

**Case No. 2020-00717-FOIA-OS**  
**American Oversight v. HHS, Civil No. 20-1169**

**November 11, 2023**

Austin Evers  
Executive Director  
American Oversight  
Sent via email: [foia@americanoversight.org](mailto:foia@americanoversight.org)

Dear Mr. Evers:

This letter is the thirtieth interim response to your March 18, 2020, Freedom of Information Act (FOIA) request. American Oversight requests that HHS produce the following records as soon as practicable, and at least within twenty business days:

All email communications (including email messages, complete email chains, email attachments, calendar invitations) sent by the government officials specified below containing any of the following key terms:

1. Coronavirus
2. Corona
3. Virus
4. Disease
5. Pandemic
6. Epidemic
7. Outbreak
8. containment
9. "public health emergency"
10. "COVID-19"
11. "COVID 19"
12. COVID19
13. SARS
14. "2019-nCoV"
15. POTUS
16. Test
17. Tests
18. Testing
19. EUA
20. Emergency
21. Wuhan
22. Hoax
23. Hubei
24. Princess
25. Cruise
26. Kirkland
27. Seattle
28. "New Rochelle"
29. "BioGen Conference"
30. CPAC
31. AIPAC
32. RNA
33. "Extraction kits"

34. Roche
35. Vaccine
36. Antiviral
37. Antiretroviral
38. Quarantine
39. Distancing
40. Isolation
41. N95
42. Mask
43. Respirator

#### Government Officials

1. Alex Azar, Secretary
2. Brian Harrison, Chief of Staff
3. Eric Hargan, Deputy Secretary
4. Jerome Adams, Surgeon General
5. Robert Kadlec, Assistant Secretary for Preparedness and Response
6. John Brooks, Senior Advisor to the Secretary for Drug Pricing Reform

On February 10, 2021, you narrowed your request per the following:

Eliminate attachments, documents regarding “Red Dawn” and obvious marketing and news bulletins:

- a. Limit the date range of the following key terms as stand-alone search terms from January 15, 2020 through February 29, 2020. ~~[[Limit responsive records to those that also include: (Test OR Tests OR Vaccine OR EUA OR “Emergency Use” OR Shortage OR Shortages OR Supplies OR “the WHO” OR States OR Governor OR Governors OR PPE OR Ventilators OR Respirators OR Swabs OR DPA OR “Defense Production Act” OR Trump OR Pence OR Jared OR Kushner OR “White House” OR “the WH”)]]~~

- i. Coronavirus
- ii. Corona
- iii. “COVID-19”
- iv. “COVID 19”
- v. COVID19
- vi. “2019-nCoV”

~~vii. SARS~~

~~viii. Epidemic~~

~~ix. Pandemic~~

~~x. Outbreak~~

~~xi. “Public Health Emergency”~~

-

- b. After March 1, 2020, for the key terms listed in Column A below (the same search terms as identified above), limit responsive records to those that also include one or more of the terms from Column B:

| Column A                                                                                                                                                                                                                                                                                                                                        | Column B                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

h. Cut the following key terms completely: [[no changes]]

- i. Disease
- ii. Virus

The Department processed **429 pages** of potentially responsive records captured in the agency's search for FOIA request 2020-00717-FOIA-OS. After a careful review of these pages, I have determined to release **248 pages** to you in their entirety and I am further releasing in part **117 pages**, with portions redacted, pursuant to Exemptions (b)(5) and (b)(6) of the FOIA (5 U.S.C. §552 (b)(5) and (b)(6)). Also, I determined that **5 pages** are not responsive to the request. Furthermore, I have determined that **59 pages** should be sent for consultation to others and returned to this Department for final disposition.

FOIA exemption (b)(5) protects inter-agency or intra-agency memoranda or letters which would not be available by law to a party other than an agency in litigation with the agency. This exemption protects documents that would be covered by any privilege an agency could assert in a civil proceeding. These privileges include, among others, the deliberative process privilege, the attorney-client privilege, the attorney work-product privilege and the presidential communications privilege. I have considered the foreseeable harm standard when reviewing these records and applying the (b)(5) exemption.

FOIA exemption (b)(6) permits a federal agency to withhold information and records about individuals in "personnel and medical files and similar files, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy." The definition of "similar files" has historically been broadly interpreted to include a wide variety of files, and the United States Supreme Court has held that Congress intended the term "similar files" to be interpreted broadly, rather than narrowly. I have analyzed these records and find they meet the threshold requirement of this exemption. Additionally, I have reviewed and weighed the public interest in disclosure of this information against the privacy interest in nondisclosure and found that the privacy interest outweighs the public's interest in disclosure.

I have found that it is reasonably foreseeable that disclosure would harm an interest protected by one or more of the exemptions to the FOIA's general rule of disclosure and/or that disclosure is prohibited by law.

We will continue to review the remaining records as efficiently and expeditiously as possible, consistent with our available resources. Should you have questions or concerns regarding the Department's response and/or the processing of your request, any such issues should be communicated to your legal counsel and Department of Justice Attorney representing the Department in this matter.

Sincerely yours,

**Alesia Y.**

## Public Health and Medical Services Conference Call (2020 Novel Coronavirus)

Host: HHS SOC

When: Friday, January 24, 2020, 0900ET

### Access Information

Audio Connection: (b)(6)

Meeting Number: (b)(6)

### AGENDA:

- Roll Call and Opening Comments
- Situation Overview
- Current Interagency Planning Activities
- Ongoing HHS Activities
  - Critical Infrastructure Protection
  - Healthcare Preparedness Program
  - Strategic National Stockpile
  - BARDA
  - CDC
  - FDA
  - OASH
  - HRSA
  - IHS
  - Others by exception
- Ongoing Interagency Activities
  - DHS
  - FEMA
  - DoD
  - VA
  - USDA

- Others by exception
- Command and Control Structure Discussion

Very Respectfully,

### Secretary's Operations Center (SOC)

U.S. Department of Health and Human Services (HHS)  
 Assistant Secretary for Preparedness and Response (ASPR)  
 200 Independence Ave S.W.  
 Washington D.C. 20201  
 WK: (202) 619 – 7800  
 Fax: (800) 514 – 4256  
 Work Cell: (b)(6)  
 Email: [hhs.soc@hhs.gov](mailto:hhs.soc@hhs.gov)

## Public Health and Medical Services Conference Call (2020 Novel Coronavirus)

Host: HHS SOC

When: Friday, January 24, 2020, 0900ET

### Access Information

Audio Connection: (b)(6)

Meeting Number: (b)(6)

### AGENDA:

- Roll Call and Opening Comments (SOC and Dr. Kadlec)
- Situation Overview (CDC – CAPT Jernigan, Joe Gregg or designee)
- Current Interagency Planning Activities (Ken McCreary)
- Ongoing HHS Activities

- Critical Infrastructure Protection (Brittney Seiler)
  - Healthcare Preparedness Program (Jack Herrmann)
  - Strategic National Stockpile (Steve Adams)
  - BARDA (Dr. Bright, Dr. Disbrow or Dr. Lambert)
  - CDC (CAPT Jernigan, Joe Gregg or designee)
  - FDA (Dominic Frasca)
  - OASH (RADM Orsega)
  - HRSA (CAPT Lennon)
  - IHS (Chris Jones)
  - Others by exception
- Ongoing Interagency Activities
    - DHS (Dr. Caneva, Paul Brooks or Designee) (DHS NOC and CWMD also invited)
    - FEMA (Mike Vineyard)
    - DoD (ASPR LNOs – OSD, INDOPACOM, SOUTHCOM, TRANSCOM and NORTHCOM)
    - VHA (Dr. Kim or Designee)
    - USDA (Jessica Fantinato)
    - Others by exception
- Command and Control Structure Discussion

Very Respectfully,

**Secretary's Operations Center (SOC)**

U.S. Department of Health and Human Services (HHS)  
 Assistant Secretary for Preparedness and Response (ASPR)  
 200 Independence Ave S.W.  
 Washington D.C. 20201  
 WK: (202) 619 – 7800  
 Fax: (800) 514 – 4256  
 Work Cell: (b)(6)

Good evening \_ TG tomorrow is Friday..... First meeting 8am – AMA Update on Coronavirus

New and Deleted Items on the calendar:

- BG Talley's office has cancelled because of the time change to 12noon – slim chance but *'his schedule may change at the last min'...*
- ESF8 is at 9am – you w/have just 30/40 mins to lead the call – the plan is to have you leave HHS/Daniel by 945am to get you to the Senate – (doors open at 10:00am for presenters)
- 3:30pm - scheduled your meeting '**ASPR Senior Leadership Meeting: Coronavirus: Planning; Incident Management; DPA, Critical Infrastructure'**

2:30pm Data Spillage Material Questions for Senior Leadership:

Good night – blessings to each of you...

**Arwenithia Ford-Barnes**

Executive Assistant to the ASPR | *Dr. Robert Kadlec*

Office: (202) 205-8905 Mobile: (b)(6) Email: [Arwenthia.FordBarnes@hhs.gov](mailto:Arwenthia.FordBarnes@hhs.gov)

Good evening, Dr. Adams,  
And what a day it was – ‘phew! Congratulations on a successful rollout of the #CessationSGR today! And thanks to the entire team for your support today (and in the lead-up!). It truly was a team effort.

Attached and below are some initial readouts – we will provide additional updates as we have them. We will also continue to heavily promote the report and related materials on social media in the coming days.

### Mentions & WTAS

Attached you will find some initial reports on today’s rollout. There are two email messages attached - First is a compilation of “What They Are Saying,” which includes stakeholder reactions. Second is an end of day recap, which touches on social media engagements, coverage, and key quotes. Lastly, you’ll find a word doc that takes a closer look at some of the news mentions.

### Latest TPs on the coronavirus

Per ASPA, attached and below are updated talking points on the topic. We will share any updated TPs that come in.

## 2019 Novel Coronavirus (2019-nCoV) Media Key Points

January 23, 2020

### MAIN KEY MESSAGES

- This is a rapidly changing situation and we are still learning about the new coronavirus (2019-nCoV) discovered in China. We are monitoring the situation closely and anticipate updating our recommendations and guidance as needed.
- Outbreaks like this – when a new virus is emerging to infect people – are always concerning. Some people might be worried about this virus and how it may impact Americans.
  - While this situation poses a very serious public health threat, CDC believes the immediate risk to the U.S. public is low at this time.
  - However, the situation is evolving, and the risk will depend on how well the virus spreads and how sick it makes people.
- CDC has activated its Emergency Operations Center and begun using public health measures, including enhanced entry screening, as part of our aggressive public health response strategy.
- We fully expect that in the coming days and weeks, we will see more cases of this new coronavirus here in the United States and globally.

### **SITUATION UPDATE**

- Although Chinese officials have closed transport within and out of Wuhan, CDC will continue to conduct enhanced entry screening at five designated airports – New York JFK, San Francisco, Los Angeles LAZ, Chicago O’Hare, and Atlanta Hartsfield-Jackson. We are currently evaluating the extent and duration of this enhanced screening.
- Next week CDC will begin regular reporting of laboratory results on our website.
  - As of today, no new cases with novel coronavirus have been detected in the United States since our announcement on Tuesday.
- Again, it’s likely that we will see more cases in the United States.
  - We must also prepare for potential person to person spread here since we have seen instances of this in Asia.
- CDC will continue to lean in on public health response efforts to protect Americans. We are working closely with state and local health departments and have teams on standby to deploy if needed.

### **WHAT YOU CAN DO**

- While the immediate risk of this new virus to the American public is believed to be low at this time, there are simple daily precautions that everyone should always take.
  - It’s currently flu and respiratory disease season and CDC recommends getting vaccinated, taking everyday preventive actions to stop the spread of germs, and taking flu antivirals if prescribed.
- Right now, CDC recommends travelers avoid all nonessential travel to Wuhan, China. We also recommend people traveling to China practice certain health precautions like avoiding contact with people who are sick and practicing good hand hygiene.

#### NOTABLE COVERAGE, RED FLAGS, AND RECOMMENDATIONS

##### Notable Coverage

**New York Times:** [Surgeon General Says ‘Shocking’ Portion of People Aren’t Told to Stop Smoking \(1/23\)](#)

*By: Sheila Kaplan, Reporter covering the FDA and tobacco industry*

The article covers various findings from the new Surgeon General report. Kaplan says that U.S. Surgeon General, Dr. Jerome Adams, urged smokers to use a range of cessation methods that have been proven effective and cautioned that e-cigarettes have not. The article also includes findings from the report that are specific to e-cigarettes, explaining that the products have not yet been proven to be effective for quitting. Dr. Adams is quoted from an interview with the New York Times as well as from today’s press conference. The story also includes quotes from members of the public health community, including Chris Bostic, deputy director for the policy at the Action on Smoking & Health and Erika Sward, a spokeswoman for the American Lung Association. The full text version of this article can be accessed at the following [Webcargo](#) link.

##### Red Flags

**PR Newswire:** [Foundation for a Smoke-Free World's Statement on "Smoking Cessation: A Report of the Surgeon General," Released on January 23, 2020\(1/23\)](#)

This is a statement from Foundation for a Smoke-Free World, an organization that received contributions from Philip Morris International (PMI) in 2018 and in 2019. The statement claims that the Surgeon General has “failed to focus on smoking cessation” for the past 30 years. The statement also claims that “failure to expand access to effective cessation tools, including NRT, medications and e-cigarettes, hampers the progress toward ending the harms of tobacco”. This is just an FYI; we do not recommend any action at this time.

