**Subject:** RE: 2/24/20 6 AM update

Morning Uwe,

Hope you are doing well. Could I get a list of all the developers interested in the EUA, perhaps with those who are furthest along tagged?

We would like to get more testing available as soon as possible and I while I am working on making positive material more available it might be good for me to connect with developers. I would also like to understand what they require to get started and what they require to complete their EUA validations.

Thanks! ☺

Best,
*Tim*

AMERICAN OVERSIGHT

Jeff, Elizabeth, Ellen, Bill and Tim:

2/24/20 6 AM update:

**Status of activities on diagnostics:**

- Prospective Community Transmission Surveillance:

Objective: Conduct testing of respiratory specimens collected from patients with respiratory illness at select locations to detect whether unrecognized community transmission of SARS-CoV-2 is occurring.

- CDC submitted draft request to conduct testing activity on 2/21/20.
- CDRH/OCET/OCC drafted feedback to draft request.
- CDC determined that the need is urgent and requested immediate implementation of testing, CDRH did not object to CDC's request but added certain conditions 2/22/20.
- FDA's feedback on the request to conduct testing was sent to CDC 2/23/20.
- DMD is actively working with 9 IVD developers with Pre-EUA submissions with more expected.

Uwe

AMERICAN OVERSIGHT

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration
Silver Spring, MD 20993

June 10, 2014

Thomas R. Frieden, MD, MPH
Director
Centers for Disease Control and Prevention
1600 Clifton Rd, MS D-14
Atlanta, GA 30333

Dear Dr. Frieden:

On June 5, 2013, based on a request by the Centers for Disease Control and Prevention (CDC), the Food and Drug Administration (FDA) issued a letter authorizing the emergency use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay for the presumptive detection of Middle East Respiratory Syndrome Coronavirus (MERS-CoV) in patients with signs and symptoms of MERS-CoV infection in conjunction with clinical and epidemiological risk factors, pursuant to section 564 of the Federal Food, Drug, and Cosmetic Act (the Act) (21 U.S.C. § 360bbb-3), by qualified laboratories.[1] On May 22, CDC submitted a request for an amendment to the Emergency Use Authorization (EUA). In response to that request, and having concluded that revising the June 5, 2013, EUA is appropriate to protect the public health or safety under section 564(g)(2)(C) of the Act (21 U.S.C. § 360bbb-3(g)(2)(C)), the June 5, 2013, letter authorizing the emergency use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay is being reissued in its entirety with the amendments incorporated.[2]

On May 29, 2013, pursuant to section 564(b)(1)(C) of the Act (21 U.S.C. § 360bbb-3(b)(1)(C)), the Secretary of Health and Human Services (HHS) determined that there is a significant potential for a public health emergency that has a significant potential to affect national security or the health and security of United States citizens living abroad, and that involves a biological, chemical, radiological, or nuclear agent or agents, or a disease or condition that may be attributable to such an agent or agents - in this case, MERS-CoV.[3] Pursuant to section 564(b)(1) of the Act (21 U.S.C. § 360bbb-3(b)(1)), and on the basis of such determination, the Secretary of HHS then declared that circumstances exist justifying the authorization of the emergency use of

[1] U.S. Food and Drug Administration. *Authorization of Emergency Use of an In Vitro Diagnostic for Detection of Middle East Respiratory Syndrome Coronavirus; Availability*. 78 Fed. Reg. 42779 (July 17, 2013).

[2] The amendments to the June 5, 2013, letter authorize the expanded use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay to include the *in vitro* qualitative detection of genomic RNA from MERS-CoV in clinical specimens collected from individuals meeting certain epidemiological criteria (e.g., contact with a probable or confirmed MERS-CoV case, history of travel to geographic locations where MERS-CoV cases were detected, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation) who may or may not exhibit clinical signs and symptoms associated with MERS-CoV infection. The amendments also include a new Fact Sheet for Contacts of MERS Cases and revisions to the Instructions for Use, product insert, and Fact Sheets for Health Care Professionals and Patients.

[3] As amended by the Pandemic and All-Hazards Preparedness Reauthorization Act, Pub. L. No. 113-5, under section 564(b)(1)(C) of the Act the Secretary may make a determination of a public health emergency, or of a significant potential for a public health emergency.

AMERICAN OVERSIGHT

*in vitro* diagnostics for the detection of MERS-CoV, subject to the terms of any authorization issued under 21 U.S.C. § 360bbb-3(a).[4]

Having concluded that the criteria for issuance of this authorization under section 564(c) of the Act (21 U.S.C. § 360bbb-3(c)) are met, I am authorizing the emergency use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay (as described in the scope section of this letter (Section II)) for the presumptive detection of MERS-CoV in individuals meeting MERS-CoV clinical and/or epidemiological criteria (e.g., clinical signs and symptoms associated with MERS-CoV infection, contact with a probable or confirmed MERS-CoV case, history of travel to geographic locations where MERS-CoV cases were detected, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation) by qualified laboratories, subject to the terms of this authorization.

## I. Criteria for Issuance of Authorization

I have concluded that the emergency use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay for the presumptive detection of MERS-CoV in individuals meeting MERS-CoV clinical and/or epidemiological criteria (e.g., clinical signs and symptoms associated with MERS-CoV infection, contact with a probable or confirmed MERS-CoV case, history of travel to geographic locations where MERS-CoV cases were detected, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation) meets the criteria for issuance of an authorization under section 564(c) of the Act, because I have concluded that:

1. MERS-CoV can cause a serious or life threatening disease or condition, including severe respiratory illness, to humans infected by this virus;

2. Based on the totality of scientific evidence available to FDA, it is reasonable to believe that the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay may be effective in diagnosing MERS-CoV, and that the known and potential benefits of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay, when used for diagnosing MERS-CoV infection, outweigh the known and potential risks of such product; and

3. There is no adequate, approved, and available alternative to the emergency use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay for diagnosing MERS-CoV.[5]

## II. Scope of Authorization

I have concluded, pursuant to section 564(d)(1) of the Act, that the scope of this authorization is limited to the use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay for the presumptive detection of MERS-CoV in individuals meeting MERS-CoV clinical and/or epidemiological criteria (e.g., clinical signs and symptoms associated with MERS-CoV infection, contact with a probable or confirmed MERS-CoV case, history of travel to geographic locations

[4] U.S. Department of Health and Human Services. *Determination and Declaration Regarding Emergency Use of In Vitro Diagnostics for Detection of Middle East Respiratory Syndrome Coronavirus (MERS-CoV)*. 78 Fed. Reg. 33842 (June 5, 2013).

[5] No other criteria of issuance have been prescribed by regulation under section 564(c)(4) of the Act.

AMERICAN OVERSIGHT

where MERS-CoV cases were detected, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation).

**The Authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay:**

The CDC Novel Coronavirus 2012 Real-time RT-PCR Assay is a real-time reverse transcriptase PCR (rRT-PCR) for the *in vitro* qualitative detection of MERS-CoV viral RNA from respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputa, lower respiratory aspirates/washes), sera, and stool from individuals meeting MERS-CoV clinical and/or epidemiological criteria (e.g., clinical signs and symptoms associated with MERS-CoV infection, contact with a probable or confirmed MERS-CoV case, history of travel to geographic locations where MERS-CoV cases were detected, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation). The testing procedure consists of nucleic acid extraction followed by rRT-PCR on the FDA cleared Applied Biosystems 7500 Fast Dx Real-Time PCR Instrument.

The CDC Novel Coronavirus 2012 Real-time RT-PCR Assay includes the following primer and probe sets:

| | |
|---|---|
| **NCV.N2** | targets the MERS-CoV nucleocapsid protein gene |
| **NCV.N3** | targets the MERS-CoV nucleocapsid protein gene |
| **NCV.upE**[6] | targets the MERS-CoV region upstream of envelope protein gene |
| **RP**[7] | targets the human Ribonuclease P gene. This primer and probe set is included as a control for specimen quality, to confirm that human nucleic acid was successfully extracted from the clinical specimen. |

The CDC Novel Coronavirus 2012 Real-time RT-PCR Assay also includes the following control materials:

- **Positive Control:** NCV-2012 rRT-PCR Assay Positive Control (VTC)
- **Negative Controls:** Sterile, nuclease-free water, used as No Template Control (NTC)
  1. **PCR No Template Control ($NTC_1$)**
  2. **Extraction control ($NTC_2$)**

The above described CDC Novel Coronavirus 2012 Real-time RT-PCR Assay, when labeled consistently with the labeling authorized by FDA, entitled "CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Instructions for Use" (available at http://www.fda.gov/MedicalDevices/Safety/EmergencySituations/ucm161496.htm), which may be revised with written permission of FDA, is authorized to be distributed to and used by qualified laboratories under this EUA, despite the fact that it does not meet certain requirements otherwise required by federal law.

---

[6] This a WHO-recommended MERS-CoV primer and probe set. See Corman VM, et al. Detection of a novel human coronavirus by real-time reverse-transcription polymerase chain reaction. *Euro Surveill* 2012;17(39). Available online at: http://www.eurosurveillance.org/images/dynamic/EE/V17N39/art20285.pdf.

[7] This primer and probe set is not provided in the CDC Novel Coronavirus 2012 rRT-PCR Assay Kit, but it is required for test performance. Laboratories will utilize the Laboratory Response Network (LRN) RNase P Real-time PCR Primer and Probe Set.

AMERICAN OVERSIGHT

**The above described CDC Novel Coronavirus 2012 Real-time RT-PCR Assay is authorized to be accompanied by the following information pertaining to the emergency use, which is authorized to be made available to health care professionals and patients:**

- **Fact Sheet for Health Care Professionals: Interpreting CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Test Results**
- **Fact Sheet for Patients: Understanding Results from the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay**
- **Fact Sheet for Contacts of MERS Cases: Understanding Results from the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay**

As described in section IV below, CDC is also authorized to make available additional information relating to the emergency use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay that is consistent with, and does not exceed, the terms of this letter of authorization.

I have concluded, pursuant to section 564(d)(2) of the Act, that it is reasonable to believe that the known and potential benefits of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay in the specified population, when used for presumptive detection of MERS-CoV, outweigh the known and potential risks of such a product.

I have concluded, pursuant to section 564(d)(3) of the Act, based on the totality of scientific evidence available to FDA, that it is reasonable to believe that the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay may be effective in the diagnosis of MERS-CoV infection pursuant to section 564(c)(2)(A) of the Act. The FDA has reviewed the scientific information available including the information supporting the conclusions described in Section I above, and concludes that the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay, when used to diagnose MERS-CoV infection in the specified population, meets the criteria set forth in section 564(c) of the Act concerning safety and potential effectiveness.

The emergency use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay under this EUA must be consistent with, and may not exceed, the terms of this letter, including the scope and the conditions of authorization set forth below. Subject to the terms of this EUA and under the circumstances set forth in the Secretary of HHS's determination under section 564(b)(1)(C) described above and the Secretary of HHS's corresponding declaration under section 564(b)(1), the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay described above is authorized to diagnose MERS-CoV infection in individuals meeting MERS-CoV clinical and/or epidemiological criteria (e.g., clinical signs and symptoms associated with MERS-CoV infection, contact with a probable or confirmed MERS-CoV case, history of travel to geographic locations where MERS-CoV cases were detected, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation).

This EUA will cease to be effective when the declaration of emergency is terminated under section 564(b)(2) of the Act or when the EUA is revoked under section 564(g) of the Act.

AMERICAN OVERSIGHT

**III. Waiver of Certain Requirements**

I am waiving the following requirements for the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay during the duration of this EUA:

- Current good manufacturing practice requirements, including the quality system requirements under 21 CFR Part 820 with respect to the design, manufacture, packaging, labeling, storage, and distribution of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay.

- Labeling requirements for cleared, approved, or investigational devices, including labeling requirements under 21 CFR 809.10 and 809.30, except for the intended use statement (21 CFR 809.10(a)(2), (b)(2)), adequate directions for use (21 U.S.C. 352(f)), (21 CFR 809.10(b)(5) and (8)), any appropriate limitations on the use of the device including information required under 21 CFR 809.10(a)(4), and any available information regarding performance of the device, including requirements under 21 CFR 809.10(b)(12).

**IV. Conditions of Authorization**

Pursuant to section 564 of the Act, I am establishing the following conditions on this authorization:

**CDC**

A. CDC will distribute the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay with the authorized labeling, as may be revised with written permission of FDA, only to qualified laboratories.

B. CDC will provide to the qualified laboratories the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Health Care Professionals, the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Patients, and the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Contacts of MERS Cases.

C. CDC will make available on its website the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Health Care Professionals, the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Patients, and the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Contacts of MERS Cases.

D. CDC will inform state and/or local public health authority(ies) of this EUA, including the terms and conditions herein.

E. CDC will ensure that qualified laboratories using the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay have a process in place for reporting test results to health care professionals and federal, state, and/or local public health authorities, as appropriate.

F. CDC will track adverse events and report to FDA as required under 21 CFR Part 803.

G. Through a process of inventory control, CDC will maintain records of device usage.

AMERICAN OVERSIGHT

H. CDC will collect information on the performance of the assay, and report to FDA any suspected occurrence of false positive or false negative results of which CDC becomes aware.

I. CDC is authorized to make available additional information relating to the emergency use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay that is consistent with, and does not exceed, the terms of this letter of authorization.

J. Only CDC may request changes to the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Health Care Professionals, the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Patients, or the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Contacts of MERS Cases. Such requests will be made by contacting FDA concerning FDA review and approval.

**Qualified Laboratories**

K. Qualified laboratories will make available the authorized Fact Sheet for Health Care Professionals, the authorized Fact Sheet for Patients, and the authorized Fact Sheet for Contacts of MERS Cases.

L. Qualified laboratories will perform the assay on an Applied Biosystems 7500 Fast Dx Real-Time PCR Instrument with the appropriate software.

M. Qualified laboratories will have a process in place for reporting test results to health care professionals and federal, state, and/or local public health authorities, as appropriate.

N. Qualified laboratories will collect information on the performance of the assay, and report to CDC any suspected occurrence of false positive or false negative results of which qualified laboratories become aware.

**CDC and Qualified Laboratories**

O. CDC and qualified laboratories will ensure that any records associated with this EUA are maintained until notified by FDA. Such records will be made available to FDA for inspection upon request.

**Conditions Related to Advertising and Promotion**

P. All advertising and promotional descriptive printed matter relating to the use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay shall be consistent with the Fact Sheets and authorized labeling, as well as the terms set forth in this EUA and other requirements set forth in the Act and FDA regulations.

Q. All advertising and promotional descriptive printed matter relating to the use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay shall clearly and conspicuously state that:

- This test has not been FDA cleared or approved;

AMERICAN OVERSIGHT

- This test has been authorized by FDA under an Emergency Use Authorization for use by qualified laboratories;
- This test has been authorized only for the detection of MERS-CoV and not for any other viruses or pathogens; and
- This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of *in vitro* diagnostics for detection of MERS-CoV under section 564(b)(1) of the Act, 21 U.S.C. § 360bbb-3(b)(1).

No advertising or promotional descriptive printed matter relating to the use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay may represent or suggest that this test is safe or effective for the diagnosis of MERS-CoV.

The emergency use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay as described in this letter of authorization must comply with the conditions above and all other terms of this authorization.

**V. Duration of Authorization**

This EUA will be effective until the declaration that circumstances exist justifying the authorization of the emergency use of *in vitro* diagnostics for detection of MERS-CoV is terminated under section 564(b)(2) of the Act or the EUA is revoked under section 564(g) of the Act.

2/20/20 6 AM update:

**Status of activities on diagnostics:**

CDC provided draft protocol for the community transmission surveillance plan and requested feedback on regulatory strategy options to ensure that the surveillance will be conducted in compliance with FDA law and regulation.

Community surveillance jurisdiction will be: New York City, Chicago, Seattle, San Francisco & Los Angeles

- Retrospective Community Transmission Surveillance:
- For de-identified specimens with no possibility to report SARS-CoV-2 test result back to individuals, the surveillance testing will start asap.
- Prospective Community Transmission Surveillance
- The specimens obtained will be collected as part of routine clinical care or as a result of enrollment in another study. Consent will be obtained or notification be given prior to sample collection to the patient to whom SARS-CoV-2 testing is being done.
- CDC plans to submit a request to conduct the surveillance activity this week.
- FDA will respond by issuing a new EUA.

Information on manufacturing of primer/probes at CDC for lots being used at CDC headquarters and for the EUA:

(b) (5)

CDC submitted protocol to FDA to qualify alternative fluorescent hydrolysis probe quencher chemistry for the CDC test panel. CDC Influenza PCR Diagnostic Panels have been 510(k)-cleared using both probe chemistries which perform equivalently. The proposed study protocol is sufficient to generate the required data to determine equivalency.

DMD provided responses to pre-EUA submission for BioFire Defense, Vela Diagnostics, Novacyte and (b) (4)

Tim,

Here the response from LabCorp regarding their testing plan. Will really need clarity from CDC on whether a commercial entity can use the CDC primers.

**Subject:** PRIORITY DUE AT NOON TODAY: FY20-24 Coronavirus Resource Estimates

LT,

Late Thursday afternoon, FDA's Office of Budget sent out a data call to all Centers, ORA and HQ Offices requesting updated estimates of FDA's total anticipated costs related to the Coronavirus outbreak for FY 2020 through FY 2024.

This weekend, we were told that FDA data must be submitted to HHS and OMB no later than Tuesday which means we are required to submit our responses by NOON TODAY. OM is working with your teams to update the previously provided FY 2020 estimates as well as collecting outyear estimates for FY 2021 through FY 2024 on the level of effort associated with the Coronavirus outbreak response, including:

- Estimated Spending for the Remainder of FY 2020 in support of the Coronavirus response
- FY 2021 to FY 2024 Cost Estimates
- Estimated FY 2020 to FY 2024 Costs Related to Efforts to Address Shortages
- Incident Management Group (IMG) - costs associated with our Center's participation in the IMG. This group is currently very active so we want to capture these costs.

AMERICAN OVERSIGHT

**Please ensure that OM receives Office responses this morning so we may meet the NOON deadline.**

Thank you,

**Denise J. Huttenlocker**

**Subject:** Availability of CDC Designed Kits

Hi,

We just got off the phone with IDT. The have the following kits available for sale today of the CDC designed kits.

(b) (4)

The CDC Test Panel includes fluorescently labeled hydrolysis probes that contain Black Hole Quencher® (BHQ®), a proprietary chemistry owned by Biosearch Technologies.
IDTDNA has an alternative fluorescent hydrolysis probe quencher chemistry (ZEN™ Double-Quenched Probe technology) being used in their kits.

Can we?

1. Sequester lots of these kits first for PHL
2. Order today and receive kits at the CDC to conduct a bridging study here at the CDC, bridging to the current kits.

Note:
1. The IDT kits also have N3 (which can be pulled out of the kits as needed)
2. I have not heard why (b) (5) . Who can fill me in on the reasons for this decision?

Also:
1. Co-Diagnostics has announced sale of a CE Marked kit. They are on the list of manufacturers who have requested EUA information from the FDA. Can we work with them (b) (5)

Hi Cynthia,

My responses to your additional questions and clarifications are provided in the attached.

The pre-EUA review is interactive, I prefer to see updates to the submission as soon as they are available, so that I can review and provide feedback in a timely fashion. You can also ask questions any time by phone or e-mail. I will also update you with any new pertinent FDA recommendations as soon as possible.

Best Regards,
Li

RE: A few additional questions on the PEUA200003 BioFire 2019-nCoV Test

Hi Li,
Attached are a few additional questions and clarifications embedded within the document you worked on. We are busy designing and testing assays, locating adequate virus sources, and preparing testing plans. Please let me know if there is an updated EUA Template and at what points you would like to see updates to the submission to ensure that the review is interactive (e.g. when it is half complete, when we have software report examples, when we have completed LoD and Exclusivity testing?).

I believe the new name of the test is : BioFire COVID-19 Test.

Thank you,
Cynthia

Hi Cynthia,

I was assigned as the lead reviewer for PEUA200003 for the BioFire FilmArray 2019-nCoV Test. Attached please find our comments to the draft Pre EUA template you submitted for FDA review.

Please let me know if you have any questions or concerns regarding the FDA review comments.

Best Regards,
Li

I don't see any issues with (b) (4) approaching CDC directly but I don't think (b) (5)

Would we consider an option of (b) (4), (b) (5)

Any other suggestions?

Thanks,

Tamara

**Subject**: 2/21/20 6 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

2/21/20 6 AM update:

**Status of activities on diagnostics:**

Association of Public Health Laboratories announced yesterday that only three of the more than 100 public health labs across the country have verified the CDC test for use.

- Screening retrospective samples, negative for the flu and other common respiratory viruses, for the coronavirus is delayed.

- Prospective Community Transmission Surveillance:
- CDC plans to submit a request to conduct the surveillance activity this week.
- New EUA will be issued.
- Draft Letter of Authorization has been provided to OCET/OCC.
- Fact sheet for patients participating in the study being drafted.

DMD has received a and is reviewing 4 new pre-EUA submission: (b) (4) 3 are from small companies, several abroad.

**Subject:** COVID-19 diagnostics

Hi,

I am at the Advisory Committee for Immunization Practices (ACIP) meeting and getting lots of questions about use of investigational diagnostics at hospital labs. There is great interest in using laboratory developed tests to complement CDC and state health department efforts. However, people's understanding is that all tests for SARS-CoV-2, including laboratory developed tests (LDTs), must be reviewed and cleared or authorized by the FDA for emergency use, or they cannot be used for diagnostic testing, and therefore at this time only the CDC RT-PCR covered by the EUA can be used, and only in authorized labs. This is articulated on the CDC website:
https://www.cdc.gov/csels/dls/locs/2020/reminder_covid-19_diagnostic_testing.html

However, I am told that this directive conflicts with prior experience at CLIA-certified hospital labs where investigational diagnostics have frequently been used without FDA authorization. Can you provide any clarification that I can pass along regarding this directive and the intentions behind it?

Thanks,
Doran

**Subject:** RE: Request for 2019-CoV EUA Template

**Importance:** High

Dear Melissa,

We are accepting multiplex approaches for the 2019-nCoV for devices that had previously cleared respiratory pathogens.

The wording for the final intended use is still being worked out, but please go ahead and submit your pre-EUA to us, so we can give you feedback regarding your planned studies asap.

Kind regards,

**Subject:** RE: Request for 2019-CoV EUA Template

Dear Melissa,

Thank you for your email. Please find attached the current EUA Interactive Review Template draft for molecular-based assays for the detection of 2019-novel coronavirus (2019-nCoV). I suggest when you are ready, the first step is to populate this draft template with the information and data that you currently have about your device and sent it back to us for review as a Pre-EUA submission (to be sent to the Document Control Center). The Pre-EUA review is an interactive process, so we will provide feedback after receiving and reviewing the information provided. The draft review template is a shared "work-in-progress" document which you will populate with information and data as obtained and which we will review and provide feedback to you.

I have also attached a draft cover letter you can use to submit your Pre-EUA for detection of 2019-nCoV to FDA (it includes the address for the Document Control Center). Please include in your Pre-EUA submission package:

- The populated EUA Review Template draft
- FDA Form 3514 (https://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM080872.pdf) - under type of submission please check "other" and specify Pre-EUA.

One hard copy of the signed EUA Cover Letter and one electronic copy of you Pre-EUA submission package (including the EUA Review Template - MS word document) should be enclosed in your Pre-EUA submission to FDA, and we also request that you submit the information requested via electronic mail to myself Kim.Sapsford@fda.hhs.gov, as well as carbon copying (cc:) the following email addresses:

AMERICAN OVERSIGHT

- Division Director: Dr Uwe Scherf, email address: Uwe.Scherf@fda.hhs.gov;

- Branch Chief: Dr Tamara Feldblyum, email address: Tamara.Feldblyum@fda.hhs.gov

Please be reminded that ***in the U.S. a test*** for the detection of 2019-nCoV or to diagnoses 2019-nCoV infection must not be distributed and/or used for clinical diagnosis without premarket clearance, approval, or EUA by the FDA.
NOTE: The EUA Interactive Review Template from the FDA is considered an internal working document and must not be distributed outside of your organization.

Please let me know if you have any questions, we look forward to working with you,
Best regards,
Kim

**Subject:** RE: CDC & EUA lot testing

Here another way.

As a part of your efforts in investigating this reagent issue, please provide information regarding the reagent lot release testing criteria and **results at the CDC for the original reagent lot, as well as the new replacement reagent lot for the N3 assay**. We are particularly interested in learning (b) (5) [redacted]

Below are the summary results of our heightened NTC QC testing for the distributed lot of N1, N2 and N3 reagents.

**2019-nCoVEUA-01** (b) (5) **Final Kit Heightened QC (NTC Reactions)**

| Marker | Frequency | Percentage | Average Ct | Range |
|---|---|---|---|---|
| 2019-nCoV_N1 | (b) (5) [redacted] | | | |
| 2019-nCoV_N2 | | | | |
| 2019-nCoV_N3 | | | | |

The attached powerpoint includes the detailed test results for your review.
We will provide a call-in number as soon as possible.
Thank you very much
Steve

Hi Uwe,
For clarification the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel consists of two separate boxes. Box #1 contains the primers and probes as described below:

**2019-nCoVEUA-01 Box #1: Primers and Probes**

| *Reagent Label* | *Part #* | *Description* | *Quantity / Tube* | *Reactions / Tube* |
|---|---|---|---|---|
| 2019-nCoV_N1 | (b) (5) [redacted] | | | |
| 2019-nCoV_N2 | | | | |
| 2019-nCoV_N3 | | | | |
| RP | | | | |

**Primer and probes from three individual boxes that were randomly selected after kit assembly were tested as presented in the powerpoint file provided earlier.**

AMERICAN OVERSIGHT

Also as requested, please find attached the QC testing process of primer/probe reagents at bulk and post-fill analysis.

**Subject**: 2/20/20 6 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

2/20/20 6 AM update:

**Status of activities on diagnostics:**

CDC provided draft protocol for the community transmission surveillance plan and requested feedback on regulatory strategy options to ensure that the surveillance will be conducted in compliance with FDA law and regulation.

Community surveillance jurisdiction will be: (b) (5)

- Retrospective Community Transmission Surveillance:

(b) (5)

- Prospective Community Transmission Surveillance

(b) (5)

- CDC plans to submit a request to conduct the surveillance activity this week.
- FDA will respond by issuing a new EUA.

AMERICAN OVERSIGHT

Information on manufacturing of primer/probes at CDC for lots being used at CDC headquarters and for the EUA:

(b) (5)

CDC submitted protocol to FDA to qualify alternative fluorescent hydrolysis probe quencher chemistry for the CDC test panel. CDC Influenza PCR Diagnostic Panels have been 510(k)-cleared using both probe chemistries which perform equivalently. The proposed study protocol is sufficient to generate the required data to determine equivalency.

DMD provided responses to pre-EUA submission for (b) (4) .

**Subject**: RE: Exclusion of N3

One minor correct, CDC just corrected a number and we verified. Instead of (b) (5) unique respiratory tract specimens is was only **2079**.

This does not change the previously final conclusion but is relevant for the record.

The team concludes: (b) (5)
(b) (5)

Thanks, Uwe

AMERICAN OVERSIGHT

Kim and Uwe,

HHS has asked us to review a response to Senator Markey re COVID, and most of it looks fine but they have a section on EUAs with some wording that I was not sure of. Below is the text; in particular, (b) (5) [redacted] Most of the rest of it is the same as the testimony you reviewed last week. Can you let me know if you have edits/feedback on this? Sorry for the short turnaround (once again). I might suggest just striking the text in blue if that is easiest.

I already made the changes Kim had suggested to the testimony (in yellow highlight).

Best,

Jennifer

(b) (5) [redacted] On February 4, 2020, the U.S. Food and Drug Administration (FDA) issued an Emergency Use Authorization (EUA) to enable emergency use of CDC's 2019-nCoV Real-Time RT-PCR Diagnostic Panel.. This authorization allows the use of the test at any CDC-qualified lab across the country. CDC is working closely with FDA and public health partners, including the American Public Health Laboratories, to rapidly share these tests domestically and internationally through CDC's International Reagent Resource (www.internationalreagentresource.org). In addition, CDC uploaded the genome of the virus from the first reported cases in the United States to GenBank, the National Institutes of Health genetic sequence database of publicly available DNA sequences (www.ncbi.nlm.nih.gov/genbank). CDC also is growing the virus in cell culture, which is necessary for further studies, including for additional genetic characterization. Once isolated, the virus will be made available through Biodefense and Emerging Infections Research Resources Repository (www.beiresources.org) to assist research efforts. CDC has also sequenced the novel virus and shared it with the National Institutes of Health for use by the research community.

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

On Monday, February 3, 2020, CDC submitted an EUA package to the FDA in order to expedite FDA permitted use of the CDC-developed laboratory test kit, called the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. FDA approved the EUA on February 4, 2020, and the test kit began shipping on February 5, 2020 to select qualified U.S. and international laboratories. Distribution of the tests will help improve the global capacity to detect and respond to the 2019 novel coronavirus.

**RE:** Request for Pre-Emergency Use Authorization (Pre-EUA) of the COVID-2019 RT-PCR Test

**Dear Dr. Scherf,**

Laboratory Corporation of America is submitting a Pre-Emergency Use (Pre-EUA) for the COVID-2019 RT-PCR Test so we can obtain feedback from FDA concerning the studies and/or testing outlined in our Pre-Emergency Use Authorization (Pre-EUA) submission package.

The Molecular Research and Development Department of Laboratory Corporation of America in Burlington, NC will perform a validation study for the detection of the 2019-Novel Coronavirus. In response to the rapid emergence of the 2019 novel Coronavirus, the CDC published a protocol for the detection of this virus by RT-PCR and was issued an Emergency Use Authorization to perform this testing (Feb 4, 2020). The test validation plan described here utilizes high throughput sample processing automation coupled to qualitative real time PCR on the Applied Biosystems QuantStudio 7 to detect the presence of 2019-Novel Coronavirus.

Attached to this letter is the first draft of our device EUA Interactive Review Template for FDA review as a Pre-EUA. One hard copy of the signed EUA Cover Letter and one electronic copy are enclosed. Also, these documents have been sent to you via email.

In case you should have any questions regarding the information provided and/or need additional information/data from us please contact me immediately either via email Brian.Krueger@LabCorp.com or phone (919) 536-2604.

Sincerely,

Brian Krueger, PhD

Good morning-

Making sure the below effort to obtain more granular information for the Commissioner (as requested by the Secretary) is on your radar screens as well—particularly number of manufacturers contacted and what information we're learning. I know this request has come through different channels, but making you know that the Commissioner is briefing senators tomorrow at 8am where we've been told he'll get these types of questions.

We're working directly with your teams, but I have Keagan cc'd here, so let us know if you have questions or concerns. We've also made clear in the request to let us know if certain information can't be shared for a particular reason (legal, cci, etc).

Thanks to you and your teams for all of the support.

Should also note that if there are other, more preferable ways to quantify or give specifics please feel free to suggest them in the document. That said, we expect the Commissioner may be asked questions along these lines as early as Tuesday, so the information or the rationale he can convey as to why he cannot disclose it will be very helpful.

Thank you all!

**Subject:** For Data Population and Review by COB Monday

IMG, CDER, CBER, CDRH, and ORA:

OL has developed a document to respond to the following directive from Leadership:

*Sec. Azar wants more specific and precise answers around our response efforts. Dr. Hahn wants to be as specific as we possibly can with regard to our response efforts, and if there is a legal reason we can't, he wants to know why. By COB Monday 2/24, JIC needs to provide these type of specifics throughout the remarks/materials prepared for Tuesday briefings, + in any press materials. The specifics don't have to be product-specific, but they want numbers, e.g., we have contacted ## manufacturing facilities in China as of DATE, and ## are still shipping product without delay.*

The document is linked below for your respective Centers/Office to populate data and review by **COB Monday, Feb. 24.** We anticipate that some of this information is not able to be shared publicly. If you believe that to be the case please so indicate in a comment bubble.

Also please note that the document may contain nonpublic and/or confidential commercial information. Please do not distribute it beyond FDA and limit its internal distribution as much as is possible.

Thank you for your efforts on this project. Please let us know if you have any questions or need additional information.

**Subject:** RE: Coronavirus and MERS culturing

Dear Tim,

As I mentioned to Uwe yesterday, the idea was to handle the COVID-19 materials for the CDRH devices as we did for Zika. CBER has the laboratories and knowledge to propagate the virus. DMD will be able to design the panel that will best challenge the sensitivity and specificity of the devices we are getting in house. Therefore, after Tony grows and inactivates the BSL-3 stocks, I would be preparing the dilutions of the viral stocks with David's help to formulate the final panel. In addition, I was also the one receiving at CDRH the orders, distributing the panels when available to the companies, as well as receiving the results of the testing. This strategy allowed DMD to have knowledge of the progress companies where doing with the panel testing and compile all the results for the EUA devices.

The preparation of the panel will take some time as the virus strains need still to be grown (and as Tony said the BSL-3 just got validated to work with COVID-19), inactivated, titrated, and the panel will have to be prepared with different dilutions that could satisfy the sensitivity observed in our devices.

AMERICAN OVERSIGHT

I proposed a meeting with CBER for next week, now that that the BSL-3 and the funds are available since 2/21/2020, to set up a timeline for the next steps.

Regards,

Mayra

**Subject:** RE: Coronavirus and MERS culturing

Dear Tim,

I am adding Drs. Carolyn Wilson, Mayra Garcia from CDRH and David McGivern to this email chain for communication purpose. Dr. Wilson is the director of office of research at CBER who oversees all 2019-nCoV activities. Dr. McGivern at the Office of Blood Research and Review at CBER will work with Mayra at CDRH to generate reference standards for industry to use.

My group is to propagate virus and then work with David's group to establish conditions for heat-inactivation of the virus. We have just received the approval to conduct the work, but there are a few house-keeping items that we need to take care of before we can start the work.

I would leave to Dr. Wilson, Mayra and Dr. McGivern to speak on the part regarding dialogues with industries.

Best,

Tony

Hi Pillai,

Great to meet you today! I wanted to reach out and have copied Jeff to find out more details about the coronavirus and mers cultures. We have a number of test developers who cannot complete validation of their EUA assays until they have at least mock samples made with virus to test.

How soon will virus be available?
Can we connect developers with someone here at the agency so they can coordinate access?

Thanks!

***EXTERNAL***: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

Dear Brian,

Apologize for the delayed response but we are currently working with various stakeholders around access to 2019-nCoV materials and clinical specimens. We appreciate that access to whole virus and/or purified whole genome RNA is limited at this present time and therefore we would consider use of representative IVTs for the initial limit of detection (LoD) evaluation. We do not anticipate access to clinical specimens in the near future and are currently discussing acceptable alternatives to that for the clinical evaluation of EUA tests. (b) (4)

Please note that live whole virus is now available through BEI Resources under catalog number NR-52281, however, this material is a BSL-3 pathogen requiring BEI Level 3 registration and a CDC permit for domestic shipments. It is our understanding that inactivated virus may be available in the next 1-2 months.

We recommend as the next step that you submit your Pre-EUA submission to FDA, as outlined in the initial email that was sent with the EUA Interactive Review Template, so we can assign you a Lead Reviewer and provide more detailed formal feedback going forward.
Best regards
Kim

**Subject:** [External] RE: 2019-nCov EUA Template

***EXTERNAL***: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

Dear Brian,

Thank you for your email. Please find attached the current EUA Interactive Review Template draft for molecular-based assays for the detection of 2019-novel coronavirus (2019-nCoV). I suggest when you are ready, the first step is to populate this draft template with the information and data that you currently have about your device and sent it back to us for review as a Pre-EUA submission (to be sent to the Document Control Center). The Pre-EUA review is an interactive process, so we will provide feedback after receiving and reviewing the information provided. The draft review template is a shared "work-in-progress" document which you will populate with information and data as obtained and which we will review and provide feedback to you.

I have also attached a draft cover letter you can use to submit your Pre-EUA for detection of 2019-nCoV to FDA (it includes the address for the Document Control Center). Please include in your Pre-EUA submission package:

- The populated EUA Review Template draft
- FDA Form 3514 (https://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM080872.pdf) - under type of submission please check "other" and specify Pre-EUA.

One hard copy of the signed EUA Cover Letter and one electronic copy of you Pre-EUA submission package (including the EUA Review Template - MS word document) should be enclosed in your Pre-EUA submission to FDA, and we also request that you submit the information requested via electronic mail to myself Kim.Sapsford@fda.hhs.gov, as well as carbon copying (cc:) the following email addresses:

AMERICAN OVERSIGHT

- Division Director: Dr Uwe Scherf, email address: Uwe.Scherf@fda.hhs.gov;
- Branch Chief: Dr Tamara Feldblyum, email address: Tamara.Feldblyum@fda.hhs.gov

Please be reminded that in the U.S. a test for the detection of 2019-nCoV or to diagnoses 2019-nCoV infection must not be distributed and/or used for clinical diagnosis without premarket clearance, approval, or EUA by the FDA.

NOTE: The EUA Interactive Review Template from the FDA is considered an internal working document and must not be distributed outside of your organization.

Please let me know if you have any questions, we look forward to working with you,
Best regards,
Kim

Good evening all,

Are there any updates to the numbers below? Jeff is briefing Senate HELP staff tomorrow so wanted to check in.

Best,

Jennifer

- FDA has granted 1 Emergency Use Authorization (EUA), to the CDC, as of 2/21/20.
- This test was developed and validated within about a month.
- CDC submitted validation data interactively throughout the process and the EUA package was submitted to FDA on 2/3/2020; on 2/4/2020, FDA issued an EUA.
- FDA has provided the EUA template to (b) (5) developers of diagnostics for this outbreak as of 2/21/20.
- (b) (5) developers have submitted pre-EUA documents for FDA feedback as of 2/21/20.

**Subject:** For Review/Edits by 9 am on Monday (2/24) - Info re EUA for COVID-19 By The Numbers
**Importance:** High

Uwe, Kim, and Toby,

Good evening. Secretary Azar has requested a great deal of data from FDA (particularly regarding the supply chain, number of firms we have contacted, numbers of firms manufacturing certain products OUS and domestically, etc.). As part of this, we want to provide some of the notable information about diagnostic tests and EUAs. Can you review the four points below by 9 am on Monday morning? Feel free to add anything else you think is responsive and helpful.

Sorry for the quick turnaround (once again).

Thanks very much for your help.

Best,

Jennifer

## FDA Response to COVID-19 By-the-Numbers

Diagnostic Tests

- Granted 1 Emergency Use Authorization, to the CDC, as of 2/21/20
- This test was developed and validated within about a month.

AMERICAN OVERSIGHT

- CDC submitted validation data interactively throughout the process and the EUA package to FDA on 2/3/2020; on 2/4/2020, FDA issued an EUA to enable emergency use of the test.
- Provided the Emergency Use Authorization template to (b)(5) developers of diagnostics for this outbreak as of 2/21/20

**Subject**: 2/14/20 6 PM update - 2019-nCoV

Jeff, Elizabeth, Ellen, Bill and Tim:

Enclosed the 2/14/20 6 PM update on 2019-nCoV

**Status of activities on diagnostics:**

- Conference call this afternoon with CDC to discuss the community transmission surveillance plan and to identify regulatory strategy options to ensure that the surveillance will be conducted in compliance with FDA law and regulation.
  - CDC will give FDA a draft protocol of their community surveillance plan for review and comment next week.

(b) (5)

  - Definite regulatory decision was not given - pending recommendations from OCC

- CoV Diagnostic WG call (FDA, BARDA & NIH) this afternoon to discuss availability of 2019-nCoV genomic material:

(b) (5)

AMERICAN OVERSIGHT

- BARDA and NIH stated that they are reviewing grant proposals from various companies. DMD is reviewing pre-EUA applications received to date.
- The WG will compile a priority list of companies to UTMB that should receive 2019-nCoV genomic material for their studies.

- DMD received 7 pre-EUA applications in the last 4 days (see table below) with study proposals and in silico primer analysis. We are currently reviewing the submissions.

2019-nCoV pre-EUAs currently under review by DMD:

| CTS | FIRM | ASSAY | Received |
|---|---|---|---|
| PEU200001 | InBios | Smart Detect 2019-nCoV | 2/11/2020 |
| PEU200002 | Roche Molecular | cobas 2019-nCoV on cobas 6800/8800 Systems | 2/11/2020 |
| PEU200003 | BioFire Defense | BioFire 2019-nCoV Test | 2/11/2020 |
| PEU20000x | ScienCell Research Laboratories | SARS-Cov-2 RT-PCR Detection Kit | 2/13/2020 |
| (b) (4) | | | |
| PEU20000x | Cepheid | Xpert SARS-CoV-2 test | 2/13/2020 |
| PEU20000x | Vela Diagnostics | ViroKeyTM SA201 2019-nCoV RT-PCR Test | 2/11/2020 |

- A total of 60 IVD Developers have requested and received EUA review template.

- Tri-agency Taskforce for Emergency Diagnostics (FDA/CDC/CMS) held a teleconference today to share information on the activities concerning the issued EUA and Pre-EUA proposals.

**Subject:** FW: ACTION NEEDED: DRAFT CDC EUA Request for Sentinel Surveillance Activities

Dear Laura,

Attached please find the following documents you submitted on February 21, 2020 to support the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in surveillance activities. These documents have been reviewed and edited by FDA's OCET and OCC.

1. Draft COVID-19 sentinel surveillance
2. Draft SARS-CoV-2 surveillance risk benefit
3. Draft CDC Surveillance EUA Request Cover letter

Please do not hesitate to reach out to me with questions.

**Subject**: 2/18/20 6 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

Enclosed the 2/18/20 6 AM update:

**Status of activities on diagnostics:**

- Extensive work with CDC on 2 major requests:

1. Testing of asymptomatic U.S. citizens from the Diamond Princess cruise ship

On February 15, 2020, CDC submitted to FDA a request for testing of asymptomatic U.S. citizens from the Diamond Princess cruise ship using the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel.

FDA did not object to the use of the device for testing asymptomatic passengers from the ship, under several conditions including that testing being done only at CDC's headquarters in Atlanta.

2. CDC's request for a possible cut-off change to their issued EUA

Dear Roth and Uwe,

Greetings from UNICEF supply Division

Hope you are doing well

It has been a long time since we have discussed our global needs for Ebola and Zika Dx . However, I'm reaching out to you again to touch base with you regarding 2019 Novel Coronavius Diagnostics

We were glad to notice the launch of FDA Novel coronavirus (2019-nCoV) EUA and the related Information on your website that FDA has issued . would you or any of your team be available for a call sometime next week to get more updates on the EUA for 2019-nCov diagnostics and the scope of products in the pipeline

Looking forward to hearing from you

Regards
Lama

**Subject:** Request for a discussion related to global need for Ebola diagnostics

Dear Shanelle Hall,

About 1.5 years ago I attended the Zika Vaccine and Diagnostics Industry Consultation which was a very well organized meeting. We at the US FDA are currently re-evaluating the need (both globally and within the US) for Ebola in vitro diagnostic tests. I was hoping that we could arrange a telephone call between UNICEF and FDA to discuss UNICEF's evaluation of the need for a rapid antigen test for Ebola.

As you may know the US has issued a number of Emergency Use Authorizations for Ebola diagnostics. These authorizations are not permanent and FDA is mandated to revisit the need for these devices as the epidemic changes. We have heard that UNICEF may be planning to acquire these types of products therefore we would like to understand your needs to ensure that any action FDA may take in this area does not negatively impact your mission.

If it is acceptable to you, I propose having an approximately one hour teleconference to discuss our shared interest in improving global health with respect to Ebola.

Kind regards,
Kris

**Subject:** RE: DRAFT CDC EUA Request for Sentinel Surveillance Activities

Kim,

Thanks for keeping this moving. I could not contribute because I was taking care of the excluding the N3 component.

FYI, this is what I sent to Tim just a minute ago.

Can I give you a call?

Uwe

As discussed in our phone conversation, we received a dataset with the results of (b) (5) specimens tested at CDC, to evaluate the proposal of dropping the N3 component.

Here is a summary of our review of the data:

- Out of a total of (b) (5) specimens, (b) (5) were positive (i.e., N1, N2, N3 positive), (b) (5) were negative (i.e., N1, N2, N3 negative).
- Of the (b) (5) "Inconclusive" specimen (b) (5) were initially N3 positive only (i.e., N1 and N2 negative), (b) (5) were N1 positive only (i.e., N2 and N3 negative), 1 was N2 positive only (i.e., N1 and N3 negative), and 1 was N1 and N3 positive.
- Upon retesting, al (b) (5) specimens that were initially N3 positive only were negative for all three components; al (b) (5) specimens that were initially N1 positive only were negative for all three components upon retesting; (b) (5) that was initially N2 positive only was negative for all three components; and (b) (5) that was initially N1 and N3 positive was positive for all three components upon retesting.

In conclusion, specimens that were initially N3 positive only, upon retesting were negative for all three components [(b) (5) 100% (95% CI 67.6% - 100%)], suggesting that the initial results were likely false positives (b) (5) 0.4%). None of the (b) (5) specimens were presumptive positive (i.e., all three components positive) upon retesting, suggesting that all (b) (5) specimens were likely true negatives.

Based on this limited data, it appears that if the N3 were to excluded from the test panel, the risk of missing a presumptive positive specimen is low. It is the Division's opinion that with the issue of compromised N3 reagent, the benefit/risk profile is in favor of temporarily excluding the N3 component from the panel. The potential risk of this exclusion is the risk of missing true low positives during early phase of the infection. Based on this limited data set, the risk appears to be small.

CDC must provide a risk/benefit analyses or justification as why the N3 should be permanently, rather than temporarily, eliminated from the panel while they address the reagent contamination or probe/primer design issues.

Good morning Kim and Uwe,

Please find attached a draft EUA request submission for the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in sentinel surveillance activities. We would appreciate your review of this draft submission to ensure it contains the information and wording request necessary to support FDA's planned issuance of a second letter of authorization for the diagnostic panel to support this critical epidemiologic activity.

Please do not hesitate to reach out with questions, ideas, recommendations as you review the attached. I look forward to hearing from you.

Warm regards,
Laura

**Subject:** Update on EUA for CDC "surveillance"

CDC says they will submit a new EUA referencing the data in their first EUA in a day or two.
Protocol attached.
It would be good to touch base to ensure we are all on the same page for next steps.

Maybe we would also be able to discuss a little about the draft letter of authorization:

This letter is in response to your request that the Food and Drug Administration (FDA) issue an Emergency Use Authorization (EUA) for emergency use of the Centers for Disease Control and Prevention (CDC) 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the SARS-CoV-2 (formerly 2019-nCoV) in nasopharyngeal (NP) or oropharyngeal (OP) respiratory specimens collected from individuals consented or notified prior to sample collection that SARS-CoV-2 testing would be performed if specimens are negative for influenza and other respiratory pathogens in order to determine if unrecognized community transmission of SARS-CoV-2 is occurring, pursuant to Section 564 of the Federal Food, Drug, and Cosmetic Act (the Act) (21 U.S.C. §360bbb-3). Testing is limited to qualified laboratories designated by CDC to conduct testing according to protocol xxx and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.

Hello,

I have two minor comments in the letter, highlighted in yellow and as a comment at the end of the letter and

One minor edits in one of the comments in the procedure (yellow) and a recommendation for clarification in the second to last sentence under the Consideration for Individuals Tested.

Thanks,
Uwe

Dear All,

Please find attached the final documents with edits/comments back to CDC for your final review. I would like to send them back to CDC tomorrow morning. I will be unavailable 9-10:30am and 11:30 am – 1:00pm. If I could get any comments before 10:30 am hopefully I can send final docs back to CDC in the 10:30-11:30 window.

Thanks
Best regards
Kim

**Subject:** DRAFT CDC EUA Request for Sentinel Surveillance Activities

Good morning Kim and Uwe,

Please find attached a draft EUA request submission for the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in sentinel surveillance activities. We would appreciate your review of this draft submission to ensure it contains the information and wording request necessary to support FDA's planned issuance of a second letter of authorization for the diagnostic panel to support this critical epidemiologic activity.

Please do not hesitate to reach out with questions, ideas, recommendations as you review the attached. I look forward to hearing from you.

Warm regards,
Laura

**Subject:** RE: CoV Dx FDA/developer needs discussion

Dear Dx Team,
I have updated information from BEI regarding the possible availability of COVID-2019 genomic RNA and inactivated viruses. Keeping our fingers crossed - it looks as though these reagents may become available in the next 4-6 weeks.

| BEI catalog # | Reagent | Quantity | Estimated time |
|---|---|---|---|
| NR-52281 | Novel Coronavirus 2019-nCoV/USA-WA1/2020 (culture) | 150 | Available now, pending QC tests |
| NR-52285 | Genomic RNA, 2019-nCoV/USA-WA1/2020 | 200 | Available as BSL-2 product# on 21 Feb 2020 with pending QC testing; after full QC the product will be available mid-March* |
| NR-52286 | Heat inactivated, 2019-nCoV/USA-WA1/2020 | 100 | late March* |
| NR-52287 | Irradiated infected cell lysate, 2019-nCoV/USA-WA1/2020 | 400 | early April* |

* Includes safety testing of reagent (4 weeks duration, 2 passages each for 14 days).
#For native viral RNA product release as BSL-2 product after a 7-days of safety testing. The safety test will continue for the 4-week duration for release as BSL-1 product.

I'm still waiting for information from WRCEVA.
Thanks,
Maureen

**Importance:** High

Hi all,

The proposal looks good to me. This is consistent with the approach we agreed when they changed the quencher from (b) (5) for the CDC influenza RT-PCR panel. They can use the verification material (IVT) for the LoD equivalency study.

Thanks,
Li

**Subject:** RE: Coronavirus and MERS culturing

Dear Tim,

As I mentioned to Uwe yesterday, the idea was to handle the COVID-19 materials for the CDRH devices as we did for Zika. CBER has the laboratories and knowledge to propagate the virus. DMD will be able to design the panel that will best challenge the sensitivity and specificity of the devices we are getting in house. Therefore, after Tony grows and inactivates the BSL-3 stocks, I would be preparing the dilutions of the viral stocks with David's help to formulate the final panel. In addition, I was also the one receiving at CDRH the orders, distributing the panels when available to the companies, as well as receiving the results of the testing. This strategy allowed DMD to have knowledge of the progress companies where doing with the panel testing and compile all the results for the EUA devices.

The preparation of the panel will take some time as the virus strains need still to be grown (and as Tony said the BSL-3 just got validated to work with COVID-19), inactivated, titrated, and the panel will have to be prepared with different dilutions that could satisfy the sensitivity observed in our devices.

AMERICAN OVERSIGHT

I proposed a meeting with CBER for next week, now that that the BSL-3 and the funds are available since 2/21/2020, to set up a timeline for the next steps.

Regards,

Mayra

**Subject:** RE: Coronavirus and MERS culturing

Dear Tim,

I am adding Drs. Carolyn Wilson, Mayra Garcia from CDRH and David McGivern to this email chain for communication purpose. Dr. Wilson is the director of office of research at CBER who oversees all 2019-nCoV activities. Dr. McGivern at the Office of Blood Research and Review at CBER will work with Mayra at CDRH to generate reference standards for industry to use.

My group is to propagate virus and then work with David's group to establish conditions for heat-inactivation of the virus. We have just received the approval to conduct the work, but there are a few house-keeping items that we need to take care of before we can start the work.

I would leave to Dr. Wilson, Mayra and Dr. McGivern to speak on the part regarding dialogues with industries.

Best,

Tony

Hi Pillai,

Great to meet you today! I wanted to reach out and have copied Jeff to find out more details about the coronavirus and mers cultures. We have a number of test developers who cannot complete validation of their EUA assays until they have at least mock samples made with virus to test.

How soon will virus be available?
Can we connect developers with someone here at the agency so they can coordinate access?

Thanks!

**Subject:** RE: USG SSWG Updates - Current and scheduled availability of SARS-2 genomic RNA and scheduled availability of inactivated virus

Dear All,
Here's a summary of the availability of the following reagents:

SARS-2 Viral Genomic RNA

- The World Reference Center for Emerging Viruses and Arboviruses (WRCEVA) prepared small quantities of SARS-2 viral genomic RNA. The material was prepared from cell culture of SARS-CoV-2 virus (USA_WA1/2020), it is being distributed as BSL-2. The following companies were prioritized by the Diagnostics WG of the MCM Task Force to receive this reagent and have received a communication informing them of the availability of limited amounts of RNA: Cepheid, BioFire Defense, Diasorin, Luminex Corp., Quidel, Qiagne, GenMark, Roche Diagnostics, Hologic, Altona, and MesBioTech.
- BEI Resources is in the process of generating a larger supply of SARS-2 viral genomic RNA. The initial lot is 200 aliquots, and as Rosemary mentioned 75 vials will be reserved for FDA use to facilitate studies associated with EUA submissions for diagnostics. This lot of SARS-2 genomic RNA is scheduled to be available either by the end of this week or early next week.

