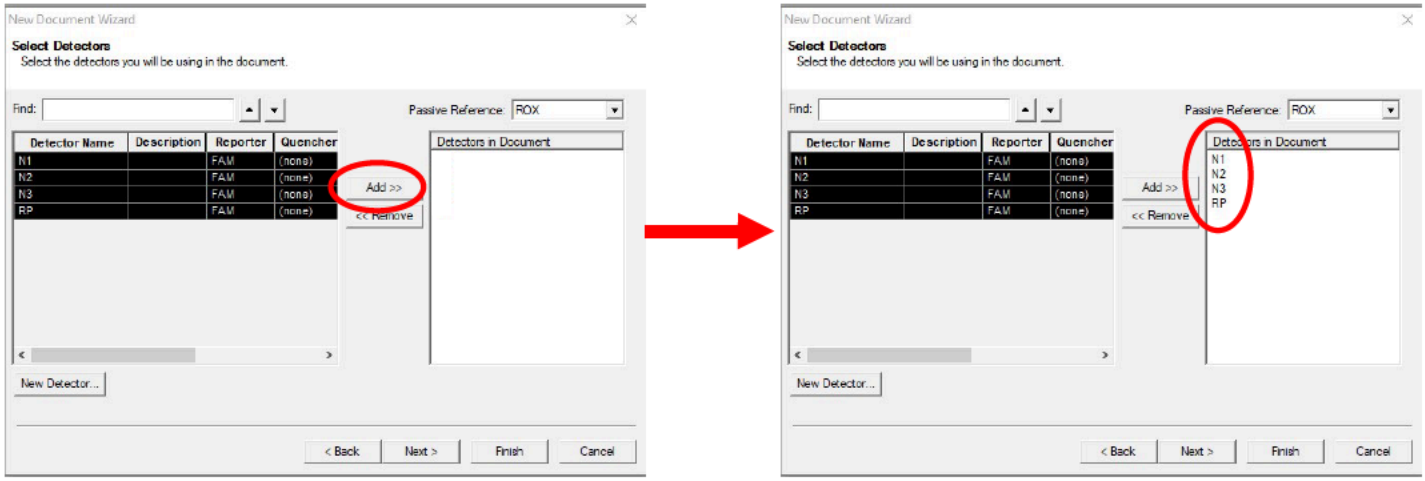
AMERICAN OVERSIGHT

**Figure 4. Creating New Detectors**

5) After selecting next, the ***Select Detectors*** screen (**Figure 4**) will appear.
6) Click the **New Detector** button (see **Figure 4**).
7) The **New Detector** window will appear (**Figure 5**). A new detector will need to be defined for each primer and probe set. Creating these detectors will enable you to analyze each primer and probe set individually at the end of the reaction.

**Figure 5. New Detector Window**

AMERICAN OVERSIGHT



FDACDRH p3-AC-002642
FDA-CVD-SHURENJ-000201200107 MULTI-HHS-20-0522-B, 20-0523-A-003331

8) Start by creating the N1 Detector. Include the following:
   a. Name: **N1**
   b. Description: *leave blank*
   c. Reporter Dye: **FAM**
   d. Quencher Dye: **(none)**
   e. Color: *to change the color of the detector indicator do the following:*
      ⇒ Click on the color square to reveal the color chart
      ⇒ Select a color by clicking on one of the squares
      ⇒ After selecting a color click **OK** to return to the New Detector screen
   f. Click the **OK** button of the New Detector screen to return to the screen shown in **Figure 4**.
9) Repeat step 6-8 for each target in the panel.

| Name | Reporter Dye | Quencher Dye |
|---|---|---|
| N1 | FAM | (none) |
| N2 | FAM | (none) |
| N3 | FAM | (none) |
| RP | FAM | (none) |

10) After each Detector is added, the **Detector Name**, **Description**, **Reporter** and **Quencher** fields will become populated in the **Select Detectors** screen (**Figure 6**).
11) Before proceeding, the newly created detectors must be added to the document. To add the new detectors to the document, click **ADD** (see **Figure 6**). Detector names will appear on the right hand side of the **Select Detectors** window (**Figure 6**).

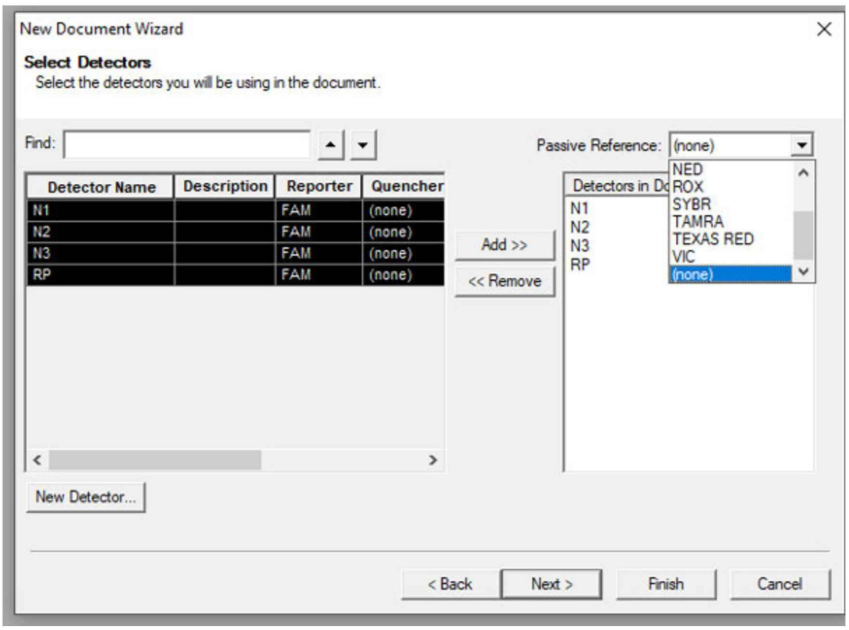


**Figure 6. Adding New Detectors to Document**

12) Once all detectors have been added, select **(none)** for **Passive Reference** at the top right hand drop down menu (**Figure 7**).

AMERICAN OVERSIGHT

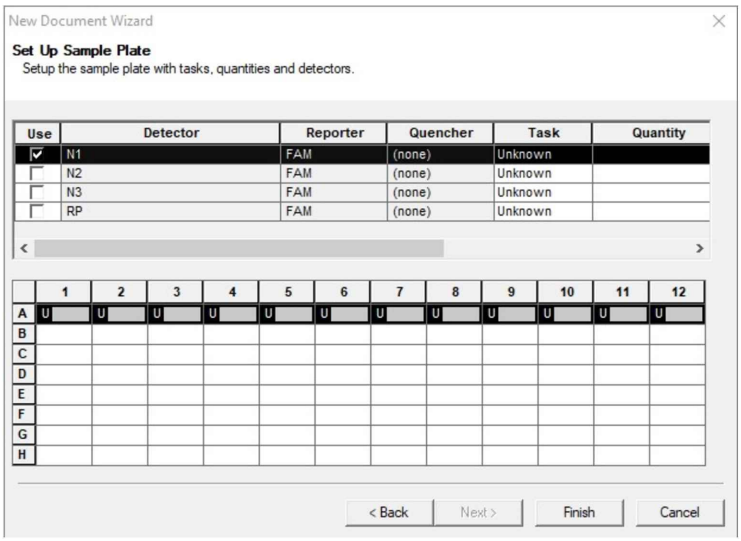

**Figure 7. Select Passive Reference**

**Passive reference should be set to "(none)" as described above.**

13) Click **Next** at the bottom of the **Select Detectors** window to proceed to the **Set Up Sample Plate** window (**Figure 8**).
14) In the **Set Up Sample Plate** window (**Figure 8**), use your mouse to select row A from the lower portion of the window, in the spreadsheet (see **Figure 8**).
15) In the top portion of the window, select detector **N1**. A check will appear next to the detector you have selected (**Figure 8**). You will also notice the row in the spreadsheet will be populated with a colored "U" icon to indicate which detector you've selected.
16) Repeat step 14-15 for each detector that will be used in the assay.

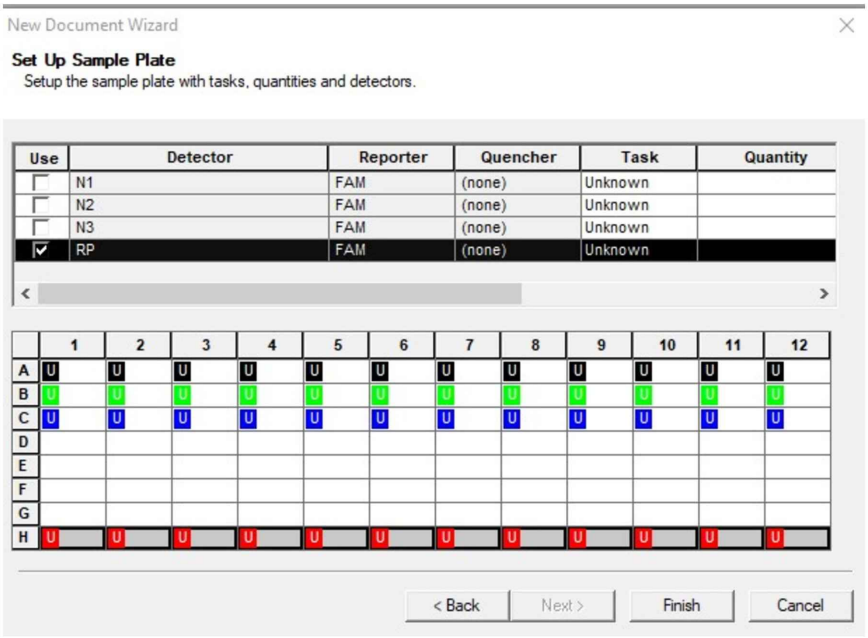

**Figure 8. Sample Plate Set-up**

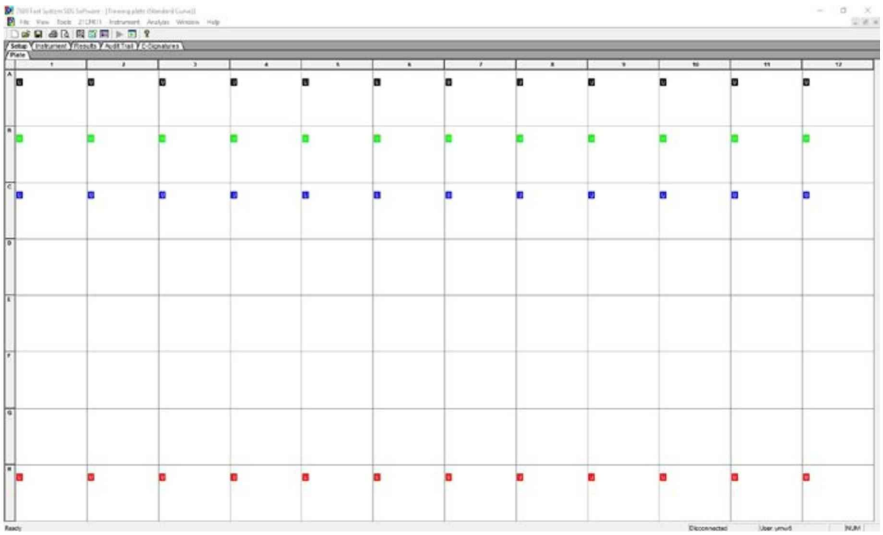
AMERICAN OVERSIGHT



17) Select **Finish** after detectors have been assigned to their respective rows. (**Figure 9**).

**Figure 9. Finished Plate Set-up**

18) After clicking "Finish", there will be a brief pause allowing the Applied Biosystems 7500 Fast Dx to initialize. This initialization is followed by a clicking noise. ***Note: The machine must be turned on for initialization.***
19) After initialization, the **Plate** tab of the Setup (**Figure 10)** will appear.
20) Each well of the plate should contain colored U icons that correspond with the detector labels that were previously chosen. To confirm detector assignments, select **Tools** from the file menu, then select **Detector Manager.**

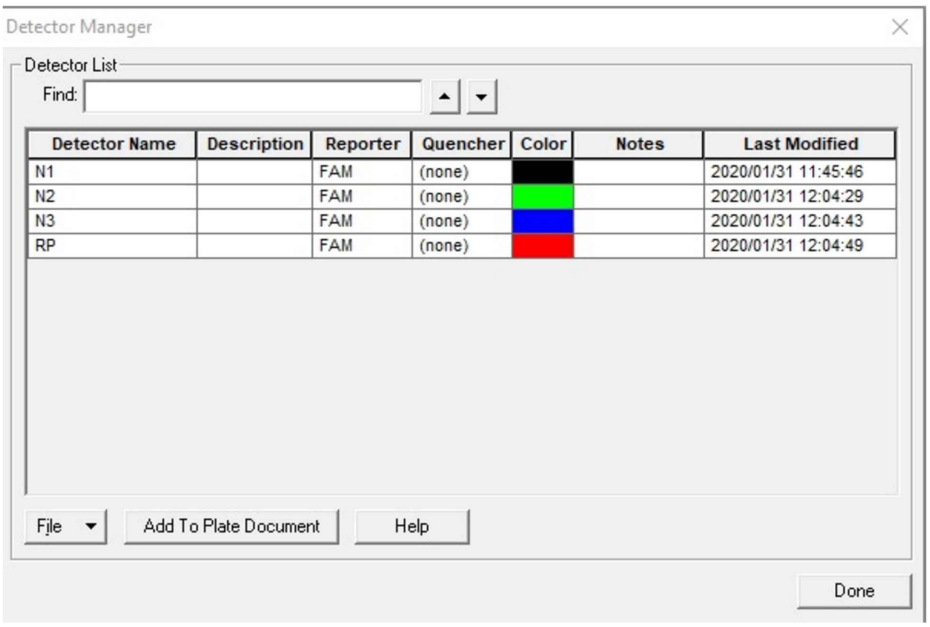


**Figure 10. Plate Set-up Window**

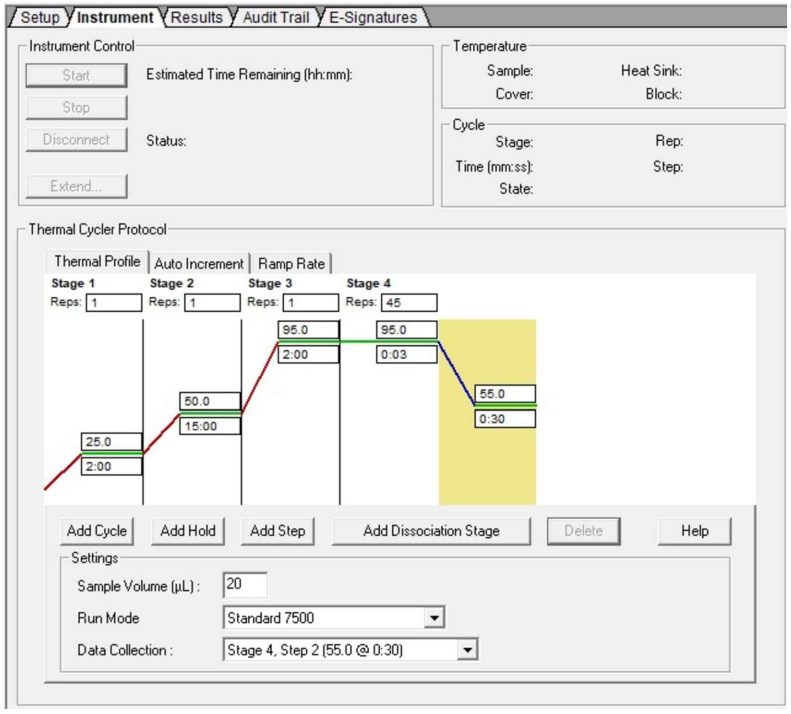
AMERICAN OVERSIGHT

21) The Detector Manager window will appear (**Figure 11**).

**Figure 11. Detector Manager Window**

22) Confirm all detectors are included and that each target has a **Reporter** set to **FAM** and the **Quencher** is set to **(none)**.
23) If all detectors are present, select **Done**. The detector information has been created and assigned to wells on the plate.

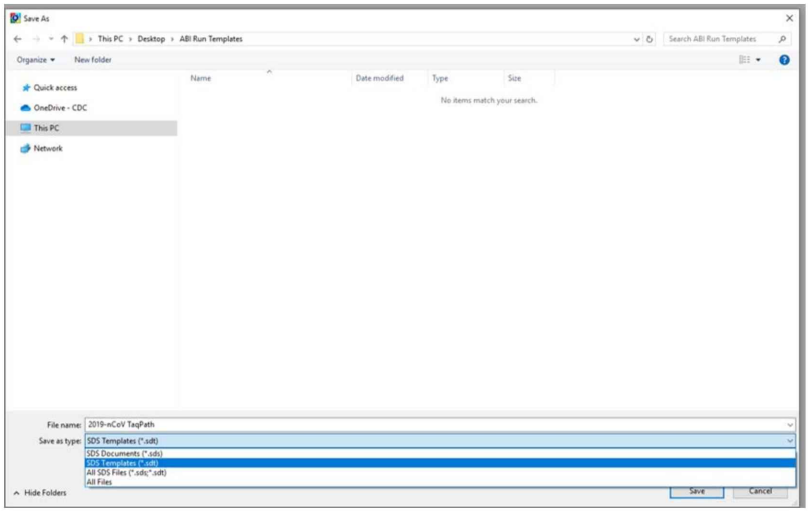
## Defining the Instrument Settings



1) After detectors have been created and assigned, proceed to instrument set up.
2) Select the **Instrument** tab to define thermal cycling conditions.
3) Modify the thermal cycling conditions as follows (**Figure 12**):

**TaqPath™ 1-Step RT-qPCR Master Mix, CG (ThermoFisher)**

a. In Stage 1, Set to 2 min at **25°C**; **1 Rep**.
b. In Stage 2, Set to 15 min at **50°C**; **1 Rep**.
c. In Stage 3, Set to 2 min at **95°C, 1 Rep.**
d. In Stage 4, Step 1 set to **3 sec** at **95°C**.
e. In Stage 4, Step 2 set to **30 sec** at **55.0°C.**
f. In Stage 4, Reps should be set to **45.**
g. Under **Settings** (**Figure 12**), bottom left-hand box, change volume to 20 µL.
h. Under **Settings**, **Run Mode** selection should be **Standard 7500**.
**i.** Step 2 of Stage 4 should be highlighted in yellow to indicate data collection (see **Figure 12**).

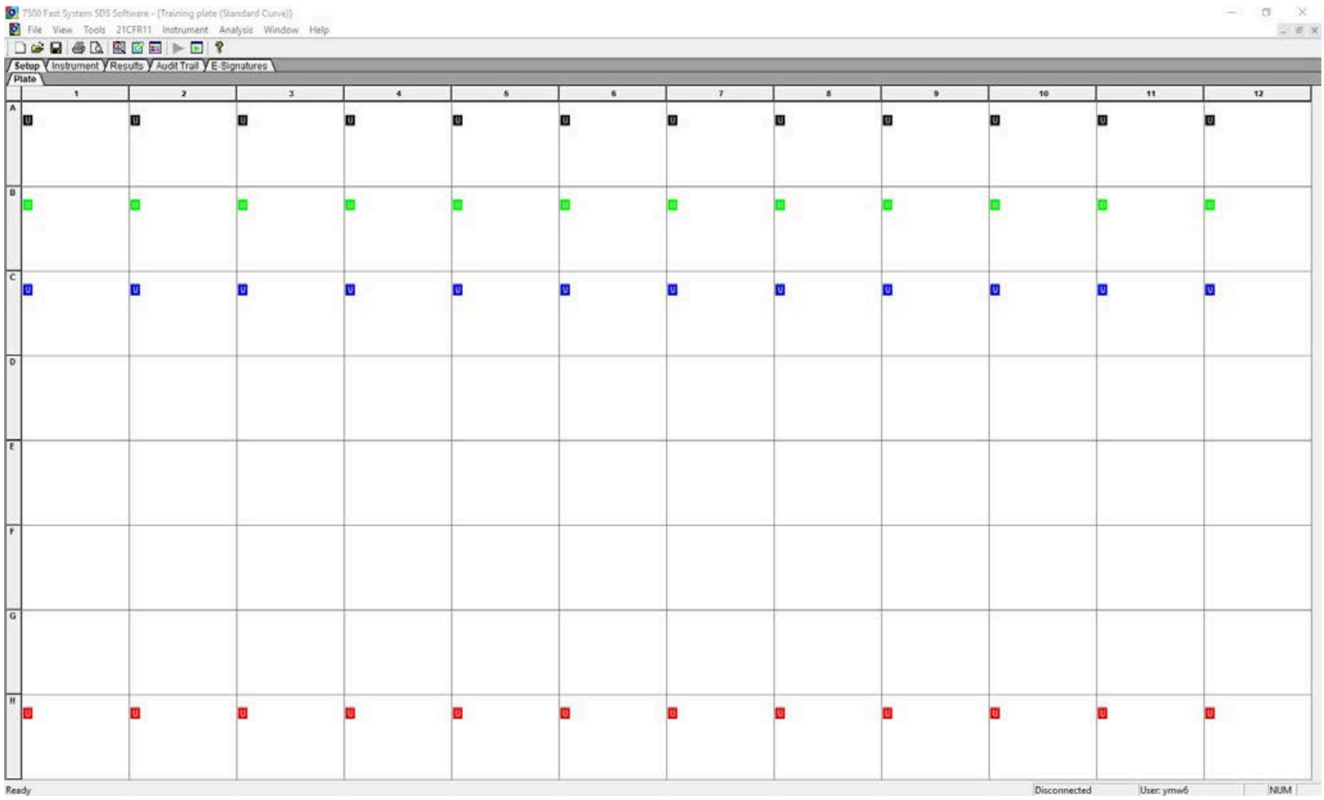


AMERICAN OVERSIGHT

**Figure 12. Instrument Window**

4) After making changes to the **Instrument** tab, the template file is ready to be saved. To save the template, select **File** from the top menu, then select **Save As**.
5) Save the template as **2019-nCoV TaqPath** as appropriate in the desktop folder labeled "***ABI Run Templates***" (*you must create this folder*). Save as type should be SDS Templates (*.sdt) (**Figure 13**).

**Figure 13. Saving Template**



AMERICAN OVERSIGHT

## Running a Test

1) Turn on the ABI 7500 Fast Dx Real-Time PCR Instrument.
2) Launch the Applied Biosystems 7500 Fast Dx Real-time PCR System by double clicking on the 7500 Fast Dx System icon on the desktop.
3) A new window should appear, select **Open Existing Document** from the menu.
4) Navigate to select your ABI Run Template folder from the desktop.
5) Double click on the appropriate template file (**2019-nCoV TaqPath)**
6) There will be a brief pause allowing the Applied Biosystems 7500 Fast Dx Real-Time PCR Instrument to initialize. This initialization is followed by a clicking noise. ***Note: The machine must be turned on for initialization.***

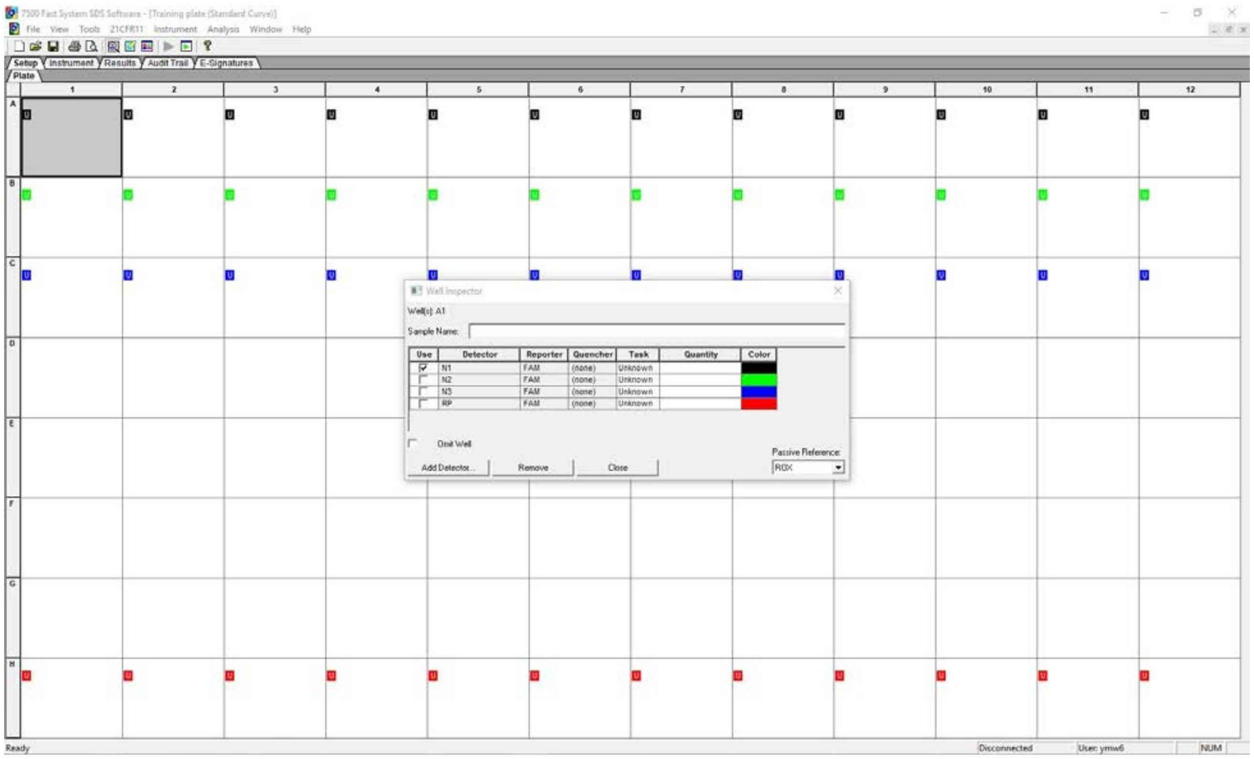


**Figure 14. Plate Set-up Window**

7) After the instrument initializes, a plate map will appear (**Figure 14**). The detectors and controls should already be labeled as they were assigned in the original template.
8) Click the **Well Inspector** icon  from the top menu.
9) Highlight specimen wells of interest on the plate map.
10) Type sample identifiers to **Sample Name** box in the **Well Inspector** window (**Figure 15**).

AMERICAN OVERSIGHT

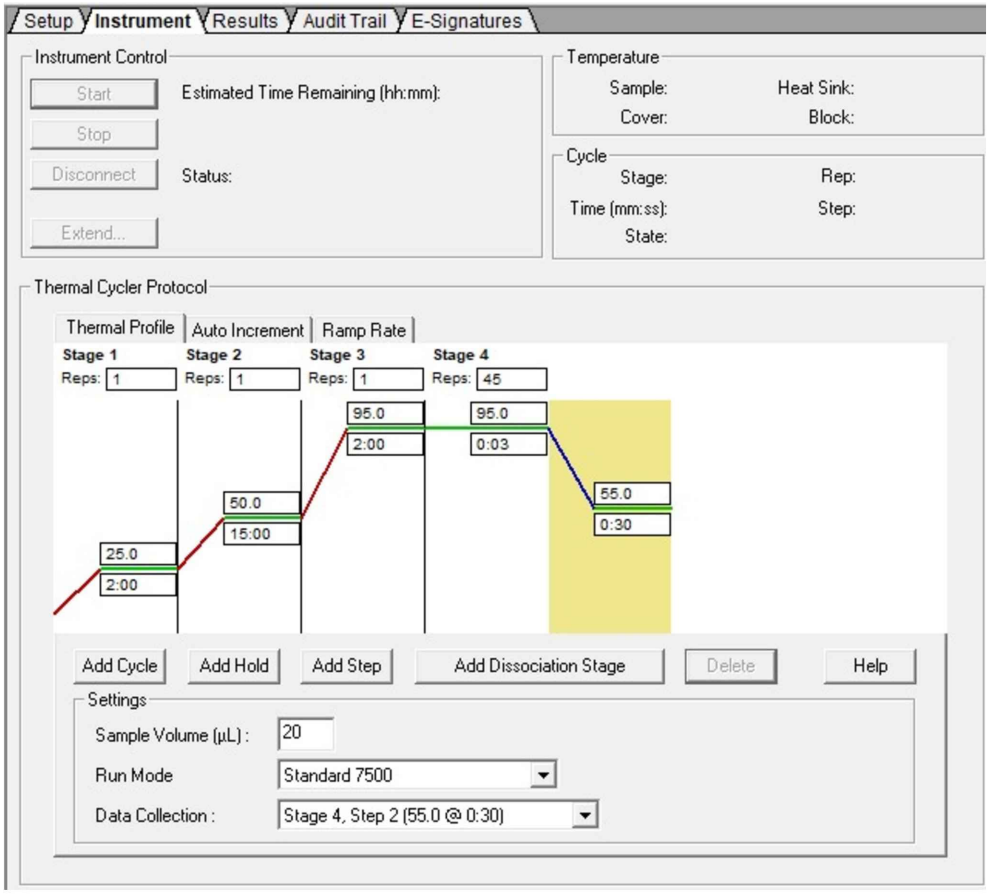

**Figure 15. Labeling Wells**

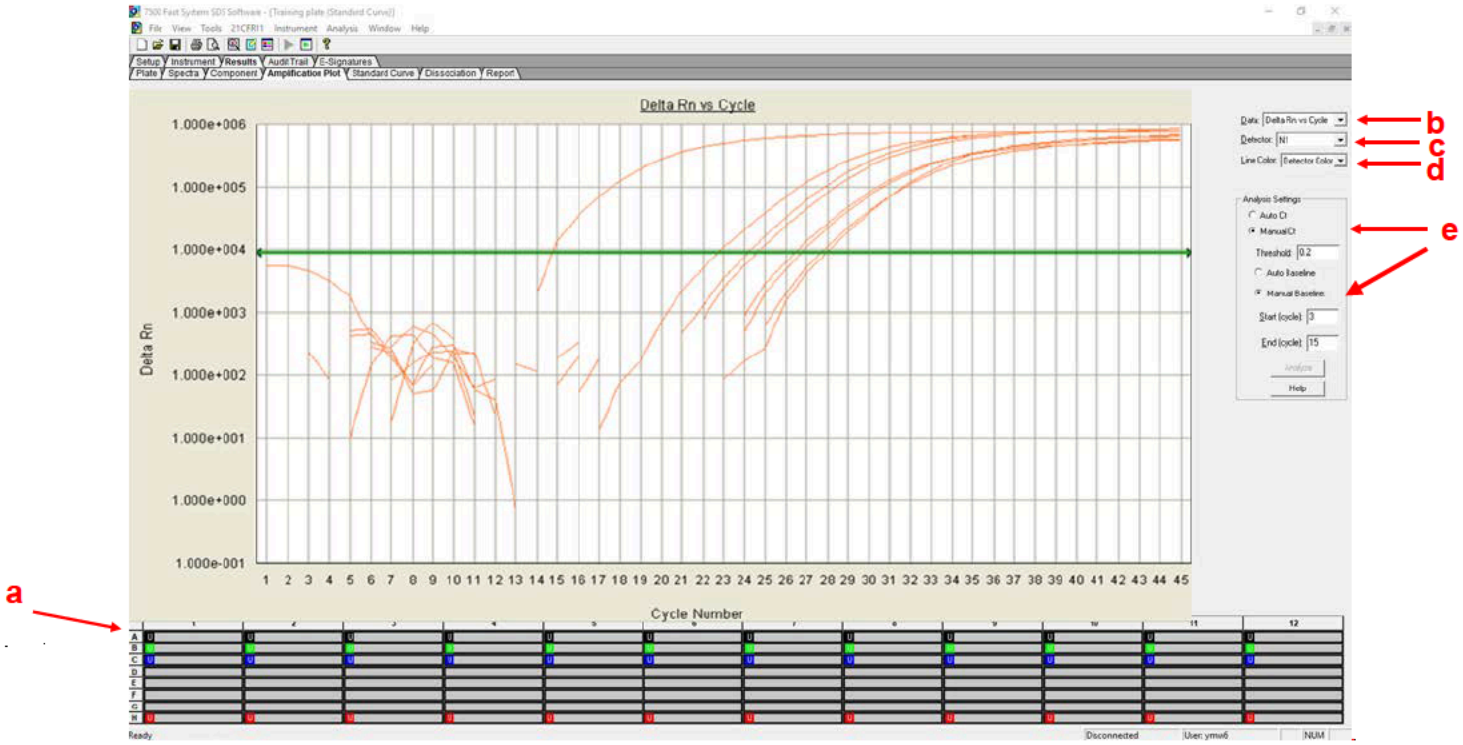
11) Repeat steps 9-10 until all sample identifiers are added to the plate setup.
12) Once all specimen and control identifiers are added click the **Close** button on the **Well Inspector** window to return to the **Plate** set up tab.
13) Click the **Instrument** tab at the upper left corner.
14) The reaction conditions, volumes, and type of 7500 reaction should already be loaded. (**Figure 16**).