#### NEW NOTABLE COVERAGE

**CNN: [US surgeon general says doctors aren't encouraging enough smokers to quit \(1/23\)](#)**

*By: Jacqueline Howard, Health Reporter*

The article cites key findings from the new Surgeon General report, including how many smokers are not routinely told by their physicians to quit smoking. The article also mentions e-cigarette-specific findings, and quotes Dr. Adams explaining the importance of using science to guide current recommendations. The article also includes a quote from the Campaign for Tobacco-Free Kids [statement](#).

**NBC News: [E-cigarettes lead people to start smoking, surgeon general says \(1/23\)](#)**

*By: Rosemary Guerguerian, M.D., Medical fellow with the NBC News Health and Medical Unit*

This article focuses on the e-cigarette-related findings in the 2020 Surgeon General report and mentions the recent FDA ban on all flavored e-cigarette products, except menthol and tobacco-flavored pods. The article explains that there's still not enough evidence to say that e-cigarettes are an effective quit aid, but there is clear evidence that using e-cigarettes leads people to start smoking.

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

## **HHS Executive Summary: Friday, 24Jan20**

### **1. HHS**

#### **Today's Noteworthy Topics:**

##### Novel Coronavirus (2019-nCoV)

The World Health Organization (WHO) decided Thursday 23Jan20 against declaring the novel coronavirus outbreak in China a Public Health Emergency of International Concern (PHEIC). There are 581 cases of confirmed 2019-nCoV in 5 countries as of 23Jan20. CDC travel health notice elevated to level 3(avoid non-essential travel) for Wuhan. Entry screening started in Atlanta (ATL) and Chicago (ORD) airports, in addition to screening currently taking place at San Francisco (SFO), Los Angeles (LAX), and John F Kennedy (JFK). Passengers will be funneled (re-ticketed) from Wuhan through these 5 airports. 2,055 persons were screened as of 22Jan20 and 1 was referred for medical evaluation. The SOC will activate to level III, (Virtual activation) in support of CDC for 2019 Novel Coronavirus (2019-nCoV); and for coordination of ESF 8 activities and information sharing. A National Public Health and Medical Services Conference Call (ESF-8) has been scheduled for 0900ET today, 24Jan20.

##### Ebola Outbreak, East Democratic Republic of the Congo

The outbreak of Zaire ebolavirus (EVD) announced on 30 July 2018 by the Ministry of Health (MOH) of Democratic Republic of Congo (DRC) continues as the second largest Ebola outbreak ever recorded. One health zones (HZs) reported nine new confirmed cases in the past week in the Nord Kivu Province of DRC. Beni HZ remains a concern after reporting all nine new confirmed cases in the past week, all potentially linked to a single case. As of 21Jan20, the current transmission chain comprising of 82 confirmed and probable cases reported in 13 health areas (HAs) in six HZs; Mabalako, Beni, Biena, Butembo, Katwa, and Musienene. The transmission chain originated from one individual who was classified as a relapse of EVD in Aloya HA within Mabalako HZ. As of 21Jan20, a total of 11 health areas (HAs) out of 471 (2%) in the 5 affected HZs have reported at least one confirmed case in the past 21 days. 2,238 deaths have been reported (case fatality proportion 66%). From 25 July 2018 through 23Jan20, 384 CDC staff have participated in a combined 612 deployments in response to the Ebola outbreak in DRC: 282 deployments to DRC; 90 to Uganda; 56 to Rwanda; 52 to South Sudan; and 132 to Switzerland.

##### National March for Life Demonstration Awareness, Washington, DC

On Friday, 24Jan20, The National March for Life will taking place in Washington, DC. Tens of thousands of pro-life advocates converge on the National Mall and march on Capitol Hill on

the anniversary of the Supreme Court's 1973 Roe v. Wade ruling which legalized abortion in all 50 states. It's the largest annual human rights demonstration in the world. The march will pass the Humphrey building on Independence Ave SW as they make their way to the U.S. Capital building. It is expected 100,000 people will attend this March. The march is expected to be peaceful but, as with any protest, demonstration, or celebration, things can happen and create a civil disturbance. Please be vigilant and aware of your surroundings. Report any issues or suspicious activity to the HHH Guard Desk at (202) 205-0111 or call 911. For any questions or concerns please contact [physicalsecurity@hhs.gov](mailto:physicalsecurity@hhs.gov).

**Daily Operational Schedule:**

0830 – FEMA Daily Operation Brief

0830 – DHS & CDC Daily 2019 Novel Coronavirus Sync Call

0900 – Public Health and Medical Services Conference Call (2019 Novel Coronavirus)

**Public Health Emergency of National Significance:**

Puerto Rico (Earthquake): 08Jan20

**HHS Response Status Summary:**

HHS SOC: Level III (Virtual)

CDC EOC: Level III (Polio/Ebola)

CDC EOC: 2019 Novel Coronavirus (Agency-Wide Response)

FDA EOC: Level II (Vape Product Response)

**Emergency Support Function (ESF) Activation:**

ESF – 8: Not Activated

ESF – 6: Not Activated

**Recovery Support Function (RSF) Activation:**

H&SS RSF: Activated Region II (2017 Irma/Maria, Puerto Rico projected end date of 05Mar20). Activated Region IX (2018 California Wildfires projected end date of 31Mar20)

**HHS Deployments: (Total = 181)**

**ASPR: 11** – (5) Irma/Maria, (1) 2018 California Wildfires, (5) 2020 Earthquake Puerto Rico

**CDC: 170** – (33) Polio, (50) Ebola, (7) Puerto Rico, (80) Coronavirus

**FMS Status:**

- • \* 32 (250 Bed) FMS sets are deployable
- • \* 10 (50 Bed) FMS sets are deployable

**New Mission Assignments (MA):** 3426EM-PR-HHS-05-01: FEMA has sent, and HHS has accepted, a mission assignment as directed by and in coordination with FEMA, Dept. of Health & Human Services (HHS), Assistant Secretary for Response and Preparedness (ASPR), and Federal Occupational Health (FOH) will provide stress counselors to address immediate and short term issues of FEMA and other Federal personnel and other agencies involved in disaster operations. This mission assignment provides \$0.00 for a cumulative amount of \$37,500.00 and extends the estimated projected end date to 29Feb20.

3426EM-PR-HHS-04-01: FEMA has sent, and A&F has accepted, a Mission Assignment Amendment in support of 2020 Earthquake, Puerto Rico. As requested by the Commonwealth of Puerto Rico and directed by and in coordination with FEMA, HHS will activate a federally qualified contractor to administer a national network of pharmacies and sufficient personnel to address emergency response requirements through EPAP. This

mission assignment provided \$0.00 for a cumulative amount of \$500,00 and extends the estimated projected end date to 27Jan20.

#### **Active Situations (7):**

- • \* Influenza Season
- • \* Irma/Maria, Puerto Rico, & USVI (Recovery)
- • \* Ebola in Eastern Democratic Republic of the Congo
- • \* California Wildfires (Recovery)
- ☐ Novel Coronavirus
- ☐ Bravo Response
- ☐ Earthquake, Puerto Rico

**U.S. International Health Regulation National Focal Point Status:** The World Health Organization (WHO) decided Thursday 23Jan20 against declaring the novel coronavirus outbreak in China a Public Health Emergency of International Concern (PHEIC).

## **2. FEMA:**

#### **Interagency Response Status Summary:**

NWC: Monitoring

NRCC: Blue

National IMATs: Red – Fully Mission Capable; Blue – Deployed – PR; Gold – Fully Mission Capable

Regional IMATs: Region II, PR; Region VIII, SD

#### **Significant National Weather:**

A series of storms will continue to bring heavy rains and a flooding threat across portions of the Pacific Northwest coast into early this weekend, with heavy snows continuing across the mountains. Meanwhile, a slow-moving storm will continue the wintry mix and slick travel conditions in the Midwest and Great Lakes, before these conditions move into the interior Northeast early this weekend.

## **3. OPDIV/STAFFDIV Overnight Reports:**

#### **CDC:**

- 2019 Novel Coronavirus – China and Thailand – Update
- Ebola – The Democratic Republic of the Congo – Update
- Dengue – Marshall Islands – Update

#### **FDA:**

- ☐ Adverse Events Possibly Linked to Vaping Products/Unknown/Aug 2019
- ☐ *Salmonella* Javiana/Cut Fruit (suspect)/Dec 2019
- ☐ *Salmonella* Braenderup/Unknown/Dec 2019
- ☐ *Listeria monocytogenes*/Dairy (suspect)/Nov 2019
- ☐ *Salmonella* Saintpaul/Fruit (suspect)/ Dec 2019
- ☐ *E. coli* O157:H7/Frozen Food Item (suspect)/Nov 2019

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

## **HHS Executive Summary: Friday, 24Jan20**

### **1. HHS**

#### **Today's Noteworthy Topics:**

##### Novel Coronavirus (2019-nCoV)

The World Health Organization (WHO) decided Thursday 23Jan20 against declaring the novel coronavirus outbreak in China a Public Health Emergency of International Concern (PHEIC). There are 581 cases of confirmed 2019-nCoV in 5 countries as of 23Jan20. CDC travel health notice elevated to level 3(avoid non-essential travel) for Wuhan. Entry screening started in Atlanta (ATL) and Chicago (ORD) airports, in addition to screening currently taking place at San Francisco (SFO), Los Angeles (LAX), and John F Kennedy (JFK). Passengers will be funneled (re-ticketed) from Wuhan through these 5 airports. 2,055 persons were screened as of 22Jan20 and 1 was referred for medical evaluation. The SOC will activate to level III, (Virtual activation) in support of CDC for 2019 Novel Coronavirus (2019-nCoV); and for coordination of ESF 8 activities and information sharing. A National Public Health and Medical Services Conference Call (ESF-8) has been scheduled for 0900ET today, 24Jan20.

##### Ebola Outbreak, East Democratic Republic of the Congo

The outbreak of Zaire ebolavirus (EVD) announced on 30 July 2018 by the Ministry of Health (MOH) of Democratic Republic of Congo (DRC) continues as the second largest Ebola outbreak ever recorded. One health zones (HZs) reported nine new confirmed cases in the past week in the Nord Kivu Province of DRC. Beni HZ remains a concern after reporting all nine new confirmed cases in the past week, all potentially linked to a single case. As of 21Jan20, the current transmission chain comprising of 82 confirmed and probable cases reported in 13 health areas (HAs) in six HZs; Mabalako, Beni, Biena, Butembo, Katwa, and Musienene. The transmission chain originated from one individual who was classified as a relapse of EVD in Aloya HA within Mabalako HZ. As of 21Jan20, a total of 11 health areas (HAs) out of 471 (2%) in the 5 affected HZs have reported at least one confirmed case in the past 21 days. 2,238 deaths have been reported (case fatality proportion 66%). From 25 July 2018 through 23Jan20, 384 CDC staff have participated in a combined 612 deployments in response to the Ebola outbreak in DRC: 282 deployments to DRC; 90 to Uganda; 56 to Rwanda; 52 to South Sudan; and 132 to Switzerland.

##### National March for Life Demonstration Awareness, Washington, DC

On Friday, 24Jan20, The National March for Life will taking place in Washington, DC. Tens of thousands of pro-life advocates converge on the National Mall and march on Capitol Hill on

the anniversary of the Supreme Court's 1973 Roe v. Wade ruling which legalized abortion in all 50 states. It's the largest annual human rights demonstration in the world. The march will pass the Humphrey building on Independence Ave SW as they make their way to the U.S. Capital building. It is expected 100,000 people will attend this March. The march is expected to be peaceful but, as with any protest, demonstration, or celebration, things can happen and create a civil disturbance. Please be vigilant and aware of your surroundings. Report any issues or suspicious activity to the HHH Guard Desk at (202) 205-0111 or call 911. For any questions or concerns please contact [physicalsecurity@hhs.gov](mailto:physicalsecurity@hhs.gov).

**Daily Operational Schedule:**

0830 – FEMA Daily Operation Brief

0830 – DHS & CDC Daily 2019 Novel Coronavirus Sync Call

0900 – Public Health and Medical Services Conference Call (2019 Novel Coronavirus)

**Public Health Emergency of National Significance:**

Puerto Rico (Earthquake): 08Jan20

**HHS Response Status Summary:**

HHS SOC: Level III (Virtual)

CDC EOC: Level III (Polio/Ebola)

CDC EOC: 2019 Novel Coronavirus (Agency-Wide Response)

FDA EOC: Level II (Vape Product Response)

**Emergency Support Function (ESF) Activation:**

ESF – 8: Not Activated

ESF – 6: Not Activated

**Recovery Support Function (RSF) Activation:**

H&SS RSF: Activated Region II (2017 Irma/Maria, Puerto Rico projected end date of 05Mar20). Activated Region IX (2018 California Wildfires projected end date of 31Mar20)

**HHS Deployments: (Total = 181)**

**ASPR: 11** – (5) Irma/Maria, (1) 2018 California Wildfires, (5) 2020 Earthquake Puerto Rico

**CDC: 170** – (33) Polio, (50) Ebola, (7) Puerto Rico, (80) Coronavirus

**FMS Status:**

- • \* 32 (250 Bed) FMS sets are deployable
- • \* 10 (50 Bed) FMS sets are deployable

**New Mission Assignments (MA):** 3426EM-PR-HHS-05-01: FEMA has sent, and HHS has accepted, a mission assignment as directed by and in coordination with FEMA, Dept. of Health & Human Services (HHS), Assistant Secretary for Response and Preparedness (ASPR), and Federal Occupational Health (FOH) will provide stress counselors to address immediate and short term issues of FEMA and other Federal personnel and other agencies involved in disaster operations. This mission assignment provides \$0.00 for a cumulative amount of \$37,500.00 and extends the estimated projected end date to 29Feb20.