Inactivated SARS-2 virus

- Heat inactivated, 2019-nCoV/USA-WA1/2020 is scheduled to become available by the end of March
- Irradiated infected cell lysate, 2019-nCoV/USA-WA1/2020 is schedule to become available by early/mid-March

Thanks,
Maureen

**Subject:** RE: USG SSWG Updates

Hi Mayra,
Following up on your message to Ruvani. Sounds like Uwe has filled you in on the distribution of genomic RNA that was coordinated through the Diagnostics WG of the MCM Task Force. The RNA was prepared by WRCEVA under contract to NIAID as a way to expedite some material to the Dx developers moving forward with SARS-CoV-2 assays for existing FDA-cleared platforms. WRCEVA also has live virus, and is working on producing more RNA.
BEI is producing genomic RNA that may be available this week or next. They are also working on inactivated (irradiated) virus. Once sufficient quantity of virus is produced, it needs to be irradiated and then QC tested to ensure it's not viable – this requires 2 passages, each 14 days. Maureen Beanan at NIH reported to the Dx WG on 2/14 that BEI estimated material would be avaible late March. I've copied Maureen here to see if she has any updates. In an email with Uwe last week, Maureen agreed to have BEI reserve some RNA and irradiated virus for Dx developers. We can use the Dx WG to discuss prioritization.
Hope this helps.
Rosemary

Hi Mayra,

AMERICAN OVERSIGHT

It is my understanding that BARDA (Rosemary Humes) and NIH have been working together to get WRCEVA to produce purified RNA for diagnostic developers (which should be available sooner than inactivated virus). I also understand that

the Diagnostics subworking Group led by Rosemary under the MCM Task Force has prioritized recipients for the purified virus.

I'm not sure about the timeline for availability of inactivated stocks. Copying Rosemary and Sara to verify.

Best,
Ruvani

Sent from my iPhone

On Feb 22, 2020, at 4:44 PM, Garcia, Mayra <Mayra.Garcia@fda.hhs.gov> wrote:

Dear Ruvani,

We are in urgent need of BSL-2 level viral stocks to provide to developers. I have checked the WRCEVA web site and found they are distributing the USA_WA1/2020 strain. Have you received any updates about other viral stocks that may be available soon at UTMB/WRCEVA or BEI?

I believe UTMB/WRCEVA was also attempting to have an inactivated stock faster than what was promised by BEI or what we can get done at FDA. Is this still the case?

Let me know if you prefer I contact Sara Woodson directly.

Many thanks,

Mayra

**Subject:** USG SSWG Updates

Colleagues,

Since sending out the request for information, we have two good news developments:

1) BEI Resources is now accepting orders for 2019-nCoV virus under catalog number NR-52281. Please note that this material is a BSL-3 pathogen requiring BEI Level 3 registration and a CDC permit for domestic shipments. To request virus, please go to the BEI Resources website.

2) UTMB/WRCEVA should also be ready distribute on Wednesday. WRCEVA has not updated their website yet, so if you want to request virus, contact Sara Woodson (sara.woodson@nih.gov)

AMERICAN OVERSIGHT

A HUGE thanks to the teams at CDC, NIH, BEI, and WRCEVA who are making all of this happen!! The SSWG will continue monitoring the availability of viral isolates, but expect BEI and UTMB will be able to meet USG priority needs.

Other important updates (attached document has more detail) include:

One vial of PBMC was collected under the NIH IRB-protocol. Due to the urgent nature to prioritize a recipient, a small group consultation with representation from CDC, DoD, FDA and NIH, made a decision was made to share this with AbCellera.

We were made aware that WHO is providing problematic guidance to countries on negotiating material transfer agreements (MTA), which could result in protracted MTA negotiations. This issue has been raised with WHO at a high-
1) level and we hope to have a resolution soon. If you encounter this and any other types of challenges related to sample sharing, please let us know.

2)

Best,
Ruvani

**Subject:** [URGENT REQUEST] USG SSWG Request and other Updates

Colleagues,

Please revisit your needs for live virus that was collated in the attached spreadsheet last month. If there is an urgent need for virus that cannot wait until BEI is up and running next week, please provide a strong justification and the contact information. CDC has a small number available for very high priority requests. Please coordinate this information through your agency POCs (unless told otherwise by someone in your agency) and provide a response to me by **3pm today**.

Below are some of the POCs I have:
DoD- COL Kishimori, Dan Harms, Christy Music
FDA- Michael Mair

AMERICAN OVERSIGHT

CDC- Wendi Kuhnert-Tallman
NIH- Hilary Marston
DHS- Ivan Zapata

Other News/Reminders:
1) *IMPORTANT* BEI can distribute virus to BSL-3 labs that are registered with them. If your BSL-3 lab is not already registered with BEI, you might want to do this so you can order virus.
2) Good news! Dr. Kadlec and Dr. Redfield have signed and transmitted letters to their counterparts in the interagency requesting use of the EUSLA. I will share the pdfs later today for your awareness.

Thanks,
Ruvani

**Subject:** RE: USG SSWG Call to coordinate 2019-nCoV sharing

Colleagues,

Attached are the notes from our call yesterday with a few updates based on developments today (Feb 5). If you note any inaccuracies, please let me know. I've also attached the updated Permit/License requirements document.

<< File: PermitLicense requirements_20200205.docx >> << File: SSWG Notes_20200204.docx >>

To provide BEI with the priority USG recipients as we discussed on the call, I will work with our core SSWG members (reps from NIH, FDA, CDC, DoD, BARDA, DHS, etc) in the next two days to review the list of recipients that were submitted to the SSWG last month.

AMERICAN OVERSIGHT

Best,

Ruvani

**Subject**: RE: Cut-off change - lot release testing criteria

**Importance**: High

Steve,

DMD reviewed your QC data summary for oligo sets N1, N2 and RP. The component testing of N1, N2 and RP each on (b) (5) well plates of NTC sample generating a total number of (b) (5) data points for each target component. No false positive results were observed. N1, N2, and RP passed your QC testing criteria.

The review team does not have any questions regarding this data set, so would not request a conference call today. Were there other items, you and your team are planning to address in a call?

When the N3 QC testing data is available and shows no false positive results for N3 on 288 data NTC samples, please combine the new QC testing data and submit the complete QC testing results of all components in one email for FDA concurrence.

Thanks,
Uwe

Hello Uwe,
We would like to share with you our bulk QC data summary for oligo sets N1, N2 and RP for your review. We continue to manufacture N3 and will forward as soon as that data is reviewed.
Please be aware there are two tab in the excel file.
Please let us know if you have questions.
Do you and your colleagues have a time tomorrow that you would like to arrange a call to discuss?
Thank you very much.
Steve

**Subject:** RE: Cut-off change - lot release testing criteria

Hi Uwe,
For clarification the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel consists of two separate boxes. Box #1 contains the primers and probes as described below:

AMERICAN OVERSIGHT

**2019-nCoVEUA-01 Box #1: Primers and Probes**

| *Reagent Label* | *Part #* | *Description* | *Quantity / Tube* | *Reactions / Tube* |
|---|---|---|---|---|
| 2019-nCoV_N1 | RV202001 | 2019-nCoV_N1 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N2 | RV202002 | 2019-nCoV_N2 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N3 | RV202003 | 2019-nCoV_N3 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| RP | RV202004 | Human RNase P Forward Primer/Probe Mix | 22.5 nmol | 1000 |

Primer and probes from three individual boxes that were randomly selected after kit assembly were tested as presented in the powerpoint file provided earlier.

Also as requested, please find attached the QC testing process of primer/probe reagents at bulk and post-fill analysis.

We hope this helps to clarify the data presented and addresses your request.
Thank you very much.
Steve

**Subject:** RE: Cut-off change - lot release testing criteria

Dear Uwe,
Thank you for your prompt response! We will attempt to address your questions, although we may need to consult further internally to get specific information on some of the questions.

Q1: Clarify how many total lots of EUA reagents are being distributed?
(b) (5)

Q2: Clarify the rational why only N1 and N2 and not include N3. Provide data to justify exclusion of N3]. (b) (5)

Q3: It is FDA's understanding that this specific lot is the only lot available for testing outside CDC headquarters and that new lots to be manufactured will not be available until March, clarify whether the proposed contingent measure will be applied immediately]. (b) (5)

Please let us know if you have any additional questions.
Thank you very much!
Steve

**Subject:** RE: Cut-off change - lot release testing criteria

Dear Uwe,

(b) (5)

If possible we would like to arrange a call with you sometime tomorrow to discuss this strategy and to learn how you would prefer to see this data summarized/presented. We are available from 9-11am or after 1pm if those times are available for you and your FDA colleagues.

Thank you very much for your consideration and support.
Steve

**Subject:** RE: Cut-off change

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

AMERICAN OVERSIGHT

Thanks,
Uwe

**Subject:** RE: Information request

Hi Maureen,
Thanks for the follow up. I will defer to FDA on this, but seems to me the better material to reserve would be inactivated virus when it is available. The CDC is still working on replacement reagents for their assay, so it will be awhile before PHLs are equipped to do testing and have the capacity to do any bridging studies. Prioritizing inactivated

AMERICAN OVERSIGHT

viruses to companies that they can use to contrive clinical samples may be the best way to get some initial performance data for EUA, especially if surge capacity is needed quickly.
Thanks again,
Rosemary

**Sent:** Friday, February 21, 2020 10:44 AM
**To:** Beanan, Maureen (NIH/NIAID) [E] (b) (6) @mail.nih.gov>; Scherf, Uwe (FDA/CDRH) <Uwe.Scherf@fda.hhs.gov>
**Cc:** Wallace, Rodney (OS/ASPR/BARDA) <Rodney.Wallace@hhs.gov>
**Subject:** Information request

Hi Maureen,
Uwe Scherf (copied here) contacted me this morning to ask if UTMB would provide more information on the RNA that is being sent to the companies so FDA can better evaluate any data that companies may produce with the RNA. If Dr. Plante has a product sheet that he can share with BARDA and FDA that would be extremely helpful. Thanks very much!!

Uwe:
The companies agreed to by the Diagnostics Interagency WG are: (b) (4) We also added (b) (4), so the total is 11 companies. All of these companies have or use FDA-cleared platforms that are currently placed in U.S. healthcare centers. All have confirmed they are working on an assay for SARS-CoV-2, and have contacted FDA for the EUA template. The (b) (4) assays have potential for POC use depending on FDA requirements.

Companies were notified by NIH with this message:
The World Reference Center for Emerging Viruses and Arboviruses (WRCEVA) supported by NIH/NIAID has prepared small quantities of genomic RNA. In collaboration with our interagency partners, (company name) has been prioritized for receipt since you are actively developing a SARS-CoV-2 assay for use on an FDA cleared platform. The material was prepared from cell culture of SARS-CoV-2 virus (USA_WA1/2020), it will be distributed as BSL-2 and shipped on dry ice. Permits may be required for international shipments. If you are interested in receiving the materials, or have additional questions, please contact (contact information provided) for more details and a copy of the Material Transfer Agreement.
Additional material including genomic RNA and Irradiated virus will be available from BEI Resources (b) (4) in the coming weeks. that the material is available, and if they are interested they should contact UTMB. Contact information was provided.

Please let me know if there is anything else I can do to help.
Rosemary

**Subject:** RE: Cut-off change - lot release testing criteria

Hi Uwe,
For clarification the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel consists of two separate boxes. Box #1 contains the primers and probes as described below:

**2019-nCoVEUA-01 Box #1: Primers and Probes**

| *Reagent Label* | *Part #* | *Description* | *Quantity / Tube* | *Reactions / Tube* |
|---|---|---|---|---|
| 2019-nCoV_N1 | RV202001 | 2019-nCoV_N1 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N2 | RV202002 | 2019-nCoV_N2 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N3 | RV202003 | 2019-nCoV_N3 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| RP | RV202004 | Human RNase P Forward Primer/Probe Mix | 22.5 nmol | 1000 |

Primer and probes from three individual boxes that were randomly selected after kit assembly were tested as presented in the powerpoint file provided earlier.

Also as requested, please find attached the QC testing process of primer/probe reagents at bulk and post-fill analysis.

We hope this helps to clarify the data presented and addresses your request.
Thank you very much.
Steve

**Subject:** RE: Cut-off change - lot release testing criteria

Dear Uwe,

(b) (5)

If possible we would like to arrange a call with you sometime tomorrow to discuss this strategy and to learn how you would prefer to see this data summarized/presented. We are available from 9-11am or after 1pm if those times are available for you and your FDA colleagues.

Thank you very much for your consideration and support.
Steve

**Subject:** RE: Cut-off change

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.

AMERICAN OVERSIGHT

4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

Hi Uwe,
FYSA- As discussed , we are being asked about U.S. status everytime a company makes a press announcement about the availability of their test outside the US. This one from Qiagen raised a bunch of questions last night.

FEB 26 2020

# QIAGEN announces worldwide shipments of QIAstat-Dx test kits for SARS-CoV-2

**• QIAstat-Dx Respiratory 2019-nCoV Panel rapidly differentiates novel coronavirus from 21 other pathogens implicated in serious respiratory syndromes**

**• Panel being tested at four hospitals in China after initial evaluation on clinical samples by a leading Paris hospital**

**• Adds to QIAGEN's portfolio of molecular testing solutions to aid in global public health emergency**

**Hilden, Germany, and Germantown, Maryland, February 26, 2020 –** QIAGEN (NYSE: QGEN; Frankfurt Prime Standard: QIA) today announced it has shipped its newly developed QIAstat-Dx Respiratory Panel 2019-nCoV test kit to four hospitals in China for evaluation. The

AMERICAN OVERSIGHT

new kit detects the novel coronavirus SARS-CoV-2 and adds rapid Sample to Insight syndromic testing to QIAGEN's portfolio of molecular testing solutions in the public health emergency. QIAGEN is also in the process of shipping QIAstat-Dx testing kits to public health institutions in other regions, including Europe, South-East Asia, and the Middle East.

Since January QIAGEN has been providing instruments and consumables to support detection of the virus in China and other markets. Official protocols for SARS-CoV-2 detection include QIAGEN extraction kits, reagents and instruments for real-time polymerase chain reaction (RT-PCR) workflows. Customers also are deploying QIAsymphony modular instruments and NeuMoDx integrated PCR systems to automate higher-throughput processing of their laboratory-developed tests for SARS-CoV-2.

"Our dedicated task force has moved very fast to develop and make available the QIAstat-Dx respiratory panel with SARS-CoV-2 detection. We are partnering closely with authorities and customers around the world to bring rapid, accurate diagnosis to the fight against this deadly infectious disease," said Thierry Bernard, Interim CEO of QIAGEN and Senior Vice President, Head of the Molecular Diagnostics Business Area. "As we have in past health crises such as SARS and the swine flu, QIAGEN is working hard to deliver better, faster testing solutions for hospitals and public health institutions to aid in the effort to monitor and bring the outbreak under control. Our employees' extraordinary response embodies QIAGEN's core mission to make improvements in life possible."

The QIAstat-Dx system was introduced in Europe in 2018 as a CE-product and cleared by the Food and Drug Administration (FDA) in the United States in mid-2019. It enables fast, cost-effective and easy-to-use syndromic testing with novel Sample to Insight workflows. The system streamlines molecular testing from end to end. A technician simply loads a clinical sample (such as a swab) into a single-use QIAstat-Dx cartridge and places it in the analyzer. QIAGEN chemistries for sample processing and analysis are built in, and the QIAstat-Dx instrument delivers results in about one hour.

**New QIAstat-Dx testing solution for SARS-CoV-2**

The QIAstat-Dx Respiratory 2019-nCoV Panel is a new version of the existing QIAstat-Dx Respiratory Panel for differential analysis of 21 viral and bacterial pathogens in respiratory syndromes. Once the SARS-CoV-2 genome was sequenced in January, QIAGEN developed two highly sensitive assays to detect SARS-CoV-2 targeting Orb1ab and the E gene. The addition of these targets provides parallel tools for combined detection of the novel coronavirus with increased sensitivity.

The expanded QIAstat-Dx panel is currently being evaluated at the Bichat-Claude Bernard Hospital in Paris. "After more than a year of experience using the existing QIAstat-Dx Respiratory Panel to evaluate patients coming into our Emergency Department with respiratory syndromes, we are evaluating the new panel with SARS-CoV-2 against RT-PCR testing using WHO recommended protocols. The QIAstat-Dx solution can provide results in about one hour, with high sensitivity and specificity and minimal hands-on time for hospital or laboratory personnel," said Dr. Benoit Visseaux, Associate Professor of Virology at Bichat-Claude Bernard Hospital in Paris.

Amid the rapidly evolving response to the coronavirus outbreak, the regulatory status of the QIAstat-Dx Respiratory Panel will vary by location. QIAGEN will apply for emergency authorization for marketing of the new panel from the U.S., the Korean KCDC/MFDS, and FDA and China's National Medical Products Administration (NMPA); the panel will be available with CE-IVD marking in Europe and other markets.

AMERICAN OVERSIGHT

**Multiple other QIAGEN testing solutions for SARS-CoV-2**

QIAGEN has moved quickly on several fronts to provide molecular testing solutions to researchers working to counter the international threat from the SARS-CoV-2 virus. Building on its strong position and experience in molecular testing for infectious diseases, QIAGEN is providing a variety of solutions:

- Enabling laboratory-developed tests (LDTs) – extraction kits, PCR enzymes and instruments, supporting in-house testing by laboratories and public health institutions. CDC guidelines for RT-PCR testing list QIAGEN's EZ1 DSP Virus kits, which run on EZ1 Advanced workstations, and QIAamp DSP Viral RNA Mini kits, which can be automated on QIAcube instruments. Chinese authorities and the Berlin Charitè protocol also include QIAGEN consumables.
- Mid- and high-throughput automation – QIAsymphony modular systems for sample preparation and PCR analysis, as well as NeuMoDx 96 and 288 systems for fully integrated PCR analysis, enabling customers to implement higher-throughput solutions for laboratory-developed RT-PCR tests. QIAGEN recently started placing NeuMoDx systems in China, for use in with LDTs in SARS-CoV-2 testing.
- Additional real-time PCR tests – two new RT-PCR tests for detection of SARS-CoV-2 have been developed at QIAGEN sites in China and the United States and will be available for Research Use Only. The company is investigating potential emergency use options for the automated PCR-based test solutions.

Further information can be also found here

**About QIAGEN**

QIAGEN N.V., a Netherlands-based holding company, is the leading global provider of Sample to Insight solutions that enable customers to gain valuable molecular insights from samples containing the building blocks of life. Our sample technologies isolate and process DNA, RNA and proteins from blood, tissue and other materials. Assay technologies make these biomolecules visible and ready for analysis. Bioinformatics software and knowledge bases interpret data to report relevant, actionable insights. Automation solutions tie these together in seamless and cost-effective workflows. QIAGEN provides solutions to more than 500,000 customers around the world in Molecular Diagnostics (human healthcare) and Life Sciences (academia, pharma R&D and industrial applications, primarily forensics). As of December 31, 2019, QIAGEN employed approximately 5,100 people in over 35 locations worldwide. Further information can be found athttp://www.qiagen.com.

Good morning Kim and Uwe,

Please find attached a draft EUA request submission for the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in sentinel surveillance activities. We would appreciate your review of this draft submission to ensure it contains the information and wording request necessary to support FDA's planned issuance of a second letter of authorization for the diagnostic panel to support this critical epidemiologic activity.

Please do not hesitate to reach out with questions, ideas, recommendations as you review the attached. I look forward to hearing from you.

Warm regards,
Laura

**Cc:** Wallace, Rodney (OS) <Rodney.Wallace@hhs.gov>
**Subject:** Information request

Hi Maureen,
Uwe Scherf (copied here) contacted me this morning to ask if UTMB would provide more information on the RNA that is being sent to the companies so FDA can better evaluate any data that companies may produce with the RNA. If Dr. Plante has a product sheet that he can share with BARDA and FDA that would be extremely helpful. Thanks very much!!

Uwe:
The companies agreed to by the Diagnostics Interagency WG are: (b) (4) We also added (b) (4) so the total is 11 companies. All of these companies have or use FDA-cleared platforms that are currently placed in U.S. healthcare centers. All have confirmed they are working on an assay for SARS-CoV-2, and have contacted FDA for the EUA template. The (b) (4) assays have potential for POC use depending on FDA requirements.

Companies were notified by NIH with this message:
The World Reference Center for Emerging Viruses and Arboviruses (WRCEVA) supported by NIH/NIAID has prepared small quantities of genomic RNA. In collaboration with our interagency partners, (company name) has been prioritized for receipt since you are actively developing a SARS-CoV-2 assay for use on an FDA cleared platform. The material was prepared from cell culture of SARS-CoV-2 virus (USA_WA1/2020), it will be distributed as BSL-2 and shipped on dry ice. Permits may be required for international shipments. If you are interested in receiving the materials, or have additional questions, please contact (contact information provided) for more details and a copy of the Material Transfer Agreement.
Additional material including genomic RNA and Irradiated virus will be available from BEI Resources (www.beiresources.org ) in the coming weeks. that the material is available, and if they are interested they should contact UTMB. Contact information was provided.

Please let me know if there is anything else I can do to help.

CDC says they will submit a new EUA referencing the data in their first EUA in a day or two.
Protocol attached.
It would be good to touch base to ensure we are all on the same page for next steps.

AMERICA'S OVERSIGHT

Maybe we would also be able to discuss a little about the draft letter of authorization:

This letter is in response to your request that the Food and Drug Administration (FDA) issue an Emergency Use Authorization (EUA) for emergency use of the Centers for Disease Control and Prevention (CDC) 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the SARS-CoV-2 (formerly 2019-nCoV) in nasopharyngeal (NP) or oropharyngeal (OP) respiratory specimens collected from individuals consented or notified prior to sample collection that SARS-CoV-2 testing would be performed if specimens are negative for influenza and other respiratory pathogens in order to determine if unrecognized community transmission of SARS-CoV-2 is occurring, pursuant to Section 564 of the Federal Food, Drug, and Cosmetic Act (the Act) (21 U.S.C. §360bbb-3). Testing is limited to qualified laboratories designated by CDC to conduct testing according to protocol xxx and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.

Uwe, My POC thoughts below. Copying Jeff for his awareness.

REALLLY need help from FDA and CDC to find a coordinated approach to communicate around Dx capacity, Dx testing development and DX utilization.
Need today -

1. throw some thoughts for what we can put in the one-pager into an email – will get a joint draft ready ASAP.

a. Uwe, please address regulatory issues, including EUA and CLIA requirements .

2. provide some ideas on what we can do to reality set this expectation.

Dear Rosemary,

Here are my thoughts.

**Cc:** Wallace, Rodney (OS) <Rodney.Wallace@hhs.gov>
**Subject:** BY noon tomorrow

Uwe and Wendi,
We have been asked to put together a one-pager and landscape on POC diagnostics discussing time (development and manufacturing (b) (5) costs and issues with developing a hand held diagnostic/tests.
As discussed on Friday's WG call, everything we have done to try to explain risk-benefit, issues and challenges with POC for this virus hasn't succeeded. I'll pull together what we have into a starting document, but REALLLY need help from FDA and CDC to find a coordinated approach to communicate around Dx capacity, Dx testing development and DX utilization.
Need today -

1. throw some thoughts for what we can put in the one-pager into an email – will get a joint draft ready ASAP.

a. Uwe, please address regulatory issues, including EUA and CLIA requirements .

2. provide some ideas on what we can do to reality set this expectation.

Thanks very much,
Rosemary

Dear Uwe,
Thank you for your prompt response! We will attempt to address your questions, although we may need to consult further internally to get specific information on some of the questions.

Q1: Clarify how many total lots of EUA reagents are being distributed?
(b) (5)

Q2: Clarify the rational why only N1 and N2 and not include N3. Provide data to justify exclusion of N3]. (b) (5)

Q3: It is FDA's understanding that this specific lot is the only lot available for testing outside CDC headquarters and that new lots to be manufactured will not be available until March, clarify whether the proposed contingent measure will be applied immediately]. (b) (5)

Please let us know if you have any additional questions.
Thank you very much!
Steve

**Subject:** RE: Cut-off change

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

**Subject:** RE: Request for enforcement discretion

All, I wanted to follow up on this email thread related to the testing of the passengers from the Diamond Princess cruise ship. CDC does intend to test all passengers who have arrived in the US. Testing will occur this week and into the weekend from all 3 sites where these passengers are being housed (Travis, Lackland and Omaha). Once our testing is complete we will, as discussed here, provide information on the number of asymptomatic cases that are tested. Given that some of these passengers are now showing symptoms we plan to finalize that number upon completion of the testing to ensure accuracy.

Thanks,

**Wendi Kuhnert-Tallman**

**Subject:** RE: Request for enforcement discretion

Dear Uwe,

We wish to thank you and your colleagues at FDA for the rapid response to our urgent request for FDA enforcement discretion. We appreciate your willingness to allow our testing of returning US travelers from the Diamond Princess cruise ship, as required of CDC by HHS. CDC agrees to restrict testing to CDC's headquarters in Atlanta, GA and will agree to share data generated in this repatriation testing activity. However, CDC has concerns about the request that the intended use of the assay be modified to make testing of asymptomatic individuals a generally acceptable use of the authorized test.

AMERICAN OVERSIGHT
The testing CDC will be conducting on the returning passengers from the Diamond Princess is a unique activity. This population presents unique challenges that led to an HHS determination that testing of these individuals was necessary,

regardless of the presence of symptoms. CDC stands behind the PUI definition and testing guidance we have posted to CDC's website. This testing guidance provides guidelines appropriate to the current epidemiological situation within the United States. We are concerned that any change to the testing guidance/intended use to permit testing of asymptomatic individuals will unnecessarily increase testing demand and promote a use of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel that CDC feels is inappropriate at the present stage of the response.

CDC would welcome the opportunity to discuss further.

We greatly appreciate FDA's partnership in this response.

Warm regards,
Wendi

**Subject:** RE: Request for enforcement discretion
**Importance:** High

Dear Dr. Kuhnert-Tallman,

On February 4, 2020, the Centers for Disease Control and Prevention (CDC) received an Emergency Use Authorization (EUA) for the CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing.

On February 15, 2020, CDC submitted to FDA a request for enforcement discretion from FDA for the testing of asymptomatic U.S. citizens from the Diamond Princess cruise ship using the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Asymptomatic individuals do not meet CDC's current Person Under Investigation (PUI) definition or testing criteria. CDC has stated that testing will be conducted at CDC's headquarters in Atlanta, GA. Specimens are expected to arrive at CDC for testing during this holiday weekend.

Our understanding of the facts and the public health concerns at issue here are that there is currently no other test available to respond to this emergency, significant public health concerns are presented by the infectious disease, and the proposed testing may help to prevent the spread of the infectious disease. Based on this understanding, at this time, FDA does not intend to object to the use of this test as described above, with the following conditions: that the testing will be conducted only at CDC's headquarters in Atlanta, GA, that CDC will submit data to FDA on the number of asymptomatic cases identified as being positive during the testing, and that CDC will act promptly to submit an application for a new EUA or a request to modify its existing EUA to include testing of asymptomatic individuals at CDC's headquarters in Atlanta, GA.

AMERICAN OVERSIGHT

**Subject:** Request for enforcement discretion

Good afternoon Dr. Scherf,

CDC has been instructed to test all U. S. passengers returning to the United States from the Diamond Princess cruise ship, currently docked in Japan. These passengers are asymptomatic, thus they do not meet CDC's current Person Under Investigation (PUI) definition or testing criteria. CDC respectfully requests enforcement discretion from FDA for the testing of asymptomatic U.S. citizens from the Diamond Princess cruise ship using the FDA-authorized 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Testing will be conducted at CDC's headquarters in Atlanta, GA. Specimens are expected to arrive at CDC for testing during this holiday weekend.

Laura Rose, Regulatory Affairs Activity Lead for OLSS, is the primary point of contact at CDC to facilitate communications about this request. She may be reached at 404-639-1084 or LERose@cdc.gov.

Warm regards,
Wendi

**Subject:** RE: Cut-off change - Number of public health labs that verified CDC panel for use

Hi Uwe,
Notifications that CDC received from public health laboratories regarding the reactivity of the N1 and N3 assay as well as those that notified CDC of successful verification are below:

(b) (5) notified CDC of issues with N3 assay
(b) (5) notified CDC of issues with N1 assay (these labs are included in those that also saw issues with N3)
(b) (5) reported that they successfully verified the test in their laboratories

We are reaching out to labs today to notify CDC if they have successfully verified the test and will update if this number changes.

Thank you very much.
Steve

**Subject:** RE: Cut-off change - Number of public health labs that verified CDC panel for use
**Importance:** High

Julie & Steve,

As requested earlier, please clarify the number of labs that have successfully verified the CDC test panel for use asap. You communicated earlier that (b) (5) labs received your test and that (b) (5) PHL informed you that they could not verify the test.

The question is in the context of a statement by APHL today that only 3 out of 100 public health labs have verified the CDC test for use. Can you confirm that?
"Only three of the more than 100 public health labs across the country have verified the CDC test for use, according to the Association of Public Health Laboratories.'

See article below:

The article also states, according to CDC, that CDC will distribute a second test and will need it approved by the FDA first.

- Please clarify what that means: Are we talking about the new lot that is being manufactured or the change in cut-off?

Thanks,
Uwe

**Problems with CDC coronavirus test delay expanded US screening**

By David Lim

02/20/2020 05:03 PM EST

Problems with a coronavirus test developed by the CDC have delayed the Trump administration's efforts to expand screening to state and local public health labs, more than two weeks after the FDA granted permission to distribute the CDC test nationwide.

Only three of the more than 100 public health labs across the country have verified the CDC test for use, according to the Association of Public Health Laboratories.

AMERICAN OVERSIGHT

The delay has also hampered CDC's plan to screen samples collected by its national flu-surveillance network for the coronavirus, according to Peter Kyriacopoulos, APHL's senior director of public policy. CDC hopes to

use public health labs in Chicago, New York City, Los Angeles, San Francisco and Seattle to screen samples that test negative for the flu and other common respiratory viruses for the coronavirus.

CDC confirmed the problems with the coronavirus test, and with using its flu-surveillance network to screen for the virus. But the agency declined to answer further questions on the matter.

The delay in establishing additional screening capacity could impede the U.S. government's ability to detect scattered cases before they snowball into larger outbreaks, former FDA Commissioner Scott Gottlieb told POLITICO.

"By that point, it may be harder to contain spread, and we'll be forced to rely on mitigation tactics to just limit the impact of the virus," he said.

More than 75,000 cases of coronavirus infection have been confirmed globally as of Thursday, and more than 2,100 people have died, according to the World Health Organization. The vast majority of cases are in China, where the virus first emerged, although countries such as Japan, South Korea and Iran are also battling local outbreaks.

In the United States, efforts to expand use of the CDC test have struggled after one of the three reagents upon which the test depends delivered inconclusive results during quality checks, said Kelly Wroblewski, APHL's director of infectious diseases. Samples that test positive at any of the three labs are still being sent to CDC for retesting.

CDC has not told public health labs when it will distribute a second version of the diagnostic test, Wroblewski said. That has left many labs struggling to decide if it is worth continuing to pursue verification of the current version, because they will have to go through the process again once the CDC revises its testing procedure, she added.

Nancy Messonnier, director of the CDC's National Center for Immunization and Respiratory Diseases, told reporters on Feb. 14 that the public health agency is reformulating the original test and is moving quickly to get the revised version to labs. FDA would have to authorize any changes to the coronavirus test before the CDC could distribute a new one.

But concerns about money also threaten the rollout of state and local coronavirus testing. Over the weekend, more than 20 Senate Democrats called for additional cash after Trump administration officials told senators during a Feb. 12 briefing that HHS would soon exhaust existing funding for its response to the virus.

"We strongly urge the administration to transmit an emergency supplemental request that ensures it can and will fully reimburse states for the costs they are incurring as part of this response," the senators wrote in a letter to HHS Secretary Alex Azar and OMB Director Mick Mulvaney.

The diagnostic test can cost up to $250 to run, depending on procedures and volume of tests a lab performs, according to Wroblewski. But it is unclear who is paying for personnel costs and other items such as personal protective gear, machines to extract RNA and sample transportation, according to APHL.

"This is a national-level response, so we would hope the federal government would have an interest in supporting a national-level response," Kyriacopoulos said. "Labs are much more interested in beginning to get the work done. But figuring out how to pay for it is not far behind."

AMERICAN OVERSIGHT

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

AMERICAN OVERSIGHT

Steve & Julie,

I know everyone is working very hard to finalize the proposal for cut-off change in for your assay. Do you have any update on when we could expect to receive the request and any data

On a second note, could you please clarify one issue for me: it is my understanding (b) (5) is that correct?

Thank you for your feedback.

Uwe

**Subject:** DRAFT CDC EUA Request for Sentinel Surveillance Activities

Good morning Kim and Uwe,

Please find attached a draft EUA request submission for the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in sentinel surveillance activities. We would appreciate your review of this draft submission to ensure it contains the information and wording request necessary to support FDA's planned issuance of a second letter of authorization for the diagnostic panel to support this critical epidemiologic activity.

AMERICAN OVERSIGHT

Please do not hesitate to reach out with questions, ideas, recommendations as you review the attached. I look forward to hearing from you.

Warm regards,
Laura

**Subject:** RE: Cut-off change

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.

AMERICAN OVERSIGHT

- Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
- Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

**Subject:** RE: Cut-off change - lot release testing criteria

Hi Uwe,

For your awareness, CDC is just now initiating purchasing mechanisms for external manufacturing. I imagine that it will take at least a week or more to provide bulk material for CDC quality control testing. I will keep you informed of timelines when we know more. Thank you for your help.

Best regards,
Julie

**Subject:** RE: Cut-off change - lot release testing criteria

Dear Julie,

CDC has communicated to FDA that you wish to contract out primer & probe manufacturing for the 2019-nCoV Real-Time RT-PCR Diagnostic Panel to certain external contractors.
CDC's EUA submission states under Section J. Product Manufacturing:

- "The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel has been validated using only the components referenced in this submission and shall not be changed without prior concurrence from the FDA."
- "The product will be manufactured at the Centers for Disease Control and Prevention (FDA registration number 1050190) by personnel consistent with practices for the production of *in vitro* diagnostic devices based on the Quality System Regulation."

CDC may submit to FDA a written request to add contract manufacturers for the primers and probes. You have indicated that the two contract manufacturers might be Biosearch Technologies, Inc., at 2199 S. Mcdowell Blvd. Petaluma, CA, 94954 and Integrated DN Technologies, Inc., at 1710 Commercial Park, Coralville, IA, 52241. Prior to using or distributing any primers or probes that are contract manufactured, you must submit for review and concurrence by DMD/OHT7-OIR/OPEQ/CDRH the names and locations of the contract manufacturers and the quality control testing data following your extended quality control testing scheme for bulk testing and final lot release testing, which includes at least 3 randomly selected final devices and testing the N1, N2, N3 components each on 3 x 96 well plates of NTC sample generating a total number of 288 data points for each target component.
FDA will review the data and determine whether to provide concurrence or request additional information. Since the companies are contract manufacturers, CDC would be responsible for their activity and would be expected to report to FDA any performance issues, adverse events or other information required under the EUA.
This request should not delay any of your activities in preparing to move forward with the use of the contract manufacturers.

AMERICAN OVERSIGHT

Thanks,

Uwe

**Subject:** RE: Cut-off change - lot release testing criteria

Steve,

Thank you for this information. A couple of additional questions regarding the manufacturing of the different lots at CDC:
Is there anything different in manufacturing of the lots being used at CDC headquarters and for the EUA:

1. Where they manufactured in the same room or at different locations at CDC?
2. Were there any differences in raw material?
3. Were there any changes made between the CDC headquarters lot and the EUA lot?
4. Were there an subsequent changes made for the current production of the new lot?

Also, did CDC (b) (5) ?

Thanks,

Uwe

**Subject:** RE: Cut-off change - lot release testing criteria

Hi Uwe,
For clarification the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel consists of two separate boxes. Box #1 contains the primers and probes as described below:

**2019-nCoVEUA-01 Box #1: Primers and Probes**

| *Reagent Label* | *Part #* | *Description* | *Quantity / Tube* | *Reactions / Tube* |
|---|---|---|---|---|
| 2019-nCoV_N1 | RV202001 | 2019-nCoV_N1 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N2 | RV202002 | 2019-nCoV_N2 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N3 | RV202003 | 2019-nCoV_N3 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| RP | RV202004 | Human RNase P Forward Primer/Probe Mix | 22.5 nmol | 1000 |

Primer and probes from three individual boxes that were randomly selected after kit assembly were tested as presented in the powerpoint file provided earlier.

Also as requested, please find attached the QC testing process of primer/probe reagents at bulk and post-fill analysis.

We hope this helps to clarify the data presented and addresses your request.
Thank you very much.
Steve

Dear Uwe,
Thank you for your prompt response! We will attempt to address your questions, although we may need to consult further internally to get specific information on some of the questions.

Q1: Clarify how many total lots of EUA reagents are being distributed?
(b) (5)

Q2: Clarify the rational why only N1 and N2 and not include N3. Provide data to justify exclusion of N3]. (b) (5)

Q3: It is FDA's understanding that this specific lot is the only lot available for testing outside CDC headquarters and that new lots to be manufactured will not be available until March, clarify whether the proposed contingent measure will be applied immediately]. (b) (5)

Please let us know if you have any additional questions.
Thank you very much!
Steve

**Subject:** RE: Cut-off change

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:

AMERICAN OVERSIGHT

- Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
- Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
- Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

**Subject:** FW: Cut-off change - lot release testing criteria
**Attachments:** QC Data Summary_2019-nCoVEUA-01 Replacement Lot.xlsx

Jeff,

We received the QC testing data for N1 & N2 following the heightened QC protocol. This data show that the new N1 and N2 lots are clean.
Data for N3 is outstanding.

Uwe

Hello Uwe,
We would like to share with you our bulk QC data summary for oligo sets N1, N2 and RP for your review. We continue to manufacture N3 and will forward as soon as that data is reviewed.
Please be aware there are two tab in the excel file.
Please let us know if you have questions.
Do you and your colleagues have a time tomorrow that you would like to arrange a call to discuss?
Thank you very much.
Steve

**Subject:** RE: Cut-off change - lot release testing criteria

Hi Uwe,
For clarification the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel consists of two separate boxes. Box #1 contains the primers and probes as described below:

AMERICAN OVERSIGHT

**2019-nCoVEUA-01 Box #1: Primers and Probes**

| *Reagent Label* | *Part #* | *Description* | *Quantity / Tube* | *Reactions / Tube* |
|---|---|---|---|---|
| 2019-nCoV_N1 | RV202001 | 2019-nCoV_N1 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N2 | RV202002 | 2019-nCoV_N2 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N3 | RV202003 | 2019-nCoV_N3 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| RP | RV202004 | Human RNase P Forward Primer/Probe Mix | 22.5 nmol | 1000 |

Primer and probes from three individual boxes that were randomly selected after kit assembly were tested as presented in the powerpoint file provided earlier.

Also as requested, please find attached the QC testing process of primer/probe reagents at bulk and post-fill analysis.

We hope this helps to clarify the data presented and addresses your request.
Thank you very much.
Steve

**Subject:** RE: Cut-off change - lot release testing criteria

Dear Uwe,
Thank you for your prompt response! We will attempt to address your questions, although we may need to consult further internally to get specific information on some of the questions.

Q1: Clarify how many total lots of EUA reagents are being distributed?
(b) (5)

Q2: Clarify the rational why only N1 and N2 and not include N3. Provide data to justify exclusion of N3]. (b) (5)

Q3: It is FDA's understanding that this specific lot is the only lot available for testing outside CDC headquarters and that new lots to be manufactured will not be available until March, clarify whether the proposed contingent measure will be applied immediately]. (b) (5)

Please let us know if you have any additional questions.
Thank you very much!
Steve

**Subject:** RE: Cut-off change

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

**Subject:** FW: ACTION NEEDED: DRAFT CDC EUA Request for Sentinel Surveillance Activities

Dear Laura,

Attached please find the following documents you submitted on February 21, 2020 to support the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in surveillance activities. These documents have been reviewed and edited by FDA's OCET and OCC.

1. Draft COVID-19 sentinel surveillance
2. Draft SARS-CoV-2 surveillance risk benefit
3. Draft CDC Surveillance EUA Request Cover letter

Please do not hesitate to reach out to me with questions.

**Subject:** COVID-19 diagnostics

Hi,

I am at the Advisory Committee for Immunization Practices (ACIP) meeting and getting lots of questions about use of investigational diagnostics at hospital labs. There is great interest in using laboratory developed tests to complement CDC and state health department efforts. However, people's understanding is that all tests for SARS-CoV-2, including laboratory developed tests (LDTs), must be reviewed and cleared or authorized by the FDA for emergency use, or they cannot be used for diagnostic testing, and therefore at this time only the CDC RT-PCR covered by the EUA can be used, and only in authorized labs. This is articulated on the CDC website:
https://www.cdc.gov/csels/dls/locs/2020/reminder_covid-19_diagnostic_testing.html

However, I am told that this directive conflicts with prior experience at CLIA-certified hospital labs where investigational diagnostics have frequently been used without FDA authorization. Can you provide any clarification that I can pass along regarding this directive and the intentions behind it?

Thanks,
Doran

Hello Uwe,
We would like to share with you our bulk QC data summary for oligo sets N1, N2 and RP for your review. We continue to manufacture N3 and will forward as soon as that data is reviewed.
Please be aware there are two tab in the excel file.
Please let us know if you have questions.
Do you and your colleagues have a time tomorrow that you would like to arrange a call to discuss?
Thank you very much.
Steve

AMERICAN OVERSIGHT

Hi Uwe,

For clarification the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel consists of two separate boxes. Box #1 contains the primers and probes as described below:

**2019-nCoVEUA-01 Box #1: Primers and Probes**

| *Reagent Label* | *Part #* | *Description* | *Quantity / Tube* | *Reactions / Tube* |
|---|---|---|---|---|
| 2019-nCoV_N1 | RV202001 | 2019-nCoV_N1 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N2 | RV202002 | 2019-nCoV_N2 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N3 | RV202003 | 2019-nCoV_N3 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| RP | RV202004 | Human RNase P Forward Primer/Probe Mix | 22.5 nmol | 1000 |

Primer and probes from three individual boxes that were randomly selected after kit assembly were tested as presented in the powerpoint file provided earlier.

Also as requested, please find attached the QC testing process of primer/probe reagents at bulk and post-fill analysis.

We hope this helps to clarify the data presented and addresses your request.
Thank you very much.
Steve

**Subject:** RE: Cut-off change - lot release testing criteria

Dear Uwe,
Thank you for your prompt response! We will attempt to address your questions, although we may need to consult further internally to get specific information on some of the questions.

Q1: Clarify how many total lots of EUA reagents are being distributed?
(b) (5)

Q2: Clarify the rational why only N1 and N2 and not include N3. Provide data to justify exclusion of N3]. (b) (5)

Q3: It is FDA's understanding that this specific lot is the only lot available for testing outside CDC headquarters and that new lots to be manufactured will not be available until March, clarify whether the proposed contingent measure will be applied immediately]. (b) (5)

Please let us know if you have any additional questions.
Thank you very much!
Steve

**Subject:** RE: Cut-off change

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

AMERICAN OVERSIGHT

Thanks,
Uwe

**Cc:** Sapsford, Kim E <Kim.Sapsford@fda.hhs.gov>
**Subject:** FW: Cut-off change - lot release testing criteria

Good morning.

Based on the Ct range of the false positive N1 and N3 results, the proposed weak positive zone from (b) (5) Ct appears to be justified.

(b) (5)

It will be very helpful if CDC can also share with us data from the public health laboratories in the field in the same format, especially the inconclusive specimens that were referred to the CDC for follow-up testing.

Thanks,
Li

**Subject:** RE: Cut-off change - lot release testing criteria

Dear Uwe,
Thank you for your prompt response! We will attempt to address your questions, although we may need to consult further internally to get specific information on some of the questions.

Q1: Clarify how many total lots of EUA reagents are being distributed?
(b) (5)

Q2: Clarify the rational why only N1 and N2 and not include N3. Provide data to justify exclusion of N3]. (b) (5)

AMERICAN OVERSIGHT

Q3: It is FDA's understanding that this specific lot is the only lot available for testing outside CDC headquarters and that new lots to be manufactured will not be available until March, clarify whether the proposed contingent measure will be applied immediately]. (b) (5) [redacted]

Please let us know if you have any additional questions.
Thank you very much!
Steve

**Subject:** RE: Cut-off change

HI Julie,

AMERICAN OVERSIGHT

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

**Subject:** RE: DRAFT CDC EUA Request for Sentinel Surveillance Activities

I had a number of edits and questions regarding the BR assessment provided by CDC, but I think they can be easily and quickly resolved. I wrote some proposed language as answers to many of my questions to try and speed this along.

I quickly read the other documents, but did not comment. Would you like me to comment on those as well? I didn't see anything egregious, but my read-through was admittedly very quick.

Brittany

**Subject:** DRAFT CDC EUA Request for Sentinel Surveillance Activities

Good morning Kim and Uwe,

Please find attached a draft EUA request submission for the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in sentinel surveillance activities. We would appreciate your review of this draft submission to ensure it contains the information and wording request necessary to support FDA's planned issuance of a second letter of authorization for the diagnostic panel to support this critical epidemiologic activity.

Please do not hesitate to reach out with questions, ideas, recommendations as you review the attached. I look forward to hearing from you.

Warm regards,
Laura

**Subject:** RE: Cut-off change - Number of public health labs that verified CDC panel for use

Hi Uwe,
Notifications that CDC received from public health laboratories regarding the reactivity of the N1 and N3 assay as well as those that notified CDC of successful verification are below:

(b) (5) notified CDC of issues with N3 assay
(b) (5) notified CDC of issues with N1 assay (these labs are included in those that also saw issues with N3)
(b) (5) reported that they successfully verified the test in their laboratories

We are reaching out to labs today to notify CDC if they have successfully verified the test and will update if this number changes.

Thank you very much.
Steve

**Subject:** RE: Cut-off change - Number of public health labs that verified CDC panel for use
**Importance:** High

Julie & Steve,

As requested earlier, please clarify the number of labs that have successfully verified the CDC test panel for use asap. You communicated earlier that (b) (5) labs received your test and that (b) (5) PHL informed you that they could not verify the test.

The question is in the context of a statement by APHL today that only 3 out of 100 public health labs have verified the CDC test for use. Can you confirm that?
"Only three of the more than 100 public health labs across the country have verified the CDC test for use, according to the Association of Public Health Laboratories.'

See article below:

The article also states, according to CDC, that CDC will distribute a second test and will need it approved by the FDA first.

- Please clarify what that means: Are we talking about the new lot that is being manufactured or the change in cut-off?

Thanks,
Uwe

**Problems with CDC coronavirus test delay expanded US screening**

By David Lim

02/20/2020 05:03 PM EST

Problems with a coronavirus test developed by the CDC have delayed the Trump administration's efforts to expand screening to state and local public health labs, more than two weeks after the FDA granted permission to distribute the CDC test nationwide.

Only three of the more than 100 public health labs across the country have verified the CDC test for use, according to the Association of Public Health Laboratories.

The delay has also hampered CDC's plan to screen samples collected by its national flu-surveillance network for the coronavirus, according to Peter Kyriacopoulos, APHL's senior director of public policy. CDC hopes to use public health labs in Chicago, New York City, Los Angeles, San Francisco and Seattle to screen samples that test negative for the flu and other common respiratory viruses for the coronavirus.

CDC confirmed the problems with the coronavirus test, and with using its flu-surveillance network to screen for the virus. But the agency declined to answer further questions on the matter.

The delay in establishing additional screening capacity could impede the U.S. government's ability to detect scattered cases before they snowball into larger outbreaks, former FDA Commissioner Scott Gottlieb told POLITICO.

"By that point, it may be harder to contain spread, and we'll be forced to rely on mitigation tactics to just limit the impact of the virus," he said.

AMERICAN OVERSIGHT

More than 75,000 cases of coronavirus infection have been confirmed globally as of Thursday, and more than 2,100 people have died, according to the World Health Organization. The vast majority of cases are in China, where the virus first emerged, although countries such as Japan, South Korea and Iran are also battling local outbreaks.

In the United States, efforts to expand use of the CDC test have struggled after one of the three reagents upon which the test depends delivered inconclusive results during quality checks, said Kelly Wroblewski, APHL's director of infectious diseases. Samples that test positive at any of the three labs are still being sent to CDC for retesting.

CDC has not told public health labs when it will distribute a second version of the diagnostic test, Wroblewski said. That has left many labs struggling to decide if it is worth continuing to pursue verification of the current version, because they will have to go through the process again once the CDC revises its testing procedure, she added.

Nancy Messonnier, director of the CDC's National Center for Immunization and Respiratory Diseases, told reporters on Feb. 14 that the public health agency is reformulating the original test and is moving quickly to get the revised version to labs. FDA would have to authorize any changes to the coronavirus test before the CDC could distribute a new one.

But concerns about money also threaten the rollout of state and local coronavirus testing. Over the weekend, more than 20 Senate Democrats called for additional cash after Trump administration officials told senators during a Feb. 12 briefing that HHS would soon exhaust existing funding for its response to the virus.

"We strongly urge the administration to transmit an emergency supplemental request that ensures it can and will fully reimburse states for the costs they are incurring as part of this response," the senators wrote in a letter to HHS Secretary Alex Azar and OMB Director Mick Mulvaney.

The diagnostic test can cost up to $250 to run, depending on procedures and volume of tests a lab performs, according to Wroblewski. But it is unclear who is paying for personnel costs and other items such as personal protective gear, machines to extract RNA and sample transportation, according to APHL.

"This is a national-level response, so we would hope the federal government would have an interest in supporting a national-level response," Kyriacopoulos said. "Labs are much more interested in beginning to get the work done. But figuring out how to pay for it is not far behind."

**Subject:** RE: Cut-off change

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.

AMERICAN OVERSIGHT

- The number of labs that observed N-1 false positive results in the negative control material.

3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:

- Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
- Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
- Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

**Subject**: RE: Cut-off change - lot release testing criteria

Dear Julie,

CDC has communicated to FDA that you wish to contract out primer & probe manufacturing for the 2019-nCoV Real-Time RT-PCR Diagnostic Panel to certain external contractors.
CDC's EUA submission states under Section J. Product Manufacturing:

- "The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel has been validated using only the components referenced in this submission and shall not be changed without prior concurrence from the FDA."
- "The product will be manufactured at the Centers for Disease Control and Prevention (FDA registration number 1050190) by personnel consistent with practices for the production of *in vitro* diagnostic devices based on the Quality System Regulation."

CDC may submit to FDA a written request to add contract manufacturers for the primers and probes. You have indicated that the two contract manufacturers might be Biosearch Technologies, Inc., at 2199 S. Mcdowell Blvd. Petaluma, CA, 94954 and Integrated DN Technologies, Inc., at 1710 Commercial Park, Coralville, IA, 52241. Prior to using or distributing any primers or probes that are contract manufactured, you must submit for review and concurrence by DMD/OHT7-OIR/OPEQ/CDRH the names and locations of the contract manufacturers and the quality control testing data following your extended quality control testing scheme for bulk testing and final lot release testing, which includes at least 3 randomly selected final devices and testing the N1, N2, N3 components each on 3 x 96 well plates of NTC sample generating a total number of 288 data points for each target component.
FDA will review the data and determine whether to provide concurrence or request additional information. Since the companies are contract manufacturers, CDC would be responsible for their activity and would be expected to report to FDA any performance issues, adverse events or other information required under the EUA.

AMERICAN OVERSIGHT

This request should not delay any of your activities in preparing to move forward with the use of the contract manufacturers.

Thanks,
Uwe

**Subject:** RE: Cut-off change - lot release testing criteria

Steve,

Thank you for this information. A couple of additional questions regarding the manufacturing of the different lots at CDC:
Is there anything different in manufacturing of the lots being used at CDC headquarters and for the EUA:

1. Where they manufactured in the same room or at different locations at CDC?
2. Were there any differences in raw material?
3. Were there any changes made between the CDC headquarters lot and the EUA lot?
4. Were there an subsequent changes made for the current production of the new lot?

Also, (b) (5) [redacted]

Thanks,
Uwe

**Subject:** RE: Cut-off change - lot release testing criteria

Hi Uwe,
For clarification the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel consists of two separate boxes. Box #1 contains the primers and probes as described below:

**2019-nCoVEUA-01 Box #1: Primers and Probes**

| *Reagent Label* | *Part #* | *Description* | *Quantity / Tube* | *Reactions / Tube* |
|---|---|---|---|---|
| 2019-nCoV_N1 | RV202001 | 2019-nCoV_N1 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N2 | RV202002 | 2019-nCoV_N2 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N3 | RV202003 | 2019-nCoV_N3 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| RP | RV202004 | Human RNase P Forward Primer/Probe Mix | 22.5 nmol | 1000 |

Primer and probes from three individual boxes that were randomly selected after kit assembly were tested as presented in the powerpoint file provided earlier.

Also as requested, please find attached the QC testing process of primer/probe reagents at bulk and post-fill analysis.