AMERICAN OVERSIGHT

**Figure 16. Instrument Settings**



15) Ensure settings are correct (refer to the *Defining Instrument Settings*).
16) Before proceeding, the run file must be saved; from the main menu, select **File,** then **Save As**. Save in appropriate run folder designation.
17) Load the plate into the plate holder in the instrument. Ensure that the plate is properly aligned in the holder.
18) Once the run file is saved, click the **Start** button. *Note: The run should take approximately 1hr and 20 minutes to complete.*

## Data Analysis

1) After the run has completed, select the **Results** tab at the upper left corner of the software.
2) Select the **Amplification Plot** tab to view the raw data (**Figure 17**).

AMERICAN OVERSIGHT

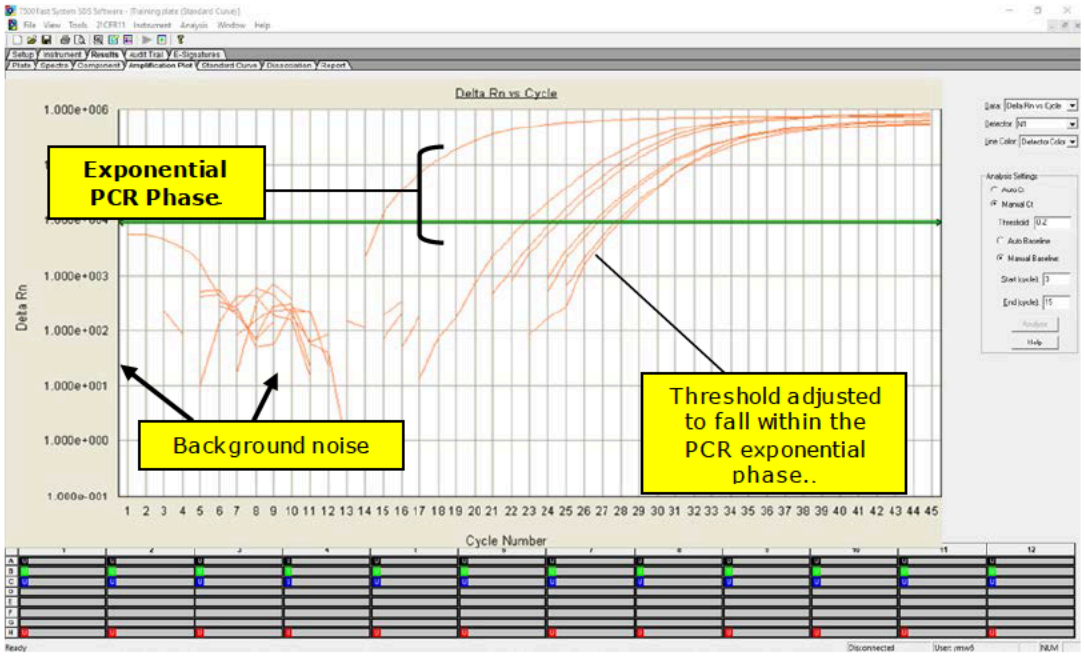


**Figure 17. Amplification Plot Window**

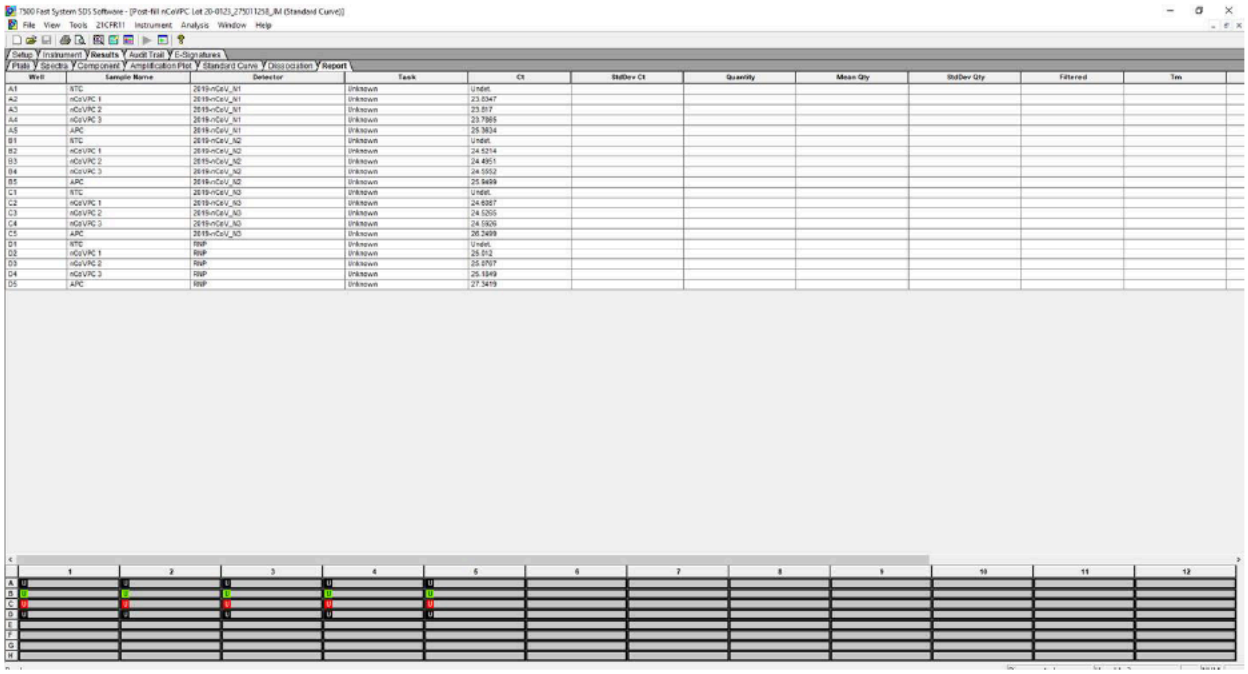
3) Start by highlighting all the samples from the run; to do this, click on the upper left hand box **(a)** of the sample wells (**Figure 17**). All the growth curves should appear on the graph.
4) On the right hand side of the window **(b)**, the **Data** drop down selection should be set to **Delta Rn vs. Cycle**.
5) Select **N1** from **(c)**, the **Detector** drop down menu, using the downward arrow.
    a. Please note that each detector is analyzed individually to reflect different performance profiles of each primer and probe set.
6) In the **Line Color** drop down **(d)**, **Detector Color** should be selected.
7) Under **Analysis Settings** select **Manual Ct (e)**.
    **b.** Do not change the **Manual Baseline** default numbers.
8) Using the mouse, click and drag the red threshold line until it lies within the exponential phase of the fluorescence curves and above any background signal (**Figure 18**).



AMERICAN OVERSIGHT

**Figure 18. Amplification Plot**

9) Click the **Analyze** button in the lower right corner of the window. The red threshold line will turn to green, indicating the data has been analyzed.
10) Repeat steps 5-9 to analyze results generated for each set of markers (i.e. N1, N2, N3, etc).
11) Save analysis file by selecting **File** then **Save As** from the main menu.
12) After completing analysis for each of the markers, select the **Report** tab above the graph to display the Ct values (**Figure 19**). To filter report by sample name in ascending or descending order, simply click on **Sample Name** in the table.

**Figure 19. Report**

AMERICAN OVERSIGHT

## Interpretation of Results and Reporting

**Expected Performance of Controls Included in the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel**

| Control Type | External Control Name | Used to Monitor | 2019 nCoV_N1 | 2019 nCoV_N2 | 2019 nCoV_N3 | RP | Expected Ct Values |
|---|---|---|---|---|---|---|---|
| Positive | nCoVPC | Substantial reagent failure including primer and probe integrity | + | + | + | + | < 40.00 Ct |
| Negative | NTC | Reagent and/or environmental contamination | - | - | - | - | None detected |
| Extraction | HSC | Failure in lysis and extraction procedure, potential contamination during extraction | - | - | - | + | < 40.00 Ct |

**If any of the above controls do not exhibit the expected performance as described, the assay may have been set up and/or executed improperly, or reagent or equipment malfunction could have occurred. Invalidate the run and re-test.**

**RNase P (Extraction Control)**

- All clinical samples should exhibit fluorescence growth curves in the RNase P reaction that cross the threshold line within 40.00 cycles (< 40.00 Ct), thus indicating the presence of the human RNase P gene. Failure to detect RNase P in any clinical specimens may indicate:
  - Improper extraction of nucleic acid from clinical materials resulting in loss of RNA and/or RNA degradation.
  - Absence of sufficient human cellular material due to poor collection or loss of specimen integrity.
  - Improper assay set up and execution.
  - Reagent or equipment malfunction.
- If the RP assay does not produce a positive result for human clinical specimens, interpret as follows:
  - If the 2019-nCoV N1, N2 and N3 are positive even in the absence of a positive RP, the result should be considered valid. It is possible, that some samples may fail to exhibit RNase P growth curves due to low cell numbers in the original clinical sample. A negative RP signal does not preclude the presence of 2019-nCoV virus RNA in a clinical specimen.

AMERICAN OVERSIGHT

- If all 2019-nCoV markers AND RNase P are negative for the specimen, the result should be considered invalid for the specimen. If residual specimen is available, repeat the extraction procedure and repeat the test. If all markers remain negative after re-test, report the results as invalid and a new specimen should be collected if possible.

**2019-nCoV Markers (N1, N2 and N3)**

- When all controls exhibit the expected performance, a specimen is considered negative if all 2019-nCoV marker (N1, N2, N3) cycle threshold growth curves DO NOT cross the threshold line within 40.00 cycles (< 40.00 Ct) AND the RNase P growth curve DOES cross the threshold line within 40.00 cycles (< 40.00 Ct).
- When all controls exhibit the expected performance, a specimen is considered presumptive positive for 2019-nCoV if all markers (N1, N2, N3) cycle threshold growth curve crosses the threshold line within 40.00 cycles (< 40.00 Ct) The RNase P may or may not be positive as described above, but the 2019-nCoV result is still valid.
- When all controls exhibit the expected performance and the growth curves for the 2019-nCoV markers (N1, N2, N3) AND the RNase P marker DO NOT cross the cycle threshold growth curve within 40.00 cycles (< 40.00 Ct), the result is invalid. The extracted RNA from the specimen should be re-tested. If residual RNA is not available, re-extract RNA from residual specimen and re-test. If the re-tested sample is negative for all markers and RNase P, the result is invalid and a new collection of specimen from the patient should be considered.
- When all controls exhibit the expected performance and the cycle threshold growth curve for any one or two markers (N1, N2, N3) (but not all three markers) crosses the threshold line within 40.00 cycles (< 40.00 Ct) the result is inconclusive. Repeat extraction and rRT-PCR.
- If HSC is positive for N1, N2, or N3, then contamination may have occurred during extraction or sample processing. Re-extract specimens and HSC and re-test.

AMERICAN OVERSIGHT

## 2019-nCoV rRT-PCR Diagnostic Panel Results Interpretation Guide

The table below lists the expected results for the 2019-nCoV rRT-PCR Diagnostic Panel. If results are obtained that do not follow these guidelines, re-extract and re-test the sample. If repeat testing yields similar results, contact CDC for consultation and possible specimen referral. See pages 8 and 31 for referral and contact information.

| 2019 nCoV_N1 | 2019 nCoV_N2 | 2019 nCoV_N3 | RP | Result Interpretation[a] | Report | Actions |
|---|---|---|---|---|---|---|
| + | + | + | ± | 2019-nCoV detected | Presumptive positive 2019-nCoV | Report results to CDC and sender. Contact CDC immediately for instructions for transfer of the specimen to CDC for additional testing and further guidance. |
| If only one, or two, of the three targets is positive | | | ± | Inconclusive Result | Inconclusive | Repeat extraction and rRT-PCR. If the repeated result remains inconclusive, contact CDC immediately for instructions for transfer of the specimen to CDC for additional testing and further guidance. |
| - | - | - | + | 2019-nCoV not detected | Not Detected | Report results to sender. Consider testing for other respiratory viruses.[b] |
| - | - | - | - | Invalid Result | Invalid | Repeat extraction and rRT-PCR. If the repeated result remains invalid, consider collecting a new specimen from the patient. |

**[a]Laboratories should report their diagnostic result as appropriate and in compliance with their specific reporting system.**

**[b]Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens from the same patient may be necessary to detect the virus.**

AMERICAN OVERSIGHT

## Quality Control

- Quality control requirements must be performed in conformance with local, state, and federal regulations or accreditation requirements and the user's laboratory's standard quality control procedures. For further guidance on appropriate quality control practices, refer to 42 CFR 493.1256.
- Quality control procedures are intended to monitor reagent and assay performance.
- Test all positive controls prior to running diagnostic samples with each new kit lot to ensure all reagents and kit components are working properly.
- Good laboratory practice (cGLP) recommends including a positive extraction control in each nucleic acid isolation batch.
- Although HSC is not included with the 2019-nCov rRT-PCR Diagnostic Panel, the HSC extraction control must proceed through nucleic acid isolation per batch of specimens to be tested.
- Always include a negative control (NTC), and the appropriate positive control (nCoVPC) in each amplification and detection run. All clinical samples should be tested for human RNAse P gene to control for specimen quality and extraction.

## Limitations

- All users, analysts, and any person reporting diagnostic results should be trained to perform this procedure by a competent instructor. They should demonstrate their ability to perform the test and interpret the results prior to performing the assay independently. CDC Division of Viral Diseases will limit the distribution of this device to only those users who have successfully completed training provided by CDC instructors or designees.
- Performance of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel has only been established in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate).
- Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens (types and time points) from the same patient may be necessary to detect the virus.
- A false negative result may occur if a specimen is improperly collected, transported or handled. False negative results may also occur if amplification inhibitors are present in the specimen or if inadequate numbers of organisms are present in the specimen.
- Positive and negative predictive values are highly dependent on prevalence. False negative test results are more likely when prevalence of disease is high. False positive test results are more likely when prevalence is moderate to low.
- Do not use any reagent past the expiration date.
- If the virus mutates in the rRT-PCR target region, 2019-nCoV may not be detected or may be detected less predictably. Inhibitors or other types of interference may produce a false negative result. An interference study evaluating the effect of common cold medications was not performed.
- Test performance can be affected because the epidemiology and clinical spectrum of infection caused by 2019-nCoV is not fully known. For example, clinicians and laboratories may not know the optimum types of specimens to collect, and when during the course of infection these specimens are most likely to contain levels of viral RNA that can be readily detected.

AMERICAN OVERSIGHT

- Detection of viral RNA may not indicate the presence of infectious virus or that 2019-nCoV is the causative agent for clinical symptoms.
- The performance of this test has not been established for monitoring treatment of 2019-nCoV infection.
- The performance of this test has not been established for screening of blood or blood products for the presence of 2019-nCoV.
- This test cannot rule out diseases caused by other bacterial or viral pathogens.

## Conditions of Authorization for the Laboratory

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Letter of Authorization, along with the authorized Fact Sheet for Healthcare Providers, the authorized Fact Sheet for Patients and authorized labeling are available on the FDA website:
https://www.fda.gov/MedicalDevices/Safety/EmergencySituations/ucm161496.htm
Use of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel must follow the procedures outlined in these manufacturer's Instructions for Use and the conditions of authorization outlined in the Letter of Authorization. Deviations from the procedures outlined are not permitted under the Emergency Use Authorization (EUA). To assist clinical laboratories running the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, the relevant Conditions of Authorization are listed verbatim below, and are required to be met by laboratories performing the EUA test.

- Authorized laboratories[1] will include with reports of the results of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, all authorized Fact Sheets. Under exigent circumstances, other appropriate methods for disseminating these Fact Sheets may be used, which may include mass media.

- Authorized laboratories will perform the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel as outlined in the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel Instructions for Use. Deviations from the authorized procedures, including the authorized RT-PCR instruments, authorized extraction methods, authorized clinical specimen types, authorized control materials, authorized other ancillary reagents and authorized materials required to perform the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel are not permitted.

- Authorized laboratories will have a process in place for reporting test results to healthcare providers and relevant public health authorities, as appropriate.

- Authorized laboratories will collect information on the performance of the test and report to DMD/OHT7-OIR/OPEQ/CDRH (via email: CDRH-EUA-Reporting@fda.hhs.gov) and CDC (respvirus@cdc.gov) any suspected occurrence of false positive or false negative results and significant deviations from the established performance characteristics of the test of which they become aware.

[1]Authorized Laboratories: For ease of reference, the Letter of Authorization refers to "qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests" as "authorized laboratories."

FDA-CVD-SHURENJ-00020120 MULTI-HHS-20-0522-B, 20-0523-A-003346

- All laboratory personnel using the test must be appropriately trained in RT-PCR techniques and use appropriate laboratory and personal protective equipment when handling this kit and use the test in accordance with the authorized labeling.

- CDC and authorized laboratories will ensure that any records associated with this EUA are maintained until otherwise notified by FDA. Such records will be made available to FDA for inspection upon request.

AMERICAN OVERSIGHT

# Performance Characteristics

***Analytical Performance:***

*Limit of Detection (LoD):*

LoD studies determine the lowest detectable concentration of 2019-nCoV at which approximately 95% of all (true positive) replicates test positive. The LoD was determined by limiting dilution studies using characterized samples.

The analytical sensitivity of the rRT-PCR assays contained in the CDC 2019 Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel were determined in Limit of Detection studies. Since no quantified virus isolates of the 2019-nCoV are currently available, assays designed for detection of the 2019-nCoV RNA were tested with characterized stocks of in vitro transcribed full length RNA (N gene; GenBank accession: MN908947.2) of known titer (RNA copies/µL) spiked into a diluent consisting of a suspension of human A549 cells and viral transport medium (VTM) to mimic clinical specimen. Samples were extracted using the QIAGEN EZ1 Advanced XL instrument and EZ1 DSP Virus Kit (Cat# 62724) and manually with the QIAGEN DSP Viral RNA Mini Kit (Cat# 61904). Real-Time RT-PCR assays were performed using the ThemoFisher Scientific TaqPath™ 1-Step RT-qPCR Master Mix, CG (Cat# A15299) on the Applied Biosystems™ 7500 Fast Dx Real-Time PCR Instrument according to the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel instructions for use.

A preliminary LoD for each assay was determined testing triplicate samples of RNA purified using each extraction method. The approximate LoD was identified by extracting and testing 10-fold serial dilutions of characterized stocks of in vitro transcribed full-length RNA. A confirmation of the LoD was determined using 3-fold serial dilution RNA samples with 20 extracted replicates. The LoD was determined as the lowest concentration where ≥ 95% (19/20) of the replicates were positive.

| 2019 Novel Coronavirus | N Gene RNA Transcript | $10^{0.5}$ | $10^{0}$ |

FDA Sensitivity Evaluation: The analytical sensitivity of the test will be further assessed by evaluating an FDA-recommended reference material using an FDA developed protocol if applicable and/or when available.

*In Silico Analysis of Primer and Probe Sequences:*

An alignment was performed with the oligonucleotide primer and probe sequences of the CDC 2019 nCoV Real-Time RT-PCR Diagnostic Panel with all publicly available nucleic acid sequences for 2019-nCoV in GenBank as of February 1, 2020 to demonstrate the predicted inclusivity of the CDC 2019 nCoV Real-Time RT-PCR Diagnostic panel. All the alignments show 100% identity of the CDC panel to the available 2019-nCoV sequences with the exception of one nucleotide mismatch with the N1 forward primer in one deposited sequence. Similarly, a single mismatch is observed in the alignment of the N3 probe. The risk assessment of these single mismatches resulting in a significant loss in reactivity, and false negative result, is low due to the design of the primers and probes with melting temperatures > 60°C and run conditions of the assay with annealing temperature at 55°C to tolerate one to two mismatches. The alignment of the 2019-nCoV_N3 assay includes additional sequences for SARS, MERS, and other Bat coronaviruses to show that other than SARS viruses, the alignment shows low identities and would not predict significant reactivity.

*Specificity/Exclusivity Testing: In Silico Analysis*

BLASTn analysis queries of the 2019-nCoV rRT-PCR assays primers and probes were performed against public domain nucleotide sequences. The database search parameters were as follows: 1) The nucleotide collection consists of GenBank+EMBL+DDBJ+PDB+RefSeq sequences, but excludes EST, STS, GSS, WGS, TSA, patent sequences as well as phase 0, 1, and 2 HTGS sequences and sequences longer than 100Mb; 2) The database is non-redundant. Identical sequences have been merged into one entry, while preserving the accession, GI, title and taxonomy information for each entry; 3) Database was updated on 10/03/2019; 4) The search

AMERICAN OVERSIGHT

parameters automatically adjust for short input sequences and the expect threshold is 1000; 5) The match and mismatch scores are 1 and -3, respectively; 6) The penalty to create and extend a gap in an alignment is 5 and 2 respectively.

2019-nCoV_N1 Assay:
Probe sequence of 2019-nCoV rRT-PCR assay N1 showed high sequence homology with SARS coronavirus and Bat SARS-like coronavirus genome. However, forward and reverse primers showed no sequence homology with SARS coronavirus and Bat SARS-like coronavirus genome. Combining primers and probe, there is no significant homologies with human genome, other coronaviruses or human microflora that would predict potential false positive rRT-PCR results.

2019-nCoV_N2 Assay:
The forward primer sequence of 2019-nCoV rRT-PCR assay N2 showed high sequence homology to Bat SARS-like coronaviruses. The reverse primer and probe sequences showed no significant homology with human genome, other coronaviruses or human microflora. Combining primers and probe, there is no prediction of potential false positive rRT-PCR results.

2019-nCoV_N3 Assay:
Analysis of the forward and reverse primer and probe sequences of 2019-nCoV rRT-PCR assay N3 showed significant homology only to human SARS coronavirus and bat SARS coronavirus. No significant homology with human genome, other coronaviruses or human microflora was observed. that would predict potential false positive rRT-PCR results.

In summary, the 2019-nCoV rRT-PCR assay N1 and N2, designed for the specific detection of 2019-nCoV, showed no significant combined homologies with human genome, other coronaviruses, or human microflora that would predict potential false positive rRT-PCR results.

The 2019-nCoV rRT-PCR assay N3 was designed for universal detection of 2019-nCoV, human SARS coronavirus and bat SARS coronavirus. The 2019-nCoV rRT-PCR assay 3 showed no significant combined homologies with human genome, other human coronaviruses other than human SARS coronavirus or human microflora that would predict potential false positive rRT-PCR results.

In addition to the *in silico* analysis, several organisms were extracted and tested with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel to demonstrate analytical specificity and exclusivity. Studies were performed with nucleic acids extracted using the QIAGEN EZ1 Advanced XL instrument and EZ1 DSP Virus Kit. Nucleic acids were extracted from high titer preparations (typically ≥ $10^5$ PFU/mL or ≥ $10^6$ CFU/mL). Testing was performed using the ThemoFisher Scientific TaqPath™ 1-Step RT-qPCR Master Mix, CG on the Applied Biosystems™ 7500 Fast Dx Real-Time PCR instrument. The data demonstrate that the expected results are obtained for each organism when tested with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel.

AMERICAN OVERSIGHT

| parainfluenza 2 | Greer | isolate | 0/3 | 0/3 | 0/3 | Neg. |
| parainfluenza 3 | C-43 | isolate | 0/3 | 0/3 | 0/3 | Neg. |
| parainfluenza 4 | M-25 | isolate | 0/3 | 0/3 | 0/3 | Neg. |

*Endogenous Interference Substances Studies*:

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel uses conventional well-established nucleic acid extraction methods and based on our experience with CDC's other EUA assays, including the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay for the presumptive detection of Middle East Respiratory Syndrome Coronavirus (MERS-CoV) and the CDC Human Influenza Virus Real-Time RT-PCR Diagnostic Panel-Influenza A/H7 (Eurasian Lineage) Assay for the presumptive detection of novel influenza A (H7N9) virus that are both intended for use with a number of respiratory specimens, we do not anticipate interference from common endogenous substances.

*Specimen Stability and Fresh-frozen Testing:*

To increase the likelihood of detecting infection, CDC recommends collection of three specimen types, lower respiratory and upper respiratory specimens for testing. If possible, additional specimen types (e.g., stool, urine) should be collected and should be stored initially until decision is made by CDC whether additional specimen sources should be tested. Specimens should be collected as soon as possible once a PUI is identified regardless of symptom onset. Maintain proper infection control when collecting specimens. Store specimens at 2-8°C and ship overnight to CDC on ice pack. Label each specimen container with the patient's ID number (e.g., medical record number), unique specimen ID (e.g., laboratory requisition number), specimen type (e.g., nasal swabs) and the date the sample was collected. Complete a CDC Form 50.34 for each specimen submitted.

AMERICAN OVERSIGHT

***Clinical Performance:***

As of January 27, 2020, CDC has tested 253 respiratory specimens from 102 persons under investigation (PUI) in the U.S. using the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Specimen types include buccal swab, nasal washes, nasopharyngeal swab, oral swab, sputum, and oropharyngeal (throat) swab.

**Table 8: Summary of CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel Data Generated by Testing Human Respiratory Specimens Collected from PUI Subjects in the U.S.**

| Specimen Type | Number of Specimens | CDC 2019-nCoV Panel Positive | CDC 2019-nCoV Panel Negative | CDC 2019-nCoV Panel Inconclusive |
|---|---|---|---|---|
| Buccal Swab | 4 | 1 | 3 | 0 |
| Nasal Wash | 2 | 0 | 2 | 0 |
| Nasopharyngeal Swab | 103 | 5 | 98 | 0 |
| Oral Swab | 52 | 5 | 47 | 0 |
| Sputum | 50 | 5 | 45 | 0 |
| Swab[1] | 13 | 0 | 13 | 0 |
| Oropharyngeal (Throat) Swab | 29 | 2 | 27 | 0 |
| Total | 253 | 18 | 235 | 0 |

[1]Actual swab type information was missing from these upper respiratory tract specimens.

For 85 of the 102 PUI subjects, multiple respiratory specimens were collected from each subject and tested by the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. A single respiratory specimen was collected and tested for each of the 17 remaining PUI subjects. Respiratory specimens for 97 of the 102 PUI subjects tested negative by the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Most but not all of the specimens collected from the five remaining PUI subjects tested positive by the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. The positive results were further investigated and confirmed by genetic sequencing. Longitudinal specimens were collected from two of the five confirmed 2019-nCoV positive patients and tested using the CDC 2019-nCoV Panel. For three of the five confirmed 2019-nCoV positive patients all samples collected tested positive by the CDC 2019-nCoV Panel. For the two remaining confirmed 2019-nCoV positive patients, upper and lower respiratory tract specimens were collected and tested from the first patient at one time point only, and from the second patient longitudinally over three time points. One buccal swab and one sputum specimen from the first patient tested positive by the CDC 2019-nCoV Panel, one nasopharyngeal swab specimen collected on the same day tested negative. For the second patient, one oral swab, one nasopharyngeal swab and one sputum specimen collected approximately eight days post onset of symptoms tested positive by the CDC 2019-nCoV Panel. While one sputum specimen collected approximately 10 days post symptoms onset tested positive, two oral swabs and two nasopharyngeal swabs collected on the same day tested negative. Approximately 12 days post onset of symptoms, one sputum specimen and one oral swab specimen from the second patient tested positive, but two nasopharyngeal swabs taken on the same day were negative.

AMERICAN OVERSIGHT

During the early phase of the testing, a total of 117 respiratory specimens collected from 46 PUI subjects were also tested with two analytically validated real-time RT-PCR assays that target separate and independent regions of the nucleocapsid protein gene of the 2019-nCoV, N4 and N5 assays. The nucleocapsid protein gene targets for the N4 and N5 assays are different and independent from the nucleocapsid protein gene targets for the three RT-PCR assays included in the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, N1, N2, and N3. Any positive result from the N4 and/or the N5 assay was further investigated by genetic sequencing.

The performance of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel was estimated against a composite comparator. A specimen was considered comparator negative if both the N4 and the N5 assays were negative. A specimen was considered comparator positive when the N4 and/or the N5 assay generated a positive result, and the comparator positive result(s) were further investigated and confirmed to be 2019-nCoV RNA positive by genetic sequencing.

**Table 9: Percent Agreement of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel with the Composite Comparator**

| CDC 2019-nCoV Panel Result | Composite Comparator Result | |
|---|---|---|
| | Positive | Negative |
| Positive | 13[1] | 0 |
| Inconclusive | 0 | 0 |
| Negative | 0 | 104 |

[1]Composite comparator results were available for 13 of 18 CDC 2019-nCoV Panel positive specimens only.

Positive percent agreement = 13/13 = 100% (95% CI: 77.2% - 100%)
Negative percent agreement = 104/104 = 100% (95% CI: 96.4% - 100%)

## Disposal

Dispose of hazardous or biologically contaminated materials according to the practices of your institution.

## INTENDED USE

The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is a real-time RT-PCR test intended for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing. Testing is limited to qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.

Results are for the presumptive identification of 2019-nCoV RNA. The 2019-nCoV RNA is generally detectable in upper and lower respiratory specimens during infection. Positive results are indicative of active infection with 2019-nCoV but do not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

Testing with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is intended for use by trained laboratory personnel who are proficient in performing real-time RT-PCR assays. The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is only for use under a Food and Drug Administration's Emergency Use Authorization .

## PACKAGE CONTENTS

| PACKAGING | COMPONENT | PART NUMBER | COMPONENT LOT NUMBER | VIALS PER KIT | QUANTITY /VIAL | STATE |
|---|---|---|---|---|---|---|
| Oligonucleotide Box | 2019-nCoV_N1 Combined Primer/Probe Mix | RV202001 | | 1 | 22.5 nmol | Dried |
| | 2019-nCoV_N2 Combined Primer/Probe Mix | RV202002 | | 1 | 22.5 nmol | Dried |
| | 2019-nCoV_N3 Combined Primer/Probe Mix | RV202003 | | 1 | 22.5 nmol | Dried |
| | RP Combined Primer/Probe Mix | RV202004 | | 1 | 22.5 nmol | Dried |
| Control Box | nCoVPC 2019-nCoV Positive Control (non-infectious) | RV202005 | | 4 | $1 \times 10^4$ copies/µL | Dried |

## STORAGE INSTRUCTIONS

Upon receipt, store at 2-8°C. Refer to the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel Instructions for Use before opening and preparing reagents for use.