3426EM-PR-HHS-04-01: FEMA has sent, and A&F has accepted, a Mission Assignment Amendment in support of 2020 Earthquake, Puerto Rico. As requested by the Commonwealth of Puerto Rico and directed by and in coordination with FEMA, HHS will activate a federally qualified contractor to administer a national network of pharmacies and sufficient personnel to address emergency response requirements through EPAP. This

mission assignment provided \$0.00 for a cumulative amount of \$500,00 and extends the estimated projected end date to 27Jan20.

#### **Active Situations (7):**

- • \* Influenza Season
- • \* Irma/Maria, Puerto Rico, & USVI (Recovery)
- • \* Ebola in Eastern Democratic Republic of the Congo
- • \* California Wildfires (Recovery)
- ☐ Novel Coronavirus
- ☐ Bravo Response
- ☐ Earthquake, Puerto Rico

**U.S. International Health Regulation National Focal Point Status:** The World Health Organization (WHO) decided Thursday 23Jan20 against declaring the novel coronavirus outbreak in China a Public Health Emergency of International Concern (PHEIC).

## **2. FEMA:**

#### **Interagency Response Status Summary:**

NWC: Monitoring

NRCC: Blue

National IMATs: Red – Fully Mission Capable; Blue – Deployed – PR; Gold – Fully Mission Capable

Regional IMATs: Region II, PR; Region VIII, SD

#### **Significant National Weather:**

A series of storms will continue to bring heavy rains and a flooding threat across portions of the Pacific Northwest coast into early this weekend, with heavy snows continuing across the mountains. Meanwhile, a slow-moving storm will continue the wintry mix and slick travel conditions in the Midwest and Great Lakes, before these conditions move into the interior Northeast early this weekend.

## **3. OPDIV/STAFFDIV Overnight Reports:**

#### **CDC:**

- 2019 Novel Coronavirus – China and Thailand – Update
- Ebola – The Democratic Republic of the Congo – Update
- Dengue – Marshall Islands – Update

#### **FDA:**

- ☐ Adverse Events Possibly Linked to Vaping Products/Unknown/Aug 2019
- ☐ *Salmonella* Javiana/Cut Fruit (suspect)/Dec 2019
- ☐ *Salmonella* Braenderup/Unknown/Dec 2019
- ☐ *Listeria monocytogenes*/Dairy (suspect)/Nov 2019
- ☐ *Salmonella* Saintpaul/Fruit (suspect)/ Dec 2019
- ☐ *E. coli* O157:H7/Frozen Food Item (suspect)/Nov 2019

Dear Dr. Kadlec and Dr. Yeskey,

As requested we had the NETEC provide a summary of the current capability/capacity gaps and challenges for NETEC, the 10 Regional Ebola and Special Pathogen Treatment Centers (RESPTC) and the state/jurisdictional treatment centers related to the 2019 Novel Coronavirus benchmarked against the 2004 SARS guidance. Attached is their report and below is Rick Hunt's synopsis of high level takeaways from the report. They also included an update on the education/training initiatives they conducted to date. As we move forward, we are exploring what options we have to obtain more real-time data on gaps and challenges as this incident unfolds, especially pertaining to the 360 HCCs across the nation. Please let me know if you have any questions.

Regards,  
Jack

***Question presented to the NETEC: Based on NETEC's assessments to date of the 10 Regional Ebola Treatment Centers and 44 state and jurisdictional Ebola treatment facilities, Provide us [HPP] with a brief summary of what those facilities already have in place and what gaps there are to monitor (ie, PUIs) , track and care for coronavirus? As a basis for your assessment, please use the 2004 CDC SARS Guidance for Preparedness & Response in Health Care Facilities.***

- NETEC's report reviews findings from self-reporting by facilities in addition to on-site consultations for the 10 Regional Ebola Treatment Centers and select State/Jurisdictional Ebola Treatment Centers upon request:
  - Self-assessments and on-site consultations required at all 10 Regional Ebola Treatment Centers in 2019, and

- On-site consultations conducted at 22 state and jurisdictional treatment facilities upon request during FY 2018 to 2020
- Initial consultations completed by NETEC between 2015-2018 focused primarily on unique preparedness efforts for Ebola virus disease or other viral hemorrhagic fevers. Beginning in 2018-2019 additional considerations for facility preparedness efforts related to respiratory pathogens which may require biocontainment unit care were integrated into the readiness consultation process for all designated facilities
- The capacity at facilities to care for suspected or confirmed to have Ebola or other special pathogens is limited. NOTE: we currently don't have enough information about the coronavirus outbreak to know precisely what level of care would be required to safely care for a PUI or patient with the coronavirus disease.
  - All 10 regional treatment centers have capability to effectively receive and provide extended care for **2** patients with viral hemorrhagic fever or a respiratory pathogen. Institutional capability to provide care for greater than **2** patients for an extended period of time is variable.
  - State and jurisdiction designated facilities demonstrated variable capability to provide care for **1** patient with suspected or confirmed to have Ebola or other special pathogen.
- At the time of NETEC's onsite consultations the majority of facilities had acquired appropriate PPE, and had processes in place to support inventory and rotation of these supplies. These consultations were not performed during an outbreak when PPE supplies could be rapidly exhausted.
- There is substantial room for improvement in state or jurisdiction designated facilities as compared to the regional treatment centers across the domains of preparedness that NETEC reviews. **I recommend rapid consultations by NETEC and/or the RESPTCs for the state or jurisdiction designated facilities. In addition to providing a rapid assessment of their preparedness, these consultations have historically driven improvements in hospitals' preparedness.**
- In their report, NETEC made the following recommendations, each of which we will follow up on:
  - Inquire with CDC about the applicability of the ICAR survey data for airborne isolation and general IPC status in healthcare facilities nationwide.
  - Collaborate with NETEC to create key questions survey on preparedness efforts for respiratory pathogens and request that the state health department HPP coordinators distribute the surveys to hospitals via healthcare coalitions and return them directly to ASPR.
  - Query each of the 10 RESPTC medical directors and nurse executives to gain their working knowledge of the preparedness status relative to respiratory pathogens of designated facilities in their regions who have not received NETEC consultations.

Jack Herrmann, MEd, NCC, LMHC  
 Director (Acting), National Healthcare Preparedness Programs  
 Office of Emergency Management and Medical Operations, Readiness Division

Office of the Assistant Secretary for Preparedness and Response

Hi Bob,

We (Monique, Michael, and I) wanted to thank you for your time Wednesday. We also wanted to follow up immediately to answer to three requests we captured from your team. Further, Monique picked up some sidebars in the room that we wanted to address with the pure intent to ensure you get the most accurate information as even small deviations from the facts, can have large ramifications in our operational response to novel coronavirus (nCoV).

In brief, we propose these three Action Items for MITRE and colleagues on your behalf from the meeting and two additional offerings to provide support for your nCoV response:

1. • **nCoV Situation Updates** from the same Expert Group that was convened on 22 January. We would arrange to provide those on a schedule dictated by the dynamics of the outbreak
2. • **Sequence Data** from a stable, representative virus– the Expert Group will provide the most appropriate (not the first available) sequence data to support downstream development of diagnostics and medical countermeasures. MITRE team will maintain contact, and work cooperatively with Tim Uyeki at CDC.
3. • Appropriate **nCoV Virus procurement** for shipment to a BSL3 lab to facilities off shore, in partner facilities, or in partner nations such as Singapore, Australia and India

Beyond the action items that resulted from the meeting last evening, we offer the following support for your consideration

4. • **Rapid Medical Countermeasure Development**
  - Building on the success of the DARPA Blue Angel and AMP programs, MITRE would develop and execute a program to **develop therapeutic monoclonal antibodies for emergency use for nCoV**. This would be a more effective operational response than leveraging the Regeneron OTA for the reasons stated below
  - We believe a vaccine approach at this time will not benefit the current outbreak given challenges with the immunogenicity of the nCoV glycoprotein. IF a vaccine development pathway is pursued, it is imperative that findings and recommendations from the BDIB project be incorporated to avoid further erosion of trust with biopharma partners.
5. • Securing Dr. Callahan or Dr. Lawler to provide independent, expert consultations as needed to support you directly.

In sum, Bob, this outbreak provides another in a series of real world tests to our Nation's operational response to a high consequence, multi-dimensional threat. This time we can do better. MITRE can assist your "Army of One" through early access to clinical and public health truth, through access to clinical, pharmaceutical industry and international trials that do not exist in house and by preventing missteps in both over-reaction and bureaucratic apathy and hubris.

On behalf of MITRE and the MITRE convened Expert Panel, we look forward to helping you in your critical work.

Bob, if any of these are of interest, I am happy to have a private telephone conversation with you at your convenience. I am available 24/7 at (b)(6)

Thanks,  
Best,  
Jay

**Subject:** FW: THE LANCET - immediate release: Report provides first clinical data from initial cases of new coronavirus in China

This one's worth 3 min scan (see highlights) since only good documented clinical info I've seen so far. Study limited by relatively few numbers of patients, but more info than have seen previously.

**Subject:** THE LANCET - immediate release: Report provides first clinical data from initial cases of new coronavirus in China

**\*\*FOR IMMEDIATE RELEASE\*\***

Peer-reviewed / Observational studies / People

## ***The Lancet*: Report provides first clinical data from initial cases of new coronavirus in China**

**\*\*Infographics available in Notes to Editors\*\***

- ***Preliminary data from Wuhan, China indicate some similar symptoms between first 41 cases of 2019 novel coronavirus and SARS.***
- ***Another study published at the same time reports person-to-person transmission and inter-city spread of new coronavirus in six members of the same family in China, and researchers stress need for vigilant control measures.***

The 2019 novel coronavirus (2019-nCoV) appears to cause similar symptoms to severe acute respiratory syndrome (SARS), and seems to be capable of spreading from person to person and between cities, according to the findings of two studies published in ***The Lancet***.

These early but important findings involve only a small number of patients, and the authors stress the need to maximise the chances of containing 2019-nCoV infection through careful surveillance, active contact tracing, and vigorous searches for the animal hosts and transmission routes to humans.

As of January 24, 2020, 835 laboratory-confirmed 2019-nCoV infections were reported in China, with 25 fatal cases. Many of the cases have been linked to the Huanan seafood market in Wuhan, China, where freshly killed game animals were reportedly sold, although the original source of infection remains unknown.

2019-nCoV is most closely related to coronaviruses from Chinese horseshoe bats. Currently, six coronaviruses (seven including 2019-nCoV) are known to cause diseases of the respiratory tract in people, but only SARS and Middle East respiratory syndrome (MERS) have resulted in large outbreaks of fatal illness to date. Currently, there are no specific coronavirus antiviral drugs or vaccines with proven efficacy in humans.

In the first new study, researchers analysed the first 41 patients infected with laboratory-confirmed 2019-nCoV admitted to hospital in the city of Wuhan between December 16, 2019, and January 2, 2020.

The authors combined clinical records, laboratory results, and imaging findings with epidemiological data. On average, patients were middle-aged (median age 49 years), most had visited Huanan seafood market (66%, 27 patients), and most patients were men (73%, 30 patients).

Like SARS, the majority of cases affected healthy individuals, with less than a third of cases occurring in people with underlying chronic medical conditions such as diabetes (20%, 8 patients), high blood pressure (15%, 6), and cardiovascular disease (15%, 6).

Similarly, 2019-nCoV infections presented with a broad range of symptoms. All patients admitted to hospital had pneumonia and most had a fever (98%, 40 patients), cough (76%, 31), and fatigue (44%, 18). Over half of patients also experienced shortness of breath (dyspnoea; 55%, 22), whilst headache (8%, 3) and diarrhoea (3%, 1) were rare.

“Despite sharing some similar symptoms to SARS (eg, fever, dry cough, shortness of breath), there are some important differences, such as the absence of upper respiratory tract symptoms (e.g., rhinorrhoea [runny nose], sneezing, sore throat) and intestinal symptoms, such as diarrhoea which affected 20-25% of SARS patients,” explains lead author Professor Bin Cao from the China-Japan Friendship Hospital and Capital Medical University, China. [1]

**Approximately one in three patients developed acute respiratory distress syndrome (29%, 12 patients) or were admitted to intensive care (32%, 13 patients), and six died.** Cytokine storm occurred in critically ill patients, however, more research is needed to understand how 2019-nCoV affects the immune system, researchers say.

"It is hard to understand the mortality rate associated with this new virus currently, as we are only detecting severe cases in the initial stages of the epidemic, rather than the milder or asymptomatic cases," explains co-author Dr Lili Ren from the Chinese Academy of Medical Sciences & Peking Union Medical College, China. [1]

Twenty eight patients (68%) have been discharged from hospital as of January 22, 2020.