We hope this helps to clarify the data presented and addresses your request.
Thank you very much.
Steve

Dear Steve,

Thank you for the update, when will you send us the performance data for all assays to understand your rational to exclude N3?

Regarding tomorrow's conference call, my team will be available at 1 or 2 PM tomorrow. Please let me know what will work better for you and your team. Please provide a call in number.

Thanks,
Uwe

**Subject:** RE: Cut-off change - lot release testing criteria

Dear Uwe,
Thank you for your prompt response! We will attempt to address your questions, although we may need to consult further internally to get specific information on some of the questions.

Q1: Clarify how many total lots of EUA reagents are being distributed?
(b) (5)

Q2: Clarify the rational why only N1 and N2 and not include N3. Provide data to justify exclusion of N3]. (b) (5)

Q3: It is FDA's understanding that this specific lot is the only lot available for testing outside CDC headquarters and that new lots to be manufactured will not be available until March, clarify whether the proposed contingent measure will be applied immediately]. (b) (5)

AMERICAN OVERSIGHT

Please let us know if you have any additional questions.
Thank you very much!

Steve

**Subject:** RE: Cut-off change

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.

AMERICAN OVERSIGHT

4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

**Subject:** RE: Cut-off change - lot release testing criteria

Hi Uwe,
For clarification the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel consists of two separate boxes. Box #1 contains the primers and probes as described below:

**2019-nCoVEUA-01 Box #1: Primers and Probes**

| *Reagent Label* | *Part #* | *Description* | *Quantity / Tube* | *Reactions / Tube* |
|---|---|---|---|---|
| 2019-nCoV_N1 | RV202001 | 2019-nCoV_N1 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N2 | RV202002 | 2019-nCoV_N2 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N3 | RV202003 | 2019-nCoV_N3 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| RP | RV202004 | Human RNase P Forward Primer/Probe Mix | 22.5 nmol | 1000 |

Primer and probes from three individual boxes that were randomly selected after kit assembly were tested as presented in the powerpoint file provided earlier.

Also as requested, please find attached the QC testing process of primer/probe reagents at bulk and post-fill analysis.

We hope this helps to clarify the data presented and addresses your request.
Thank you very much.
Steve

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:

AMERICAN OVERSIGHT

- The number of labs that have successfully verified the CDC test panel.
- The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
- The number of labs that observed N-1 false positive results in the negative control material.

3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

**Cc:** Scherf, Uwe (FDA/CDRH) <Uwe.Scherf@fda.hhs.gov>
**Subject:** Cut-off change
**Importance:** High

Steve & Julie,

I know everyone is working very hard to finalize the proposal for cut-off change in for your assay. Do you have any update on when we could expect to receive the request and any data

On a second note, could you please clarify one issue for me: it is my understanding (b) (5) , is that correct?

AMERICAN OVERSIGHT

Thank you for your feedback.

Uwe

| | **2019-nCoV Oligo QC Process** | | |

**Purpose:** To perform bulk and post-fill functional performance analysis for the 2019-nCoV oligonucleotides.

**Sample Type:** Oligonucleotides

**Number of Samples:** Three vials per oligo

**Materials Needed:**

- Reference Materials:
  - Enzyme
    - Taq-Path™ 1-Step RT-qPCR Master Mix, CG; Cat# A15299, A15300
  - Oligonucleotides
    - 2019-nCoV_N1 Reference Oligos (Forward, Reverse, Probe)
    - 2019-nCoV_N2 Reference Oligos (Forward, Reverse, Probe)
    - 2019-nCoV_N3 Reference Oligos (Forward, Reverse, Probe)
    - RP Reference Oligos (Forward, Reverse, Probe)
  - RNA Transcript Material
    - 2019-nCoV transcript ($10^5$ copies/µL)
  - Assay Positive Control (APC)
    - 2019-nCoV Real-time RT-PCR Control
- Investigational Oligonucleotides
  - Bulk
    - 2019-nCoV_N1: Forward, Reverse, Probe (3 vials per oligo, 9 vials total)
    - 2019-nCoV_N2: Forward, Reverse, Probe (3 vials per oligo, 9 vials total)
    - 2019-nCoV_N3: Forward, Reverse, Probe (3 vials per oligo, 9 vials total)
    - RP: Forward, Reverse, Probe (3 vials per oligo, 9 vials total)
  - Post-Fill
    - 2019-nCoV_N1 combined oligos: 3 vials total
    - 2019-nCoV_N2 combined oligos: 3 vials total
    - 2019-nCoV_N3 combined oligs: 3 vials total
    - RP combined oligos: 3 vials total

Hi Uwe,
Our request for response from labs that were able to successfully verify the test went out yesterday afternoon. As of now, a total of twelve labs have responded that they were successful with verification. This includes the seven labs previously identified. We will keep you updated on the status of responses.
I hope this is useful.
Thank you
Steve

**Subject:** RE: Cut-off change - Number of public health labs that verified CDC panel for use

Hi Uwe,
Notifications that CDC received from public health laboratories regarding the reactivity of the N1 and N3 assay as well as those that notified CDC of successful verification are below:

(b) (5) notified CDC of issues with N3 assay
(b) (5) notified CDC of issues with N1 assay (these labs are included in those that also saw issues with N3)
(b) (5) reported that they successfully verified the test in their laboratories

We are reaching out to labs today to notify CDC if they have successfully verified the test and will update if this number changes.

Thank you very much.
Steve

**Subject:** RE: Cut-off change - Number of public health labs that verified CDC panel for use
**Importance:** High

Julie & Steve,

As requested earlier, please clarify the number of labs that have successfully verified the CDC test panel for use asap. You communicated earlier that (b) (5)labs received your test and that(b) (5) PHL informed you that they could not verify the test.

The question is in the context of a statement by APHL today that only 3 out of 100 public health labs have verified the CDC test for use. Can you confirm that?
"Only three of the more than 100 public health labs across the country have verified the CDC test for use, according to the Association of Public Health Laboratories.'

See article below:

The article also states, according to CDC, that CDC will distribute a second test and will need it approved by the FDA first.

- Please clarify what that means: Are we talking about the new lot that is being manufactured or the change in cut-off?

Thanks,
Uwe

**Problems with CDC coronavirus test delay expanded US screening**

By David Lim

02/20/2020 05:03 PM EST

Problems with a coronavirus test developed by the CDC have delayed the Trump administration's efforts to expand screening to state and local public health labs, more than two weeks after the FDA granted permission to distribute the CDC test nationwide.

Only three of the more than 100 public health labs across the country have verified the CDC test for use, according to the Association of Public Health Laboratories.

The delay has also hampered CDC's plan to screen samples collected by its national flu-surveillance network for the coronavirus, according to Peter Kyriacopoulos, APHL's senior director of public policy. CDC hopes to use public health labs in Chicago, New York City, Los Angeles, San Francisco and Seattle to screen samples that test negative for the flu and other common respiratory viruses for the coronavirus.

CDC confirmed the problems with the coronavirus test, and with using its flu-surveillance network to screen for the virus. But the agency declined to answer further questions on the matter.

AMERICAN OVERSIGHT

The delay in establishing additional screening capacity could impede the U.S. government's ability to detect scattered cases before they snowball into larger outbreaks, former FDA Commissioner Scott Gottlieb told POLITICO.

"By that point, it may be harder to contain spread, and we'll be forced to rely on mitigation tactics to just limit the impact of the virus," he said.

More than 75,000 cases of coronavirus infection have been confirmed globally as of Thursday, and more than 2,100 people have died, according to the World Health Organization. The vast majority of cases are in China, where the virus first emerged, although countries such as Japan, South Korea and Iran are also battling local outbreaks.

In the United States, efforts to expand use of the CDC test have struggled after one of the three reagents upon which the test depends delivered inconclusive results during quality checks, said Kelly Wroblewski, APHL's director of infectious diseases. Samples that test positive at any of the three labs are still being sent to CDC for retesting.

CDC has not told public health labs when it will distribute a second version of the diagnostic test, Wroblewski said. That has left many labs struggling to decide if it is worth continuing to pursue verification of the current version, because they will have to go through the process again once the CDC revises its testing procedure, she added.

Nancy Messonnier, director of the CDC's National Center for Immunization and Respiratory Diseases, told reporters on Feb. 14 that the public health agency is reformulating the original test and is moving quickly to get the revised version to labs. FDA would have to authorize any changes to the coronavirus test before the CDC could distribute a new one.

But concerns about money also threaten the rollout of state and local coronavirus testing. Over the weekend, more than 20 Senate Democrats called for additional cash after Trump administration officials told senators during a Feb. 12 briefing that HHS would soon exhaust existing funding for its response to the virus.

"We strongly urge the administration to transmit an emergency supplemental request that ensures it can and will fully reimburse states for the costs they are incurring as part of this response," the senators wrote in a letter to HHS Secretary Alex Azar and OMB Director Mick Mulvaney.

The diagnostic test can cost up to $250 to run, depending on procedures and volume of tests a lab performs, according to Wroblewski. But it is unclear who is paying for personnel costs and other items such as personal protective gear, machines to extract RNA and sample transportation, according to APHL.

"This is a national-level response, so we would hope the federal government would have an interest in supporting a national-level response," Kyriacopoulos said. "Labs are much more interested in beginning to get the work done. But figuring out how to pay for it is not far behind."

**Subject:** RE: Cut-off change

HI Julie,

AMERICAN OVERSIGHT

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

AMERICAN OVERSIGHT

Dear Uwe,
Below are the summary results of our heightened NTC QC testing for the distributed lot of N1, N2 and N3 reagents.

**2019-nCoVEUA-01 Lot 20-0121 Final Kit Heightened QC (NTC Reactions)**

| Marker | Frequency | Percentage | Average Ct | Range |
|---|---|---|---|---|
| (b) (5) | | | | |

The attached powerpoint includes the detailed test results for your review.
We will provide a call-in number as soon as possible.
Thank you very much
Steve

**Subject:** RE: Cut-off change - lot release testing criteria

Dear Uwe,

(b) (5)

[redacted]

AMERICAN OVERSIGHT

(b) (5)

As you requested, we can provide information regarding the reagent lot release testing criteria and results at the CDC of the current EUA kits in distribution and address your other questions that were received earlier today. Also, we can share the sporadic aberrant reactivity that we have observed in our hands specifically with the N1 and N3 EUA assays to demonstrate the frequency and Ct range of false positive results.

If possible we would like to arrange a call with you sometime tomorrow to discuss this strategy and to learn how you would prefer to see this data summarized/presented. We are available from 9-11am or after 1pm if those times are available for you and your FDA colleagues.

Thank you very much for your consideration and support.
Steve

AMERICAN OVERSIGHT

<Tamara.Feldblyum@fda.hhs.gov>
**Subject:** RE: Cut-off change

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

**Cc:** Wallace, Rodney (OS/ASPR/BARDA) <Rodney.Wallace@hhs.gov>
**Subject:** Information request

Hi Maureen,
Uwe Scherf (copied here) contacted me this morning to ask if UTMB would provide more information on the RNA that is being sent to the companies so FDA can better evaluate any data that companies may produce with the RNA. If Dr. Plante has a product sheet that he can share with BARDA and FDA that would be extremely helpful. Thanks very much!!

Uwe:
The companies agreed to by the Diagnostics Interagency WG are: (b) (4) We also added (b) (4), so the total is 11 companies. All of these companies have or use FDA-cleared platforms that are currently placed in U.S. healthcare centers. All have confirmed they are working on an assay for SARS-CoV-2, and have contacted FDA for the EUA template. The (b) (4) assays have potential for POC use depending on FDA requirements.

Companies were notified by NIH with this message:
The World Reference Center for Emerging Viruses and Arboviruses (WRCEVA) supported by NIH/NIAID has prepared small quantities of genomic RNA. In collaboration with our interagency partners, (company name) has been prioritized for receipt since you are actively developing a SARS-CoV-2 assay for use on an FDA cleared platform. The material was prepared from cell culture of SARS-CoV-2 virus (USA_WA1/2020), it will be distributed as BSL-2 and shipped on dry ice. Permits may be required for international shipments. If you are interested in receiving the materials, or have additional questions, please contact (contact information provided) for more details and a copy of the Material Transfer Agreement.
Additional material including genomic RNA and Irradiated virus will be available from BEI Resources (www.beiresources.org ) in the coming weeks. that the material is available, and if they are interested they should contact UTMB. Contact information was provided.

AMERICAN OVERSIGHT

Please let me know if there is anything else I can do to help.

**Subject:** RE: Cut-off change - Number of public health labs that verified CDC panel for use

Hi Uwe,
Notifications that CDC received from public health laboratories regarding the reactivity of the N1 and N3 assay as well as those that notified CDC of successful verification are below:

(b) (5) notified CDC of issues with N3 assay
(b) (5) notified CDC of issues with N1 assay (these labs are included in those that also saw issues with N3)
(b) (5) reported that they successfully verified the test in their laboratories

We are reaching out to labs today to notify CDC if they have successfully verified the test and will update if this number changes.

Thank you very much.
Steve

**Subject:** RE: Cut-off change - Number of public health labs that verified CDC panel for use
**Importance:** High

Julie & Steve,

As requested earlier, please clarify the number of labs that have successfully verified the CDC test panel for use asap. You communicated earlier that (b) (5)labs received your test and that(b) (5) PHL informed you that they could not verify the test.

The question is in the context of a statement by APHL today that only 3 out of 100 public health labs have verified the CDC test for use. Can you confirm that?
"Only three of the more than 100 public health labs across the country have verified the CDC test for use, according to the Association of Public Health Laboratories.'

See article below:

The article also states, according to CDC, that CDC will distribute a second test and will need it approved by the FDA first.

- Please clarify what that means: Are we talking about the new lot that is being manufactured or the change in cut-off?

Thanks,
Uwe

**Problems with CDC coronavirus test delay expanded US screening**

By David Lim
02/20/2020 05:03 PM EST

AMERICAN OVERSIGHT

Problems with a coronavirus test developed by the CDC have delayed the Trump administration's efforts to expand screening to state and local public health labs, more than two weeks after the FDA granted permission to distribute the CDC test nationwide.

Only three of the more than 100 public health labs across the country have verified the CDC test for use, according to the Association of Public Health Laboratories.

The delay has also hampered CDC's plan to screen samples collected by its national flu-surveillance network for the coronavirus, according to Peter Kyriacopoulos, APHL's senior director of public policy. CDC hopes to use public health labs in Chicago, New York City, Los Angeles, San Francisco and Seattle to screen samples that test negative for the flu and other common respiratory viruses for the coronavirus.

CDC confirmed the problems with the coronavirus test, and with using its flu-surveillance network to screen for the virus. But the agency declined to answer further questions on the matter.

The delay in establishing additional screening capacity could impede the U.S. government's ability to detect scattered cases before they snowball into larger outbreaks, former FDA Commissioner Scott Gottlieb told POLITICO.

"By that point, it may be harder to contain spread, and we'll be forced to rely on mitigation tactics to just limit the impact of the virus," he said.

More than 75,000 cases of coronavirus infection have been confirmed globally as of Thursday, and more than 2,100 people have died, according to the World Health Organization. The vast majority of cases are in China, where the virus first emerged, although countries such as Japan, South Korea and Iran are also battling local outbreaks.

In the United States, efforts to expand use of the CDC test have struggled after one of the three reagents upon which the test depends delivered inconclusive results during quality checks, said Kelly Wroblewski, APHL's director of infectious diseases. Samples that test positive at any of the three labs are still being sent to CDC for retesting.

CDC has not told public health labs when it will distribute a second version of the diagnostic test, Wroblewski said. That has left many labs struggling to decide if it is worth continuing to pursue verification of the current version, because they will have to go through the process again once the CDC revises its testing procedure, she added.

Nancy Messonnier, director of the CDC's National Center for Immunization and Respiratory Diseases, told reporters on Feb. 14 that the public health agency is reformulating the original test and is moving quickly to get the revised version to labs. FDA would have to authorize any changes to the coronavirus test before the CDC could distribute a new one.

But concerns about money also threaten the rollout of state and local coronavirus testing. Over the weekend, more than 20 Senate Democrats called for additional cash after Trump administration officials told senators during a Feb. 12 briefing that HHS would soon exhaust existing funding for its response to the virus.

"We strongly urge the administration to transmit an emergency supplemental request that ensures it can and will fully reimburse states for the costs they are incurring as part of this response," the senators wrote in a letter to HHS Secretary Alex Azar and OMB Director Mick Mulvaney.

The diagnostic test can cost up to $250 to run, depending on procedures and volume of tests a lab performs, according to Wroblewski. But it is unclear who is paying for personnel costs and other items such as personal protective gear, machines to extract RNA and sample transportation, according to APHL.

"This is a national-level response, so we would hope the federal government would have an interest in supporting a national-level response," Kyriacopoulos said. "Labs are much more interested in beginning to get the work done. But figuring out how to pay for it is not far behind."

**Subject:** RE: Cut-off change

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

**Subject:** RE: Request for enforcement discretion

Uwe,

Ellen is working with OCC on the "no objection" language, and to include that we don't object if this use on asymptomatic individuals if it is subsequently included under the EUA.

AMERICAN OVERSIGHT

Please let me know when the team has made a decision on the cut off request. Assuming we come accord with CDC on a new cut off, we would need to develop "no objection" language for that request, as well. If there's any information Ellen can use to start on that language now so we can wrap this up today, please let us know.

Jeff

**Subject:** FW: Request for enforcement discretion
**Importance:** High

Jeff and Ellen,

See below the official request from CDC.

As stated in my previous email, based on our knowledge of the device, DMD would not have objections allowing CDC to test asymptomatic individuals using the 2019-nCoV Real-Time RT-PCR Diagnostic Panel kit to test all U. S. passengers returning to the United States from the Diamond Princess cruise ship. Provided that testing be conducted at CDC's headquarters in Atlanta, GA.

Ellen, per my phone conversation with Jeff, he agrees but would like your input on FDA's intend to not object to the use of the 2019-Novel Coronavirus (2019-nCoV). Please let me know if your thoughts on CDC's request.

Should also note that if there are other, more preferable ways to quantify or give specifics please feel free to suggest them in the document. That said, we expect the Commissioner may be asked questions along these lines as early as Tuesday, so the information or the rationale he can convey as to why he cannot disclose it will be very helpful.

Thank you all!

**Subject:** For Data Population and Review by COB Monday

IMG, CDER, CBER, CDRH, and ORA:

OL has developed a document to respond to the following directive from Leadership:

*Sec. Azar wants more specific and precise answers around our response efforts. Dr. Hahn wants to be as specific as we possibly can with regard to our response efforts, and if there is a legal reason we can't, he wants to know why. By COB Monday 2/24, JIC needs to provide these type of specifics throughout the remarks/materials prepared for Tuesday briefings, + in any press materials. The specifics don't have to be product-specific, but they want numbers, e.g., we have contacted ## manufacturing facilities in China as of DATE, and ## are still shipping product without delay.*

The document is linked below for your respective Centers/Office to populate data and review by **COB Monday, Feb. 24.** We anticipate that some of this information is not able to be shared publicly. If you believe that to be the case please so indicate in a comment bubble.

Also please note that the document may contain nonpublic and/or confidential commercial information. Please do not distribute it beyond FDA and limit its internal distribution as much as is possible.

Thank you for your efforts on this project. Please let us know if you have any questions or need additional information.

**Subject**: RE: CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel: addition of ZEN probes

Dear Julie,

The listed proposal is appropriate to evaluate whether both probe chemistries will perform equivalent. We look forward to receiving the data for review and concurrence.

From FDA's site there is not need for further discussion of the protocol.

Best regards,

Uwe

**Subject:** RE: Coronavirus and MERS culturing

Dear Tim,

As I mentioned to Uwe yesterday, the idea was to handle the COVID-19 materials for the CDRH devices as we did for Zika. CBER has the laboratories and knowledge to propagate the virus. DMD will be able to design the panel that will best challenge the sensitivity and specificity of the devices we are getting in house. Therefore, after Tony grows and inactivates the BSL-3 stocks, I would be preparing the dilutions of the viral stocks with David's help to formulate the final panel. In addition, I was also the one receiving at CDRH the orders, distributing the panels when available to the companies, as well as receiving the results of the testing. This strategy allowed DMD to have knowledge of the progress companies where doing with the panel testing and compile all the results for the EUA devices.

The preparation of the panel will take some time as the virus strains need still to be grown (and as Tony said the BSL-3 just got validated to work with COVID-19), inactivated, titrated, and the panel will have to be prepared with different dilutions that could satisfy the sensitivity observed in our devices.

AMERICAN OVERSIGHT

I proposed a meeting with CBER for next week, now that that the BSL-3 and the funds are available since 2/21/2020, to set up a timeline for the next steps.

Regards,

Mayra

**Subject:** RE: Coronavirus and MERS culturing

Dear Tim,

I am adding Drs. Carolyn Wilson, Mayra Garcia from CDRH and David McGivern to this email chain for communication purpose. Dr. Wilson is the director of office of research at CBER who oversees all 2019-nCoV activities. Dr. McGivern at the Office of Blood Research and Review at CBER will work with Mayra at CDRH to generate reference standards for industry to use.

My group is to propagate virus and then work with David's group to establish conditions for heat-inactivation of the virus. We have just received the approval to conduct the work, but there are a few house-keeping items that we need to take care of before we can start the work.

I would leave to Dr. Wilson, Mayra and Dr. McGivern to speak on the part regarding dialogues with industries.

Best,

Tony

Hi Tony, Shufeng and Christopher,

We are getting inquiries from IVD test developers who are ready to finish the validation of their molecular Coronavirus assays so they can submit them to CDRH for EUA authorization. I have heard that you are developing a source of Coronavirus and mers and was wondering if you are in dialogue with companies already and if we can introduce them to you so they can get in line to receive samples when they are ready.

Thanks so much in advance!

Best,
*Tim*

Hi Pillai,

Great to meet you today! I wanted to reach out and have copied Jeff to find out more details about the coronavirus and mers cultures. We have a number of test developers who cannot complete validation of their EUA assays until they have at least mock samples made with virus to test.

How soon will virus be available?
Can we connect developers with someone here at the agency so they can coordinate access?

Thanks!

**Subject:** Request for enforcement discretion

Good afternoon Dr. Scherf,

CDC has been instructed to test all U. S. passengers returning to the United States from the Diamond Princess cruise ship, currently docked in Japan. These passengers are asymptomatic, thus they do not meet CDC's current Person Under Investigation (PUI) definition or testing criteria. CDC respectfully requests enforcement discretion from FDA for the testing of asymptomatic U.S. citizens from the Diamond Princess cruise ship using the FDA-authorized 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Testing will be conducted at CDC's headquarters in Atlanta, GA. Specimens are expected to arrive at CDC for testing during this holiday weekend.

AMERICAN OVERSIGHT

Laura Rose, Regulatory Affairs Activity Lead for OLSS, is the primary point of contact at CDC to facilitate communications about this request. She may be reached at 404-639-1084 or LERose@cdc.gov.

Dear Rita,

I confirm the receipt of the electronic Pre-Emergency Use Authorization (Pre-EUA) request for the cobas 2019-nCoV test for use on the cobas 6800/8800 Systems and the request for FDA feedback on the planned studies.

DMD is looking forward to working with you and your team on this submission.

Kind regards,

Uwe

Dear Kim,

I hope you're doing well. Roche Molecular Systems has completed the pre-EUA template for the 2019 novel coronavirus (2019-nCoV) for the **cobas**® 2019-nCoV test for use on the **cobas**® 6800/8800 Systems and would like to request FDA feedback on the planned studies. The pre-EUA submission was sent to the DCC today (FedEx tracking number; (b) (4) , to the attention of Dr. Uwe Scherf and is attached for your reference. Please feel free to contact me at anytime to discuss the details of the submission. Thank you.

Kind regards,

**CC:** (b)(4), (b)(6) [redacted]
**Asunto:** RE: nCoV EUA template request

Dear (b) (4) [redacted]

Thank you for your email, we are accepting Pre-EUA submissions at this time. Please find attached the current EUA Interactive Review Template draft for molecular-based assays for the detection of 2019-novel coronavirus (2019-nCoV). I suggest when you are ready, the first step is to populate this draft template with the information and data that you currently have about your device and sent it back to us for review as a Pre-EUA submission (to be sent to the Document Control Center). The Pre-EUA review is an interactive process, so we will provide feedback after receiving and reviewing the information provided. The draft review template is a shared "work-in-progress" document which you will populate with information and data as obtained and which we will review and provide feedback to you.

I have also attached a draft cover letter you can use to submit your Pre-EUA for detection of 2019-nCoV to FDA (it includes the address for the Document Control Center). Please include in your Pre-EUA submission package:

- The populated EUA Review Template draft
- FDA Form 3514 (https://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM080872.pdf) - under type of submission please check "other" and specify Pre-EUA.

One hard copy of the signed EUA Cover Letter and one electronic copy of you Pre-EUA submission package (including the EUA Review Template - MS word document) should be enclosed in your Pre-EUA submission to FDA, and we also

AMERICAN OVERSIGHT

request that you submit the information requested via electronic mail to myself Kim.Sapsford@fda.hhs.gov, as well as carbon copying (cc:) the following email addresses:

- Division Director: Dr Uwe Scherf, email address: Uwe.Scherf@fda.hhs.gov;
- Branch Chief: Dr Tamara Feldblyum, email address: Tamara.Feldblyum@fda.hhs.gov

Please be reminded that ***in the U.S. a test*** for the detection of 2019-nCoV or to diagnoses 2019-nCoV infection must not be distributed and/or used for clinical diagnosis without premarket clearance, approval, or EUA by the FDA.
NOTE: The EUA Interactive Review Template from the FDA is considered an internal working document and must not be distributed outside of your organization.

Please let me know if you have any questions, we look forward to working with you,
Best regards,
Kim

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

U.S. FOOD & DRUG ADMINISTRATION

Febuary 4, 2020

Robert R. Redfield, MD
Director
Centers for Disease Control and Prevention
1600 Clifton Rd., MS D-14
Atlanta, GA 30333

Dear Dr. Redfield:

This letter is in response to your request that the Food and Drug Administration (FDA) issue an Emergency Use Authorization (EUA) for emergency use of the Centers for Disease Control and Prevention (CDC) 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing, pursuant to Section 564 of the Federal Food, Drug, and Cosmetic Act (the Act) (21 U.S.C. §360bbb-3). Testing is limited to qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests.[1]

On Feburary 4, 2020, pursuant to Section 564(b)(1)(C) of the Act, the Secretary of the Department of Health and Human Services (HHS) determined that there is a public health emergency that has a significant potential to affect national security or the health and security of United States citizens living abroad, and that involves the 2019-nCoV. Pursuant to Section 564 of the Act, and on the basis of such determination, the Secretary of HHS then declared that circumstances exist justifying the authorization of emergency use of in vitro diagnostics for detection and/or diagnosis of the novel coronavirus (2019-nCoV) subject to the terms of any authorization issued under Section 564(a) of the Act.[2]

Having concluded that the criteria for issuance of this authorization under Section 564(c) of the Act are met, I am authorizing the emergency use of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel (as described in the scope Section of this letter (Section II)) in individuals who

[1] For ease of reference, this letter will refer to "qualified laboratories designated by CDC and, in the United States, certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests" as "authorized laboratories."

[2] U.S. Department of Health and Human Services, *Determination of a Public Health Emergency and Declaration that Circumstances Exist Justifying Authorizations Pursuant to Section 564(b) of the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. § 360bbb-3*. Feburary 4, 2020.

AMERICAN OVERSIGHT

meet CDC criteria for 2019-nCoV testing for the presumptive detection of 2019-nCoV by authorized laboratories, subject to the terms of this authorization.

## I. Criteria for Issuance of Authorization

I have concluded that the emergency use of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in individuals who meet CDC criteria for 2019-nCoV testing meets the criteria for issuance of an authorization under Section 564(c) of the Act, because I have concluded that:

1. The 2019-nCoV can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus;

2. Based on the totality of scientific evidence available to FDA, it is reasonable to believe that the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel may be effective in diagnosing 2019-nCoV infection, and that the known and potential benefits of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, when used for diagnosing 2019-nCoV infection, outweigh the known and potential risks of such product; and

3. There is no adequate, approved, and available alternative to the emergency use of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel for diagnosing 2019-nCoV infection.[3]

## II. Scope of Authorization

I have concluded, pursuant to Section 564(d)(1) of the Act, that the scope of this authorization is limited to the use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel by authorized laboratories for the presumptive detection of 2019-nCoV in individuals who meet CDC criteria for 2019-nCoV testing.

### The Authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is for the presumptive detection of 2019-nCoV RNA in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate), and other authorized specimens collected from individuals who meet CDC criteria for 2019-nCoV testing. The testing procedure consists of nucleic acid extraction and purification from the human specimen using authorized extraction methods/instruments followed by real time RT-PCR, where the RNA is reverse transcribed into cDNA and then amplified using the primer sets and detected using specific probes. The real time reverse transcriptase (RT)-PCR is performed on the FDA cleared Applied Biosystems 7500 Fast Dx Real-Time PCR Instrument with SDS 1.4 software, or other authorized instruments or software.

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel includes the following materials or other authorized materials:

[3] No other criteria of issuance have been prescribed by regulation under Section 564(c)(4) of the Act.

AMERICAN OVERSIGHT

- 2019-nCoV_N1, 2019-nCoV_N2 and 2019-nCoV_N3 vials containing primers and probes that target the nucleocapsid (N) gene and are designed for both universal detection of SARS-like coronavirus as well as specific detection of the 2019-nCoV
- RP vial containing the internal control primers and probes that target the Human RNase P gene
- nCoVPC vial containing the 2019-nCoV positive control used in the assay

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel also requires the use of additional authorized materials and authorized ancillary reagents that are not included with the test but are commonly used in clinical laboratories and are described in the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Instructions for Use.

The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel requires the following control materials, or other authorized control materials; all controls listed below must generate expected results in order for a test to be considered valid, as outlined in the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Instructions for Use:

- Human Specimen Control (HSC): A human cell culture preparation used as an extraction control and positive control for the RNase P primer and probe set that is extracted and tested concurrently with each specimen extraction run.
- Positive Control for 2019-nCoV (nCoVPC): Run with each batch of specimens. Monitors for failures of rRT-PCR reagents and reaction conditions.
- No Template Control (NTC): Nuclease-free water included in each run. Monitors for reagent and system contamination.
- RNase P (RP) control in clinical samples: The RP primer and probe set is included in each run to test for human RNase P, which controls for specimen quality and demonstrates that nucleic acid was generated by the extraction process.

The above described CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, when labeled consistently with the labeling authorized by FDA, entitled "CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel Instructions for Use" (available at https://www.fda.gov/medical-devices/emergency-situations-medical-devices/emergency-use-authorizations), which may be revised by CDC in consultation with, and with concurrence of, the Division of Microbiology Devices (DMD)/Office of Health Technology 7 Office of In Vitro Diagnostics and Radiological Health (OHT7-OIR)/Office of Product Evaluation and Quality (OPEQ)/Center for Devices and Radiological Health (CDRH), is authorized to be distributed to and used by authorized laboratories under this EUA, despite the fact that it does not meet certain requirements otherwise required by applicable federal law.

The above-described CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel is authorized to be accompanied by the following information pertaining to the emergency use, which is required to be made available to healthcare providers and patients:

- Fact Sheet for Healthcare Providers: CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel

AMERICAN OVERSIGHT

- Fact Sheet for Patients: CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel

I have concluded, pursuant to Section 564(d)(2) of the Act, that it is reasonable to believe that the known and potential benefits of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel when used for the presumptive detection of 2019-nCoV and used consistently with the Scope of Authorization of this letter (Section II), outweigh the known and potential risks of such a product.

I have concluded, pursuant to Section 564(d)(3) of the Act, based on the totality of scientific evidence available to FDA, that it is reasonable to believe that the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel may be effective in the presumptive detection of 2019-nCoV, when used consistently with the Scope of Authorization of this letter (Section II), pursuant to Section 564(c)(2)(A) of the Act.

FDA has reviewed the scientific information available to FDA, including the information supporting the conclusions described in Section I above, and concludes that the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, when used for detection of the 2019-nCoV in the specified population (as described in the Scope of Authorization of this letter (Section II)), meets the criteria set forth in Section 564(c) of the Act concerning safety and potential effectiveness.

The emergency use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel under this EUA must be consistent with, and may not exceed, the terms of this letter, including the Scope of Authorization (Section II) and the Conditions of Authorization (Section IV). Subject to the terms of this EUA and under the circumstances set forth in the Secretary of HHS's determination under Section 564(b)(1)(C) described above and the Secretary of HHS's corresponding declaration under Section 564(b)(1), the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel described above is authorized to detect 2019-nCoV in individuals who meet CDC criteria for 2019-nCoV testing.

This EUA will cease to be effective when the HHS declaration that circumstances exist to justify the EUA is terminated under Section 564(b)(2) of the Act or when the EUA is revoked under Section 564(g) of the Act.

**III. Waiver of Certain Requirements**

I am waiving the following requirements for the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel during the duration of this EUA:

- Current good manufacturing practice requirements, including the quality system requirements under 21 CFR Part 820 with respect to the design, manufacture, packaging, labeling, storage, and distribution of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel

- Labeling requirements for cleared, approved, or investigational devices, including labeling requirements under 21 CFR 809.10 and 21 CFR 809.30, except for the

AMERICAN OVERSIGHT

intended use statement (21 CFR 809.10(a)(2), (b)(2)), adequate directions for use (21 U.S.C. 352(f)), (21 CFR 809.10(b)(5), (7), and (8)), any appropriate limitations on the use of the device including information required under 21 CFR 809.10(a)(4), and any available information regarding performance of the device, including requirements under 21 CFR 809.10(b)(12)

**IV. Conditions of Authorization**

Pursuant to Section 564(e) of the Act, I am establishing the following conditions on this authorization:

**Centers for Disease Control and Prevention (CDC)**

A. CDC will notify DMD/OHT7-OIR/OPEQ/CDRH in advance of any changes to the CDC criteria for 2019-nCoV testing.

B. CDC will make available the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel with the authorized labeling only to authorized laboratories. CDC may request changes to the authorized labeling. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

C. CDC will provide to authorized laboratories the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Fact Sheet for Healthcare Providers and the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Fact Sheet for Patients. CDC may request changes to the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Fact Sheet for Healthcare Providers and the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Fact Sheet for Patients. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

D. CDC will make available on its website the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Fact Sheet for Healthcare Providers and the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Fact Sheet for Patients.

E. CDC will inform authorized laboratories and relevant public health authorities of this EUA, including the terms and conditions herein, and any updates made to the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, authorized labeling and authorized Fact Sheets.

F. CDC will ensure that the authorized laboratories using the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel have a process in place for reporting test results to healthcare providers and relevant public health authorities, as appropriate.

G. Through a process of inventory control, CDC will maintain records of test usage.

H. CDC will collect information on the performance of the test. CDC will report to FDA any suspected occurrence of false positive and false negative results and significant

AMERICAN OVERSIGHT

deviations from the established performance characteristics of the test of which CDC becomes aware.

I. CDC is authorized to make available additional information relating to the emergency use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel that is consistent with, and does not exceed, the terms of this letter of authorization.

J. CDC may request new Fact Sheets to accompany the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, if appropriate, and may request changes to such Fact Sheets. Such requests will be made by CDC in consultation with, and require concurrence of, Office of Counterterrorism and Emerging Threats (OCET)/Office of the Chief Scientist (OCS)/Office of the Commissioner (OC) and DMD/OHT7-OIR/OPEQ/CDRH.

K. CDC may request the addition of other instruments and associated software for use with the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

L. CDC may request the addition of other extraction methods for use with the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

M. CDC may request the addition of other specimen types for use with the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

N. CDC may request the addition and/or substitution of other control materials for use with the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

O. CDC may request the addition and/or substitution of other ancillary reagents and materials for use with the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. Such requests will be made by CDC in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

P. CDC will evaluate the analytical limit of detection and assess traceability[4] of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel with any FDA-recommended reference material(s). After submission to FDA and DMD/OHT7-OIR/CDRH's review of and concurrence with the data, CDC will update its labeling to reflect the additional testing. Such labeling updates will be made in consultation with, and require concurrence of, DMD/OHT7-OIR/OPEQ/CDRH.

Q. CDC will track adverse events and report to FDA under 21 CFR Part 803.

[4] Traceability refers to tracing analytical sensitivity/reactivity back to an FDA-recommended reference material.

AMERICAN OVERSIGHT

**Authorized Laboratories**

R. Authorized laboratories will include with reports of the results of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel, all authorized Fact Sheets. Under exigent circumstances, other appropriate methods for disseminating these Fact Sheets may be used, which may include mass media.

S. Authorized laboratories will perform the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel as outlined in the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel Instructions for Use. Deviations from the authorized procedures, including the authorized RT-PCR instruments, authorized extraction methods, authorized clinical specimen types, authorized control materials, authorized other ancillary reagents and authorized materials required to perform the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel are not permitted.

T. Authorized laboratories will have a process in place for reporting test results to healthcare providers and relevant public health authorities, as appropriate.

U. Authorized laboratories will collect information on the performance of the test and report to DMD/OHT7-OIR/OPEQ/CDRH (via email: CDRH-EUA-Reporting@fda.hhs.gov) and CDC (respvirus@cdc.gov) any suspected occurrence of false positive or false negative results and significant deviations from the established performance characteristics of the test of which they become aware.

V. All laboratory personnel using the test must be appropriately trained in RT-PCR techniques and use appropriate laboratory and personal protective equipment when handling this kit, and use the test in accordance with the authorized labeling.

**CDC and Authorized Laboratories**

W. CDC and authorized laboratories will ensure that any records associated with this EUA are maintained until otherwise notified by FDA. Such records will be made available to FDA for inspection upon request.

**Conditions Related to Advertising and Promotion**

X. All advertising and promotional descriptive printed matter relating to the use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel shall be consistent with the Fact Sheets and authorized labeling, as well as the terms set forth in this EUA and the applicable requirements set forth in the Act and FDA regulations.

Y. All advertising and promotional descriptive printed matter relating to the use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel shall clearly and conspicuously state that:

- This test has not been FDA cleared or approved;

AMERICAN OVERSIGHT

- This test has been authorized by FDA under an EUA for use by authorized laboratories;
- This test has been authorized only for the detection of nucleic acid from 2019-nCoV, not for any other viruses or pathogens; and
- This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of emergency use of in vitro diagnostic tests for detection and/or diagnosis of 2019-nCoV under Section 564(b)(1) of the Act, 21 U.S.C. § 360bbb-3(b)(1), unless the authorization is terminated or revoked sooner.

No advertising or promotional descriptive printed matter relating to the use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel may represent or suggest that this test is safe or effective for the detection of 2019-nCoV.

The emergency use of the authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel as described in this letter of authorization must comply with the conditions and all other terms of this authorization.

**V. Duration of Authorization**

This EUA will be effective until the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection and/or diagnosis of 2019-nCoV is terminated under Section 564(b)(2) of the Act or the EUA is revoked under Section 564(g) of the Act.

Sincerely,

Denise M. Hinton

Dear Roth and Uwe,

Greetings from UNICEF supply Division

Hope you are doing well

It has been a long time since we have discussed our global needs for Ebola and Zika Dx . However, I'm reaching out to you again to touch base with you regarding 2019 Novel Coronavius Diagnostics

We were glad to notice the launch of FDA Novel coronavirus (2019-nCoV) EUA and the related Information on your website that FDA has issued . would you or any of your team be available for a call sometime next week to get more updates on the EUA for 2019-nCov diagnostics and the scope of products in the pipeline

Looking forward to hearing from you

Regards
Lama

Dear Lama,

Thank you for your engagement. We are glad to discuss both infection agents and will have the appropriate individuals on the phone. I propose we schedule a call for either:

Thursday October 12 at 3 pm CEST (9 am Eastern time zone in the US)
Or
Friday October 13 at 3 pm CEST (9 am Eastern time zone in US)

Do these times work for you?

Kind regards,
Kris

Dear Kris,

It is great to hear from you again and thank you so much for reaching out to Unicef.

It is indeed important to discuss our shared interest in improving global health with respect to Ebola.

we would like to schedule call with you to discuss our plans and need for the the Ebola Diagnostics and update you ( if relevant) on our progress with Zika Dignostics as well

How about the week of 9th October?

Looking forward to hearing from you

**Subject:** Request for a discussion related to global need for Ebola diagnostics

Dear Shanelle Hall,

About 1.5 years ago I attended the Zika Vaccine and Diagnostics Industry Consultation which was a very well organized meeting. We at the US FDA are currently re-evaluating the need (both globally and within the US) for Ebola in vitro diagnostic tests. I was hoping that we could arrange a telephone call between UNICEF and FDA to discuss UNICEF's evaluation of the need for a rapid antigen test for Ebola.

As you may know the US has issued a number of Emergency Use Authorizations for Ebola diagnostics. These authorizations are not permanent and FDA is mandated to revisit the need for these devices as the epidemic changes. We have heard that UNICEF may be planning to acquire these types of products therefore we would like to understand your needs to ensure that any action FDA may take in this area does not negatively impact your mission.

If it is acceptable to you, I propose having an approximately one hour teleconference to discuss our shared interest in improving global health with respect to Ebola.

Kind regards,
Kris

**Attachments**: EUA Review Template_NAT_Novel Coronavirus 1.19.2020.doc; Draft cover letter for Sponsor 01212020.docx

**Importance**: High

Dear Ute,

This is what we normally send out to sponsors who request the EUA-template. This one is for the NAAT test, we are working on developing an antigen based test template now.

Thanks a gain for the great meeting yesterday and the presentation to my staff. Call/email me any time if you have any questions.

Herzlichst,
Uwe

Dear Jeff,

Thank you for your email. Please find attached the current EUA Interactive Review Template draft for molecular-based assays for the detection of 2019-novel coronavirus (2019-nCoV). I suggest when you are ready, the first step is to populate this draft template with the information and data that you currently have about your device and sent it back to us for review as a Pre-EUA submission (to be sent to the Document Control Center). The Pre-EUA review is an interactive process, so we will provide feedback after receiving and reviewing the information provided. The draft review template is a shared "work-in-progress" document which you will populate with information and data as obtained and which we will review and provide feedback to you.

I have also attached a draft cover letter you can use to submit your Pre-EUA for detection of 2019-nCoV to FDA (it includes the address for the Document Control Center). Please include in your Pre-EUA submission package:

- The populated EUA Review Template draft
- FDA Form 3514 (https://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM080872.pdf) - under type of submission please check "other" and specify Pre-EUA.

One hard copy of the signed EUA Cover Letter and one electronic copy of you Pre-EUA submission package (including the EUA Review Template - MS word document) should be enclosed in your Pre-EUA submission to FDA, and we also request that you submit the information requested via electronic mail to myself Kim.Sapsford@fda.hhs.gov, as well as carbon copying (cc:) the following email addresses:

- Division Director: Dr Uwe Scherf, email address: Uwe.Scherf@fda.hhs.gov;
- Branch Chief: Dr Tamara Feldblyum, email address: Tamara.Feldblyum@fda.hhs.gov

Please be reminded that in the U.S. a test for the detection of 2019-nCoV or to diagnoses 2019-nCoV infection must not be distributed and/or used for clinical diagnosis without premarket clearance, approval, or EUA by the FDA.
NOTE: The EUA Interactive Review Template from the FDA is considered an internal working document and must not be distributed outside of your organization.

Please let me know if you have any questions, we look forward to working with you, Best regards,

Dear Uwe,

Thanks so much for taking the time yesterday to meet.
Greatly appreciated, especially considering how busy the day was for you and your team.
It's great to see that the first assay was authorized!

I also received news today from my team that Korea has authorized the PowerChek 2019-nCoV Real-time PCR kit from Kogen Biotech.

If you have the chance to send me your nCoV template, it would help to align our requirements for manufacturers.

Thanks again.

Liebe Grüsse,
Ute

AMERICAN OVERSIGHT

# EMERGENCY USE AUTHORIZATION (EUA)

## EUA INTERACTIVE REVIEW TEMPLATE FOR MOLECULAR-BASED SINGLE TARGET TESTS FOR 2019 NOVEL CORONAVIRUS (2019-nCoV)

## GENERAL INFORMATION ABOUT THIS TEMPLATE

- Text highlighted in yellow ***[Text]*** should be completed by the IVD developer (sponsor) as applicable to their specific test. Text in **bold** outlines the Food and Drug Administration (FDA) suggestions and clarifications for the sponsors' consideration when completing the required information in a specific section.

- This is a EUA interactive review template for Pre-EUA/EUA submissions concerning molecular-based single target tests for detection of 2019 Novel Coronavirus (2019-nCoV), Wuhan, China. If you are developing a multiplex molecular-based assay for the detection and differentiation of nucleic acids from a panel of microorganisms, please review Appendix A for FDA recommendations.

- This is a EUA interactive review template for Pre-EUA/EUA submissions and not a guidance document. The template is subject to change as we learn more about the 2019-nCoV disease and its risk-benefit profile. Recipients will receive notice and updated templates as they become available.

- This EUA interactive review template is an FDA internal document and any proprietary information provided within the template and during the interactive review process will remain confidential as it does in a regular FDA premarket submission.

- Feedback provided by FDA during the interactive review of your pre-EUA/EUA is subject to change as we learn more about the 2019-nCoV disease and the risk-benefit profile evolves to address unmet public health needs.

- Prior to a potential authorization FDA will require developers of molecular-based tests to assess traceability of their test to an FDA-recommended reference material panel if available at the time. Specific details about the traceability study and the FDA-recommended reference material panel will be provided by the Lead Reviewer assigned to the Pre-EUA submission once the analytical and clinical evaluation data has been reviewed and found to be acceptable.

- Please be reminded that tests for the detection of 2019-nCoV or 2019-nCoV infection must not be distributed and/or used for clinical diagnoses without premarket clearance, approval, or EUA by the FDA. Clinical samples for 2019-nCoV testing should be sent to the appropriate public health laboratories until the IVD device subject of this Pre-EUA submission has received authorization from the FDA.

- Clinical specimens may be required to support the EUA request. Furthermore, please note that applicable regulations for human subject protection do apply under the

AMERICAN OVERSIGHT

EUA. Please refer to the Clinical Evaluation section of this document for more details.

- If authorized, the EUA means that this 2019-nCoV IVD is temporarily authorized for use until the public health emergency is terminated or the EUA is revoked by the FDA.

    - FDA recommends that you consider registration and listing your EUA product once you have been issued an EUA. If this is problematic, please notify the Agency during your Pre-EUA.
    - The EUA is not a pathway to permanent marketing of your device. Therefore, we strongly recommend that you consider, in addition to an EUA, a traditional premarket submission for your IVD so that your device can still be legally marketed after termination of the emergency declaration. We recommend that you identify as soon as possible in the Pre-EUA review process any consideration of moving your product forward towards De Novo/510(k) clearance. If so some of our feedback to you may take such a long-term goal into consideration in order to prevent additional testing where it may not be needed. Therefore, please consider submitting a Pre-Submission to inquire what studies would be required for a premarket approval/ clearance of your 2019-nCoV IVD. Details on how to submit a Pre-Submission to the Agency are outlined in the FDA guidance document: *Requests for Feedback and Meetings for Medical Device Submissions: The Q-Submission Program.* [ HYPERLINK "https://www.fda.gov/regulatory-information/search-fda-guidance-documents/requests-feedback-and-meetings-medical-device-submissions-q-submission-program" ]

## A. EXECUTIVE SUMMARY (as of X/XX/20XX)

## B. PURPOSE FOR SUBMISSION

Emergency Use Authorization (EUA) request for distribution and/or use of the ***[test name]*** to ***[indicate labs, if applicable]*** for the *in vitro* qualitative detection of RNA from the 2019-nCoV in ***[add all claimed specimen types, e.g., nasopharyngeal/oropharyngeal swabs, sputa, BAL, stool, and serum, etc.]*** from patients who meet CDC 2019-nCoV clinical criteria (e.g., signs and symptoms associated with 2019-nCoV infection) and CDC novel coronavirus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated) to aid in the diagnosis of 2019-nCoV infection.

## C. MEASURAND

AMERICAN OVERSIGHT

Specific nucleic acid sequences from the genome of the 2019-nCoV **[*please specify the targeted gene(s) of the pathogen*]**.

## D. APPLICANT

***[Official name, address and contact information of applicant]***

## E. PROPRIETARY AND ESTABLISHED NAMES

Proprietary Name - ***[test name]***
Established Name - ***[test name]***

## F. REGULATORY INFORMATION

***Approval/Clearance Status:***
The ***[test name]*** test is not cleared, CLIA waived, approved, or subject to an approved investigational device exemption.

***Product Code:***
[XXX – FDA will complete]

## G. PROPOSED INTENDED USE

***1) Intended Use:***
**The proposed IU will be finalized based on the data and recommendations from Public Health authorities at the time of authorization – example text is provided below for a qualitative molecular test that detects organism RNA but may be adapted according to the specific emergency situation addressed by the device.**

[***Test name***] is a [***specify test technology such as, real-time RT-PCR test***] intended for the qualitative detection of nucleic acid from the 2019-nCoV in [***describe all the specimen types***] from individuals meeting CDC 2019-nCoV clinical criteria (e.g., clinical signs and symptoms associated with 2019-nCoV infection) in conjunction with CDC 2019-nCoV epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated). Testing is limited to [***laboratories - certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. §263a, to perform high complexity tests, or by similarly qualified non-U.S. laboratories***].

Results are for the identification of 2019-nCoV RNA. The 2019-nCoV RNA is generally detectable in **[*name specimen type*]** during the acute phase of infection. Positive results

AMERICAN OVERSIGHT

are indicative of active infection. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

The ***[test name]*** is intended for use by **[*include intended user, e.g., trained clinical laboratory personnel specifically instructed and trained in the techniques of real-time PCR and in vitro diagnostic procedures*]**. The ***[test name]*** is only for use under the Food and Drug Administration's Emergency Use Authorization.

***2) Special Conditions for Use Statements:***

For prescription use only
For in vitro diagnostic use only

***3) Special Instrument Requirements:***

The ***[test name]*** test is to be used with the [***list all RT-PCR Instruments, software requirements, automated extraction instruments***].

## H. DEVICE DESCRIPTION AND TEST PRINCIPLE

**Example text has been added under each of the sub-headings below for a fluorescence based rRT-PCR test for detection of organism RNA. If a different test principle is used by the test for the detection of a specific analyte please modify the description accordingly to capture the salient points in each of the sub-headings below. Please note that for new investigative technologies FDA may request additional detailed information so we can adequately assess the risks and benefits associated with the device.**

***1) Product Overview/Test Principle:***

**Describe the technology of the test and how this technology works to identify the measurand, the instruments employed/required to perform the test from sample collection to result (include all claimed extraction and PCR detection instruments), and the specimen types for which you claim to have specific performance characteristics as described below. If applicable, list all primer and probe sets and briefly describe what they detect. Please include the nucleic acid sequences for all primers and probes used in the test. Please indicate if the test uses biotin-Streptavidin/avidin chemistry in any of the steps for coupling reagents. Please note that an alignment with available reference genomes for different strains of the target pathogen is requested as part of the inclusivity evaluation (Section N).**

The ***[test name]*** is a real-time reverse transcription polymerase chain reaction (rRT - PCR) test. The 2019-nCoV primer and probe set(s) is designed to detect RNA from

AMERICAN OVERSIGHT

the 2019-nCoV in ***[list all the specimens]*** from patients who meet CDC 2019-nCoV clinical criteria (e.g., signs and symptoms associated 2019-nCoV infection) in conjunction with CDC 2019-nCoV epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated).

2) ***Description of Test Steps:***

**List and describe in detail all the steps of the test sequentially from specimen collection to detection.**

Nucleic acids are isolated and purified from ***[specimens]*** using ***[please describe the method(s) of extraction (please specify the specimen input volume for extraction and/or test, the nucleic acid elution volume and whether isolation/purification is manual and/or automated)].*** The purified nucleic acid is reverse transcribed using ***[enzyme mix/kits – please specify the input volume of purified nucleic acid added to the rRT-PCR reaction mix]*** into cDNA which is then subsequently amplified in ***[please describe the instrument(s) and enzyme mix]***. In the process, the probe anneals to a specific target sequence located between the forward and reverse primers. During the extension phase of the PCR cycle, the 5' nuclease activity of Taq polymerase degrades the probe, causing the reporter dye to separate from the quencher dye, generating a fluorescent signal. With each cycle, additional reporter dye molecules are cleaved from their respective probes, increasing the fluorescence intensity. Fluorescence intensity is monitored at each PCR cycle by ***[please describe the detection instrument(s)]***.