## PROCEDURE/INTERPRETATION/LIMITATIONS

Users should refer to the **CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel Instructions for Use** posted on the FDA website for all IVD products used under Emergency Use Authorization, http://www.fda.gov/MedicalDevices/Safety/EmergencySituations/ucm161496.htm.

# CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel – Verification Requirements

Please consult the following guidance from CMS regarding Emergency Use Authorized diagnostic tests: https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Policy-and-Memos-to-States-and-Regions-Items/QSO18-19-CLIA

## INTENDED USE

The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is a real-time RT-PCR test intended for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing. Testing is limited to qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.

Results are for the presumptive identification of 2019-nCoV RNA. The 2019-nCoV RNA is generally detectable in upper and lower respiratory specimens during infection. Positive results are indicative of active infection with 2019-nCoV but do not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

Testing with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is intended for use by trained laboratory personnel who are proficient in performing real-time RT-PCR assays. The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is only for use under a Food and Drug Administration's Emergency Use Authorization.

## REQUIRED MATERIALS

The 2019 novel coronavirus positive control (nCoVPC) is provided with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel and should be prepared according to the instructions for use. The nCoVPC consists of an RNA transcript of the 2019-nCoV N gene as well as human RNase P gene segment. nCoVPC will yield a positive result with the following primer and probe sets: 2019-nCoV_N1, 2019-nCoV_N2, 2019-nCoV_N3 and RP.

Approximately 2 mL of an upper respiratory specimen (e.g. nasopharyngeal swabs (NPS) in transport media) will be needed for testing. Specimens may be pooled if less than 2mL of one specimen is available.

Refer to CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel package insert (manufacturer instructions) for additional reagents, materials, and instructions.

## PRECAUTIONS

This reagent should be handled in an approved BSL-2 handling area to avoid contamination of laboratory equipment and reagents that could cause false positive results. This product is an RNA transcript and is non-infectious. However, the nCoVPC should be handled in accordance with Good Laboratory Practices.

Store reagent at appropriate temperatures (see below) and hold on ice when thawed.

Please use standard precautions when handling respiratory specimens.

# CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel – Verification Requirements

****** DO NOT DISCARD: Important product-specific information ******

## INSTRUCTIONS FOR PREPARING SAMPLES BEFORE EXTRACTION WITH THE QIAmp DSP VIRAL RNA MINI KIT

- Refer to the 2019-nCoV Real-Time RT-PCR Diagnostic Panel instructions for use for reconstitution of the materials for use. RNA should be kept cold during preparation and use.
- Make a 1/10 dilution of nCoVPC in by adding 5 µL of nCoVPC into 45 µL of nuclease-free water or 10 mM Tris
- Aliquot 560 µL of lysis buffer into each of nine tubes labeled 1-9.
- Add 140 µL of upper respiratory specimen (e.g. NPS in viral transport media) into each of the nine labeled tubes with lysis buffer
- To prepare samples at a moderate concentration, spike 14 µL of undiluted nCoVPC (rehydrated as described in the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel instructions for use) into each tube labeled 1-3 containing lysis buffer and specimen
- To prepare samples at a low concentration, spike 14 µL of 1/10 dilution of nCoVPC into each tube labeled 4-6 containing lysis buffer and specimen
- To prepare negative samples, spike 14 µL of nuclease-free water into each tube labeled 7-9 containing lysis buffer and specimen
- Perform extractions of all nine samples according to the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel instructions for use

## INSTRUCTIONS FOR PREPARING SAMPLES BEFORE EXTRACTION WITH THE QIAGEN EZ1 ADVANCED XL

- Refer to the 2019-nCoV Real-Time RT-PCR Diagnostic Panel instructions for use for reconstitution of the materials for use. RNA should be kept cold during preparation and use.
- Make a 1/10 dilution of nCoVPC in by adding 5 µL of nCoVPC into 45 µL of nuclease-free water or 10 mM Tris
- Aliquot 280 µL of lysis buffer into each of nine tubes labeled 1-9.
- Add 120 µL of upper respiratory specimen (e.g. NPS in viral transport media) into each of the nine labeled tubes with lysis buffer
- To prepare samples at a moderate concentration, spike 12 µL of undiluted nCoVPC (rehydrated as described in the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel instructions for use) into each tube labeled 1-3 containing lysis buffer and specimen
- To prepare samples at a low concentration, spike 12 µL of 1/10 dilution of nCoVPC into each tube labeled 4-6 containing lysis buffer and specimen
- To prepare negative samples, spike 12 µL of nuclease-free water into each tube labeled 7-9 containing lysis buffer and specimen
- Perform extractions of all nine samples according to the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel instructions for use

## PROCEDURE

Follow the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel instructions for use for testing the 9 extracted samples at least once.

## EXPECTED RESULTS

Moderate nCoVPC samples should be presumptive positive for 2019-nCoV.
Low nCoVPC samples should be presumptive positive for 2019-nCoV.
Negative upper respiratory samples should be negative for 2019-nCoV.

≥ 90% of test results should be in agreement with the expected results. If test results are less than 90% in agreement with expected results, contact CDC at respvirus@cdc.gov.

## QUESTIONS

Please send questions or comments by email to respvirus@cdc.gov.

## DISTRIBUTION:

Distributed to qualified laboratories designated by Centers for Disease Control and Prevention, 1600 Clifton Road, Atlanta, GA, 30329 USA

**Subject:** RE: Request for Input for 20 Feb Update on FDA 2019-nCoV SITREP

Good afternoon,

Below are CDRH's updates for today's Sitrep. Also we have attached a chart for more specific information on our outreach to manufacturers.

**Personal Protective Equipment (PPE) Outreach to Manufacturers:**

- FDA continues to prioritize outreach to PPE facilities (based on 2014 market share report):

(b) (4)

- Exact facility numbers are likely to change as more information becomes available through outreach.

- **N95 surgical respirators:**
  - As of 2/20/20, we are aware of (b) (4) that make N95 surgical respirators (manufacturers and contract manufacturers). This number is likely to change as more information becomes available through outreach.
  - Out of (b) (4)
  - Out of (b) (4) irms indicated that they were affected by nCoV.
  - Attached table provides average monthly production volumes, based on

AMERICAN OVERSIGHT

information received to date.

- **Non-surgical, industrial N95 respirators:**
  - As of 2/20/20, we are aware (b) (4) that make non-surgical, industrial N95 respirators. There are likely many more manufacturers (not regulated by FDA). This number is likely to change as more information becomes available through outreach.
  - Out (b) (4)
  - Outreach to NIOSH is being performed to receive a list of non-surgical, industrial N95 manufacturers.
  - Out of (b) (4) firms indicated that they were affected by nCoV.
  - 3M has a de novo for N95 for use in public health emergencies.

- **Surgical masks**:
  - There are (b) (4) known to FDA (manufactures and contract manufactures).
  - Out of (b) (4), (b) (4)
  - Out of (b) (4) indicated that they were affected by nCoV.
  - We have received substantive responses from (b) (4) (b) (4)

- **Gloves:**
  - There are (b) (4) known to FDA (manufacturers and contract manufactures).
  - Out of (b) (4)
  - Out of (b) (4) indicated that they were affected by nCoV.
  - We have received substantive responses from (b) (4)

- **Isolation gowns:**
  - There are (b) (4) known to FDA (manufactures and contract manufactures).
  - Out of (b) (4).
  - Out of (b) (4) indicated that they were affected by nCoV.
  - We have received substantive responses from (b) (4)

- **Surgical gowns:**
  - There are (b) (4) known to FDA (manufactures and contract manufactures). There are (b) (4)
  - Out of (b) (4) indicated that they were affected by nCoV.
  - We have received substantive responses from (b) (4)

**<u>Outreach to Stakeholders:</u>**

**NIOSH:**

- CDRH spoke with NIOSH the evening of 2/21/20 about EUAs for N95s. Key takeaways from this discussion were as follows:

AMERICAN OVERSIGHT

(b) (4), (b) (5)

**Hospital Associations/Distributors/GPOS:**

- CDRH is reaching out to hospital associations/Distributors/GPOs to gather information regarding novel coronavirus and access to PPE to determine any potential supply chain disruptions and possible shortages.

**Congressional Briefings**

- CDRH participated in the Senate HSGAC Minority staff briefing focused on nCoV supply chain and foreign inspections. Key takeaways from this meeting were as follows:

(b) (5)

(b) (5)

**Communication Updates**

- On 2/20/20, ARC and OCE developed a strategy to meet the COVID-19 communication needs with an emphasis on what is needed for the communication rollout for the imminent Emergency Use Authorizations for N95 respirators. This rollout will be closely coordinated with CDC/NIOSH Communication team. The type of comms products that are currently being considered include webpage updates, email distribution to N95 manufacturers and healthcare facilities, talking points/FAQs for CDC to align the messaging, joint blog and/or joint webinar with CDC. We anticipate having a draft comms plan ready by end of this week and will share with the JIC.

**Non-diagnostic EUAs:**

(b) (5)

AMERICAN OVERSIGHT

- CDRH received a new EUA request on (b) (4), (b) (5) [redacted]
- [redacted]

Please let us know if you have any questions.

Thank you,
Heather

Hi Greg, Michael,
Here is CBER's new items for today's SITREP.
Thanks,
David

CBER Activities for 02/20/2020

(b) (4) [redacted]

- Vaccines: FDA participated in a SARS-CoV-2 Vaccine Working Group meeting.
- Supply Chain: FDA has reached out to (b) (4) [redacted] biologics manufacturers to determine if there are any potential disruptions in their supply chain. To date, no firms have reported a supply disruption.

**Sent:** Sunday, March 1, 2020 11:03 AM
**To:** Oakley, Caitlin B. (OS/ASPA) <Caitlin.Oakley@HHS.GOV>
**Subject:** Quick question

Hi Caitlin! Hope you're doing well. This is possibly a dumb question but we just wanted to touch base to understand the correct number of available or soon-to-be-available coronavirus test kits out there so we don't say the wrong number...

VP Pence said this morning that 15,000 test kits had been released and the administration is working with a commercial provider to get 50,000 more distributed.

Secretary Azar said we have the ability to test 75,000 people in the field right now and that will increase.

AMERICAN OVERSIGHT

So I just wanted to check for clarification – is it the case that each kit can test more than one person? Or that there was already 10,000 kits in the field before the 15k and 50k that the VP mentioned? Sorry if this betrays my ignorance of how testing kits work, we just wanted to see if the number is 65k or 75k. Thank you!

Sarah

Here's my suggested invite:

## Telebriefing for Hill Staff on 2019-nCoV Testing

Please join us on Monday, March 2, at 2 pm for a bipartisan, bicameral telebriefing on 2019-nCoV Testing. CDC and FDA will provide updates regarding 2019-nCoV testing and actions to increase the availability of tests.

**What** Briefing for hill staff on the 2019 Novel Coronavirus response and testing

**Who** Representatives from the Centers for Disease Control and Prevention and the Food and Drug Administration will provide updates. Representatives from the interagency response will be available to answer questions about broader questions related to the coronavirus response.

**When** February 28, 2:00 pm

**Jennifer Brown Tomasello, MPA**

Got it, thanks!

We posted the guidance and webinar info on LinkedIn, so other than the tweet we're done with the guidance and EUA template comms and outreach for today. (b) (5) [redacted] I see a note from Elizabeth with some thoughts on that as well and will share with IC as well.

I've released CDRH comms folks from mission control but can reach them for EUA posting when the time comes. Lori and the JIC are monitoring and looped into everything too so I think we're covered.

I'll continue to monitor, but please let me know if there's anything else I'm missing here or you need from me short-term on this.

**Subject:** FW: For OMB Review: Diagnostics (FDA Guidance)

Jeff, Elizabeth, Keagan, Stephanie –

HHS asking whether we will post before 10 am. I'm not familiar with our rollout plans (press release, etc), can you let me know if this is doable?

Thanks,
Lauren

I know they are interested in hearing about the broader strategy for COVID-19 response, if that can be addressed.

CDC has the only authorized EUA right now, but it can be run in public health labs throughout the country in addition to CDC Atlanta. (Be sure to say "authorized" and not "approved.") We should touch base next week as this is rapidly evolving.

**To:** Oakley, Caitlin B. (OS/ASPA) <Caitlin.Oakley@HHS.GOV>
**Subject:** Quick question

Hi Caitlin! Hope you're doing well. This is possibly a dumb question but we just wanted to touch base to understand the correct number of available or soon-to-be-available coronavirus test kits out there so we don't say the wrong number…

VP Pence said this morning that 15,000 test kits had been released and the administration is working with a commercial provider to get 50,000 more distributed.

Secretary Azar said we have the ability to test 75,000 people in the field right now and that will increase.

So I just wanted to check for clarification – is it the case that each kit can test more than one person? Or that there was already 10,000 kits in the field before the 15k and 50k that the VP mentioned? Sorry if this betrays my ignorance of how testing kits work, we just wanted to see if the number is 65k or 75k. Thank you!

## Top National Stories

### F.D.A. Expands Coronavirus Testing In The United States

*New York Times (2/29, Knvul Sheikh)*

The New York Times reports the Food and Drug Administration (FDA) "announced Saturday that testing for the coronavirus would be greatly expanded in the United States, giving laboratories and hospitals around the country the go-ahead to conduct tests that had until now been severely limited to those analyzed by the Centers for Disease Control and Prevention." The move "should

AMERICAN OVERSIGHT

improve the pace of detecting coronavirus infections and make it possible to more rapidly spot patterns of suspected or confirmed cases." In a statement, FDA Commissioner Stephen Hahn said, "This action today reflects our public health commitment to addressing critical public health needs and rapidly responding and adapting to this dynamic and evolving situation."

## Coronavirus

### How Prepared Are US Hospitals For Coronavirus Outbreak

*NBC Nightly News (2/29)*

On NBC Nightly News, correspondent Steve Patterson discussed the measures hospitals like Kaiser Medical Center in Oakland are taking to prepare for a potential coronavirus outbreak in the US. Kaiser Permanente's Dr. Stephen Parodi said, "We have teams that are working right now to take care of patients to make sure we're getting it right." Patterson explained that process "involves training...staff by conducting drills used by isolation rooms that have separate ventilation symptoms designed to contain the spread of infections like the coronavirus." Kaiser Permanente's Dr. Mary Meyer said, "At all of our hospitals, we are really pushing to have a significant proportion of our clinical staff trained. ... We have been planning for this for months." However, Patterson reported, "Even hospitals that are doing proper training are facing supply shortages, for things like masks and respirators, because of shipping delays and an active flu season that has already put a strain on resources."

### China Officials Knew Of Coronavirus In December, Ordered Cover-up, Report Says

*New York Post (2/29, Sara Dorn)*

The New York Post reports, "Chinese scientists knew about the coronavirus and its deadly effects as early as December – but were ordered by government officials to suppress the evidence, according to a report" from the Sunday Times of London, which cited Chinese business news site Caixin Global. In December, "several genomics companies tested samples from sick patients in Wuhan – the center of the coronavirus outbreak – and noticed alarming similarities between their illnesses and the 2002 SARS virus," and while "researchers alerted Beijing of their findings," they "received a gag order" on Jan. 3 "from China's National Health Commission, with instructions to destroy the samples." According to the Post, "The alleged cover-up continued when representatives from the US Centers for Disease Control and Prevention visited Wuhan Jan. 8, where officials intentionally withheld information that hospital workers had been infected by patients – a telltale sign of contagion."

### Millions Locked Down Across The Globe Due To Coronavirus

*NBC Nightly News (2/29)*

NBC Nightly News reported, "The coronavirus has the world on edge," as the disease continues to spread "into even more countries, causing major disruptions in every day life." Correspondent Bill Neely outlined some of the preventative measures affected countries have taken. For example, South Korea has "ask[ed] its entire population of 51 million to stay indoors" after "reporting

AMERICAN OVERSIGHT

hundreds more cases" on Saturday. Meanwhile, "Switzerland and France have banned all large gatherings," and Japan's Prime Minister on Saturday sought "to reassure the world" that the 2020 Olympics will proceed as planned.

***More Coverage.*** Coronavirus Has Spread To 59 Countries (CBS Weekend News, 2/29)

## Coronavirus Tests Limits Of Central Bank Firepower

*New York Times (2/29, Jeanna Smialek And Jack Ewing)*

In a front-page article, the New York Times reports, "Federal Reserve officials and their global counterparts are staring down an economic threat unlike any they have ever faced, as markets look to them to contain the fallout" from the coronavirus despite "limited ammunition and tools ill-suited to deal with broken supply chains and quarantined consumers." There is "no playbook...for dealing with the economic threat posed by the coronavirus," but "in the best case scenario, the virus is quickly contained and the global economy suffers a hiccup." Should the outbreak become a worldwide pandemic, however, "the Fed and other central bankers are poised to respond. The Fed chair, Jerome H. Powell, issued a rare statement on Friday saying that policymakers would 'act as appropriate' to support the economy, which investors and analysts took as a sign that officials would cut rates at their March meeting, if not earlier."

## Gig Workers Face The Spread Of The New Coronavirus With No Safety Net

*Washington Post (2/29, Nitasha Tiku)*

The Washington Post reports, "As coronavirus spreads globally, prompting some companies to instruct employees to stop traveling or to work remotely, one of the most vulnerable groups is likely to be tens of thousands of gig workers," who often "find themselves with few health protections but with a potentially higher risk of coming into contact with infected people." That's because "app-using companies such as Uber, Lyft, the grocery delivery service Instacart and the food delivery service DoorDash have classified the workers who deliver meals or transport passengers as independent contractors," meaning they do not receive "health insurance and other benefits" and "do not have the right to unionize." Author Alex Rosenblat said the health risks posed by the novel coronavirus could prompt some companies to change their policies toward independent contractors as they consider liability concerns.

## Pence Says Risk Of Coronavirus For Americans Is Low.

*CNN's State Of The Union (3/1)*

Vice President Pence discussed the Trump Administration's efforts to combat the coronavirus. Pence said, "The good news is of the 22 Americans who have contracted the coronavirus, more than half of them are almost fully recovered. I think that it is all a reflection of the fact that early on in this crisis in January the President took the unprecedented step of suspending all travel from China and establishing a quarantine effect. As you know, in addition to the 22 Americans, we have had 46 other Americans that have been through quarantine who have contracted the virus, but they are all being treated and all doing well, but the President took that action and established the quarantines out of an abundance of caution. ... Dr. Fauci and others have said the risk of the

AMERICAN OVERSIGHT

coronavirus for Americans is low and that's largely because of the decision the President made and the energetic efforts of CDC and local health officials and we will continue to lean in that in a hopeful way. We know that there are going to be more cases."

***More Coverage.*** US Enhances Screenings At Airports, Pence Says. (Fox News Sunday Morning Futures, 3/1); Schools May Shut Down Over Coronavirus, Pence Says (NBC's Meet The Press, 3/1)

## Secretary Azar Emphasizes Importance Of Testing For Coronavirus

*ABC's This Week (3/1)*

HHS Secretary Azar said, "We have said publicly from day one we would see more cases spreading here in the United States and this is exactly what we've been predicting all along. We're deployed out there with state officials and the health department. In Seattle, we're working closely, we're trying to discern how did these individuals contract the coronavirus. We're ramping up testing. We now have 75,000 tests available out there in the United States and over the next week that will expand radically on top of the 75,000 tests available. ... It's important we test people who have any respiratory illness that's unidentified. A week and a half ago we expanded to six key cities. If anyone is tested for flu they should also be tested for novel coronavirus. That's a key part of our emergency supplementals. I want to expand that kind of testing nationwide as soon as Congress gets us the money that will be out there throughout the country."

## Secretary Azar Concerned About Community Transmission

*Fox News Sunday (3/1)*

HHS Secretary Azar said, "We've got about 23 cases here in the United States that are not a result of us repatriating individuals from Japan or China. Of those individuals, we've got cases in Chicago, as well as Washington, Oregon, two in California, where we do not yet know why they contracted the novel coronavirus. We have employed state and local people and we're looking to get to the bottom of it. ... Any community transmission is concerning, that is why we have been very clear from the outset, we are going to have more cases here in the United States in spite of the President's aggressive efforts at containment. We will see more cases, we will see some forms of community spreading. But the risk to any individual American remains low thanks to the efforts of the President has taken, they will stay low, we are working to keep it that way, but things can change rapidly, but they should know we have the best public health system in the world looking out for them."

***More Coverage.*** Azar Reiterates Risk Remains Low (CBS' Face The Nation 3/1)

## Rubio Criticizes China's Handling Of Coronavirus.

*Fox News Sunday Morning Futures (3/1)*

Sen. Marco Rubio (R-FL) said, "The way you deal with a global pandemic is you become transparent and you share information about the actual virus. You make sure researchers around the world can start working and developing treatments and vaccines, they didn't do that. You share best practices and infection numbers and statistics. The reason why you do that is so

AMERICAN OVERSIGHT

researchers all over the world and other governments can take steps and measures to adjust to that. They didn't do that. ... The Communist Party of China are more interested in protecting their global image than they are in containing this. That's really the fundamental challenge."

## Health Care & Insurance Reform

### VA Secretary: Care For Veterans 'Would Disappear' If America Descends Into Socialism

*Breitbart (2/29, Edwin Mora)*

Breitbart reports, "The United States would not be able to care for its millions of veterans if it becomes a socialist country, the US Department of Veterans Affairs (VA) secretary cautioned Breitbart News at the annual Conservative Political Action Conference (CPAC) on Saturday." Said VA Secretary Wilkie, "If America were suddenly to descend into a socialists State, that promise [to take care of our veterans' that [Abraham] Lincoln made [when he created the department] 150 years ago is wiped out. There's no longer any care for veterans. … An incredibly high percentage of our warriors are with missing limbs." Wilkie also said that "under President Donald Trump, the VA is providing care for those veterans with special needs," and added that "if socialism became the coin of the realm, that would be gone," and "that place that was promised for warriors would disappear."

Elizabeth,

Yes, please send it to Keagan, Laura Caliguiri, Karas Gross, Lauren Paulos, and Stephanie since the participants may subsequently speak to the media and/or the Hill and/or some of those folks may attend the webinar

Jeff

**Subject:** RE: NYS EUA

Got it, thanks!

We posted the guidance and webinar info on LinkedIn, so other than the tweet we're done with the guidance and EUA template comms and outreach for today. (b) (5) [redacted] I see a note from Elizabeth with some thoughts on that as well and will share with IC as well.

I've released CDRH comms folks from mission control but can reach them for EUA posting when the time comes. Lori and the JIC are monitoring and looped into everything too so I think we're covered.

I'll continue to monitor, but please let me know if there's anything else I'm missing here or you need from me short-term on this.

http://www.cidrap.umn.edu/news-perspective/2020/02/cdc-warns-us-covid-19-spread-labs-frustrated-over-lack-tests

just FYI – realize u r responding to APHL

## Test kits available 'soon,' but labs frustrated

Messonnier also addressed the stall in getting testing kits to state and local health departments.

"I am frustrated that we have had issues with our test. I want to assure you we are hoping to modify the kits and hope to send them soon," Messonnier said.

AMERICAN OVERSIGHT

She also pointed out that the CDC was testing as many as 400 samples at a time and providing overnight results. "There is no current backlog or delay," she said.

On Feb 12, the CDC announced that several test kits sent to public health labs had an issue with a test reagent, which caused the negative control to generate a test response where there should have been none.

When pressed on when specifically the kits will be made available, Messonnier did not provide a date.

Currently, only 12 labs outside of the CDC—located in California, Illinois, Nebraska, Nevada, and Tennessee—have the capability to test for the virus. Peter Kyriacopoulos, the chief policy officer for APHL, told CIDRAP News the testing process could be dramatically shortened and expanded if 100 APHL-member labs receive authorization to do their own tests.

He said yesterday that the Association of Public Health Laboratories (APHL) addressed a letter to the Food and Drug Administration (FDA) asking for permission for member laboratories to use lab-developed tests between now and when the improved CDC kit is re-sent. Permission has to be granted because the FDA already issued an Emergency Use Authorization (EUA) authority for the CDC's test.

"We know because of the prevalence of this issue in the media, many of our labs may be called to do testing, and they will want to be responsive," said Kyriacopoulos. He explained that the labs could do manual extraction of the virus RNA, but testing would be more streamlined if they were allowed to use automated RNA extraction platforms. He said the automatic extraction devices would cost each lab about $200,000.

Joanne Barkus, PhD, the director of the Public Health Laboratory at the Minnesota Department of Health, said she is frustrated by the delay.

"We are trying to prepare for what I feel will be inevitable—a case in Minnesota—and we will want to expand testing," she told CIDRAP News. Right now, Barkus said the CDC was keeping up with test demands. But that could easily be changed if multiple community detections occur across the country and state epidemiologists begin testing case contacts en masse.

Tremel,

AMERICAN OVERSIGHT

Thanks for the inquiry. FDA very much appreciates the critical role of BARDA and public health laboratories in our nation's response to public health emergencies, as well as the severity of the current situation with the 2019 novel coronavirus disease. In the context of a public health emergency, false diagnostic test results can lead to significant adverse public health consequences - not only serious implications for individual patient care, but also serious implications for the analyses of disease progression and for public health decision-making. The EUA provisions help ensure that FDA has appropriate oversight over the emergency use of certain unapproved products, as well as over unapproved use of approved products, including diagnostic tests, regardless of who makes them. FDA welcomes the review of submissions of diagnostic test information on a rolling basis and is committed to a prompt and interactive review of them. In past experiences with these rolling reviews, FDA has been able to authorize tests for public health emergencies within as little as 1 day upon receipt of the complete validation. The Agency is currently supporting over 70 developers in the diagnostics space, including some public health laboratories, and FDA looks forward to collaboration with additional developers as well.

I'm not sure if you are aware, but we have a couple laboratory IVD pre-EUA and EUA focused webpages, including some info with regard to LDTs.

https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/information-laboratories-implementing-ivd-tests-under-eua

https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/how-submit-pre-eua-vitro-diagnostics-fda

Thanks,

Jennifer

Paul,

Thank you. The kudos go across the Agency. This was truly an FDA effort. And thank you and the rest of our HHS colleagues for the quick turnaround, and on a Friday night. Very impressive, as well.

Jeff

On Feb 28, 2020, at 9:31 PM, Shuren, Jeff <Jeff.Shuren@fda.hhs.gov> wrote:

The policy applies to all CLIA-certified, high complexity laboratories who make a test and use it in their lab – an LDT – which includes private labs and commercial manufacturers who have a lab, such as Roche. It does not include commercial manufacturers making a test kit for distribution to laboratories. Of note, several of those manufacturers have been working with us and are developing tests for the US market.

Under the policy, all test developers are meeting the EUA standard in their validation of their tests, which they would do anyway. The change is that they can start testing patients before submitting an EUA request to the FDA and FDA reviewing their data to assure the test is accurate and reliable. In the case of an individual laboratory, if their tests turns out not to work it just impacts that one lab and the patients they tested. For a test kit in distribution that does not work, it may impact dozens of labs and all the patients they test.

**Subject:** enforcement discretion request for COVID-19 for PHLs final.pdf

Dear Commissioner Hahn,

On behalf of our nation's state and local public health laboratories (PHLs), we are writing to urge you to consider enforcement discretion to allow this select group of governmental laboratories the ability to create and implement a laboratory developed test (LDT) for the detection of SARS-CoV-2 (COVID-19). We recognize the gravity of the current COVID-19 situation across the globe and wish to have greater diagnostic capability for both surveillance and for patient diagnosis across the United States, hence this extraordinary and rare request. The letter attached details our request.

Please contact me for any follow up or questions you may have at 301-526-5704 or scott.becke@aphl.org

Sincerely,

Scott Becker

**Subject:** ACLA Annual Meeting, Role of Commercial Labs in Coronavirus Testing

Hi Keagan. As you may be aware, next week Commissioner Hahn has graciously agreed to speak at the ACLA annual meeting. The meeting is on March 4th at the Grand Hyatt in DC and he is scheduled to speak from 9:00-9:15. Elizabeth Hillebrenner is also speaking on a panel at 11:00am to discuss diagnostics generally. Meeting agenda available here.

I am reaching out because in addition to Commissioner Hahn's remarks, I think the ACLA meeting would provide an excellent opportunity for the FDA to address the diagnostics community about the Coronavirus. I've extended the same invitation to the CDC. There will be approximately 200 people in attendance at the meeting, including CEOs and senior leadership from companies such as LabCorp, Quest, Mayo Clinic Laboratories, Hologic, and Siemens. ACLA and several member companies have a weekly call with the CDC, and the FDA has participated on some of the calls. We have shared information with the CDC about lab capacity and other information, in the event that public health labs are unable to handle testing needs, and surge capacity is necessary.

While these calls have been helpful, numerous questions remain about the availability of the CDC assay to commercial labs, the FDA EUA process, and other issues. I'd be happy to modify the agenda to allow time for a representative from the FDA, CDC, or both, to provide an update an answer questions.

I know the situation is changing quickly, and I can only imagine how busy it is at the FDA. But, as a lot of the key players in the diagnostics community will be together at our meeting next week, I wanted to extend the opportunity.

My office and mobile numbers are below if you have questions or if you would like to discuss.

Thanks.

Julie

APHL ASSOCIATION OF PUBLIC HEALTH LABORATORIES

February 24, 2020

Stephen M. Hahn, MD
Commissioner of Food and Drugs
Food and Drug Administration
10903 New Hampshire Avenue
Silver Spring, MD 20993-0002

Dear Commissioner Hahn,

On behalf of our nation's state and local public health laboratories (PHLs), we are writing to urge you to consider enforcement discretion to allow this select group of governmental laboratories the ability to create and implement a laboratory developed test (LDT) for the detection of SARS-CoV-2 (COVID-19). We recognize the gravity of the current COVID-19 situation across the globe and wish to have greater diagnostic capability for both surveillance and for patient diagnosis across the United States, hence this extraordinary and rare request.

While we appreciate the many efforts underway at CDC to provide a diagnostic assay to our member labs under the Emergency Use Authorization (EUA), this has proven challenging and we find ourselves in a situation that requires a quicker local response. We are now many weeks into the response with still no diagnostic or surveillance test available outside of CDC for the vast majority of our member laboratories. While we understand that the EUA process is open to PHLs, we believe a more expeditious route is needed at this time.

To the extent possible, public health laboratories could work together to:

- Utilize a standard protocol or use a limited set of protocols
- Purchase reagents including primers and probes from a common source
- Utilize a standard validation panel
- Recommend a minimum standard validation approach
- Enable confirmation at another PHL while cases remain sporadic. It is also possible to consider the use of LRN advanced labs to serve as a confirmatory lab if resources are available to do so.

We recognize that not all PHL's will develop and implement an LDT. If PHL's decided against the use of an LDT for whatever reason, they could: 1) wait for the availability of the new CDC replacement kit, 2) coordinate with a PHL that has developed an LDT (this is not uncommon for PHLs to work together), or 3) use a commercially available assay once approved by FDA under an EUA.