The authors note several limitations of the study, including that due to the limited number of cases, assessing the risk factors for disease severity and mortality is difficult, and they call for larger studies in outpatient and community settings to confirm the full clinical spectrum of disease.

In the second paper, which is a first of its kind genetic analysis, researchers studied a family of seven people who presented to hospital with unexplained pneumonia. They identified 2019-nCoV in five members who had recently visited Wuhan, and in one other family member who did not travel with them. Only a child, who was reported by their mother to have worn a surgical mask for most of the stay in Wuhan, was not infected. Importantly, another child was infected with 2019-nCoV, but showed no clinical symptoms—suggesting that individuals may be able to spread infections in the community without knowing that they are infected.

"Our findings are consistent with person-to person transmission of this new coronavirus in hospital and family settings, and the reports of infected travellers in other countries," says Professor Kwok-Yung Yuen from the University of Hong Kong-Shenzhen Hospital who led the research. "Because asymptomatic infection appears possible, controlling the epidemic will also rely on isolating patients, tracing and quarantining contacts as early as possible, educating the public on both food and personal hygiene, and ensuring healthcare workers comply with infection control." [1]

The researchers studied the epidemiological, clinical, laboratory, and microbiological findings of the family.

The first patient—a 65 year old woman—developed symptoms five days after visiting a 1 year old relative with febrile pneumonia at a Wuhan hospital on December 29, 2019. After returning home to Shenzhen, she was admitted to the University of Hong Kong-Shenzhen Hospital (HKU-SZH) on January 10, 2020, along with her 66 year old husband who had also become ill (figure 1).

On January 11, four other family members were assessed at HKU-SZH—the daughter (aged 37 years) and son-in-law (aged 36 years) presented 9–10 days after symptoms first appeared on January 1–2, along with their two asymptomatic children. The seventh family member—the 63 year old mother-in-law—who had not travelled to Wuhan, but with whom several members of the family stayed with on their return, subsequently became unwell and was admitted to hospital because of persistent symptoms on January 15, 2020.

Genetic testing found that five patients were positive for the spike protein that novel coronavirus uses to enter cells [2]. Of these, the complete 2019-nCoV genome was identified from clinical samples of two patients.

None of the family visited food markets or had contact with animals during their stay in Wuhan. The authors say that the most likely explanation for the family's infections is that the 65 year old woman acquired 2019-nCoV while visiting her young relative at the Wuhan hospital, then transmitted it to four other family members during their seven-day trip, and to the other family member after flying home to Shenzhen city in Hong Kong. However, local health authorities are still conducting further contact tracing

of this family.

All six patients were hospitalised in isolation and remain stable as of January 20, 2020.

The authors stress that “vigilant control measures are warranted at this early stage of the epidemic”, but caution that their findings reflect only a snapshot of one family cluster, and how efficiently this virus is able to spread remains unknown.

“With the improved surveillance network and laboratory capability developed following the SARS pandemic, China has now been able to recognise this new outbreak within a few weeks and has made the virus genome publicly available to help control its spread”, says co-author Dr Rosana Wing-Shan Poon from the University of Hong Kong. “Learning the lessons from SARS, which started as animal-to-human transmission, all game meat trading should be better regulated to terminate this potential transmission route. Further investigations are needed to clarify the potential threat posed by this emerging virus and asymptomatic cases.” [1]

Writing in a linked Comment, authors Professor Chen Wang, president of the Chinese Academy of Medical Sciences (CAMS), George Gao, director of Chinese Center for Disease Control and Prevention (CDC), Professor Peter Horby, director of the Oxford University Clinical Research Unit in Hanoi, Vietnam, and Professor Frederick G. Hayden, University of Virginia School of Medicine, USA, say: “To improve detection efficiency, front-line clinics, apart from local centres for disease control and prevention, should be armed with validated point-of-care diagnostic kits... Education campaigns should be launched to promote precautions for travellers, including frequent hand-washing, cough etiquette, and use of personal protection equipment (eg, masks) when visiting public places. Also, the general public should be motivated to report fever and other risk factors for coronavirus infection, including travel history to affected area and close contacts with confirmed or suspected cases. Considering that substantial numbers of patients with SARS and MERS were infected in health-care settings, precautions need to be taken to prevent nosocomial spread of the virus.”

Writing in a second linked Comment, Professor David Heymann (who was not involved in the studies) from The London School of Hygiene & Tropical Medicine, UK, says: “Such rapidly shared [and open source] scientific information can be used to provide real-time guidance for epidemiologists working to contain the outbreak, clinicians managing patients, and modellers helping to understand potential future directions and the possible effectiveness of various interventions.”

An Editorial from The Lancet that was published simultaneously notes the journal's commitment to data sharing related to public health emergencies. It notes: “Openness and sharing of data are paramount... There are enormous demands for rapid access to information about this new virus, the patients and communities affected, and the response. But equally crucial is the need to ensure those data are reliable, accurate, and independently scrutinised. As for ongoing and future health emergencies, we will be making all related Lancet content fully and freely available.”

#### NOTES TO EDITORS

The first study was funded by the Special Project for Emergency of the Ministry of Science and Technology, Chinese Academy of Medical Sciences (CAMS) Innovation Fund for Medical Sciences, National Science Grant for Distinguished Young Scholars, National Key Research and Development Program of China, the Beijing Science and Technology Project, and National Mega-projects for Infectious Diseases in China. It was conducted by researchers from Jin Yin-tan Hospital, Wuhan, China; China-Japan Friendship Hospital, Beijing, China; Peking Union Medical College, Beijing, China; Capital Medical University, Beijing, China; Beijing Ditan Hospital, Beijing, China; Chinese Academy of Medical Sciences & Peking Union Medical College, Beijing, China; Huazhong University of Sciences and Technology, Wuhan, China; Tsinghua University School of Medicine, Beijing, China; Zhongnan Hospital of Wuhan University, Wuhan, China; and Peking University People's hospital, Beijing, China.

The second study was funded by The Shaw Foundation Hong Kong, Michael Seak-Kan Tong, Respiratory Viral Research Foundation Limited, Hui Ming, Hui Hoy and Chow Sin Lan Charity Fund Limited, Marina Man-Wai Lee, the Hong Kong Hainan Commercial Association South China Microbiology Research Fund, Sanming Project of Medicine

(Shenzhen), and and High Level-Hospital Program (Guangdong Health Commission). It was conducted by researchers from The University of Hong Kong, Hong Kong Special Administrative Region and The University of Hong Kong-Shenzhen Hospital, Shenzhen, China.

[2] Six cases were confirmed as 2019-nCoV, but only five of them were genetically confirmed. The daughter was not virologically confirmed but she had typical changes of viral pneumonia on lung CT scan. Nasal and throat secretions can be negative by genetic test because the main pathology is in the lungs deep down. She was exposed to a Wuhan hospital and most other family members are genetic test positive for the virus, so she is defined as an epidemiologically and radiologically probable case, not defined by virological test

## AXIOS Axios Logo Alerts

Axios

### CDC confirms 2nd U.S. case of Wuhan coronavirus

By the numbers: 63 patients from 22 states are being investigated for possible infection, but CDC officials said that the agency still considers the infection risk for people in the U.S. to be low.

## AXIOS Axios Logo Alerts

### CDC confirms 2nd U.S. case of Wuhan coronavirus

By the numbers: 63 patients from 22 states are being investigated for possible infection, but CDC officials said that the agency still considers the infection risk for people in the U.S. to be low.

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

**HHS Domestic SPOTREP: Novel Coronavirus, Wuhan, China (Update #13)**

**What:** The **second** case of 2019 Novel Coronavirus (nCoV) in the United States was confirmed in **Chicago on 24Jan20**.

- This case is believed to be travel related with the person recently traveling to Wuhan, China in December 2019
- The patient returned from Wuhan on 13Jan20, and contacted a healthcare provided after experiencing symptoms a few days later
- The patient remains hospitalized in isolation, but in stable condition
- A clinical specimen was collected and sent to the CDC, where testing confirmed the infection
- The Illinois Department of Public Health (IDPH) and Chicago Department of Public Health (CDPH) are investigating locations the patient visited and are identifying any close contacts that were possibly exposed.

**When:** 24Jan20 1100ET

**Where:** Domestic

**Why:** CIR: Disease - Domestic

**Actions/Follow-Up:** The SOC will continue to monitor this incident and report as needed. *This message was distributed to the SOC SPOTREP-SITREP Distribution List.*

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

**Prepared by:** Juan Ospina, Watch Officer

**Approved by:** Henry E. Coleman Jr., Senior Watch Officer

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

**HHS Domestic SPOTREP: Novel Coronavirus, Wuhan, China (Update #13)**

**What:** The **second** case of 2019 Novel Coronavirus (nCoV) in the United States was confirmed in **Chicago on 24Jan20**.

- This case is believed to be travel related with the person recently traveling to Wuhan, China in December 2019
- The patient returned from Wuhan on 13Jan20, and contacted a healthcare provided after experiencing symptoms a few days later
- The patient remains hospitalized in isolation, but in stable condition
- A clinical specimen was collected and sent to the CDC, where testing confirmed the infection
- The Illinois Department of Public Health (IDPH) and Chicago Department of Public Health (CDPH) are investigating locations the patient visited and are identifying any close contacts that were possibly exposed.

**When:** 24Jan20 1100ET

**Where:** Domestic

**Why:** CIR: Disease - Domestic

**Actions/Follow-Up:** The SOC will continue to monitor this incident and report as needed. *This message was distributed to the SOC SPOTREP-SITREP Distribution List.*

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

**Prepared by:** Juan Ospina, Watch Officer

**Approved by:** Henry E. Coleman Jr., Senior Watch Officer

**Secretary's Operations Center**

## **Second travel-related case of 2019 Novel Coronavirus detected in United States**

The Centers for Disease Control and Prevention (CDC) today confirmed the second infection with 2019 Novel Coronavirus (2019-nCoV) in the United States has been detected in Illinois. The patient recently returned from Wuhan, China, where an outbreak of respiratory illness caused by this novel coronavirus has been ongoing since December 2019.

The patient returned to the U.S. from Wuhan on January 13, 2020, and called a health care provider after experiencing symptoms a few days later. The patient was admitted to a hospital, where infection control measures were taken to reduce the risk of transmission to other individuals. The patient remains hospitalized in an isolation room in stable condition and is doing well.

Based on the patient's travel history and symptoms, health care professionals suspected 2019-nCoV. A clinical specimen was collected and sent to CDC, where laboratory testing confirmed the infection. The Illinois Department of Public Health (IDPH) and the Chicago Department of Public Health (CDPH) are investigating locations where this patient went after returning to Illinois and are identifying any close contacts who were possibly exposed. The patient has limited close contacts, all of whom are currently well and who will be monitored for symptoms. Since returning from China, the patient has had very limited movement outside the home.

CDC is taking aggressive public health measures to help protect the health of Americans. While CDC considers this a serious public health threat, based on current information, the immediate health risk from 2019-nCoV to the general American public is considered low at this time. CDC is working closely with the Illinois Department of Public Health, the Chicago Department of Public Health, and other local partners. A CDC team has been deployed to support the ongoing investigation.

However, CDC has been proactively preparing for the introduction of 2019-nCoV in the U.S. for weeks, including:

- First alerting clinicians on January 8 to be on the look-out for patients with respiratory symptoms and a history of travel to Wuhan, China.
- Developing guidance for clinicians for testing and management of 2019-nCoV, as well as guidance for home care of patients with 2019-nCoV.
- Has developed a diagnostic test to detect this virus in clinical specimens. Currently, testing must take place at CDC, but CDC is preparing to share these test kits with domestic and international partners.
- Implementing public health entry screening at Atlanta (ATL), Chicago (ORD), Los Angeles (LAX), New York (JFK), and San Francisco (SFO) airports. CDC is currently evaluating the extent and duration of this enhanced screening.

- CDC has activated its Emergency Operations Center to better provide ongoing support.

Coronaviruses are a large family of viruses, some causing respiratory illness in people and others circulating among animals including camels, cats and bats. Rarely, animal coronaviruses can evolve and infect people and then spread between people, such as has been seen with Severe Acute Respiratory Syndrome (SARS) and Middle East Respiratory Syndrome (MERS). Investigations are ongoing to learn more, but person-to-person spread of 2019-nCoV is occurring.

It is likely there will be more cases reported in the U.S. in the coming days and weeks. CDC will continue to update the public as circumstances warrant. While the immediate risk of this new virus to the American public is believed to be low at this time, there are simple daily precautions that everyone should always take. It is currently flu and respiratory disease season, and CDC recommends getting vaccinated, taking everyday preventive actions to stop the spread of germs, and taking flu antivirals if prescribed. Right now, CDC recommends travelers avoid all nonessential travel to Wuhan, China. In addition, CDC recommends people traveling to China practice certain health precautions like avoiding contact with people who are sick and practicing good hand hygiene.

For more information about the current outbreak in China, visit <https://www.cdc.gov/coronavirus/2019-ncov/index.html>. For travel health information, visit <https://wwwnc.cdc.gov/travel/notices/watch/pneumonia-china>.

 Modeling Wuhan CoVs.mht

Dear Secretary Azar,

My summary of the Wuhan coronavirus needs updating since last evening. Suddenly a number of articles have become available to the public.