3) ***Control Material(s) to be Used with [test name]:***

**List all control materials (provided with the test kit and/or required but not provided with the test kit and describe what they are, how they are expected to work, where in the testing process they are used, and the frequency of use. If a control is commercially available, provide supplier's name and catalog number or other identifier; if your device relies on external controls that are manufactured by a third party please note that these controls should also be validated within your analytical and clinical studies described below in Section (N).**

Controls that will be provided with the test kit include:

a) A "no template" (negative) control is needed to ***[describe need]*** and is used ***[describe use – please also specify frequency of use]***

b) A positive template control is needed to ***[describe need]*** and is used ***[describe use – please specify the concentration of the positive control relative to the LoD of your test (note that ideally the positive control concentration should be such that it is close to the LoD of your test) and also specify frequency of use]***

AMERICAN OVERSIGHT

c) An extraction control ***[describe control]*** is needed to ***[describe need]*** and is used ***[describe use – please also specify frequency of use].*** **Please note that if the no template control and positive control, are taken through the entire sample processing procedure, including the extraction, then a separate extraction control is not required**.

d) An internal control ***[describe control]*** is needed to ***[describe need]*** and is used ***[describe use]***.

Controls that are required but not provided with the test kit include ***[describe control – provide recommended sources of the control materials – either a separate control kit for purchase that you the applicant develops or a control material that can be purchased from a third party].*** This/these control(s) is/are needed to ***[describe need]*** and is used ***[describe use – please also specify frequency of use]***.

**Please note that any control recommended to be used with your device (provided with the kit or not) needs to be validated in the context of your analytical and clinical study (i.e., you will need to run these controls as part of your studies). In instances where control material is not readily available through 3rd party vendors (which is often the case at the beginning of an outbreak) FDA may request that you include suitable control material with your device. Please note that external control materials are considered particularly important in the context of EUA devices because often GMP requirements for the manufacture of the EUA device are waived in emergency situations and reagent stability studies are limited. Hence the external controls offer some assurance of EUA test performance in the hands of the end user.**

## I. INTERPRETATION OF RESULTS

All test controls should be examined prior to interpretation of patient results. If the controls are not valid, the patient results cannot be interpreted. **Please describe if a Ct cutoff is used as part of your testing algorithm and/or if the end user is required to review fluorescent curves for weakly positive samples before final interpretation. Although not typical for molecular-based tests, if the test result involves the use of an algorithm/calculation, for example a ratio value, when determining the final patient test result, please include a detailed description and any additional calibration materials that may be required.**

1) ***[Test name] Controls – Positive, Negative and Internal***

**Describe in detail the expected results generated, including acceptance criteria, for all the controls described in detail in Section H above. Describe the measured values (if applicable) for valid and invalid controls and outline the recommended actions the laboratory should take in the event of an invalid control result.**

AMERICAN OVERSIGHT

2) ***Examination and Interpretation of Patient Specimen Results:***

**Describe when clinical specimen test results should be assessed and outline the criteria for test validity**. **Example text**: Assessment of clinical specimen test results should be performed after the positive and negative controls have been examined and determined to be valid and acceptable. If the controls are not valid, the patient results cannot be interpreted.

**Clearly indicate how to interpret numeric test values (if applicable) as positive or negative for presence of the 2019-nCoV. Indicate if the end user is required to review fluorescent curves for weakly positive samples before final interpretation and how to identify indeterminate/inconclusive results (if they exist) results and how the user should resolve them, e.g. if repeat testing may be required.**

**When applicable, provide a table clearly describing the possible combinations of test result values for each primer/probe set, and how they should be combined into a final interpretation of the result for your test. If the test produces result that will be used as part of a CDC recommended testing algorithm, please indicate what follow-up testing/process should be conducted, if applicable.**

## J. PRODUCT MANUFACTURING

**Please note that if you are developing a test for use at a single site (i.e., a laboratory developed test LDT), some of the information requested in this section may not be applicable. Please contact FDA for additional guidance for an emergency use LDT.**

The ***[test name]*** has been validated using only the components referenced in this submission and shall not be changed without prior concurrence from the FDA.

*1)* ***Overview of Manufacturing and Distribution:***

The product will be manufactured at [***manufacturer's name and FDA registration number (if applicable) or laboratory name if an LDT***] by [***manufacturer name, or laboratory name if an LDT***] personnel consistent with practices for the production of **[*types of devices*]** based on [***type of quality system****]. Material manufactured by [***manufacturer's name, or laboratory name if an LDT***] may be bottled and kitted by [***packager name***] manufacturing facility.

***Under the Emergency Use Authorization (EUA) most of the 21 CFR 820 Quality System Regulation (QSR) requirements can be waived for the duration of the EUA. FDA expects that developers follow comparable practices as much as possible and may consider previous compliance history when determining whether or not to waive certain QSR requirements for a specific product. Please note adverse events, as per 21 CFR Part 803, have to be reported for authorized devices (see Section R).**

AMERICAN OVERSIGHT

The current manufacturing capabilities include the ability to manufacture approximately **[*please insert the approximate number of units/products that can currently be manufactured per week at the manufacturing facility*]** products per week, however in the event of a surge in demand this could be increased to **[*please insert the approximate maximum number of units/products that could potentially be manufactured per week at the manufacturing facility if there was a surge in demand*]** product per week within a **[*please specify in weeks/months the expected timeframe required to increase product production if required*]** timeframe.

The product will be distributed by **[*please describe the distribution plan for the product and list all current distributors*]**.

2) ***Components Included with the Test***

Components manufactured by [***manufacturer's name and FDA registration number (if applicable)***] and supplied with the test include:

**List all components and reagents provided for your test, including a description of the primers and probes, volumes, concentrations, quantities, buffer components, etc.**

3) ***Components Required But Not Included with the Test***

Components required but not included with the test:

**List all components and reagents not included with the test that must be supplied by the user to perform the test, with specific supplier names and catalog numbers or other identifiers for obtaining these components and reagents. Please include here all specific consumables that were validated for use with your device, that are not interchangeable with other products and that are needed to guarantee device performance as established in the EUA validation studies listed in Section N below.**

4) ***Testing Capabilities***

**Briefly describe current sample throughput capacity, total time required to perform the test (from clinical specimen collection, specimen transport to result), and number of tests that can be performed per instrument run and per day.**

5) ***Reagent Stability:***

**Briefly describe stability test plan for *[test name]* reagents and include any accelerated stability information if available. Please note that reagent stability studies do not need to be completed at the time of EUA issuance, however the study design should be agreed upon during interactive review and the stability studies started immediately following authorization, if not before. When designing your stability study, we have some general recommendations that are outlined in Appendix B, for your consideration.**

AMERICAN OVERSIGHT

## K. PERFORMANCE EVALUATION

**If you plan to claim multiple target analytes to aid in differential diagnosis or you plan to claim multiple RT-PCR instruments and/or extraction methods, please refer to Appendix A and C, respectively, more information. Please note that any omission of a requested study in this document should be documented and justified.**

### *1) Analytical Sensitivity:*

a) *Limit of Detection (LoD):* **You should determine the LoD of the device utilizing the entire test system from sample preparation to detection for each clinical matrix claimed. Please note that claims for additional anticoagulants, for blood specimens, can be supported by a matrix equivalency study as outlined in Section N, subsection 3 below. The LoD is determined using dilutions of live propagated and titered 2019-nCoV stocks (CFU/mL or PFU/mL) spiked into a relevant clinical matrix. If wild-type virus is not available at the time of your validation studies, please contact FDA to discuss a potential alternative. Please note that if available please also provide Genomic Equivalent Copies (GEC)/mL units for the stock solutions used and include an explanation on how they were determined. Please note that LoD studies should be performed with live organisms, as described above. If you plan to use inactivated organism in your LoD determination you should describe how the material was inactivated and perform a study to determine whether the inactivation process impacted the LoD of the device.**

**First a tentative LoD must be established through limiting dilutions of the prepared material with 3-5 replicate measurements. Please note for all the analytical studies described in Section N that require replicate testing, one replicate equates to one independent extraction and PCR detection. Once a tentative LoD is established, the LoD should be confirmed by preparing at least 20 additional replicates at the LoD concentration and demonstrating that the organism was detected with a minimum 95% positivity (19/20). If this confirmatory study achieves a positivity of 100%, then a lower concentration needs to be tested (with 20 replicates) until <100% positivity is obtained.**

**Please use the following format when submitting LoD information and data:**

LoD studies determine the lowest detectable concentration of 2019-nCoV at which approximately 95% of all (true positive) replicates test positive. The LoD was determined by limiting dilution studies using characterized samples.

**List/describe the following in this section:**

- **Titers and strains of the 2019-nCoV stocks used for the LoD study and describe how the organism stocks were prepared and how the titers were determined.**

AMERICAN OVERSIGHT

- **The dilution factor and number of serial dilutions of the characterized 2019-nCoV that were tested to determine the LoD for each primer and probe set.**
- **The nucleic acid extraction/purification method.**
- **The real time PCR instrument.**

Serial dilutions of the characterized 2019-nCoV were then tested in **[*number of replicates (i.e., recommend that sample is extracted independently three-five times and each extraction tested once)*]** replicates. The lowest concentration at which all [*number of replicates*] replicates were positive was treated as the tentative LoD for each test. The LoD of each test was then confirmed by testing [*number of replicates (at least 20 recommended)*] with concentrations at the tentative limit of detection. The final LoD of each test was determined to be the lowest concentration resulting in positive detection of [*number of positive replicates (at least 19 out of 20 replicates)*]. [*Include analysis of LoD results, indicating the final LoD for each test*]

**Tentative LoD: [*Please provide a summary of the data for each strain tested]* example table 2019-nCoV stocks is provided below:**

| 2019-nCoV Strain Tested | Stock 2019-nCoV Titer | Serial 10-Fold Dilution Factor | Concentration in Dilution Tested [Include Units] | Replicate 1 $C_t$ | Replicate 2 $C_t$ | Replicate 3 $C_t$ | Replicate 4 $C_t$ | Replicate 5 $C_t$ | Call Rate | Lowest Concentration with Uniform Positivity per Analyte | Limit of Detection (LoD) per Virus Strain |
|---|---|---|---|---|---|---|---|---|---|---|---|
| ***Example:*** *[analyte]* | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |

b) FDA Sensitivity Evaluation: The analytical sensitivity of the test has to be further assessed by evaluating an FDA-recommended reference material using an FDA developed protocol if applicable and/or when available. Details will be provided during the Pre-EUA interactive review.

c) *Reactivity/Inclusivity:* Reactivity of the ***[test name]*** was evaluated for additional isolates of 2019-nCoV.

**Reactivity: *[test name]* example table below**

| 2019-nCoV Strain/Isolate | Source/Sample Type* | Concentration | Ct** |
|---|---|---|---|
| | | | |
| | | | |
| | | | |

AMERICAN OVERSIGHT

| | | | |
|---|---|---|---|
| | | | |

***Please list source of material used for wet testing and sample type tested (i.e., organism – live or inactivated, purified nucleic acid – whole genome etc.).**
**** If your technology does not produce Ct values, please include instead the signal output for your specific device technology.**

**At a minimum, the strain used in your LoD evaluation should be listed here (multiple isolates of the same 2019-nCoV strain that was used for the LoD studies can also be included if available). If additional isolates are not available at the time of your validation studies, please discuss with FDA. Each isolate should be tested at or near the LoD (no more than 3x LOD) of the test, spiked into clinical matrix utilizing the entire test system, including extraction. If you plan to claim more than one type of clinical matrix, we recommend that you perform this study in the most challenging clinical matrix, testing a minimum of 3 replicates. In addition, the wet testing should be accompanied by extensive inclusivity *in silico* analysis of the test primer and probes with all known strains/isolates (past/present) of 2019-nCoV (including the strain/isolate used for wet testing).**

## 2) *Analytical Specificity:*

a) *Cross-Reactivity:* Cross-reactivity of the ***[test name]*** was evaluated using both *in silico* analysis and by testing whole organisms **[*pathogen*]** (concentration) or purified nucleic acid from other ***[describe organisms]*** (concentration/reaction).

**Cross-Reactivity: *[test name]* example table for wet tested organisms below**

| Virus/Bacteria/Parasite | Strain | Source/ Sample type | Concentration | Ct Values* |
|---|---|---|---|---|
| | | | | |
| | | | | |
| | | | | |

***If your technology does not produce Ct values, please include instead the signal output for your specific device technology.**

**Cross-reactivity studies are preformed to demonstrate that the test does not react with related pathogens, high prevalence disease agents and normal or pathogenic flora that are reasonably likely to be encountered in the clinical specimen. The FDA Tables 1 and 2, below are intended to recommend simulate testing of patients having infections with organisms which cause similar symptoms to those observed at the onset of 2019-nCoV infection. The FDA Tables also include other organisms and strains which have significant genetic similarity and therefore a higher likelihood of cross-reacting with 2019-nCoV specific reagents. Also included in the FDA Tables are recommended unclaimed organisms/strains which are likely to be endemic to the currently affected area should be included in cross-reactivity testing since these organisms/strains will be an important aspect of the differential diagnosis of 2019-nCoV infection.**

AMERICAN OVERSIGHT

**FDA Table 1 Cross-Reactivity: List of Organisms to be wet-tested and analyzed *in silico* (for tests detecting 2019-nCoV) in respiratory material or blood specimens**

| Other high priority pathogens from the same genetic family | High priority organisms likely in the circulating area |
|---|---|
| Human coronavirus 229E | Adenovirus (e.g. C1 Ad. 71) |
| Human coronavirus OC43 | Human Metapneumovirus (hMPV) |
| Human coronavirus HKU1 | Parainfluenza virus 1-4 |
| Human coronavirus NL63 | Influenza A |
| SARS-coronavirus | Influenza B |
| MERS-coronavirus | Enterovirus (e.g. EV68) |
| | Respiratory syncytial virus |
| | Rhinovirus |
| | *Chlamydia pneumonia* |
| | *Haemophilus influenzae* |
| | *Legionella pneumophila* |
| | *Mycobacterium tuberculosis* |
| | *Streptococus pneumonia* |
| | *Streptococcus pyrogenes* |
| | *Bordetella pertussis* |
| | *Mycoplasma pneumoniae* |
| | *Pneumocystis jirovecii* (PJP) |
| | Pooled human nasal wash - *to represent diverse microbial flora in the human respiratory tract* |
| | |

**FDA Table 2 Cross-Reactivity: List of Organisms to be analyzed *in silico* (for tests detecting 2019-nCoV) in respiratory material or blood specimens:**

| Other high priority pathogens from the same genetic family | High priority organisms, including organisms commonly found in the clinical matrix |
|---|---|
| | Influenza C |
| | Parechovirus |
| | *Candida albicans* |
| | *Corynebacterium diphtheriae* |
| | *Legionella non-pneumophila* |
| | *Bacillus anthracosis* (Anthrax) |
| | *Moraxella cararrhalis* |
| | *Neisseria elongate and miningitidis* |
| | *Pseudomonas aeruginosa* |
| | *Staphylococcus epidermis* |
| | *Staphylococcus salivarius* |
| | *Leptospirosis* |

AMERICAN OVERSIGHT

| | |
|---|---|
| | *Chlamydia psittaci* |
| | *Coxiella burneti (Q-Fever)* |
| | *Streptococcus aureus* |
| | |

***In silico* analysis should be performed on all potentially cross-reactive organisms outlined in the FDA Tables 1 and 2 above. You should provide the result summary of the *in silico* blast analysis (tabular format) evaluating whether there is any significant amplification of non-target sequences that could either result is cross-reactivity or potentially interfere with the detectability of the actual target analyte. As such we are asking that you provide individual blast results (non-truncated alignments) for each of the primers and probes used in your device with potential cross-reacting organisms. Please provide for our review the percent sequence homology for each organism relative to the target analyte primers/probes in your test. Please use the example table below when presenting the results of *in silico* analysis in your submission:**

**Results of *In Silico* Analysis**

| Pathogen | Strain | GenBank Acc# | % Homology Test FP (i.e. 0-100%) | % Homology Test RP | % Homology Test Probe |
|---|---|---|---|---|---|
| | | | | | |
| | | | | | |

**The analysis should include multiple representative strains from GenBank for each organism. If *in silico* analysis reveals other potential cross-reactants (i.e., ≥80% homology between one of your primers or the probe to any of the sequences of listed potential cross reactants), you should carefully review the alignments and determine based on the positions of the homologous stretches and mismatches if additional cross-reactivity and/or interference (please refer to item b below – microbial interference studies) wet testing will be required to rule out cross-reactivity or interference of that organism that may affect the performance of your device. In these circumstances if wet-testing is omitted you should include an explanation as to why *in silico* generated data is not clinically relevant (irrelevant isolate, location/extent of match within primer/probe, etc.), or why the performance of your test would not be impacted.**

**Organisms in FDA Table 1 should be wet tested in addition to the *in silico* analysis. Omissions from wet-testing should be discussed with FDA and supported by a well-documented justification that includes a due diligence attempt to obtain the live or inactivated organisms (and/or purified nucleic acid – which is acceptable for cross reactivity evaluation for an EUA).**

AMERICAN OVERSIGHT

**The wet testing evaluation should reflect test specimens prepared at the highest clinically relevant level of organism (i.e., a minimum of $10^6$ CFU/ml or higher for bacteria and $10^5$ $TCID_{50}$/mL or PFU/ml or higher for viruses) and should be tested with a minimum of three replicates per organism test specimen. Test specimens can be prepared by spiking cultured isolates/inactivated organisms/ purified nucleic acids (whole genome) into negative clinical matrix and determining cross reactivity based on triplicate replicates. If you plan to claim more than one type of clinical matrix, please note that if significant differences in LoD are observed for the different clinical matrices this may warrant this study being performed in more than one clinical matrix.**

**If you plan to claim non-blood or non-respiratory clinical specimen types for diagnostic use with your device, e.g., stool specimens, etc., please consult FDA for more information on additional organisms that may be recommended for cross-reactivity testing, common examples are provided below for stool specimens (FDA Table 3):**

**FDA Table 3: Organisms to be analyzed for non-blood clinical specimens:**

| **Stool** |
|---|
| *Escherichia coli* |
| *Lactobacillus* |
| *Bacillus* spp. |
| *Clostridium* Spp. |
| *Enterobacter* |
| *Enterococcus* |
| Fusobacterium |
| Bacteroidetes |
| Bifidobacterium |
| Ruminococcus |
| |

b) *Microbial Interference Studies:* **If *in silico* analysis reveals ≥ 80% homology between the cross-reactivity microorganisms and your test primers/ probe(s), we recommend that you either perform (1) a microbial interference study with 2019-nCoV and the microorganisms that your test primers/ probe(s) have homology to, (2) as an alternative to the microbial interference study, you may provide justification as to why (e.g., amount of primer(s)/ probe(s) included in your master mix) the performance of your test would not be impacted by the presence of a causative agent of a clinically significant co-infection, or (3) explain why the *in silico* results are clinically irrelevant. In the case of the microbial interference study, interference should be evaluated using samples spiked at a low 2019-nCoV concentration, at 3x LoD, and a high interferent level (either microorganisms or nucleic acids purified from them), to represent the worst-case scenario, with a minimum of 3 replicates. If you plan to claim more than**

AMERICAN OVERSIGHT

**one type of blood clinical matrix, please note that if significant differences in LoD are observed for the different clinical matrices this may warrant this study being performed in more than one clinical matrix. If the LoDs are similar in the blood clinical matrices the study should be performed in the most challenging matrix, i.e., whole blood. In addition, if you are claiming blood and non-blood clinical specimens you may be required to perform this study in more than one clinical matrix. If interference is observed at the level tested, an additional titration study should be performed to determine the highest microorganism interferent level the 2019-nCoV test can tolerate.**

c) *Endogenous Interference Substances Studies*: **The extent of testing for endogenous interference substances depends on the matrix that is claimed for the device as well as on the technology of the device, e.g., if a nucleic extraction procedure is performed prior to testing or not. For EUA we do not typically ask for interference studies for tests that use conventional PCR and/or well-established extraction methods prior to testing (e.g., Boom method and column-based extraction methods).**

**For extraction procedures that are new or for nucleic acid-based technologies that are different from conventional PCR (e.g., various isothermal methods), we expect testing of potential interferents. The impact of interfering substances should be evaluated over the expected clinical range of the potentially interfering substance. Potential sources of endogenous interference include, but are not limited to, the ones listed in the tables below. It is important to note that the evaluation of interference and the generation of false negative results should be done using samples containing the analyte at or near the LoD and should not exceed 3x LoD. You should test a minimum of 3 replicates per substance. If you plan to claim more than one type of clinical matrix, please note that if significant differences in LoD are observed between the different clinical matrices this may warrant this study being performed in more than one clinical matrix. Biotin interference poses a risk to laboratory tests that incorporate the free biotin-streptavidin capture method. Therefore, please review this safety communication [ HYPERLINK "https://www.fda.gov/medical-devices/safety-communications/fda-warns-biotin-may-interfere-lab-tests-fda-safety-communication" ] and the following [ HYPERLINK "onenote:http://sharepoint.fda.gov/orgs/CDRH-IVD/Orgs/DMD/DMD%20OneNotes/Language/Analytical%20Studies/Interference.one" \l "DRAFT%20guidance%20-%20Testing%20for%20Biotin%20Interference%20in%20In%20Vitro%20Diagnostic%20Devices&section-id={39D67316-5AE2-4791-958F-9387D384D6FA}&page-id={9298F00C-7C39-43CB-9EBA-29E5BC08BB6E}&end" ] ([ HYPERLINK "http://sharepoint.fda.gov/orgs/CDRH-IVD/Orgs/DMD/_layouts/OneNote.aspx?id=%2Forgs%2FCDRH-IVD%2FOrgs%2FDMD%2FDMD%20OneNotes%2FLanguage&wd=target%28Analytical%20Studies%2FInterference.one%7C39D67316-5AE2-4791-958F-**

AMERICAN OVERSIGHT

**9387D384D6FA%2FDRAFT%20guidance%20-%20Testing%20for%20Biotin%20Interference%20in%20In%20Vitro%7C9298F00C-7C39-43CB-9EBA-29E5BC08BB6E%2F%29" ]) to determine if biotin interference testing may be warranted for your device. We also recommend you consult with FDA prior to initiating biotin interference testing, if applicable.**

**The tables below indicate the potentially interfering substances that may be found in blood and respiratory specimens. For other non-blood specimen types, such as stool, the list of substances could be expanded – please consult with FDA.**

**Interfering Substances: *[test name]* Example table below for evaluation of interfering substances for the ability to generate false *positive* results:**

| Potential Interfering Substance | Concentration | Results (Detected X/3) |
|---|---|---|
| **Respiratory Specimens** | | |
| Mucin: bovine submaxillary gland, type I-S | | |
| Blood (human) | | |
| Nasal sprays or drops | | |
| Nasal corticosteroids | | |
| Nasal gel | | |
| FluMist | | |
| Homeopathic allergy relief medicine | | |
| Throat lozenges, oral anesthetic and analgesic | | |
| Anti-viral drugs | | |
| Antibiotic, nasal ointment | | |
| Antibacterial, systemic | | |
| **Blood Specimens** | | |
| Hemoglobin | 10 mg/mL* | |
| Bilirubin Conjugated | 0.4 mg/mL* | |
| Bilirubin Unconjugated | 0.4 mg/mL* | |
| Serum proteins (e.g., Human Serum Albumin) | 60 mg/mL* | |
| Triglycerides | 15 mg/mL* | |
| Cholesterol | 4 mg/mL* | |
| Human Anti-mouse Antibody (HAMA) | 800 ng/mL* | |
| Rheumatoid Factor | 2000 IU/mL* | |

*Taken from the recently-updated 3rd edition of CLSI guideline EP07, Interference Testing in Clinical Chemistry (Section 3.4.2) which now defers to CLSI EP37, Supplemental Tables for Interference Testing in Clinical Chemistry for the recommended concentrations for testing common endogenous substances (Table 2) and have subsequently updated a number of the recommended testing concentrations.

**Interfering Substances: *[test name]* Example table below for evaluation of interfering substances for the ability to generate false *negative* results:**

AMERICAN OVERSIGHT

| Potential Interfering Substance | Concentration* | Viral Strain Level (In multiples of LoD) | Results (Detected X/3) |
|---|---|---|---|
| **Respiratory Specimens** | | | |

### 3) *Matrix Equivalency (if applicable):*

**A matrix equivalency study may be used to support certain specimen type claims that were not evaluated during the clinical study (e.g., serum versus plasma, use of different anticoagulants, use of difference swab types or viral transport media, etc.). Please note that LoD and clinical specificity studies are required for all claimed matrices. The matrix in which the clinical studies are conducted is the comparator. All other matrices are to be shown to be equivalent to the comparator matrix. We request a minimum of 40 paired samples each obtained from individual persons; negative (10 samples), low positive (1.5-2xLoD, 20 samples), and moderate positive (5-10xLoD, 10 samples) samples should be tested. Positive samples are prepared by spiking paired negative clinical matrix with the same amount of target analyte. Please note that individual (and not pooled) samples should be used in this study.**

AMERICAN OVERSIGHT

4) ***Comparative Limit of Detection (LoD) of the Test vs. the Comparator Method:***

**A comparative LoD study may be required to support use of a comparator method in your clinical evaluation that has not been validated with a specific specimen type. The comparative LoD study should be conducted testing the same dilution series using both, your test and the comparator you chose in parallel (to dilution endpoints for both tests), 3-5 replicates per dilution level are sufficient for this study.**

5) ***Specimen Stability and Fresh-frozen Testing:***

**A specimen stability study may be required to support specimen stability claims in the instructions for use outside of those typically outlined in CSLI standards. A fresh/frozen and/or freeze/thaw study may be required to support the use of frozen specimens if they are used as part of the clinical evaluation. Please consult with FDA concerning an appropriate study design prior to initiating any studies.**

6) ***Clinical Evaluation:***

**This section should describe the clinical study used to evaluate the performance of your test. Please note that the exact requirements for the clinical evaluation will be very dependent on, access to 2019-nCoV disease clinical specimens at the time of the studies and the nature of the emergency. Our general clinical study evaluation recommendations for respiratory and serum clinical specimens are outlined below. If you are interested in claiming additional specimen types, for example, stool, please contact FDA for current recommendations. Please note these clinical study recommendations may be subject to change as we continue to learn about the 2019-nCoV disease or as the risk benefit analysis changes.**

**The clinical performance in general should be evaluated for each unique claimed clinical specimen type - with the exception of claims that can be supported by a matrix equivalency study (outlined in Section 3 above). The performance characteristics should ideally be established using a clinical study with a limited number of prospective samples. If a prospective study is not feasible, an acceptable alternative would be to test retrospectively collected 2019-nCoV nucleic acid negative and positive specimens from patients, accompanied by some basic information such as, the specimen collection date, date of onset of symptoms (if present/known), tests used to identify 2019-nCoV nucleic acid positive specimens, etc. Depending on the nature of the disease, if no prospective or retrospective specimens are**

AMERICAN OVERSIGHT

**available at the time of your pre-EUA submission for the 2019-nCoV disease we may accept a fully contrived clinical evaluation. The clinical evaluation should be comprised of a minimum of 100 negative individually collected specimens and 50 individual positive specimens (prospective, retrospective and/or contrived). Use of pooled specimens are not acceptable for the clinical evaluation of your test. Please see FDA Table 5 for more details. Please note that if a fully contrived clinical study is used to support your Pre-EUA submission, additional clinical testing of a limited number of natural clinical positive specimens and potentially negative specimens from the endemic region, if available, may be required at the time when this Pre-EUA transitions to an EUA as a result of an Emergency declaration for 2019-nCoV disease.**

AMERICAN OVERSIGHT

## FDA Table 5: Clinical study Recommendations:

| Details | Study Including Prospective/ Retrospective Specimens | Fully Contrived Sample Study |
|---|---|---|
| Minimum Number of Positive Specimens | 50<br><br>The number of natural (prospective/retrospective) positive clinical specimens should be at least 25 (collected from symptomatic patients in the 2019-nCoV disease endemic region(s)) and, if necessary, may be supplemented with contrived samples to generate the total of 50 positive specimens. Contrived samples should be prepared as described in the fully contrived sample study column. | 50<br><br>The contrived positive samples should be made in individual negative clinical matrix collected from subjects from a non-endemic population (pooled matrix is not acceptable for the clinical evaluation). Please note that the negative clinical matrix used for spiking should be confirmed negative by your test device prior to spiking. Half of the contrived positive samples can be prepared by spiking the 2019-nCoV at LoD and the remaining contrived positive samples should cover the range of the test up to and not higher than 5 x LoD.<br><br>Negative respiratory specimens: Can be archived/retrospective samples collected from US patients with signs and symptoms of respiratory infection.<br><br>Negative blood specimens: Can be collected from healthy subjects from non-endemic areas. |
| Minimum Number of Negative Specimens | 100<br><br>Note: In general, for EUA the 100 individual negative samples can be collected from; (1) archived/retrospective samples collected from US patients with signs and symptoms of respiratory infection for respiratory specimens, and (2) healthy subjects from non-endemic areas for blood specimens, that are "expected 2019-nCoV disease negative". Note these negative specimens can be used to also prepare any contrived positive specimens used in support of the clinical evaluation of the test.<br><br>Please note this recommendation is dependent on the current outbreak situation and is subject to change as we learn more about the 2019-nCoV disease/outbreak. If the outbreak situation for 2019-nCoV disease is primarily outside of the continental U.S. (OUS) it may be beneficial to consider collecting negative specimens that represent 50% endemic and 50% non-endemic regions. If negative specimens are collected from the endemic region of the 2019-nCoV disease these should be tested with the same comparator chosen for the positive specimens (more details provided below). For non-endemic collected specimens you can compare to the expected "negative" result. | |
| Recommended Comparator Method | Positive: Positive percent agreement should be calculated in comparison to a EUA PCR test (please see the following website for the most recent list of FDA authorized 2019-nCoV | Positive: Compare to expected result.<br><br>Negative: See Minimum Number of Negative Specimens row |

AMERICAN OVERSIGHT

| | | |
|---|---|---|
| for percent agreement performance calculations | tests: [ HYPERLINK "https://www.fda.gov/MedicalDevices/Safety/EmergencySituations/ucm161496.htm" ]. If no EUA test available at the time of your EUA submission, please consult with FDA about your choice of comparator method – which ideally should be a well validated PCR test with comparable sensitivity to your subject device. Please note that a well validated PCR test should include evaluation of the tests LoD, inclusivity, exclusivity, interference and any clinical testing.<br><br>Negative: See Minimum Number of Negative Specimens row | |
| Comparator Method Note 1 | Please note when using natural clinical specimens, the comparator method must be validated for the specimen type claimed – if not you should perform a Comparative Limit of Detection (LoD) of the Test vs. the Comparator Method study, as explained above (Section 4), to support its use as a comparator method in your clinical study. | N/A |
| Comparator Method Note 2 | Any occurrences of false results should be investigated with an additional validated PCR test and/or targeted sequencing, and the results of the discordant analysis can be footnoted in your final performance table but cannot be used to change the final performance calculations. | |
| Natural Clinical Specimens IRB/Informed Consent Note | For clinical specimens collected to support the EUA request, please note that sample collection needs to adhere to all applicable rules of human subject protection; as such, sample collection needs IRB approval, which includes review of the informed consent forms. Samples need to be collected with informed consent. If leftover de-identified samples are used, FDA exercises enforcement discretion regarding the informed consent requirement if the specimen collection meets the criteria described in the FDA Guidance on Informed Consent for In Vitro Diagnostic Device Studies Using Leftover Human Specimens that are Not Individually Identifiable ([ HYPERLINK "http://www.fda.gov/cdrh/oivd/guidance/1588.pdf" ]).<br>**Note that IRB approval is still required even if leftover de-identified samples are used in your study.** | |
| Additional Studies Warning | N/A | If fully contrived samples were used in your Pre-EUA submission, additional testing of natural clinical specimens may be requested, if available, to support transition of the Pre-EUA to EUA as a result of an Emergency declaration. |
| Testing Approach Note 1 | Please note all clinical specimens (natural and contrived) should be evaluated in accordance with your proposed diagnostic algorithm, including retesting when appropriate. We understand the limited nature of natural specimens may preclude retesting. In instances were retesting is indicated but not performed, for the purposed of performance evaluation, initial results will be analyzed for performance and equivocal/indeterminate results count against your final performance. | |
| Testing Approach Note 2 | Specimens should be tested in a blinded fashion, e.g., positive and negative samples should be mixed and blinded to the end user, end user should also be blinded to the results of any comparator method testing. | |

AMERICAN OVERSIGHT

**When you describe your clinical study please indicate/include:**

- **How the specimens were generated/collect/sourced**
- **If the study was fully prospective, mix of prospective, retrospective and/or contrived or fully contrived**
- **The rationale for the concentrations/specimens selected (if using contrived or 3-party sourced specimens)**
- **The total number of specimens tested**
- **The specimen types (clinical matrix)**
- **A summary of the study results**

**In the case of real-time PCR tests, please provide the line data in an Excel file as part of the Pre-EUA submission for each specimen (please indicate for each specimen if it was prospective, retrospective or contrived and the clinical matrix it represents); the data should include the $C_T$ values (for the specimen and the controls) and call/result for your device and, in the case of the natural clinical specimens, the comparator method results should be included as well.**

## L. UNMET NEED ADDRESSED BY THE PRODUCT

**This section will be finalized by FDA based on the state of the emergency at the time of authorization and based on recommendations from Public Health authorities at that time. Example text is provided below but may be adapted according to the specific emergency situation that is addressed by the device and the need at the specific time of the outbreak.**

[Outline background of pathogen, disease and current outbreak]

[Outline details of the disease such as the following:

- likely sources of transmission
- likely symptoms – if any
- Prevalence of symptomatic disease (what fraction of infection results in symptomatic disease)]

Laboratories in the United States are in need of diagnostic tools for use in the 2019-nCoV emergency for rapid diagnosis of acute 2019-nCoV infection.

A public health emergency has been declared by the Secretary of Health and Human Services (HHS) on [Month Day, YEAR] justifying the authorization of emergency use of *in vitro* diagnostic tests for detection of 2019-nCoV and/or diagnosis of 2019-nCoV infection.

The ***[test name]*** can augment clinically important laboratory evidence for individuals with active infection. The 2019-nCoV nucleic acid is generally detectable in [name

AMERICAN OVERSIGHT

specimen type] during the acute phase of infection (approximately [7] days following onset of symptoms, if present) [and possibly for longer in other specimen types].

Under emergency use authorization (EUA), ***[applicant name]*** plans to distribute the test or accept sample for testing with the ***[test name]*** for the detection of nucleic acid from 2019-nCoV in clinical specimens collected from individuals meeting CDC's 2019-nCoV clinical and/or epidemiological criteria. This EUA request for the ***[test name]*** is intended to expand domestic readiness within the United States and its territories by expanding diagnostic testing capabilities for 2019-nCoV during public health emergency.

FDA consulted with subject matter experts within HHS on the public health needs for diagnostic devices to detect 2019-nCoV nucleic acid. It is FDA's conclusion that there currently exists a public health need for such devices, i.e., that there is no adequate, approved (cleared), and available alternative to the ***[test name]*** for 2019-nCoV detection during the public health emergency.

## M. APPROVED/CLEARED ALTERNATIVE PRODUCTS

Currently no methods for the detection of the 2019-nCoV have been approved/ cleared by FDA.

## N. RISKS AND BENEFITS:

**The Risks and Benefits section should be updated according to your specific device, some example language is given below but should be tailored to the device and the disease.**

Risks

The ***[test name]*** has been designed to minimize the likelihood of false test results. However, should false results occur, they may present risks to patients:

- False positive result:
  - A false positive 2019-nCoV result could [***update based on the pathogen***].
  - A false positive result in the context of the current public health emergency could lead to misallocation of resources used for surveillance and prevention.
  - A false positive result could delay correct diagnosis and initiation of appropriate treatment for the actual cause of patient illness.
- False negative result:
  - Although a negative result does not rule out 2019-nCoV infection, a false negative has the potential to result in initiation of inappropriate treatment and a delay in correct diagnosis.
  - A false negative result can trigger a waste of health care resources, as additional evaluations are pursued in the effort to establish the true diagnosis.
  - A false negative results can contribute to further spread of the disease.

Benefits

AMERICAN OVERSIGHT

The primary benefit of distributing the ***[test name]*** for clinical use is that it provides a relatively fast diagnostic method for symptomatic patients, which enables faster intervention.

- True positive test results provide support for the diagnosis of a 2019-nCoV infection. The results can be used in conjunction with clinical and epidemiological information to guide patient management.
- Distribution of the factsheets can help healthcare professionals and the public learn more about 2019-nCoV disease and how to avoid acquiring it.

Risk Assessment

- Negative results may not preclude a 2019-nCoV infection. It is emphasized that the ***[test name]*** should not be used as the sole basis for treatment or other patient management decisions. The clinical features of the illness and the type and risk of exposure must be considered pivotal to making patient management decisions. A negative test should not be interpreted as definitive, if other aspects of the patient's clinical presentation or recent epidemiologic exposures indicate such is likely, and diagnostic tests for other diseases are negative.
- False negative results due to failure of PCR are minimized by the presence of controls that monitor nucleic acid extraction and PCR efficiency.
- Risk of patient discomfort or harm during sample collection is minimal.

Risk-Benefit Assessment

The risks posed by use of the ***[test name]*** are mitigated by:

- Use of the ***[test name]*** in conjunction with other laboratory, epidemiological, and clinical evaluation tools
- Distribution of Healthcare Provider and Patient fact sheets.
- Post-market studies/reporting or conditions of Authorization.

Based on these factors, the potential benefits from the use of the ***[test name]*** are expected to outweigh the risks.

## O. FACT SHEET FOR HEALTHCARE PROVIDERS AND PATIENTS:

**Include proposed Fact Sheets for Patients and Healthcare Providers**

## P. INSTRUCTIONS FOR USE/ PROPOSED LABELING/PACKAGE INSERT:

**Include Instructions for Use, Box Labels, Vial Labels and any other proposed labeling.**

## Q. RECORD KEEPING AND REPORTING INFORMATION TO FDA:

AMERICAN OVERSIGHT

[***Manufacturer name***] will track adverse events and report to FDA under 21 CFR Part 803. A website is available to report on adverse events, and this website is referenced in the Fact Sheet for Health Care providers as well as through the [***Manufacturer name***] Product Support website: [***Include link to Website***]. Each report of an adverse event will be processed according to [***Manufacturer name]***'s Non-Conformance Reporting Requirements, and Medical Device Reports will be filed with the FDA as required. Through a process of inventory control, [***Manufacturer name]*** will also maintain records of device usage/purchase. [***Manufacturer name]*** will collect information on the performance of the test, and report to FDA any suspected occurrence of false positive or false negative results of which [***Manufacturer name]*** becomes aware. [***Manufacturer name]*** will maintain records associated with this EUA and ensure these records are maintained until notified by FDA. Such records will be made available to FDA for inspection upon request.

## R. ADMINISTRATIVE INFORMATION:

**Interactive Review Log:** Please use the table below to document interactive review with FDA and include interactions initiated by either FDA or yourself

| **Date** | **Type of Interaction** (phone/ email/ formal submission-DCC) | **Brief Description** (e.g., questions asked/ feedback from FDA received / any word documents included) |
|---|---|---|
| [X] | [X] | [X] |
| | | |
| | | |

## S. FDA ADMINISTRATIVE INFORMATION:

**This section will be finalized by the FDA Lead Reviewer upon completion of the review process and documents the interactive review of this submission and any conclusions resulting from the interactive review.**

1) **Summary of Interactive Review – Lead Reviewer to use this section to highlight any major issues solved during interactive review.**
2) **Final Conclusions for Interactive Review -** It is FDA's conclusion that there currently exists a public health need for such devices, i.e., that there is no adequate, approved (cleared), and available alternative to the ***[test name]*** for [pathogen] detection during the public health emergency. **Conclusion should include an outline the unique features of the device compared to currently issued EUA's under the declaration, if applicable.**
3) **Upon competition of this section the Lead Reviewer should also sign this document and save the file as the final Decision Memorandum.**

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

## APPENDIX A – Multiplex Panels Under EUA:

An emergency declaration by the HHS Secretary is typically specific for a pathogen/disease (i.e., there is a publicly declared health emergency involving a particular etiologic agent). Therefore, the EUA pathway is only applicable for testing patients with signs/symptoms/risk of exposure for that single agent in a given emergency. FDA has occasionally allowed limited additional target pathogens to be claimed for EUA devices, but panel members must be relevant to the event/disease outbreak subject of the specific emergency declaration. When determining whether to issue an EUA for a multiplex panel FDA takes into consideration the utility of the test (multiplex pathogen detection as an aid in differential diagnosis), clearance/approval status of IVDs for the other panel members, whether the proposed Intended Use fits within the HHS emergency declaration and the how the multiplex panel would fit into current public health authority patient testing algorithm recommendations. We recommend you contact FDA for specific feedback if you plan to claim multiple target analytes as part of your EUA test. If it is determined that a multiplex test is beneficial to the emergency response, please note that analytical and clinical evaluations for each of the target analytes will be required.

## APPENDIX B – General Study Design Recommendations for Reagent Stability:

- For EUAs you may follow the current FDA recognized CLSI Standard EP25 – Evaluation of Stability of In Vitro Diagnostic Reagents; Approved Guideline when evaluating the suitability of stability study designs. If you are planning to pursue a De Novo/510(k) for your device we recommend discussing in more detail your stability design to facilitate potential use of the EUA data in your regular premarket submission.
- Please note that use of only the positive controls is not acceptable for reagent stability evaluation because controls are usually formulated at a moderate positive level. For all the stability evaluations in addition to your external positive and negative controls and the no-template control you should include for the EUA evaluation at least one sample, that should be prepared by spiking negative clinical matrix at an analyte concentration of 3-5xLoD.
- If you are claiming multiple blood clinical specimen types in which similar LoDs are determined, you should use the most challenging clinical matrix for this study.
- Please note we typically recommend your stability study design includes the evaluation of at least 5 replicates. You should also evaluate, if available, 3 different lots of reagents.
- You should design your study to provide data for a timeframe that is about 10% longer than the one to be claimed – for example; a claim of 18 months should be supported by stability data out to 20 months and a claim of 7 days should include stability data out to 8 days.
- FDA considers 15-30°C to represent room temperature conditions. Ideally you should evaluate stability at both 15°C and 30°C, however, for the purposes of the EUA evaluation at 30°C is acceptable as the worse-case scenario.
- Shelf-Life Stability- Unopened kit:
    - You should evaluate real-time kit stability studies with unopened kits stored at the claimed storage temperature for your test.

AMERICAN OVERSIGHT

  - Accelerated stability evaluations for unopened kits is acceptable for EUA submissions while the real-time studies are on-going. However, please note real-time stability data is required to support regular pre-market submissions and for the final claim of an EUA.
- Shipping Stability - Unopened kit: Study should evaluate the anticipated handling and shipping times and temperatures expected for unopened kits.
- In-use/Opened Kit Stability: Depending on your device your stability study design should also support in-use stability of the kit reagents once the kit has been opened, e.g., storage at 2-8 $^{o}$C for 7 days. This includes on board stability once reagents have been placed on the instrument (if applicable).
- Inverted stability (if applicable): Study should support inverted stability for of kits.
- Freeze-thaw Stability: If you recommend aliquoting the reagents to meet the end-users needs following the initial thaw this recommendation should be supported by a freeze-thaw stability study, including the specific number of allowed freeze-thaw cycles.
- FDA analysis recommendations for real time stability studies are as follows:
  - Baseline of the study (t=0 of stability study) should not exceed a month from bottling
  - Clear baselines should be described (e.g., a month from bottling) for each stability claim under each study
  - Claims should be determined based on regression analysis. Any %change (%shift) from time zero (baseline) should be calculated between the target claim and the zero-time as (Ttest-Tbaseline)/ Tbaseline*100 with 95%CI using the regression equation obtained from plotting the mean values. When formulating your acceptance criteria for evaluating the shift from baseline you should consider the reproducibility of your device. However, generally, that the shift at the target claim due to storage cannot exceed 10-15%. The target stability is the next to last tested point that was within +/- 10% of time zero.
  - Acceptance criterion may be different, depending on the test samples analyte concentration distribution in the intended use population and the risk, in other words, the impact of false results to public health.

**APPENDIX C – Claiming Multiple Instruments and/or Extraction Methods:**

If you wish to claim multiple instruments and/or extraction methods for use with your test, please review the study recommendations provided below and contact FDA for any additional feedback. Please note that these analytical and clinical evaluation recommendations are based on the assumption that the elution volumes from the extraction methods and PCR volumes on the different RT-PCR instruments are identical.

- Limit of Detection (LoD): Please note that these studies should be repeated for each clinical matrix claimed in the Intended Use. Pick one RT-PCR instrument and determine the tentative LoD (using 5 replicates in 10-fold dilution) followed by the confirmatory LoD (20 replicates spiked at tentative LoD) for each extraction method on the chosen instrument. Note: If you detect 20/20 replicates in your confirmatory LOD study you should test the next lower concentration, using a 3-fold dilution, until

AMERICAN OVERSIGHT

you achieve a hit rate of <20/20.

- If the different extraction methods yield the same LoD (≤3xLOD) on the RT-PCR instrument chosen for initial testing, pick one extraction method for further LoD determination on the remaining RT-PCR instruments and follow the recommendations below.
- If the extraction methods do not yield the same LoD on the chosen RT-PCR instrument, please choose the extraction method with the worst LoD for further comparison of the LoD on all RT-PCR instruments.

For all other RT-PCR instruments you should use the following adaptive LoD study design:

- Please perform a refined tentative LoD study with 5 replicates at 0.5x, 1x, and 1.5 to 2x LoD. If you detect 4/5 replicates as positive at all the tested levels, you need to include the next higher concentration (i.e., 3x LoD). If you obtain 5/5 replicates at 0.5x LoD, you need to test the next lower concentration (i.e., 0.25x LoD). You will test in this manner until you find the lowest concentration that gives you 5/5 positive results for the tested RT-PCR instrument. This concentration should be used for a confirmatory LoD study for the given RT-PCR instrument using 20 replicates.

Final reported LoD: Please list all RT-PCR instruments with their respective LoDs if different LoDs are obtained. LoDs are considered comparable if they are between 1-3xLoD. These studies should be repeated for each clinical matrix claimed in the Intended Use.

- Interference Substances Studies (if applicable): Pick one extraction method and RT-PCR instrument combination, preferably the one with the worst overall LoD (if one or more of the RT-PCR instruments has a different LoD).

- Inclusivity Testing: For the inclusivity testing, pick one extraction method and RT-PCR instrument combination, preferably the one with the worst overall LoD (if one or more of the RT-PCR instruments has a different LoD).

- Exclusivity Testing: For exclusivity, you can perform this study using any extraction/instrument combination.

- Clinical study: If equivalency of the RT-PCR instruments is shown in an LoD study that tests and confirms that the LoD is the same or very similar for all of the RT-PCR instruments (between 2-3xLoD), then you can pick one RT-PCR instrument for your clinical study provided that the RT-PCR instruments in question are known to FDA for other *in vitro* diagnostic devices. If you find that one or more RT-PCR instruments machines has/have a different LoD, you should pick the extraction method / RT-PCR instrument combination with the worst LoD.

Note, if there are differences in the extraction input volume, extraction elution volume

AMERICAN OVERSIGHT

and PCR input volume (extracted nucleic acid) then the LoD should be confirmed, for each.

AMERICAN OVERSIGHT

**ATTN:** Division Director: Dr. Uwe Scherf**,** OHT7-OIR/OPEQ/CDRH/FDA

**RE:** Request for Pre-Emergency Use Authorization (Pre-EUA) of the [*Name of the Assay*]

**Dear Dr. Scherf,**

[***Name of the Company***] is submitting a Pre-Emergency Use (Pre-EUA) for the [***Name of the Medical Device Product***] so we can obtain feedback from FDA concerning the studies and/or testing outlined in our Pre-Emergency Use Authorization (Pre-EUA) submission package.

The [***Name of the Medical Device Product***] is [***brief description of the device***] and [***intended use***].

Attached to this letter is the first draft of our device EUA Interactive Review Template for FDA review as a Pre-EUA. One hard copy of the signed EUA Cover Letter and one electronic copy are enclosed. Also, these documents have been sent to you via email.

In case you should have any questions regarding the information provided and/or need additional information/data from us please contact me immediately either via email [_____] or phone [_____].

Sincerely,

[***Name***]

[***Signature block***]

**Subject**: RE: 2/10/20 6 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

Enclosed the 2/10/20 6 AM update

**Status of activities on diagnostics**:

- Issue with rapid verification and implementation of CDC's 2019-nCoV Real-Time RT-PCR Diagnostic Panel in handful of public health labs:
  - CDC informed FDA yesterday afternoon that APHL has been notified that some laboratories have observed performance issues during verification testing, particularly with the N3 part of the assay showing sporadic aberrant reactivity in the negative controls. CDC is aware of these reports and is investigating.
  - Conference call with CDC has been scheduled for today 2 PM to discuss the issue and any investigation so far.

**New roadblocks/challenges/delays:**
(b) (5)

**Enclosed also the compiled activities over the weekend which have been previously communicated:**

**Status of activities on diagnostics previously reported for 2/8/20 @ 2/9/20**:

- A total of 41 IVD Developers have requested and received EUA review template, additional requests (2) are pending clarification about the device technology.

AMERICAN OVERSIGHT

- Conference call with CDC: CDC intends to add 2 additional automated extraction methods to their EUA (Roche MagNA Pure 96 and Roche MagNA Pure 24), to support larger number of State Public Health labs who are only using these instruments. DMD/CDC agreed on bridging study protocol and limited clinical sample testing to demonstrate performance. CDC expects to submit amendment in next 2 weeks.
- On 2/6/20 CDC started shipping CDC's 2019-nCoV PCR assay to 4 public health labs that are strategically located in US and to other public health labs in states with confirmed cases.
- CDC via their IRR (International Reagent Resource) is accepting orders for CDC's 2019-nCoV tests from qualified laboratories.
  - This includes 115 qualified U.S. laboratories [state & local public health labs and DoD labs]
  - 191 qualified international labs, such as the World Health Organization (WHO) Global Influenza Surveillance Response System (GISRS) laboratories.
  - CDC test will not be available in U.S. hospitals or other primary care settings.
- CDC's isolate from infected patient in Washington was shipped to BEI (Biodefense and Emerging Infections Research Resources Repository) on Wednesday (NR-52281). Additional viral Isolates from other patients in US are expected to arrive at BEI in the next 2 weeks. Isolate without inactivation is BSL-3 analyte. BEI will begin work on inactivating virus [For use in BSL-2 labs]. Generating inactivated virus will take 2-3 months.

- Phone call scheduled with FDA/BARDA/CDC on Monday to address issues regarding timeline for virus inactivation and availability of BSL-3 facilities for commercial developers.

- CDRH was contacted by (b) (5), (b) (4)
(b) (4), (b) (5)

  - Delicate intended use from the public health perspective in an outbreak situation
  - DMD is following up on actions taken towards apps during the Zika outbreak
  - DMD will contact app developer to get further information and clarification on the ap

**Subject:** Urgent - CDC EUA package received
**Importance:** High

Jeff, Denise, Anna, Tim, and Michael,

CDC just submitted their EUA package to request authorization for their 2019-Novel Coronavirus (2019-nCoV) assay. DMD staff has reviewed most of the data package already and will finish the review of the outstanding data as expeditiously as possible. I want to provide a clear update on how long that process could take and next steps once we have completed our review.
We expect that it will take us close 3-4 hours to fully review the outstanding data and prepare all the final documents for clearance in the review division. If the data is acceptable, we plan to send the EUA approval package to OCET & OCC tomorrow morning around 11 AM for final FDA clearance before it goes to Denise for authorization. We have been closely coordinating with OMA and they already have drafted a press release so that we are ready to make an announcement if an EUA can be issued tomorrow.
I will keep this group updated.

Thank you all in advance for your patience and help.

Best,

Uwe

**Subject**: Action needed tomorrow - FW: RUO coronavirus tests

**Importance**: High

Leroy,

Just spoke with Ellen. We need to call the company tomorrow and asked them to take their announcement down.

They requested an EUA template and know they need EUA authorization, so they must take these statements down.

Let's touch base tomorrow morning. Thanks, Uwe

It looks like there is another company mentioned as well in the bottom Novacyt.

**Uwe -- Did you see this? – Ellen**

7 February 2020
News
**Co-Diagnostics launches RUO test for new coronavirus**

US-based Co-Diagnostics has launched a research use only (RUO) CoPrimer test for new coronavirus (2019-nCoV).
The company launched the product just weeks after it completed principle design work for the test to address the growing need for testing designs to detect the presence of coronavirus.
To date, the coronavirus outbreak killed 638 people, with a total of 31,428 infection cases now confirmed.
The Logix Smart 2019-nCoV coronavirus test is now available for sale to laboratories, hospitals and institutions.

AMERICAN OVERSIGHT

Designed leveraging the company's CoDx Design software system, the test helps in identifying the most optimal target on the 2019-nCoV genome for a PCR assay.
Co-Diagnostics expects that the test will ensure greater accuracy in detecting the presence of the coronavirus.
Co-Diagnostics CEO Dwight Egan said: "Leveraging our proprietary design process and software has allowed us to quickly move this product from design into commercialisation, and to do so with the confidence that our high-quality product meets our goal of providing an effective, much-needed global diagnostic solution in an emergency situation."
"As a result of our rapid development, we have already received requests from customers in countries across the world to purchase tests.
"Sales and shipments of products will be fulfilled from our Utah headquarters to customers who have the capacity to utilise RUO products to slow the spread of this epidemic."
Last week, Novacyt's molecular diagnostics division Primerdesign launched a molecular RUO test for 2019-nCoV.