We look forward to discussing this request with you and your staff as soon as possible. If you have questions, please contact Scott Becker at 301-526-5704 or via email at scott.becker@aphl.org.

Sincerely,

Grace Kubin

**Subject:** RE: Hill call tomorrow after 1:00

Folks-

I am still working with the Hill to find a time or us to all chat tomorrow afternoon but it will be after 2:00. Once I nail down a time from the Hill, I will also schedule a short, internal prep call for us all to talk through a good game plan for the call.

For awareness, below (the notes in red are mine) and attached are some of the questions I got from the committee earlier that I think we will need to cover on the call.

Again, thank you in advance for your help. I know there are a lot of moving pieces right now but hopefully this will be time well spent for the Agency's current and ongoing efforts.

AMERICAN OVERSIGHT

**Funding:**

- Provide a breakdown by center and field for all funding (b) (5)

- Which activities are currently being undertaken out of FY 2020 funds and how much has been spent to date? (b) (5)

- For all lines, explain why these activities cannot be funded out of the base. Some potential items are noted on the attachment. Can walk through on call

- What the cost drivers behind the estimates, (i.e., lab work, people, IT)?
  - Please share data/numbers on how the estimates were built and include an FTE estimate for each of the four COVID Response Activities ok

- Are any of these activities brand-new to FDA and if so, which ones and how was the cost estimate derived? Believe this answer is no but will confirm on call tomorrow

- Why is the funding proposed for two years? Would potential new FTEs become wrapped into the baseline S&E account in future years? Can walk through on call

**Overarching themes:**

- How does FDA envision managing this long-term? We can walk though ebola or zika in how we managed those to give you a sense of long term picture of efforts

- Does FDA need any new legislative authority to carry out these activities? Is so, please provide the language. We can discuss on call (CDRH/CDER)

- Do any of these activities implicate other HHS op-div activities? Yes—working with several. Can walk through tomorrow on which ones

**Centers:**

- Are any of these activities eligible for user fee funding? Some potential items are noted on the attachment. (also OB) Will walk through on call

AMERICAN OVERSIGHT

- For the planned hires, how many and how would the hires be completed (special authorities, contract…)? All

- What is the timeframe for a potential coronavirus vaccine? Can walk through on call (CBER/OC)

- Please explain in greater detail the potential for drug shortages should coronavirus continue to spread. Can walk through on call (CDER)

**Subject:** RE: Hill call tomorrow after 1:00

Thank you Keagan. Adding Judy bc I forgot earlier (sorry!)

Attached is what was sent to the Hill earlier based on info your teams shared with OB for your reference.

The preliminary feedback I just got from the Hill was they need to understand the big picture/message here—in very simple terms. They are working under a VERY expedited timeline here (will have the bill drafted by Friday) so they are looking for basic facts/needs in plain English.

The specific cost-drivers for our needs is what they need to better understand—and why that work can't be done with our base funds (say for example on MCMs—we get funding for that work so why is more needed?) Are we hiring staff? If not, what are the funds specifically for?

As I mentioned earlier, I am supposed to get some questions later tonight but wanted to relay the preliminary feedback I got. They are supportive—we just need to arm them with the details and justification so they can get members on board.

AMERICAN OVERSIGHT

I will also try to set up a quick pre-call tomorrow for us to touch base prior to speaking with the Hill so we can all get on the same page.

**Subject:** ACLA Annual Meeting, Role of Commercial Labs in Coronavirus Testing

Hi Keagan. As you may be aware, next week Commissioner Hahn has graciously agreed to speak at the ACLA annual meeting. The meeting is on March 4th at the Grand Hyatt in DC and he is scheduled to speak from 9:00-9:15. Elizabeth Hillebrenner is also speaking on a panel at 11:00am to discuss diagnostics generally. Meeting agenda available here.

AMERICA OVERSIGHT

I am reaching out because in addition to Commissioner Hahn's remarks, I think the ACLA meeting would provide an excellent opportunity for the FDA to address the diagnostics community about the Coronavirus. I've extended the same invitation to the CDC. There will be approximately 200 people in attendance at the meeting, including CEOs and senior leadership from companies such as LabCorp, Quest, Mayo Clinic Laboratories, Hologic, and Siemens. ACLA and several member companies have a weekly call with the CDC, and the FDA has participated on some of the calls. We have shared information with the CDC about lab capacity and other information, in the event that public health labs are unable to handle testing needs, and surge capacity is necessary.

While these calls have been helpful, numerous questions remain about the availability of the CDC assay to commercial labs, the FDA EUA process, and other issues. I'd be happy to modify the agenda to allow time for a representative from the FDA, CDC, or both, to provide an update an answer questions.

I know the situation is changing quickly, and I can only imagine how busy it is at the FDA. But, as a lot of the key players in the diagnostics community will be together at our meeting next week, I wanted to extend the opportunity.

My office and mobile numbers are below if you have questions or if you would like to discuss.

Thanks.

Julie

My impression is the KCDC developed the test in combination with Ministry of Health and Welfare.

We are trying to get the lab director's information so we can do some communication.

Monday evening would work for me- say 1700 your time. Just give me a number and I'll call in.

Clint

Subject: RE: FDA contact and potentials for KCDC assay

Hi Clint,

Sorry, I was out of office and not able to respond, now logged in and have looped in Dr. Heather Agler from FDA/CDRH so we are all in communication. I also want to bring in a few more folks from DoD side (JPEO Jen Dabish who has diagnostic and EUA expertise, USAMMDA reg Emily Badraslioglu /FHP LTC Sandi Parriott who will have to carry the water on this).

For now and since it is late on Friday for East Coast, maybe we can do this via email so we can get our questions to you to then go to your KCDC POC via translator.

A questions Heather and I discussed are: (b) (5) ?

(b) (5)

Perhaps we should plan on a TC on Monday 5 or 6 pm? I can get something on the calendar - it might be good to chat with US folks first(?). not sure.

Heather - please jump in with your questions/and or a pathway.

V/r,
Jenn

**Subject: ACLA Annual Meeting, Role of Commercial Labs in Coronavirus Testing**

Hi Keagan. As you may be aware, next week Commissioner Hahn has graciously agreed to speak at the ACLA annual meeting. The meeting is on March 4th at the Grand Hyatt in DC and he is scheduled to speak from 9:00-9:15. Elizabeth Hillebrenner is also speaking on a panel at 11:00am to discuss diagnostics generally. Meeting agenda available here.

I am reaching out because in addition to Commissioner Hahn's remarks, I think the ACLA meeting would provide an excellent opportunity for the FDA to address the diagnostics community about the Coronavirus. I've extended the same invitation to the CDC. There will be approximately 200 people in attendance at the meeting, including CEOs and senior leadership from companies such as LabCorp, Quest, Mayo Clinic Laboratories, Hologic, and Siemens. ACLA and several member companies have a weekly call with the CDC, and the FDA has participated on some of the calls. We have shared information with the CDC about lab capacity and other information, in the event that public health labs are unable to handle testing needs, and surge capacity is necessary.

While these calls have been helpful, numerous questions remain about the availability of the CDC assay to commercial labs, the FDA EUA process, and other issues. I'd be happy to modify the agenda to allow time for a representative from the FDA, CDC, or both, to provide an update an answer questions.

I know the situation is changing quickly, and I can only imagine how busy it is at the FDA. But, as a lot of the key players in the diagnostics community will be together at our meeting next week, I wanted to extend the opportunity.

My office and mobile numbers are below if you have questions or if you would like to discuss.

Thanks.

Julie

Here's what went back to HHS. I corrected a few typos, so wanted to make sure you had this for your records. Never mind my question about the footnote; the formatting in the redline makes it carryover in an odd way to the next page, but I see it now.

On Feb 25, 2020, at 9:06 PM, Mair, Michael <Michael.Mair@fda.hhs.gov> wrote:

http://www.cidrap.umn.edu/news-perspective/2020/02/cdc-warns-us-covid-19-spread-labs-frustrated-over-lack-tests

just FYI – realize u r responding to APHL

# Test kits available 'soon,' but labs frustrated

Messonnier also addressed the stall in getting testing kits to state and local health departments.

"I am frustrated that we have had issues with our test. I want to assure you we are hoping to modify the kits and hope to send them soon," Messonnier said.

She also pointed out that the CDC was testing as many as 400 samples at a time and providing overnight results. "There is no current backlog or delay," she said.

On Feb 12, the CDC announced that several test kits sent to public health labs had an issue with a test reagent, which caused the negative control to generate a test response where there should have been none.

When pressed on when specifically the kits will be made available, Messonnier did not provide a date.

Currently, only 12 labs outside of the CDC—located in California, Illinois, Nebraska, Nevada, and Tennessee—have the capability to test for the virus. Peter Kyriacopoulos, the chief policy officer for APHL, told CIDRAP News the testing process could be dramatically shortened and expanded if 100 APHL-member labs receive authorization to do their own tests.

He said yesterday that the Association of Public Health Laboratories (APHL) addressed a letter to the Food and Drug Administration (FDA) asking for permission for member laboratories to use lab-developed tests between now and when the improved CDC kit is re-sent. Permission has to be granted because the FDA already issued an Emergency Use Authorization (EUA) authority for the CDC's test.

"We know because of the prevalence of this issue in the media, many of our labs may be called to do testing, and they will want to be responsive," said Kyriacopoulos. He explained that the labs could do manual extraction of the virus RNA, but testing would be more streamlined if they were allowed to use automated RNA extraction platforms. He said the automatic extraction devices would cost each lab about $200,000.

Joanne Barkus, PhD, the director of the Public Health Laboratory at the Minnesota Department of Health, said she is frustrated by the delay.

AMERICAN OVERSIGHT

"We are trying to prepare for what I feel will be inevitable—a case in Minnesota—and we will want to expand testing," she told CIDRAP News. Right now, Barkus said the CDC was keeping up with test demands. But that could easily be changed if multiple community detections occur across the country and state epidemiologists begin testing case contacts en masse.

**Subject:** APHL Letter for FDA

Dear Wendi and Ren:

I am writing to let you know that the APHL Board of Directors approved sending a letter urging the FDA Commissioner to consider enforcement discretion to allow governmental public health laboratories the ability to create and implement a laboratory developed test (LDT) for the detection of SARS-CoV-2 (COVID-19). In the letter we state that to the extent possible, public health laboratories could work together to:

- Utilize a standard protocol or use a limited set of protocols
- Purchase reagents including primers and probes from a common source
- Utilize a standard validation panel
- Recommend a minimum standard validation approach
- Enable confirmation at another PHL while cases remain sporadic. It is also possible to consider the use of LRN advanced labs to serve as a confirmatory lab if resources are available to do so.

We recognize that not all PHL's will develop and implement an LDT. If PHL's decided against the use of an LDT for whatever reason, they could: 1) wait for the availability of the new CDC replacement kit, 2) coordinate with a PHL that has developed an LDT (this is not uncommon for PHLs to work together), or 3) use a commercially available assay once approved by FDA under an EUA.

AMERICAN OVERSIGHT

We recognize the gravity of the current COVID-19 situation across the globe and wish to have greater diagnostic capability for both surveillance and for patient diagnosis across the United States, hence this extraordinary and rare request.

We will let you know the outcome of our communication with FDA, which is attached. The letter was sent to the FDA Commissioner, copy to his chief of staff; Dr. Redfield, copy to Dr. Jernigan.

Sincerely,

Scott Becker

AMERICAN OVERSIGHT

APHL ASSOCIATION OF PUBLIC HEALTH LABORATORIES

February 24, 2020

Stephen M. Hahn, MD
Commissioner of Food and Drugs
Food and Drug Administration
10903 New Hampshire Avenue
Silver Spring, MD 20993-0002

Dear Commissioner Hahn,

On behalf of our nation's state and local public health laboratories (PHLs), we are writing to urge you to consider enforcement discretion to allow this select group of governmental laboratories the ability to create and implement a laboratory developed test (LDT) for the detection of SARS-CoV-2 (COVID-19). We recognize the gravity of the current COVID-19 situation across the globe and wish to have greater diagnostic capability for both surveillance and for patient diagnosis across the United States, hence this extraordinary and rare request.

While we appreciate the many efforts underway at CDC to provide a diagnostic assay to our member labs under the Emergency Use Authorization (EUA), this has proven challenging and we find ourselves in a situation that requires a quicker local response. We are now many weeks into the response with still no diagnostic or surveillance test available outside of CDC for the vast majority of our member laboratories. While we understand that the EUA process is open to PHLs, we believe a more expeditious route is needed at this time.

To the extent possible, public health laboratories could work together to:

- Utilize a standard protocol or use a limited set of protocols
- Purchase reagents including primers and probes from a common source
- Utilize a standard validation panel
- Recommend a minimum standard validation approach
- Enable confirmation at another PHL while cases remain sporadic. It is also possible to consider the use of LRN advanced labs to serve as a confirmatory lab if resources are available to do so.

We recognize that not all PHL's will develop and implement an LDT. If PHL's decided against the use of an LDT for whatever reason, they could: 1) wait for the availability of the new CDC replacement kit, 2) coordinate with a PHL that has developed an LDT (this is not uncommon for PHLs to work together), or 3) use a commercially available assay once approved by FDA under an EUA.

We look forward to discussing this request with you and your staff as soon as possible. If you have questions, please contact Scott Becker at 301-526-5704 or via email at scott.becker@aphl.org.

Sincerely,

Grace Kubin

http://www.cidrap.umn.edu/news-perspective/2020/02/cdc-warns-us-covid-19-spread-labs-frustrated-over-lack-tests

just FYI – realize u r responding to APHL

## Test kits available 'soon,' but labs frustrated

Messonnier also addressed the stall in getting testing kits to state and local health departments.

"I am frustrated that we have had issues with our test. I want to assure you we are hoping to modify the kits and hope to send them soon," Messonnier said.

She also pointed out that the CDC was testing as many as 400 samples at a time and providing overnight results. "There is no current backlog or delay," she said.

On Feb 12, the CDC announced that several test kits sent to public health labs had an issue with a test reagent, which caused the negative control to generate a test response where there should have been none.

When pressed on when specifically the kits will be made available, Messonnier did not provide a date.

Currently, only 12 labs outside of the CDC—located in California, Illinois, Nebraska, Nevada, and Tennessee—have the capability to test for the virus. Peter Kyriacopoulos, the chief policy officer for APHL, told CIDRAP News the testing process could be dramatically shortened and expanded if 100 APHL-member labs receive authorization to do their own tests.

He said yesterday that the Association of Public Health Laboratories (APHL) addressed a letter to the Food and Drug Administration (FDA) asking for permission for member laboratories to use lab-developed tests between now and when the improved CDC kit is re-sent. Permission has to be granted because the FDA already issued an Emergency Use Authorization (EUA) authority for the CDC's test.

"We know because of the prevalence of this issue in the media, many of our labs may be called to do testing, and they will want to be responsive," said Kyriacopoulos. He explained that the labs could do manual extraction of the virus RNA, but testing would be more streamlined if they were allowed to use automated RNA extraction platforms. He said the automatic extraction devices would cost each lab about $200,000.

AMERICAN OVERSIGHT

Joanne Barkus, PhD, the director of the Public Health Laboratory at the Minnesota Department of Health, said she is frustrated by the delay.

"We are trying to prepare for what I feel will be inevitable—a case in Minnesota—and we will want to expand testing," she told CIDRAP News. Right now, Barkus said the CDC was keeping up with test demands. But that could easily be changed if multiple community detections occur across the country and state epidemiologists begin testing case contacts en masse.

Jeff,

OL just sent additional intel and suggestions for tomorrow's briefing, below. As noted, all Senate HELP Health LAs will be invited. OL is asking that in addition to walking through the responses to the bipar HELP Qs (attached), you and Janet each provide an overview including the state of play, our outreach efforts, what we know (and don't know) to date, discussion of reporting authorities (or in our case – the lack thereof), and correcting the record (for Janet it will be addressing the Axios piece; for us, you could take the opportunity to discuss our record on EUAs and the importance of those authorities in emergency situations). I do concur with OL that you should be prepared for COVID-19 questions outside the Senate bipar list.

I've also highlighted the point from staff below that they will appreciate context for the numbers.

Please note, (b) (5)

(b) (5)

AMERICAN OVERSIGHT

(b) (5)

[redacted]

Please do let me know if you have any questions or concerns on the overall plan for tomorrow, and if there is anything else you want to be sure we cover during tomorrow's 9 am prep.

Best,

Jennifer

Ken and Jennifer,

The committee staff is planning to invite all HELP LA's to the briefing, and we should expect additional questions in the drug and device space, outside of the QA doc to come up. Margaret did state that walking through the questions sounds good, and providing a general update would be nice for folks on the phone that haven't heard one from FDA. She also stated "In general, all the numbers you all shared, while they are very helpful, it would be also great to have in context – for example, where we have the number of facilities in China, do we also have the number of facilities globally? Recognizing there is a volume component there too."

**Subject:** RE: Pre-EUA IVD template request

Dear Jill,

Thank you very much for reaching out to us about the test you have validated at Wadsworth Center, NYS Department of Health it was very nice to chat with you. As discussed please find attached the current EUA Interactive Review Template draft for molecular-based assays for the detection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) [formally - 2019-novel coronavirus (2019-nCoV)]. I suggest the first step is to populate this draft template with the validation information and data that you currently have about your device and sent it back to us for review as a Pre-EUA submission (to be sent to the Document Control Center). The Pre-EUA review is an interactive process, so we will provide feedback after receiving and reviewing the information provided. The draft review template is a shared "work-in-progress" document which you will populate with information and data as obtained and which we will review and provide feedback to you. **Please make sure to capture in the EUA review template that you** (b) (4) [redacted]

I have also attached a draft cover letter you can use to submit your Pre-EUA for detection of SARS-CoV-2 to FDA (it includes the address for the Document Control Center). Please include in your Pre-EUA submission package:

- The populated EUA Review Template draft
- FDA Form 3514 (https://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM080872.pdf) - under Section A (type of submission) please check "other" and specify Pre-EUA; please also complete Sections B, C, F and G. For G please use the information provided in this link: https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfPCD/classification.cfm?id=3669.

One hard copy of the signed EUA Cover Letter and one electronic copy (CD or thumb drive) of you Pre-EUA submission package should be enclosed in your Pre-EUA submission package mailed to FDA (recommend FedEx). In addition to mailing your Pre-EUA package to FDA we also request that you submit the package to the review division via electronic mail (including the EUA Review Template in MS word) to myself Kim.Sapsford@fda.hhs.gov, as well as carbon copying (cc:) the following email addresses:

- Division Director: Dr Uwe Scherf, email address: Uwe.Scherf@fda.hhs.gov;
- Branch Chief: Dr Tamara Feldblyum, email address: Tamara.Feldblyum@fda.hhs.gov

Please let me know if you have ANY questions I am happy to assist if you are not sure about certain sections in the template.
Best regards
Kim

**Public health labs press FDA to allow homegrown coronavirus tests**

By David Lim

02/24/2020 07:15 PM EST

Public health laboratories urged the FDA on Monday to permit them to create their own tests for the coronavirus, after problems with a diagnostic developed by CDC prevented its widespread rollout.

AMERICAN OVERSIGHT

FDA typically allows "laboratory developed tests" — which are designed, manufactured and used within a single lab — to be used without close regulatory scrutiny. But the agency requires labs to submit such tests for review during health emergencies to prevent harm from false or misleading results from compounding a crisis. The coronavirus does not appear to be an exception.

"No test should be used without being validated," FDA spokesperson Stephanie Caccomo said. "In the context of a public health emergency, false results can lead to significant adverse public health consequences."

The FDA has traditionally shied away from allowing the use of LDTs in emergency situations. In 2016, the agency sent a letter to two Houston hospitals that created an LDT to rapidly detect the Zika virus, expressing concern that the agency had not reviewed the "high-risk" test.

But Association of Public Health Laboratories Executive Director Scott Becker said that the coronavirus requires a different approach. The virus is spreading in multiple countries, and the CDC's efforts to expand testing capability beyond its labs have run into trouble.

Only five state and local public health labs — in California, Nebraska, Illinois, Nevada and Tennessee — have verified the CDC diagnostic for use since the FDA approved it on an emergency basis on Feb. 4, he said.

APHL hopes to work with FDA to develop a policy that allows some labs to market a LDT without submitting it for FDA review, Becker told POLITICO — adding that it doesn't make sense for more than 100 labs to file individual emergency use authority applications.

**"**We believe a more expeditious route is needed at this time," Becker and Grace Kubin, director of the Laboratory Services Section at the Texas Department of State Health Services, wrote to FDA Commissioner Stephen Hahn on Monday.

**"** What we're suggesting is that public health labs be viewed as a group to do this," Becker told POLITICO. "It isn't every lab on their own — we would want to do this in a network sort of fashion. We could also enable confirmation at another public health laboratory to ensure confidence."

The letter says that labs could work together towards a standard protocol, purchase reagents and supplies from a common source and recommend a minimum standard approach for validating test results.

Caccomo says that the FDA is working with more than 70 test developers on products for the virus. The agency can complete reviews for such tests in as little as one day, she added — ensuring that it is effective and meets the minimum standards for emergency use.

Some major hospitals are also starting to develop LDTs for coronavirus screening, but are concerned that FDA rules do not permit them to actually start testing patients, according to Michael Mina, associate medical director of molecular diagnostics at Brigham and Women's Hospital.

"We're actually trying to get our test up and running, even though we don't know if we'll be able to use it," Mina said. "I know that Mass General Hospital is also thinking about doing something very similar. I presume all the major academic hospitals are at least considering it."

The American Clinical Laboratory Association, which represents large commercial labs like LabCorp and Quest Diagnostics, declined to comment on whether LDTs should be used to help increase the country's capacity to screen for the coronavirus. Historically, the lab industry trade lobby has maintained LDTs are not medical devices and subject to FDA regulation.

Jeff,

OL just sent additional intel and suggestions for tomorrow's briefing, below. As noted, all Senate HELP Health LAs will be invited. OL is asking that (b) (5) [redacted] I do concur with OL that you should be prepared for COVID-19 questions outside the Senate bipar list.

I've also highlighted the point from staff below that they will appreciate context for the numbers.

Please note, I did flag for (b) (5) [redacted]

(b) (5) [redacted]

Please do let me know if you have any questions or concerns on the overall plan for tomorrow, and if there is anything else you want to be sure we cover during tomorrow's 9 am prep.

Best,

Jennifer

**Subject:** RE: COVID Congressional Engagement

Ken and Jennifer,

The committee staff is planning to invite all HELP LA's to the briefing, and we should expect additional questions in the drug and device space, outside of the QA doc to come up. Margaret did state that walking through the questions sounds good, and providing a general update would be nice for folks on the phone that haven't heard one from FDA. She also stated "In general, all the numbers you all shared, while they are very helpful, it would be also great to have in context – for example, where we have the number of facilities in China, do we also have the number of facilities globally? Recognizing there is a volume component there too."

**Subject:** RE: Testkit
**Importance:** High

OK, just got clarification, here's where we are:

1. We have one lab at the Chan-Zuckerberg Biohub run by Joe Derisi (https://profiles.ucsf.edu/joe.derisi) that has been working with the Bill & Melinda Gates Foundation. I understand this lab played a role in the index case in Cambodia and have been helping folks in multiple countries. They believe they can rapidly turn the Biohub into a testing facility capable running several thousand tests/day, using what sounds like the same test that CDC is using. They have the necessary space, infrastructure, molecular biology, and data science teams at the ready. I'm expecting a brief bulleted write-up in the next 20 minutes or so that I can send you to introduce you to this lab. They already work with public health departments and health facilities around the country and would be able and willing to accept kits from throughout California and beyond. They already have BUA to receive inactivated human samples.

2. Derisi's lab and a separate lab run by Charles Chiu are also working on rapid assays using CRISPR technology. Here are a couple of articles. I will have more information for you on the Chiu option later today (he's unavailable before 2pm Pacific).

AMERICAN OVERSIGHT

Hi Keagan. As you may be aware, next week Commissioner Hahn has graciously agreed to speak at the ACLA annual meeting. The meeting is on March 4th at the Grand Hyatt in DC and he is scheduled to speak from 9:00-9:15. Elizabeth Hillebrenner is also speaking on a panel at 11:00am to discuss diagnostics generally. Meeting agenda available here.

I am reaching out because in addition to Commissioner Hahn's remarks, I think the ACLA meeting would provide an excellent opportunity for the FDA to address the diagnostics community about the Coronavirus. I've extended the same invitation to the CDC. There will be approximately 200 people in attendance at the meeting, including CEOs and senior leadership from companies such as LabCorp, Quest, Mayo Clinic Laboratories, Hologic, and Siemens. ACLA and several member companies have a weekly call with the CDC, and the FDA has participated on some of the calls. We have shared information with the CDC about lab capacity and other information, in the event that public health labs are unable to handle testing needs, and surge capacity is necessary.

While these calls have been helpful, numerous questions remain about the availability of the CDC assay to commercial labs, the FDA EUA process, and other issues. I'd be happy to modify the agenda to allow time for a representative from the FDA, CDC, or both, to provide an update an answer questions.

I know the situation is changing quickly, and I can only imagine how busy it is at the FDA. But, as a lot of the key players in the diagnostics community will be together at our meeting next week, I wanted to extend the opportunity.

My office and mobile numbers are below if you have questions or if you would like to discuss.

Thanks.

Julie

**Subject:** NYS Wadsworth Center COVID-19 Test
**Importance:** High

Wendi, Dan, Laura,

AMERICAN OVERSIGHT

NYS Wadsworth Center submitted an EUA request to us this afternoon for a test that uses the CDC protocol but only for N1/N2 (consistent with the CDC test currently subject to enforcement discretion). To support their EUA, Wadsworth conducted a bridging study that demonstrates performance similar to CDC's N1/N2 test. We know their performance is comparable because we have seen CDC's data but Wadsworth has not. **Would CDC allow Wadsworth to have a right of reference to its data, under which does not get access to the data but can reference it in support of their EUA?** Wadsworth has one more test to perform, which if it looks good, we would otherwise grant the EUA.

Thanks,
Uwe

AMERICAN OVERSIGHT

Folks-

I am still working with the Hill to find a time or us to all chat tomorrow afternoon but it will be after 2:00. Once I nail down a time from the Hill, I will also schedule a short, internal prep call for us all to talk through a good game plan for the call.

For awareness, below (the notes in red are mine) and attached are some of the questions I got from the committee earlier that I think we will need to cover on the call.

Again, thank you in advance for your help. I know there are a lot of moving pieces right now but hopefully this will be time well spent for the Agency's current and ongoing efforts.

**Funding:**

- Provide a breakdown by center and field for all funding (b) (5)

- Which activities are currently being undertaken out of FY 2020 funds and how much has been spent to date? (b) (5)

- For all lines, explain why these activities cannot be funded out of the base. Some potential items are noted on the attachment. Can walk through on call

- What the cost drivers behind the estimates, (i.e., lab work, people, IT)?
  - Please share data/numbers on how the estimates were built and include an FTE estimate for each of the four COVID Response Activities ok

- Are any of these activities brand-new to FDA and if so, which ones and how was the cost estimate derived? Believe this answer is no but will confirm on call tomorrow

- Why is the funding proposed for two years? Would potential new FTEs become wrapped into the baseline S&E account in future years? Can walk through on call

AMERICAN OVERSIGHT

**Overarching themes:**

- How does FDA envision managing this long-term? We can walk though ebola or zika in how we managed those to give you a sense of long term picture of efforts

- Does FDA need any new legislative authority to carry out these activities? Is so, please provide the language. We can discuss on call (CDRH/CDER)

- Do any of these activities implicate other HHS op-div activities? Yes—working with several. Can walk through tomorrow on which ones

**Centers:**

- Are any of these activities eligible for user fee funding? Some potential items are noted on the attachment. (b) (5) [redacted]

- For the planned hires, how many and how would the hires be completed (special authorities, contract…)? All

- What is the timeframe for a potential coronavirus vaccine? Can walk through on call (CBER/OC)

- Please explain in greater detail the potential for drug shortages should coronavirus continue to spread. Can walk through on call (CDER)

AMERICAN OVERSIGHT

Thank you Keagan. Adding Judy bc I forgot earlier (sorry!)

Attached is what was sent to the Hill earlier based on info your teams shared with OB for your reference.

The preliminary feedback I just got from the Hill was they need to understand the big picture/message here—in very simple terms. They are working under a VERY expedited timeline here (will have the bill drafted by Friday) so they are looking for basic facts/needs in plain English.

The specific cost-drivers for our needs is what they need to better understand—and why that work can't be done with our base funds (say for example on MCMs—we get funding for that work so why is more needed?) Are we hiring staff? If not, what are the funds specifically for?

As I mentioned earlier, I am supposed to get some questions later tonight but wanted to relay the preliminary feedback I got. They are supportive—we just need to arm them with the details and justification so they can get members on board.

I will also try to set up a quick pre-call tomorrow for us to touch base prior to speaking with the Hill so we can all get on the same page.

Keagan,

Once Michael has the letter cleared, we would need the letter put on FDA letterhead, signed by Dr. Hahn, and then a scanned copy emailed to CDRH (me) so I can email it to APHL before 4:30 PM. Is that enough time and is there someone on your end who can take the hand off from Michael?

**Subject:** Monday, February 24 Update on Response to Cybersecurity Signal (SweynTooth)

Good evening –

**Bottom Line Up Front:** CDRH continues to respond to the "SweynTooth" vulnerabilities. As indicated in our update on Friday (the 21st), CDRH's concern regarding the "SweynTooth" vulnerabilities are increasing as we have learned about the possibility that this vulnerability may be remotely executed or leveraged as part of a pivot attack (i.e. from a network to a device). Concern is further heightened as we heard from an ISAO partner that the researchers may release additional exploit code (the timing of this potential release is unknown).

As detailed in our initial communication below, on Tuesday, February 18th, CDRH was made aware of a suite of vulnerabilities collectively termed "SweynTooth." CDRH has continued to work expeditiously with internal and external stakeholders to respond to these vulnerabilities. Updated details regarding these activities are provided below:

**Subject:** Update on Response to New Cybersecurity Signal (SweynTooth)

Good morning –

Two days ago, CDRH was made aware from a press inquiry of a suite of vulnerabilities related to the Bluetooth Low Energy (BLE) protocol that may impact certain medical devices that contain the affected chipsets. According to the researchers that disclosed the vulnerabilities, the "SweynTooth" vulnerabilities may allow actors to crash devices, to force them into a "deadlocked" state where the device becomes nonresponsive or may automatically restart, or to bypass security features. The research team has also posted Proof-of-Concept code on GitHub. Preliminary analysis of FDA databases identified more than 800 different medical devices that might be susceptible to these vulnerabilities.

Based on the information we have so far, including the nature and significance of these vulnerabilities, the possible impacts to patient health and the number of devices impacted, (b) (5)

**Subject**: RE: IDT provides 2019-nCoV Kits that include the CDC 2019-nCoV/SARS-CoV-2 published assays in individual tubes

Uwe – can you/someone on your team please reach out to IDT now to see if the kits are available?

Tim – can you please talk with CDC that we would have the public health labs that received CDC's test obtain new primers/probes from IDT and verify their use with the material already provided in their CDC kit and make sure we are all on the same page. CDC should communicate this to the labs unless you think it should come from us. We can contact APHL now to let them know and include this in the response letter we send to them.