The most important article is from *The Scientist* which states the public now has the genomic sequence of 2019-nCoV (new name which replaces my own 'Wuhan-CoVs'). I don't know how the public was to find the scientific articles from PRC and elsewhere without private notice, but 'it is what it is'. All of the now public articles are attached above.

The really important paragraph in *The Scientist* is the following paragraph:

*Coronaviruses are so named because they have surface proteins that stick out like tips on a crown. These spikes help them invade cells. The S1 region of the protein first binds to a receptor on a human (or animal) cell, and the S2 region then fuses and allows the virus to enter that cell. Menachery says the S2 portion of the spike protein on the coronavirus matches that of the SARS virus, but the S1 region is somewhat different, meaning 2019-nCoV could use a different cell receptor for entry than the SARS virus does. However, a preprint that came out today from Wuhan-based scientists suggests that the two viruses do, in fact, utilize the same cell entry receptor, ACE2.*

All of these new articles will give Dr. Fauci and his team the clues they need to stop this outbreak. He needs to go to PRC with Dr. Liang in my opinion to find out what the PRC has not given the public.

Some of my recommendations from last night are now moot. But many of them still apply.

I need to attach a Disclaimer to this email and others in the future because of the misperception previously that my opinions represented the opinions of previous or current employers. I never meant that to be the case and never claimed that was the case. But feathers were ruffled nonetheless.

Thanks for reading my emails. I appreciate you 'leading the way'.

Be well,

Robert G. Levitt, M.D.

Dear Colleagues:

### **Life Dominates the Week**

As I write this, thousands of Marchers are walking the mall to the Supreme Court with President Trump's words echoing in their hearts, "I am fighting for you – because we are the voice for the voiceless." In yet another Trump first, the President addressed the March for Life participants in person – one more manifestation of his pro-life commitment and that of this entire Administration.

More than any other agency, HHS has been point in advancing [President Trump's life agenda](#). Even today, news was made as the HHS Office for Civil Rights declared that California's law requiring all health insurance plans to cover elective abortion was in violation of federal law. The state received a "[Notice of Violation](#)" and discussions will begin on coming into compliance with the law.

Here are some other happenings at HHS for the week.

### **Surgeon General Issues First Report on Smoking Cessation in 30 Years**

We all know smoking is bad for you. But today's report puts a spotlight on what we've learned about quitting smoking as well as new tools to stop smoking. Some nuggets from the report:

- First, an all-hands-on-deck public health effort can work – 67% fewer adults smoke now than did in 1965;
- Second, there's more to be done. While a majority of smokers try to quit in a year, less than one-third of them use the approved cessation tools we know can enhance success.

[Press Release](#)

[Executive Summary](#) of "Smoking Cessation: A Report of the Surgeon General"

### **Stakeholder Engagement – Meet "Oscar"**

Secretary Azar talked insurance innovation this week as he met with Oscar Health CEO Mario Schlosser. A relative newcomer in the insurance market, the company has found novel ways to heighten customer engagement through their mobile phone app and their use of in-house medical staff for telemedicine practices.

### **Secretary Azar spoke at the National Academies on Thursday**

The Secretary spoke at the [State of Innovation 2020: Bold New Ideas for the Future](#) summit discussing the Administration's work on kidney care, organ procurement and donation, and system transformation with Laura Arnold of Arnold Ventures. We remain focused on bettering the system for patients and their families.

## **Coronavirus**

HHS is prepared and being proactive in addressing the developing situation in China and elsewhere as a novel coronavirus (2019-nCoV) has spread across Asia, with the first case here in the United States. Last week, CDC began implementing public health entry screening at San Francisco (SFO), New York (JFK), and Los Angeles (LAX) airports. Today, CDC will add entry health screening at two more airports – Atlanta (ATL) and Chicago (ORD).

This past Tuesday, CDC reported its first US case — a Washington state resident, who traveled from Wuhan to Seattle on Jan. 15 and is reportedly in good condition. The virus has claimed at least 17 lives, sickened more than 600 and prompted Chinese authorities to lock down multiple cities in an effort to contain the disease.

This week, the Secretary went on Lou Dobbs Tonight to outline HHS's response:

[More information about the current outbreak](#)

[More information about Coronaviruses](#)

## **Under Construction**

- **Price Transparency** – The comment period for the previously released [Transparency in Coverage Proposed Rule](#) will end on January 29, 2020.
- **E-Cigarette Guidance** – On January 2, HHS and FDA released [guidance](#) designed to address the alarming increase in youth use of e-cigarettes. Timing for this going into effect will be February 6.
- **Stark and Anti-Kickback**: Deputy Secretary Eric Hargan will continue to host listening sessions with external stakeholders on Stark Law and Anti-Kickback reforms. These two proposals are key parts of the Department's Regulatory Sprint to Coordinated Care, which seeks to reexamine current federal regulations that might impede the drive toward a more value-based healthcare system.

In the "Stay Tuned" category:

- Interoperability
- Maternal Health
- Rural Health
- Ending the HIV Epidemic
- Fighting Opioid and other Substance Abuse
- Drug Pricing Reform

I close with a salute to the thousands of pro-life students, moms with kids in tow, the faith-filled and religious leaders, the families and the singles who come from all across the country to stand in solidarity with the unborn.

Good afternoon Dr. Kadlec.

We just received word from our GHSI colleagues in France that they have identified two travel-associated confirmed 2019-nCoV cases. Information is still rather limited, but I will send you additional details as I receive them.

Please let me know if there are any specific inquiries you would like me to make through GHSI channels in advance of next Tuesday's 10am Senior Officials call.

Thank you,

Robin

**Subject:** RE: Wuhan, China outbreak - GHSI teleconference

Dear colleagues,

I would like to inform you that we have two confirmed imported cases of ncov in France :

One in Paris and one in Bordeaux.

For bordeaux case :

-48 year old man returned to France from China. He was in Wuhan between 13 and 15 january.

I will give you more details soon as possible.

Très cordialement/Best regards.

Antoine Schwoerer

**Objet :** RE: Wuhan, China outbreak - GHSI teleconference

Greetings GHSI colleagues.

As you may have already seen in the news, the United States has confirmed a second case of 2019-nCoV in a woman who recently returned to Chicago, Illinois from Wuhan; the CDC press release can be found at <https://www.cdc.gov/media/releases/2020/p0124-second-travel-coronavirus.html>. Additional details regarding the case are below.

- The 60-year-old woman returned to the United States from Wuhan, China on January 16 and called her health care provider a few days later when she began to experience symptoms. Due to her recent travel to Wuhan, 2019-nCoV was suspected, and the patient was hospitalized and placed in isolation. On January 24, the CDC reported that the patient's samples had tested positive for 2019-nCoV.

Additionally, you can continue to find up-to-date information from CDC regarding our risk assessment and guidance for travelers, healthcare professionals, and laboratories at <https://www.cdc.gov/coronavirus/2019-ncov/index.html>. Please feel free to reach out if you have any questions, and we will continue to share updated information with our trusted GHSI partners as it becomes available.

Warm regards,  
Robin Moudy  
U.S. Delegation Liaison  
PIWG Secretariat

**Subject:** RE: Wuhan, China outbreak - GHSI teleconference

Dear colleagues,

We have a new confirmed case of NCOV in Paris.  
We have a total of 3 confirmed cases in France now:  
- Paris case’s: a couple of chinese tourists ;  
- Bordeaux case: 1 french people.  
All cases are imported of China and were in Wuhan.

We will give more details soon.

Très cordialement/Best regards.

Antoine Schwoerer

Good afternoon Dr. Kadlec.

We just received word from our GHSI colleagues in France that they have identified two travel-associated confirmed 2019-nCoV cases. Information is still rather limited, but I will send you additional details as I receive them.

Please let me know if there are any specific inquiries you would like me to make through GHSI channels in advance of next Tuesday's 10am Senior Officials call.

Thank you,  
Robin

Dear colleagues,

I would like to inform you that we have two confirmed imported cases of ncov in France :  
One in Paris and one in Bordeaux.  
For bordeaux case :  
-48 year old man returned to France from China. He was in Wuhan between 13 and 15 january.

I will give you more details soon as possible.

Très cordialement/Best regards.

**Objet :** RE: Wuhan, China outbreak - GHSI teleconference

Greetings GHSI colleagues.

As you may have already seen in the news, the United States has confirmed a second case of 2019-nCoV in a woman who recently returned to Chicago, Illinois from Wuhan; the CDC press release can be found at <https://www.cdc.gov/media/releases/2020/p0124-second-travel-coronavirus.html>. Additional details regarding the case are below.

- The 60-year-old woman returned to the United States from Wuhan, China on January 16 and called her health care provider a few days later when she began to experience symptoms. Due to her recent travel to Wuhan, 2019-nCoV was suspected, and the patient was hospitalized and placed in isolation. On January 24, the CDC reported that the patient's samples had tested positive for 2019-nCoV.

Additionally, you can continue to find up-to-date information from CDC regarding our risk assessment and guidance for travelers, healthcare professionals, and laboratories at <https://www.cdc.gov/coronavirus/2019-ncov/index.html>. Please feel free to reach out if you have any questions, and we will continue to share updated information with our trusted GHSI partners as it becomes available.

Warm regards,  
Robin Moudy

### **Second travel-related case of 2019 Novel Coronavirus detected in United States**

The Centers for Disease Control and Prevention (CDC) today confirmed the second infection with 2019 Novel Coronavirus (2019-nCoV) in the United States has been detected in Illinois. The patient recently returned from Wuhan, China, where an outbreak of respiratory illness caused by this novel coronavirus has been ongoing since December 2019.

The patient returned to the U.S. from Wuhan on January 13, 2020, and called a health care provider after experiencing symptoms a few days later. The patient was admitted to a hospital, where infection control measures were taken to reduce the risk of transmission to other individuals. The patient remains hospitalized in an isolation room in stable condition and is doing well.

Based on the patient's travel history and symptoms, health care professionals suspected 2019-nCoV. A clinical specimen was collected and sent to CDC, where laboratory testing confirmed the infection. The Illinois Department of Public Health (IDPH) and the Chicago Department of Public Health (CDPH) are investigating locations where this patient went after returning to Illinois and are identifying any close contacts who were possibly exposed. The patient has limited close contacts, all of whom are currently well and who will be monitored for symptoms. Since returning from China, the patient has had very limited movement outside the home.

CDC is taking aggressive public health measures to help protect the health of Americans. While CDC considers this a serious public health threat, based on current information, the immediate health risk from 2019-nCoV to the general American public is considered low at this time. CDC is working closely with the Illinois Department of Public Health, the Chicago Department of Public Health, and other local partners. A CDC team has been deployed to support the ongoing investigation.

However, CDC has been proactively preparing for the introduction of 2019-nCoV in the U.S. for weeks, including:

- First alerting clinicians on January 8 to be on the look-out for patients with respiratory symptoms and a history of travel to Wuhan, China.
- Developing guidance for clinicians for testing and management of 2019-nCoV, as well as guidance for home care of patients with 2019-nCoV.
- Has developed a diagnostic test to detect this virus in clinical specimens. Currently, testing must take place at CDC, but CDC is preparing to share these test kits with domestic and international partners.
- Implementing public health entry screening at Atlanta (ATL), Chicago (ORD), Los Angeles (LAX), New York (JFK), and San Francisco (SFO) airports. CDC is currently evaluating the extent and duration of this enhanced screening.
- CDC has activated its Emergency Operations Center to better provide ongoing support.

Coronaviruses are a large family of viruses, some causing respiratory illness in people and others circulating among animals including camels, cats and bats. Rarely, animal coronaviruses can evolve and infect people and then spread between people, such as has been seen with Severe Acute Respiratory Syndrome (SARS) and Middle East Respiratory Syndrome (MERS). Investigations are ongoing to learn more, but person-to-person spread of 2019-nCoV is occurring.

It is likely there will be more cases reported in the U.S. in the coming days and weeks. CDC will continue to update the public as circumstances warrant. While the immediate risk of this new virus to the American public is believed to be low at this time, there are simple daily precautions that everyone should always take. It is currently flu and respiratory disease season, and CDC recommends getting vaccinated, taking everyday preventive actions to stop the spread of germs, and taking flu antivirals if prescribed. Right now, CDC recommends travelers avoid all nonessential travel to Wuhan, China. In addition, CDC recommends people traveling to China practice certain health precautions like avoiding contact with people who are sick and practicing good hand hygiene.

For more information about the current outbreak in China, visit <https://www.cdc.gov/coronavirus/2019-ncov/index.html>. For travel health information, visit <https://wwwnc.cdc.gov/travel/notices/watch/pneumonia-china>.

## U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES

*CDC works 24/7 protecting America's health, safety, and security. Whether diseases start at home or abroad, are curable or preventable, chronic or acute, or from human activity or deliberate attack, CDC responds to America's most pressing health threats. CDC is headquartered in Atlanta and has experts located throughout the United States and the world.*

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

### **Second travel-related case of 2019 Novel Coronavirus detected in United States**

The Centers for Disease Control and Prevention (CDC) today confirmed the second infection with 2019 Novel Coronavirus (2019-nCoV) in the United States has been detected in Illinois. The patient recently returned from Wuhan, China, where an outbreak of respiratory illness caused by this novel coronavirus has been ongoing since December 2019.