**Subject**: 2/12/20 6 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

Enclosed the 2/12/20 6 AM update:

**Status of activities on diagnostics**

- A total of 56 IVD Developers have requested and received EUA review template

- Held conference call with company advertising their Logix Smart 2019-nCoV Kit as an RUO test. Labeling and advertising implied diagnostic and screening testing.
- Explained RUO labeling regulation 809.10(c)(i) - and the requirement that all labeling bears the statement, prominently placed: **"For Research Use Only. Not for use in diagnostic procedures."**
- Pointed out and requested correction of specific claims and statements on their website and in news releases that implied performance and use of their device for diagnostic/screening testing.
- Firm acknowledged that they are not in compliance with RUO labeling regulation.
- Firm agreed to take immediate corrective action to resolve the identified concerns regarding the product labeling and advertising.
- Agreed on deadline for complete list of all planned action of 2/14/20.

Today **No additional updates** on activities communicated yesterday's at ~4 PM. For your convenience here the reported activity from yesterday:

**nCoV Diagnostic EUA Activity**

- Additional IVD Developers have requested and received EUA review template [(b) (4) Roche Diagnostics (Shanghai), (b) (4) , (b) (4) University of Washington (LDT)] total 40 to date, additional requests (2) are pending clarification about the device technology.

- Responded to various EUA template requestor questions regarding access to viral materials and clinical specimens

- CDRH met with (b) (4) nd determined their device was not eligible for an EUA. We encouraged a Q-sub.

**Subject:** RE: CDC and potential enforcement discretion issue

Confidential / Deliberative / Predecisional

Dear Uwe,

Jeff asked me to start drafting potential enforcement discretion language for the cut-off issue. I don't have all the facts so I need your help to fill them in. Also, I was not sure whether this had to cover both the N1 and N3, or only N1. We can have a call to discuss this matter if that would be easier. I am available at (b)(6)

Thanks,
Ellen

**Subject**: nCoA activities

Steve here some points for the report. Uwe

- A total of 56 IVD Developers have requested and received EUA review template - DMD provides interactive feedback even before pre-EUA submission.

- DMD received four pre-EUA submissions: BioFire Defense for their BioFire 2019-nCov Test, Inbios Inc. for their Smart *Detect*™ 2019-nCOV rRT-PCR kit, Roche Molecular Systems for their cobas 2019-nCoV test for use on the 6800/8800 Systems and Vela Diagnostics' for their ViroKeyTM SA201 2019-nCoV RT-PCR Test. The submissions request FDA feedback on the planned studies. DMD's review team started review and will provide responses interactively.

- CDC reported issues with test verification in 26 U.S. Public health labs that received the CDC test. These labs could not verify assay due to false positive results of the N-3 component with negative controls. CDC concluded being a manufacturing issue, re-manufactured component and will replace component. The risk to patients is low, since no patient samples have been tested at the labs who could not verify the CDC test. Further investigation of root cause under way. DMD is receiving updates when available.

- DMD held conference call with company advertising RUO product with implied diagnostic/screening claims. Firm agreed to take immediate corrective action to resolve the identified concerns regarding the product labeling and advertising.

AMERICAN OVERSIGHT

Dear Uwe,

60 – see attached

Best regards
Kim

PS this is the updated I sent OCET earlier:

**CDRH Diagnostics SITREP Friday Feb 14, 2020**

| Diagnostic Pipeline | | | |
|---|---|---|---|
| **Sponsor** | **Product** | **Regulatory Status** | **Notes** |
| CDC | CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel | EUA | |
| Inbios | Molecular DX | Pre-EUA | |
| Roche Molecular Systems | Molecular DX | Pre-EUA | |
| BioFire Defense | Molecular DX | Pre-EUA | |
| Cepheid | Molecular DX | Pre-EUA | |
| Vela Diagnostics | Molecular DX | Pre-EUA | |

- EUA template for antigen-based tests has been finalized and is being shared with IVD Developers
- Additional IVD Developers have requested and received the appropriate EUA review template (b) (5) (b) (5) total 60 to date.
- Interactions with CDC to informally discuss the proposed outline of a community transmission surveillance activity and to identify regulatory strategy options CDC can consider to ensure the surveillance activity is conducted in compliance with FDA law and regulation.

- Tri-agency Taskforce for Emergency Diagnostics had call to give agency updates on activities around EUA and Pre-EUA diagnostics.

Dear Uwe, Tamara and Li,

I think we can go ahead and close the CDC EUA – I have forwarded as many emails as it docman will let me – it is sending anything with an attachment back to me now!! I captured all the major feedback emails I think. I also included a CTS note that the document was received after the EUA was issued. The final authorized package is also uploaded in the reviewer documents.
I will not have my computer with me in Florida but I will have my work phone to monitor email – just FYI ☺
Have a good weekend
Thanks
Best regards
Kim

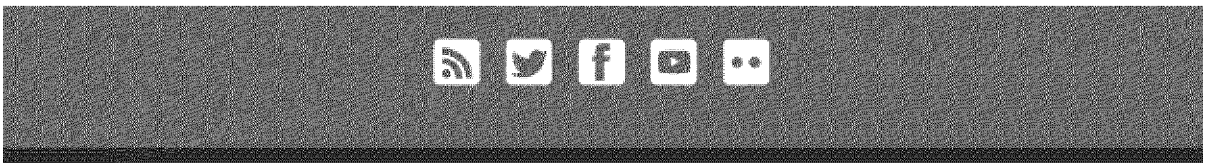
FDA U.S. FOOD & DRUG ADMINISTRATION

# FDA Takes Significant Step in Coronavirus Response Efforts, Issues Emergency Use Authorization for the First 2019 Novel Coronavirus Diagnostic



*Critical Milestone Reached in Response to this Outbreak*

AMERICAN OVERSIGHT

Today, the U.S Food and Drug Administration issued an emergency use authorization (EUA) to enable emergency use of the Centers for Disease Control and Prevention's (CDC) 2019-nCoV Real-Time RT-PCR Diagnostic Panel. To date, this test has been limited to use at CDC laboratories; today's authorization allows the use of the test at any CDC-qualified lab across the country.

**"Since this outbreak first emerged, we've been working closely with our partners across the U.S government and around the globe to expedite the development and availability of critical medical products to help end this outbreak as quickly as possible. This continues to be an evolving situation and the ability to distribute this diagnostic test to qualified labs is a critical step forward in protecting the public health," said FDA Commissioner Stephen M. Hahn, M.D. "Our collaboration with the CDC has been vital to rapidly developing and facilitating access to this diagnostic test. The FDA remains deeply committed to utilizing our regulatory tools and leveraging our technical and scientific expertise to advance the availability of critical medical products to respond to this outbreak in the most expeditious, safe and effective manner possible."**

**Subject**: 2/13/20 6 AM update - FDA ACTION REQUIRED

**Importance**: High

Jeff, Elizabeth, Ellen, Bill and Tim:

Enclosed the 2/13/20 6 AM update, a number of issues came about this afternoon:

**Status of activities on diagnostics**

- As previously reported on Monday CDC has issues with test verification in a number of labs that received the CDC test: this has now be **reported in press this afternoon**
- Initially only 10, but now 26 U.S. Public health labs out of ~100 that received the CDC test cannot verify assay due to positive results of the N-3 component with negative controls.
- CDC concluded this being a manufacturing problem.
- CDC has re-manufactured the components for the N3 portion of the assay.
- New lot passed newly established QC testing. New product will be lyophilized and send out asap.
- Further investigation of root cause under way. DMD is receiving updates when they become available.

- CDC informed FDA about their updated Patient Under Investigation (PUI) definition and footnote. The following statement was added: ***For severely ill individuals, testing can be considered when exposure history is equivocal (e.g., uncertain travel or exposure, or no known exposure) and another etiology has not been identified.***

AMERICAN OVERSIGHT

DMD agreed with this updated definition, but requested going forward to be informed ahead of time if any PUI updates are planned so FDA can provide input.

- CDC is planning several public health activities to address the SARS-CoV-2 outbreak (previously called 2019-nCoV)
- **Investigation of contacts of confirmed SARS-CoV-2 cases: FDA ACTION REQUIRED**
  - Serial respiratory specimens are being collected from close contacts of confirmed cases every other day until 14 days after the close contact's last exposure to the confirmed case.
  - **ACTION REQUIRED:** (b) (5) [redacted]
  - In the interest of public health during this outbreak with uncertainty regarding infection and transmission DMD recommend allowing the report of positive result.

- **Sentinel surveillance to detect non-travel related SARS-CoV-2 Infections in the community: FDA ACTION REQUIRED**
  - The intended use restricts testing to persons with severe illness, recent travel to China or known contact with a confirmed SARS-CoV-2 case, and precludes identification of mild illness in persons who did not travel to China.
  - Knowing whether there is community transmission without ties to travel or confirmed cases is critical to shaping future response activities including testing criteria, quarantine guidance, investigation protocols, and additional public health preparedness measures.
  - CDC communicated that they will established initially a limited number (5) of sentinel surveillance sites [and if necessary will expanded in the future].
  - Most sites will use ongoing outpatient surveillance specimens that have tested negative for influenza and other respiratory viruses.
  - CDC is currently working with the 5 initial states to determine a protocol if a positive test result is found.

**ACTION REQUIRED:** (b) (5) [redacted]

- **Study to understand the natural history of SARS-CoV-2 Infection**:
  - Serial specimens collection from confirmed cases throughout the course of infection. Information will directly inform guidance on diagnostics, infection prevention and control and the need for isolation.

- **Updated information from BEI regarding possible availability of SARS-CoV-2 genomic RNA and inactivated viruses:**
- If no issues arise genomic RNA and inactivated viruses may become available in the next 4-6 weeks
- Novel Coronavirus 2019-nCoV/USA-WA1/2020 (culture) is available now, but requires BSL-3 facility

- DMD received the (b) (4) pre-EUA submission from Vela Diagnostics' for their ViroKeyTM SA201 2019-nCoV RT-PCR Test.

**Subject:** RE: 2/10/20 6 AM update

AMERICAN OVERSIGHT

Jeff, Elizabeth, Ellen, Bill and Tim:

Enclosed the 2/10/20 6 AM update

**Status of activities on diagnostics**:

- Issue with rapid verification and implementation of CDC's 2019-nCoV Real-Time RT-PCR Diagnostic Panel in handful of public health labs:
  - CDC informed FDA yesterday afternoon that APHL has been notified that some laboratories have observed performance issues during verification testing, particularly with the N3 part of the assay showing sporadic aberrant reactivity in the negative controls. CDC is aware of these reports and is investigating.
  - Conference call with CDC has been scheduled for today 2 PM to discuss the issue and any investigation so far.

**New roadblocks/challenges/delays:**

(b) (5)

**Enclosed also the compiled activities over the weekend which have been previously communicated:**

**Status of activities on diagnostics previously reported for 2/8/20 @ 2/9/20**:

- A total of 41 IVD Developers have requested and received EUA review template, additional requests (2) are pending clarification about the device technology.
- Conference call with CDC: CDC intends to add 2 additional automated extraction methods to their EUA (Roche MagNA Pure 96 and Roche MagNA Pure 24), to support larger number of State Public Health labs who are only using these instruments. DMD/CDC agreed on bridging study protocol and limited clinical sample testing to demonstrate performance. CDC expects to submit amendment in next 2 weeks.
- On 2/6/20 CDC started shipping CDC's 2019-nCoV PCR assay to 4 public health labs that are strategically located in US and to other public health labs in states with confirmed cases.
- CDC via their IRR (International Reagent Resource) is accepting orders for CDC's 2019-nCoV tests from qualified laboratories.
  - This includes 115 qualified U.S. laboratories [state & local public health labs and DoD labs]
  - 191 qualified international labs, such as the World Health Organization (WHO) Global Influenza Surveillance Response System (GISRS) laboratories.
  - CDC test will not be available in U.S. hospitals or other primary care settings.
- CDC's isolate from infected patient in Washington was shipped to BEI (Biodefense and Emerging Infections Research Resources Repository) on Wednesday (NR-52281). Additional viral Isolates from other patients in US are expected to arrive at BEI in the next 2 weeks. Isolate without inactivation is BSL-3 analyte. BEI will begin work on inactivating virus [For use in BSL-2 labs]. Generating inactivated virus will take 2-3 months.

- Phone call scheduled with FDA/BARDA/CDC on Monday to address issues regarding timeline for virus inactivation and availability of BSL-3 facilities for commercial developers.

- CDRH was contacted by (b) (4), (b) (5)

(b) (4), (b) (5)

AMERICAN OVERSIGHT

  - Delicate intended use from the public health perspective in an outbreak situation

- DMD is following up on actions taken towards apps during the Zika outbreak
- DMD will contact app developer to get further information and clarification on the ap

**Importance:** High

Dear Jennifer, Liz, Dennis, Marcy and Michael,

Please find attached the formal EUA request package for the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel with the following documents for OCET and OCC's review and clearance:

Please find attached the EUA request package for the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel:

1) CDC Cover Letter - pdf
2) Draft EUA Letter of Authorization – with some notes for OCET/OCC – MS word
3) CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel HCP Fact Sheet – MS word

AMERICAN OVERSIGHT

4) CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Patient Fact Sheet – MS word
5) CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Labeling
a. Instructions for Use – MS word – [note CDC are having technical issues making this a pdf- will submit later – to combine with the labeling in b]
b. Product Information Sheet and Verification Requirements - pdf
6) DMD EUA Lead Memo for CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel – MS word

CDRH considers these documents as cleared.

Thank you so much for your collaboration and help getting this first EUA for 2019-nCoV authorized so expeditiously!

Best regards
Uwe

# FDA REVIEW MEMORANDUM FOR EMERGENCY USE AUTHORIZATION (EUA) OF THE CDC 2019 Novel CORONAVIRUS (2019-nCoV) REAL-TIME RT-PCR DIAGNOSTIC PANEL

## A. EXECUTIVE SUMMARY (as of 01/31/2020)

An outbreak of pneumonia caused by a novel coronavirus (2019-nCoV) in Wuhan City, Hubei Province, China was initially reported to WHO on December 31, 2019. Chinese health officials have reported thousands of infections with 2019-nCoV in China, with the virus reportedly spreading from person-to-person in many parts of that country. As of January 31, there were six confirmed cases of 2019-nCoV in the United States with one confirmed instance of person-to-person transmission. On January 31, 2020, Health and Human Services Secretary Alex M. Azar II declared a public health emergency (PHE) for the United States to aid the nation's healthcare community in responding to 2019-nCoV.

The Centers for Disease Control and Prevention (CDC) continues to closely monitor the outbreak of the 2019-nCoV. CDC has established an Incident Management System to coordinate a domestic and international public health response. As part of its response activities CDC has developed a molecular *in vitro* diagnostic test, the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel, to aid in the diagnosis of patients being evaluated with acute febrile, respiratory illness who meet the CDC clinical criteria for a 2019-nCoV patient under investigation (PUI).

AMERICAN OVERSIGHT

**RE:** Request for Pre-Emergency Use Authorization (Pre-EUA) of the BioFire 2019-nCov Test

AMERICAN OVERSIGHT

Dear Dr. Scherf,

BioFire Defense, LLC is submitting a Pre-Emergency Use (Pre-EUA) for the BioFire 2019-nCov Test to obtain feedback from FDA concerning the studies and/or testing outlined in our Pre-Emergency Use Authorization (Pre-EUA) submission package. BioFire Defense is respectfully requesting early interactive review to ensure the test plans are acceptable to the US FDA prior to testing and EUA submission. Assay design is not complete, testing has not yet been initiated, and the EUA template is in draft form (BioFire Defense proposed sections are in blue).

The U.S. Department of Defense (DoD) NGDS contract with BioFire Defense is likely to be used to support this project to pursue authorization for 2019-nCoV testing on the U.S. DoD diagnostic system of record (FilmArray 2.0). While a contract is not yet in place for this work, the U.S. DoD has requested that BioFire Defense pursue the fastest route to authorization for the BioFire 2019-nCoV Test.

**Proposed Intended Use**

BioFire 2019-nCoV Test is a nested multiplexed real-time RT-PCR test intended for the qualitative detection of nucleic acid from the 2019-nCoV in nasopharyngeal swabs in Viral Transport Media (and sputum) from individuals meeting CDC 2019-nCoV clinical criteria (e.g., clinical signs and symptoms associated with 2019-nCoV infection) in conjunction with CDC 2019-nCoV epidemiological criteria (e.g., history of residence in or travel to a geographic region with active 2019-nCoV transmission at the time of travel, or other epidemiologic criteria for which 2019-nCoV testing may be indicated). Testing is limited to laboratories certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. §263a, to perform moderate complexity tests, or by similarly qualified non-U.S. laboratories.

Attached to this letter is the first draft of our device EUA Interactive Review Template for FDA review as a Pre-EUA. Hard copies comprising this submission (including a signed hard copy of this cover letter) are listed below. An eCopy is included for this submission. **The eCopy is an exact duplicate of the paper copy.** Also, these documents have been sent to you via email.

AMERICAN OVERSIGHT

Documents comprising the submission:

001_ CoverLetter_PreEUA_BioFire_2019-nCov Test
002_Form3514
003_ EUA Template_FilmArray_2019-nCoV_Test_20200209

In case you should have any questions regarding the information provided and/or need additional information/data from us please contact me immediately either via email or phone.

Sincerely,

Cynthia Phillips, Ph.D.

**Subject:** RE: BioFire 2019-nCoV Test - Request for Interactive EUA Review

Dear Cynthia,

Thank you for the draft EUA Template for the BioFire 2019-nCoV test. We request that in addition to this email you submit this same template to our document control center as a Pre-EUA submission – I have attached a draft cover letter and the instructions are below:

Please include in your Pre-EUA submission package:

- The populated EUA Review Template draft you sent with your email
- FDA Form 3514 (https://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM080872.pdf) - under type of submission please check "other" and specify Pre-EUA.

One hard copy of the signed EUA Cover Letter and one electronic copy of you Pre-EUA submission package (including the EUA Review Template - MS word document) should be enclosed in your Pre-EUA submission to FDA.

We will review the BioFire Defense proposed section in blue in the EUA template you submitted and let you know if we have any questions.

We look forward to working with you on this submission
Best regards
Kim

**Subject:** BioFire 2019-nCoV Test - Request for Interactive EUA Review

Hello Kim,

Attached is a draft EUA Template for a BioFire 2019-nCoV Test. BioFire Defense is respectfully requesting early interactive review to ensure the test plans are acceptable to the US FDA prior to testing and EUA submission. Assay design is not complete, testing has not yet been initiated, and the EUA template is in draft form (BioFire Defense proposed sections are in blue).

Background: The US Department of Defense (DoD) NGDS contract with BioFire Defense is likely to be used to support this project to pursue authorization for 2019-nCoV testing on the US DoD diagnostic system of record (FilmArray 2.0). While a contract is not yet in place for this work, the US DoD has requested that BioFire Defense pursue the fastest route to authorization for the BioFire 2019-nCoV Test.

Please let us know if we have sent this to the right office, if you would like us to submit formally through the document mail center, if there is an updated template, whether it is possible to do this kind of interactive review, and whatever other information we need to begin. We are always available for questions. As I am rarely in my office; my cell phone (b) (6) or email are the best ways to reach me.

Thank you,
Cynthia

**Subject**: Urgent - Request to have conference call today at 4 PM

All,

I have been thinking about the pre-EUA comments to be send to the sponsor. We are getting a lot of pressure from all sides.

Sorry to interrupt your weekend, but we need to get the comments to the sponsors asap and not wait until Tuesday as I originally wanted to.

As discussed with Tamara, let have a group teleconference today at 4 PM. Tamara will send out the WebEx for the group.

We will go over the following items and any additional items identified by Anna and Himani.

**Subject**: 2/11/20 6 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

Enclosed the 2/11/20 6 AM update:

**Status of activities on diagnostics**

- DMD received the first three pre-EUA submissions: one from BioFire Defense for their BioFire 2019-nCov Test, the 2nd from Inbios Inc. for their Smart *Detect*™ 2019-nCOV rRT-PCR kit, and the 3rd from Roche Molecular Systems for their cobas 2019-nCoV test for use on the cobas 6800/8800 Systems. The submissions primarily request FDA feedback on the planned studies and only have very limited data. DMD's review team started review and will provide responses interactively.

- A total of 45 IVD Developers have requested and received EUA review template - DMD provides interactive feedback even before pre-EUA submission.

- Contacted (b) (4), (b) (5) . Received additional information, under review, follow up call scheduled for this week.

- CDC issue with verification in around 10% of labs receiving the CDC test:
- Official email on this issue received by FDA. DMD agreed to best option for immediate resolution: Manufacturing of a new primer/probe set for the N3 assay and selective N3 component replacement only. The primer/probe set of the other 2 targets of the assay did not show any false positive issues and will not be replaced.

AMERICA'S OVERSIGHT

**Recap from yesterday afternoon 3 PM:**

- FDA/BARDA/CDC call to address issues regarding timeline for virus inactivation and availability of BSL-3 facilities for commercial developers
- BEI inactivating of virus [For use in BSL-2 labs] will take 2-3 month
- Alternative option: NIH has contract with UTMB to generate live virus, UTMB timeline for growing and inactivation was communicated to NIH to be shorter [optimal case (b) (4) weeks, if complications occur (b) (4) weeks] NIH is following up with UTMB to confirm these timelines.
- (b) (5)
- (b) (5) is not a viable option

- CDC issue with verification in a some labs:
- Around 100 labs received CDC assay, 10% cannot verify assay due to N3 false positive results
- CDC concluded that the observed reactivity with the N3 part of the assay is a manufacturing issue and not a technical error in laboratories
- CDC will manufacture N3 assay component with higher QC specs. Will also contract to commercial vendor for external manufacturing
- CDC proposed N3 component replacement [not the whole test] for labs failing the verification first followed by the other lab. A false N3 signal triggers inconclusive results requiring sample to be retested at CDC in Atlanta.
- Official report on this issue will be sent to FDA today. DMD is in support of the proposal of the N3 component replacement.

**Subject:** 2/12/20 6 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

Enclosed the 2/12/20 6 AM update:

**Status of activities on diagnostics**

- A total of 56 IVD Developers have requested and received EUA review template
- Held conference call with company advertising their Logix Smart 2019-nCoV Kit as an RUO test. Labeling and advertising implied diagnostic and screening testing.

AMERICAN OVERSIGHT

- Explained RUO labeling regulation 809.10(c)(i) - and the requirement that all labeling bears the statement, prominently placed: **"For Research Use Only. Not for use in diagnostic procedures."**
- Pointed out and requested correction of specific claims and statements on their website and in news releases that implied performance and use of their device for diagnostic/screening testing.
- Firm acknowledged that they are not in compliance with RUO labeling regulation.
- Firm agreed to take immediate corrective action to resolve the identified concerns regarding the product labeling and advertising.
- Agreed on deadline for complete list of all planned action of 2/14/20.

**Subject**: 2/8/20 8 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

Enclosed the 2/8/20 8 AM update

**Status of activities on diagnostics**:

- A total of 41 IVD Developers have requested and received EUA review template, additional requests (2) are pending clarification about the device technology.
- Conference call with CDC: CDC intends to add 2 additional automated extraction methods to their EUA (Roche MagNA Pure 96 and Roche MagNA Pure 24), to support larger number of State Public Health labs who are only using these instruments. DMD/CDC agreed on bridging study protocol and limited clinical sample testing to demonstrate performance. CDC expects to submit amendment in next 2 weeks.
- On 2/6/20 CDC started shipping CDC's 2019-nCoV PCR assay to 4 public health labs that are strategically located in US and to other public health labs in states with confirmed cases.
- CDC via their IRR (International Reagent Resource) is accepting orders for CDC's 2019-nCoV tests from qualified laboratories.
  - This includes 115 qualified U.S. laboratories [state & local public health labs and DoD labs]
  - 191 qualified international labs, such as the World Health Organization (WHO) Global Influenza Surveillance Response System (GISRS) laboratories.
  - CDC test will not be available in U.S. hospitals or other primary care settings.
- CDC's isolate from infected patient in Washington was shipped to BEI (Biodefense and Emerging Infections Research Resources Repository) on Wednesday (NR-52281). Additional viral Isolates from other patients in US are expected to arrive at BEI in the next 2 weeks. Isolate without inactivation is BSL-3 analyte. BEI will begin work on inactivating virus [For use in BSL-2 labs]. Generating inactivated virus will take 2-3 months.
- Phone call scheduled with FDA/BARDA/CDC on Monday to address issues regarding timeline for virus inactivation and availability of BSL-3 facilities for commercial developers.

**Subject:** RE: Quick questions

Looks good Uwe, could you also include Heather and Julie (Marders) on the email to Jeff also. I am trying to figure out with them exactly whom we should be sending updates to now. Now this IMG group has been set up it is a bit confusing, and I know Heather and Julie are updating Jeff also. We can chat next week

**Subject:** Quick questions

Kim,

I am planning to send the following to Jeff et all this morning, do you think it is too detailed?

**Status of activities on diagnostics**:

AMERICAN OVERSIGHT

- A total of 41 IVD Developers have requested and received EUA review template, additional requests (2) are pending clarification about the device technology.
- Conference call with CDC: CDC intends to add 2 additional automated extraction methods to their EUA (Roche MagNA Pure 96 and Roche MagNA Pure 24), to support larger number of State Public Health labs who are only using these instruments. DMD/CDC agreed on bridging study protocol and limited clinical sample testing to demonstrate performance. CDC expects to submit amendment in next 2 weeks.
- On 2/6/20 CDC started shipping CDC's 2019-nCoV PCR assay to 4 public health labs that are strategically located in US and to other public health labs in states with confirmed cases.
- CDC via their IRR (International Reagent Resource) is accepting orders for CDC's 2019-nCoV tests from qualified laboratories.
  - This includes 115 qualified U.S. laboratories [state & local public health labs and DoD labs]
  - 191 qualified international labs, such as the World Health Organization (WHO) Global Influenza Surveillance Response System (GISRS) laboratories.
  - CDC test will not be available in U.S. hospitals or other primary care settings.
- CDC's isolate from infected patient in Washington was shipped to BEI (Biodefense and Emerging Infections Research Resources Repository) on Wednesday (NR-52281). Additional viral Isolates from other patients in US are expected to arrive at BEI in the next 2 weeks. Isolate without inactivation is BSL-3 analyte. BEI will begin work on inactivating virus [For use in BSL-2 labs]. Generating inactivated virus will take 2-3 months.

- Phone call scheduled with FDA/BARDA/CDC on Monday to address issues regarding timeline for virus inactivation and availability of BSL-3 facilities for commercial developers.

World Health Organization

GLOPID-R
Global Research Collaboration for Infectious Disease Preparedness

20, AVENUE APPIA – CH-1211 GENEVA 27 – SWITZERLAND – TEL CENTRAL +41 22 791 2111 – FAX CENTRAL +41 22 791 3111 – www.who.int

Uwe Scherf

Dear Uwe Scherf,

WHO R&D Blueprint

*for action to prevent epidemics:*

**Global research and innovation forum: towards a roadmap for the 2019 novel Coronavirus**
**WHO Executive Boardroom, 11-12 February 2020, Geneva, Switzerland**

On behalf of the World Health Organization (WHO), and the Global Research Collaboration for Infectious Disease Preparedness (GloPID-R), we have pleasure in inviting you, as a participant, to attend the above-mentioned 2-day in-person meeting to be held in Geneva, Switzerland, 11-12

AMERICAN OVERSIGHT

February 2020. We plan to live-stream the plenary sessions for participants unable to travel.

The purpose of the forum is to bring together a group of key experts, partners and stakeholders to finalize the development of a *roadmap for the 2019 novel Coronavirus* in order to enable the conduct of research, product development and innovation. Such a roadmap will include an analysis of current capacities and ongoing efforts in affected countries and globally, and a review of the steps that the community should take to accelerate critical research. This meeting will assess the status of research and product development to fight the 2019 novel Coronavirus epidemic; including diagnostics, therapeutics, and prophylactics products as well as regulatory, ethical, social sciences, animal health, data / sample sharing and other considerations; to align on a cross-functional strategy to advance the countermeasures necessary to treat patients and control transmission.

The forum will be structured in a series of plenary and group sessions, the three main overall objectives being to

- *enable the joint identification of the main knowledge gaps and research priorities;*
- *foster an acceleration of the generation of scientific information; and*
- *promote the development and generation of priority medical countermeasures to control the 2019-nCoV emergency, through an effective collaborative approach.*

*The main expected outcome will be to generate a concerted global research agenda, including priorities and frameworks for global coordination and implementation.*

A complete set of the background documents will be available on your arrival in Geneva. The working language of the consultation will be English.

Please find a Declaration of Interests Form which we kindly request you to complete and return, as soon as possible and upload directly to the event registration site or email eventsregistration@gatesfoundation.org with document attached prior to the meeting.

Please **register here no later than Tuesday, February 3, 2020.** If you will not be able to attend and would no longer like to receive emails please respond to this message with "decline".

Please note the following requirements for each registration:

**WHO reg:**

- Minimum of 15 min
- Create an account – then activate through email
- Cannot register with phone, must be on computer
- Need photo
- Need passport number

**DOI:**

- Be prepared to have an e-signature or print, sign, and scan the document

Should you require further details on the technical content of the consultation, please do not hesitate to contact Ms. Ximena Riveros Balta, email: lauriex@who.int. For any administrative queries related to this meeting, please contact Ms Neddy Mafunga, e-mail: mafungan@who.int or Peyton.Wall@GatesFoundation.org.

We look forward to hearing from you with regard to your participation.

AMERICAN OVERSIGHT

Yours sincerely,

| | | |

**Subject:** RE: 2/10/20 6 AM update

Thank you Uwe for the continued excellent updates. Regarding getting viral isolates into the hands of developers, for safety reasons and timeliness reasons, I like the idea of the last bullet as we discussed last week, see below:

- Discuss resource needs and timing to generate extracted nucleic acid from viral isolate. Extracted nucleic acid can be used in BSL-2 labs, if material is certified being non-infective. (b) (5) [redacted]]

AMERICAN OVERSIGHT

Of course, you are know all this, just thinking out loud. The downside of this approach may be (b) (5) [redacted]

Finally, do we have an idea of (b) (5) [redacted].

Thanks!

**Subject:** RE: 2/10/20 6 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

Enclosed the 2/10/20 6 AM update

**Status of activities on diagnostics**:

- Issue with rapid verification and implementation of CDC's 2019-nCoV Real-Time RT-PCR Diagnostic Panel in handful of public health labs:
  - CDC informed FDA yesterday afternoon that APHL has been notified that some laboratories have observed performance issues during verification testing, particularly with the N3 part of the assay showing sporadic aberrant reactivity in the negative controls. CDC is aware of these reports and is investigating.

AMERICAN OVERSIGHT

- Conference call with CDC has been scheduled for today 2 PM to discuss the issue and any investigation so far.

**New roadblocks/challenges/delays:**

(b) (5)

**Enclosed also the compiled activities over the weekend which have been previously communicated:**

**Status of activities on diagnostics previously reported for 2/8/20 @ 2/9/20**:

- A total of 41 IVD Developers have requested and received EUA review template, additional requests (2) are pending clarification about the device technology.
- Conference call with CDC: CDC intends to add 2 additional automated extraction methods to their EUA (Roche MagNA Pure 96 and Roche MagNA Pure 24), to support larger number of State Public Health labs who are only using these instruments. DMD/CDC agreed on bridging study protocol and limited clinical sample testing to demonstrate performance. CDC expects to submit amendment in next 2 weeks.
- On 2/6/20 CDC started shipping CDC's 2019-nCoV PCR assay to 4 public health labs that are strategically located in US and to other public health labs in states with confirmed cases.
- CDC via their IRR (International Reagent Resource) is accepting orders for CDC's 2019-nCoV tests from qualified laboratories.
  - This includes 115 qualified U.S. laboratories [state & local public health labs and DoD labs]
  - 191 qualified international labs, such as the World Health Organization (WHO) Global Influenza Surveillance Response System (GISRS) laboratories.
  - CDC test will not be available in U.S. hospitals or other primary care settings.
- CDC's isolate from infected patient in Washington was shipped to BEI (Biodefense and Emerging Infections Research Resources Repository) on Wednesday (NR-52281). Additional viral Isolates from other patients in US are expected to arrive at BEI in the next 2 weeks. Isolate without inactivation is BSL-3 analyte. BEI will begin work on inactivating virus [For use in BSL-2 labs]. Generating inactivated virus will take 2-3 months.

- Phone call scheduled with FDA/BARDA/CDC on Monday to address issues regarding timeline for virus inactivation and availability of BSL-3 facilities for commercial developers.

- CDRH was contacted by (b) (4), (b) (5)

(b) (4), (b) (5)

  - Delicate intended use from the public health perspective in an outbreak situation
  - DMD is following up on actions taken towards apps during the Zika outbreak
  - DMD will contact app developer to get further information and clarification on the ap

**New roadblocks/challenges/delays:**

(b) (5)

AMERICAN OVERSIGHT

- Will determine whether BEI has 'BSL-3 suites' that developers could use for evaluating their device with the viral isolate if sponsor has no access to BLS-3 lab (b) (5)
- Discuss resource needs and timing to generate extracted nucleic acid from viral isolate. Extracted nucleic acid can be used in BSL-2 labs, if material is certified being non-infective. (b) (5) (b) (5)

**Subject:** RE: Urgent - Question possible coming up tomorrow at the late panel meeting

Uwe,

This topic was discussed in the WHO meeting in Geneva I attended a couple of years ago. The main points that come up to my mind from our experience and this particular meeting are:

-Barrier 1: Perception of length/burden of regulatory process and cost. For example 510k is too "expensive" (e.g., (b) (4) especially regarding the clinical trials. For the EUA we allowed about half of the molecular samples to be contrived, but for the 510k more natural samples were needed and therefore, prospective expensive studies were necessary.
*Solutions: 1) (b) (5)

-Barrier 2: Limited ability to interact with regulatory agencies
*Solution: (b) (5)

-Barrier 2: Lack of enough samples to complete 510k requirement, especially during Ebola.
*Solutions: 1) (b) (5)

-Barrier 3: Lack of market incentive, market not big enough. After the Zika outbreak, few cases have been seen as to justify further investment of money, time, and effort to get a 510K.
*Solutions: (b) (5)

AMERICAN OVERSIGHT

-Barrier 4: Small companies, limited resources. Some companies like (b) (4) also explained to us they are a small company, reg people are limited and very busy. (b) (5)

*Solution: (b) (5)

-Barrier 5 (global): Duplicative application processes. Companies need to prepare multiple applications to different parts of the world, so they need to select sometimes where to apply.
*Solution: (b) (5)

-Barrier 6 (global): Lack of standardization amongst regulatory agencies and lack of guidance and recommendations in regulatory approval process specially outside US. Companies need to prepare different applications to different parts of the world.
*Solutions: (b) (5)

We can see what other points are presented tomorrow.

Regards,

Mayra

Hello Dr. Scherf,

I'm not sure if your group is handling the EUA requests and reviews for diagnostic tests to detect the coronavirus that the agency published the EUA notice for last week? I requested the template / information on behalf of Vela Diagnostics on Monday and have not yet gotten a reply. My development team is moving forwarding with qualification activities and we are wanting to make sure we understand what information the agency is looking for us to include upfront as we plan these activities.

Thank you for time and help. If your group aren't the ones tasked with this EUA review, can you help point me to the right group?

Sincerely,
Donald Henton

**Subject:** Meeting Today on Coronavirus

Uwe, ARC,

I have a meeting at 3 PM today on coronavirus. Can you each (Uwe and ARC) give me an update early this afternoon before the meeting on the status of the EUA and of possible shortages respectively? The Administration's focus is starting to turn to the latter so expect requests for frequent updates from several parties.

Thank you.

Jeff

**Subject:** Following-up on EUA request for coronavirus EUA template request

Hello Dr. Scherf,

I'm not sure if your group is handling the EUA requests and reviews for diagnostic tests to detect the coronavirus that the agency published the EUA notice for last week? I requested the template / information on behalf of Vela Diagnostics on Monday and have not yet gotten a reply. My development team is moving forwarding with qualification activities and we are wanting to make sure we understand what information the agency is looking for us to include upfront as we plan these activities.

Thank you for time and help. If your group aren't the ones tasked with this EUA review, can you help point me to the right group?

Sincerely,
Donald Henton

**Subject:** 2019-nCoV EUA Interactive Review Template – Molecular-based for Pre-EUA on ViroKeyTM SA201 2019-nCoV RT-PCR Test from Vela Diagnostics

Dr. Kim Sapsford-Medintz, Ph.D.,

You will find a copy of the initial Pre-EUA eCopy for the Vela Diagnostics' ViroKeyTM SA201 2019-nCoV RT-PCR Test and cover letter with questions we would like to seek FDA input on as we approach the verification and validation activities on this particular assay. I have also included the redline version of the Word document template as Eugene Wee (lead scientist) and I have gone through it.

The hardcopy is being forwarded to the document center as a Pre-EUA.

My team looks forward to your initial feedback as we refine the testing we expect to begin in roughly 10-14 days.

Sincerely,
Donald Henton

# EMERGENCY USE AUTHORIZATION (EUA)

## EUA INTERACTIVE REVIEW TEMPLATE FOR MOLECULAR-BASED SINGLE TARGET TESTS FOR 2019 NOVEL CORONAVIRUS (2019-nCoV)

## GENERAL INFORMATION ABOUT THIS TEMPLATE

- Text highlighted in yellow *[Text]* should be completed by the IVD developer (sponsor) as applicable to their specific test. Text in **bold** outlines the Food and Drug Administration (FDA) suggestions and clarifications for the sponsors' consideration when completing the required information in a specific section.

- This is a EUA interactive review template for Pre-EUA/EUA submissions concerning molecular-based single target tests for detection of 2019 Novel Coronavirus (2019-nCoV), Wuhan, China. If you are developing a multiplex molecular-based assay for the detection and differentiation of nucleic acids from a panel of microorganisms, please review Appendix A for FDA recommendations.

- This is a EUA interactive review template for Pre-EUA/EUA submissions and not a guidance document. The template is subject to change as we learn more about the 2019-nCoV disease and its risk-benefit profile. Recipients will receive notice and updated templates as they become available.

- This EUA interactive review template is an FDA internal document and any proprietary information provided within the template and during the interactive review process will remain confidential as it does in a regular FDA premarket submission.

- Feedback provided by FDA during the interactive review of your pre-EUA/EUA is subject to change as we learn more about the 2019-nCoV disease and the risk-benefit profile evolves to address unmet public health needs.

- Prior to a potential authorization FDA will require developers of molecular-based tests to assess traceability of their test to an FDA-recommended reference material panel if available at the time. Specific details about the traceability study and the FDA-recommended reference material panel will be provided by the Lead Reviewer assigned to the Pre-EUA submission once the analytical and clinical evaluation data has been reviewed and found to be acceptable.

- Please be reminded that tests for the detection of 2019-nCoV or 2019-nCoV infection must not be distributed and/or used for clinical diagnoses without premarket clearance, approval, or EUA by the FDA. Clinical samples for 2019-nCoV testing should be sent to the appropriate public health laboratories until the IVD device subject of this Pre-EUA submission has received authorization from the FDA.

- Clinical specimens may be required to support the EUA request. Furthermore, please note that applicable regulations for human subject protection do apply under the

AMERICAN OVERSIGHT

EUA. Please refer to the Clinical Evaluation section of this document for more details.

- If authorized, the EUA means that this 2019-nCoV IVD is temporarily authorized for use until the public health emergency is terminated or the EUA is revoked by the FDA.
    - FDA recommends that you consider registration and listing your EUA product once you have been issued an EUA. If this is problematic, please notify the Agency during your Pre-EUA.
    - The EUA is not a pathway to permanent marketing of your device. Therefore, we strongly recommend that you consider, in addition to an EUA, a traditional premarket submission for your IVD so that your device can still be legally marketed after termination of the emergency declaration. We recommend that you identify as soon as possible in the Pre-EUA review process any consideration of moving your product forward towards De Novo/510(k) clearance. If so some of our feedback to you may take such a long-term goal into consideration in order to prevent additional testing where it may not be needed. Therefore, please consider submitting a Pre-Submission to inquire what studies would be required for a premarket approval/ clearance of your 2019-nCoV IVD. Details on how to submit a Pre-Submission to the Agency are outlined in the FDA guidance document: *Requests for Feedback and Meetings for Medical Device Submissions: The Q-Submission Program.* [ HYPERLINK "https://www.fda.gov/regulatory-information/search-fda-guidance-documents/requests-feedback-and-meetings-medical-device-submissions-q-submission-program" ]

**Re: Pre-EUA Pre-EUA Submission Review of ViroKey™ SA201 2019-nCoV RT-PCR Test** (b) (4)

**Contents: Pre-EUA eCopy Cover Letter**
**1 Hardcopy of signature page and current draft 2019-nCoV EUA Interactive Review Template – Molecular-based**
**One USB eCopy– the eCopy is the exact duplicate of the paper copy**

Dear Dr. Kim Sapsford-Medintz, Ph.D.:

Enclosed you will find the initial Pre-EUA submission on behalf of Vela Diagnostics for it's ViroKey™ SA201 2019-nCoV RT-PCR Test (b) (4) currently under qualification as an *in vitro* diagnostic test intended for the qualitative detection of ribonucleic acids (RNA) from 2019-nCoV coronavirus in nasal swabs, nasopharyngeal swabs and serum. The test is intended as an aid to diagnose 2019-nCoV virus infection in symptomatic individuals and/or individuals who are suspected to have been exposed to the 2019-nCoV virus based on epidemiological criteria.

Please note, Vela is submitting one paper copy and one eCopy as requested following FDA's December 3, 2015 Guidance "*eCopy Program for Medical Device Submissions, Guidance for Industry and Food and Drug Administration Staff*", **and the eCopy is an exact duplicate of the paper copy.** In addition, a paper copy with the handwritten signature is attached to the electronic copy.

We have questions we would like to address during the Pre-EUA:

(b) (4)

AMERICAN OVERSIGHT

(b) (4)

This submission contains trade secret and confidential commercial information that should be protected in accordance with 21 CPR Part 20.

If you should have any questions related to the content of this submission, please contact me directly at 973-369-3578. Alternatively, please contact John Panzera at (b) (6) or via email at (b) (6)

Ms. Hutchins,

In review of your firm's website and News release statements regarding the Research Use Only (RUO) Logix Smart 2019-nCoV coronavirus test, we have some concerns regarding your firm's statements which have been made regarding this product in the context of the current HHS Emergency Use Authorization (EUA) declaration. We would request a teleconference this afternoon to discuss our concerns. We are available between the hours of 12.30pm and 3.00pm EST. Please let us know your availability for this discussion.

Sincerely,

**Leroy N. Hwang, Ph.D.**

**Subject:** RE: Public health labs report problems with coronavirus test

Ellen,
We reported about it before on Monday [on Monday they reported 10 labs] but got update today that 26 labs had problems verifying their test. This verification step is an important assessment of how the test works before it is used on clinical samples. These labs did not run any clinical samples.

CDC manufactured a new lot of their for the N3 assay component which passed their now more stringent QC criteria. CDC will send out the new reagent lot to labs in a few days.

Their root cause analysis is ongoing. We are receiving updates when they are available.

Uwe

**Public health labs report problems with coronavirus test**

By David Lim

02/12/2020 04:21 PM EST

At least 25 public health laboratories around the country say they're unable to test for cases of the coronavirus originating in Wuhan because a test kit distributed by the CDC is delivering inconclusive results.

Some labs that began doing quality checks on the test last weekend found one of three reagents in the kit was ineffective, according to Kelly Wroblewski, director of infectious diseases at the Association of Public Health Laboratories. More labs started reporting similar issues on Monday and Tuesday. None of the diagnostic kits were used to test actual clinical specimens.

The kits allow states and localities to test patients, eliminating the need to confirm cases by sending samples to the CDC's headquarters in Atlanta. CDC is developing replacement tests it can send to the labs.

"Some of the states identified some inconclusive laboratory results, but we're working closely with them to correct the issues," Nancy Messonnier, director of the CDC's Center for the National Center for Immunization and Respiratory Diseases, said Wednesday.

There are 13 confirmed cases of coronavirus in the United States with 60 other people under investigation whose samples are waiting to be tested, according to CDC. More than 44,500 cases and 1,100 deaths are confirmed in China, according to the World Health Organization.

CDC initially made 200 of the diagnostic kits available to U.S. labs last week after receiving emergency use authorization from the FDA on Feb. 4.

"Of course I hoped that this week every state would be up and running," Messonnier said. "How long will that take? I can't tell you that for sure."

A "very small number of labs" in the U.S. have successfully verified the diagnostic test, according to Wroblewski. But states will continue to send all clinical specimens to CDC headquarters in Atlanta as a "backstopping" measure, according to Messonnier.

"Although this is sort of an unfortunate development and nobody wanted to see this happen, this is why there are quality control steps in place," Wroblewski said.

**Subject:** 2019-nCoV highlights

Sara,

Attached some activities around the 2019-nCoV. Sorry for the late response. Uwe

- CDRH approved the Emergency Use Authorization (EUA) for CDC's 2019-nCoV Real-Time RT-PCR Diagnostic Panel on 2/4/2020. https://www.fda.gov/news-events/press-announcements/fda-takes-significant-step-coronavirus-response-efforts-issues-emergency-use-authorization-first

- CDC is distributing the kits to ~100 public health and DoD labs. Training and verification of the test under way. The test is also available internationally under the IRR (International Reagent Resource) program. This includes 191 qualified international laboratories, such as the World Health Organization (WHO) Global Influenza Surveillance Response System (GISRS) laboratories.

- A total of 45 IVD Developers have requested and received EUA review template - DMD provides interactive feedback even before pre-EUA submission.

- DMD received the first two pre-EUA submissions: one from BioFire Defense for their BioFire 2019-nCov Test, and the 2nd from Inbios Inc. for their Smart *Detect*™ 2019-nCOV rRT-PCR kit. The submissions are lacking performance data, but DMD's review team started review and will provide responses interactively.

- CDC's isolate from infected patient in Washington available at BEI (Biodefense and Emerging Infections Research Resources Repository) (NR-52281). Live virus isolate requires BSL-3 facility. Generating inactivated virus will take 2-3 months, so alternative options are explored with NIH and BARDA.

- Dr. Brittany Goldberg, Senior Medical Officer in DMD (b) (5)

No worries and thanks Uwe. Can be super brief, just a couple high level sentences would be fine.

Thanks!

Hello,

Please find attached the pdf and Word documents of the EUA package for CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel

AMERICAN OVERSIGHT

- Letter (Signed pdf and Word)

- Fact Sheet for Healthcare Providers (Word and pdf)
- Fact Sheet for Patients (Word and pdf)
- Instructions for Use (Word only)
- PIS and VR (pdf only)

A hard copy is being sent to CDC via UPS today.

Thanks,

Jennifer

**Subject:** CONTRATULATIONS! The CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel Emergency Use Authorization has been issued
**Importance:** High

**Congratulations!**

FDA just issued the Emergency Use Authorization for the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel.
Thanks to the tireless and extraordinary work of the DMD review team over the last weeks:

- **Kim Sapsford-Medintz**, Ph.D. *MCM EUA Team Lead,*
- **Li Li**, Lead Reviewer, Viral Respiratory & HPV Branch,
- **Brittany Goldberg**, MD, Senior Medical Officer, and
- **Tamara Feldblyum**, Ph.D. Branch Chief, Viral Respiratory & HPV Branch

and our colleagues **Jennifer Ross**, **Elizabeth Sadove**, **April Finnen**, **Michael Mair** from OCET, **Marcy Busch** and **Dennis Claire** from OCC, **Megan McSeveney** & **Angela Stark** (press office), and our senior leadership.

These have been incredible 2 weeks and words cannot describe how grateful I am for your phenomenal dedication and extraordinary hard work that made this happen. You are an exceptional team to work with unprecedented commitment to public health!

Thanks you! Thank you! Thank you!

My very kind regards,

Uwe

**Public health labs report problems with coronavirus test**

By David Lim

02/12/2020 04:21 PM EST

At least 25 public health laboratories around the country say they're unable to test for cases of the coronavirus originating in Wuhan because a test kit distributed by the CDC is delivering inconclusive results.

Some labs that began doing quality checks on the test last weekend found one of three reagents in the kit was ineffective, according to Kelly Wroblewski, director of infectious diseases at the Association of Public Health Laboratories. More labs started reporting similar issues on Monday and Tuesday. None of the diagnostic kits were used to test actual clinical specimens.

The kits allow states and localities to test patients, eliminating the need to confirm cases by sending samples to the CDC's headquarters in Atlanta. CDC is developing replacement tests it can send to the labs.

"Some of the states identified some inconclusive laboratory results, but we're working closely with them to correct the issues," Nancy Messonnier, director of the CDC's Center for the National Center for Immunization and Respiratory Diseases, said Wednesday.

There are 13 confirmed cases of coronavirus in the United States with 60 other people under investigation whose samples are waiting to be tested, according to CDC. More than 44,500 cases and 1,100 deaths are confirmed in China, according to the World Health Organization.

CDC initially made 200 of the diagnostic kits available to U.S. labs last week after receiving emergency use authorization from the FDA on Feb. 4.

"Of course I hoped that this week every state would be up and running," Messonnier said. "How long will that take? I can't tell you that for sure."

AMERICAN OVERSIGHT

A "very small number of labs" in the U.S. have successfully verified the diagnostic test, according to Wroblewski. But states will continue to send all clinical specimens to CDC headquarters in Atlanta as a "backstopping" measure, according to Messonnier.

"Although this is sort of an unfortunate development and nobody wanted to see this happen, this is why there are quality control steps in place," Wroblewski said.

**Subject:** RE: Follow up from briefing: any update on EUA test?

Michael,

Here information on the CDC issues:

- CDC initially reported on Monday about issue with test verification in a number of labs that received the CDC test: this has now be **reported in press this afternoon.** Since the assay verification failed, the labs did not use the test for any clinical sample testing
- Initially only 10, but now 26 U.S. Public health labs out of ~100 that received the CDC test cannot verify assay due to positive results of the N-3 component with negative controls.
- Upon internal investigation CDC concluded that issues is due to manufacturing problem.
- CDC has re-manufactured the components for the N3 portion of the assay.
- New lot passed newly established QC testing. New product will be lyophilized and send out shortly.
- Further investigation of root cause is under way. DMD is receiving updates when they become available.

I hope this helps.

Uwe

**Public health labs report problems with coronavirus test**

By David Lim

02/12/2020 04:21 PM EST

At least 25 public health laboratories around the country say they're unable to test for cases of the coronavirus originating in Wuhan because a test kit distributed by the CDC is delivering inconclusive results.

Some labs that began doing quality checks on the test last weekend found one of three reagents in the kit was ineffective, according to Kelly Wroblewski, director of infectious diseases at the Association of Public Health Laboratories. More labs started reporting similar issues on Monday and Tuesday. None of the diagnostic kits were used to test actual clinical specimens.

The kits allow states and localities to test patients, eliminating the need to confirm cases by sending samples to the CDC's headquarters in Atlanta. CDC is developing replacement tests it can send to the labs.

"Some of the states identified some inconclusive laboratory results, but we're working closely with them to correct the issues," Nancy Messonnier, director of the CDC's Center for the National Center for Immunization and Respiratory Diseases, said Wednesday.

There are 13 confirmed cases of coronavirus in the United States with 60 other people under investigation whose samples are waiting to be tested, according to CDC. More than 44,500 cases and 1,100 deaths are confirmed in China, according to the World Health Organization.

CDC initially made 200 of the diagnostic kits available to U.S. labs last week after receiving emergency use authorization from the FDA on Feb. 4.

"Of course I hoped that this week every state would be up and running," Messonnier said. "How long will that take? I can't tell you that for sure."

A "very small number of labs" in the U.S. have successfully verified the diagnostic test, according to Wroblewski. But states will continue to send all clinical specimens to CDC headquarters in Atlanta as a "backstopping" measure, according to Messonnier.

"Although this is sort of an unfortunate development and nobody wanted to see this happen, this is why there are quality control steps in place," Wroblewski said.

**Subject:** Clarifying request for 2019 nCoV Fraud Products Task Force

Good morning,

Over the weekend I sent a request to colleagues I typically work with on health fraud matters to help organize a nCoV task force to gather information for sharing/reporting to the IMG.

This request should have gone to the IMG leads and out to the various centers. My apologies for any trouble or confusion. Since fraud products cut across commodities and involve a variety of offices within the agency, the goal was to organize how information was reported to IMG leadership.

As we have done in the past, the fraud products task force would include representatives from various Centers/programs – CBER, CFSAN, CDER, CDRH, CVM, OCI, OCC and ORA.

I want to ensure the IMG is aware of the request and happy to clarify our intention in developing this task force.