Deliberative/PreDecisional

The CDC has not received kits from IDT yet, doesn't expect them for 2-3 weeks. CDC says they may be advertising kits but may not be able to ship. I or someone else can call IDT to find out for sure. I'm going into my last lab manufacture tour now.

If IDT can ship kits today, the question is (b) (5)

**Subject:** IDT provides 2019-nCoV Kits that include the CDC 2019-nCoV/SARS-CoV-2 published assays in individual tubes

Tim, Ellen, Jeff,

Based on the attached information it looks like that the CDC primer is commercially available at IDT Integrated Technology:

# 2019-nCoV CDC qPCR Probe Assays

IDT provides 2019-nCoV Kits that include the CDC 2019-nCoV/SARS-CoV-2 published assays in individual tubes. Three of the primer/probe sets in this panel target different locations on the 2019-nCoV/SARS-CoV-2 Nucleocapsid gene (N-gene). These 3 primer/probe sets must be run concurrently with the internal control (4th assay), which targets the human RNase P gene. Altogether, there are 4 qPCR assays per patient sample.

Components are premixed to the CDC recommended working concentration and delivered in IDTE, pH 7.5. Stocked kits are available in 3 reaction sizes of 50, 100, and 500 reactions, with custom sizes available (see section below. Kits are shipped within 1–2 business days at ambient temperature.

**Subject:** RE: N95 Respirators

Jeff,

Following our discussion and after conferring with Liz, we concur that the fluid resistance testing can be waived for non-surgical use. This is because, (b) (5)
(b) (5)
(b) (5) We have revised the Non-Surgical documents (redlined and clean), accordingly.

For surgical use, fluid resistance testing continues to be appropriate.

We also discussed that the EUAs will be focused on use by healthcare providers. Therefore, the General Public Use documents do not need to be considered further.

I am attaching the current EUA documents for the following N95 respirator devices:
1. Non-surgical (revised with "v2" in file name, redlined and clean)
2. Surgical (same documents as those provided at 5:45pm)

AMERICAN OVERSIGHT

OHT4 has not reviewed these yet, but I wanted to provide this based on our discussion.

Good Morning,

Yes, a second EUA for situations where there is low risk for fluid exposure will make these protective against particle penetration N95s more readily available.

I am including Cynthia Chang on this note as well since she was working closely with Liz on this so they can help coordinate this second particle barrier only EUA provided others agree.

FYI I was on leave yesterday and will be returning on Wed. All credit for the quick response goes to the team.

**Subject:** RE: CDC 2019-nCoV Test

The Commissioner and Redfield already spoke.

I just signed off on the no objection language for the testing of asymptomatic patients. That will be sent to CDC soon. We are awaiting an email from CDC with details on the ask for a new cut off. Once we have it we have folks standing by to review and make a decision. We are already working on no objection language, assuming we and CDC are on the same page for a cut off. Given that tested individuals would still be under quarantine, I anticipate we'll be in a good place. If we receive the email within the next few hours it's our hope to wrap this up and inform CDC that we have no objection tonight. If not, it would be tomorrow.

AMERICAN OVERSIGHT

<Keagan.Lenihan@fda.hhs.gov>
**Subject:** CDC 2019-nCoV Test

We have become aware of (b) (5) as well as a request by the Secretary for expanded use of the test. As you know, (b) (5) of the (b) (5) public health labs who received the CDC test reported false positive results with the N3 component. (The test has three components – N1, N2, and N3.) CDC determined that there was a problem in the manufacturing of the N3 component. (b) (5)

As of now, the (b) (5) This means there will be a (b) (5). Our team is currently reviewing. If supportable, we would inform CDC that we do not object and, subsequently, modify the EUA. (b) (5) We would be happy to facilitate those discussions.

Lastly, CDC has sent us the following request in response to a request from the Secretary: "CDC has been instructed to test all U. S. passengers returning to the United States from the Diamond Princess cruise ship, currently docked in Japan. These passengers are asymptomatic, thus they do not meet CDC's current Person Under Investigation (PUI) definition or testing criteria. CDC respectfully requests enforcement discretion from FDA for the testing of asymptomatic U.S. citizens from the Diamond Princess cruise ship using the FDA-authorized 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Testing will be conducted at CDC's headquarters in Atlanta, GA. Specimens are expected to arrive at CDC for testing during this holiday weekend."

We believe it is appropriate to use the test at CDC headquarters for testing these asymptomatic individuals. (This is the test that we know works.) We will work with OCC on language informing CDC that we do not object to such use of the test and, subsequently, modify the EUA.

**Subject:** RE: N95 Respirators

Jeff,

Following our discussion and after conferring with Liz, we concur that the fluid resistance testing can be waived for non-surgical use. This is because, (b) (5)
(b) (5)

For surgical use, fluid resistance testing continues to be appropriate.

AMERICAN OVERSIGHT

We also discussed that the EUAs will be focused on use by healthcare providers. Therefore, the General Public Use documents do not need to be considered further.

I am attaching the current EUA documents for the following N95 respirator devices:

1. Non-surgical (revised with "v2" in file name, redlined and clean)
2. Surgical (same documents as those provided at 5:45pm)

OHT4 has not reviewed these yet, but I wanted to provide this based on our discussion.

Best regards,
Cynthia

**Subject:** RE: N95 Respirators

Dear Dr. Shuren,

We have revised the EUA documents for 3 types of N95 respirators:
1. Surgical
2. Non-surgical for Healthcare Use
3. General Public Use.

Redlined and clean documents are provided for each of the 3 devices above.

(b) (5)

The team additionally removed (b) (5) as recommended by Binita.

Please let us know of additional questions or requests.

Best regards,
Cynthia

Dear All,

Please see attached:

- EUA for Surgical N95 respirators – slightly modified from the one sent forward yesterday (tracked and clean)
- EU for Non-Surgical N95 respirators – modified from the surgical N95 respirator document (tracked and clean)

I modified these without conferring with the OHT4 team since I am not sure that they are checking email today. Hopefully this serves to keep things moving until they have an opportunity to review.

Thank you. Adding Ellen.

I think we could also do a "bulk EUA", particularly for low risk (?high pressure) fluid exposure that are NIOSH certified. Optimal if we could a bulk EUA for both uses.

Good Morning,

Yes, a second EUA for situations where there is low risk for fluid exposure will make these protective against particle penetration N95s more readily available.

I am including Cynthia Chang on this note as well since she was working closely with Liz on this so they can help coordinate this second particle barrier only EUA provided others agree.

FYI I was on leave yesterday and will be returning on Wed. All credit for the quick response goes to the team.

Binita

**Cc:** Agler, Heather L <Heather.Agler@fda.hhs.gov>, Marders, Julia A <Julia.Marders@fda.hhs.gov>, Ricci, Linda J <Linda.Ricci@fda.hhs.gov>
**Subject:** N95 Respirators

Thank you and your team for the quick work on an EUA for N95 respirators and your flexibility. My understanding is that for NIOSH certified N95 respirators (standard respirators), the only additional testing we would need to grant an EUA is for fluid resistance. Given the current environment, we would expect healthcare workers to use N95 respirators in two types of situations – one in non-surgical/non-emergency settings with known or possible coronavirus patients (or patients with another serious, highly contagious infection) and one in surgical/emergency settings with the same patient population where they may be exposed to high pressure bodily fluids.

AMERICAN OVERSIGHT

Could/should we create two EUAs – one for non-surgical/non-emergency settings where NIOSH certification would be sufficient and one for surgical/emergency settings where we would need NIOSH certification plus fluid resistance testing? The labeling would be different, as well, reflecting the different uses and known performance.

Jeff

Dear Laura,

Attached please find the following documents you submitted on February 21, 2020 to support the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in surveillance activities. These documents have been reviewed and edited by FDA's OCET and OCC.

1. Draft COVID-19 sentinel surveillance
2. Draft SARS-CoV-2 surveillance risk benefit
3. Draft CDC Surveillance EUA Request Cover letter

Please do not hesitate to reach out to me with questions.

**Subject**: RE: Seeking help from FDA [ ref:_00Dd0fegA._500t0SCkbJ:ref ]

An EUA should not be needed. These are FDA cleared gowns that have not been distributed due to concerns about possible contamination. It's up to FDA to decide whether under the circumstances the benefits outweigh the risks to allow the product to be used in the US with or without mitigations, such as changed labeling.

**Cc:** dice@fda.hhs.gov
**Subject:** Seeking help from FDA

VERY URGENT
Dear Jan,
I am the Quality Assurance Manager of Hospital Authority HA), Hong Kong – Mr. David CHAN.

It is noted that around 9 million surgical gowns are involved in the recall which have been quarantined by Cardinal Health since the manufacturing sites of the gowns concerned were not registered with U.S. Food and Drug Administration (FDA) and were not qualified by Cardinal Health.

I write on behalf of Hospital Authority to seek your kind assistance to explore the possibility for Hospital Authority to take over some affected lots of surgical gowns which are currently placed on hold as a result of a voluntary recall announced by Cardinal Health.

AMERICAN OVERSIGHT

In view of the current situation in Hong Kong with increasing trend in confirmed coronavirus cases locally, increasing demand for isolation gowns is expected. HA is trying the best to arrange sufficient PPEs for front line staff who are committed in providing quality patient services in fighting against Coronavirus.

We assure that the intended purpose of the affected surgical gowns will only be used as AAMI Level 3 isolation gowns for front line staff in hospitals/clinics as long as Level 3 Surgical Gowns meet our product specifications and are acceptable from infection control point of view.

Thank you for your kind coordination and reflect our request to the concerned party of FDA.

Yours sincerely,

Best regards,

David CHAN

**To:** Shuren, Jeff <Jeff.Shuren@fda.hhs.gov>
**Subject:** RE: 2019-nCoV RT-PCR Test EUA

Predecisional / Deliberative,

Jeff,

Brief response:

I don't see anything in the EUA Guidance addressing contract manufacturers specifically. The Guidance uses "manufacturing site(s)" and "manufacturing processes" (not manufacturer alone) as the focus of attention for the contents of an EUA application and FDA's review.

From my review of the EUA authorization letter, (b) (5) (b) (5) but maybe you understand something that I do not -- see page 6 of 8 of the attached letter pdf (also available at this website https://www.fda.gov/media/134919/download )

Analysis:

1. The EUA Guidance (pages 12, 13 and 15) states that an EUA application must include:

"Information on chemistry (as applicable), manufacturing, and controls; a list of each site where the product, if authorized, is or would be manufactured, and the current CGMP status of the manufacturing site(s);"

"Any right of reference, as applicable."

"For IVDs, device performance data to support the intended use such as analytical sensitivity and analytical specificity, and data from testing fresh, contrived, banked or archived specimens."

2. In granting the EUA for this CDC test, FDA waived cGMP compliance, as provided in the statute and noted in the EUA Guidance (page 27):

"FDA generally expects that EUA products will be produced, stored, and distributed in compliance with CGMPs; however, limits or waivers may be granted in an EUA on a case-by-case basis, after consideration of the circumstances and of any alternative proposed approach (section 564(e)(3))."

At the time the waiver was granted, the two additional contract manufacturers were not considered in the circumstances.

AMERICAN OVERSIGHT

3. In determining whether to revise an EUA, FDA can consider whether "the manufacturing site and processes has raised significant questions regarding the purity, potency, or safety of the EUA product that materially affect the risk/benefit assessment upon which the EUA was based."

The EUA Guidance references "manufacturing site(s)" and not "manufacturers." (b) (5)
(b) (5)

I think that (b) (5)
(b) (5)

Yes, I do think we should include a statement as well as additional clarity on the recommendations pending SMEs' feedback.

Of note, though, (b) (5) [redacted], which we are still working out.

AMERICAN OVERSIGHT

Good morning. We received the request below from the SNS regarding the review and insertion of an FDA statement concerning FDA regulated product into a letter that would accompany any of the product that would be released from

the SNS. We are reaching out to the SMEs to get their product specific thoughts on what CDC is proposing. We had already reached out to our SMEs this week regarding the use of expired N95s (see second attachment for their full analysis) and in their opinion the hierarchy for use was as follows: (b) (5) [redacted] We are in agreement with NIOSH that expired products should only be used in the event of a shortage and also identified characteristics that should be considered when deciding whether to use expired product so I think we could say something high-level about this. We just wanted to get insight from leadership on whether you were ok with us adding a specific paragraph on FDA regulated products vs, just providing commentary on the information CDC has posed regarding FDA regulated products. We recognize that any final language would need to be cleared through the center.

Best,

Aftin

**Subject:** TIME SENSITIVE REVIEW REQUEST SNS: Dear HCP letter for expired SNS PPE
**Importance:** High

Hi Aftin and team,

The SNS is developing a letter to accompany the use of any PPE that comes from the SNS. This ties into the use of expired product that we are working on. They want to know if we would like to insert a statement for FDA-regulated products. Please review the letter and provide suggestions by **Sunday 9 pm**. That will give me time to put the suggestions together and get it back to OCET by Monday morning. I have asked OCET to provide the type of statement

AMERICAN OVERSIGHT

that they have provided in the past for these types of letters. We don't want to over edit, but focus on the parts that are directly related to CDRH regulated product and determine if our comments can be included in one added paragraph.

Thanks,
Heather

Thank you. Adding Ellen.

I think we could also do a "bulk EUA", particularly for low risk (?high pressure) fluid exposure that are NIOSH certified. Optimal if we could a bulk EUA for both uses.

**Subject:** Re: N95 Respirators

Good Morning,

Yes, a second EUA for situations where there is low risk for fluid exposure will make these protective against particle penetration N95s more readily available.

I am including Cynthia Chang on this note as well since she was working closely with Liz on this so they can help coordinate this second particle barrier only EUA provided others agree.

FYI I was on leave yesterday and will be returning on Wed. All credit for the quick response goes to the team.

Binita

**Subject:** N95 Respirators

Thank you and your team for the quick work on an EUA for N95 respirators and your flexibility. My understanding is that for NIOSH certified N95 respirators (standard respirators), the only additional testing we would need to grant an EUA is for fluid resistance. Given the current environment, we would expect healthcare workers to use N95 respirators in two types of situations – one in non-surgical/non-emergency settings with known or possible coronavirus patients (or patients with another serious, highly contagious infection) and one in surgical/emergency settings with the same patient population where they may be exposed to high pressure bodily fluids.

Could/should we create two EUAs – one for non-surgical/non-emergency settings where NIOSH certification would be sufficient and one for surgical/emergency settings where we would need NIOSH certification plus fluid resistance testing? The labeling would be different, as well, reflecting the different uses and known performance.

Jeff

**Subject:** CDC 2019-nCoV Test

We have become aware of two new issues regarding the CDC's test as well as a request by the Secretary for expanded use of the test. As you know, ~26 of the ~100 public health labs who received the CDC test reported false positive results with the N3 component. (The test has three components – N1, N2, and N3.) CDC determined that there was a problem in the manufacturing of the N3 component. Today they informed us that some of the labs have identified what may be false positives with the N1 component. In addition, and particularly concerning, CDC informed us that the test they validated for purposes of the EUA used a different lot of components than the test that was manufactured for the public health labs, i.e., they were made by two different entities (and they clearly perform differently). (b) (5)
(b) (5)

As of now, the contract manufacturer CDC is using has not been able to solve their quality control problem; the latest batch still has problems. (b) (5) Therefore, CDC is requesting that the public health labs be able to use a different cut off – essentially raise the cut off so that it excludes the false positives that have occurred with the N3 and now possibly the N1 components. (b) (5)
(b) (5) Our team is currently reviewing. If supportable, we would inform CDC that we do not object and, subsequently, modify the EUA. CDC would need to issue new instructions to the public health labs. In addition, we plan to suggest to CDC that, (b) (5)
(b) (5)

Lastly, CDC has sent us the following request in response to a request from the Secretary: "CDC has been instructed to test all U. S. passengers returning to the United States from the Diamond Princess cruise ship, currently docked in Japan. These passengers are asymptomatic, thus they do not meet CDC's current Person Under Investigation (PUI) definition or testing criteria. CDC respectfully requests enforcement discretion from FDA for the testing of asymptomatic U.S. citizens from the Diamond Princess cruise ship using the FDA-authorized 2019-nCoV Real-Time RT-PCR Diagnostic Panel. (b) (5)
(b) (5)

(b) (5)
(b) (5) We will work with OCC on language informing CDC that we do not object to such use of the test and, subsequently, modify the EUA.

**Subject:** FW: ACTION NEEDED: DRAFT CDC EUA Request for Sentinel Surveillance Activities

Dear Laura,

Attached please find the following documents you submitted on February 21, 2020 to support the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in surveillance activities. These documents have been reviewed and edited by FDA's OCET and OCC.

1. Draft COVID-19 sentinel surveillance
2. Draft SARS-CoV-2 surveillance risk benefit
3. Draft CDC Surveillance EUA Request Cover letter

Please do not hesitate to reach out to me with questions.

**Subject:** CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel - Regulatory Discretion

Dear Wendi,

On February 4, 2020, the Centers for Disease Control and Prevention (CDC) received an Emergency Use Authorization (EUA) for the CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing.

Today, February 22, 2020, CDRH/FDA was informed that CDC would need enforcement discretion from FDA, until approval of a new EUA, for certain public health surveillance testing activities that do not fall within the currently authorized intended use of the assay (EUA200001) – namely, CDC has identified an urgent need to partner with designated jurisdictions and surveillance sites across the United States to perform testing to identify possible transmission of SARS-CoV-2 among individuals without a clear epidemiologic link (contact with known cases or history of recent travel to mainland China).

At this time, there are no adequate, approved, and available alternative tools that can detect SARS-CoV-2 during the acute phase of infection in the United States in symptomatic individuals without the epidemiological risk factors. In addition, unlike typical surveillance activities, individuals who test positive or inconclusive for SARS-CoV-2 using the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel will be notified of their test result and followed up accordingly.

Our understanding of the facts and the public health concerns at issue here are that there is currently no other test available to respond to this emergency, significant public health concerns are presented by the infectious disease, the proposed testing may help to prevent the spread of the infectious disease, and the testing activity will help to support situational awareness and guide the public health response to COVID-19. Based on this understanding, at this time, FDA does not intend to object to the use of this test as described above, with the following conditions: that all patients must be adequately informed about the status of this testing and the potential implications of agreeing to this testing, and that CDC will act promptly to submit an application for a new EUA to authorize the testing described above.

If you have any questions, please contact Uwe Scherf or me.

AMERICAN OVERSIGHT

Sincerely,
Ellen

**Importance:** High

Jeff and Ellen,

I want you to give you a heads up on this. I received a call from CDC to let me know that they (b) (5) test all U.S. citizens being evacuated from the Diamond Princess cruise ship in Yokohama, regardless of having signs or symptoms of respiratory infection or not. CDC is preparing a formal email to request our concurrence.

As you know, the currently issued EUA for the CDC's test is not authorized for testing asymptomatic individuals. Based on our knowledge of the device, DMD would not have objections allowing CDC to test asymptomatic individuals using the 2019-nCoV Real-Time RT-PCR Diagnostic Panel kit.

AMERICAN OVERSIGHT

I will let you know as soon as I receive CDC's formal request. I can be reached at (b) (6) .

**Cc:** Scherf, Uwe <Uwe.Scherf@fda.hhs.gov>
**Subject:** RE: EUA Questions

Jeff,

The authorization letter waives certain requirement as cited below:

I am waiving the following requirements for the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel during the duration of this EUA:
· Current good manufacturing practice requirements, including the quality system requirements under 21 CFR Part 820 with respect to the design, manufacture, packaging, labeling, storage, and distribution of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel

However, certain conditions of authorization in the letter mitigate these risks. These conditions include:

G. Through a process of inventory control, CDC will maintain records of test usage.
H. CDC will collect information on the performance of the test. CDC will report to FDA any suspected occurrence of false positive and false negative results and significant deviations from the established performance characteristics of the test of which CDC becomes aware.

Here the link to the complete authorization letter: https://www.fda.gov/media/134919/download

AMERICAN OVERSIGHT

Dear Commissioner Hahn,

On behalf of our nation's state and local public health laboratories (PHLs), we are writing to urge you to consider enforcement discretion to allow this select group of governmental laboratories the ability to create and implement a laboratory developed test (LDT) for the detection of SARS-CoV-2 (COVID-19). We recognize the gravity of the current COVID-19 situation across the globe and wish to have greater diagnostic capability for both surveillance and for patient diagnosis across the United States, hence this extraordinary and rare request. The letter attached details our request.

Please contact me for any follow up or questions you may have at 301-526-5704 or scott.becke@aphl.org

Sincerely,

Scott Becker

**Importance:** High

Please see the story in POLITICO Pro below. According to the article, APHL is saying that only 3 of the public health labs have been able to verify use of the CDC test. (b) (5) (b) (5). Can OHT7 follow up with CDC on the veracity of what APHL is reporting?

The article also states that CDC will distribute a second test and will need it approved by the FDA first, according to CDC.

# Problems with CDC coronavirus test delay expanded US screening

By David Lim

02/20/2020 05:03 PM EST

Problems with a coronavirus test developed by the CDC have delayed the Trump administration's efforts to expand screening to state and local public health labs, more than two weeks after the FDA granted permission to distribute the CDC test nationwide.

Only three of the more than 100 public health labs across the country have verified the CDC test for use, according to the Association of Public Health Laboratories.

The delay has also hampered CDC's plan to screen samples collected by its national flu-surveillance network for the coronavirus, according to Peter Kyriacopoulos, APHL's senior director of public policy. CDC hopes to use public health labs in Chicago, New York City, Los Angeles, San Francisco and Seattle to screen samples that test negative for the flu and other common respiratory viruses for the coronavirus.

CDC confirmed the problems with the coronavirus test, and with using its flu-surveillance network to screen for the virus. But the agency declined to answer further questions on the matter.

The delay in establishing additional screening capacity could impede the U.S. government's ability to detect scattered cases before they snowball into larger outbreaks, former FDA Commissioner Scott Gottlieb told POLITICO.

"By that point, it may be harder to contain spread, and we'll be forced to rely on mitigation tactics to just limit the impact of the virus," he said.

More than 75,000 cases of coronavirus infection have been confirmed globally as of Thursday, and more than 2,100 people have died, according to the World Health Organization. The vast majority of cases are in China, where the virus first emerged, although countries such as Japan, South Korea and Iran are also battling local outbreaks.

In the United States, efforts to expand use of the CDC test have struggled after one of the three reagents upon which the test depends delivered inconclusive results during quality checks, said Kelly Wroblewski, APHL's director of infectious diseases. Samples that test positive at any of the three labs are still being sent to CDC for retesting.

CDC has not told public health labs when it will distribute a second version of the diagnostic test, Wroblewski said. That has left many labs struggling to decide if it is worth continuing to pursue verification of the current version, because they will have to go through the process again once the CDC revises its testing procedure, she added.

Nancy Messonnier, director of the CDC's National Center for Immunization and Respiratory Diseases, told reporters on Feb. 14 that the public health agency is reformulating the original test and is moving quickly to get the revised version to labs. FDA would have to authorize any changes to the coronavirus test before the CDC could distribute a new one.

But concerns about money also threaten the rollout of state and local coronavirus testing. Over the weekend, more than 20 Senate Democrats called for additional cash after Trump administration officials told senators during a Feb. 12 briefing that HHS would soon exhaust existing funding for its response to the virus.

"We strongly urge the administration to transmit an emergency supplemental request that ensures it can and will fully reimburse states for the costs they are incurring as part of this response," the senators wrote in a letter to HHS Secretary Alex Azar and OMB Director Mick Mulvaney.

The diagnostic test can cost up to $250 to run, depending on procedures and volume of tests a lab performs, according to Wroblewski. But it is unclear who is paying for personnel costs and other items such as personal protective gear, machines to extract RNA and sample transportation, according to APHL.

"This is a national-level response, so we would hope the federal government would have an interest in

AMERICAN OVERSIGHT

supporting a national-level response," Kyriacopoulos said. "Labs are much more interested in beginning to get the work done. But figuring out how to pay for it is not far behind."

**Subject:** CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel - Regulatory Discretion

Dear Wendi,

On February 4, 2020, the Centers for Disease Control and Prevention (CDC) received an Emergency Use Authorization (EUA) for the CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing.

Today, February 22, 2020, CDRH/FDA was informed that CDC would need enforcement discretion from FDA, until approval of a new EUA, for certain public health surveillance testing activities that do not fall within the currently authorized intended use of the assay (EUA200001) – namely, CDC has identified an urgent need to partner with designated jurisdictions and surveillance sites across the United States to perform testing to

AMERICAN OVERSIGHT

identify possible transmission of SARS-CoV-2 among individuals without a clear epidemiologic link (contact with known cases or history of recent travel to mainland China).

At this time, there are no adequate, approved, and available alternative tools that can detect SARS-CoV-2 during the acute phase of infection in the United States in symptomatic individuals without the epidemiological risk factors. In addition, unlike typical surveillance activities, individuals who test positive or inconclusive for SARS-CoV-2 using the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel will be notified of their test result and followed up accordingly.

Our understanding of the facts and the public health concerns at issue here are that there is currently no other test available to respond to this emergency, significant public health concerns are presented by the infectious disease, the proposed testing may help to prevent the spread of the infectious disease, and the testing activity will help to support situational awareness and guide the public health response to COVID-19. Based on this understanding, at this time, FDA does not intend to object to the use of this test as described above, with the following conditions: that all patients must be adequately informed about the status of this testing and the potential implications of agreeing to this testing, and that CDC will act promptly to submit an application for a new EUA to authorize the testing described above.

If you have any questions, please contact Uwe Scherf or me.

Sincerely,
Ellen

Hello AMP ID Subdivision members –

The message below was received Tuesday, February 18, 2020 as part of AMP's participation in the CDC Clinical Lab Partners group. We will pass along information to our membership when requested by government agencies or AMP leadership.

***REMINDER:* The AMP Training & Education Committee will host a FREE webinar "The 2019 Novel Coronavirus Outbreak: What Laboratories Need to Know about the Virus, Epidemiology, and Diagnostic Testing" TOMORROW Thursday, February 20, 1:00 PM ET.**

CLICK HERE for registration and additional information. ***This webinar is free for ALL attendees***, so please share the link with your interested colleagues.

AMERICAN OVERSIGHT

**Audience:** Clinical Laboratory Professionals

**Subject:** Reminder: COVID-19 Diagnostic Testing

**Level:** Laboratory Advisory

The Food and Drug Administration (FDA) granted an Emergency Use Authorization (EUA) for the CDC 2019-Novel Coronavirus (COVID-19) Real-Time RT-PCR Diagnostic Panel which is to be used in qualified laboratories for testing patient respiratory specimens that meet CDC criteria for COVID-19 testing. **This message is to remind clinical laboratories that this is currently the only EUA assay for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), the virus that causes COVID-19. Any laboratory that is not designated by CDC as a qualified laboratory and is implementing a COVID-19 diagnostic test other than the CDC EUA assay must contact the FDA to obtain an EUA before any COVID-19 diagnostic testing may be performed in their facilities.**

The Secretary of Health and Human Services issued an emergency declaration that justifies the authorization of emergency use of in vitro diagnostics for the detection of SARS-CoV-2 and the diagnosis of COVID-19. All tests for SARS-CoV-2, including laboratory developed tests (LDTs), must be reviewed and cleared or authorized by the FDA for emergency use, or they cannot be used for diagnostic testing. The FDA requests that developers of such LDTs submit information about their tests to help FDA better understand their design, validation, and performance characteristics. For more details, please refer to FDA: Information for Laboratories Implementing IVD Tests Under EUA.

Qualified laboratories for use of the CDC-distributed 2019-nCoV Real-Time RT-PCR Diagnostic Panel, as defined by the EUA, include select U.S. state and local public health laboratories and Department of Defense laboratories. Diagnostic testing with this assay can only be done at CDC and by these qualified laboratories. The state and local public health laboratories are in the process of implementing the CDC EUA assay.

Clinical laboratories should contact their state health departments for guidance if they have a suspected COVID-19 case specimen. Clinical laboratories that need a diagnostic test for COVID-19 performed should contact their local health department, which will either provide testing or facilitate referral of the specimen to the CDC for testing.

Clinical laboratories should NOT attempt viral isolation from specimens collected from COVID-19 persons under investigation (PUIs). For interim guidelines for collecting, handling, and testing clinical specimens from PUIs for COVID-19, please see the CDC Coronavirus Disease 2019 (COVID-19) website.

**Subject:** N95 EUA Template

Heather, Lori — As you know, we will make available two EUA templates for makers of standard N95 respirators to seek an EUA for surgical and non-surgical uses in healthcare settings as well as offer to work with them through pre-EUAs, as we've been doing with diagnostic test makers. While we work with OCC on whether we can grant EUAs in a more streamlined fashion, e.g., bulk EUAs, can you please raise this to the JIC to develop a communication plan? We could have the templates ready to go this week, depending on OCC clearance.

AMERICAN OVERSIGHT

Heather, Linda — I would give IMG and CDC a heads up of what we plan to do. I would also reach out to makers of standard N95s once OCC clears the templates to encourage them to request an EUA and offer to work with them.

Jeff

**Subject:** Today's CDC Call

Hi Jeff,

Uwe and I just got off the call for the new Sentinel Surveillance proposal. They answered all our questions and we will start working on the draft proposal that arrived today. They anticipate finalizing the proposal with the sites in the next day or two and submitting it to us for a new EUA approval. They understood the importance of separating this approval from the previous diagnostic approval. In discussion with the sites, they will do some more work on what it means to notify patients of the Coronavirus testing and understand the importance of documenting that notification in some way.

Separately, we asked the status of the (b) (5) [redacted]

Thanks!

Best,

**Subject:** COVID-19 Hearings

Dr. Hahn now has three congressional hearings on COVID-19. There is a prep session at 3:30 PM today for the E&C hearing that I am attending. As you've seen from Jennifer's updates on Hill briefings (Heather, I believe you have been participating), much of the focus for devices is on (b) (5) [redacted] There's plenty of interest in what (b) (5) [redacted] etc. All the things the team has been working on.

In light of today's prep, I'll need the latest information on what we know for when we meet later today, including the chart on (b) (5) [redacted], etc.

There also may be other questions E&C staff or members have raised during briefings that Jennifer/Heather can provide more details on.

Hi Pillai,

Great to meet you today! I wanted to reach out and have copied Jeff to find out more details about the coronavirus and mers cultures. We have a number of test developers who cannot complete validation of their EUA assays until they have at least mock samples made with virus to test.

How soon will virus be available?
Can we connect developers with someone here at the agency so they can coordinate access?

Thanks!

Best,
*Tim*

From the Desk of
**the Commissioner**

U.S. FOOD & DRUG ADMINISTRATION

Dear EUA Team,

I know we are in the middle of responding to the novel 2019-nCoV public health emergency, but I want to pause for just a moment to thank you for your incredible work to bring the Emergency Use Authorization for CDC's test over the finish line. This is a critical milestone in the government's response efforts to mitigate the further spread of the virus. It is also a crystal clear example of how our work makes a difference at home and abroad.

I know there is much more work to be done in the fight against this outbreak. Please know that I am grateful for your commitment and expertise, and for simply--doing what needed to be done--to make the first EUA a reality.

You have my deepest gratitude and many thanks as you continue this important work.

Sincerely,

**Stephen M. Hahn, M.D.**
**Commissioner of Food and Drugs**

Dear IMDRF MC Members and Official Observer,

You all must have been busy fighting against the novel coronavirus(2019-nCoV).