The patient returned to the U.S. from Wuhan on January 13, 2020, and called a health care provider after experiencing symptoms a few days later. The patient was admitted to a hospital, where infection control measures were taken to reduce the risk of transmission to other individuals. The patient remains hospitalized in an isolation room in stable condition and is doing well.

Based on the patient's travel history and symptoms, health care professionals suspected 2019-nCoV. A clinical specimen was collected and sent to CDC, where laboratory testing confirmed the infection. The Illinois Department of Public Health (IDPH) and the Chicago Department of Public Health (CDPH) are investigating locations where this patient went after returning to Illinois and are identifying any close contacts who were possibly exposed. The patient has limited close contacts, all of whom are currently well and who will be monitored for symptoms. Since returning from China, the patient has had very limited movement outside the home.

CDC is taking aggressive public health measures to help protect the health of Americans. While CDC considers this a serious public health threat, based on current information, the immediate health risk from 2019-nCoV to the general American public is considered low at this time. CDC is working closely with the Illinois Department of Public Health, the Chicago Department of Public Health, and other local partners. A CDC team has been deployed to support the ongoing investigation.

However, CDC has been proactively preparing for the introduction of 2019-nCoV in the U.S. for weeks, including:

- • \* First alerting clinicians on January 8 to be on the look-out for patients with respiratory symptoms and a history of travel to Wuhan, China.
- • \* Developing guidance for clinicians for testing and management of 2019-nCoV, as well as guidance for home care of patients with 2019-nCoV.
- • \* Has developed a diagnostic test to detect this virus in clinical specimens. Currently, testing must take place at CDC, but CDC is preparing to share these test kits with domestic and international partners.
- • \* Implementing public health entry screening at Atlanta (ATL), Chicago (ORD), Los Angeles (LAX), New York (JFK), and San Francisco (SFO) airports. CDC is currently evaluating the extent and duration of this enhanced screening.
- • \* CDC has activated its Emergency Operations Center to better provide ongoing support.

Coronaviruses are a large family of viruses, some causing respiratory illness in people and others circulating among animals including camels, cats and bats. Rarely, animal coronaviruses can evolve and infect people and then spread between people, such as has been seen with Severe Acute Respiratory Syndrome (SARS) and Middle East Respiratory Syndrome (MERS). Investigations are ongoing to learn more, but person-to-person spread of 2019-nCoV is occurring.

It is likely there will be more cases reported in the U.S. in the coming days and weeks. CDC will continue to update the public as circumstances warrant. While the immediate risk of this new virus to the American public is believed to be low at this time, there are simple daily precautions that everyone should always take. It is currently flu and respiratory disease season, and CDC recommends getting vaccinated, taking everyday preventive actions to stop the spread of germs, and taking flu antivirals if prescribed. Right now, CDC recommends travelers avoid all nonessential travel to Wuhan, China. In addition, CDC recommends people traveling to China practice certain health precautions like avoiding contact with people who are sick and practicing good hand hygiene.

For more information about the current outbreak in China, visit <https://www.cdc.gov/coronavirus/2019-ncov/index.html>. For travel health information, visit <https://wwwnc.cdc.gov/travel/notices/watch/pneumonia-china>.

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

Good Afternoon All,

Attached is the 24Jan20 2019 Novel Coronavirus Social Media Report.

BLUF: (U) The number of confirmed cases and deaths are steadily increasing. As cases continue to spread globally, the U.S. confirmed its second case of the virus in a patient in Chicago with recent travel history to Wuhan, China. Potential rumors include possible link between the novel coronavirus and consumption of bat soup as well as a rumor that the virus is believed to be a bio weapon created at a BSL-4 lab in Wuhan.

**Epidemiology:**

- • \* (U) The death toll from the novel Coronavirus is currently at 26 people in China per Chinese health officials.
- • \* (U) There were 830 confirmed cases of the virus across China a sharp increase.
- • \* (U) A second person in the US has been diagnosed with the coronavirus, the US Centers for Disease Control and Prevention (CDC) has announced.
- • \* (U) There are 63 patients in 22 states being investigated for signs of the rare respiratory illness, the CDC told reporters in a conference call on Friday.

**Public Health Response:**

- □(U) China has begun construction on a hospital designed to receive a thousand patients suffering from coronavirus. The hospital will be located in Wuhan.
- □(U) China Air Force aircraft took off from Xi'an and flew 143 medical staff of the Air Force Military Medical University to Wuhan to support the local

**Travel Considerations:**

- □(U) Lockdown measures are increasing across China's Hubei province to try to control the spread of a new virus.
- □(U) Travel bans have been imposed on eight cities in Hubei province: Wuhan, Huanggang, Ezhou, Chibi, Xiantao, Qianjiang, Zhijiang and Lichuan

Please see the attached Social Media Report for additional information. (FOUO) This message was distributed to ASPR SLT, SOC Section Chiefs and SOC Leadership.

Dr. Adams,  
Attached is a draft message to CC officers from you and the ASH about officers being deployed for the coronavirus. Please let us know if you have any edits.

<< File: Message from the ASH and SG.docx >>

**Jenn Sherman**

Director of Public Affairs

Office of the Surgeon General

Department of Health and Human Services (HHS)

#### Sent to White House (Night Note):

- **CDC issued press release on Marburg virus**

Today, CDC issued a [press release](#) on Marburg virus found circulating in bats in West Africa. This new study, published today in *Nature Communications*, is the first time Marburg virus has been found in West Africa and the first time an Angola-like strain has been found in Egyptian rousette bats.

#### Other Newsworthy Items:

- Tonight at 7:15PM, NBC Nightly News will air an interview with Deputy Commissioner Frank Yiannas re: FDA preparedness for foodborne illness
- Saturday, Fox & Friends Weekend will air the Secretary's interview re: March for Life
- Pricilla Alvarez, CNN, continues to follow the impact of Migrant Protection Protocol (MPP) on the numbers of UAC in ORR care. We are expecting a story later today or this weekend noting 352 children have been referred to ORR custody this fiscal year where there is indication that their family is in Mexico.

(b)(5)

#### From Today:

- (CDC) Dr. Nancy Messonnier participated in the following interviews re: the Coronavirus from China
  - ABC – World News Tonight, pre-taped
  - CBS – Newspath, pre-taped
  - Reuters – taped
  - NBC – NBC Nightly News, pre-taped
  - AP-TV – taped
  - Univision – Live
  - Telemundo – Live
- (NIH) Dr. Fauci pre-taped an interview for Fox News's *Special Report with Brett Baier* re: the Coronavirus from China
- Director Severino participated in an interview with World Magazine re: March for Life; California action
- (CDC) [Marburg Virus Found Circulating in Bats in West Africa](#)
- (CDC) [Second Travel-related Case of 2019 Novel Coronavirus Detected in United States](#)
- (CDC) [CDC Telebriefing: Update on 2019 Novel Coronavirus \(2019-nCoV\)](#)

#### Sent to White House (Night Note):

- CDC issued press release on Marburg virus

Today, CDC issued a [press release](#) on Marburg virus found circulating in bats in West Africa. This new study, published today in *Nature Communications*, is the first time Marburg virus has been found in West Africa and the first time an Angola-like strain has been found in Egyptian rousette bats.

#### Other Newsworthy Items:

- Tonight at 7:15PM, NBC Nightly News will air an interview with Deputy Commissioner Frank Yiannas re: FDA preparedness for foodborne illness
- Saturday, Fox & Friends Weekend will air the Secretary's interview re: March for Life
- Pricilla Alvarez, CNN, continues to follow the impact of Migrant Protection Protocol (MPP) on the numbers of UAC in ORR care. We are expecting a story later today or this weekend noting 352 children have been referred to ORR custody this fiscal year where there is indication that their family is in Mexico.

(b)(5)

Dear Fellow Commissioned Corps Officers,

The CDC today confirmed the second case of novel coronavirus infection (2019-nCoV) within the United States. This second patient recently returned from Wuhan, China, where the outbreak of respiratory illness caused by this novel coronavirus has been ongoing since December 2019.

In support of the national efforts to control the spread of this disease, we are deploying officers to provide expert outbreak response in direct support of the CDC. Specific objectives include the conduct of entry screening at U.S. airports, and the provision of guidance to healthcare professionals.

Please understand this is a rapidly changing situation, and we will continue to keep you updated on the efforts of the Commissioned Corps. For the latest information, please visit <https://www.cdc.gov/coronavirus/2019-ncov/index.html> where you can read the situation summary, receive information for healthcare professionals and laboratories as well as guidance for travelers.

Sincerely,

Brett P. Giroir, MD  
ADM, USPHS  
Assistant Secretary for Health

Jerome Adams, MD, MPH  
VADM, USPHS  
U.S. Surgeon General

Dear Secretary Azar

The NEJM just released two Perspectives and one Editorial on what is known about the danger of the Wuhan -CoV as of this hour. I have read the articles and summarize for you. I wish once again that I was an I. D. specialist, but I am not. Thank goodness we have Dr. Fauci.

Here is my summary:

Incubation period is 14 days. Another reason to ban flights and ships from Wuhan from U.S.

Absence of fever on arrival to U.S. means little.

Wuhan-CoV originated in bats which are immune to virus and transmitted to exotic pets in Wuhan sea food/exotic pet market. Must learn which exotic animals carry the virus. PRC and EM of all living stock in Wuhan market. Then any stock positive for virus killed in Wuhan and province.

Wuhan-CoV goes to lung cells not mouth/throat cells to cause death. So protective masks essential to prevent passage down upper airway. Must determine who is prone to lung infection not upper airway infection that is mild in most infected persons to date.

Wuhan-CoV mutates rapidly. Worst scenario is that Wuhan -CoV infects pigs immunocompromised by African Swine Flu (ASF). These ASF pigs are being smuggled out of PRC to Newark and Poland and Italy. President Xi must authorize death penalty for smuggling any animal out of PRC.

Dr. Fauci can give you answers on how to prevent spread Wuhan-CoV was in U.S. and vaccine development in 6 weeks and precautions for all.

My email is my opinion only as always.

Robert G Levitt MD

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

**HHS Executive Summary: Saturday, 25Jan20**

**1. HHS**

**Today's Noteworthy Topics:**

Novel Coronavirus (2019-nCoV)

There are 849 cases of confirmed 2019-nCoV in 10 locations as of 24Jan20. There are two confirmed cases of 2019-nCoV in the United States (Washington and Illinois). Entry screening continues to take place at Atlanta (ATL), Chicago (ORD), San Francisco (SFO), Los Angeles (LAX), and John F Kennedy (JFK) airports. As of 23Jan20 2,204 persons on 239 flights have been screened and one referred for medical evaluation. CDC has detailed several staff to WHO in Geneva who are assisting with the nCoV response. CDC laboratory in regular discussions with the FDA to complete the Emergency Use Authorization (EUA) for the 2019-nCoV RTPCR assay and is collecting laboratory data to support the EUA.

**Daily Operational Schedule:**

0830 – DHS & CDC Daily 2019 Novel Coronavirus Sync Call

**Public Health Emergency of National Significance:**

Puerto Rico (Earthquake): 08Jan20

**HHS Response Status Summary:**

HHS SOC: Level III (Virtual)

CDC EOC: Level III (Polio/Ebola)

CDC EOC: 2019 Novel Coronavirus (Agency-Wide Response)

FDA EOC: Level II (Vape Product Response)

**Emergency Support Function (ESF) Activation:**

ESF – 8: Not Activated

ESF – 6: Not Activated

**Recovery Support Function (RSF) Activation:**

H&SS RSF: Activated Region II (2017 Irma/Maria, Puerto Rico projected end date of 05Mar20). Activated Region IX (2018 California Wildfires projected end date of 31Mar20)

**HHS Deployments: (Total = 181)**

**ASPR: 11** – (5) Irma/Maria, (1) 2018 California Wildfires, (5) 2020 Earthquake Puerto Rico

**CDC: 170** – (31) Polio, (48) Ebola, (8) Puerto Rico, (83) Coronavirus

**FMS Status:**

- • \* 32 (250 Bed) FMS sets are deployable
- • \* 10 (50 Bed) FMS sets are deployable

**New Mission Assignments (MA):** 4473DR-PR-HHS-01: FEMA has sent, and A&F has accepted, a Mission Assignment in support of 2020 Earthquake, Puerto Rico. As requested by the Commonwealth of Puerto Rico and directed by, and in coordination with FEMA, Health & Human Services (HHS) will activate a federally qualified contractor to administer a national network of pharmacies and sufficient personnel to address emergency response requirements through EPAP. This mission assignment provides \$1,000,000.00, for a cumulative amount of \$1,000,000.00. This is funding for HHS to deploy the Emergency Prescription Assistance Program (EPAP) to affected areas in the Commonwealth of Puerto Rico. Estimated Projected end date of 10Feb20.

**Active Situations (7):**

- • \* Influenza Season
- • \* Irma/Maria, Puerto Rico, & USVI (Recovery)
- • \* Ebola in Eastern Democratic Republic of the Congo
- • \* California Wildfires (Recovery)
- □ Novel Coronavirus
- □ Bravo Response
- □ Earthquake, Puerto Rico

**U.S. International Health Regulation National Focal Point Status:** NSTR

**2. FEMA:****Interagency Response Status Summary:**

NWC: Monitoring

NRCC: Blue

National IMATs: Red – Fully Mission Capable; Blue – Deployed – PR; Gold – Fully Mission Capable

Regional IMATs: Region II, PR

**Significant National Weather:**

A series of storms will produce locally heavy rain early this weekend across coastal portions of Oregon and northern California. A slow moving storm will spread wintry conditions into parts of the interior Northeast, with areas of heavy rain across the Mid-Atlantic.