AMERICAN OVERSIGHT

Again, sorry for any trouble/confusion.

Jason

Hi – OCC are we good with these? Thank you!

1. Today, FDA cohosted a public workshop with @MDIConline on Advancing Emergency Use Diagnostic Products Toward Full Marketing Status. Planned well before the #coronavirus outbreak, it's especially timely now. http://bit.ly/36WxpC2 **[PHOTO]**

2. The workshop explored key considerations for using real world evidence to transition EUA authorized devices to full marketing status. We're continuing our collaborative work across the public and private sector to prepare, mitigate and respond to this outbreak.

**CDC wants to distribute coronavirus diagnostic test by end of week**

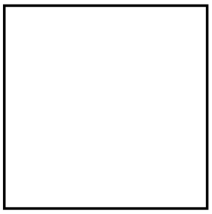
By David Lim, Sarah Owermohle

02/03/2020 02:08 PM EST

The CDC wants the FDA to quickly grant an emergency authorization to use its Wuhan coronavirus diagnostic test so it can distribute it to laboratories across the country later this week.

"The process is extremely expedited and our colleagues at FDA have been working with us closely — our plans were submitted to them today, and I expect that means we should be able to start sending them out by the end of the week barring complications," Nancy Messonnier, director of the National Center for Immunization and Respiratory Diseases, said on a press call.

For the FDA to grant emergency authorization for the test, HHS Secretary Alex Azar first must declare that circumstances exist that justify its use — a step that appears imminent after Azar declared the virus a public



AMERICAN OVERSIGHT

health emergency late last week. CDC has already sent the test to the International Reagent Resource so states can begin ordering it, according to Messonnier.

**Subject:** 2019-nCoV Launch

Dear 2019-nCoV IMG members,

Hi. First off, many thanks for all of the awesome work you have been doing to respond to the 2019-nCoV outbreak…and all of the work you will continue to do. And thank you for agreeing to be a team member on the 2019-nCoV IMG.

I would have liked to have a held a kick off meeting in person, but everyone is so busy that I thought a virtual kick off would be better for folks.

The overall over all objectives of the 2019-nCoV IMG are to:

- Facilitate internal coordination and support overall Agency activities
- Facilitate external coordination with US government partners and other stakeholders
- Promote situational awareness across the Agency
- Identify policy and resource issues for consideration by the AEG
- Facilitate timely communications

I have attached the current org chart , and we'll be updating this as members rotate in or out of the IMG, or the structure itself changes as we move forward.

We are not requesting that IMG members work from the FDA EOC, due to multiple priorities and varied locations you are free to work 'virtually'. That said, the EOC is available should co-locating there be useful for facilitating activities. Each section will determine how best to manage their respective work flow…section chiefs will work with their respective teams to optimize and manage process as works best. Our intent is to maximize efficiency.

I will add you all to the request for information for the daily FDA SITREP. So keep an eye out for that.

In addition, the AEG will be having a daily call (at least for the next few weeks) at 5:15 – 5:30 PM. Given that, I will be scheduling a daily call at 4:00-4:30 PM with IMG staff to touch base in advance of the AEG call. I will be looking to the Section Chiefs primarily to report out, but am including everyone on the invite to listen in and/or provide information as necessary. I realize how busy you all are, but please join when you can.

AMERICAN OVERSIGHT

Please do not hesitate to contact me and Tom Mignone (Deputy AIC) if there is anything that you need from us, or with ideas or concerns you have as we get up to full speed.

Thx again. - michael

**Subject:** Review requested - Tweets- coronavirus - FDA- MDIC meeting today - Advancing Emergency Use Diagnostic Products Toward Full Marketing Status

Hi all - requesting a quick concurrent review of these draft tweets for FDA's main account on today's FDA-MDIC workshop and tying it a bit to our work on coronavirus. Please review by 4:30pm today if possible. CCing a large group for awareness. Thank you all!

1. Today, FDA cohosted a public workshop with @MDIConline on Advancing Emergency Use Diagnostic Products Toward Full Marketing Status. Planned well before the #coronavirus outbreak, it's especially timely now. http://bit.ly/36WxpC2 **[PHOTO]**

2. The workshop explored key considerations for using real world evidence to transition EUA authorized device to full marketing status. We're continuing our collaborative work across the public and private sector to prepare, mitigate and respond to this outbreak.

Hello,

Please find attached the pdf and Word documents of the EUA package for CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel

- Letter (Signed pdf and Word)
- Fact Sheet for Healthcare Providers (Word and pdf)
- Fact Sheet for Patients (Word and pdf)
- Instructions for Use (Word only)
- PIS and VR (pdf only)

A hard copy is being sent to CDC via UPS today.

Thanks,

Jennifer

Maybe they are referring to plans for distribution. We are still awaiting the outstanding analytical validity data/EUA package. I called Uwe to confirm before I sent my reply email to you.

Adding Uwe for any additional clarity.

**CDC wants to distribute coronavirus diagnostic test by end of week**

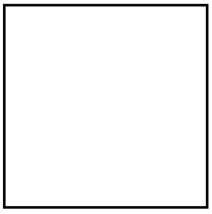
By David Lim, Sarah Owermohle

02/03/2020 02:08 PM EST

The CDC wants the FDA to quickly grant an emergency authorization to use its Wuhan coronavirus diagnostic test so it can distribute it to laboratories across the country later this week.

"The process is extremely expedited and our colleagues at FDA have been working with us closely — our plans were submitted to them today, and I expect that means we should be able to start sending them out by the end of the week barring complications," Nancy Messonnier, director of the National Center for Immunization and Respiratory Diseases, said on a press call.

For the FDA to grant emergency authorization for the test, HHS Secretary Alex Azar first must declare that circumstances exist that justify its use — a step that appears imminent after Azar declared the virus a public health emergency late last week. CDC has already sent the test to the International Reagent Resource so states



AMERICAN OVERSIGHT

can begin ordering it, according to Messonnier.

**Subject:** NSC request nCoV MCM Task Force strategy

All,

The NSC has requested the nCoV MCM Task Force's strategy for MCM development for 2019-nCoV. We propose using the attached Strategy for Zika Vaccine Development that was used in 2016 as the template for the nCoV Strategy for MCM Development. If you are all in agreement on this approach, BARDA will initiate a draft today and send to all of you for review. In parallel, we will work with NIAID and DoD to update the figures and tables in the document. If you have information or updates to incorporate, please share them with Robert and me today (they can also be incorporated in the review stage).

We are targeting Tues 2/4 at 0900 to receive all written comments from Task Force leads and their SMEs, and Wed 2/5 at 1500 to have a finalized document. To accomplish this task as efficiently as possible, we would like to have a smaller Task Force Working Group call on Monday to discuss the draft. Ideally, the Strategy Working Group will be composed of all of the Task Force leads and the SMEs that you identify as being essential to this task. Please send me the names of the 2-4 SMEs from your team whom you would like to include in the Strategy Working Group today so that I can schedule the discussion.

We apologize for the tight timeline on this request.

Best,
Christy

Dear All,

Please find attached some draft fact sheets for patients and HCP. In MERS-CoV we also had a contacts FS (for asymptomatic that had a contact risk) but didn't seem to apply to the 2019-nCoV at this time.

I also made some minor comments to the draft intended use in the attached.

Let me know if you have any questions

Best regards
Kim

**Subject:** RE: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

I have one question about the intended use:

Do you want signs and symptoms AND epidemiological risk factors or AND/OR epidemiological risks (i.e. would include people only with S&S but no epi risk)? Just checking as I work on the fact sheets. The intended use you sent said "and/or"

Thanks
Best regards
Kim

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

**Subject:** FW: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

**Subject:** RE: Regulatory discretion - Need to confirm process and next steps

Dear Uwe,
We greatly appreciate FDA's rapid review of CDC's request. CDC will send the name and address of the specific laboratory(ies) that will be performing testing to the FDA/CDRH MCM Team Lead, Kim Sapsford once locations are confirmed.

We will notify our lab team of the note below and let you know if there are any additional questions.
Thanks again -
Best,
Anita

**Subject:** RE: Regulatory discretion - Need to confirm process and next steps
**Importance:** High

Dear Anita,

FDA and CDC have been working interactively together on CDC's request for an Emergency Use Authorization (EUA) for its 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens. At this time, there is no *in vitro* diagnostic test approved, cleared or authorized for such use.

AMERICAN OVERSIGHT

On January 30th, CDC notified FDA that it would like to distribute the test to certain laboratories so that they can use the test prior to issuance of an EUA. This would help to address the significant public health concerns raised by the infectious disease at this early stage, and may help to prevent the spread of the infectious disease by addressing the high testing demands currently being faced by CDC.

We understand that CDC would like to distribute the 2019-nCoV Real-Time RT-PCR Diagnostic Panel kit, and any components, to laboratories designated by CDC as qualified and, in the United States, such laboratories will be certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests. We also understand that CDC will ask each of the state laboratories to send positive samples and (b) (5) negative samples to CDC for further validation testing.

Based on our understanding of the facts and the public health concerns at issue here – specifically, that there is currently no other test available to respond to this emergency and that CDC is actively pursuing EUA authorization – at this time, FDA does not intend to object to the distribution and use of this test as described above. We ask that you please send the name and address of the specific laboratory(ies) that will be performing testing to the FDA/CDRH MCM Team Lead, Kim Sapsford (Kim.Sapsford@fda.hhs.gov) and the Director of the Division of Microbiology Devices, Uwe Scherf (Uwe.Scherf@fda.hhs.gov).

Kind regards,
Uwe

AMERICAN OVERSIGHT

Dear Steve,

FDA agree with use of "Product Information Sheet" rather than Instructions for Use and do not have any additional comments on the box/vial labels.
Please make sure to submit the developed product information sheet as part of your labeling package with the EUA submission (should include Instructions for use, product information sheet, final box/vial labels) and make sure it includes instructions to the end user for obtaining the full Instructions for Use document.

Best regards
Kim

**Subject:** RE: EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Dear Steve,

Great thank you – we will review and discuss.
Please include Li Li (cc'd) on all communications going forward – he will be the Lead Reviewer on your submission
Is there a good tentative time for a follow-up call tomorrow that would work for CDC?

Best regards
Kim

Hi Kim,

Based on our discussion yesterday, we've made edits to the current draft for your consideration. In addition we're including an example of the in silico cross-reactivity analysis approach and would appreciate your feedback. The overall strategy would be as follows:

(b) (5)

Perhaps we can have another call once you've reviewed so that we can discuss further.

Regards,
Steve

**Subject:** EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Dear All,

Please find attached the draft CDC EUA template – I have tried to fill out as much CDC information as possible for you - based on what you have provided me so far. I suggest that we plan to touch base early next week – please let me know if there are times/days when you are not fully booked – we can accommodate on our end – and I will set something up.

Let me know if you have any questions – I will be monitoring email.
Best regards
Kim

Dear All,

Please find attached some draft fact sheets for patients and HCP. In MERS-CoV we also had a contacts FS (for asymptomatic that had a contact risk) but didn't seem to apply to the 2019-nCoV at this time.

I also made some minor comments to the draft intended use in the attached.

Let me know if you have any questions

Best regards
Kim

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

AMERICAN OVERSIGHT

I'll be online this weekend as well so don't hesitate to reach out.

**Subject:** FW: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of

AMERICAN OVERSIGHT

the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

AMERICAN OVERSIGHT

Hi Bill,

Yes, Title 42 Appointees may earn OT since they do not receive Market Pay. However, it would depend on their current salary and that would determine the # of hours they could actually work.

Uwe,

Please send your signed request to Jennifer Draper or Karen Colleli and they will verify the employee's eligibility.

Thanks

Uwe,
I am not sure that we can authorize individuals under Title 42 for OT. I have removed Anna Mielech and authorized all others on the form attached. If we get the OK for Anna, we can complete another form or add her back.

Lesa and/or Daniel, can we authorize OT for Title 42?

Bill

Uwe,
I am supportive of OT pay and would be happy to authorize. Before I can sign the form, I need the grade/step information filled in as that information determines eligibility for OT pay (i.e. certain series/grades are not eligible for OT). Therefore, I can't formally authorize it until I know the grade of the individuals for whom you are requesting OT. Looping in Lesa/Daniel. Not sure who is in the best position to quickly provide that info (OPEQ operations or OIR).
Thanks
Bill

Dear Bill,

As you have seen from the DMD updates and the information in the press, the 2019-nCoV situation has been very challenging.

Our interactive review and teleconferences indicated that CDC will send CDRH a completed EUA review template any time soon. The staff has been fabulous and supporting the program 200%. I am anticipating CDC data to be reviewed over the weekend and a complete EUA review package next week. As soon as the emergency is declared we anticipate additional documents from commercial sponsors. This work is on top of the regular review work and I feel obliged to assure appropriate compensation for my staff. Attached please find the request form for overtime for your consideration.

Thanks, Uwe

5. SPECIFIC DESCRIPTION OF TASK *(Do not use general description, i.e., "typing," "filing")*
In timely support of the current outbreak of the 2019 novel coronavirus (nCoV) regarding pre-EUA and EUA submissions from government organizations like CDC, BARDA, and DoD to expeditiously authorize diagnostics tests for the detection of nCoV via the Emergency Use Authorization Autority.

6. REASONS FOR NOT COMPLETING TASK DURING REGULAR HOURS
The urgency of the 2019-nCoV outbreak requires constant instant responses to government stakeholders and IVD developers like CDC and commercial entities. This additional work is on top of the regular regulator review under MDUFA timelines and workload exceeds what staff can provide in 40 hours of their regular working hours.

7. COMPLETED BY REQUESTING OFFICIAL *(from box 3)*
a. DO YOU ANTICIPATE THE NEED FOR OVERTIME IN SUBSEQUENT PAY PERIODS FOR THIS TASK?
☒ Yes *(If "Yes," complete 7b.)* ☐ No
b. DESCRIBE STEPS TAKEN BY REQUESTOR TO REDUCE OR AVOID FURTHER OVERTIME
Review resources from other Branches of DMD will be used, however, specialized knowledge of the EUA process of the above listed individual might be required pending progression of the 2019-nCoV outbreak in the US.

## INSTRUCTIONS FOR COMPLETING FORM FDA 211

Overtime Work (within the provisions of Federal Personnel Manual Supplement 990-1) may be authorized only by officials to whom the necessary authority has been delegated (see FDA Staff Manual Guide 1430.5). Overtime or Holiday Pay will not be paid, nor compensatory time granted, without appropriate authorization. Requests should be initiated on Form FDA 211, "Overtime, Compensatory Time, and Holiday Pay Request and Authorization," and completed as follows:

| Item | Explanation |
|---|---|
| 1-3 | Self-explanatory, to be filled out by requesting official. A requesting official can be the employee, timekeeper, Administrative Officer, or supervisor. |
| 4 | If space is required for additional names of those working overtime, another Form FDA 211 should be filled out in its entirety. If more than one form is used for the same request, the forms should be clipped so that they are processed concurrently.<br><br>Only the "requested" side of the columns should be filled out by the requesting official in item 4d.<br><br>A check mark or "x" should be placed in the appropriate column of item 4e indicating the desired compensation. |
| 5-7 | Self-explanatory, to be filled out by requesting official. |
| 8 | To be filled out by authorizing official.<br><br>After evaluation (and adjustment if necessary), the authorizing official will sign to approve or disapprove the request. If disapproved, the request is returned to the requesting official. If approved, the request is returned to the requesting official who should then forward the document to the applicable timekeepers (and Budget Officer if required).<br><br>The timekeeper will enter hours worked in the appropriate column of item 4d. Hours worked are to be based on data which the employee provides on the bi-weekly time report and cannot exceed hours "requested." If hours worked exceed hours "requested," only the authorizing official may increase the "requested" amount and must initial the modification. |

Hi Kim and Li,

I am forwarding our draft Package Insert minus performance data sections for a first look. We will forward the one-pager product information sheet once we have that draft.

I am also forwarding a list of clinical specimens that CDC has tested with the panel so far. Since this is obviously a better representation of the clinical performance than using contrived specimens, we'd would like to ask whether we could utilize this set for our clinical data.

Regards,
Steve

Dear Steve,

FDA agree with use of "Product Information Sheet" rather than Instructions for Use and do not have any additional comments on the box/vial labels.
Please make sure to submit the developed product information sheet as part of your labeling package with the EUA submission (should include Instructions for use, product information sheet, final box/vial labels) and make sure it includes instructions to the end user for obtaining the full Instructions for Use document.

Best regards
Kim

Hi Kim,

Thanks for the additional review! I revised the box label to state that there would be a "Product information sheet" rather than Instructions for Use. Will this be acceptable?

Thank you!

Regards,
Steve

Hi Kim and Li,

We are able more information regarding catlog/part numbers on our vial labels and box labels. I think on a previous response from Kim you were satisfied with these labels. We'd like to confirm that before we start printing in our manufacturing process.

Thanks!

Talk to you in just a couple of minutes.

Regards,
Steve

Dear All,

Please find attached the draft CDC EUA template – I have tried to fill out as much CDC information as possible for you - based on what you have provided me so far. I suggest that we plan to touch base early next week – please let me know if there are times/days when you are not fully booked – we can accommodate on our end – and I will set something up.

Let me know if you have any questions – I will be monitoring email.
Best regards
Kim

Dear All,

Please find attached some draft fact sheets for patients and HCP. In MERS-CoV we also had a contacts FS (for asymptomatic that had a contact risk) but didn't seem to apply to the 2019-nCoV at this time.

I also made some minor comments to the draft intended use in the attached.

Let me know if you have any questions

Best regards
Kim

Hi Kim,

AMERICAN OVERSIGHT

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come
Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/
I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064

AMERICAN OVERSIGHT

At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

Hi Kim and Li,

I am forwarding our draft Package Insert minus performance data sections for a first look. We will forward the one-pager product information sheet once we have that draft.

I am also forwarding a list of clinical specimens that CDC has tested with the panel so far. Since this is obviously a better representation of the clinical performance than using contrived specimens, we'd would like to ask whether we could utilize this set for our clinical data.

Regards,
Steve

AMERICAN OVERSIGHT

Dear Steve,

FDA agree with use of "Product Information Sheet" rather than Instructions for Use and do not have any additional comments on the box/vial labels.
Please make sure to submit the developed product information sheet as part of your labeling package with the EUA submission (should include Instructions for use, product information sheet, final box/vial labels) and make sure it includes instructions to the end user for obtaining the full Instructions for Use document.

Best regards
Kim

**Subject:** RE: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

AMERICAN OVERSIGHT

I'll be online this weekend as well so don't hesitate to reach out.

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of

AMERICAN OVERSIGHT

the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

AMERICAN OVERSIGHT

Dear All,

Please find attached some draft fact sheets for patients and HCP. In MERS-CoV we also had a contacts FS (for asymptomatic that had a contact risk) but didn't seem to apply to the 2019-nCoV at this time.

I also made some minor comments to the draft intended use in the attached.

Let me know if you have any questions

Best regards
Kim

**Subject:** RE: Regulatory discretion - Need to confirm process and next steps
**Importance:** High

Dear Anita,

FDA and CDC have been working interactively together on CDC's request for an Emergency Use Authorization (EUA) for its 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens. At this time, there is no *in vitro* diagnostic test approved, cleared or authorized for such use.

On January 30th, CDC notified FDA that it would like to distribute the test to certain laboratories so that they can use the test prior to issuance of an EUA. This would help to address the significant public health concerns raised by the infectious disease at this early stage, and may help to prevent the spread of the infectious disease by addressing the high testing demands currently being faced by CDC.

We understand that CDC would like to distribute the 2019-nCoV Real-Time RT-PCR Diagnostic Panel kit, and any components, to laboratories designated by CDC as qualified and, in the United States, such laboratories will be certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests. We also understand that CDC will ask each of the state laboratories to send positive samples and (b) (5) negative samples to CDC for further validation testing.

Based on our understanding of the facts and the public health concerns at issue here – specifically, that there is currently no other test available to respond to this emergency and that CDC is actively pursuing EUA authorization – at this time, FDA does not intend to object to the distribution and use of this test as described above. We ask that you please send the name and address of the specific laboratory(ies) that will be performing testing to the FDA/CDRH MCM Team Lead, Kim Sapsford (Kim.Sapsford@fda.hhs.gov) and the Director of the Division of Microbiology Devices, Uwe Scherf (Uwe.Scherf@fda.hhs.gov).

**Subject**: RE: draft CDC EUA template
**Attachments**: EUA CDC-2019-nCoV rRT-PCR DRAFT 27JAN2020 29JAN2020 30JAN2020 01FEB2020 CLEAN_DMD.doc; PI - CDC 2019-nCoV rRT-PCR Dx Panel_draft 31JAN20 CLEAN DMD.docx

**Importance**: High

Dear Julie,

Please find attached DMD's comments in the EUA template, looks good, we just need the LoD data. We inserted them in the clean version for ease of viewing. Once the LoD is finalized we recommend dropping the EUA template performance section into your instructions for use performance section.

We would also like to request the following limitation addition/change in the IFU:

New:

- Performance of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel has only been established in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate).

And maybe strengthen the negative results one by combining two of the current limitations with the addition in green:

- Negative results do not preclude 2019-nCoV infection and should not be used as the sole basis for treatment or other patient management decisions. Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens (types and time points) from the same patient may be necessary to detect the virus.

Julie, also when are you planning to send the complete package for CDC clearance – in parallel with our review or after we have reviewed and say it is good.

Let us know if have any questions.

Best regards
Uwe

**Subject:** draft CDC EUA template

Hi all,

Here is the latest version of the CDC EUA template. We believe that the only data set missing is the limit of detection study, which we will have for you tomorrow, likely in the afternoon. I've attached both a tracked changes version which captures all of our combined edits and a clean version from which we can work if you agree with all of our combined edits.

Please let us know if there are additional questions. We will be available all day tomorrow to discuss.

Thanks,
Julie

**Subject:** RE: Clean instruction for use and question regarding in silico analyses

Dear Julie,

Please find attached the final redline (FYI) and clean Patient and HCP facts sheets for you to send forward for CDC clearance.
In addition, below is an outline of the main items we would expect to see in the EUA request package:

- CDC Cover Letter
- EUA Template
- Labeling:
  - Final Instructions for Use/Package Insert (let us know which you choose)
  - Final Product Information Sheet
  - Final Verification Requirements
  - Final Box and Vial Labels
- Fact Sheets:

AMERICAN OVERSIGHT

- HCP Fact Sheet
- Patient Fact Sheet

- Appendix – include any line data and additional information (bioinformatic analysis) used to support the summary information in the EUA template

Let me know if you have any questions
Best regards
Kim

Hi again,

AMERICAN OVERSIGHT

I am including labeling for Human Specimen Control for use with the 2019-nCoV Real-Time RT-PCR Diagnostic Panel. This will be a material not provided in the 2019-nCoV Dx Panel but will be provided as a separate product by CDC. These drafts are edits to a currently cleared IVD HSC product for the *B. anthracis* Real-time PCR Assay. HSC is a control material used in multiple IVD-cleared and EUA assays at CDC including tests for influenza and Ebola. Please let us know if you have questions or would like to discuss further.

Thanks,
Julie

Hi Steve and Julie,

Please find attached our feedback on the draft package insert (minus the performance sections). Let us know if you have any questions.

We have looked at the spreadsheet list of clinical specimens that CDC has tested to date with the CDC 2019-nCoV real-time RT-PCR panel and have some questions about the specimens included to help us better understand the data:

- Were they collected from patients suspected of 2019-nCoV (i.e., PUI subjects)?
- How many patients are represented in this data? Are some specimens collected from the same patient tested at different times, etc.?
- Are all the positives collected from the same patient at different times – or do they represent different patients?
- Is the "result reported" column reporting the result of only the CDC 2019-nCoV real-time RT-PCR panel or does it factor in confirmatory testing (for the positive)? Note line 8, CSID 3001920918 has 2 positive PCRs and one that would be considered negative – based on a 38 Ct cut-off – should the result for this specimen therefore be inclusive or did it factor in additional testing, such as targeted sequencing?
- Have the presumptive positives been confirmed through targeted sequencing?

AMERICAN OVERSIGHT

- The negative status of a specimen collected from a PUI subject is difficult to determine – were the negative individuals confirmed positive for another respiratory disease?

DMD concluded that a contrived clinical study, as discussed on our call Friday (i.e., testing of 50 individual negative and 50 contrived individual positive samples; limited pooled samples may be acceptable to address potential individual clinical sample volume limitation), is still needed to support the EUA submission. This data set may be helpful in further supporting the specificity of the test and the different respiratory specimens you intend to claim.

Also attached are our feedback on the draft "Product Information Sheet" for your consideration.

Best Regards,
Li

Hi Kim and Li,

I am forwarding our draft Package Insert minus performance data sections for a first look. We will forward the one-pager product information sheet once we have that draft.

AMERICAN OVERSIGHT

I am also forwarding a list of clinical specimens that CDC has tested with the panel so far. Since this is obviously a better representation of the clinical performance than using contrived specimens, we'd would like to ask whether we could utilize this set for our clinical data.

Regards,
Steve

Dear Steve,

FDA agree with use of "Product Information Sheet" rather than Instructions for Use and do not have any additional comments on the box/vial labels.
Please make sure to submit the developed product information sheet as part of your labeling package with the EUA submission (should include Instructions for use, product information sheet, final box/vial labels) and make sure it includes instructions to the end user for obtaining the full Instructions for Use document.

Best regards
Kim

**Subject:** RE: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

**Subject:** FW: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

AMERICAN OVERSIGHT

Couple of reports we have been following:

- https://www.todayonline.com/singapore/wuhan-virus-suspected-cases-singapore-go-5-moh-warns-more-come

Take w/ grain of salt.

- http://outbreaknewstoday.com/novel-coronavirus-thailand-reports-2nd-confirmed-case-60660/

I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064

At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

Dear Julie, Steve and Steve,

FDA also agrees with your pre-positioning proposal to distribute tests and control to the LRN labs and public health labs before the EUA authorization.

AMERICAN OVERSIGHT

One nuance, are you also planning to provide the device outside of the US?

**Subject:** RE: EUA Template for CDC 2019-nCoV rRT-PCR - Draft

Dear Steve,

FDA agree with use of "Product Information Sheet" rather than Instructions for Use and do not have any additional comments on the box/vial labels.
Please make sure to submit the developed product information sheet as part of your labeling package with the EUA submission (should include Instructions for use, product information sheet, final box/vial labels) and make sure it includes instructions to the end user for obtaining the full Instructions for Use document.

Best regards
Kim

Hi Kim and Li,

We are able more information regarding catlog/part numbers on our vial labels and box labels. I think on a previous response from Kim you were satisfied with these labels. We'd like to confirm that before we start printing in our manufacturing process.

Thanks!

Talk to you in just a couple of minutes.

Regards,
Steve

Dear All,

Please find attached the draft CDC EUA template – I have tried to fill out as much CDC information as possible for you - based on what you have provided me so far. I suggest that we plan to touch base early next week – please let me know if there are times/days when you are not fully booked – we can accommodate on our end – and I will set something up.

Let me know if you have any questions – I will be monitoring email.
Best regards
Kim

**Subject:** RE: Update from Wuhan Municipal Health and Health Committee - 4 new cases added

Hi Kim,

To begin, we plan to use the Applied Biosystems 7500 Fast Dx Real-Time PCR System with SDS version 1.4 software and the QIAGEN EZ1 DSP Virus Kit and Buffer AVL (for off-board lysis) using both manual extraction and the QIAGEN EZ1 Advanced XL (Nucleic Acid Purification System). If the situation escalates, we will add other automated nucleic acid extraction chemistries.

I'll be online this weekend as well so don't hesitate to reach out.

Julie

I guess there was a second Thai case

- Translated w/Google translate - http://wjw.wuhan.gov.cn/front/web/showDetail/2020011809064
At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

Dear All

Couple of minor comments on the labelling.

Also in the news:
Translated w/google translate

http://wjw.wuhan.gov.cn/front/web/showDetail/2020011909074

Wuhan Municipal Health Commission | Published: 2020-01-19 00:43:34 | Hits: 2429 | Font size: Large Middle Small

At 04:00 on January 17, 2020, 4 patients were cured and discharged, with 17 new cases and no deaths.

Analysis of the epidemiological data of the previously released cases of pneumonitis infected by the new coronavirus found that some cases had no history of contact with the South China Seafood Wholesale Market. On the basis of standardizing pre-screening triage and fever diagnosis, optimized test kits were used to sample and monitor unidentified pneumonia cases for fever diagnosis and isolation in the city, and 17 new types of coronavirus positive were detected. After comprehensive research and judgment by clinical experts, 17 cases were confirmed as confirmed cases, and all were treated in Wuhan Jinyintan Hospital and related designated hospitals. Of the 17 newly diagnosed cases, 3 were severe cases. The next step will continue to carry out the detection of suspected cases in the city.

As of 24:00 on January 17, 62 cases of pneumonitis with new coronavirus infection have been reported in our city, 19 cases have been cured and discharged, 8 cases are being treated in severe cases, and 2 cases have died. The remaining patients are in stable condition. Institution receives isolation treatment. A total of 763 close contacts have been tracked, 681 medical observations have been lifted, and 82 people are still receiving medical observations. Among the close contacts, no related cases were found. Epidemiological investigations of new cases and follow-up investigations of close contacts are ongoing.

http://wjw.wuhan.gov.cn/front/web/showDetail/2020011909075

On January 17, 2020, national and provincial experts screened some cases of unexplained pneumonia that were screened by community health service centers in the city, and found and treated in various hospitals, based on their clinical manifestations, epidemiological history, and optimization. The positive results of the novel coronavirus nucleic acid detected by the subsequent detection kit were comprehensively judged, and 17 cases of pneumonia cases with new coronavirus infection were newly identified.

Of the 17 patients, 12 were males and 5 were females; 9 were under 60 years of age, 8 were 60 years of age and older, the youngest was 30 years old and the oldest was 79 years old; the onset date was before January 13, 2020; first symptoms Fever, cough, or fever with cough; 3 cases were severe, and the rest were stable. Except for 2 cases of severe illness, which was temporarily unsuitable for transfer, the remaining 15 cases had been transferred to Wuhan Jinyintan

AMERICAN OVERSIGHT

Hospital for centralized treatment.

The epidemiological investigation of 17 new cases is in-depth, and close contacts are also being tracked.

In the next step, the city will continue to expand the search scope, identify suspected cases, and conduct sampling tests.

At 04:00 on January 16, 2020, 3 patients were discharged from the hospital and no new deaths were reported. After comprehensive research and judgment on the clinical manifestations, epidemiological history, and laboratory test results of the national, provincial and municipal expert groups, 4 new cases of pneumonitis infected with new coronavirus have been added in our city. At present, the new cases have been arranged for transfer to Wuhan All cases were treated at Jinyintan Hospital. All the patients were in stable condition without critical illness. The time of onset of the cases was concentrated from January 5th to 8th. Related epidemiological investigations and search of close contacts were underway. In addition, Thailand and Japan each reported a case of pneumonia with a new coronavirus infection from Wuhan. Currently, Thai diagnosed cases are being hospitalized; Japanese diagnosed cases have been discharged. Close contacts in the country are conducting follow-up and medical observations. As of now, 45 cases of pneumonitis with new-type coronavirus infection have been reported in our city, 15 cases have been cured and discharged, 5 cases are being treated in severe cases, and 2 cases have died. A total of 763 close contacts have been tracked, 665 medical observations have been lifted, and 98 people are still receiving medical observations. Among the close contacts, no related cases were found.

**Subject:** RE: Cut-off change - lot release testing criteria

Steve,

Thank you for this information. A couple of additional questions regarding the manufacturing of the different lots at CDC:
Is there anything different in manufacturing of the lots being used at CDC headquarters and for the EUA:

1. Where they manufactured in the same room or at different locations at CDC?
2. Were there any differences in raw material?
3. Were there any changes made between the CDC headquarters lot and the EUA lot?
4. Were there an subsequent changes made for the current production of the new lot?

Also, did CDC ever test the lot used at CDC headquarters following the newly established more stringent QC testing scheme (e.g., running 288 NTC replicates on 3 samplings of N1, N2, and N3)?

Thanks,

Uwe

**Subject:** RE: Cut-off change - lot release testing criteria

Hi Uwe,
For clarification the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel consists of two separate boxes. Box #1 contains the primers and probes as described below:

**2019-nCoVEUA-01 Box #1: Primers and Probes**

| *Reagent Label* | *Part #* | *Description* | *Quantity / Tube* | *Reactions / Tube* |
|---|---|---|---|---|
| 2019-nCoV_N1 | RV202001 | 2019-nCoV_N1 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N2 | RV202002 | 2019-nCoV_N2 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| 2019-nCoV_N3 | RV202003 | 2019-nCoV_N3 Combined Primer/Probe Mix | 22.5 nmol | 1000 |
| RP | RV202004 | Human RNase P Forward Primer/Probe Mix | 22.5 nmol | 1000 |

Primer and probes from three individual boxes that were randomly selected after kit assembly were tested as presented in the powerpoint file provided earlier.

Also as requested, please find attached the QC testing process of primer/probe reagents at bulk and post-fill analysis.

We hope this helps to clarify the data presented and addresses your request.
Thank you very much.
Steve

**Subject:** RE: Cut-off change - lot release testing criteria

Dear Uwe,
Below are the summary results of our heightened NTC QC testing for the distributed lot of N1, N2 and N3 reagents.

**2019-nCoVEUA-01 Lot 20-0121 Final Kit Heightened QC (NTC Reactions)**

| Marker | Frequency | Percentage | Average Ct | Range |
|---|---|---|---|---|
| 2019-nCoV_N1 | 8/288 | 2.78% | 36.38 | 35.57-37.44 |
| 2019-nCoV_N2 | 0/288 | 0% | N/A | N/A |
| 2019-nCoV_N3 | 16/288 | 5.56% | 37.93 | 35.62-39.85 |

The attached powerpoint includes the detailed test results for your review.
We will provide a call-in number as soon as possible.
Thank you very much

AMERICAN OVERSIGHT

Dear Uwe,
Thank you for your prompt response! We will attempt to address your questions, although we may need to consult further internally to get specific information on some of the questions.

Q1: Clarify how many total lots of EUA reagents are being distributed?
(b) (4)
.

Q2: Clarify the rational why only N1 and N2 and not include N3. Provide data to justify exclusion of N3]. (b) (4)

Q3: It is FDA's understanding that this specific lot is the only lot available for testing outside CDC headquarters and that new lots to be manufactured will not be available until March, clarify whether the proposed contingent measure will be applied immediately]. (b) (4)

Please let us know if you have any additional questions.
Thank you very much!
Steve

**Subject:** RE: Cut-off change - lot release testing criteria

Hi Julie & Steve,

As a part of your efforts in investigating this reagent issue, please provide information regarding the reagent lot release testing criteria and results at the CDC for the original reagent lot, as well as the new replacement reagent lot for the N3 assay. We are particularly interested in learning how many replicates of NTC/HSC were tested during reagent release testing, and if any low level false positive results were ever observed during the lot release testing at the CDC. If low level false positive results were observed during reagent release testing at the CDC, at what frequency they were observed, and what were the Cts observed?

AMERICAN OVERSIGHT

**Subject:** RE: Cut-off change

HI Julie,

Thanks for the update. Based on FDA's internal discussion this morning we have the following additional information request:

1. The number of national and international laboratories which have received the CDC test panel.
2. Provide an update on:
   - The number of labs that have successfully verified the CDC test panel.
   - The number of labs that observed N-3 false positive results in the negative control material and therefore could not verify the assay.
   - The number of labs that observed N-1 false positive results in the negative control material.
3. Clarify whether the false positive results for N-3 and N-1 occurred in the same laboratory or were reported from different laboratories.
4. Clarify whether CDC have received any signal of false positive results for the N-2 components from any of the laboratories.
5. In regards to manufacturing sites:
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC test panel run at CDC headquarters in Atlanta.
   - Provide the name(s) and address(es) of all manufactory site(s) of test components used for the CDC issued EUA test panel distributed nationally and internationally.
   - Provide the name(s) and address(es) of manufactory site(s) that CDC intends to use for manufacturing future EUA test panel lots.

Thanks,
Uwe

**Subject:** DRAFT CDC EUA Request for Sentinel Surveillance Activities

Good morning Kim and Uwe,

Please find attached a draft EUA request submission for the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in sentinel surveillance activities. We would appreciate your review of this draft submission to ensure it contains the information and wording request necessary to support FDA's planned issuance of a second letter of authorization for the diagnostic panel to support this critical epidemiologic activity.

Please do not hesitate to reach out with questions, ideas, recommendations as you review the attached. I look forward to hearing from you.

AMERICAN OVERSIGHT

Warm regards,

Laura

CDC
CENTERS FOR DISEASE CONTROL AND PREVENTION

February 20, 2020
Stephen M. Hahn, M.D.
Commissioner
Food and Drug Administration
CDRH Document Mail Center – WO66-G609
10903 New Hampshire Avenue
Silver Spring, MD 20993

**Request for Emergency Use Authorization:**
**CDC 2019 Novel Coronavirus (nCoV) Real-Time RT-PCR Diagnostic Panel (EUA200001)**

Dear Dr. Hahn,

Please find enclosed the Centers for Disease Control and Prevention's (CDC) formal request for Emergency Use Authorization (EUA) regarding the use of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel for public health surveillance activities that do not fall within the currently authorized intended use of the assay (EUA200001). This test detects SARS-CoV-2, the virus that causes COVID-19, and is an essential tool in surveillance activities to support situational awareness, inform strategy development and guide response to COVID-19. Due to the exigent nature of this request, an electronic copy of the official submission of this EUA request is also being concurrently provided to Dr. Uwe Scherf, Director, Division of Microbiology Devices, Center for Devices and Radiological Health (CDRH) via e-mail.

CDC requests that the intended use of the assay and CDC testing guidance remain unchanged for diagnostic use of the test, as authorized in EUA. CDC asks for authorization to use the test in surveillance activities that are necessarily outside the current testing recommendations and will be used to guide future testing guidance and other response strategies.

CDC has identified an urgent need to partner with jurisdictions across the United States to perform a surveillance activity to identify possible transmission of SARS-CoV-2 among individuals without a clear epidemiologic link (contact with known cases or history of recent travel to mainland China). Thus, this testing will not be among individuals who meet the current CDC testing guidance and are therefore not included in the currently authorized populations that may be tested diagnostically with the 2019-nCoV Real-Time RT-PCR Diagnostic Panel.

Individuals tested in this sentinel surveillance to detect signals of potential community transmission of SARS-CoV-2 will include persons presenting with influenza-like illness. This sentinel surveillance activity will initially be performed in 6 health jurisdictions across the country (New York, New York; Chicago, Illinois; Seattle, Washington; San Francisco, California; Los Angeles, California; Honolulu, Hawaii), though additional jurisdictions may be added over the course of the surveillance activity.

AMERICAN OVERSIGHT

Testing with the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in support of the sentinel surveillance activity will be conducted according to the FDA-authorized instructions for use and will include all repeat testing and confirmatory testing recommended for diagnostic testing. Testing over the course of the sentinel surveillance activity will be performed at CDC and at public health laboratories. Samples tested by public health laboratories will be forwarded to CDC for additional testing as outlined in the authorized instructions for use.

As CDC continues to investigate this outbreak, the use of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in surveillance activities within the United States is imperative. CDC anticipates that this sentinel surveillance activity will be but one of the surveillance activities needed to support our understanding of the COVID-19 threat and to guide our decision-making over the course of this response effort.

At this time, there are no adequate, approved (cleared), and available alternative tools that can detect SARS-CoV-2 during the acute phase of infection in the United States. Therefore, CDC requests this EUA to allow use of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel to support critical surveillance activities within the U.S. public health system by providing a rapid diagnostic tool to qualified laboratories for the detection of RNA from 2019-nCoV in surveillance samples. Authorization of use of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel for surveillance meets an unmet need of providing qualified laboratories a rapid diagnostic tool for evaluation of specimens from patients in the acute phase of infection during this public health emergency.

Please find enclosed CDC's guidance to participating jurisdictions for conduct of the sentinel surveillance activity, and an assessment of known and potential benefits and risks associated with the surveillance activity.

If you have any questions regarding this submission, please contact:

# Guidance for Conducting Sentinel Surveillance to Detect Signals of Potential Community Trans mission of SARS-CoV-2

February 21, 2020

## Background

The Centers for Disease Control and Prevention (CDC) and state and local health departments are responding to an outbreak of respiratory disease termed coronavirus disease 2019 (COVID-19) that was first detected in Wuhan City, China in December of 2019. The virus, termed severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), has since spread to many other countries, including the United States. Current strategies for preventing the spread of infection include rapid detection and isolation of cases and tracing and monitoring their close contacts for signs of illness.

If community transmission of SARS-CoV-2 were occurring in the US, the only way to detect it would be to test patients without a known exposure. Because mild disease appears to be common with COVID-19, initial cases reflecting local community transmission are likely to be mild. However, current recommendations for who to test for SARS-CoV-2 in the US rely on a case definition that includes specific clinical (fever and signs of lower respiratory tract infection) and exposure criteria (recent travel to China or close contact with a known infected person). Adherence to this definition precludes identification of persons with mild illness who do not have a travel history or exposure to a known case. Detecting community transmission by testing individuals who do not meet current testing criteria is critical for shaping future response activities including testing criteria, quarantine guidance, investigation protocols, and additional public health preparedness measures. Most critically, results of sentinel surveillance will guide decisions on whether the national public health approach should shift from an aggressive containment strategy (e.g., use of quarantine for all contacts) to one focusing on pandemic preparation and mitigation (e.g., protecting health care workers by employing universal infection control precautions in health care facilities for all cases of fever and respiratory illness, recommending that mildly ill individuals stay home to prevent wider transmission, focusing on prioritizing healthcare resources on those most critically ill and consideration of community mitigation measures such as social distancing).

## Objective

Conduct sentinel surveillance at select sites to determine if unrecognized community transmission of SARS-CoV-2 is occurring.

## Methods

### *Surveillance populations*

To identify evidence of community transmission, we propose setting up sentinel systems in some local United States jurisdictions with early COVID-19 cases or communities with large numbers of travelers from places where transmission is occurring to obtain respiratory specimens for SARS-CoV-2 testing in patients who deny recent travel history to China or direct contact with a COVID-19 case. To start, we propose establishing this "sentinel" surveillance at six sites: Los Angeles and San Francisco, California; Seattle, Washington; Chicago, Illinois; New York City, New York; and Honolulu, Hawaii. Additional sites may be added as testing capacity increases.

Under sentinel surveillance, each jurisdiction will prospectively obtain respiratory specimens collected from participants with fever and upper or lower respiratory symptoms who are presenting for clinical

AMERICAN OVERSIGHT

care. Some sites may choose to do this using an existing surveillance system for influenza or other respiratory viral diseases, while other sites may set up a system specifically for COVID-19 community transmission.

Each jurisdiction will determine the best source of specimens based on the predicted likelihood of detecting SARS-CoV-2. Some considerations for selection include:

1. Population served: To increase the likelihood of detecting SARS-CoV-2 if it is circulating in the US, facilities or laboratories serving populations with frequent travel from areas where transmission of SARS-CoV-2 is occurring should ideally be targeted.
2. Healthcare setting: Current clinical criteria for testing includes the presence of lower respiratory tract illness. Outpatient settings offer the opportunity to widen the scope of testing by including persons with milder respiratory infections. Other settings, including emergency department and hospital settings, are also acceptable alternatives since persons meeting the clinical criteria in those settings may not be tested because they do not meet exposure criteria (i.e. travel to China or close contact with a known case).
3. Specimens negative for other respiratory pathogens: Specimens with the highest yield may be those that are negative for influenza and other respiratory pathogens. Identification of an alternative (non-COVID-19) explanation for a person's respiratory illness may make COVID-19 detection in the specimen less likely, with the recognition that co-infections may occur.
4. Age group: While most reported COVID-19 cases have occurred in adults and there have been no cases detected in US children, it is possible that younger populations manifest more mild symptoms that would not be detected under current testing criteria. It is therefore recommended that sentinel surveillance include both children and adults.
5. Identification of persons tested: Since current recommendations include isolation of patients who have COVID-19 as well as contact tracing of close contacts, specimens will be obtained from persons who can be contacted for follow-up of a positive test (see **Follow-up of persons with SARS-CoV-2 detections** below).

Examples of how surveillance will be conducted at select sites are outlined below. Additional sites will follow similar surveillance procedures.

- Los Angeles, California: LA County DPH will conduct sentinel surveillance in the San Gabriel Valley region of LA County, which has a population of 1.35 million people and comprises 8 of the 10 cities with the highest proportion of Chinese immigrants in the U.S. We approached 10 hospitals in this region and identified 3 hospitals that conducted rapid influenza testing by using a viral transport media that is compatible with SARS-CoV-2 testing. These hospitals agreed to send to LA County DPH swab specimen that test negative for influenza. One of the hospitals (178-bed capacity) indicated that they are currently conducting an average of 40 rapid influenza tests daily, of which approximately 30% are positive for influenza. Therefore, we expect to receive approximately 25 swabs/day for testing at LA County DPH public health lab. Further, the hospital indicated that 95% of the rapid influenza tests are conducted in the Emergency Department.

AMERICAN OVERSIGHT

FDA-CVD-SCHERFU-00017593.0002 FDACDRH-p8-AO-001410
MULTI-HHS-20-0522-B, 20-0523-A-002339

- New York City, New York: In Phase I (CDC lab performs all testing), NYC will seek to work with up to 3 outpatient facilities operated by Charles B Wang Community Health Centers (CBWCHC). These centers are located in two communities with a high proportion of Chinese language speakers: 1 adult center and 1 pediatric center in lower Manhattan (Chinatown) and 1 combination adult and pediatric center in Flushing, Queens. Since the specimen number is capped at 50 per city per week we will aim to collect 25 specimens per borough per week. The New York City Department of Health and Mental Hygiene (DOHMH) plans to station staff at each location to facilitate data collection, specimen collection, tracking, accessioning, and transport. Any patient who denies international travel in the 2 weeks before illness onset AND tests negative for influenza, and is well enough to be sent home, will be offered coronavirus testing. Because these centers use rapid influenza test kits, new swabs will need to be collected. DOHMH will supply the center with appropriate swabs and viral transport media. Providers will be asked to inform the patients of the plans to test them for COVID-19 as part of the general consent process for their medical evaluation, as well as inform them that if positive, they will be asked to self-isolate at home until 10 days after symptoms resolve. Patients will be able to opt out. At the time of specimen collection, DOHMH will collect additional information from patients on clinical symptoms and illness onset, recent travel (in the preceding 2 weeks) and occupation. To facilitate transport to CDC, specimens will be collected Mondays, Tuesdays, and Wednesdays including evening hours as per the center's schedules and will be transported to PHL and shipped to CDC either once or twice per week. DOHMH staff will be on site at the health centers to facilitate specimen and data collection. In the likely case that we pursue identified testing, positive and negative results will be returned to the provider. Positive results will prompt a rapid case investigation by DOHMH to reconfirm absence of travel history or known epidemiological links. In this scenario, we propose to isolate patients at home who have tested positive until 10 days after their illness resolves. Close contacts (household, intimate partners) will be identified BUT not placed in quarantine or home monitoring. Close contacts of cases who are confirmed with COVID-19 will be monitored daily and medically evaluated should they develop symptoms. The project will be presented to the DOHMH Institutional Review Board for review and request for exemption as public health surveillance. Once the CDC EUA is available to the NYC Public Health Laboratory, if there is still a need to document community transmission (i.e., if this has not yet been established), we would expand to additional sites including acute care settings, such as emergency departments serving these same areas of the city.

***Collection, shipping and testing of specimens***

Acceptable specimens include nasopharyngeal (NP) (preferred) or oropharyngeal (OP) that are collected with synthetic fiber swabs with plastic shafts. To maximize the number of persons tested, only one specimen should be collected per patient. Calcium alginate swabs or swabs with wooden shafts should not be used since they contain substances that inactivate some viruses. Place swabs immediately into sterile tubes containing 2-3 ml of viral transport media. Respiratory specimens should be transported in accordance with CDC guidance: https://www.cdc.gov/coronavirus/2019-nCoV/lab/guidelines-clinical-specimens.html.

AMERICAN OVERSIGHT

FDA-CVD-SCHERFU-00017593.0002 FDACDRH-p8-AO-001411
MULTI-HHS-20-0522-B, 20-0523-A-002340

**Guidance for Conducting Sentinel Surveillance to Detect Signals of Potential Community Trans mission of SARS-CoV-2**

February 21, 2020

Specimens will need to be labelled so they are distinguished from specimens obtained from persons under investigations (PUIs). The labeling convention for sentinel surveillance will be "SURV-state abbreviation—unique number" (e.g. SURV-WA-001).

Specimens being tested at CDC should be shipped to:

**ATTN: STAT LAB**
**c/o Steve Lindstrom, Shifaq Kamili (Unit 84)**
**Respiratory Viruses Diagnostic Laboratory / DVD**
**Centers for Disease Control and Prevention**
**1600 Clifton Road, NE**
**Atlanta, Georgia, 30333**
**Telephone: 404-639-1587**

Please email completed shipping logs to dsrstat@cdc.gov when the shipment is in route.

The respiratory specimens will be tested for SARS-CoV-2 using CDC's 2019-Novel Coronavirus Real-Time Reverse Transcriptase-PCR Diagnostic Panel that was authorized for use by the Food and Drug Administration under an Emergency Use Authorization (EUA) on February 4, 2020. It is intended for use with upper and lower respiratory specimens collected from persons who meet specified clinical and epidemiological criteria for testing. CDC will submit a new EUA request to conduct the surveillance activity outlined in this guidance. The specimens will be tested at CDC or at a public health laboratory designated by CDC as qualified and certified under the Clinical laboratory Improvement Amendments (CLIA) to perform high-complexity testing. Under current guidance, persons who test positive for SARS-CoV-2 would be identified, the positive result confirmed by CDC, and appropriate public health action would be pursued (see **Follow-up of persons with SARS-CoV-2 detections** below).

The table below shows the number of specimens that would need to be tested in order to detect one SARS-CoV-2 infection given the specified community prevalence and level of confidence. The number of specimens tested will depend in part on the availability of test kits. While CDC is doing all testing, we anticipate testing ~50 specimens a week per site (300 total specimens). Once kits are available at public health laboratories, we anticipate that each site would have enough assay reagents to test ~200 specimens a week.

| Prevalence of nCoV to detect | Confidence level | # of specimens needed to test to identify 1 nCoV positive | Approx. # of nCoV kits needed** |
|---|---|---|---|
| 0.50% | 95% | 598 | 1 kit |
| 1.00% | 95% | 299 | .5 kit |

** Assumes each kit can test 700-800 specimens using a full plate.

***Follow-up of persons with SARS-CoV-2 detections***

Current CDC guidance recommends that persons with confirmed SARS-CoV-2 infection should be isolated either in a healthcare facility or at home depending on their clinical management requirements. Isolation is also recommended if the initial test is indeterminate at CDC or if the test is positive or

AMERICAN OVERSIGHT

indeterminate at a public health laboratory pending results of the confirmatory test at CDC. There are infection prevention and control recommendations for healthcare settings https://www.cdc.gov/coronavirus/2019-nCoV/hcp/infection-control.html and home settings (https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-home-care.html). Additionally, contact tracing and risk assessments of contacts should be initiated as soon as possible after identification of the positive result. Guidance for risk assessment and public health management of persons with potential exposure to SARS-CoV-2 can be found at: https://www.cdc.gov/coronavirus/2019-ncov/php/risk-assessment.html. Isolation and risk assessment guidance may change based on changes to patterns of SARS-CoV-2 circulation identified by sentinel surveillance or other means.

***Considerations for when current containment strategies may change based on results of sentinel surveillance***

The purpose of this surveillance activity is to determine if SARS-CoV-2 viruses are circulating in the community among persons with no exposures known to be associated with infection. If cases are detected in this surveillance that can't be linked to a known exposure, this information will help inform local and national decisions on measures to limit spread of the virus, including shifting the public health response focus to be more aligned with mitigation of a potential pandemic. A framework for this decision process is being developed by CDC in parallel with this surveillance system, and will be discussed with collaborators before the start of surveillance.

***Data collection and analysis***

Data collected will include basic demographics of the person tested (age and sex), county and state where testing occurred, setting where test was done (outpatient clinic, emergency department, hospital), date of specimen collection and result of SARS-CoV-2 testing. Only these data will be shared with CDC through a secured data transmission pathway. Health departments will also collect the hospital/facility name and person's name and contact information so appropriate follow-up of a positive test result can occur. These data will not be shared with CDC. Data will be presented in aggregate as the proportion of patients who test positive out of those tested, stratified by location, age and sex. CDC will only receive de-identified data individual or aggregated data.

**Human subjects considerations**

The activities under this protocol are part of public health surveillance and not considered research by CDC. Individual sites may have different determinations. The specimens obtained will be collected as part of routine clinical care or as a result of enrollment in another study. However, specimens will be identifiable to site staff since finding a positive SARS-CoV-2 result does have implications for clinical management of the patient. Therefore, it is recommended that the protocols for each participating site include patient consent or notification (and documentation in the medical record) that SARS-CoV-2 testing is being done prior to specimen collection. An example of the notification sheet is included in Appendix A.