We inform that the new diagnostic test kit described below was reviewed and approved to be used on 4 February in response to the novel coronavirus crisis.

* Product Name : PowerChek 2019-nCoV Real-time PCR kit
* Manufacturer : Kogen Biotech in the Republic of Korea

AMERICAN OVERSIGHT

The Republic of Korea has the system for Emergency Use Assessment and Listing(EUAL) that allows a

diagnostic test kit to be produced, distributed and used for a limited time period by the request of the director of the Korea Centers for Disease Control and Prevention(KCDC) on the occasion where there is no approved product in Korea amid the growing need for a diagnostic test kit to detect the epidemic.

Should you have any further questions, please do not hesitate to contact us.

Best Regards,

Hyeonjoo Oh, Ph.D

Dear Peter,

I believe Thermo Fisher has has our emergency use authorization (EUA) template and our team is available to engage in pre-EUA meetings/teleconferences to discuss data needs/plan to support an EUA. That is the fastest, most streamlined path forward. Access to testing materials, though, is still limited depending on access to an appropriate BSL lab but the team can work with you.

Best regards,

Jeff

AMERICAN OVERSIGHT

Dear Dr. Shuren, Dr. Marks,

Good morning. Hope all is well. Looking forward to our meeting next week.

As things continue to progress with the coronavirus outbreak one of the topics we intended to discuss was the potential to assist FDA/CDC/NIH to help manufacture coronavirus test kits.
Today former FDA Commissioner Gottlieb tweeted that Thermo Fisher, among a few others, could help in this way. (https://twitter.com/ScottGottliebMD/status/1227962496914468865)
How could we collaborate on this? Could there be a pre-meeting with your teams to discuss the potential opportunity and solutions?
We are interested in supporting efforts in this area given the severity of the situation.
Please share your thoughts.

Warm regards,
Peter

AMERICAN OVERSIGHT

**Public health labs report problems with coronavirus test**

By David Lim

02/12/2020 04:21 PM EST

At least 25 public health laboratories around the country say they're unable to test for cases of the coronavirus originating in Wuhan because a test kit distributed by the CDC is delivering inconclusive results.

Some labs that began doing quality checks on the test last weekend found one of three reagents in the kit was ineffective, according to Kelly Wroblewski, director of infectious diseases at the Association of Public Health Laboratories. More labs started reporting similar issues on Monday and Tuesday. None of the diagnostic kits were used to test actual clinical specimens.

The kits allow states and localities to test patients, eliminating the need to confirm cases by sending samples to the CDC's headquarters in Atlanta. CDC is developing replacement tests it can send to the labs.

"Some of the states identified some inconclusive laboratory results, but we're working closely with them to correct the issues," Nancy Messonnier, director of the CDC's Center for the National Center for Immunization and Respiratory Diseases, said Wednesday.

There are 13 confirmed cases of coronavirus in the United States with 60 other people under investigation whose samples are waiting to be tested, according to CDC. More than 44,500 cases and 1,100 deaths are confirmed in China, according to the World Health Organization.

CDC initially made 200 of the diagnostic kits available to U.S. labs last week after receiving emergency use authorization from the FDA on Feb. 4.

"Of course I hoped that this week every state would be up and running," Messonnier said. "How long will that take? I can't tell you that for sure."

A "very small number of labs" in the U.S. have successfully verified the diagnostic test, according to Wroblewski. But states will continue to send all clinical specimens to CDC headquarters in Atlanta as a "backstopping" measure, according to Messonnier.

"Although this is sort of an unfortunate development and nobody wanted to see this happen, this is why there are quality control steps in place," Wroblewski said.

Bill, Jeff,
I confirm this belongs to DMD. We had similar (b) (4) [redacted] for the Zika outbreak and will find out how those request were handled. It is likely not to git the EUA approach since the emergency declaration was specifically for the detection of nCoV. DMD will follow up with a phone call to the sponsor.

Dear Dr. Perea-Henze,

Thank you for reaching out to us. We have been working very closely with the CDC and other parts of government, reviewing data as it comes in in real time, and with a team working around the clock to assure a test is available under an emergency use authorization (EUA) or other appropriate authorities as quickly as possible for use. In addition, the CDC will be able to distribute the test as soon as it is available.

As we all work together to address the coronavirus outbreak please do not hesitate to reach out to us at any time to let us know how we can be helpful.

Best regards,

Jeff

**Subject:** Coronavirus testing equipment and materials

Dear Drs. Hahn and Stenzel,

The commitment of the Food and Drug Administration to the safety and well-being of all Americans is critical to the work that we do every day at the New York City Department of Health and Mental Hygiene, and is especially important in the context of a public health emergency.

The reliability and accuracy of clinical tests is a basic need in health care and public health. In the current 2019-novel coronavirus (nCoV) public health emergency, public health action that will impact the lives of many will be taken based on the result of a single laboratory diagnostic test, and it is therefore critical that the test be as close to 100% accurate, 100% of the time as possible.

We commend the collaboration between the FDA, the Centers for Disease Control and Prevention (CDC), and the Centers for Medicare and Medicaid Services (CMS) to streamline the development, validation, and authorization of clinical tests that meet regulatory requirements in the rapidly evolving setting of an infectious disease public health emergency. The efficiency of this process is being put to the test in this emergency.

AMERICAN OVERSIGHT

We ask that the evaluation and subsequent Emergency Use Authorization of the CDC-developed diagnostic assay for the detection of 2019-nCoV infection be moved forward as quickly as possible. It is critical that local

jurisdictions, including New York City, have access to this test locally to support the rapid and accurate evaluation of patients under investigation (PUI) for 2019-nCoV infection. In New York City, the test result for every PUI will have implications for the health of all New Yorkers. It is imperative that testing be available locally to decrease the time to get a result into the hands of clinicians caring for the patient and the public health officials that need to enact public health interventions to stop the spread of this virus in NYC, and across the country.

As always, thank you for your commitment to the health and safety of New Yorkers and all Americans.

Sincerely,

Raul Perea-Henze, MD, MPH
Deputy Mayor for Health & Human Services
City of New York

**To:** Lenihan, Keagan <Keagan.Lenihan@fda.hhs.gov>
**Subject:** CDC wants to distribute coronavirus diagnostic test by end of week

**CDC wants to distribute coronavirus diagnostic test by end of week**

By David Lim, Sarah Owermohle

02/03/2020 02:08 PM EST

The CDC wants the FDA to quickly grant an emergency authorization to use its Wuhan coronavirus diagnostic test so it can distribute it to laboratories across the country later this week.

"The process is extremely expedited and our colleagues at FDA have been working with us closely — our plans were submitted to them today, and I expect that means we should be able to start sending them out by the end of the week barring complications," Nancy Messonnier, director of the National Center for Immunization and Respiratory Diseases, said on a press call.

For the FDA to grant emergency authorization for the test, HHS Secretary Alex Azar first must declare that circumstances exist that justify its use — a step that appears imminent after Azar declared the virus a public health emergency late last week. CDC has already sent the test to the International Reagent Resource so states can begin ordering it, according to Messonnier.

**Subject:** Urgent - CDC EUA package received
**Importance:** High

Jeff, Denise, Anna, Tim, and Michael,

CDC just submitted their EUA package to request authorization for their 2019-Novel Coronavirus (2019-nCoV) assay. DMD staff has reviewed most of the data package already and will finish the review of the outstanding data as expeditiously as possible. I want to provide a clear update on how long that process could take and next steps once we have completed our review.

We expect that it will take us close 3-4 hours to fully review the outstanding data and prepare all the final documents for clearance in the review division. If the data is acceptable, we plan to send the EUA approval package to OCET & OCC tomorrow morning around 11 AM for final FDA clearance before it goes to Denise for authorization. We have been closely coordinating with OMA and they already have drafted a press release so that we are ready to make an announcement if an EUA can be issued tomorrow.

I will keep this group updated.

Thank you all in advance for your patience and help.

Best,

Uwe

**Subject:** Re: Greetings

Dear Peter,

I believe Thermo Fisher has has our emergency use authorization (EUA) template and our team is available to engage in pre-EUA meetings/teleconferences to discuss data needs/plan to support an EUA. That is the fastest, most streamlined path forward. Access to testing materials, though, is still limited depending on access to an appropriate BSL lab but the team can work with you.

Best regards,

Jeff

**To:** Shuren, Jeff <Jeff.Shuren@fda.hhs.gov>, Marks, Peter <Peter.Marks@fda.hhs.gov>
**Subject:** Greetings

Dear Dr. Shuren, Dr. Marks,

Good morning. Hope all is well. Looking forward to our meeting next week.

As things continue to progress with the coronavirus outbreak one of the topics we intended to discuss was the potential to assist FDA/CDC/NIH to help manufacture coronavirus test kits.
Today former FDA Commissioner Gottlieb tweeted that Thermo Fisher, among a few others, could help in this way. (https://twitter.com/ScottGottliebMD/status/1227962496914468865)
How could we collaborate on this? Could there be a pre-meeting with your teams to discuss the potential opportunity and solutions?
We are interested in supporting efforts in this area given the severity of the situation.
Please share your thoughts.

Warm regards,
Peter

**To:** Shuren, Jeff <Jeff.Shuren@fda.hhs.gov>
**Subject:** FW: February 21st Meeting

Jeff –

Should they be setting a separate meeting with CDER on this additional topic re: their capabilities to manufacture vaccines and drug products or are you OK with them possibly sending someone to attend the meeting we set up? I'm not even sure CDER is interested but before I provide Peter with a CDER POC, I thought I would check.

Original ask: My CEO Marc Casper and I would like to have a meeting with yourself, Dr. Tim Stenzel and Dr. Peter Marks to build a relationship and share what Thermo Fisher is working on in terms of new products.
In addition we'd like to hear from FDA on key 2020 (and beyond ) priorities that we could ensure proper attention to.

Lindsay

**Subject:** February 21st Meeting

Dear Lindsay,

Good morning. Hope it's a good day for you.
We are setting our discussion topics and determined that the coronavirus and its progress would be top of mind.
We'd like to talk about, among other things, our capabilities to manufacture vaccines and drug products to support its prevention.
Seeing that we did not invite Dr. Janet Woodcock from CDER is it possible she may have availability or perhaps one of her team?
I am sorry to surprise you with this but our company provides many services and we would like a productive discussion to help.

Thanks for helping. If you would rather I reach out to her office any contact information would be great.

Best,
Peter

AMERICAN OVERSIGHT

OFFICE OF THE MAYOR
THE CITY OF NEW YORK

**RAUL PEREA-HENZE, MD, MPH**
DEPUTY MAYOR FOR HEALTH & HUMAN SERVICES

February 2, 2020

Dear Drs. Hahn and Stenzel,

The commitment of the Food and Drug Administration to the safety and well-being of all Americans is critical to the work that we do every day at the New York City Department of Health and Mental Hygiene, and is especially important in the context of a public health emergency.

The reliability and accuracy of clinical tests is a basic need in health care and public health. In the current 2019-novel coronavirus (nCoV) public health emergency, public health action that will impact the lives of many will be taken based on the result of a single laboratory diagnostic test, and it is therefore critical that the test be as close to 100% accurate, 100% of the time as possible.

We commend the collaboration between the FDA, the Centers for Disease Control and Prevention (CDC), and the Centers for Medicare and Medicaid Services (CMS) to streamline the development, validation, and authorization of clinical tests that meet regulatory requirements in the rapidly evolving setting of an infectious disease public health emergency. The efficiency of this process is being put to the test in this emergency.

We ask that the evaluation and subsequent Emergency Use Authorization of the CDC-developed diagnostic assay for the detection of 2019-nCoV infection be moved forward as quickly as possible. It is critical that local jurisdictions, including New York City, have access to this test locally to support the rapid and accurate evaluation of patients under investigation (PUI) for 2019-nCoV infection. In New York City, the test result for every PUI will have implications for the health of all New Yorkers. It is imperative that testing be available locally to decrease the time to get a result into the hands of clinicians caring for the patient and the public health officials that need to enact public health interventions to stop the spread of this virus in NYC, and across the country.

As always, thank you for your commitment to the health and safety of New Yorkers and all Americans.

Sincerely,

Raul Perea-Henze, MD, MPH

Thank you Uwe for the continued excellent updates. Regarding (b) (5) [redacted], see below:

- Discuss resource needs and timing to generate extracted nucleic acid from viral isolate. Extracted nucleic acid can be used in BSL-2 labs, if material is certified being non-infective. (b) (5) [redacted]]

Of course, you are know all this, just thinking out loud. (b) (5) [redacted]

Finally, do we have an idea of how many non-public health clinical labs are out there in the US that are BSL-3? Am wondering just how widespread testing can be.

Thanks!

Best,

**Subject:** RE: 2/10/20 6 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

Enclosed the 2/10/20 6 AM update

**Status of activities on diagnostics**:

- Issue with rapid verification and implementation of CDC's 2019-nCoV Real-Time RT-PCR Diagnostic Panel in handful of public health labs:
  - CDC informed FDA yesterday afternoon that APHL has been notified that some laboratories have observed performance issues during verification testing, particularly with the N3 part of the assay showing sporadic aberrant reactivity in the negative controls. CDC is aware of these reports and is investigating.
  - Conference call with CDC has been scheduled for today 2 PM to discuss the issue and any investigation so far.

**New roadblocks/challenges/delays:**

- Delay of verification and implementation of CDC's nCoV assay is some public health labs. DMD will determine specific numbers and any CDC investigations at conference call Monday at 2 PM.

**Enclosed also the compiled activities over the weekend which have been previously communicated:**

**Status of activities on diagnostics previously reported for 2/8/20 @ 2/9/20**:

- A total of 41 IVD Developers have requested and received EUA review template, additional requests (2) are pending clarification about the device technology.
- Conference call with CDC: CDC intends to add 2 additional automated extraction methods to their EUA (Roche MagNA Pure 96 and Roche MagNA Pure 24), to support larger number of State Public Health labs who are only using these instruments. DMD/CDC agreed on bridging study protocol and limited clinical sample testing to demonstrate performance. CDC expects to submit amendment in next 2 weeks.
- On 2/6/20 CDC started shipping CDC's 2019-nCoV PCR assay to 4 public health labs that are strategically located in US and to other public health labs in states with confirmed cases.
- CDC via their IRR (International Reagent Resource) is accepting orders for CDC's 2019-nCoV tests from qualified laboratories.
  - This includes 115 qualified U.S. laboratories [state & local public health labs and DoD labs]
  - 191 qualified international labs, such as the World Health Organization (WHO) Global Influenza Surveillance Response System (GISRS) laboratories.
  - CDC test will not be available in U.S. hospitals or other primary care settings.
- CDC's isolate from infected patient in Washington was shipped to BEI (Biodefense and Emerging Infections Research Resources Repository) on Wednesday (NR-52281). Additional viral Isolates from other patients in US are expected to arrive at BEI in the next 2 weeks. (b) (5)

**Subject:** Inquiry

Dear Ms. Goldie,

Good afternoon to you. My name is Peter Shearstone and I am the global leader for quality and regulatory affairs for Thermo Fisher Scientific in Waltham Massachusetts.
We are one of the largest life science businesses in the world and are involved in many different parts of the healthcare.

AMERICA OVERSIGHT

Earlier this week some of our products were approved for use in the first Coronavirus diagnostic test when the FDA approved the emergency use authorization for the CDC.

My CEO Marc Casper and I will be in Washington D.C. on Friday, February 21st for a meeting with Dr. Shuren, Dr. Stenzel and Dr. Marks to discuss our efforts and where we can help FDA advance science.
I am writing to see if Dr. Hahn would also be available for a quick drive-by hello to meet that day? We are meeting with the Center leaders at 1pm Friday afternoon. I believe a short meeting to discuss our recent and future efforts on Coronavirus would be of interest to the FDA Commissioner.

Your thoughts are appreciated with this request.

Best regards and thank you,

Peter

**Subject:** Feedback on prepositioning of tests before authorization - DMD - 2019-nCoV update

Dear Jeff, Bill, Tim and Courtney,

Feedback requested: CDC has requested the prepositioning of their test (authorization pending) into the Laboratory Respond Network (LRN) labs and some public health labs as soon as the manufacturing or sufficient tests and verification controls is completed. The goal is to train lab personnel on the use of the test as quickly as possible and perform test verification. The prepositioning at this stage of an EUA has not been done before, but OIR believes it is the right thing to do to protect public health. We recommend to use enforcement discretion for this prepositioning request. Please let me know whether you support this recommendation.

Also, in past emergencies, we worked directly with OCET on EUA package requests (draft documents) and cc CDRH as the final package moves up to OCET and the Commissioner. Please let me know, whether under the new OPEQ/CDRH structure this is still the approach we should take or whether OPEQ/CDRH wants to be involved in the review of the EUA request package. We would like to know so we can factor this into the review timelines. If so, please recommend individuals we should bring up to speed – given the time sensitive nature of these EUA requests.

AMERICAN OVERSIGHT

General update: From the "AMA updates on Coronavirus" call that happened this morning, it appears based on the current case numbers that the mortality rate is about 2.5%. There are current 5 US airports that established screening. The travel alert was updated to a level 3 (highest rating).
CDC is testing 3 alert cases - individuals from the same family – test results are pending, 46 other individuals are also under investigation.

DARPA is involved to support the development of additional diagnostic platforms, but currently all specimens go to CDC for testing. There is consideration of sending sequencing out to LRN, however, CDC expect to have an assay ready to go in 2 weeks. A number of vaccines are in development based on MERS-CoV and SARS but there is a need for wild-type virus for the development of animal models. Funding is under discussion.

In addition, we had a call CDC today to clarify data requirements to support their EUA request. CDC shares data constantly and anticipates a more complete data package for CDRH review very early next week. In other updates WHO have determined at this point that the Wuhan coronavirus is not yet a public health emergency of international concern.

Best, Uwe

**Subject:** Re: 9 am Commissioner Call - 1/30/2020

Thanks for sharing. We received a data call on the coronavirus last night asking what additional resources would be spent in response to the virus and whether our existing budgets can cover the cost. The one item for CDRH is PPE at a cost of (b) (5) which we could fund. If there are others that need to be included, please send them before 1pm today.

Regarding the comment below that the ASPR wants more robust dialogue between his team and FDA on shortages, I'm not sure where that is heading towards.

We have CDRH representation from ARC/OST on the Supply Chain TF that was just set up for this concern...first call was on Tuesday...there's a follow up today at 2:30 and I will make sure our team is on the call and participatory.

I do think that this (b) (5) (b) (5)

**Subject:** 9 am Commissioner Call - 1/30/2020

Commissioner:

- Interesting HHS leadership retreat yesterday. Great presentation by (b) (5)
- Dr. Hahn wants to know the effect of coronavirus on drugs/biologic supplies and inspections, and beyond. What else is out there that we have to worry about. Dr. Hahn has asked Denise Hinton to work with Anna and all of the Centers re worst case scenario. Probably should do a table top exercise.

Keagan:

- Jay is evaluating if there are budgetary needs for FDA for the coronavirus. Make sure you are accounting for your commission corps, as well as shortages – so we have a full picture for HHS. Everyone should re-look at budget implications and if there are changes, let Bill/Jay know.
  - Dr. Hahn said incredibly important to know resource implications. If we are not doing inspections – how will we replace later. How do we catch up?
- Reminder – Commissioner All Hands at 11 am today. Space reserved for senior leadership up front. Webcast available.

OMA/OEA:

- Working to clear travel notice.
- Communication re WL (?) sent.

AMERICAN OVERSIGHT

- CBD communication?
- FIB on ANDAs, etc.

Amy:

- Yesterday spoke at pharmaceutical manufacturer meeting re tech modernization.
- Speaking to Health Care Executives this evening on FDA tech modernization.
- CBD – Policy workgroup meeting today to discuss actions and review drafts.

Anna:

- This afternoon a team will be sitting down with OIRA on CFSAN rule.
- Mark Abdoo, Anna, and others will be meeting with (b) (5) colleagues re EU shellfish agreement.

Re Coronavirus:

- Request from Sec. Azar re names for HHS team to be deployed to China.
- Significant concern at highest levels re potential shortage impacts for all medical products (drugs, devices, etc.) that would be needed as part of sustained response efforts.
  - Growing concern regarding medical products and drugs needed outside of the coronavirus response but because of uncertainty of travel, etc. and getting API/materials, there could be disruption to the supply chain.
  - ASPR Dr. Kadlec wants a more robust convo between his team and FDA re potential shortages and mitigation steps. Call will be scheduled – Denise Hinton is heading up many of these efforts internally. HHS looking for something more rigorous than current activities to date.

Mark Abdoo

- State Dept issued authorized departure of US employees from embassy in Beijing as of Jan 29th. Voluntary request for non-emergency personnel but staff are being strongly encouraged to leave.
  - Need to come to policy position quickly. Some HHS colleagues want to stay in the country.
  - Travel orders for folks leaving Beijing will be proceed through state emergency management system. We have some at post to help cover expenses but may need an additional funding cable for this purpose.
  - The only approved travel for safe haven is to the U.S. All staff departing Beijing will come to U.S. Unclear whether staff will come to D.C. or go to their District Office or elsewhere.
  - Any travel to China is now being approved at the Undersecretary of Management at State Dept Level – meaning it will not be approved.
  - FDA Country director has revoked any preapproved travel and will not allow more.
  - Need to issue guidance on how staff will apply for expense allowances to cover evacuation costs. Also need to develop policy on how these staff will work when they return.
  - Dr. Hahn asked if there was a plan to communicate policy to the Center Directors; Mark said folks are meeting at 1:30 to discuss and will plan to communicate with everyone if/when decisions are made.

Dr. Shah – Has met with most Center Directors and leadership team. Thank you for the warm welcome.

Frank (Cailtin) – Having some good conversations with (b) (5)

OL:

AMERICAN OVERSIGHT

- RADM Denise Hinton has joined HHS (BARDA, NIH, CDC) briefing E&C members on efforts to respond to the coronavirus.
- Staff briefing for Sens. Cardin (D-MD), Smith (D-MN), Blumenthal (D-CT) re drug shortage task force report.

OCA: Request from House Approps to meet with FDA re our work on coronavirus, EUAs generally, and budget implications. Will e-mail folks this morning. OCA will try to include Senate approps staff in the request.

CDRH: Nothing to report.

CFSAN: At OIRA meeting with Anna and others today.

CVM – Generic animal drug alliance meeting today.

ORA – Has looked at inspections (b) (5) [redacted]

OCC – (b) (5) [redacted]

OO – OO and Dr. Hahn agree it makes sense for employees to telework for now activities are interrupted by coronavirus. OO said employees without telework agreements can e-mail and follow up with formal documentation later.

OB – OB sent an additional request yesterday for Centers to indicate burden of coronavirus response. (b) (5) [redacted]

CBER, CDER, CDRH, CTP, OCE, OCS, and OO all passed or were not on today.

**Subject:** Cardinal Heath Surgical Gowns: leadership updates 1-22-2020

Good evening.

We are sending you today's updates from OPEQ and ARC on surgical gowns:

**Recalls:**

- Cardinal's 806 package for the gowns is in and being reviewed. The team has decided that there are no future data that would sway their decision to prevent release of Cardinal's on-site, quarantined, single gowns (there are about (b) (4). (b) (5) .

AMERICAN OVERSIGHT

- Cardinal's 806 package for the kits arrived earlier today and is being reviewed. Most of the discussion is about what to do with the kits, to mitigate a shortage (below).
- We plan to post Early Recall Notification for the single gowns recall by end of this week.

**Shortages:**

(b) (5)

**Communications:**

- OCE is working on draft KMQA to address any questions that might arise from the posting of Early Recall Notifications for both the single gowns.

**Congressional Inquiries:**

- No new inquiries received today. For the inquiry received yesterday, we are putting together a response and CDRH/FDA congressional liaisons plan to speak with the staff for Senators Markey (D-MA) and Warren (D-MA) on Monday (1/27/2020) afternoon.

**External Stakeholder Outreach:**

ASPR/CIP:

- SLT meeting: Today, Linda Ricci represented FDA in ASPR Senior Leadership Team meeting. The meeting went well and there were no questions to FDA. Dr. Kadlec plans to provide situational awareness update on Cardinal gown issue to HHS Secretary during his next meeting on the ongoing Corona Virus incident, due to the potential overlap of these issues (will gown recall impact availability of gowns for Corona Virus response). ASPR/CIP plans to share the draft talking points/updates with FDA for comments/edits prior to presenting to the Secretary.

- Private sector TCON: ASPR/CIP-private sector call is yet to be scheduled. ASPR is waiting for FDA to issue the recall notice to have information publicly available before holding this call with their sector partners. FDA is invited to participate in this call.

American Hospital Association (AHA):

- ARC held a TCON with AHA on 1/22/2020. Key takeaways:
  - Expressed concern about not having more details about the environmental conditions that the gowns were manufactured under. Since the recall goes back to September 2018, their customers have expressed concerns that patients may have already been affected.
  - Indicated that their customers are implementing mitigation strategies such as: putting level 3 gowns on allocation, some hospitals are using gowns from their Ebola cache, and some hospitals are networking a resource sharing with other hospitals in their communities.
  - Asked if the FDA is doing anything to facilitate the rapid importation of Level 3 gowns.

AMERICAN OVERSIGHT

**Vizient (Group Purchasing Organization):**

- ARC held a TCON with Vizient on 1/22/2020. Key takeaways:
  - Indicated that they speak with the President of Cardinal Health every day and are in daily contact with the largest 24 health systems.
  - Stated that they feel there has been minimal actual impact to elective surgeries at this point.
  - Expressed concern about the event spanning back to September 2018 and stated that their customers want to know what actually went wrong with the gowns, so that they can better manage things from a public relation stand point.
  - Expressed anxiety about the possible convergence of EtO, surgical gown recalls, and the potential spread of coronavirus.
  - Indicated that their customers are implementing mitigation strategies such as: (b) (4) Additionally, Cardinal Health is providing substitutes at no additional cost and Cardinal is assisting hospitals to assemble their own kits.
  - Vizient is helping their customers connect with alternative manufacturers (b) (4)
  - Asked if the FDA has any knowledge of the actual contaminant, and we advised that we did not.

**Health Industry Distributors Association (HIDA):**

- ARC held a TCON with HIDA on 1/22/2020. Key takeaway:
  - Indicated that the CH impact has not actually been felt and that everything is currently "speculative".

**Premier (Group Purchasing Organization):**

- FDA received a list of questions from Premier. We are in the process of drafting responses to their questions and plan to follow up with them by end of this week.

We will continue to keep you posted with new information and updates. Please let us know if you have any questions.

Best,
Lakshmi and Adam

Hi.

AMERICAN OVERSIGHT

Many thx for your continued assistance with the SITREP.

To enable better information sharing, we have created a sharepoint site (2019-nCoV SitReps) where we can store documents and then link to them from the SITREP. You can find the final versions of the SITREP there as well.

Just a quick note on (b) (5) [redacted]

Attached is a draft 29 Jan SITREP on the FDA response to the 2019-nCoV outbreak.

Please **provide any updates you to me by 3:00 PM.**

Please highlight any info that should not be shared outside of FDA in red.

Many thx for your continued assistance with this. -m

**Subject:** MedTech mtg at USEU today

Hi Mark, all – Medical devices updates from events today. Please let me know if we should discuss any of this.
Ritu

---

**At USEU**
-Pre-brief with Amb Sondland and Amb Sondland mtg with Med Tech held today.
-Amb. wants to find a short-term fix to industry concerns about lack of sufficient notified bodies to meet May 2020 compliance date. Dec corrigendum is a positive step but not enough. MDSAP guidance, EU full membership in MDSAP, participation in MDSRP all good for long term. Proposed advocating solutions on both fronts.
-Med Tech supports Amb intervention. Highlighted potential economic impact of May 2020 date without further relief from EP/EC – disruption could cost U.S. industry tens of billions of USD. MedTech expects EC will issue MDSAP guidance in March.
-Amb plans to meet with MEPs and Health Commissioner to push on two points – (1) At a high-level, EC to provide policy direction to EU-MS to prioritize and apply risk-based approach to enforcement. What form such instruction will take is TBD – MedTech suggested a 'Policy Directive' that lists 'significant changes' that do not need re-certification; and (2) EC to issue guidance to accept MDSAP audit reports in lieu of new audits.
-USEU tweet following MedTech mtg:

AMERICAN OVERSIGHT

*"The U.S. and EU each have high standards that ensure the health and safety of consumers. We are now working with @medtecheurope and the EU to ensure that US-manufactured life-saving devices can continue to be made available to EU citizens."*

**Germany**
-Amb Grenell meeting with DG Anne Bucher (DG for SANTE) is confirmed for Jan 22nd. Pre-brief with FDA and FCS.
-Shared yesterday's TPs with Emb Berlin.

**Subject:** RE: AMB Grenell Visit to Brussels and Requested FDA Meeting

Thanks, Mark. Call with Berlin was fine – it was a bit of an educational one – there is some confusion about current MRA-pharma scope and so they didn't fully get why we object to MRA concept for medical devices. (b) (5)

Attached is a pared down version for purposes of AMBs briefing books with reworked TPs on how MDSRP can accommodate AMB Grenell's specific ask. New/reworked TPs below – please let me know any concerns as soon as possible.

Many thanks!
Ritu

**Subject:** RE: (b) (5) for Commissioner's Briefing

Good morning. The criteria used to identify essential procodes is found below. For each procode, OHTs were asked to answer the following:

1. Is it used to diagnose, treat or prevent a serious disease or medical condition?
2. Is it used as a necessary tool (e.g. core medical equipment) for life sustaining conditions or patient care?
3. Is this device made by a sole manufacturer?
4. Is it used for a vulnerable population?
5. Does disruption in availability of this device cause concern and significantly impact patient care?

Best,

**Subject:** Cardinal Heath Surgical Gowns: leadership updates 1-21-2020

Good evening.

We are sending you today's updates on surgical gowns:

**Recall/Shortages**:

- Gowns: Cardinal's 806 for gowns was received on Tuesday, 1/21/2020. The Cardinal single surgical gown recall does not appear to pose a significant threat to the supply chain as stakeholder outreach suggests that the market has adequate alternatives for AAMI level 3 gowns, including level 4 gowns and gowns produced by competitors.

- Kits: As of Tuesday, 1/21/2020 FDA has received a draft preliminary form of 806 for the Presource kits. The Presource kits are custom and unique to the facility, or even the provider level, making them difficult to otherwise source.

- FDA had a TCON with Cardinal Health (CH) this afternoon. Key takeaways are:
  - FDA requested additional information regarding the kits ASAP.
  - A follow up email was sent to the firm requesting them to submit the following information:
    - 806 recall package for kits by 10am tomorrow, Jan 22nd

AMERICAN OVERSIGHT

- Descriptions of the configurations of the kits, specifically with attention to how the other kit components are arranged in relation to the potentially contaminated gown(s), and how they are physically separated from those gown(s) and the materials used to physically separate from those gown(s), by 10am tomorrow, Jan 22nd
- Firm's mitigation strategy on potential shortages that may alleviate burden on their customers by 1pm tomorrow, Jan 22nd
  - CH confirmed that all their gowns are sterilized using EtO. They do not use the (b) (4) facility to sterilize their gowns. Their gowns are sterilized at (b) (4) at multiple locations.
  - CH is anticipating to begin the sterility testing on or before Feb 10th.