**3. OPDIV/STAFFDIV Overnight Reports:****CDC:**

- Person-to-person outbreaks of hepatitis A infections – Multiple states, 2016–2020 – Update
- 2019 Novel Coronavirus – China and Thailand – Update
- Ebola – The Democratic Republic of the Congo – Update
- Polio (Wild Type) – Pakistan – Update
- Polio (Wild Type) – Afghanistan – Update
- Polio (Vaccine-derived) – Pakistan – Update

- Polio (Vaccine-derived) – Togo – Update

**FDA:**

- □ Adverse Events Possibly Linked to Vaping Products/Unknown/Aug 2019
- □ Listeria monocytogenes/Unknown/Oct 2019
- □ Hepatitis A/Fresh Fruit (suspect)/Nov 2019
- □ Salmonella Javiana/Cut Fruit (suspect)/Dec 2019
- □ Salmonella Braenderup/Unknown/Dec 2019
- □ E. coli O157:H7/Leafy Greens/Nov 2019
- □ E. coli O157:H7/Leafy Greens (suspect)/ Dec 2019
- □ Listeria monocytogenes/Dairy (suspect)/Nov 2019
- □ Salmonella Saintpaul/Fruit (suspect)/ Dec 2019
- □ E. coli O157:H7/Frozen Food Item (suspect)/Nov 2019
- □ Listeria monocytogenes/Leafy Greens (suspect)/Dec 2019

JOB LISTINGS ON JAMA  
CAREER CENTER®

*JAMA Network Open*

**Associations of Fish Oil  
Supplement Use With Testicular Function in Young Men**

Tina Kold Jensen, PhD; Lærke Priskorn, PhD; Stine A. Holmboe, PhD; et al

Invited Commentary: **More Evidence of the Association of Diet With Human  
Spermatogenesis Function**; Albert Salas-Huetos, MSc, PhD

**Physician-Infectious  
Disease-SSM Health**

Madison, WI

*JAMA Internal Medicine*

**Assessment of Cardiovascular  
Diagnostic Tests and Procedures Offered in Executive  
Screening Programs at Top-Ranked Cardiology Hospitals**

Alan Ge, MA; David L. Brown, MD

**OBGYN Physician**

White Plains, New York

Editor's Note: **First Physical, Reprised**; Rita F. Redberg, MD; Mitchell  
H. Katz, MD

**Staff Psychiatrist -  
Psychiatric Inpatient  
Program (CHCF)**

Stockton, California

*JAMA Psychiatry*

**Efficacy and Safety of  
Lumateperone for Treatment of Schizophrenia: A Randomized**

**Anesthesiologist**

## **Clinical Trial**

Christoph U. Correll, MD; Robert E. Davis, PhD; Michal Weingart, PhD; et al

Editorial: **The Potential Role of Lumateperone**; Joshua T. Kantrowitz, MD

*JAMA Neurology*

## **Ambroxol for the Treatment of Patients With Parkinson Disease With and Without Glucocerebrosidase Gene Mutations: A Nonrandomized, Noncontrolled Trial**

Stephen Mullin, PhD, MRCP; Laura Smith, MSc; Katherine Lee, MRes; et al

*JAMA Surgery*

## **Interventions and Operations 5 Years After Bariatric Surgery in a Cohort From the US National Patient-Centered Clinical Research Network Bariatric Study**

Anita Courcoulas, MD; R. Yates Coley, PhD; Jeanne M. Clark, MD; et al

Invited Commentary: **Bariatric Surgery Is Safe and It Works**; Anne P. Ehlers, MD, MPH; Amir A. Ghaferi, MD, MS

*JAMA Cardiology*

## **Association of Clinical**

**Subject:** (U) U.S. To Evacuate Citizens, Diplomats From Wuhan; Consulate Temporarily Shut Down-MMC Update 34 [Novel Coronavirus - Worldwide] NOC 0051-20

## Unclassified

### Location(s): Global

The United States is arranging a charter flight on Sunday to bring its citizens and diplomats back from the Chinese city of Wuhan, and plans to temporarily shut its Wuhan consulate, media reported Saturday.

The plane, with around 230 people, will carry diplomats from the U.S. consulate as well as U.S. citizens and their families, a person familiar with the operation said.

Washington was given approval for the operation from China's Foreign Ministry and other government agencies following negotiations in recent days, media said.

In Australia, four cases of the deadly coronavirus have been confirmed as authorities scramble to contact passengers who shared flights from China with the patients.

Three men tested positive to the respiratory condition in New South Wales on Saturday, state health authorities confirmed. It comes after another man, aged in his 50s, tested positive in a Melbourne hospital after arriving from the Chinese city of Guangzhou last week.

Additionally, a Hong Kong leader declared a virus emergency on Saturday, announcing measures to limit links with mainland China and prevent the spread of the new coronavirus.

As a result, flights and high speed rail trips between Hong Kong and Wuhan will be halted.

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

Good morning Dr. Kadlec,

Open source media is reporting:

- The United States is arranging a charter flight on 26Jan20 to evacuate U.S. citizens and diplomats from Wuhan, China.
- Initial reports indicate that the consulate will be temporarily shut down in Wuhan.
- The plane is expected to carry approximately 230 people composed of primarily U.S. Diplomats, Citizens, and their family.
- This was a topic of discussion yesterday, but the number of evacuees was significantly lower (Approx. 30 people).
- HHS SOC has reached out to Department of State Wuhan Taskforce to confirm reports that the flight has been arranged. The flight has not been arranged at this time.
- HHS SOC has reached out to ACF for additional information.

The SOC will continue to monitor this situation and provide updates as needed. This message was sent to the ASPR SLT, SOC Leadership, and appropriate SMEs.

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

Very Respectfully,

**Secretary's Operation Center**

Good Morning Dr. Kadlec -

Please see below the message sent to USG IHR Stakeholders seeking their review of the potential PHEIC event. The IHR Program will seek your approval for transmission of the message to WHO (**estimate between 1600 and 1900 today**), once USG IHR Stakeholders provide their comments and CDC clears on any edits. **This message is for your situational awareness and no action is required.**

On Behalf of the IHR Program,

Adam Tewell

**Subject:** URGENT IHR REVIEW REQUIRED: Potential PHEIC - Confirmation of 2nd case of novel coronavirus (nCoV) in the United States

Dear USG IHR Stakeholders,

Please advise in the by **1400 January 25, 2020** (Eastern Standard Time) if you have any questions or comments.

The U.S. International Health Regulations (IHR) National Focal Point requests your review of the attached pending notification of a potential public health emergency of international concern (PHEIC). Subsequent to this review period, we will request the approval of the Assistant Secretary for Preparedness and Response, who serves as the IHR Message Authorizing Official, to send this notification to the World Health Organization.

### **Event information**

The IHR Program has been notified of a potential PHEIC involving a 2<sup>nd</sup> travel associated case of nCoV in the United States

**Title:** Confirmation of 2<sup>nd</sup> Case novel coronavirus (nCoV) in U.S.

**Location:** Chicago, IL, U.S.

### **PHEIC notification criteria met:**

Criteria 1- Public health impact of the event is serious

Criteria 2- Event is unusual/unexpected

Criteria 3 –Significant Risk of International Spread

Criteria 4- Significant Risk of Travel or Trade Restrictions

The U.S. Centers for Disease Control and Prevention (CDC) is closely monitoring an outbreak caused by a novel (new) coronavirus (nCoV) in Wuhan City, Hubei Province, China. Chinese authorities first identified the new coronavirus, which has, as of January 24, 2020, resulted in over 800 confirmed human infections, including some deaths, in China. A number of countries, including the United States, are actively screening incoming travelers from Wuhan, and exported cases have been confirmed in Japan, Republic of Korea, Thailand, Taiwan, United States, Hong Kong SAR, Macau SAR, Singapore, and Vietnam. The first case confirmed case in the United States was announced on January 21, 2020. The second case confirmed in the United States was announced on January 24, 2020.

### **United States Patient Case #2 Summary:**

The patient is a 63 year old female with co-morbidities including hyperlipidemia and hypertension who traveled to Wuhan from the end of December through Jan 13th. Symptoms of fever and myalgias began on Jan 14th followed by cough and shortness of breath on Jan 20th. The patient sought medical care and was found to be febrile and hypoxic with a chest x-ray that noted multifocal ground glass opacities. The patient was hospitalized for oxygen support and clinically improved. Specimens obtained on Jan 22nd returned positive for nCoV on Jan 23rd. Of note, while in Wuhan the patient spent time in a hospital with an ill family member who died on Dec 31st from viral pneumonia. In addition, two other family members in Wuhan required hospitalization and were diagnosed with viral pneumonia.

Very respectfully,

[1] China update

Date: Sat 25 Jan 2020

Source: Chinese National Health Committee [in Chinese, machine trans., edited]

<<http://www.nhc.gov.cn/xcs/yqfkd/202001/a7cf0437d1324aed9cc1b890b8ee29e6.shtml>>

Update on pneumonia of new coronavirus infection as of 24:00 on 24 Jan 2020

-----  
At 04:00 on [24 Jan 2020], 29 provinces (autonomous regions and municipalities) reported 444 new confirmed cases and 16 new deaths. Three new cases were cured and discharged. A total of 19 provinces (autonomous regions and municipalities) reported 1118 new suspected cases; 30 provinces (autonomous regions and municipalities) reported the epidemic situation, and Qinghai Province was newly added.

As of 24:00 on [24 Jan 2020], the Health and Health Commission received a total of 1287 confirmed cases of pneumonia with new coronavirus infection in 29 provinces (autonomous regions and municipalities), including 237 severe cases and 41 deaths (39 cases in Hubei Province, [1 case in Hebei Province and 1 case in Heilongjiang]); 38 cases have been cured and discharged. A total of 1965 suspected cases were reported in 20 provinces (autonomous regions and municipalities).

At present, 15 197 close contacts have been traced, 1230 medical observations have been lifted, and 13 967 people are still receiving medical observations.

In addition, confirmed cases were reported abroad: 5 cases in Hong Kong, China, 2 cases in Macau, 3 cases in Taiwan, 4 cases in Thailand (2 cases have been cured), 2 cases in Japan (1 case has been cured), 2 cases in Korea, 2 cases were in the USA, 2 in Viet Nam, 3 in Singapore, 1 in Nepal, and 2 in France.

ProMED-mail

<[promed@promedmail.org](mailto:promed@promedmail.org)>

[In yesterday's (24 Jan 2020) update, there were 259 new confirmed

cases and 8 new deaths from the 29 provinces; today's figures are 444 new confirmed cases and 16 new deaths. Likewise there were 830 confirmed cases of pneumonia in 29 provinces (autonomous regions and municipalities), including 177 severe cases and 25 deaths (24 in Hubei Province and 1 in Hebei Province). There were a total of 1072 suspected cases. In contrast, today (25 Jan 2020) there were a total of 1287 confirmed cases of pneumonia in 29 provinces (autonomous regions and municipalities), including 237 severe cases and 41 deaths (39 in Hubei Province, 1 Hebei Province, and 1 in Heilongjiang Province). There were a total of 1965 suspected cases were reported in 20 provinces (autonomous regions and municipalities). Media and social media reports have markedly elevated estimates, one speculating that there have been 100 000 cases in Wuhan. There appears to be significant person-to-person transmission ongoing within this outbreak, and cases are occurring almost throughout China (in 29 of the 33 provinces).

A good map of China showing the provinces can be found at <https://protect2.fireeye.com/url?k=c6f12b3a-9aa422ea-c6f11a05-0cc47a6a52de-11b61f5f9dc5408f&u=https://www.chinadiscovery.com/china-maps/china-provincial-map.html>.

Note that one of the new fatalities was in Heilongjiang Province in the extreme northeast of the country. - Mod.MPP]

[In related news, a 62-year-old doctor and ENT specialist at Hubei Xinhua hospital in Wuhan is apparently the first known fatality among staff treating patients. See <https://www.theguardian.com/science/2020/jan/25/coronavirus-outbreak-doctor-in-wuhan-hospital-dies-as-army-medics-flown-in>]. -Mod.LXL]

[2] Wuhan City addresses Q &A re: available care

Date: Fri 24 Jan 2020

Source: Wuhan Municipal Health Committee [in Chinese, machine trans., edited]

<http://wjw.wuhan.gov.cn/front/web/showDetail/2020012309114>

Reply of Wuhan Municipal Health and Health Committee on Several Issues Concerned by Citizens

-----  
1. There are many people who come to the fever clinic, and the observation beds are very tight. How [can you] allocate medical resources and strengthen the treatment to solve the outstanding problem of the fever clinic?

Answer: At present, the number of fever patients in the city is increasing. There is indeed a long queue of fever clinics and tight beds. For this reason, the city headquarters made an urgent study and decided to recruit related hospitals as designated hospitals for fever patients. Seven hospitals, including the Hankou Hospital, the Red Cross Hospital, the Western Hospital of the Pu'ai Hospital, the Seventh Hospital, the Ninth Hospital, the Wuchang Hospital, and the Fifth Hospital, have been recruited as a whole. More than 3000 beds were arranged to treat suspected and confirmed cases. At the same time, the city's 2nd-level and above general hospitals still need to set up fever clinics, carry out pre-checks and triages, and diagnose and treat general fever patients, and actively guide patients with fever with respiratory symptoms to the city's designated fever hospitals. It is expected that the tension in the consultation of fever patients will ease.