**Communication plan**

AMERICAN OVERSIGHT

**Guidance for Conducting Sentinel Surveillance to Detect Signals of Potential Community Trans mission of SARS-CoV-2**

February 21, 2020

In preparation for the possibility that community cases not linked to travel will be identified through this sentinel surveillance, CDC and sites are developing a communication plan. It will outline for the public how surveillance is being conducted, how numbers of positives may translate into unrecognized cases in the communities where surveillance is being conducted and how containment or mitigation strategies may change as a result of the findings.

**Appendix A**

The *[State Department of Health]* and the Centers for Disease Control and Prevention (CDC) are closely monitoring an outbreak of respiratory disease caused by a novel (new) coronavirus. Some person-to-person spread of this virus outside China has been detected. In the United States, no ongoing community spread of the virus has been found. Because of your symptoms today, we would like to test to see if you (or your child) have an infection caused by this new coronavirus. Results from this test could help identify spread of the virus in the community.

A healthcare worker will use a sterile cotton-tipped swab to reach gently through your nostril (your child's nostril) to swab the inside of the back of your (your child's) nose. The swab will be sent to a public health laboratory. You (your child) may experience some temporary discomfort from the swab. If the test is positive, you might be asked to restrict your (your child's) movement. This may mean that you ( your child) would need to stay away from other people until the infection has cleared. Only the persons conducting this investigation and the state or local health department will know about your personal (and your child's) information or the results of testing. Beyond this, your name (and your child's name) will be kept private and will not be shared.

There are currently no plans for future use of your laboratory specimens but it is possible the information will be used in future public health investigations. However, these will NOT include genetic analysis.

If you have any questions you can contact *[DPH contact info?]*

Assessment of Benefits and Risks:

CDC has considered both the risks and benefits of conducting sentinel surveillance for detection of local transmission of SARS-CoV-2. The positive and negative impact to study participants, to the communities selected for testing, and to national emergency response activities are summarized below. CDC has determined the benefits of this surveillance activity outweigh the known and potential risks.

| Benefits | |
|---|---|
| Surveillance Participants | • If positive for the presence of SARS-CoV-2 RNA, the participant will know a potential cause of their symptoms/illness<br>• Individuals who test positive will have access to appropriate medical care<br>• Knowledge of infection could allow action to be taken to limit transmission to others, aid in identification of contacts who may have been exposed, and allow for early intervention in illness among contacts |
| Communities | • Health care providers would know their risk of exposure and could be actively monitored for signs of illness<br>• Identification of the presence of new chains of transmission could help limit spread<br>• Local public health authorities could assess the risk of spread and provide appropriate guidance to the public |
| National Emergency Response | Knowledge of local transmission allows for:<br>• more accurate situational awareness<br>• better prioritization of health care resources to the most critically ill<br>• better-informed decisions on national public health approach and the most appropriate strategies for detection and mitigation of further transmission |
| Risks | |
| Surveillance Participants | • Positive or indeterminate test results would require isolation of individuals and negatively impact work and home life<br>• Individuals isolated following indeterminate or positive results could encounter stigmatization |

AMERICAN OVERSIGHT

| | |
|---|---|
| Communities | • Health care professionals providing care to identified cases could face immediate furlough, resulting in potential loss of pay<br>• Communities in which local transmission has been identified could face stigmatization<br>• Sampling may fail to identify transmission occurring |
| National Emergency Response | • Media coverage of positive individuals in a community could result in panic and decreased participation in ongoing surveillance studies<br>• Sampling may not reveal an accurate picture of actual transmission of SARS-CoV-2 in the US |
| Conclusions:<br>Do the probable benefits outweigh the probable risks? | |
| CDC believes that the benefit of these surveillance activities outweighs the risk, and awareness of these risks will help CDC mitigate their effect through communication and coordination with jurisdictions performing surveillance. | |

I had a number of edits and questions regarding the BR assessment provided by CDC, but I think they can be easily and quickly resolved. I wrote some proposed language as answers to many of my questions to try and speed this along.

I quickly read the other documents, but did not comment. Would you like me to comment on those as well? I didn't see anything egregious, but my read-through was admittedly very quick.

**Subject:** DRAFT CDC EUA Request for Sentinel Surveillance Activities

Good morning Kim and Uwe,

Please find attached a draft EUA request submission for the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in sentinel surveillance activities. We would appreciate your review of this draft submission to ensure it contains the information and wording request necessary to support FDA's planned issuance of a second letter of authorization for the diagnostic panel to support this critical epidemiologic activity.

Please do not hesitate to reach out with questions, ideas, recommendations as you review the attached. I look forward to hearing from you.

Warm regards,
Laura

Dear Laura,

Attached please find the following documents you submitted on February 21, 2020 to support the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in surveillance activities. These documents have been reviewed and edited by FDA's OCET and OCC.

1. Draft COVID-19 sentinel surveillance
2. Draft SARS-CoV-2 surveillance risk benefit
3. Draft CDC Surveillance EUA Request Cover letter

Please do not hesitate to reach out to me with questions.

**Importance:** High

Hi Team,

I just heard from Jeff. We have to get these documents cleaned up and back to CDC ASAP, per direction of the FDA Commissioner and the CDC Director.

(b) (5)

So that CDC can get moving right away, FDA/CDRH will be granting enforcement discretion to CDC to begin prior to approval of the EUA but note that an EUA must be submitted and approved. I will draft that language.

Thanks,
Ellen

**Subject:** DRAFT CDC EUA Request for Sentinel Surveillance Activities

Good morning Kim and Uwe,

Please find attached a draft EUA request submission for the use of the FDA-authorized CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel in sentinel surveillance activities. We would appreciate your review of this draft submission to ensure it contains the information and wording request necessary to support FDA's planned issuance of a second letter of authorization for the diagnostic panel to support this critical epidemiologic activity.

AMERICAN OVERSIGHT

Please do not hesitate to reach out with questions, ideas, recommendations as you review the attached. I look forward to hearing from you.

Warm regards,

Laura

AMERICAN OVERSIGHT

Hi Dr. Sapsford-Medintz, I'm a medical device market analyst working with MedTech Strategist's publication for the global device regulatory, reimbursement and market access space, called *Market Pathways*. I saw this great presentation online that you gave in October 2018 re: the Zika virus - https://www.medicalcountermeasures.gov/BARDA/Documents/BID2018_Presentations/Sapsford%20FDA%20EUA%20%20Zika%20BID18.pdf.

I was hoping I could schedule a few minutes of your time this week for a call to discuss FDA's emergency use authorization, and how this might apply to diagnostics that address the coronavirus outbreak?

Thank you so much in advance for your time and assistance!

Best,
Tracy

**Subject:** 2019-nCoV 1/30/20 6 AM update

Jeff, Elizabeth Ellen, Bill and Tim,

1/30/20 6 AM update

**Status of activities on diagnostics**:

- Update on use of (b)(5) provision under section (b)(5)
  - (b)(5) (b)(5)
  - CDRH/OCET/OCC are drafting email to communicate use of enforcement discretion to allow distribution and limited testing
- Interactive review with CDC continues
  - Intended use and Contact Fact Sheet were discussed
  - Outstanding clinical data received late yesterday
  - Indication for Use updated and finalized
- Bioinformatic analysis to predict cross-reactivity of cleared respiratory panels to 2019-nCoV:
  - BireFire/BioMérieux and GenMark DX: analysis completed, technical note posted - no cross-reactivity predicted
  - FDA landing webpage's link to sponsor's technical note in preparation
- Additional IVD Developers, Thermo Fisher Scientific, (b) (4), (b) (5), Roche Molecular Systems Inc., Primer Design, have requested and received EUA review template. Now 14 total.
- Provided technical accuracies feedback on coronavirus briefing points for Denise Hinton ahead of E&C subcommittee briefing 1/30/20

**New roadblocks/challenges/delays:**

- Need clarification on negative clinical samples tested by CDC - data received late yesterday.

**Summary of sponsors requested and received review template:**

- Altona Diagnostics (1/17/20)
- Inbios International (1/23/20)

AMERICAN OVERSIGHT

- Quest Diagnostics (1/24/20)
- Quidel (1/25/20)

**Subject**: FW: Follow-up for EUA for nCoV

All,

See below, it look like Quidel has a TR-PCR in late stage development that does not cross-react with SARS nor with MERS, does not react with influenza A and B isolates, RSV, hMPV, Adenoviruses, parainfluenza, and other respiratory viruses and bacteria, BUT from the bioinformatics analysis seems to detect SARS and 2019-nCoV, both being SARS like viruses.

Will discuss tomorrow whether such an approach is good enough for an EUA, or whether we need a 2019-nCoV specific primer and probe signal.

Uwe

**Subject**: Rosemary's request

Kim,

I drafted some point for Rosemary which we can send tomorrow. Any additional points that come to your mind? I am fine with the goals.

Thanks, Uwe

**Subject:** USG Strategy needed for Diagnostics 2019-nCoV

CoV Dx Team,
I have been asked to coordinate the drafting of a USG strategy for CoV diagnostics, this will be used to brief up, including possibly to the NSC. Some of you will remember we had to do this for Zika in 2016. As expected , turn around is short, expectation is to have this ready early next week. Vaccine and Therapeutics groups are doing same, it is my understanding that everything will be vetted and approved through the official 2019-nCoV MCM Task Force that includes senior representative from every agency.

Using what we did for Zika as a template, I have started drafting, and will share draft later today, but wanted to give you a heads up so you can start working.
To speed things along, I ask:
1. Review the proposed goals below – are these acceptable – please suggest edits/revisions. Send your input back today - just at the WG level now, vetting with leadership will come later.
2. Please provide by ~~Monday morning~~ COB today a draft brief summary of what you are currently doing, and what you plan to do if funding is made available.
Current activities
- Developed pre-EUA Review template for nucleic acids available by request under CDRH-EUA-Templates@fda.hhs.gov
- Provided template to 19 IVD sponsors
- Interactive review of pre-EUA submitted by sponsors
- Proactive drafting of documents requires for EUA authorization (e.g., Letter of Authorization, Fact sheet for HCP & Patients)
- Requested cross-reactivity prediction assessment of sponsors with cleared devices with respiratory devices
- Establishing LOINC codes for 2019-nCoV molecular tests to advance outbreak surveillance through advanced data interoperability

Plan if funding is available
- Development of reference material for traceability purposes
-

3. Please provide ~~Monday morning~~ COB today by a list of any key challenges (other than access to samples/viruses) that you think need to be highlighted.
- Development of reference material for traceability purposes
- Develop material for verification purposes

AMERICAN OVERSIGHT

**Proposed goals:**

Leveraging individual federal agency roles and expertise, USG interagency collaborative efforts are underway to achieve the following 2019-nCov diagnostic strategic goals:

- Expand 2019-nCoV testing capacity by providing the CDC Real-Time RT-PCR Assay for Detection 2019-Novel Coronavirus under EUA to public health and DoD laboratories.
- Rapidly advance the development of specific and sensitive commercial molecular assays to detect 2019-nCoV in clinical samples for use in the U.S. under EUA, and outside the U.S.
- Advance the development of pan-coronavirus assays that can also differentiate known human coronaviruses (2019-nCoV, MERS-CoV, SARS-CoV, CoV 229E, CoV OC43, CoV NL63, and CoV HKU1) in clinical specimens.
- Identify, collect, produce, and distribute necessary development reagents and materials including viruses, antigens, clinical samples and reference panels for test validation.
- Define and communicate to developers the FDA regulatory pathways for development, approval or clearance, and emergency use of coronavirus assays.

**Subject**: 2019-nCoV update

Steve,

Here the update
**Division of Microbiology**:

- **has been proactively coordinating with CDC on diagnostic activities** and held Teleconferences with **CDC on Jan 8, 15, and 17, 21**, 2020.

- **CDRH/DMD finalized** an **EUA Interactive Review Template** specific for Molecular-based technologies detecting the 2019-nCoV. The objective is to share this document with IVD developers to proactively communicate the required data and expedite the regulatory process. The template was shared with CDC on 1/20/20.

- **DMD** is **currently working interactively** with **CDC to complete the data information needed to support an EUA request to FDA**.

- CDC will submit an EUA package to **facilitate distribution of the test** within the **Laboratory Response Network**.

- **As of 1/23/2020 one** other **IVD developers, Altona Diagnostics** has **requested** and **received** the Interactive Review Template from DMD.

**Subject**: RE: Potential composite comparator for the real clinical specimens collected from PUI subjects

Li,

Very thoughtful points. Getting information on the characterization of the negative samples will be essential. Like your idea of the composite comparator, question would be, since specimens are from PUI, which are likely still closely monitored and received instructed to come back for evaluation if their disease e.g. common cold progresses into serious cases, whether some PUI negative patient actually developed 2019-nCoV by now (after the initial negative results). (b) (5)

**Subject:** Potential composite comparator for the real clinical specimens collected from PUI subjects

Looking back at the MERS-CoV CDC EUA, they also had data testing real clinical specimens. (b) (5)

However, if they provide all test results, including results of targeted sequencing and other CoV assays (at least two other), we may be able to develop a composite comparator, e.g., negative results from at least two other CoV assays can be considered as true negative, provided that the LoDs for the other CoV assays are equivalent or better than the CDC panel. All positives from the other CoV assays were further sequenced. Positive results by targeted sequencing (meeting sequencing quality criteria) can be considered as true positive.

**Subject**: RE: 2019 Novel Coronavirus Cross Reactivity

Kim,

I do not think we need more details on the bioinformatics. The most important message it that their commercial tests do NOT cross-react.

Yes, they should post this on their website, so we can link from our FDA landing page to their official notice.

Uwe

**Subject:** 2019 Novel Coronavirus Cross Reactivity

ATTENTION: Third party email, use caution with links and attachments.

Dear Kristen,

Due to the recent emergence in December 2019 of the novel coronavirus (2019-nCoV) in Wuhan City, Hubei Province, China, and in light of the increasing number of US cases, we are requesting all companies with cleared respiratory panels that detect human coronaviruses to perform a bioinformatic analysis against the released 2019-nCoV genome

AMERICAN OVERSIGHT

sequences, available through the GISAID Initiative (https://www.gisaid.org/), to predict if the test is likely to cross-react with the 2019-nCoV. We have heard that BioFire have already released a technical note on this topic but have not seen it posted online. FDA would like to include on our 2019-CoV webpage (https://www.fda.gov/emergency-preparedness-and-response/mcm-issues/novel-coronavirus-2019-ncov) a statement regarding any potential or lack of potential cross-reactivity with cleared respiratory panel devices that detect the common human coronaviruses and/or MERS-CoV. Please provided us (via email) with the conclusion from your bioinformatics analysis as soon as possible.

We appreciate your timely assistance in this matter
Let me know if you have any questions

Best regards
Kim

**Subject**: DMD - 2019-nCoV update

Dear Jeff, Bill, Tim, and Courtney,

I just wanted to provide you an update on the 2019-nCoV outbreak - in light of the rapidly increasing number of cases reported in China over the weekend, the confirmed human-to-human transmission and based on our discussion with CDC today who indicated that the US detected their first case (which already made the news!).
DMD and CDC are working interactively to complete the data information needed to support an EUA request to FDA, and currently CDC anticipates a data package for review towards the end of this week, early next week. In addition WHO is holding an emergency meeting tomorrow to determine if the current situation should be declared a global health emergency.

Let me know if you have any questions

Best regards
Uwe

**Subject:** Daily 2 PM update

Jeff,

**Status of activities on diagnostics**:

- OCET and OCC support Center recommendation to exercise enforcement discretion to allow CDC to preposition their test
- Additional IVD Developer has requested and received EUA review template [Inbios International]
- Updating FDA 2019-nCoV landing webpage to provide information on cleared respiratory devices on predicting cross-reactivity to 2019-nCoV. BioFire/Biomerieux provided technical note to customer, FDA plans to link to this information and encourage other manufactures of cleared respiratory tests to perform similar analysis and provide this information. [e.g., GenMark Diagnostics, Qiagen, Luminex, Applied BioCode Inc]

**New roadblocks/challenges/delays:**

- Considerations for support of (b) (5) and OCET at 3 PM today

Best, Uwe

**Subject:** Notes from today

Dear Uwe,

Draft email below (apologize for the delay):

Dear Jeff, Bill, Tim and Courtney,

(b)(5) [redacted]

DARPA and CDC are involved in diagnostic platforms, all specimens currently go to CDC for testing. There is consideration of (b) (5) [redacted] Number of vaccines in development based on MERS-CoV and SARS but there is a need for wild-type virus for the development of animal models. Funding is under discussion.

In addition, we had a call CDC today to discuss data requirements to support their EUA request. They anticipate a more complete data package for review very early next week. In other updates WHO have determined at this point that the Wuhan coronavirus is not yet a public health emergency of international concern.

In past emergencies we have worked directly with OCET on EUA package requests and cc CDRH as the final package moves up to OCET and the Commissioner. We would like to know if under the new OPEQ structure in CDRH if this is still the approach we should take or do OPEQ/CDRH want to be involved in the EUA request package review. We would like

AMERICAN OVERSIGHT

to know so we can factor this into the review timelines and if so please identify individuals we should bring up to speed – given the time sensitive nature of these EUA requests.

Best regards
Kim

**Subject:** FW: FDA visit

Dear Uwe,

Sorry to bother you with a logistic question. But I am wondering what kind of visa is required to enter FDA.
Carolyn said for the meeting in the Great Room it doesn't matter as FDA security doesn't seemed to be involved, but which visa is preferred for the second day (Feb 4).
I have the option of(b) (6) or(b) (6)

Thanks a lot,
Ute

AMERICAN OVERSIGHT

Dear Ute,

Happy New Year! Good to hear from you and thanks for sharing in advance that you are coming to the Feb 3rd MDIC workshop.

So far Feb 4th looks good for me to get together, I can meet any time between 9-10 AM and 11 AM and 3 PM, please let us know what can work for you.

Would you be interested to give a talk to my division about your work at WHO? My staff would be very interested to get to know you closer and understand your role at WHO.

Best, Uwe

Elizabeth,

They look good. I wouldn't include the CDC criteria in Tim's presentation. Dan is welcome to use slides if he wants to discuss the CDC criteria after Tim finishes his presentation.

I agree they need to go to OCC and then shared with OC. I can share them with OC once OCC finishes their review.

AMERICAN OVERSIGHT

# Policy for Diagnostics Testing in Laboratories Certified to Perform High Complexity Testing under CLIA prior to Emergency Use Authorization for Coronavirus Disease-2019 during the Public Health Emergency: Immediately in Effect Guidance

Timothy Stenzel, MD, PhD
Director, OHT7: Office of In Vitro Diagnostics and Radiological Health
Office of Product Evaluation and Quality

Center for Devices and Radiological Health

March 2, 2020

AMERICAN OVERSIGHT

# Agenda

- Background
- Summary of Immediately In Effect Guidance
- Questions and Answers

AMERICAN OVERSIGHT

# Objective

- Explain policy for molecular diagnostics testing in high-complexity Clinical Laboratory Improvement Amendments (CLIA)-certified laboratories prior to emergency use authorization for coronavirus disease-2019 (COVID-19) during the public health emergency.

4

AMERICAN OVERSIGHT

# Background

- Guidance issued February 29, 2020 describes a policy enabling laboratories to immediately use tests they developed and validated in order to achieve more rapid testing capacity in the U.S.
- To address the COVID-19 public health emergency, the FDA has determined that prior public participation for this guidance is not feasible or appropriate and is issuing this guidance without prior public comment.
- This guidance document is immediately in effect, but it remains subject to comment in accordance with the FDA's good guidance practices.

5

AMERICAN OVERSIGHT

# Scope

- The new policy is limited to:
  - Laboratories certified to perform high complexity testing, consistent with the requirements under the Clinical Laboratory Improvement Amendments (CLIA)
  - Molecular diagnostics for SARS-CoV-2
  - (b) (5)
- The new policy does NOT impact:
  - Requirements under the Clinical Laboratory Improvement Amendments (CLIA)
  - CDC recommendations for who should be tested

6

AMERICAN OVERSIGHT

# Policy

- Labs should complete validation of newly developed SARS-CoV-2 tests prior to clinical use
- Labs should notify FDA when clinical use of a validated test begins
- Labs should confirm the first 5 positive and negative samples with an EUA authorized test
- Test reports should indicate the test has been validated but independent review by FDA is not yet complete
- Labs should submit an EUA within 15 days of initiating testing
- If any specimens fail confirmatory testing or if FDA is unable to authorize the EUA, labs should stop testing and issue corrected test reports indicating prior results may not be valid

7

(b) (5)

AMERICAN OVERSIGHT

# Test Validation

- Validation should meet minimal recommendations outlined in the guidance for:
  - Limit of Detection (LoD)
  - Clinical Evaluation
  - Inclusivity
  - Cross-Reactivity
- Limited viral materials are available
  - FDA, BARDA, and CDC prioritize and coordinate shipments to labs when ready to validate

8

AMERICAN OVERSIGHT

# Limit of Detection

- Defined as the lowest concentration at which 19/20 replicates are positive
- Methods:
  - test dilution series with 3 replicates per concentration (range finding)
  - confirm final concentration with 20 replicates (around initially identified LoD only)
- Samples:
  - ~~may~~ use pooled negative clinicals samples or artificial matrix ~~contrived samples (i.e., spiking RNA or inactivated virus into artificial or real clinical matrix)~~
  - if multiple specimen types are intended, evaluate most challenging (e.g., sputum)

9

AMERICAN OVERSIGHT

# Clinical Evaluation

- Test at least 30 contrived reactive specimens and 30 non-reactive specimens
  - Contrived reactive specimens can be created by spiking viral RNA or inactivated virus into leftover clinical specimens
  - Twenty (20) of the contrived specimens should be spiked at a concentration of 1x-2x LoD, with the remainder of specimens spanning the assay testing range.

- Acceptable performance:
  - 95% agreement at 1x-2x LoD and
  - 100% agreement at all other concentrations and for negative specimens

10

AMERICAN OVERSIGHT

# Inclusivity

- Conduct an *in silico* analysis of the percent identity matches against publicly available SARS-CoV-2 sequences that can be detected by the proposed molecular assay.
- 100% of published SARS-CoV-2 sequences should be detectable with the selected primers and probes

AMERICAN OVERSIGHT

# Cross-Reactivity

- Conduct an *in silico* analysis of the assay primer and probes compared to common respiratory flora and other viral pathogens is sufficient
- There should be >80% homology between one of the primers/probes and any sequence present in the targeted microorganism
- Follow recognized laboratory procedures for any additional cross-reactivity testing in the context of the sample types intended for testing

12

AMERICAN OVERSIGHT

# Status of EUA Tests

- CDC EUA authorization Feb 4, 2020
  - Covers CDC-qualified IDT 2019-nCoV Kit Lot#0000500383
  - Additional IDT lots undergoing qualification by CDC
- NYS Wadsworth Center EUA Authorization Feb 29, 2020
- CDC, FDA and BARDA are working with multiple IVD manufacturers and laboratories to enable additional EUA authorizations as soon as possible; monitor at:
  https://www.fda.gov/medical-devices/emergency-situations-medical-devices/emergency-use-authorizations#coronavirus2019

13

# CDC's Clinical Criteria for Testing

| Clinical Features | & | Epidemiologic Risk |
|---|---|---|
| Fever[1] **or** signs/symptoms of lower respiratory illness (e.g. cough or shortness of breath) | **AND** | Any person, including healthcare workers[2], who has had close contact[3] with a laboratory-confirmed[4] COVID-19 patient within 14 days of symptom onset |
| Fever[1] **and** signs/symptoms of a lower respiratory illness (e.g., cough or shortness of breath) requiring hospitalization | **AND** | A history of travel from affected geographic areas[5] (see below) within 14 days of symptom onset |
| Fever[1] with severe acute lower respiratory illness (e.g., pneumonia, ARDS) requiring hospitalization and without alternative explanatory diagnosis (e.g., influenza)[6] | **AND** | No source of exposure has been identified |

https://www.cdc.gov/coronavirus/2019-ncov/hcp/clinical-criteria.html

# Submissions to FDA

- **Notification** of clinical use of a validated test should be directed to CDRH-EUA-Templates@fda.hhs.gov and should include:
  - name of the laboratory
  - name of the lab director
  - address
  - contact person

- **EUA** should be submitted within 15 days of initiating clinical testing to OIR-Operations@fda.hhs.gov and should include:
  - Form 3514 available at: https://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM080872.pdf
  - Completed EUA template available at: https://www.fda.gov/media/135658/download

**Subject**: Instructions for use

Joe,

I am trying to help with the PI which is (b)(5)

Here some point I see need to be added to the Wadsworth PI

## For Emergency Use Only

## For *In-vitro* Diagnostic (IVD) Use

## Rx Only

## Intended Use

From their Review Memo

## Warnings and Precautions

The yellow section are already in their PI

- For *in vitro* diagnostic use (IVD).
- For emergency use only.
- Follow standard precautions. All patient specimens and positive controls should be considered potentially infectious and handled accordingly.
- Do not eat, drink, smoke, apply cosmetics or handle contact lenses in areas where reagents and human specimens are handled.
- Handle all specimens as if infectious using safe laboratory procedures. Refer to Interim Laboratory Biosafety Guidelines for Handling and Processing Specimens Associated with 2019-nCoV https://www.cdc.gov/coronavirus/2019-nCoV/lab-biosafety-guidelines.html.
- Specimen processing should be performed in accordance with national biological safety regulations.
- If infection with 2019-nCoV is suspected based on current clinical and epidemiological screening criteria recommended by public health authorities, specimens should be collected with appropriate infection control precautions.
- (b)(5)

**Subject**: RE: 2/27/20 6 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

2/27/20 6 AM update:

**Status of activities on diagnostics:**

- CDC announced to today during an APHL conference call with its members that it will go forward with the exclusion of it N3 target and move its test into a N1-N2 test only.
A new lot of N1/N2 primers and probes was made and is being QCed with an enhanced QC protocol. If material pass it will be ready to shipment shortly after. Additional commercially manufactures N1/N2 primer and probes are also QC tested for possible distribution. CDC intend to submit an amendment request to their EUA for the change to utilize N1/N2 primer/probes
(b)(5) [redacted]

- A total of 76 IVD Developers have requested and received EUA review template.

- 18 developers have submitted pre-EUA documents for FDA feedback

- CDRH sent respond letter to APHL and held follow-up telecom with AHPL leadership and 12 other PHLs. (b)(5) [redacted]

**Subject:** Due by NOON - Review of EUA Text in Response to Sen. Markey re COVID-19
**Importance:** High

Kim and Uwe,

HHS has asked us to review a response to Senator Markey re COVID, and most of it looks fine but they have a section on EUAs with some wording that I was not sure of. Below is the text; in particular, (b)(5) [redacted]. Most of the rest of it is the same as the testimony you reviewed last week. Can you let me know if you have edits/feedback on this? Sorry for the short turnaround (once again). I might suggest just striking the text in blue if that is easiest.

I already made the changes Kim had suggested to the testimony (in yellow highlight).

Best,

Jennifer

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

On Monday, February 3, 2020, CDC submitted an EUA package to the FDA in order to expedite FDA permitted use of the CDC-developed laboratory test kit, called the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel. FDA approved the EUA on February 4, 2020, and the test kit began shipping on February 5, 2020 to select qualified U.S. and international laboratories. Distribution of the tests will help improve the global capacity to detect and respond to the 2019 novel coronavirus.

**Subject:** FW: RAPID COVID-19 SCREEN

Dear Dr. Elkins,

The current route for submitting your request to the FDA is via a pre-EUA process.

Before we start this process, please provide a summary of your device and any studies you have done so far for validation the test. Especially the validation of your this test vs RT-PCR for COVID-19.

After we receive this information we will consider to set up a conference call to discuss next steps.

**Subject:** 2/54/206 AM update

Jeff, Elizabeth, Ellen, Bill and Tim:

2/25/206 AM update:

**Status of activities on diagnostics:**

- 2/24/20 CDC proposed to change wording the intended use of their EUA from:
  - The CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel is a real-time RT-PCR test intended for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals **who meet CDC criteria for 2019-nCoV testing**

  - To:

(b)(5)

[redacted]

**Also, CDC communicate that they will move forward with changing their assay to a N1+N2 only assay. CDC's intention is to have both changes done with one submission.**

AMERICAN OVERSIGHT

- CDC will provide additional confirmation testing had been conducted by CDC on presumptive positive samples. FDA will rely this additional information for the statistical justification included in the benefit-risk assessment for CDC to exclude using the N3 primer/probeset as part of their assay moving forward.

- A total of 75 IVD Developers have requested and received EUA review template

(b) (4), (b) (5)

Suzanne,
We do not need the documents tonight, but need to make sure the carrier can deliver the documents to CDRH tomorrow. They are the hard copies of the EUA request we already received electronically earlier today and approved with the issuance of CDC's EUA.

Please give me a call at (b) (6)
so we can assure to be prepare with the Emergency OP's coordinator to be ready to accept the documents tomorrow.

**Subject:** RE: Speaker Request: MDIC EUA Workshop 2/3/20

Hi Jennifer,

Yes, I can speak at this meeting and am of course going to attend. I do wonder if Uwe Scherf wouldn't be a better speaker or at least to consider him for another place on the agenda, since he leads the Division of DMD in our Office that handles and reviews all EUAs.

Thanks! It will be a pleasure to see this program happen.

Best,

**Subject:** Speaker Request: MDIC EUA Workshop 2/3/20

Tim,

Your calendar should already have a hold on February 3rd for the MDIC RWE IVD EUA workshop (from Carolyn Hiller) to be held at FDA White Oak. The full steering committee met to draft the agenda and identify session organizers. We have started planning the FDA session and would like to invite you to make a presentation. Please confirm that you will be available.

The full draft agenda is attached. If you have comments, then please let us know. Copied below for reference is the draft FDA session, the session will most likely start around 9 or 10am, but we will be able to confirm the exact time after MDIC determines when the workshop will start and identifies keynote speaker(s).

(b) (5)

Thanks,

Jennifer

**Subject:** URGENT IHR REVIEW REQUIRED: Potential PHEIC - Confirmation of novel coronavirus (nCoV) in the United States

Good afternoon,

FDA OEO received notification from the HHS International Health Regulations (IHR) Program regarding a potential PHEIC involving the first confirmed novel coronavirus (nCoV). The IHR event notification form is attached.

The HHS/ASPR International Health Regulations (IHR) Program requests FDA's review of the attached pending notification of a potential public health emergency of international concern (PHEIC). Subsequent to this review period, HHS/ASPR will request the approval of the Assistant Secretary for Preparedness and Response, who serves as the IHR Message Authorizing Official, to send this notification to the World Health Organization.

If you have any comments, please advise OEO by **5:00PM EDT today (1/21/2020).**

AMERICAN OVERSIGHT

**Event information**

The IHR Program has been notified of a potential PHEIC involving a Chinese citizen in the United States who tested positive for nCoV.

**Title:** Confirmation of novel coronavirus (nCoV)

**Location**: United States

**PHEIC notification criteria met:**

Criteria 1- Public health impact of the event is serious
Criteria 2- Event is unusual/unexpected
Criteria 3 –Significant Risk of International Spread
Criteria 4- Significant Risk of Travel or Trade Restrictions

The Centers for Disease Control and Prevention (CDC) is closely monitoring an outbreak caused by a novel (new) coronavirus (nCoV) in Wuhan City, Hubei Province, China. Chinese authorities first identified the new coronavirus, which has resulted in about 200 confirmed human infections and three reported deaths in China. A number of countries, including the United States, are actively screening incoming travelers from Wuhan, and exported cases have been confirmed in Thailand, Japan, and South Korea. The first case confirmed case in the United States was announced on January 21, 2020.

United States Patient Case Summary:
35 year old otherwise healthy male, Chinese citizen, traveled from the United States to Wuhan, China on November 26, 2019. He returned to the United States on January 15, 2020 and began to experience symptoms on January 16, 2020. He had normal chest x-ray and a negative test for influenza virus. He did not report exposure to ill persons, livestock or seafood/animal markets while in China. Due to travel to Wuhan, he was tested for nCoV (and was discharged home with instructions for home isolation). The patient specimen, acquired on January 19, 2020, was sent overnight to CDC and on January 20, 2020 tested positive for nCoV. CDC is actively coordinating with state and local health departments on the response.

Thank you,

Josh

<Tara.Rabin@fda.hhs.gov>
**Subject:** Please review ASAP - Media Inquiry on FDA preparedness for coronavirus spread to US

Hi all, we have a media inquiry on US diagnostics preparedness from Pharmaintelligence. They are asking about US preparedness to deal with people coming into the US who might be carrying coronavirus? Could you please review and edit the proposed response below as soon as possible. Reporter's deadline is 2:30 pm. Thank you! Megan

My questions would be:

1) Has FDA recently received any applications from US or international firms to develop and approve a diagnostics test for the coronavirus 2019-nCOV from China?
2) Would there be an expedited process to approve such a diagnostic test?
3) How does the process work, and are any additional legal or regulatory authorities triggered when FDA is quickly trying to approve use of a test for an infectious disease in the US?

(b) (5)

| | | | |
| | | | |

-Additional IVD Developers have requested and received the appropriate EUA review template [(b) (4) , University of Nebraska Medical Center] for a total of 70 to date or are working interactively with DMD in order to get comments in their preliminary EUA Study design [Pre-EUA]. Note University of Nebraska Medical Center (UNMC) campus also houses the Nebraska Public Health Laboratory – which was able to verify the CDC EUA test. There are currently have confirmed 11 COVID-19 positive patients quarantined at UNMC after being evacuated from the Dimond Princess cruise ship.
-Interactions with CDC are still ongoing to discuss the proposed outline of a community transmission surveillance activity under a new EUA – study protocol has been provided.
-Interactions with CDC are still ongoing regarding the verification issues with their EUA test – CDC are currently re-manufacturing the test kits and are hoping to have kits ready next week.
- TTFED call held around EUA test implementation.

Let me know if you have any questions
Best regards
Kim

# Policy for Diagnostics Testing in Laboratories Certified to Perform High Complexity Testing under CLIA prior to Emergency Use Authorization for Coronavirus Disease-2019 during the Public Health Emergency: Immediately in Effect Guidance

Timothy Stenzel
Director, OHT7: Office of In Vitro Diagnostics and Radiological Health
Office of Product Evaluation and Quality

Center for Devices and Radiological Health

March 2, 2020

AMERICAN OVERSIGHT

# Agenda

- Background
- Summary of Immediately In Effect Guidance
- Questions and Answers

AMERICAN OVERSIGHT

# Objective

- Explain policy for molecular diagnostics testing in high-complexity Clinical Laboratory Improvement Amendments (CLIA)-certified laboratories prior to emergency use authorization for coronavirus disease-2019 (COVID-19) during the public health emergency.

4

AMERICAN OVERSIGHT

# Background

- Guidance issued February 29, 2020 describes a policy enabling laboratories to immediately use tests they developed and validated in order to achieve more rapid testing capacity in the U.S.
- To address the COVID-19 public health emergency, the FDA has determined that prior public participation for this guidance is not feasible or appropriate and is issuing this guidance without prior public comment.
- This guidance document is immediately in effect, but it remains subject to comment in accordance with the FDA's good guidance practices.

5

AMERICAN OVERSIGHT

# Scope

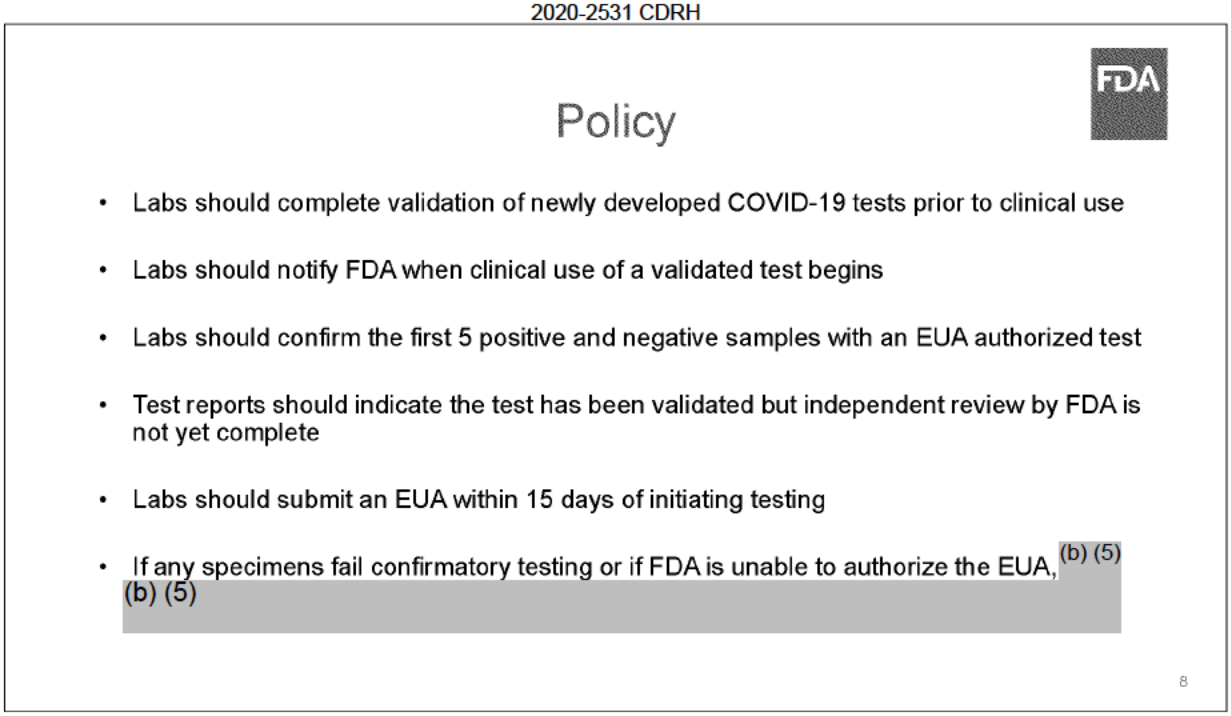
- The new policy is limited to:
  - Laboratories certified to perform high complexity testing, consistent with the requirements under the Clinical Laboratory Improvement Amendments (CLIA)
  - Molecular diagnostics for COVID-19

(b) (5)

- The new policy does NOT impact:
  - Requirements under the Clinical Laboratory Improvement Amendments (CLIA)
  - CDC recommendations for who should be tested

6

AMERICAN OVERSIGHT



# CDC's Clinical Criteria for Testing

| Clinical Features | & | Epidemiologic Risk |
|---|---|---|
| Fever[1] **or** signs/symptoms of lower respiratory illness (e.g. cough or shortness of breath) | **AND** | Any person, including healthcare workers[2], who has had close contact[3] with a laboratory-confirmed[4] COVID-19 patient within 14 days of symptom onset |
| Fever[1] **and** signs/symptoms of a lower respiratory illness (e.g., cough or shortness of breath) requiring hospitalization | **AND** | A history of travel from affected geographic areas[5] (see below) within 14 days of symptom onset |
| Fever[1] with severe acute lower respiratory illness (e.g., pneumonia, ARDS) requiring hospitalization and without alternative explanatory diagnosis (e.g., influenza)[6] | **AND** | No source of exposure has been identified |

https://www.cdc.gov/coronavirus/2019-ncov/hcp/clinical-criteria.html

7

AMERICAN OVERSIGHT

FDA does not intend to object to the clinical use of diagnostics for COVID-19 that have been developed and validated in a lab certified to perform high complexity testing during this emergency if the following are criteria are met:
Labs should validate tests per guidance

Labs should notify FDA when clinical use of a validated test begins

Labs should confirm the first 5 positive and negative samples with an EUA authorized test

Test reports should indicate the test has been validated but that independent review by FDA is not yet complete

Labs should submit an EUA within 15 days of initiating testing

If any specimens fail confirmatory testing or if FDA is unable to authorize the EUA, (b) (5)
(b) (5)

AMERICAN OVERSIGHT

# Policy

Validation should meet minimal recommendations outlined in the guidance for:

- Limit of Detection
- Clinical Evaluation
- Inclusivity
- Cross-Reactivity

AMERICAN OVERSIGHT

# Limit of Detection

- Defined as the lowest concentration at which 19/20 replicates are positive
- Methods:
  - test dilution series with 3 replicates per concentration
  - confirm final concentration with 20 replicates
- Samples:
  - may use contrived samples (i.e., spiking RNA or inactivated virus into artificial or real clinical matrix)
  - if multiple specimen types are intended, evaluate most challenging (e.g., sputum)

10

AMERICAN OVERSIGHT

# Clinical Evaluation

- Test at least 30 contrived reactive specimens and 30 non-reactive specimens
  - Contrived reactive specimens can be created by spiking RNA or inactivated virus into leftover clinical specimens
  - Twenty of the contrived specimens should be spiked at a concentration of 1x-2x LoD, with the remainder of specimens spanning the assay testing range.

- Acceptable performance:
  - 95% agreement at 1x-2x LoD and
  - 100% agreement at all other concentrations and for negative specimens

AMERICAN OVERSIGHT

# Inclusivity

- Conduct an *in silico* analysis of the percent identity matches against publicly available SARS-CoV-2 sequences that can be detected by the proposed molecular assay.
- 100% of published SARS-CoV-2 sequences should be detectable with the selected primers and probes

AMERICAN OVERSIGHT

# Cross-Reactivity

- Conduct an *in silico* analysis of the assay primer and probes compared to common respiratory flora and other viral pathogens is sufficient
- There should be >80% homology between one of the primers/probes and any sequence present in the targeted microorganism
- Follow recognized laboratory procedures for any additional cross-reactivity testing in the context of the sample types intended for testing

AMERICAN OVERSIGHT

## Submissions to FDA

- **Notification** of clinical use of a validated test should be directed to CDRH-EUA-Templates@fda.hhs.gov and should include:
  - name of the laboratory
  - name of the lab director
  - address
  - contact person

- **EUA** should be submitted within 15 days of initiating clinical testing to OIR-Operations@fda.hhs.gov and should include:
  - Form 3514 available at: https://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM080872.pdf
  - Completed EUA template available at: https://www.fda.gov/media/135658/download

14

Mention: Under normal circumstances, an EUA should be mailed to our document control center. Due to the extenuating circumstances, we will waive this requirement and accept submissions via email.

Hi Uwe,

I wanted you to see this sooner than later. I'm a little tired and so will look at it again in the morning. I see the virus name will require updating and will check the rest for accuracy, content and delivery as well.

Again, thank you to you and your team for the NYS authorization!

Best,
*Tim*

Hello Tim,

As promised yesterday, following please find a short summary of the current status of our COVID-19 Lyra project:

Yesterday you mentioned the availability of inactivated virus through (b) (4) Despite trying to contact someone at (b) (4) to evaluate availability of the inactivated virus we were not able to get any further there. Could you please provide some more information on whom specifically to contact?
Similarly the evaluation of availability of extracted RNA through (b) (4) showed that material could only be shipped by end of March. Do you have any further or different information you could provide?

The internal project status is as follows:

(b) (4)

Hi Tim, et al. at CDC and Mark, et al. at SFS – Jeff Duchin (Chief Health Officer at Public Health Seattle-King County) asked me to follow up with you about the outcome of our discussion earlier today (9 PT/12 ET) about Seattle Flu Study testing for SARS-CoV-2.

At the end of the call, Tim said he would get back to Mark within the hour, but we haven't heard anything on our end.

Could someone please send a summary of where things stand and specifically
- what the current guidance is about SFS continued testing of samples for nCoV (retrospective and prospective)
- if testing continues, what is the flow of information to public health / re-contacting patients with results
- any other relevant info (e.g., was the lot of the kit SFS used to confirm their initial positive the same lot that CDC had QC'd?)

Thank you,

Karen Cowgill, PhD, MSc *(she/her)*

**Subject:** SEATTLE Flu Study Lab Result

Wendy,

Thanks for helping us navigate with FDA colleagues what we can say/do in response to a potential positive test result from the SFS research assay. Helen Chu and Jan Englund are the SFS researchers that can provide the details of the test method and other relevant information. I'm also copying Scott Lindquist, the WA State DOH communicable disease epidemiologist and Karen Cowgill who works on surveillance with us. It probably would be good to have a call early tomorrow Pacific time (7:30) but Helen and Jan should schedule the time with you.

Very much appreciate your help.

Jeff

**Subject:** Language consideration for expedited EUA process
**Importance:** High

Dear Drs. Stenzel and Jernigan,

AMERICAN OVERSIGHT

We appreciate your work on rolling out an expedited approach for laboratories interested in pursuing Emergency Use Authorization of tests developed in their laboratories. We think this is an important step in expanding testing capacity in the United States. We would like to put forward two points for you to consider as you are developing guidance on this process in case they have not already been considered.

1. Please consider including language on requiring rapid notification of positive results to public health agencies to assure appropriate public health steps are taken to mitigate spread of disease.
2. Consider limiting use of EUA assays made available through the expedited EUA process to individuals who meet CDC criteria for testing, as has been required in other public health emergencies.

We applaud your efforts to identify pathways to expand testing capacity more quickly and look forward to working with you on how to move forward.

**Subject:** CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel - Regulatory Discretion

Dear Wendi,

On February 4, 2020, the Centers for Disease Control and Prevention (CDC) received an Emergency Use Authorization (EUA) for the CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing.

On February 24, 2020, CDRH/FDA was informed that enforcement discretion from FDA was needed for the following:

AMERICAN OVERSIGHT

1. CDC qualified laboratories to perform testing using only the already distributed N1 and N2 (and not N3) primers of CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel, upon verification of those primers by the laboratory, until such time as they receive and verify new primers that will be supplied by CDC and/or Integrated DNA Technologies (IDT) and begin performing testing with them. CDC would also distribute and these laboratories would use new result interpretation instructions that FDA has reviewed but has not yet authorized as part of an EUA, for performing testing with only the N1 and N2 primers. CDC requests this enforcement discretion to address the manufacturing issues that have been identified with certain N3 primers and to avoid significant delays in testing given increased testing demands. CDC and IDT, a CDC-identified third-party manufacturer, are preparing new lots and kits for the new primers, but it will take some time to complete quality control testing and to send these primers to the CDC qualified laboratories.

2. CDC qualified laboratories to test individuals who meet COVID-19 clinical and/or epidemiological criteria using the authorized test and the two primer test (as set forth above). This enforcement discretion is being requested to address growing concerns of community transmission of COVID-19, and would be until authorization of a new or amended EUA for this use.

CDC has generated data indicating that testing using the N1 and N2 primers of the CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel may be effective in the detection of SARS-CoV-2, and CDC and FDA have worked interactively in connection with FDA's review of the data. At this time, there are no adequate, approved, and available alternative tools that can detect SARS-CoV-2.

Our understanding of the facts and the public health concerns at issue here are: that there is currently no other test available to detect SARS-CoV-2 to respond to this emergency; significant public health concerns are presented by the infectious disease; and the proposed testing may help to prevent the spread of the infectious disease COVID-19. Based on this understanding, at this time, FDA does not intend to object to the use of this test as described above, with the conditions that presumptive positives and inconclusive results will be confirmed by testing at the CDC headquarters in Atlanta, GA, and that CDC will act promptly to submit a new or amended EUA to authorize the testing described above.

Sincerely,
Ellen

Subject: EUA - Corona

Hi Tim,

Long time no chat. I just had Jeff Trent reach out as I boarded a flight to head back to Dallas. Who can I chat with as to an EUA for their assay? State of AZ public health lab has reached out to them. I asked them to send me a summary of where they are with their assay and will be glad to share when I get it.

Can you chat tomorrow morning?

Best regards,

Melina

**Subject:** RE: NYS Wadsworth Center COVID-19 Test

Hi Dan, Thanks for the quick call this morning. A simple email to the FDA/me stating "Yes, The New York State Wadsworth Center can reference the data in the CDC's 2019 nCoV EUA application" is sufficient for the FDA's review purposes that should lead to a quick EUA authorization for Wadworth's EUA, as early as this afternoon. Therefore, this is obviously an urgent matter.

Best,
*Tim*

Hi Dan and Wendi,

This right of reference is important to get this and additional assays based on the CDC through the EUA process quickly. The other two companies we discussed today will be similar.

I believe a simple email stating "Yes, The New York State Wadsworth Center can reference the data in the CDC 2019 nCoV EUA application".

Hope this helps.

Thanks in advance!

Best,
Tim

**Subject:** NYS Wadsworth Center COVID-19 Test
**Importance:** High

Wendi, Dan, Laura,

NYS Wadsworth Center submitted an EUA request to us this afternoon for a test that uses the CDC protocol but only for N1/N2 (consistent with the CDC test currently subject to enforcement discretion). To support their EUA, Wadsworth conducted a bridging study that demonstrates performance similar to CDC's N1/N2 test. We know their performance is comparable because we have seen CDC's data but Wadsworth has not. **Would CDC allow Wadsworth to have a right of reference to its data, under which does not get access to the data but can reference it in support of their EUA?** Wadsworth has one more test to perform, which if it looks good, we would otherwise grant the EUA.

Thanks,
Uwe

**Subject:** RE: NYS Wadsworth Center COVID-19 Test

Hi Dan and Wendi,

This right of reference is important to get this and additional assays based on the CDC through the EUA process quickly. The other two companies we discussed today will be similar.

I believe a simple email stating "Yes, The New York State Wadsworth Center can reference the data in the CDC 2019 nCoV EUA application".

AMERICAN OVERSIGHT

Hope this helps.

Thanks in advance!

Best,
Tim

**To:** Kuhnert-Tallman, Wendi L (CDC) <wdk1@cdc.gov>; Jernigan, Daniel B (CDC) <dbj0@cdc.gov>; Rose, Laura E (CDC) <zey9@cdc.gov>
**Cc:** Scherf, Uwe <Uwe.Scherf@fda.hhs.gov>; Stenzel, Timothy <Timothy.Stenzel@fda.hhs.gov>
**Subject:** NYS Wadsworth Center COVID-19 Test
**Importance:** High

Wendi, Dan, Laura,

NYS Wadsworth Center submitted an EUA request to us this afternoon for a test that uses the CDC protocol but only for N1/N2 (consistent with the CDC test currently subject to enforcement discretion). To support their EUA, Wadsworth conducted a bridging study that demonstrates performance similar to CDC's N1/N2 test. We know their performance is comparable because we have seen CDC's data but Wadsworth has not. **Would CDC allow Wadsworth to have a right of reference to its data, under which does not get access to the data but can reference it in support of their EUA?** Wadsworth has one more test to perform, which if it looks good, we would otherwise grant the EUA.

Thanks,
Uwe

**Subject:** Minimal Criteria for test validation

Jeff and Tim,

The minimal criteria acceptable to validate the test to be developed by the target laboratories are listed below. We foresee that it will take 3-4 days for a CLIA-certified, high-complexity laboratory to complete these evaluations.

(b) (5)

Let me know if you have any questions.

Uwe

Hi All,

Just to provide some additional detail that was not provided in the attachments, SeraCare's COVID-19 reference materials will cover the following genomic regions:

| Regions included | Location |
|---|---|
| ORF1a region | 417..1899 |
| | 3094..3360 |
| RdRp region | 13291..13560 |
| | 14700..15950 |
| | 18577..19051 |
| E (Envelop) region | 25801..28200 |
| N (Nucleocapsid) region | 27952..29873 |

Please don't hesitate to reach out if I can be of any further assistance.

Sincerely,

Eric

Tim

As discussed earlier I have attached quote for the (b) (4) kits, apologies for short delay but needed to get the key information correct, particularly the highlighted which seems minor but needs clarifications.

Manufactured under ISO 9001 in our RUO factory
Mixed and Aliquot in our ISO 13485 factory
Same specifications as already ordered.

Lead time – With internal process QC – (b) (4)
Without internal process QC – (b) (4)
These will be highest priority and we can update as they progress for you.
We have started manufacture already on (b) (4) – so the lead times are from this date.

AMERICAN OVERSIGHT

(b) (4)

I will send a separate note on the Licensing and Darren will be reaching out to you.
I will send a separate note from SeraCare group.

thanks

AMERICAN OVERSIGHT

**AccuPlex Coronavirus Reference Material Available**

SeraCare, part of LGC Clinical Diagnostics, has initiated development of a reference material targeted to the COVID-19 (Coronavirus), consensus sequences, published by the CDC and WHO.

Utilizing proprietary AccuPlex technology, we are packaging target sequences of interest into a stable, non-infectious, replication-deficient, alphavirus particle. The resulting material represents a true, full-process control – from sample preparation to detection – in a safe and non-infectious format. This technology supports both IVD development efforts, as well as diagnostic quality control, for routine clinical QC use.

We anticipate that we'll have RNA transcripts available for evaluation by the first week in March, and the final packaged AccuPlex material available by the middle of March. We're offering the final product in 2 formats:

- high titer stock material that can be used for assay development and regulatory submission efforts
- low-copy-number, low-positive, reference material for clinical laboratory assay verification activities

Attached is a product sheet providing more details of the technology.

Please let me know if this may be of interest, and if you have any questions.