- The kit shortage is under active and heated discussion internally.
  - The team's decision will hinge on a better understanding of the internal kit configuration, which seems to come in 2 and perhaps more varieties.
  - Some kits have the gowns physically separated from the other components, whereas other kits do not.
  - The risk of harm from use may differ among the different configurations.
  - Right now, with the information we have, (b) (5)

**Communications:**
Today, CH provided a link to their microsite that lists their customer letter. We have updated our Medical Gowns web page to include the link to the Cardinal's microsite.

**Congressional Inquiries:**
We have received questions from Senators Markey's and Warren's office today regarding hospital gown issue. At this time, the questions are very general and high-level such as "whether Cardinal is participating with us", "what are some potential types of adverse events from lack of sterility", etc. ARC is working with Jennifer Tomasello to address these questions.

**External Stakeholder Outreach:**

- ASPR/CIP: ASPR/CIP has relayed that the private sector partners have some questions and concerns for us including but not limited to: more specifics on the contaminant, looking for patient complications, bioburden of the contamination. ARC is coordinating with ASPR to have a call with the private sector partners this week.

- Massachusetts Hospital Association (MHA): ARC spoke with MHA on 01/21/2020 in follow-up to inquiry received from the MA Senators. As of today, MHA has received only 2 comments regarding the CH gown shortage. Both calls were from hospitals with a teaching function. MHA was not comfortable disclosing their names without prior approval. MHA was unable to answer if their concerns centered around the gowns only, Presource kits only, or both items. They did advise that they have a meeting with 35 Massachusetts Hospital CEOs planned for Thursday, 01/23/2020. They are willing to discuss any potential supply chain disruptions, product availability concerns, and mitigation strategies with their members at this meeting. ARC has scheduled a follow-up with MHA following this meeting.

We will continue to keep you posted with new information and updates. Please let us know if you have any questions.

Best,
Lakshmi

**Subject**: RE: Coronavirus

CDRH has been proactively coordinating with CDC on diagnostic activities through the Tri-agency Taskforce for Emergency Diagnostics (TTFED): Teleconferences were held Jan 8, 15, and 17, 2020. In anticipation of testing specimens from returning travelers at the selected airports, CDC is developing a molecular test, based on CDC's previously developed MERS-CoV RT-PCR Assay (which FDA authorized for use under EUA in June 2014), that they will CLIA validate for use in CDC laboratories. Primers and probes have been selected and CDC is currently validating the assay. CDC anticipates submitting an EUA package to facilitate distribution of the test within the Laboratory Response Network. We are finalizing an EUA Interactive Review Template specific for Molecular-based technologies detecting the 2019-nCoV to share with all IVD developers that request the template. We are currently working interactively with CDC to complete the data information needed to support an EUA request to FDA. At this time, no other IVD developers have reached out to us to request an EUA Interactive Review Template for the 2019-nCoV. We have also been involved in a recent WHO-USG Telecon on Wuhan Coronavirus Cooperation (Jan 14, 2020) to discuss needs and potential areas of collaboration. OCET is coordinating this interaction for FDA.

**Subject**: Re: N95 EUA for COVID19

If need be it could an EUA with alternatives — NIOSH certified can be used in non-surgical healthcare settings or in a surgical healthcare setting if used with a faceshield or the manufacturer truthfully certifies that it conducted and passed ASTM fluid penetration testing (or our scaled back version). That would not be inconsistent with CDC's current recommendations.

(b) (5)

[redacted]

And if granting enforcement discretion to the public health labs, there is no basis to exclude other test developers.

The labs should be validating their tests and can submit data/analyses to us on a rolling basis. Once we have the final piece we grant the EUA for valid tests quickly, often within a day. Over 70 developers requested and received our EUA template and are already developing tests. The public health labs could have been doing that but haven't, as far as I've heard.

# EMERGENCY USE AUTHORIZATION (EUA)

## EUA INTERACTIVE REVIEW TEMPLATE FOR MOLECULAR-BASED SINGLE TARGET TESTS FOR 2019 NOVEL CORONAVIRUS (2019-nCoV)

## GENERAL INFORMATION ABOUT THIS TEMPLATE

- Text highlighted in yellow ***[Text]*** should be completed by the IVD developer (sponsor) as applicable to their specific test. Text in **bold** outlines the Food and Drug Administration (FDA) suggestions and clarifications for the sponsors' consideration when completing the required information in a specific section.

- This is a EUA interactive review template for Pre-EUA/EUA submissions concerning molecular-based single target tests for detection of 2019 Novel Coronavirus (2019-nCoV), Wuhan, China. If you are developing a multiplex molecular-based assay for the detection and differentiation of nucleic acids from a panel of microorganisms, please review Appendix A for FDA recommendations.

- This is a EUA interactive review template for Pre-EUA/EUA submissions and not a guidance document. The template is subject to change as we learn more about the 2019-nCoV disease and its risk-benefit profile. Recipients will receive notice and updated templates as they become available.

- This EUA interactive review template is an FDA internal document and any proprietary information provided within the template and during the interactive review process will remain confidential as it does in a regular FDA premarket submission.

- Feedback provided by FDA during the interactive review of your pre-EUA/EUA is subject to change as we learn more about the 2019-nCoV disease and the risk-benefit profile evolves to address unmet public health needs.

- Prior to a potential authorization FDA will require developers of molecular-based tests to assess traceability of their test to an FDA-recommended reference material panel if available at the time. Specific details about the traceability study and the FDA-recommended reference material panel will be provided by the Lead Reviewer assigned to the Pre-EUA submission once the analytical and clinical evaluation data has been reviewed and found to be acceptable.

- Please be reminded that tests for the detection of 2019-nCoV or 2019-nCoV infection must not be distributed and/or used for clinical diagnoses without premarket clearance, approval, or EUA by the FDA. Clinical samples for 2019-nCoV testing should be sent to the appropriate public health laboratories until the IVD device subject of this Pre-EUA submission has received authorization from the FDA.

- Clinical specimens may be required to support the EUA request. Furthermore, please note that applicable regulations for human subject protection do apply under the

AMERICAN OVERSIGHT

EUA. Please refer to the Clinical Evaluation section of this document for more details.

- If authorized, the EUA means that this 2019-nCoV IVD is temporarily authorized for use until the public health emergency is terminated or the EUA is revoked by the FDA.

    - FDA recommends that you consider registration and listing your EUA product once you have been issued an EUA. If this is problematic, please notify the Agency during your Pre-EUA.
    - The EUA is not a pathway to permanent marketing of your device. Therefore, we strongly recommend that you consider, in addition to an EUA, a traditional premarket submission for your IVD so that your device can still be legally marketed after termination of the emergency declaration. We recommend that you identify as soon as possible in the Pre-EUA review process any consideration of moving your product forward towards De Novo/510(k) clearance. If so some of our feedback to you may take such a long-term goal into consideration in order to prevent additional testing where it may not be needed. Therefore, please consider submitting a Pre-Submission to inquire what studies would be required for a premarket approval/ clearance of your 2019-nCoV IVD. Details on how to submit a Pre-Submission to the Agency are outlined in the FDA guidance document: *Requests for Feedback and Meetings for Medical Device Submissions: The Q-Submission Program.* [ HYPERLINK "https://www.fda.gov/regulatory-information/search-fda-guidance-documents/requests-feedback-and-meetings-medical-device-submissions-q-submission-program" ]

## A. EXECUTIVE SUMMARY (as of X/XX/20XX)

## B. PURPOSE FOR SUBMISSION

Emergency Use Authorization (EUA) request for distribution and/or use of the ***[test name]*** to ***[indicate labs, if applicable]*** for the *in vitro* qualitative detection of RNA from the 2019-nCoV in ***[add all claimed specimen types, e.g., nasopharyngeal/oropharyngeal swabs, sputa, BAL, stool, and serum, etc.]*** from patients who meet CDC 2019-nCoV clinical criteria (e.g., signs and symptoms associated with 2019-nCoV infection) and CDC novel coronavirus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated) to aid in the diagnosis of 2019-nCoV infection.

## C. MEASURAND

AMERICAN OVERSIGHT

Specific nucleic acid sequences from the genome of the 2019-nCoV **[*please specify the targeted gene(s) of the pathogen*]**.

## D. APPLICANT

***[Official name, address and contact information of applicant]***

## E. PROPRIETARY AND ESTABLISHED NAMES

Proprietary Name - ***[test name]***
Established Name - ***[test name]***

## F. REGULATORY INFORMATION

***Approval/Clearance Status:***
The ***[test name]*** test is not cleared, CLIA waived, approved, or subject to an approved investigational device exemption.

***Product Code:***
[XXX – FDA will complete]

## G. PROPOSED INTENDED USE

***1) Intended Use:***
**The proposed IU will be finalized based on the data and recommendations from Public Health authorities at the time of authorization – example text is provided below for a qualitative molecular test that detects organism RNA but may be adapted according to the specific emergency situation addressed by the device.**

[***Test name***] is a [***specify test technology such as, real-time RT-PCR test***] intended for the qualitative detection of nucleic acid from the 2019-nCoV in [***describe all the specimen types***] from individuals meeting CDC 2019-nCoV clinical criteria (e.g., clinical signs and symptoms associated with 2019-nCoV infection) in conjunction with CDC 2019-nCoV epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated). Testing is limited to [***laboratories - certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. §263a, to perform high complexity tests, or by similarly qualified non-U.S. laboratories***].

Results are for the identification of 2019-nCoV RNA. The 2019-nCoV RNA is generally detectable in **[*name specimen type*]** during the acute phase of infection. Positive results

AMERICAN OVERSIGHT

are indicative of active infection. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

The ***[test name]*** is intended for use by **[*include intended user, e.g., trained clinical laboratory personnel specifically instructed and trained in the techniques of real-time PCR and in vitro diagnostic procedures*]**. The ***[test name]*** is only for use under the Food and Drug Administration's Emergency Use Authorization.

***2) Special Conditions for Use Statements:***

For prescription use only
For in vitro diagnostic use only

***3) Special Instrument Requirements:***

The ***[test name]*** test is to be used with the [***list all RT-PCR Instruments, software requirements, automated extraction instruments***].

## H. DEVICE DESCRIPTION AND TEST PRINCIPLE

**Example text has been added under each of the sub-headings below for a fluorescence based rRT-PCR test for detection of organism RNA. If a different test principle is used by the test for the detection of a specific analyte please modify the description accordingly to capture the salient points in each of the sub-headings below. Please note that for new investigative technologies FDA may request additional detailed information so we can adequately assess the risks and benefits associated with the device.**

***1) Product Overview/Test Principle:***

**Describe the technology of the test and how this technology works to identify the measurand, the instruments employed/required to perform the test from sample collection to result (include all claimed extraction and PCR detection instruments), and the specimen types for which you claim to have specific performance characteristics as described below. If applicable, list all primer and probe sets and briefly describe what they detect. Please include the nucleic acid sequences for all primers and probes used in the test. Please indicate if the test uses biotin-Streptavidin/avidin chemistry in any of the steps for coupling reagents. Please note that an alignment with available reference genomes for different strains of the target pathogen is requested as part of the inclusivity evaluation (Section N).**

The ***[test name]*** is a real-time reverse transcription polymerase chain reaction (rRT - PCR) test. The 2019-nCoV primer and probe set(s) is designed to detect RNA from

AMERICAN OVERSIGHT

the 2019-nCoV in ***[list all the specimens]*** from patients who meet CDC 2019-nCoV clinical criteria (e.g., signs and symptoms associated 2019-nCoV infection) in conjunction with CDC 2019-nCoV epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated).

2) ***Description of Test Steps:***

**List and describe in detail all the steps of the test sequentially from specimen collection to detection.**

Nucleic acids are isolated and purified from ***[specimens]*** using ***[please describe the method(s) of extraction (please specify the specimen input volume for extraction and/or test, the nucleic acid elution volume and whether isolation/purification is manual and/or automated)].*** The purified nucleic acid is reverse transcribed using ***[enzyme mix/kits – please specify the input volume of purified nucleic acid added to the rRT-PCR reaction mix]*** into cDNA which is then subsequently amplified in ***[please describe the instrument(s) and enzyme mix]***. In the process, the probe anneals to a specific target sequence located between the forward and reverse primers. During the extension phase of the PCR cycle, the 5' nuclease activity of Taq polymerase degrades the probe, causing the reporter dye to separate from the quencher dye, generating a fluorescent signal. With each cycle, additional reporter dye molecules are cleaved from their respective probes, increasing the fluorescence intensity. Fluorescence intensity is monitored at each PCR cycle by ***[please describe the detection instrument(s)]***.

3) ***Control Material(s) to be Used with [test name]:***

**List all control materials (provided with the test kit and/or required but not provided with the test kit and describe what they are, how they are expected to work, where in the testing process they are used, and the frequency of use. If a control is commercially available, provide supplier's name and catalog number or other identifier; if your device relies on external controls that are manufactured by a third party please note that these controls should also be validated within your analytical and clinical studies described below in Section (N).**

Controls that will be provided with the test kit include:

a) A "no template" (negative) control is needed to ***[describe need]*** and is used ***[describe use – please also specify frequency of use]***

b) A positive template control is needed to ***[describe need]*** and is used ***[describe use – please specify the concentration of the positive control relative to the LoD of your test (note that ideally the positive control concentration should be such that it is close to the LoD of your test) and also specify frequency of use]***

AMERICAN OVERSIGHT

c) An extraction control ***[describe control]*** is needed to ***[describe need]*** and is used ***[describe use – please also specify frequency of use].*** **Please note that if the no template control and positive control, are taken through the entire sample processing procedure, including the extraction, then a separate extraction control is not required**.

d) An internal control ***[describe control]*** is needed to ***[describe need]*** and is used ***[describe use]***.

Controls that are required but not provided with the test kit include ***[describe control – provide recommended sources of the control materials – either a separate control kit for purchase that you the applicant develops or a control material that can be purchased from a third party].*** This/these control(s) is/are needed to ***[describe need]*** and is used ***[describe use – please also specify frequency of use]***.

**Please note that any control recommended to be used with your device (provided with the kit or not) needs to be validated in the context of your analytical and clinical study (i.e., you will need to run these controls as part of your studies). In instances where control material is not readily available through 3rd party vendors (which is often the case at the beginning of an outbreak) FDA may request that you include suitable control material with your device. Please note that external control materials are considered particularly important in the context of EUA devices because often GMP requirements for the manufacture of the EUA device are waived in emergency situations and reagent stability studies are limited. Hence the external controls offer some assurance of EUA test performance in the hands of the end user.**

## I. INTERPRETATION OF RESULTS

All test controls should be examined prior to interpretation of patient results. If the controls are not valid, the patient results cannot be interpreted. **Please describe if a Ct cutoff is used as part of your testing algorithm and/or if the end user is required to review fluorescent curves for weakly positive samples before final interpretation. Although not typical for molecular-based tests, if the test result involves the use of an algorithm/calculation, for example a ratio value, when determining the final patient test result, please include a detailed description and any additional calibration materials that may be required.**

1) ***[Test name] Controls – Positive, Negative and Internal***

**Describe in detail the expected results generated, including acceptance criteria, for all the controls described in detail in Section H above. Describe the measured values (if applicable) for valid and invalid controls and outline the recommended actions the laboratory should take in the event of an invalid control result.**

AMERICAN OVERSIGHT

2) ***Examination and Interpretation of Patient Specimen Results:***

**Describe when clinical specimen test results should be assessed and outline the criteria for test validity**. **Example text**: Assessment of clinical specimen test results should be performed after the positive and negative controls have been examined and determined to be valid and acceptable. If the controls are not valid, the patient results cannot be interpreted.

**Clearly indicate how to interpret numeric test values (if applicable) as positive or negative for presence of the 2019-nCoV. Indicate if the end user is required to review fluorescent curves for weakly positive samples before final interpretation and how to identify indeterminate/inconclusive results (if they exist) results and how the user should resolve them, e.g. if repeat testing may be required.**

**When applicable, provide a table clearly describing the possible combinations of test result values for each primer/probe set, and how they should be combined into a final interpretation of the result for your test. If the test produces result that will be used as part of a CDC recommended testing algorithm, please indicate what follow-up testing/process should be conducted, if applicable.**

## J. PRODUCT MANUFACTURING

**Please note that if you are developing a test for use at a single site (i.e., a laboratory developed test LDT), some of the information requested in this section may not be applicable. Please contact FDA for additional guidance for an emergency use LDT.**

The ***[test name]*** has been validated using only the components referenced in this submission and shall not be changed without prior concurrence from the FDA.

*1)* ***Overview of Manufacturing and Distribution:***

The product will be manufactured at [***manufacturer's name and FDA registration number (if applicable) or laboratory name if an LDT***] by [***manufacturer name, or laboratory name if an LDT***] personnel consistent with practices for the production of **[*types of devices*]** based on [***type of quality system****]. Material manufactured by [***manufacturer's name, or laboratory name if an LDT***] may be bottled and kitted by [***packager name***] manufacturing facility.

***Under the Emergency Use Authorization (EUA) most of the 21 CFR 820 Quality System Regulation (QSR) requirements can be waived for the duration of the EUA. FDA expects that developers follow comparable practices as much as possible and may consider previous compliance history when determining whether or not to waive certain QSR requirements for a specific product. Please note adverse events, as per 21 CFR Part 803, have to be reported for authorized devices (see Section R).**

AMERICAN OVERSIGHT

The current manufacturing capabilities include the ability to manufacture approximately **[*please insert the approximate number of units/products that can currently be manufactured per week at the manufacturing facility*]** products per week, however in the event of a surge in demand this could be increased to **[*please insert the approximate maximum number of units/products that could potentially be manufactured per week at the manufacturing facility if there was a surge in demand*]** product per week within a **[*please specify in weeks/months the expected timeframe required to increase product production if required*]** timeframe.

The product will be distributed by **[*please describe the distribution plan for the product and list all current distributors*]**.

2) ***Components Included with the Test***

Components manufactured by [***manufacturer's name and FDA registration number (if applicable)***] and supplied with the test include:

**List all components and reagents provided for your test, including a description of the primers and probes, volumes, concentrations, quantities, buffer components, etc.**

3) ***Components Required But Not Included with the Test***

Components required but not included with the test:

**List all components and reagents not included with the test that must be supplied by the user to perform the test, with specific supplier names and catalog numbers or other identifiers for obtaining these components and reagents. Please include here all specific consumables that were validated for use with your device, that are not interchangeable with other products and that are needed to guarantee device performance as established in the EUA validation studies listed in Section N below.**

4) ***Testing Capabilities***

**Briefly describe current sample throughput capacity, total time required to perform the test (from clinical specimen collection, specimen transport to result), and number of tests that can be performed per instrument run and per day.**

5) ***Reagent Stability:***

**Briefly describe stability test plan for *[test name]* reagents and include any accelerated stability information if available. Please note that reagent stability studies do not need to be completed at the time of EUA issuance, however the study design should be agreed upon during interactive review and the stability studies started immediately following authorization, if not before. When designing your stability study, we have some general recommendations that are outlined in Appendix B, for your consideration.**

AMERICAN OVERSIGHT

## K. PERFORMANCE EVALUATION

**If you plan to claim multiple target analytes to aid in differential diagnosis or you plan to claim multiple RT-PCR instruments and/or extraction methods, please refer to Appendix A and C, respectively, more information. Please note that any omission of a requested study in this document should be documented and justified.**

### *1) Analytical Sensitivity:*

a) *Limit of Detection (LoD):* **You should determine the LoD of the device utilizing the entire test system from sample preparation to detection for each clinical matrix claimed. Please note that claims for additional anticoagulants, for blood specimens, can be supported by a matrix equivalency study as outlined in Section N, subsection 3 below. The LoD is determined using dilutions of live propagated and titered 2019-nCoV stocks (CFU/mL or PFU/mL) spiked into a relevant clinical matrix. If wild-type virus is not available at the time of your validation studies, please contact FDA to discuss a potential alternative. Please note that if available please also provide Genomic Equivalent Copies (GEC)/mL units for the stock solutions used and include an explanation on how they were determined. Please note that LoD studies should be performed with live organisms, as described above. If you plan to use inactivated organism in your LoD determination you should describe how the material was inactivated and perform a study to determine whether the inactivation process impacted the LoD of the device.**

**First a tentative LoD must be established through limiting dilutions of the prepared material with 3-5 replicate measurements. Please note for all the analytical studies described in Section N that require replicate testing, one replicate equates to one independent extraction and PCR detection. Once a tentative LoD is established, the LoD should be confirmed by preparing at least 20 additional replicates at the LoD concentration and demonstrating that the organism was detected with a minimum 95% positivity (19/20). If this confirmatory study achieves a positivity of 100%, then a lower concentration needs to be tested (with 20 replicates) until <100% positivity is obtained.**

**Please use the following format when submitting LoD information and data:**

LoD studies determine the lowest detectable concentration of 2019-nCoV at which approximately 95% of all (true positive) replicates test positive. The LoD was determined by limiting dilution studies using characterized samples.

**List/describe the following in this section:**

- **Titers and strains of the 2019-nCoV stocks used for the LoD study and describe how the organism stocks were prepared and how the titers were determined.**

AMERICAN OVERSIGHT

- **The dilution factor and number of serial dilutions of the characterized 2019-nCoV that were tested to determine the LoD for each primer and probe set.**
- **The nucleic acid extraction/purification method.**
- **The real time PCR instrument.**

Serial dilutions of the characterized 2019-nCoV were then tested in **[*number of replicates (i.e., recommend that sample is extracted independently three-five times and each extraction tested once)*]** replicates. The lowest concentration at which all [***number of replicates***] replicates were positive was treated as the tentative LoD for each test. The LoD of each test was then confirmed by testing [***number of replicates (at least 20 recommended)***] with concentrations at the tentative limit of detection. The final LoD of each test was determined to be the lowest concentration resulting in positive detection of [***number of positive replicates (at least 19 out of 20 replicates)***]. [***Include analysis of LoD results, indicating the final LoD for each test***]

**Tentative LoD: [*Please provide a summary of the data for each strain tested]* example table 2019-nCoV stocks is provided below:**

| 2019-nCoV Strain Tested | Stock 2019-nCoV Titer | Serial 10-Fold Dilution Factor | Concentration in Dilution Tested [Include Units] | Replicate 1 $C_t$ | Replicate 2 $C_t$ | Replicate 3 $C_t$ | Replicate 4 $C_t$ | Replicate 5 $C_t$ | Call Rate | Lowest Concentration with Uniform Positivity per Analyte | Limit of Detection (LoD) per Virus Strain |
|---|---|---|---|---|---|---|---|---|---|---|---|
| ***Example:*** *[analyte]* | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |

b) FDA Sensitivity Evaluation: The analytical sensitivity of the test has to be further assessed by evaluating an FDA-recommended reference material using an FDA developed protocol if applicable and/or when available. Details will be provided during the Pre-EUA interactive review.

c) *Reactivity/Inclusivity:* Reactivity of the ***[test name]*** was evaluated for additional isolates of 2019-nCoV.

**Reactivity: *[test name]* example table below**

| 2019-nCoV Strain/Isolate | Source/Sample Type* | Concentration | Ct** |
|---|---|---|---|
| | | | |
| | | | |
| | | | |

AMERICAN OVERSIGHT

| | | | |
|---|---|---|---|
| | | | |

***Please list source of material used for wet testing and sample type tested (i.e., organism – live or inactivated, purified nucleic acid – whole genome etc.).**
**** If your technology does not produce Ct values, please include instead the signal output for your specific device technology.**

**At a minimum, the strain used in your LoD evaluation should be listed here (multiple isolates of the same 2019-nCoV strain that was used for the LoD studies can also be included if available). If additional isolates are not available at the time of your validation studies, please discuss with FDA. Each isolate should be tested at or near the LoD (no more than 3x LOD) of the test, spiked into clinical matrix utilizing the entire test system, including extraction. If you plan to claim more than one type of clinical matrix, we recommend that you perform this study in the most challenging clinical matrix, testing a minimum of 3 replicates. In addition, the wet testing should be accompanied by extensive inclusivity *in silico* analysis of the test primer and probes with all known strains/isolates (past/present) of 2019-nCoV (including the strain/isolate used for wet testing).**

## 2) *Analytical Specificity:*

a) *Cross-Reactivity:* Cross-reactivity of the ***[test name]*** was evaluated using both *in silico* analysis and by testing whole organisms **[*pathogen*]** (concentration) or purified nucleic acid from other ***[describe organisms]*** (concentration/reaction).

**Cross-Reactivity: *[test name]* example table for wet tested organisms below**

| Virus/Bacteria/Parasite | Strain | Source/ Sample type | Concentration | Ct Values* |
|---|---|---|---|---|
| | | | | |
| | | | | |
| | | | | |

***If your technology does not produce Ct values, please include instead the signal output for your specific device technology.**

**Cross-reactivity studies are preformed to demonstrate that the test does not react with related pathogens, high prevalence disease agents and normal or pathogenic flora that are reasonably likely to be encountered in the clinical specimen. The FDA Tables 1 and 2, below are intended to recommend simulate testing of patients having infections with organisms which cause similar symptoms to those observed at the onset of 2019-nCoV infection. The FDA Tables also include other organisms and strains which have significant genetic similarity and therefore a higher likelihood of cross-reacting with 2019-nCoV specific reagents. Also included in the FDA Tables are recommended unclaimed organisms/strains which are likely to be endemic to the currently affected area should be included in cross-reactivity testing since these organisms/strains will be an important aspect of the differential diagnosis of 2019-nCoV infection.**

AMERICAN OVERSIGHT

**FDA Table 1 Cross-Reactivity: List of Organisms to be wet-tested and analyzed *in silico* (for tests detecting 2019-nCoV) in respiratory material or blood specimens**

| Other high priority pathogens from the same genetic family | High priority organisms likely in the circulating area |
|---|---|
| Human coronavirus 229E | Adenovirus (e.g. C1 Ad. 71) |
| Human coronavirus OC43 | Human Metapneumovirus (hMPV) |
| Human coronavirus HKU1 | Parainfluenza virus 1-4 |
| Human coronavirus NL63 | Influenza A |
| SARS-coronavirus | Influenza B |
| MERS-coronavirus | Enterovirus (e.g. EV68) |
| | Respiratory syncytial virus |
| | Rhinovirus |
| | *Chlamydia pneumonia* |
| | *Haemophilus influenzae* |
| | *Legionella pneumophila* |
| | *Mycobacterium tuberculosis* |
| | *Streptococus pneumonia* |
| | *Streptococcus pyogenes* |
| | *Bordetella pertussis* |
| | *Mycoplasma pneumoniae* |
| | *Pneumocystis jirovecii* (PJP) |
| | Pooled human nasal wash - *to represent diverse microbial flora in the human respiratory tract* |
| | |

**FDA Table 2 Cross-Reactivity: List of Organisms to be analyzed *in silico* (for tests detecting 2019-nCoV) in respiratory material or blood specimens:**

| Other high priority pathogens from the same genetic family | High priority organisms, including organisms commonly found in the clinical matrix |
|---|---|
| | Influenza C |
| | Parechovirus |
| | *Candida albicans* |
| | *Corynebacterium diphtheriae* |
| | *Legionella non-pneumophila* |
| | *Bacillus anthracis* (Anthrax) |
| | *Moraxella catarrhalis* |
| | *Neisseria elongate and meningitidis* |
| | *Pseudomonas aeruginosa* |
| | *Staphylococcus epidermis* |
| | *Staphylococcus salivarius* |
| | *Leptospirosis* |

AMERICAN OVERSIGHT

| | |
|---|---|
| | *Chlamydia psittaci* |
| | *Coxiella burnetii (Q-Fever)* |
| | *Streptococcus aureus* |
| | |

***In silico*** **analysis should be performed on all potentially cross-reactive organisms outlined in the FDA Tables 1 and 2 above. You should provide the result summary of the *in silico* blast analysis (tabular format) evaluating whether there is any significant amplification of non-target sequences that could either result is cross-reactivity or potentially interfere with the detectability of the actual target analyte. As such we are asking that you provide individual blast results (non-truncated alignments) for each of the primers and probes used in your device with potential cross-reacting organisms. Please provide for our review the percent sequence homology for each organism relative to the target analyte primers/probes in your test. Please use the example table below when presenting the results of *in silico* analysis in your submission:**

**Results of *In Silico* Analysis**

| Pathogen | Strain | GenBank Acc# | % Homology Test FP (i.e. 0-100%) | % Homology Test RP | % Homology Test Probe |
|---|---|---|---|---|---|
| | | | | | |
| | | | | | |

**The analysis should include multiple representative strains from GenBank for each organism. If *in silico* analysis reveals other potential cross-reactants (i.e., ≥80% homology between one of your primers or the probe to any of the sequences of listed potential cross reactants), you should carefully review the alignments and determine based on the positions of the homologous stretches and mismatches if additional cross-reactivity and/or interference (please refer to item b below – microbial interference studies) wet testing will be required to rule out cross-reactivity or interference of that organism that may affect the performance of your device. In these circumstances if wet-testing is omitted you should include an explanation as to why *in silico* generated data is not clinically relevant (irrelevant isolate, location/extent of match within primer/probe, etc.), or why the performance of your test would not be impacted.**

**Organisms in FDA Table 1 should be wet tested in addition to the *in silico* analysis. Omissions from wet-testing should be discussed with FDA and supported by a well-documented justification that includes a due diligence attempt to obtain the live or inactivated organisms (and/or purified nucleic acid – which is acceptable for cross reactivity evaluation for an EUA).**

AMERICAN OVERSIGHT

**The wet testing evaluation should reflect test specimens prepared at the highest clinically relevant level of organism (i.e., a minimum of $10^6$ CFU/ml or higher for bacteria and $10^5$ $TCID_{50}$/mL or PFU/ml or higher for viruses) and should be tested with a minimum of three replicates per organism test specimen. Test specimens can be prepared by spiking cultured isolates/inactivated organisms/ purified nucleic acids (whole genome) into negative clinical matrix and determining cross reactivity based on triplicate replicates. If you plan to claim more than one type of clinical matrix, please note that if significant differences in LoD are observed for the different clinical matrices this may warrant this study being performed in more than one clinical matrix.**

**If you plan to claim non-blood or non-respiratory clinical specimen types for diagnostic use with your device, e.g., stool specimens, etc., please consult FDA for more information on additional organisms that may be recommended for cross-reactivity testing, common examples are provided below for stool specimens (FDA Table 3):**

**FDA Table 3: Organisms to be analyzed for non-blood clinical specimens:**

| **Stool** |
|---|
| *Escherichia coli* |
| *Lactobacillus* |
| *Bacillus* spp. |
| *Clostridium* Spp. |
| *Enterobacter* |
| *Enterococcus* |
| Fusobacterium |
| Bacteroidetes |
| Bifidobacterium |
| Ruminococcus |
| |

b) *Microbial Interference Studies:* **If *in silico* analysis reveals ≥ 80% homology between the cross-reactivity microorganisms and your test primers/ probe(s), we recommend that you either perform (1) a microbial interference study with 2019-nCoV and the microorganisms that your test primers/ probe(s) have homology to, (2) as an alternative to the microbial interference study, you may provide justification as to why (e.g., amount of primer(s)/ probe(s) included in your master mix) the performance of your test would not be impacted by the presence of a causative agent of a clinically significant co-infection, or (3) explain why the *in silico* results are clinically irrelevant. In the case of the microbial interference study, interference should be evaluated using samples spiked at a low 2019-nCoV concentration, at 3x LoD, and a high interferent level (either microorganisms or nucleic acids purified from them), to represent the worst-case scenario, with a minimum of 3 replicates. If you plan to claim more than**