AMERICAN OVERSIGHT

# AccuPlex™ Recombinant Viral Technology

A SAFE, FULL-PROCESS CONTROL SOLUTION FOR YOUR INFECTIOUS DISEASE MOLECULAR ASSAYS

## HIGHLIGHTS

REAL MAMMALIAN VIRUS ENABLES FULL-PROCESS QC FOR RT-PCR BASED VIRAL DISEASE ASSAYS.

NON-INFECTIOUS AND REPLICATION DEFICIENT; ENSURES SAFETY DURING ASSAY DEVELOPMENT AND END-USER UTILITY.

ACCEPTS MULTIPLE SEQUENCES FROM SAME OR DIFFERENT RNA VIRUSES; OFFERS FULL GENOME COVERAGE.

## INTRODUCTION

**Emerging infectious diseases pose a severe threat to public health due to their pathogenic, contagious nature. Quick development, validation, and implementation of precision diagnostic tests are necessary to ensure accurate detection of these infectious agents in order to ensure public safety and rapid treatment. Positive controls are a crucial component for these diagnostic assays to ensure accurate performance, but can potentially harm assay developers and laboratory end-users in their infectious state.**

The key to the successful, rapid development of an infectious disease molecular diagnostic assay is to utilize non-infectious, manufactured controls. These controls should adequately represent the virus genetically and function in the appropriate assay format and sample matrix. In addition, these controls should evaluate the entire process from viral nucleic acid extraction through amplification and detection and not just a portion of the workflow (process control).

## THE SAFEST, TRUE FULL-PROCESS CONTROL ON THE MARKET

SeraCare's AccuPlex recombinant material serves as a true molecular process control for your diagnostic assays. Compatible with multiplexed RT-PCR and NGS-based assays, AccuPlex custom recombinant materials are constructed with a replication-deficient mammalian virus, producing a safe, non-infectious material (Figure 1). With a protein coat and lipid bilayer, these mammalian virus-based reference materials resemble the complexity of virus targets found in patient samples.

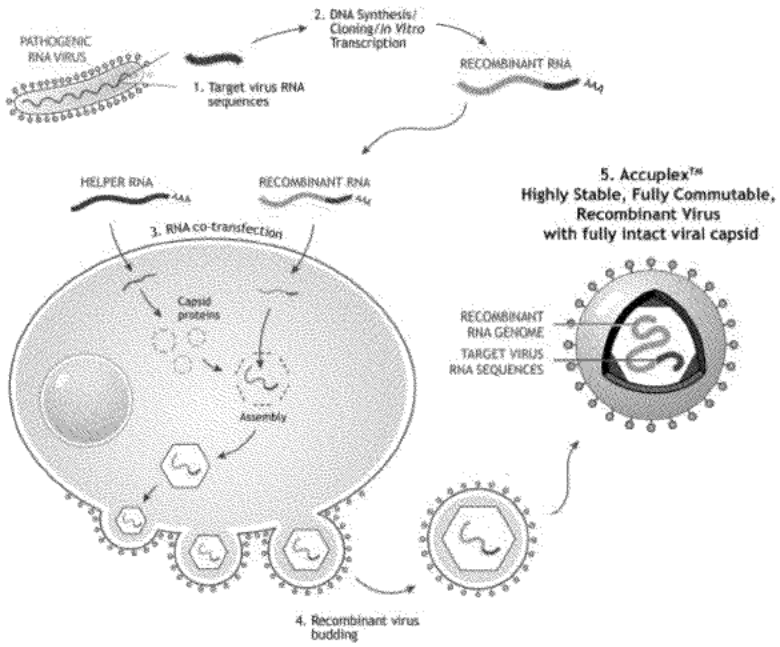

**FIGURE 1:**
1) RNA sequence from the pathogenic virus of interest is chosen. 2) DNA synthesis and cloning occur to produce the recombinant RNA. 3) Recombinant RNA and helper RNA are co-transfected into the mammalian cells, allowing the encapsulation of recombined RNA. 4) Exocytosis of the mature enveloped RNA virus with the RNA sequence of the virus of interest.

AMERICAN OVERSIGHT

## ABOUT SERACARE

TRUSTED SUPPLIER TO THE DIAGNOSTIC TESTING INDUSTRY FOR OVER 30 YEARS.

HIGH-QUALITY CONTROL PRODUCTS, RAW BIOLOGICAL MATERIALS, AND IMMUNOASSAY REAGENTS.

INNOVATIVE TOOLS AND TECHNOLOGIES TO PROVIDE ASSURANCE IN DIAGNOSTIC ASSAY PERFORMANCE AND TEST RESULTS.

FOR MORE INFORMATION, PLEASE VISIT OUR WEBSITE: WWW.SERACARE.COM.

## MOST 'PATIENT SAMPLE-LIKE' MATERIAL EVALUATES ENTIRE WORKFLOW

Unlike other technologies that package the viral RNA into a bacteriophage, the AccuPlex recombinant closely resembles the wild-type mammalian pathogenic virus. This enables the release of the viral genome at a similar rate to the wild-type virus during the nucleic acid sample preparation process. AccuPlex recombinant material mimics a real patient sample in your workflow, serving as a full-process control for your assay.

| Technology | Packaged Insert Size | Analyte | Complex Viral Structure | Replication Deficient | Flexible Sequence Design | True Process Control |
|---|---|---|---|---|---|---|
| **AccuPlex** | **4 kb** | **Virus** | **Yes** | **Yes** | **Yes** | **Yes** |
| Cultured virus | Full genome | Virus | Yes | No | No | Yes |
| MS-2 | 1 kb | Bacteriophage | No | Yes | Yes | No |

## ACCUPLEX SOLVES ASSAY DEVELOPMENT CHALLENGES

If you're developing diagnostics for emerging viral diseases and have the challenge of including safe, non-infectious controls in your test kit, partner with SeraCare's talented R&D team to produce your custom AccuPlex recombinant virus material (DNA or RNA-based). Utilizing your sequences of interest and product specifications, we will develop a custom solution which meets your unique requirements.

**SeraCare's AccuPlex Solution:**

- Non-infectious and replication deficient, enables safe and effective handling of positive material
- Fully-extractable with a real viral protein coat; serves as a full-process control
- Accepts multiple sequences from same or different RNA viruses, customizable to your sequences of interest
- Digital PCR (ddPCR) QC step allows for a wide range of titer levels, offers flexible concentrations
- Compatible with any sample matrix (e.g. DBS, buffer, serum)
- Stability studies confirm product is stable at 4 °C, room temperature, and elevated temperatures

**Subject:** RE: LGC - Seracare - COVID-19 Reference Material - IVD Communications
**Attachments:** Seracare Coronavirus communication_ v2.docx; AccuPlex Product Sheet.pdf

Hi Uwe,

I wanted to let you know that the (b) (4) kit utilized a control that is different from the CDC design. See attached.

Hi Russell, Let me know if you sent the quote, I may have missed it.

Thanks!

Best,
*Tim*

**Subject:** LGC - Seracare - COVID-19 Reference Material - IVD Communications

Tim

Timely information from my colleague at Seracare – I have forwarded this to you with a customer communication and also the product sheet with all information you were asking.

AMERICAN OVERSIGHT

His contact details are below and I made him aware I was sending this over.

Hope it is useful

Regards

Russell Herbert | Director Global Sales | Biosearch Technologies
Strategic Accounts | Healthcare & Diagnostic Market
Cell: (b) (6) @LGCGroup.com

Attached are the 2 pieces I'd like to speak to. The word document is the standard email communication we're sending directly to relevant IVD customer contacts; the second is a product sheet overview of AccuPlex technology.

We're also in the process of making a COVID-19 specific product sheet. We anticipate to have that ready in a week or so and will send it to you once we have it.

Please let me know if you need any more information on my end.

Thanks,

Eric

Dear Brian,

AMERICAN OVERSIGHT

I am providing you our recent feedback regarding two studies; please see below.

Limit of detection:

Analytical Sensitivity (LoD) using viral genomic RNA or inactivated virus preferably in clinical matrix as described in the EUA Template (if BSL-3 facilities are available live virus can also be used in this study). If viral genomic RNA is used in the LoD study, the clinical or simulated matrix should be mixed with the lysis buffer from the extraction kit validated for use with your test prior to the addition of RNA to mitigate the risk of RNA degradation in clinical or simulated matrix. The sample to lysis buffer ratio should be the same as when extracting and purifying nucleic acids from clinical specimens. The volume of the initial viral genomic RNA dilutions used to build the contrived specimens for testing should be kept as low as possible to maximumly preserve the characteristics of the natural clinical specimen matrixes. If lysis buffer is not used for your assay, then other methods to prevent RNA degradation may be helpful (e.g., use of RNasin). For the initial dilution of viral genomic RNA, the diluent should be able to maintain RNA stability e.g., using certified RNase-free consumables and reagents, carrier RNA or tRNA, etc.

Clinical Evaluation – Contrived clinical study:
You should test 50 negative and 50 positive contrived clinical samples. The samples should be prepared by spiking SARS-CoV2 viral RNA or inactivated virus into individual clinical specimens collected from patients with signs and symptoms of respiratory infection (if BSL-3 facilities are available live virus can also be used to prepare contrived clinical samples). Left-over archived specimens may be used to prepare the mock clinical samples. Half (25) of the contrived positive samples should be prepared by spiking the SARS-CoV2 at 1X – 2x LoD and the remaining contrived positive samples should span the testing range of your assay and not higher than 5x LoD. Consider mixing the clinical matrix with the lysis buffer from the extraction kit validated for use with your test prior to the addition of viral RNA to mitigate the risk of RNA degradation. The sample to lysis buffer ratio should be the same as when extracting and purifying nucleic acids from clinical specimens. The volume of the initial viral genomic RNA dilutions used to build the contrived clinical specimens for testing should be kept as low as possible to maximumly preserve the characteristics of the natural clinical specimen matrix.

I will send remaining FDA comments in the interactive review Template soon.

Note: Please contact FDA if you are interested in obtaining the extracted viral genomic RNA.

Best regards,
Himani

Dear Lindsay,

Good morning. Hope it's a good day for you.
We are setting our discussion topics and determined that the coronavirus and its progress would be top of mind.
We'd like to talk about, among other things, our capabilities to manufacture vaccines and drug products to support its prevention.
Seeing that we did not invite Dr. Janet Woodcock from CDER is it possible she may have availability or perhaps one of her team?
I am sorry to surprise you with this but our company provides many services and we would like a productive discussion to help.

Thanks for helping. If you would rather I reach out to her office any contact information would be great.

**Subject**: Availability of CDC Designed Kits

Hi,

We just got off the phone with IDT. The have the following kits available for sale today of the CDC designed kits.

(b) (4) kits with (b) (4) reactions, (b) (4) kits with (b) (4) reactions, and (b) (4) kits with (b) (4) reactions in hands. They can be shipped in 1-2 days.

The CDC Test Panel includes fluorescently labeled hydrolysis probes that contain Black Hole Quencher® (BHQ®), a proprietary chemistry owned by Biosearch Technologies.
IDTDNA has an alternative fluorescent hydrolysis probe quencher chemistry (ZEN™ Double-Quenched Probe technology) being used in their kits.

Can we?

**Subject:** CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel - Regulatory Discretion

AMERICAN OVERSIGHT

Dear Wendi,

On February 4, 2020, the Centers for Disease Control and Prevention (CDC) received an Emergency Use Authorization (EUA) for the CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing.

Today, February 22, 2020, CDRH/FDA was informed that CDC would need enforcement discretion from FDA, until approval of a new EUA, for certain public health surveillance testing activities that do not fall within the currently authorized intended use of the assay (EUA200001) – namely, CDC has identified an urgent need to partner with designated jurisdictions and surveillance sites across the United States to perform testing to identify possible transmission of SARS-CoV-2 among individuals without a clear epidemiologic link (contact with known cases or history of recent travel to mainland China).

At this time, there are no adequate, approved, and available alternative tools that can detect SARS-CoV-2 during the acute phase of infection in the United States in symptomatic individuals without the epidemiological risk factors. In addition, unlike typical surveillance activities, individuals who test positive or inconclusive for SARS-CoV-2 using the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel will be notified of their test result and followed up accordingly.

Our understanding of the facts and the public health concerns at issue here are that there is currently no other test available to respond to this emergency, significant public health concerns are presented by the infectious disease, the proposed testing may help to prevent the spread of the infectious disease, and the testing activity will help to support situational awareness and guide the public health response to COVID-19. Based on this understanding, at this time, FDA does not intend to object to the use of this test as described above, with the following conditions: that all patients must be adequately informed about the status of this testing and the potential implications of agreeing to this testing, and that CDC will act promptly to submit an application for a new EUA to authorize the testing described above.

If you have any questions, please contact Uwe Scherf or me.

Sincerely,
Ellen

**Importance:** High

Uwe, Kim, and Toby,

Good evening. Secretary Azar has requested a great deal of data from FDA (particularly regarding the supply chain, number of firms we have contacted, numbers of firms manufacturing certain products OUS and domestically, etc.). As part of this, we want to provide some of the notable information about diagnostic tests and EUAs. Can you review the four points below by 9 am on Monday morning? Feel free to add anything else you think is responsive and helpful.

Sorry for the quick turnaround (once again).

Thanks very much for your help.

Best,

Jennifer

## FDA Response to COVID-19 By-the-Numbers

Diagnostic Tests

- Granted 1 Emergency Use Authorization, to the CDC, as of 2/21/20
- This test was developed within about a month.

AMERICAN OVERSIGHT

- CDC submitted the EUA package to FDA on 2/3/2020; on 2/4/2020, FDA issued an EUA to enable emergency use of the test.
- Provided the Emergency Use Authorization template to 70 developers of diagnostics for this outbreak as of 2/21/20

Hi Tim
So great to hear from you.
We have our submission number after a few exchanges with the agency via email on our validation design. I am copying Dr. Brian Krueger. He and I can be available and welcome your help.

Hi Marcia,

I am told LabCorp is developing an assay. Could you put me in touch with the correct R&D leader to discuss? We want to do anything we can to help speed the development of an EUA.

Thanks in advance!

Best,

**Subject:** For Review/Edits by 9 am on Monday (2/24) - Info re EUA for COVID-19 By The Numbers
**Importance:** High

Uwe, Kim, and Toby,

Good evening. Secretary Azar has requested a great deal of data from FDA (particularly regarding the supply chain, number of firms we have contacted, numbers of firms manufacturing certain products OUS and domestically, etc.). As part of this, we want to provide some of the notable information about diagnostic tests and EUAs. Can you review the four points below by 9 am on Monday morning? Feel free to add anything else you think is responsive and helpful.

Sorry for the quick turnaround (once again).

Thanks very much for your help.

Best,

Jennifer

Tim,

Here the information:

The materials provided by CDC are [all manufactured at CDC]

1. 2019-nCoVEUA-01 Box #1: Primers and Probes for the following targets:
a. 2019-nCoV_N1
b. 2019-nCoV_N2
c. 2019-nCoV_N3
d. Human RNase P
2. 2019-nCoV Positive Control (nCoVPC)

AMERICAN OVERSIGHT

Other materials needed to run the test but not provided by CDC in their 2019-nCoV panel:

1. Human Specimen Control (HSC) –manufactured by CDC [need to be ordered separately]
2. RT-qPCR Enzyme Master Mix – manufactured by ThermoFisher
3. Two different extraction kits (manual & automated) - manufactured by Qiagen
4. The 7500 Fast Dx Real-Time PCR Systems with SDS 1.4 software - RCR instrument by Applied Biosystems

Plus regular equipment and consumables used in the laboratory.

Uwe

Lindsay,

Good morning. Who is Dr. Stenzel's administrative support person?
I scheduled a meeting with him today at 9:30am EST regarding our EUA for COVID-19 and he has not arrived yet.

Thanks,
Peter

**Subject:** February 21st Meeting

Dear Lindsay,

Good morning. Hope it's a good day for you.
We are setting our discussion topics and determined that the coronavirus and its progress would be top of mind.
We'd like to talk about, among other things, our capabilities to manufacture vaccines and drug products to support its prevention.
Seeing that we did not invite Dr. Janet Woodcock from CDER is it possible she may have availability or perhaps one of her team?
I am sorry to surprise you with this but our company provides many services and we would like a productive discussion to help.

Thanks for helping. If you would rather I reach out to her office any contact information would be great.

Best,
Peter

**Subject:** IDT provides 2019-nCoV Kits that include the CDC 2019-nCoV/SARS-CoV-2 published assays in individual tubes

Tim, Ellen, Jeff,

Based on the attached information it looks like that the CDC primer is commercially available at IDT Integrated Technology:

# 2019-nCoV CDC qPCR Probe Assays

IDT provides 2019-nCoV Kits that include the CDC 2019-nCoV/SARS-CoV-2 published assays in individual tubes. Three of the primer/probe sets in this panel target different locations on the 2019-nCoV/SARS-CoV-2 Nucleocapsid gene (N-gene). These 3 primer/probe sets must be run concurrently with the internal control (4th assay), which targets the human RNase P gene. Altogether, there are 4 qPCR assays per patient sample.

Components are premixed to the CDC recommended working concentration and delivered in IDTE, pH 7.5. Stocked kits are available in 3 reaction sizes of 50, 100, and 500 reactions, with custom sizes available (see section below. Kits are shipped within 1–2 business days at ambient temperature.

**Subject:** CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel - Regulatory Discretion

Dear Wendi,

On February 4, 2020, the Centers for Disease Control and Prevention (CDC) received an Emergency Use Authorization (EUA) for the CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing.

Today, February 22, 2020, CDRH/FDA was informed that CDC would need enforcement discretion from FDA, until approval of a new EUA, for certain public health surveillance testing activities that do not fall within the currently authorized intended use of the assay (EUA200001) – namely, CDC has identified an urgent need to partner with designated jurisdictions and surveillance sites across the United States to perform testing to identify possible transmission of SARS-CoV-2 among individuals without a clear epidemiologic link (contact with known cases or history of recent travel to mainland China).

At this time, there are no adequate, approved, and available alternative tools that can detect SARS-CoV-2 during the acute phase of infection in the United States in symptomatic individuals without the epidemiological risk factors. In addition, unlike typical surveillance activities, individuals who test positive or inconclusive for SARS-CoV-2 using the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel will be notified of their test result and followed up accordingly.

Our understanding of the facts and the public health concerns at issue here are that there is currently no other test available to respond to this emergency, significant public health concerns are presented by the infectious disease, the proposed testing may help to prevent the spread of the infectious disease, and the testing activity will help to support situational awareness and guide the public health response to COVID-19. Based on this understanding, at this time, FDA does not intend to object to the use of this test as described above, with the following conditions: that all patients must be adequately informed about the status of this testing and the

AMERICAN OVERSIGHT

potential implications of agreeing to this testing, and that CDC will act promptly to submit an application for a new EUA to authorize the testing described above.

If you have any questions, please contact Uwe Scherf or me.

Sincerely,
Ellen

AMERICAN OVERSIGHT

Morning Uwe,

Hope you are doing well. Could I get a list of all the developers interested in the EUA, perhaps with those who are furthest along tagged?

We would like to get more testing available as soon as possible and I while I am working on making positive material more available it might be good for me to connect with developers. I would also like to understand what they require to get started and what they require to complete their EUA validations.

Thanks! ☺

**Subject:** CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel - Regulatory Discretion

Dear Wendi,

On February 4, 2020, the Centers for Disease Control and Prevention (CDC) received an Emergency Use Authorization (EUA) for the CDC's 2019-Novel Coronavirus (2019-nCoV) Real-Time Reverse Transcriptase (RT)-PCR Diagnostic Panel for the presumptive qualitative detection of nucleic acid from the 2019-nCoV in upper and lower respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputum, lower respiratory tract aspirates, bronchoalveolar lavage, and nasopharyngeal wash/aspirate or nasal aspirate) collected from individuals who meet CDC criteria for 2019-nCoV testing.

Today, February 22, 2020, CDRH/FDA was informed that CDC would need enforcement discretion from FDA, until approval of a new EUA, for certain public health surveillance testing activities that do not fall within the currently authorized intended use of the assay (EUA200001) – namely, CDC has identified an urgent need to partner with designated jurisdictions and surveillance sites across the United States to perform testing to identify possible transmission of SARS-CoV-2 among individuals without a clear epidemiologic link (contact with known cases or history of recent travel to mainland China).

At this time, there are no adequate, approved, and available alternative tools that can detect SARS-CoV-2 during the acute phase of infection in the United States in symptomatic individuals without the epidemiological risk factors. In addition, unlike typical surveillance activities, individuals who test positive or inconclusive for SARS-CoV-2 using the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel will be notified of their test result and followed up accordingly.

Our understanding of the facts and the public health concerns at issue here are that there is currently no other test available to respond to this emergency, significant public health concerns are presented by the infectious disease, the proposed testing may help to prevent the spread of the infectious disease, and the testing activity will help to support situational awareness and guide the public health response to COVID-19. Based on this understanding, at this time, FDA does not intend to object to the use of this test as described above, with the following conditions: that all patients must be adequately informed about the status of this testing and the potential implications of agreeing to this testing, and that CDC will act promptly to submit an application for a new EUA to authorize the testing described above.

If you have any questions, please contact Uwe Scherf or me.

Sincerely,
Ellen

**Importance:** High

Please see the story in POLITICO Pro below. According to the article, APHL is saying that only 3 of the public health labs have been able to verify use of the CDC test. That number is less than the (b) (4) labs number that CDC gave us (e.g., sent to ~110 labs of which (b) (4) could not verify for N3 and (b) (4) could not verify for N1). Can OHT7 follow up with CDC on the veracity of what APHL is reporting?

The article also states that CDC will distribute a second test and will need it approved by the FDA first, according to CDC.

Jeff

## Problems with CDC coronavirus test delay expanded US screening

By David Lim

02/20/2020 05:03 PM EST

Problems with a coronavirus test developed by the CDC have delayed the Trump administration's efforts to expand screening to state and local public health labs, more than two weeks after the FDA granted permission to distribute the CDC test nationwide.

Only three of the more than 100 public health labs across the country have verified the CDC test for use, according to the Association of Public Health Laboratories.

The delay has also hampered CDC's plan to screen samples collected by its national flu-surveillance network for the coronavirus, according to Peter Kyriacopoulos, APHL's senior director of public policy. CDC hopes to use public health labs in Chicago, New York City, Los Angeles, San Francisco and Seattle to screen samples that test negative for the flu and other common respiratory viruses for the coronavirus.

CDC confirmed the problems with the coronavirus test, and with using its flu-surveillance network to screen for the virus. But the agency declined to answer further questions on the matter.

The delay in establishing additional screening capacity could impede the U.S. government's ability to detect scattered cases before they snowball into larger outbreaks, former FDA Commissioner Scott Gottlieb told POLITICO.

"By that point, it may be harder to contain spread, and we'll be forced to rely on mitigation tactics to just limit the impact of the virus," he said.

More than 75,000 cases of coronavirus infection have been confirmed globally as of Thursday, and more than 2,100 people have died, according to the World Health Organization. The vast majority of cases are in China, where the virus first emerged, although countries such as Japan, South Korea and Iran are also battling local outbreaks.

In the United States, efforts to expand use of the CDC test have struggled after one of the three reagents upon which the test depends delivered inconclusive results during quality checks, said Kelly Wroblewski, APHL's director of infectious diseases. Samples that test positive at any of the three labs are still being sent to CDC for retesting.

CDC has not told public health labs when it will distribute a second version of the diagnostic test, Wroblewski said. That has left many labs struggling to decide if it is worth continuing to pursue verification of the current version, because they will have to go through the process again once the CDC revises its testing procedure, she added.

Nancy Messonnier, director of the CDC's National Center for Immunization and Respiratory Diseases, told reporters on Feb. 14 that the public health agency is reformulating the original test and is moving quickly to get the revised version to labs. FDA would have to authorize any changes to the coronavirus test before the CDC could distribute a new one.

But concerns about money also threaten the rollout of state and local coronavirus testing. Over the weekend, more than 20 Senate Democrats called for additional cash after Trump administration officials told senators

AMERICAN OVERSIGHT

during a Feb. 12 briefing that HHS would soon exhaust existing funding for its response to the virus.

"We strongly urge the administration to transmit an emergency supplemental request that ensures it can and will fully reimburse states for the costs they are incurring as part of this response," the senators wrote in a letter to HHS Secretary Alex Azar and OMB Director Mick Mulvaney.

The diagnostic test can cost up to $250 to run, depending on procedures and volume of tests a lab performs, according to Wroblewski. But it is unclear who is paying for personnel costs and other items such as personal protective gear, machines to extract RNA and sample transportation, according to APHL.

"This is a national-level response, so we would hope the federal government would have an interest in supporting a national-level response," Kyriacopoulos said. "Labs are much more interested in beginning to get the work done. But figuring out how to pay for it is not far behind."

Hey Tim,

Thank you so much for the UTMB lead. They have sample RNA ready to ship! We should have it Friday!

AMERICAN OVERSIGHT

**DEPARTMENT OF HEALTH AND HUMAN SERVICES**

Food and Drug Administration
Silver Spring, MD 20993

June 10, 2014

Thomas R. Frieden, MD, MPH
Director
Centers for Disease Control and Prevention
1600 Clifton Rd, MS D-14
Atlanta, GA 30333

Dear Dr. Frieden:

On June 5, 2013, based on a request by the Centers for Disease Control and Prevention (CDC), the Food and Drug Administration (FDA) issued a letter authorizing the emergency use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay for the presumptive detection of Middle East Respiratory Syndrome Coronavirus (MERS-CoV) in patients with signs and symptoms of MERS-CoV infection in conjunction with clinical and epidemiological risk factors, pursuant to section 564 of the Federal Food, Drug, and Cosmetic Act (the Act) (21 U.S.C. § 360bbb-3), by qualified laboratories.[1] On May 22, CDC submitted a request for an amendment to the Emergency Use Authorization (EUA). In response to that request, and having concluded that revising the June 5, 2013, EUA is appropriate to protect the public health or safety under section 564(g)(2)(C) of the Act (21 U.S.C. § 360bbb-3(g)(2)(C)), the June 5, 2013, letter authorizing the emergency use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay is being reissued in its entirety with the amendments incorporated.[2]

On May 29, 2013, pursuant to section 564(b)(1)(C) of the Act (21 U.S.C. § 360bbb-3(b)(1)(C)), the Secretary of Health and Human Services (HHS) determined that there is a significant potential for a public health emergency that has a significant potential to affect national security or the health and security of United States citizens living abroad, and that involves a biological, chemical, radiological, or nuclear agent or agents, or a disease or condition that may be attributable to such an agent or agents - in this case, MERS-CoV.[3] Pursuant to section 564(b)(1) of the Act (21 U.S.C. § 360bbb-3(b)(1)), and on the basis of such determination, the Secretary of HHS then declared that circumstances exist justifying the authorization of the emergency use of

[1] U.S. Food and Drug Administration. *Authorization of Emergency Use of an In Vitro Diagnostic for Detection of Middle East Respiratory Syndrome Coronavirus; Availability.* 78 Fed. Reg. 42779 (July 17, 2013).

[2] The amendments to the June 5, 2013, letter authorize the expanded use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay to include the *in vitro* qualitative detection of genomic RNA from MERS-CoV in clinical specimens collected from individuals meeting certain epidemiological criteria (e.g., contact with a probable or confirmed MERS-CoV case, history of travel to geographic locations where MERS-CoV cases were detected, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation) who may or may not exhibit clinical signs and symptoms associated with MERS-CoV infection. The amendments also include a new Fact Sheet for Contacts of MERS Cases and revisions to the Instructions for Use, product insert, and Fact Sheets for Health Care Professionals and Patients.

[3] As amended by the Pandemic and All-Hazards Preparedness Reauthorization Act, Pub. L. No. 113-5, under section 564(b)(1)(C) of the Act the Secretary may make a determination of a public health emergency, or of a significant potential for a public health emergency.

AMERICAN OVERSIGHT

*in vitro* diagnostics for the detection of MERS-CoV, subject to the terms of any authorization issued under 21 U.S.C. § 360bbb-3(a).[4]

Having concluded that the criteria for issuance of this authorization under section 564(c) of the Act (21 U.S.C. § 360bbb-3(c)) are met, I am authorizing the emergency use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay (as described in the scope section of this letter (Section II)) for the presumptive detection of MERS-CoV in individuals meeting MERS-CoV clinical and/or epidemiological criteria (e.g., clinical signs and symptoms associated with MERS-CoV infection, contact with a probable or confirmed MERS-CoV case, history of travel to geographic locations where MERS-CoV cases were detected, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation) by qualified laboratories, subject to the terms of this authorization.

## I. Criteria for Issuance of Authorization

I have concluded that the emergency use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay for the presumptive detection of MERS-CoV in individuals meeting MERS-CoV clinical and/or epidemiological criteria (e.g., clinical signs and symptoms associated with MERS-CoV infection, contact with a probable or confirmed MERS-CoV case, history of travel to geographic locations where MERS-CoV cases were detected, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation) meets the criteria for issuance of an authorization under section 564(c) of the Act, because I have concluded that:

1. MERS-CoV can cause a serious or life threatening disease or condition, including severe respiratory illness, to humans infected by this virus;

2. Based on the totality of scientific evidence available to FDA, it is reasonable to believe that the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay may be effective in diagnosing MERS-CoV, and that the known and potential benefits of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay, when used for diagnosing MERS-CoV infection, outweigh the known and potential risks of such product; and

3. There is no adequate, approved, and available alternative to the emergency use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay for diagnosing MERS-CoV.[5]

## II. Scope of Authorization

I have concluded, pursuant to section 564(d)(1) of the Act, that the scope of this authorization is limited to the use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay for the presumptive detection of MERS-CoV in individuals meeting MERS-CoV clinical and/or epidemiological criteria (e.g., clinical signs and symptoms associated with MERS-CoV infection, contact with a probable or confirmed MERS-CoV case, history of travel to geographic locations

[4] U.S. Department of Health and Human Services. *Determination and Declaration Regarding Emergency Use of In Vitro Diagnostics for Detection of Middle East Respiratory Syndrome Coronavirus (MERS-CoV)*. 78 Fed. Reg. 33842 (June 5, 2013).

[5] No other criteria of issuance have been prescribed by regulation under section 564(c)(4) of the Act.

AMERICAN OVERSIGHT

where MERS-CoV cases were detected, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation).

**The Authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay:**

The CDC Novel Coronavirus 2012 Real-time RT-PCR Assay is a real-time reverse transcriptase PCR (rRT-PCR) for the *in vitro* qualitative detection of MERS-CoV viral RNA from respiratory specimens (such as nasopharyngeal or oropharyngeal swabs, sputa, lower respiratory aspirates/washes), sera, and stool from individuals meeting MERS-CoV clinical and/or epidemiological criteria (e.g., clinical signs and symptoms associated with MERS-CoV infection, contact with a probable or confirmed MERS-CoV case, history of travel to geographic locations where MERS-CoV cases were detected, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation). The testing procedure consists of nucleic acid extraction followed by rRT-PCR on the FDA cleared Applied Biosystems 7500 Fast Dx Real-Time PCR Instrument.

The CDC Novel Coronavirus 2012 Real-time RT-PCR Assay includes the following primer and probe sets:

| | |
|---|---|
| **NCV.N2** | targets the MERS-CoV nucleocapsid protein gene |
| **NCV.N3** | targets the MERS-CoV nucleocapsid protein gene |
| **NCV.upE**[6] | targets the MERS-CoV region upstream of envelope protein gene |
| **RP**[7] | targets the human Ribonuclease P gene. This primer and probe set is included as a control for specimen quality, to confirm that human nucleic acid was successfully extracted from the clinical specimen. |

The CDC Novel Coronavirus 2012 Real-time RT-PCR Assay also includes the following control materials:

- **Positive Control:** NCV-2012 rRT-PCR Assay Positive Control (VTC)
- **Negative Controls:** Sterile, nuclease-free water, used as No Template Control (NTC)
  1. **PCR No Template Control ($NTC_1$)**
  2. **Extraction control ($NTC_2$)**

The above described CDC Novel Coronavirus 2012 Real-time RT-PCR Assay, when labeled consistently with the labeling authorized by FDA, entitled "CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Instructions for Use" (available at http://www.fda.gov/MedicalDevices/Safety/EmergencySituations/ucm161496.htm), which may be revised with written permission of FDA, is authorized to be distributed to and used by qualified laboratories under this EUA, despite the fact that it does not meet certain requirements otherwise required by federal law.

---

[6] This a WHO-recommended MERS-CoV primer and probe set. See Corman VM, et al. Detection of a novel human coronavirus by real-time reverse-transcription polymerase chain reaction. *Euro Surveill* 2012;17(39). Available online at: http://www.eurosurveillance.org/images/dynamic/EE/V17N39/art20285.pdf.

[7] This primer and probe set is not provided in the CDC Novel Coronavirus 2012 rRT-PCR Assay Kit, but it is required for test performance. Laboratories will utilize the Laboratory Response Network (LRN) RNase P Real-time PCR Primer and Probe Set.

AMERICAN OVERDRIVE

**The above described CDC Novel Coronavirus 2012 Real-time RT-PCR Assay is authorized to be accompanied by the following information pertaining to the emergency use, which is authorized to be made available to health care professionals and patients:**

- **Fact Sheet for Health Care Professionals: Interpreting CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Test Results**
- **Fact Sheet for Patients: Understanding Results from the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay**
- **Fact Sheet for Contacts of MERS Cases: Understanding Results from the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay**

As described in section IV below, CDC is also authorized to make available additional information relating to the emergency use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay that is consistent with, and does not exceed, the terms of this letter of authorization.

I have concluded, pursuant to section 564(d)(2) of the Act, that it is reasonable to believe that the known and potential benefits of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay in the specified population, when used for presumptive detection of MERS-CoV, outweigh the known and potential risks of such a product.

I have concluded, pursuant to section 564(d)(3) of the Act, based on the totality of scientific evidence available to FDA, that it is reasonable to believe that the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay may be effective in the diagnosis of MERS-CoV infection pursuant to section 564(c)(2)(A) of the Act. The FDA has reviewed the scientific information available including the information supporting the conclusions described in Section I above, and concludes that the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay, when used to diagnose MERS-CoV infection in the specified population, meets the criteria set forth in section 564(c) of the Act concerning safety and potential effectiveness.

The emergency use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay under this EUA must be consistent with, and may not exceed, the terms of this letter, including the scope and the conditions of authorization set forth below. Subject to the terms of this EUA and under the circumstances set forth in the Secretary of HHS's determination under section 564(b)(1)(C) described above and the Secretary of HHS's corresponding declaration under section 564(b)(1), the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay described above is authorized to diagnose MERS-CoV infection in individuals meeting MERS-CoV clinical and/or epidemiological criteria (e.g., clinical signs and symptoms associated with MERS-CoV infection, contact with a probable or confirmed MERS-CoV case, history of travel to geographic locations where MERS-CoV cases were detected, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation).

This EUA will cease to be effective when the declaration of emergency is terminated under section 564(b)(2) of the Act or when the EUA is revoked under section 564(g) of the Act.

AMERICAN OVERSIGHT

**III. Waiver of Certain Requirements**

I am waiving the following requirements for the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay during the duration of this EUA:

- Current good manufacturing practice requirements, including the quality system requirements under 21 CFR Part 820 with respect to the design, manufacture, packaging, labeling, storage, and distribution of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay.

- Labeling requirements for cleared, approved, or investigational devices, including labeling requirements under 21 CFR 809.10 and 809.30, except for the intended use statement (21 CFR 809.10(a)(2), (b)(2)), adequate directions for use (21 U.S.C. 352(f)), (21 CFR 809.10(b)(5) and (8)), any appropriate limitations on the use of the device including information required under 21 CFR 809.10(a)(4), and any available information regarding performance of the device, including requirements under 21 CFR 809.10(b)(12).

**IV. Conditions of Authorization**

Pursuant to section 564 of the Act, I am establishing the following conditions on this authorization:

**CDC**

A. CDC will distribute the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay with the authorized labeling, as may be revised with written permission of FDA, only to qualified laboratories.

B. CDC will provide to the qualified laboratories the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Health Care Professionals, the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Patients, and the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Contacts of MERS Cases.

C. CDC will make available on its website the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Health Care Professionals, the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Patients, and the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Contacts of MERS Cases.

D. CDC will inform state and/or local public health authority(ies) of this EUA, including the terms and conditions herein.

E. CDC will ensure that qualified laboratories using the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay have a process in place for reporting test results to health care professionals and federal, state, and/or local public health authorities, as appropriate.

F. CDC will track adverse events and report to FDA as required under 21 CFR Part 803.

G. Through a process of inventory control, CDC will maintain records of device usage.

AMERICAN OVERSIGHT

H. CDC will collect information on the performance of the assay, and report to FDA any suspected occurrence of false positive or false negative results of which CDC becomes aware.

I. CDC is authorized to make available additional information relating to the emergency use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay that is consistent with, and does not exceed, the terms of this letter of authorization.

J. Only CDC may request changes to the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Health Care Professionals, the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Patients, or the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay Fact Sheet for Contacts of MERS Cases. Such requests will be made by contacting FDA concerning FDA review and approval.

**Qualified Laboratories**

K. Qualified laboratories will make available the authorized Fact Sheet for Health Care Professionals, the authorized Fact Sheet for Patients, and the authorized Fact Sheet for Contacts of MERS Cases.

L. Qualified laboratories will perform the assay on an Applied Biosystems 7500 Fast Dx Real-Time PCR Instrument with the appropriate software.

M. Qualified laboratories will have a process in place for reporting test results to health care professionals and federal, state, and/or local public health authorities, as appropriate.

N. Qualified laboratories will collect information on the performance of the assay, and report to CDC any suspected occurrence of false positive or false negative results of which qualified laboratories become aware.

**CDC and Qualified Laboratories**

O. CDC and qualified laboratories will ensure that any records associated with this EUA are maintained until notified by FDA. Such records will be made available to FDA for inspection upon request.

**Conditions Related to Advertising and Promotion**

P. All advertising and promotional descriptive printed matter relating to the use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay shall be consistent with the Fact Sheets and authorized labeling, as well as the terms set forth in this EUA and other requirements set forth in the Act and FDA regulations.

Q. All advertising and promotional descriptive printed matter relating to the use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay shall clearly and conspicuously state that:

- This test has not been FDA cleared or approved;

AMERICAN OVERSIGHT

- This test has been authorized by FDA under an Emergency Use Authorization for use by qualified laboratories;
- This test has been authorized only for the detection of MERS-CoV and not for any other viruses or pathogens; and
- This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of *in vitro* diagnostics for detection of MERS-CoV under section 564(b)(1) of the Act, 21 U.S.C. § 360bbb-3(b)(1).

No advertising or promotional descriptive printed matter relating to the use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay may represent or suggest that this test is safe or effective for the diagnosis of MERS-CoV.

The emergency use of the authorized CDC Novel Coronavirus 2012 Real-time RT-PCR Assay as described in this letter of authorization must comply with the conditions above and all other terms of this authorization.

**V. Duration of Authorization**

This EUA will be effective until the declaration that circumstances exist justifying the authorization of the emergency use of *in vitro* diagnostics for detection of MERS-CoV is terminated under section 564(b)(2) of the Act or the EUA is revoked under section 564(g) of the Act.

Deliberative / Pre-decisional

Hi Ellen,

I believe the CDC will ask for the same language as was used in the MERS EUA. See highlighted text below and attached.

On June 5, 2013, based on a request by the Centers for Disease Control and Prevention (CDC), the Food and Drug Administration (FDA) issued a letter authorizing the emergency use of the CDC Novel Coronavirus 2012 Real-time RT-PCR Assay for the presumptive detection of Middle East Respiratory Syndrome Corona virus (MERS-Co V) in patients with signs and symptoms of MERS-Co V infection in conjunction with clinical and epidemiological risk factors , pursuant to section 564 ofthe Federal Food, Drug, and Cosmetic Act (the Act) (21 U.S.C. § 360bbb-3), by qualified laboratories.

Best,
*Tim*

**Subject:** RE: COVID-19 assays

Hi Werner,

Thank you so much for this and apologies for the delay in getting back to you. It has been a very busy day an am still in the EOC.

I like the sound of this below for now as I have not yet got my head around thinking about serology assays and I am still gaining understanding of (b)(4)

You Wrote:

(b)(4)

Two items:

1) UTMB is now shipping extracted viral RNA that can be used for your development work.

2) If you get the UTMB RNA this week or early next week, how soon can you have a finished EUA assay with validation package to submit to the FDA?

Thanks!

Best,
*Tim*

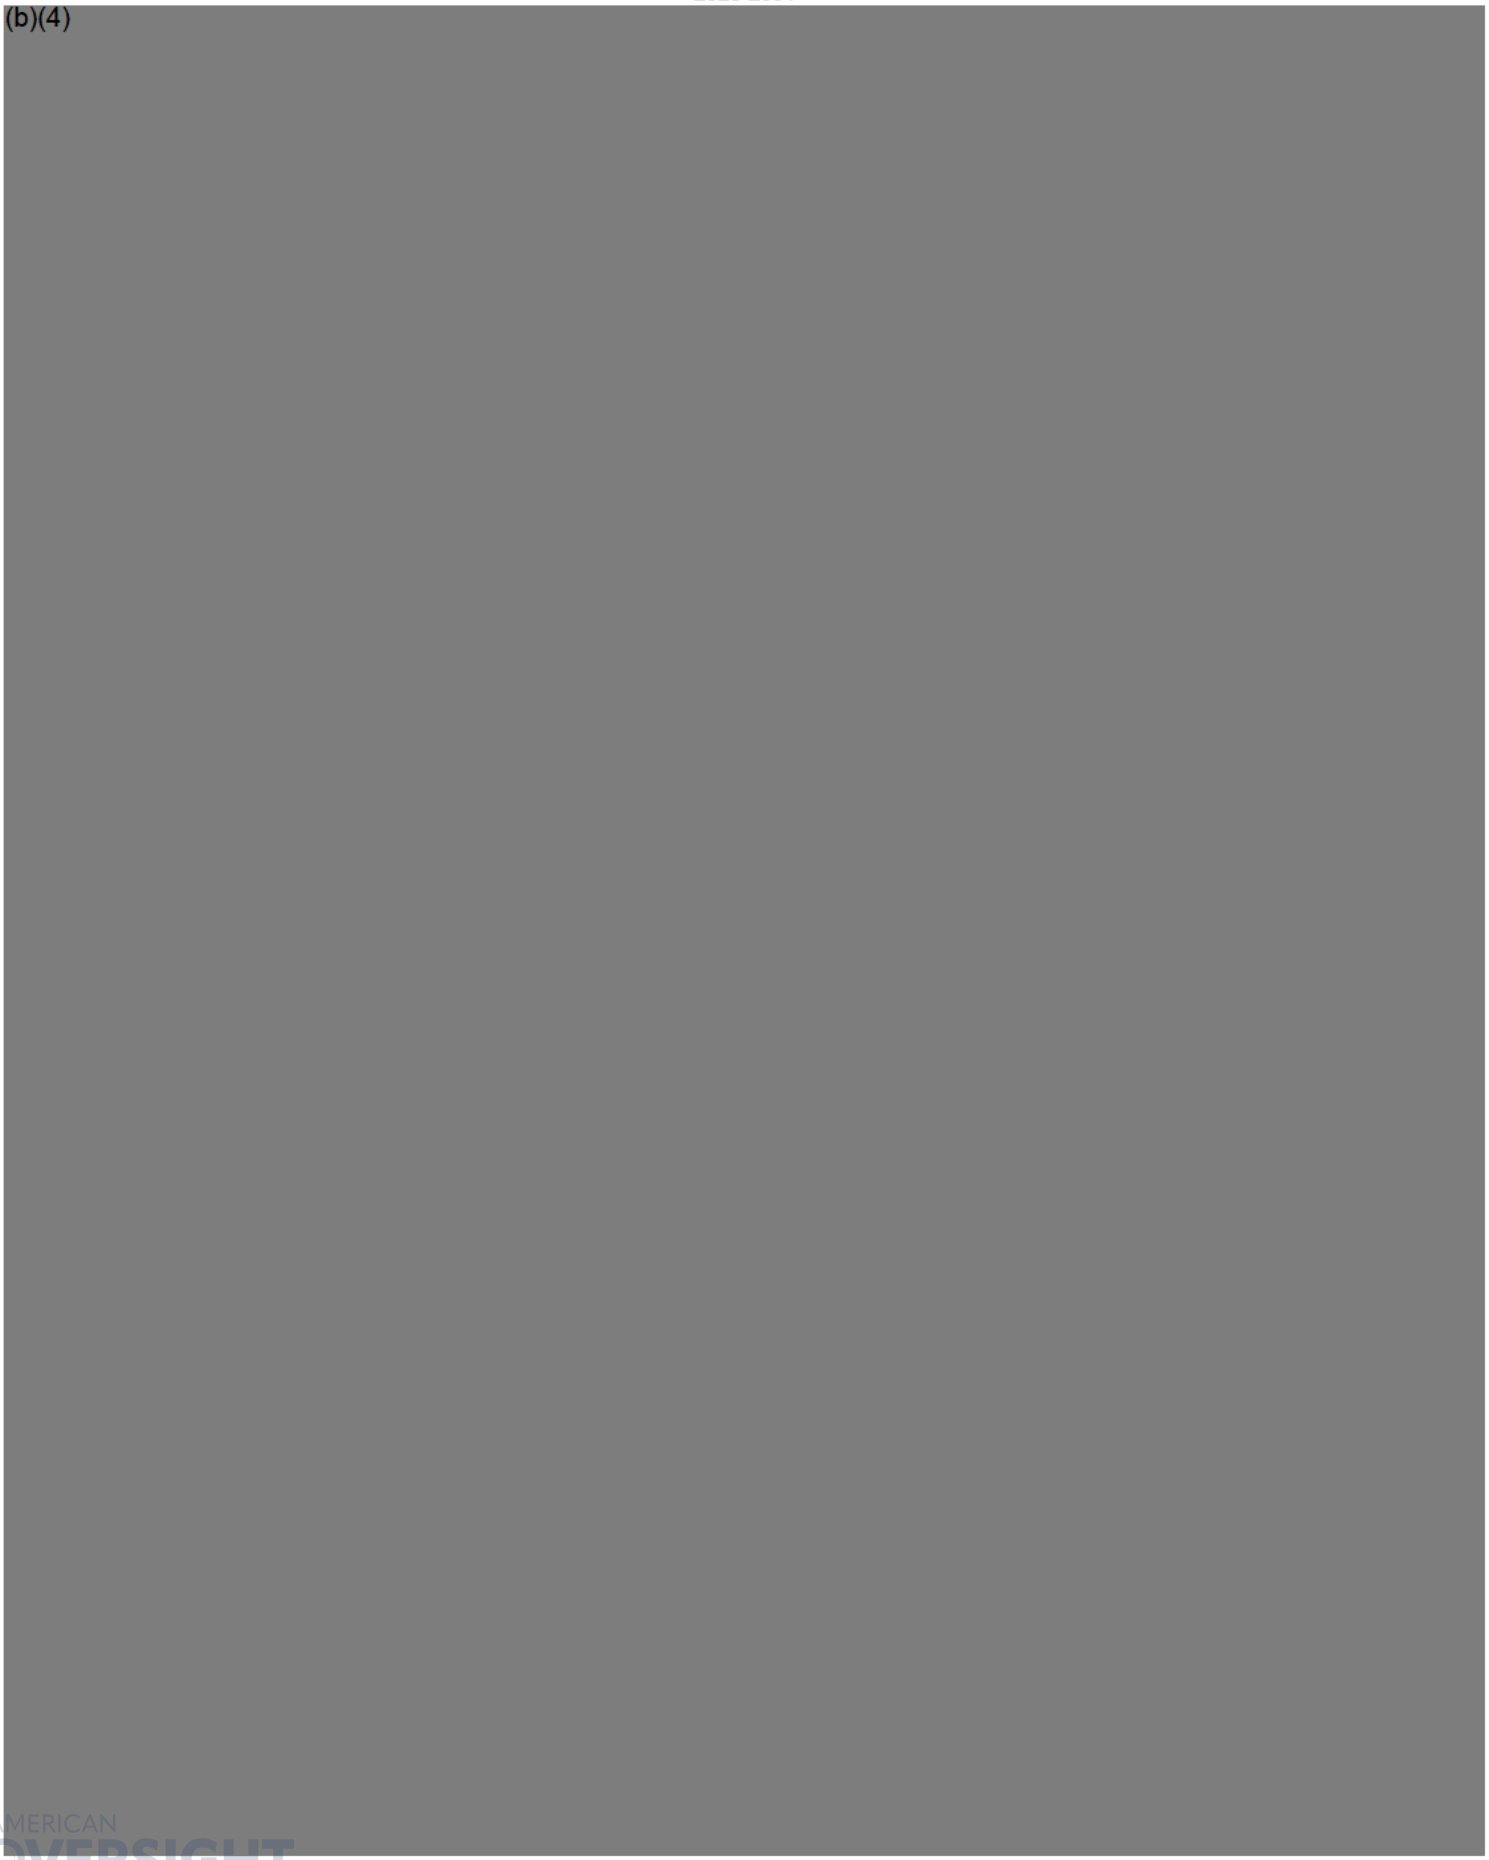
Hallo Tim,

It was great talking to you on Friday to discuss options and requirements for the development of COVID-19 assays on the Quidel platforms, in specific Lyra for nucleic acid-based assays and (b) (4) and Sofia for the immunoassay-based assays.



As R&D team we discussed today at Quidel what options we would have to develop such assays, which assumptions we have to make and what timelines are best case options.

Hi Liz,

That would be great. Can we arrange something for in the morning? I am booked 10-11 am Eastern, otherwise I am free at this moment tomorrow.

My cell is (b) (6)

Peter also mentioned that he can help arrange the communication.

Thanks! ☺

Best,
*Tim*

Tim,
Thank you for the introduction.

AMERICAN OVERSIGHT

Dr. Stenzel, I would be happy to facilitate a call with our R&D lead on the Coronavirus qPCR assays as well as one of our regulatory leads. Would you have time later this week, either on Thursday or Friday? If you have someone who helps with your schedule, I am happy to work directly with them as well.

Best regards,
- Liz

Hi Tim – it was nice to meet last week. Appreciate the time and candor in the discussion. I know that one of the key hurdles we face is access to the samples in the US. I'm including here Liz Kerr, our leader of a company-wide task force. Can we work with you on samples? – Tim

Hi Tim,

Great to see you last week. I was heartened that your company is interested in developing assay.

We want to do anything we can to help speed the development of an EUA. Could you put me in touch with the correct R&D leader to discuss?

Thanks in advance!

Best,
*Tim*

**Subject**: RE: checking in on 2021 USCAP Timely Topics lecture

Hi Julia,

Great to hear from you and hope you are well! That restaurant is great, hope you son and daughter in law enjoyed it.

I am the acting FDA Liaison to the CDC for Coronavirus and have been at the CDC since Saturday, not sure when I will be going back to DC.

Regarding USCAP, there has only been more and more topics to potentially focus on since we last talked. The two you mention are timely. And AI and ML only seems to grow exponentially. There clearly are some very good LDT labs.

Not sure when your board meeting is, I will have time to talk today most likely after 6 pm Eastern Time. What works for you.

Thanks! ☺

Best,
*Tim*

---

Hi Tim,

AMERICAN OVERSIGHT

I hope your year has gone well! Can't believe how fast it all goes!

I will be departing this week for the 2020 USCAP annual meeting in Los Angeles and there may be a brief discussion about your anticipated 2021 presentation at the Board meeting. I wanted to reach out to learn if you had any additional thoughts regarding your presentation.

One thing that seems to be increasingly evident is that pathology (to include laboratory precision medicine) is receiving more highly visible criticism from oncologists and other organizations (some likely warranted due to a few highly visible aggregious news worthy labs) - but others not, but lumped with the bad actors... Interested to learn more about this disconnect and spectrum of views of LDTs and FDA approved assays - merits and limitations ... Also, role of molecular pathologist vs phd geneticist in interpreting somatic cancer results another conflicting topic

Coincidentally (b) (6) (he got married a little over a year ago) - she is an interventional cardiology fellow and has a meeting there. I advised them to try the Chinese restaurant we ate at and they are going there tonight with some of the other fellows!

Wishing you the best always and look forward to hearing back from you on any new insight

Julie

**Subject:** RE: a bit more info (hotel?) etc...

Non-UNMC email

Hi Julia,

Wonderful!

I will check my CV to make sure it is up to date and then send along.

AMERICAN OVERSIGHT

A typical title for my talks these days are **FDA Updates** or **FDA Updates on Precision Medicine.** Not extremely exciting so if you have any ideas, please relay. Also, if there is anything specific that you think folks will find more timely and interesting, I am open to adapting my talk. It is a bit far out for setting a specific title or topic so perhaps these generic titles work for now.

No hotel required for March 18 as I am local and will drive down for the day. As long as I am there it would be nice to have a pass for the day so I can attend other events/talks, etc. as well that day.

Thanks!

Best,

*Tim*