AMERICAN OVERSIGHT

**one type of blood clinical matrix, please note that if significant differences in LoD are observed for the different clinical matrices this may warrant this study being performed in more than one clinical matrix. If the LoDs are similar in the blood clinical matrices the study should be performed in the most challenging matrix, i.e., whole blood. In addition, if you are claiming blood and non-blood clinical specimens you may be required to perform this study in more than one clinical matrix. If interference is observed at the level tested, an additional titration study should be performed to determine the highest microorganism interferent level the 2019-nCoV test can tolerate.**

**c)** *Endogenous Interference Substances Studies*: **The extent of testing for endogenous interference substances depends on the matrix that is claimed for the device as well as on the technology of the device, e.g., if a nucleic extraction procedure is performed prior to testing or not. For EUA we do not typically ask for interference studies for tests that use conventional PCR and/or well-established extraction methods prior to testing (e.g., Boom method and column-based extraction methods).**

**For extraction procedures that are new or for nucleic acid-based technologies that are different from conventional PCR (e.g., various isothermal methods), we expect testing of potential interferents. The impact of interfering substances should be evaluated over the expected clinical range of the potentially interfering substance. Potential sources of endogenous interference include, but are not limited to, the ones listed in the tables below. It is important to note that the evaluation of interference and the generation of false negative results should be done using samples containing the analyte at or near the LoD and should not exceed 3x LoD. You should test a minimum of 3 replicates per substance. If you plan to claim more than one type of clinical matrix, please note that if significant differences in LoD are observed between the different clinical matrices this may warrant this study being performed in more than one clinical matrix. Biotin interference poses a risk to laboratory tests that incorporate the free biotin-streptavidin capture method. Therefore, please review this safety communication [ HYPERLINK "https://www.fda.gov/medical-devices/safety-communications/fda-warns-biotin-may-interfere-lab-tests-fda-safety-communication" ] and the following [ HYPERLINK "onenote:http://sharepoint.fda.gov/orgs/CDRH-IVD/Orgs/DMD/DMD%20OneNotes/Language/Analytical%20Studies/Interference.one" \l "DRAFT%20guidance%20-%20Testing%20for%20Biotin%20Interference%20in%20In%20Vitro%20Diagnostic%20Devices&section-id={39D67316-5AE2-4791-958F-9387D384D6FA}&page-id={9298F00C-7C39-43CB-9EBA-29E5BC08BB6E}&end" ] ([ HYPERLINK "http://sharepoint.fda.gov/orgs/CDRH-IVD/Orgs/DMD/_layouts/OneNote.aspx?id=%2Forgs%2FCDRH-IVD%2FOrgs%2FDMD%2FDMD%20OneNotes%2FLanguage&wd=target%28Analytical%20Studies%2FInterference.one%7C39D67316-5AE2-4791-958F-**

AMERICAN OVERSIGHT

**9387D384D6FA%2FDRAFT%20guidance%20-%20Testing%20for%20Biotin%20Interference%20in%20In%20Vitro%7C9298F00C-7C39-43CB-9EBA-29E5BC08BB6E%2F%29" ]) to determine if biotin interference testing may be warranted for your device. We also recommend you consult with FDA prior to initiating biotin interference testing, if applicable.**

**The tables below indicate the potentially interfering substances that may be found in blood and respiratory specimens. For other non-blood specimen types, such as stool, the list of substances could be expanded – please consult with FDA.**

**Interfering Substances: *[test name]* Example table below for evaluation of interfering substances for the ability to generate false *positive* results:**

| Potential Interfering Substance | Concentration | Results (Detected X/3) |
|---|---|---|
| **Respiratory Specimens** | | |
| Mucin: bovine submaxillary gland, type I-S | | |
| Blood (human) | | |
| Nasal sprays or drops | | |
| Nasal corticosteroids | | |
| Nasal gel | | |
| FluMist | | |
| Homeopathic allergy relief medicine | | |
| Throat lozenges, oral anesthetic and analgesic | | |
| Anti-viral drugs | | |
| Antibiotic, nasal ointment | | |
| Antibacterial, systemic | | |
| **Blood Specimens** | | |
| Hemoglobin | 10 mg/mL* | |
| Bilirubin Conjugated | 0.4 mg/mL* | |
| Bilirubin Unconjugated | 0.4 mg/mL* | |
| Serum proteins (e.g., Human Serum Albumin) | 60 mg/mL* | |
| Triglycerides | 15 mg/mL* | |
| Cholesterol | 4 mg/mL* | |
| Human Anti-mouse Antibody (HAMA) | 800 ng/mL* | |
| Rheumatoid Factor | 2000 IU/mL* | |

*Taken from the recently-updated 3rd edition of CLSI guideline EP07, Interference Testing in Clinical Chemistry (Section 3.4.2) which now defers to CLSI EP37, Supplemental Tables for Interference Testing in Clinical Chemistry for the recommended concentrations for testing common endogenous substances (Table 2) and have subsequently updated a number of the recommended testing concentrations.

**Interfering Substances: *[test name]* Example table below for evaluation of interfering substances for the ability to generate false *negative* results:**

AMERICAN OVERSIGHT

| Potential Interfering Substance | Concentration* | Viral Strain Level (In multiples of LoD) | Results (Detected X/3) |

### 3) *Matrix Equivalency (if applicable):*

**A matrix equivalency study may be used to support certain specimen type claims that were not evaluated during the clinical study (e.g., serum versus plasma, use of different anticoagulants, use of difference swab types or viral transport media, etc.). Please note that LoD and clinical specificity studies are required for all claimed matrices. The matrix in which the clinical studies are conducted is the comparator. All other matrices are to be shown to be equivalent to the comparator matrix. We request a minimum of 40 paired samples each obtained from individual persons; negative (10 samples), low positive (1.5-2xLoD, 20 samples), and moderate positive (5-10xLoD, 10 samples) samples should be tested. Positive samples are prepared by spiking paired negative clinical matrix with the same amount of target analyte. Please note that individual (and not pooled) samples should be used in this study.**

AMERICAN OVERSIGHT

*4) Comparative Limit of Detection (LoD) of the Test vs. the Comparator Method:*

**A comparative LoD study may be required to support use of a comparator method in your clinical evaluation that has not been validated with a specific specimen type. The comparative LoD study should be conducted testing the same dilution series using both, your test and the comparator you chose in parallel (to dilution endpoints for both tests), 3-5 replicates per dilution level are sufficient for this study.**

*5) Specimen Stability and Fresh-frozen Testing:*

**A specimen stability study may be required to support specimen stability claims in the instructions for use outside of those typically outlined in CSLI standards. A fresh/frozen and/or freeze/thaw study may be required to support the use of frozen specimens if they are used as part of the clinical evaluation. Please consult with FDA concerning an appropriate study design prior to initiating any studies.**

*6) Clinical Evaluation:*

**This section should describe the clinical study used to evaluate the performance of your test. Please note that the exact requirements for the clinical evaluation will be very dependent on, access to 2019-nCoV disease clinical specimens at the time of the studies and the nature of the emergency. Our general clinical study evaluation recommendations for respiratory and serum clinical specimens are outlined below. If you are interested in claiming additional specimen types, for example, stool, please contact FDA for current recommendations. Please note these clinical study recommendations may be subject to change as we continue to learn about the 2019-nCoV disease or as the risk benefit analysis changes.**

**The clinical performance in general should be evaluated for each unique claimed clinical specimen type - with the exception of claims that can be supported by a matrix equivalency study (outlined in Section 3 above). The performance characteristics should ideally be established using a clinical study with a limited number of prospective samples. If a prospective study is not feasible, an acceptable alternative would be to test retrospectively collected 2019-nCoV nucleic acid negative and positive specimens from patients, accompanied by some basic information such as, the specimen collection date, date of onset of symptoms (if present/known), tests used to identify 2019-nCoV nucleic acid positive specimens, etc. Depending on the nature of the disease, if no prospective or retrospective specimens are**

AMERICAN OVERSIGHT

**available at the time of your pre-EUA submission for the 2019-nCoV disease we may accept a fully contrived clinical evaluation. The clinical evaluation should be comprised of a minimum of 100 negative individually collected specimens and 50 individual positive specimens (prospective, retrospective and/or contrived). Use of pooled specimens are not acceptable for the clinical evaluation of your test. Please see FDA Table 5 for more details. Please note that if a fully contrived clinical study is used to support your Pre-EUA submission, additional clinical testing of a limited number of natural clinical positive specimens and potentially negative specimens from the endemic region, if available, may be required at the time when this Pre-EUA transitions to an EUA as a result of an Emergency declaration for 2019-nCoV disease.**

AMERICAN OVERSIGHT

## FDA Table 5: Clinical study Recommendations:

| Details | Study Including Prospective/ Retrospective Specimens | Fully Contrived Sample Study |
|---|---|---|
| Minimum Number of Positive Specimens | 50<br><br>The number of natural (prospective/retrospective) positive clinical specimens should be at least 25 (collected from symptomatic patients in the 2019-nCoV disease endemic region(s)) and, if necessary, may be supplemented with contrived samples to generate the total of 50 positive specimens. Contrived samples should be prepared as described in the fully contrived sample study column. | 50<br><br>The contrived positive samples should be made in individual negative clinical matrix collected from subjects from a non-endemic population (pooled matrix is not acceptable for the clinical evaluation). Please note that the negative clinical matrix used for spiking should be confirmed negative by your test device prior to spiking. Half of the contrived positive samples can be prepared by spiking the 2019-nCoV at LoD and the remaining contrived positive samples should cover the range of the test up to and not higher than 5 x LoD.<br><br>Negative respiratory specimens: Can be archived/retrospective samples collected from US patients with signs and symptoms of respiratory infection.<br><br>Negative blood specimens: Can be collected from healthy subjects from non-endemic areas. |
| Minimum Number of Negative Specimens | 100<br><br>Note: In general, for EUA the 100 individual negative samples can be collected from; (1) archived/retrospective samples collected from US patients with signs and symptoms of respiratory infection for respiratory specimens, and (2) healthy subjects from non-endemic areas for blood specimens, that are "expected 2019-nCoV disease negative". Note these negative specimens can be used to also prepare any contrived positive specimens used in support of the clinical evaluation of the test.<br><br>Please note this recommendation is dependent on the current outbreak situation and is subject to change as we learn more about the 2019-nCoV disease/outbreak. If the outbreak situation for 2019-nCoV disease is primarily outside of the continental U.S. (OUS) it may be beneficial to consider collecting negative specimens that represent 50% endemic and 50% non-endemic regions. If negative specimens are collected from the endemic region of the 2019-nCoV disease these should be tested with the same comparator chosen for the positive specimens (more details provided below). For non-endemic collected specimens you can compare to the expected "negative" result. | |
| Recommended Comparator Method | Positive: Positive percent agreement should be calculated in comparison to a EUA PCR test (please see the following website for the most recent list of FDA authorized 2019-nCoV | Positive: Compare to expected result.<br><br>Negative: See Minimum Number of Negative Specimens row |

AMERICAN OVERSIGHT

| | | |
|---|---|---|
| for percent agreement performance calculations | tests: [ HYPERLINK "https://www.fda.gov/MedicalDevices/Safety/EmergencySituations/ucm161496.htm" ]. If no EUA test available at the time of your EUA submission, please consult with FDA about your choice of comparator method – which ideally should be a well validated PCR test with comparable sensitivity to your subject device. Please note that a well validated PCR test should include evaluation of the tests LoD, inclusivity, exclusivity, interference and any clinical testing.<br><br>Negative: See Minimum Number of Negative Specimens row | |
| Comparator Method Note 1 | Please note when using natural clinical specimens, the comparator method must be validated for the specimen type claimed – if not you should perform a Comparative Limit of Detection (LoD) of the Test vs. the Comparator Method study, as explained above (Section 4), to support its use as a comparator method in your clinical study. | N/A |
| Comparator Method Note 2 | Any occurrences of false results should be investigated with an additional validated PCR test and/or targeted sequencing, and the results of the discordant analysis can be footnoted in your final performance table but cannot be used to change the final performance calculations. | |
| Natural Clinical Specimens IRB/Informed Consent Note | For clinical specimens collected to support the EUA request, please note that sample collection needs to adhere to all applicable rules of human subject protection; as such, sample collection needs IRB approval, which includes review of the informed consent forms. Samples need to be collected with informed consent. If leftover de-identified samples are used, FDA exercises enforcement discretion regarding the informed consent requirement if the specimen collection meets the criteria described in the FDA Guidance on Informed Consent for In Vitro Diagnostic Device Studies Using Leftover Human Specimens that are Not Individually Identifiable ([ HYPERLINK "http://www.fda.gov/cdrh/oivd/guidance/1588.pdf" ]).<br>**Note that IRB approval is still required even if leftover de-identified samples are used in your study.** | |
| Additional Studies Warning | N/A | If fully contrived samples were used in your Pre-EUA submission, additional testing of natural clinical specimens may be requested, if available, to support transition of the Pre-EUA to EUA as a result of an Emergency declaration. |
| Testing Approach Note 1 | Please note all clinical specimens (natural and contrived) should be evaluated in accordance with your proposed diagnostic algorithm, including retesting when appropriate. We understand the limited nature of natural specimens may preclude retesting. In instances were retesting is indicated but not performed, for the purposed of performance evaluation, initial results will be analyzed for performance and equivocal/indeterminate results count against your final performance. | |
| Testing Approach Note 2 | Specimens should be tested in a blinded fashion, e.g., positive and negative samples should be mixed and blinded to the end user, end user should also be blinded to the results of any comparator method testing. | |

AMERICAN OVERSIGHT

**When you describe your clinical study please indicate/include:**

- **How the specimens were generated/collect/sourced**
- **If the study was fully prospective, mix of prospective, retrospective and/or contrived or fully contrived**
- **The rationale for the concentrations/specimens selected (if using contrived or 3-party sourced specimens)**
- **The total number of specimens tested**
- **The specimen types (clinical matrix)**
- **A summary of the study results**

**In the case of real-time PCR tests, please provide the line data in an Excel file as part of the Pre-EUA submission for each specimen (please indicate for each specimen if it was prospective, retrospective or contrived and the clinical matrix it represents); the data should include the $C_T$ values (for the specimen and the controls) and call/result for your device and, in the case of the natural clinical specimens, the comparator method results should be included as well.**

## L. UNMET NEED ADDRESSED BY THE PRODUCT

**This section will be finalized by FDA based on the state of the emergency at the time of authorization and based on recommendations from Public Health authorities at that time. Example text is provided below but may be adapted according to the specific emergency situation that is addressed by the device and the need at the specific time of the outbreak.**

[Outline background of pathogen, disease and current outbreak]

[Outline details of the disease such as the following:

- likely sources of transmission
- likely symptoms – if any
- Prevalence of symptomatic disease (what fraction of infection results in symptomatic disease)]

Laboratories in the United States are in need of diagnostic tools for use in the 2019-nCoV emergency for rapid diagnosis of acute 2019-nCoV infection.

A public health emergency has been declared by the Secretary of Health and Human Services (HHS) on [Month Day, YEAR] justifying the authorization of emergency use of *in vitro* diagnostic tests for detection of 2019-nCoV and/or diagnosis of 2019-nCoV infection.

The ***[test name]*** can augment clinically important laboratory evidence for individuals with active infection. The 2019-nCoV nucleic acid is generally detectable in [name

AMERICAN OVERSIGHT

specimen type] during the acute phase of infection (approximately [7] days following onset of symptoms, if present) [and possibly for longer in other specimen types].

Under emergency use authorization (EUA), ***[applicant name]*** plans to distribute the test or accept sample for testing with the ***[test name]*** for the detection of nucleic acid from 2019-nCoV in clinical specimens collected from individuals meeting CDC's 2019-nCoV clinical and/or epidemiological criteria. This EUA request for the ***[test name]*** is intended to expand domestic readiness within the United States and its territories by expanding diagnostic testing capabilities for 2019-nCoV during public health emergency.

FDA consulted with subject matter experts within HHS on the public health needs for diagnostic devices to detect 2019-nCoV nucleic acid. It is FDA's conclusion that there currently exists a public health need for such devices, i.e., that there is no adequate, approved (cleared), and available alternative to the ***[test name]*** for 2019-nCoV detection during the public health emergency.

## M. APPROVED/CLEARED ALTERNATIVE PRODUCTS

Currently no methods for the detection of the 2019-nCoV have been approved/ cleared by FDA.

## N. RISKS AND BENEFITS:

**The Risks and Benefits section should be updated according to your specific device, some example language is given below but should be tailored to the device and the disease.**

Risks

The ***[test name]*** has been designed to minimize the likelihood of false test results. However, should false results occur, they may present risks to patients:

- False positive result:
  - A false positive 2019-nCoV result could [***update based on the pathogen***].
  - A false positive result in the context of the current public health emergency could lead to misallocation of resources used for surveillance and prevention.
  - A false positive result could delay correct diagnosis and initiation of appropriate treatment for the actual cause of patient illness.
- False negative result:
  - Although a negative result does not rule out 2019-nCoV infection, a false negative has the potential to result in initiation of inappropriate treatment and a delay in correct diagnosis.
  - A false negative result can trigger a waste of health care resources, as additional evaluations are pursued in the effort to establish the true diagnosis.
  - A false negative results can contribute to further spread of the disease.

Benefits

AMERICAN OVERSIGHT

The primary benefit of distributing the ***[test name]*** for clinical use is that it provides a relatively fast diagnostic method for symptomatic patients, which enables faster intervention.

- True positive test results provide support for the diagnosis of a 2019-nCoV infection. The results can be used in conjunction with clinical and epidemiological information to guide patient management.
- Distribution of the factsheets can help healthcare professionals and the public learn more about 2019-nCoV disease and how to avoid acquiring it.

Risk Assessment

- Negative results may not preclude a 2019-nCoV infection. It is emphasized that the ***[test name]*** should not be used as the sole basis for treatment or other patient management decisions. The clinical features of the illness and the type and risk of exposure must be considered pivotal to making patient management decisions. A negative test should not be interpreted as definitive, if other aspects of the patient's clinical presentation or recent epidemiologic exposures indicate such is likely, and diagnostic tests for other diseases are negative.
- False negative results due to failure of PCR are minimized by the presence of controls that monitor nucleic acid extraction and PCR efficiency.
- Risk of patient discomfort or harm during sample collection is minimal.

Risk-Benefit Assessment

The risks posed by use of the ***[test name]*** are mitigated by:

- Use of the ***[test name]*** in conjunction with other laboratory, epidemiological, and clinical evaluation tools
- Distribution of Healthcare Provider and Patient fact sheets.
- Post-market studies/reporting or conditions of Authorization.

Based on these factors, the potential benefits from the use of the ***[test name]*** are expected to outweigh the risks.

## O. FACT SHEET FOR HEALTHCARE PROVIDERS AND PATIENTS:

**Include proposed Fact Sheets for Patients and Healthcare Providers**

## P. INSTRUCTIONS FOR USE/ PROPOSED LABELING/PACKAGE INSERT:

**Include Instructions for Use, Box Labels, Vial Labels and any other proposed labeling.**

## Q. RECORD KEEPING AND REPORTING INFORMATION TO FDA:

AMERICAN OVERSIGHT

[***Manufacturer name***] will track adverse events and report to FDA under 21 CFR Part 803. A website is available to report on adverse events, and this website is referenced in the Fact Sheet for Health Care providers as well as through the [***Manufacturer name***] Product Support website: [***Include link to Website***]. Each report of an adverse event will be processed according to [***Manufacturer name]***'s Non-Conformance Reporting Requirements, and Medical Device Reports will be filed with the FDA as required. Through a process of inventory control, [***Manufacturer name]*** will also maintain records of device usage/purchase. [***Manufacturer name]*** will collect information on the performance of the test, and report to FDA any suspected occurrence of false positive or false negative results of which [***Manufacturer name]*** becomes aware. [***Manufacturer name]*** will maintain records associated with this EUA and ensure these records are maintained until notified by FDA. Such records will be made available to FDA for inspection upon request.

## R. ADMINISTRATIVE INFORMATION:

**Interactive Review Log:** Please use the table below to document interactive review with FDA and include interactions initiated by either FDA or yourself

| **Date** | **Type of Interaction** (phone/ email/ formal submission-DCC) | **Brief Description** (e.g., questions asked/ feedback from FDA received / any word documents included) |
|---|---|---|
| [X] | [X] | [X] |
| | | |
| | | |

## S. FDA ADMINISTRATIVE INFORMATION:

**This section will be finalized by the FDA Lead Reviewer upon completion of the review process and documents the interactive review of this submission and any conclusions resulting from the interactive review.**

1) **Summary of Interactive Review – Lead Reviewer to use this section to highlight any major issues solved during interactive review.**
2) **Final Conclusions for Interactive Review -** It is FDA's conclusion that there currently exists a public health need for such devices, i.e., that there is no adequate, approved (cleared), and available alternative to the ***[test name]*** for [pathogen] detection during the public health emergency. **Conclusion should include an outline the unique features of the device compared to currently issued EUA's under the declaration, if applicable.**
3) **Upon competition of this section the Lead Reviewer should also sign this document and save the file as the final Decision Memorandum.**

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

## APPENDIX A – Multiplex Panels Under EUA:

An emergency declaration by the HHS Secretary is typically specific for a pathogen/disease (i.e., there is a publicly declared health emergency involving a particular etiologic agent). Therefore, the EUA pathway is only applicable for testing patients with signs/symptoms/risk of exposure for that single agent in a given emergency. FDA has occasionally allowed limited additional target pathogens to be claimed for EUA devices, but panel members must be relevant to the event/disease outbreak subject of the specific emergency declaration. When determining whether to issue an EUA for a multiplex panel FDA takes into consideration the utility of the test (multiplex pathogen detection as an aid in differential diagnosis), clearance/approval status of IVDs for the other panel members, whether the proposed Intended Use fits within the HHS emergency declaration and the how the multiplex panel would fit into current public health authority patient testing algorithm recommendations. We recommend you contact FDA for specific feedback if you plan to claim multiple target analytes as part of your EUA test. If it is determined that a multiplex test is beneficial to the emergency response, please note that analytical and clinical evaluations for each of the target analytes will be required.

## APPENDIX B – General Study Design Recommendations for Reagent Stability:

- For EUAs you may follow the current FDA recognized CLSI Standard EP25 – Evaluation of Stability of In Vitro Diagnostic Reagents; Approved Guideline when evaluating the suitability of stability study designs. If you are planning to pursue a De Novo/510(k) for your device we recommend discussing in more detail your stability design to facilitate potential use of the EUA data in your regular premarket submission.
- Please note that use of only the positive controls is not acceptable for reagent stability evaluation because controls are usually formulated at a moderate positive level. For all the stability evaluations in addition to your external positive and negative controls and the no-template control you should include for the EUA evaluation at least one sample, that should be prepared by spiking negative clinical matrix at an analyte concentration of 3-5xLoD.
- If you are claiming multiple blood clinical specimen types in which similar LoDs are determined, you should use the most challenging clinical matrix for this study.
- Please note we typically recommend your stability study design includes the evaluation of at least 5 replicates. You should also evaluate, if available, 3 different lots of reagents.
- You should design your study to provide data for a timeframe that is about 10% longer than the one to be claimed – for example; a claim of 18 months should be supported by stability data out to 20 months and a claim of 7 days should include stability data out to 8 days.
- FDA considers 15-30°C to represent room temperature conditions. Ideally you should evaluate stability at both 15°C and 30°C, however, for the purposes of the EUA evaluation at 30°C is acceptable as the worse-case scenario.
- Shelf-Life Stability- Unopened kit:
    - You should evaluate real-time kit stability studies with unopened kits stored at the claimed storage temperature for your test.

AMERICAN OVERSIGHT

  - Accelerated stability evaluations for unopened kits is acceptable for EUA submissions while the real-time studies are on-going. However, please note real-time stability data is required to support regular pre-market submissions and for the final claim of an EUA.
- Shipping Stability - Unopened kit: Study should evaluate the anticipated handling and shipping times and temperatures expected for unopened kits.
- In-use/Opened Kit Stability: Depending on your device your stability study design should also support in-use stability of the kit reagents once the kit has been opened, e.g., storage at 2-8 $^{o}$C for 7 days. This includes on board stability once reagents have been placed on the instrument (if applicable).
- Inverted stability (if applicable): Study should support inverted stability for of kits.
- Freeze-thaw Stability: If you recommend aliquoting the reagents to meet the end-users needs following the initial thaw this recommendation should be supported by a freeze-thaw stability study, including the specific number of allowed freeze-thaw cycles.
- FDA analysis recommendations for real time stability studies are as follows:
  - Baseline of the study (t=0 of stability study) should not exceed a month from bottling
  - Clear baselines should be described (e.g., a month from bottling) for each stability claim under each study
  - Claims should be determined based on regression analysis. Any %change (%shift) from time zero (baseline) should be calculated between the target claim and the zero-time as (Ttest-Tbaseline)/ Tbaseline*100 with 95%CI using the regression equation obtained from plotting the mean values. When formulating your acceptance criteria for evaluating the shift from baseline you should consider the reproducibility of your device. However, generally, that the shift at the target claim due to storage cannot exceed 10-15%. The target stability is the next to last tested point that was within +/- 10% of time zero.
  - Acceptance criterion may be different, depending on the test samples analyte concentration distribution in the intended use population and the risk, in other words, the impact of false results to public health.

**APPENDIX C – Claiming Multiple Instruments and/or Extraction Methods:**

If you wish to claim multiple instruments and/or extraction methods for use with your test, please review the study recommendations provided below and contact FDA for any additional feedback. Please note that these analytical and clinical evaluation recommendations are based on the assumption that the elution volumes from the extraction methods and PCR volumes on the different RT-PCR instruments are identical.

- Limit of Detection (LoD): Please note that these studies should be repeated for each clinical matrix claimed in the Intended Use. Pick one RT-PCR instrument and determine the tentative LoD (using 5 replicates in 10-fold dilution) followed by the confirmatory LoD (20 replicates spiked at tentative LoD) for each extraction method on the chosen instrument. Note: If you detect 20/20 replicates in your confirmatory LOD study you should test the next lower concentration, using a 3-fold dilution, until

AMERICAN OVERSIGHT

you achieve a hit rate of <20/20.

- If the different extraction methods yield the same LoD (≤3xLOD) on the RT-PCR instrument chosen for initial testing, pick one extraction method for further LoD determination on the remaining RT-PCR instruments and follow the recommendations below.
- If the extraction methods do not yield the same LoD on the chosen RT-PCR instrument, please choose the extraction method with the worst LoD for further comparison of the LoD on all RT-PCR instruments.

For all other RT-PCR instruments you should use the following adaptive LoD study design:

- Please perform a refined tentative LoD study with 5 replicates at 0.5x, 1x, and 1.5 to 2x LoD. If you detect 4/5 replicates as positive at all the tested levels, you need to include the next higher concentration (i.e., 3x LoD). If you obtain 5/5 replicates at 0.5x LoD, you need to test the next lower concentration (i.e., 0.25x LoD). You will test in this manner until you find the lowest concentration that gives you 5/5 positive results for the tested RT-PCR instrument. This concentration should be used for a confirmatory LoD study for the given RT-PCR instrument using 20 replicates.

Final reported LoD: Please list all RT-PCR instruments with their respective LoDs if different LoDs are obtained. LoDs are considered comparable if they are between 1-3xLoD. These studies should be repeated for each clinical matrix claimed in the Intended Use.

- Interference Substances Studies (if applicable): Pick one extraction method and RT-PCR instrument combination, preferably the one with the worst overall LoD (if one or more of the RT-PCR instruments has a different LoD).

- Inclusivity Testing: For the inclusivity testing, pick one extraction method and RT-PCR instrument combination, preferably the one with the worst overall LoD (if one or more of the RT-PCR instruments has a different LoD).

- Exclusivity Testing: For exclusivity, you can perform this study using any extraction/instrument combination.

- Clinical study: If equivalency of the RT-PCR instruments is shown in an LoD study that tests and confirms that the LoD is the same or very similar for all of the RT-PCR instruments (between 2-3xLoD), then you can pick one RT-PCR instrument for your clinical study provided that the RT-PCR instruments in question are known to FDA for other *in vitro* diagnostic devices. If you find that one or more RT-PCR instruments machines has/have a different LoD, you should pick the extraction method / RT-PCR instrument combination with the worst LoD.

Note, if there are differences in the extraction input volume, extraction elution volume

AMERICAN OVERSIGHT

and PCR input volume (extracted nucleic acid) then the LoD should be confirmed, for each.

AMERICAN OVERSIGHT

**Subject:** RE: Pre-EUA IVD template request

Dear Jill,

Thank you very much for reaching out to us about the test you have validated at Wadsworth Center, NYS Department of Health it was very nice to chat with you. As discussed please find attached the current EUA Interactive Review Template draft for molecular-based assays for the detection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) [formally - 2019-novel coronavirus (2019-nCoV)]. I suggest the first step is to populate this draft template with the validation information and data that you currently have about your device and sent it back to us for review as a Pre-EUA submission (to be sent to the Document Control Center). The Pre-EUA review is an interactive process, so we will provide feedback after receiving and reviewing the information provided. The draft review template is a shared "work-in-progress" document which you will populate with information and data as obtained and which we will review and provide feedback to you. **Please make sure to capture in the EUA review template that you performed the validation using the SIGMA primer/probes sets, sensitivity was evaluated with the positive control material provided in the CDC EUA test kit and that validation studies were performed used the commercial primer/probe materials using the CDC EUA Protocol (please be sure to include information the extraction method and instrument used).**

AMERICAN OVERSIGHT

I have also attached a draft cover letter you can use to submit your Pre-EUA for detection of SARS-CoV-2 to FDA (it includes the address for the Document Control Center). Please include in your Pre-EUA submission package:

- The populated EUA Review Template draft
- FDA Form 3514 (https://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM080872.pdf) - under Section A (type of submission) please check "other" and specify Pre-EUA; please also complete Sections B, C, F and G. For G please use the information provided in this link: https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfPCD/classification.cfm?id=3669.

One hard copy of the signed EUA Cover Letter and one electronic copy (CD or thumb drive) of you Pre-EUA submission package should be enclosed in your Pre-EUA submission package mailed to FDA (recommend FedEx). In addition to mailing your Pre-EUA package to FDA we also request that you submit the package to the review division via electronic mail (including the EUA Review Template in MS word) to myself Kim.Sapsford@fda.hhs.gov, as well as carbon copying (cc:) the following email addresses:

- Division Director: Dr Uwe Scherf, email address: Uwe.Scherf@fda.hhs.gov;
- Branch Chief: Dr Tamara Feldblyum, email address: Tamara.Feldblyum@fda.hhs.gov

Please let me know if you have ANY questions I am happy to assist if you are not sure about certain sections in the template.

Best regards

Kim

**Subject**: Re: IDT provides 2019-nCoV Kits that include the CDC 2019-nCoV/SARS-CoV-2 published assays in individual tubes

If CDC has verified these probes can the public health labs proceed with the CDC test using these probes and then avoid the need for a new EUA for using just N1 and N2?

Also, if live or inactivated viral samples are not available to validate tests, can test developers use contrived samples in the interim?

Jeff