2. At present, Wuhan has adopted a "7 to 7" insurance system. Why do you want to do this? How does it work?

Answer: In order to strengthen the medical service capabilities of the 7 designated hospitals for fever patients, select the ministry, provincial and municipal hospitals (Tongji Hospital, Xiehe Hospital, Provincial People's Hospital, Wuhan University South-South Hospital, City First Hospital, City The Central Hospital and the No. 3 Hospital of the Municipality of the People's Republic of China) have supported 7 designated hospitals for fever patients. The director of the supporting hospital will temporarily serve as the director of the corresponding designated diagnosis and treatment hospital. S/He will be responsible for the personnel, finance, and material management of the designated diagnosis and treatment hospital, coordinate the deployment of hospital resources on both sides, and make every effort to treat the patient. The existing staff affiliation and administrative level remain unchanged. The medical staff of the designated diagnosis and treatment hospitals are all transferred to the diagnosis and treatment of fever patients. When the strength is insufficient, the supporting hospitals will deploy and enrich them.

3. Many hospitals report that there are no results within a few days after the specimens are submitted for inspection, which affects the rapid diagnosis. What is the reason? How [can you] improve the detection speed next?

Answer: As the country has incorporated pneumonitis of the new type of coronavirus into a Class B infectious disease and adopted Class A management, the detection of samples of this type of pathogen is

managed in accordance with highly pathogenic microorganisms (Class 2), and the relevant samples are tested and transported. It must meet the relevant requirements of biosafety management, and pathogen-related experimental activities should be carried out in a biosafety laboratory with the corresponding protection level.

In the early stage, the sample detection process for suspected cases was as follows: The 1st-patient hospital passed a standardized pre-test and triage, combined with clinical examination, laboratory inspection and chest imaging examination, confirmed the suspected case after sampling by the expert group, and sampled the disease. The control center will transfer the samples to the city's disease control center, and the city's disease control center will transfer to the provincial disease control center for nucleic acid detection. More than 200 samples can be detected every day. (Before [16 Jan 2020], there was no kit in our province, and it had to be sent to the national designated testing institution for virus isolation and nucleic acid detection.) It is estimated that it will take about 2 days from the start of sampling to the return of results (Before [16 Jan 2020], the samples had to be sent to the testing institution designated by the state of Beijing, and the results would take about 3-5 days to return).

In order to meet the needs of the current prevention and control situation and increase the speed of testing, upon requesting the consent of the relevant higher authorities, since [22 Jan 2020], the city has designated various designated treatment hospitals, counterpart assistance hospitals for fever fixed diagnosis and treatment hospitals, and the city's disease control center. Waiting for biosafety laboratories with corresponding protection levels to carry out the detection of pathogenic nucleic acids of related samples (the 1st batch of a total of 10 institutions), it is estimated that nearly 2000 samples can be detected every day when all are run. To this end, the city plans to urgently transport 30 000 kits to the designated testing institutions and has so far issued 6000 copies.

4. Managing close contacts of pneumonia infected by new coronavirus is an effective means to control the spread of the disease. How does Wuhan manage the close contacts of pneumonitis infected by new coronavirus? How many of the close contacts were diagnosed with pneumonitis infected by a new coronavirus?

Answer: At the beginning of the outbreak, our city strictly regulated and organized the judgment, assignment, follow-up, and disposal of close contacts. The specific methods are summarized as follows:

(1) Full inclusion and full coverage. All persons who work with, observe, suspect, or diagnose with cases who work, study, live together with others, and who are in close contact with each other, and those who perform medical and nursing care of the cases, are tracked and investigated as close contacts. One person is missing.

(2) Territorialization and gridding. Mainly based on the current place of residence, timely and accurately hand over close contacts to the residential jurisdiction for management. The districts assign personnel lists to the grid management team to ensure that they receive standardized medical observations.

(3) 5-3-1: 5 items given to each close contact, 3 people in the medical observation team, and visit 1 time per day. Each close contact is provided with a prevention and control knowledge manual, a pair of masks, a thermometer, a temperature detection table, and a recording pen. The medical observation team is composed of community leaders, community doctors, and community grid members who enter the household daily (at least once a day), monitor daily, and report information in a timely manner. The observation period (14 days) is over, and the medical observation will be lifted after passing the assessment.

(4) Report in time and rule in time. When the close contacts have abnormal conditions such as fever (37.3 deg C and above), cough, etc., immediately report them, and report them step by step. Immediately deploy an ambulance to transfer them to the designated hospital for treatment. As of 24:00 on [22 Jan 2020], the number of close contacts increased by 260 on that day, a total of 1441 close contacts were tracked, 779 medical observations have been lifted, and 662 people are still receiving medical observations. There were 46 people with close fever symptoms, 10 were excluded, 35 were waiting to be queued, and 1 was suspected.

<[promed@promedmail.org](mailto:promed@promedmail.org)>

[The media has chosen a sensationalist approach to the observation that the medical facilities are currently overwhelmed with the influx of febrile patients fearing the worst. Much has been written about hospital closings, lack of supplies for treatment and protective items (masks, gloves) for hospital staff. The above document attempts to address these through delineating the care structure in Wuhan. As part of pandemic preparedness, surge control is a critical management step. The above document seems to address much of the concerns, but on paper

and in practice may be a challenge. - Mod.MPP]

## Summary

-----

**Background:** A recent cluster of pneumonia cases in Wuhan, China, was caused by a novel betacoronavirus, the 2019 novel coronavirus (2019-nCoV). We report the epidemiological, clinical, laboratory, and radiological characteristics and treatment and clinical outcomes of these patients.

**Methods:** All patients with suspected 2019-nCoV were admitted to a designated hospital in Wuhan. We prospectively collected and analysed data on patients with laboratory-confirmed 2019-nCoV infection by real-time RT-PCR and next-generation sequencing. Data were obtained with standardised data collection forms shared by the International Severe Acute Respiratory and Emerging Infection Consortium from electronic medical records. Researchers also directly communicated with patients or their families to ascertain epidemiological and symptom data. Outcomes were also compared between patients who had been admitted to the intensive care unit (ICU) and those who had not.

**Findings:** By [2 Jan 2020], 41 admitted hospital patients had been identified as having laboratory-confirmed 2019-nCoV infection. Most of the infected patients were men (30 [73%] of 41); less than half had underlying diseases (13 [32%]), including diabetes (8 [20%]), hypertension (6 [15%]), and cardiovascular disease (6 [15%]). Median age was 49.0 years (IQR 41.0-58.0); 27 (66%) of 41 patients had been exposed to Huanan seafood market. One family cluster was found. Common symptoms at onset of illness were fever (40 [98%] of 41 patients), cough (31 [76%]), and myalgia or fatigue (18 [44%]); less common symptoms were sputum production (11 [28%] of 39), headache (3 [8%] of 38), haemoptysis (2 [5%] of 39), and diarrhoea (1 [3%] of 38). Dyspnoea developed in 22 (55%) of 40 patients (median time from illness onset to dyspnoea 8.0 days [IQR 5.0-13.0]); 26 (63%) of 41 patients had lymphopenia. All 41 patients had pneumonia with abnormal

findings on chest CT. Complications included acute respiratory distress syndrome (12 [29%]), RNAemia\* (6 [15%]), acute cardiac injury (5 [12%]) and secondary infection (4 [10%]); 13 (32%) patients were admitted to an ICU and 6 (15%) died. Compared with non-ICU patients, ICU patients had higher plasma levels of IL2 [interleukin-2], IL7 [interleukin-7], IL10 [interleukin-10], GSCF [granulocyte colony-stimulating factor], IP10 [inducible protein], MCP1 [monocyte chemotactic protein-1], MIP1A [macrophage inflammatory protein], and TNFalpha [tumor necrosis factor].

Interpretation: The 2019-nCoV infection caused clusters of severe respiratory illness similar to severe acute respiratory syndrome coronavirus and was associated with ICU admission and high mortality. Major gaps in our knowledge of the origin, epidemiology, duration of human transmission, and clinical spectrum of disease need fulfilment by future studies.

\*Since we did not perform tests for detecting infectious virus in blood, we avoided the term viraemia and used RNAemia instead. RNAemia was defined as a positive result for real-time RT-PCR in the plasma sample.

[4] Novel coronavirus 2019

Date: Fri 24 Jan 2020

Source: New England Journal of Medicine (NEJM) [edited]

<<https://www.nejm.org/doi/full/10.1056/NEJMoa2001017?query=RP>>

Citation: Zhu N, Zhang D, Wang W, et al. A novel coronavirus from patients with pneumonia in China, 2019. N Engl J Med [Epub 24 Jan 2020]. <<https://www.nejm.org/doi/full/10.1056/NEJMoa2001017>>

Summary

-----

In December 2019, a cluster of patients with pneumonia of unknown cause was linked to a seafood wholesale market in Wuhan, China. A previously unknown betacoronavirus was discovered through the use of unbiased sequencing in samples from patients with pneumonia. Human airway epithelial cells were used to isolate a novel coronavirus, named 2019-nCoV, which formed another clade within the subgenus sarbecovirus, Orthocoronavirinae subfamily. Different from both MERS-CoV and SARS-CoV, 2019-nCoV is the 7th member of the family of coronaviruses that infect humans. Enhanced surveillance and further investigation are ongoing. (Funded by the National Key Research and Development Program of China and the National Major Project for Control and Prevention of Infectious Disease in China.)

## Discussion

-----

We report a novel CoV (2019-nCoV) that was identified in hospitalized patients in Wuhan, China, in December 2019 and January 2020. Evidence for the presence of this virus includes identification in bronchoalveolar-lavage fluid in 3 patients by whole-genome sequencing, direct PCR, and culture. The illness likely to have been caused by this CoV was named "novel coronavirus-infected pneumonia" (NCIP). Complete genomes were submitted to GISAID. Phylogenetic analysis revealed that 2019-nCoV falls into the genus betacoronavirus, which includes coronaviruses (SARS-CoV, bat SARS-like CoV, and others) discovered in humans, bats, and other wild animals (15 [see source URL for complete reference list]). We report isolation of the virus and the initial description of its specific cytopathic effects and morphology.

Molecular techniques have been used successfully to identify infectious agents for many years. Unbiased, high-throughput sequencing is a powerful tool for the discovery of pathogens (14,16). Next-generation sequencing and bioinformatics are changing the way we can respond to infectious disease outbreaks, improving our understanding of disease occurrence and transmission, accelerating the identification of pathogens, and promoting data sharing. We describe in this report the use of molecular techniques and unbiased DNA sequencing to discover a novel betacoronavirus that is likely to have been the cause of severe pneumonia in 3 patients in Wuhan, China.

Further development of accurate and rapid methods to identify unknown respiratory pathogens is still needed. On the basis of analysis of 3 complete genomes obtained in this study, we designed several specific and sensitive assays targeting ORF1ab, N, and E regions of the 2019-nCoV genome to detect viral RNA in clinical specimens. The primer sets and standard operating procedures have been shared with the World

Health Organization and are intended for surveillance and detection of 2019-nCoV infection globally and in China. More recent data show 2019-nCoV detection in 830 persons in China (17).

Although our study does not fulfill Koch's postulates, our analyses provide evidence implicating 2019-nCoV in the Wuhan outbreak. Additional evidence to confirm the etiologic significance of 2019-nCoV in the Wuhan outbreak include[s] identification of a 2019-nCoV antigen in the lung tissue of patients by immunohistochemical analysis, detection of IgM and IgG antiviral antibodies in the serum samples from a patient at 2 time points to demonstrate seroconversion, and animal (monkey) experiments to provide evidence of pathogenicity. Of critical importance are epidemiologic investigations to characterize transmission modes, reproduction interval, and clinical spectrum resulting from infection to inform and refine strategies that can prevent, control, and stop the spread of 2019-nCoV.

[5] Healthy young male fatality

Date: Fri 24 Jan 2020

Source: MSN News/The Washington Post [abridged, edited]

<<https://www.msn.com/en-us/news/world/healthy-young-man-dies-of-coronavirus-in-china-new-cases-in-japan-and-south-korea/ar-BBZh7lo>>

A young, healthy man from Wuhan and a person living 1500 miles from the epicenter of the coronavirus are among the latest victims of the outbreak, which has incited fear and anger across China as the important Spring Festival gets underway. Reports of 8 new deaths from the pneumonia-like virus, taking the total to 26, came as authorities enforced a lockdown across large parts of the province of Hubei, population 59 million. But they also came as the medical system clearly struggled to cope with the outbreak, with reports of crowded hospitals, stressed doctors and dwindling supplies.

Amid increasing talk that the real number of deaths and infections could be much higher than the official figures, the State Council, the

Chinese equivalent of the cabinet, vowed to "seriously handle" underreporting of cases.

Some details about the latest deaths in China have raised concerns about the virus's spread. Until now, the vast majority of the victims had been older than 60, and almost all of them had existing health conditions. All had been in Hubei province and especially in its capital, Wuhan.

But the latest announcement said that a 36-year-old man from Wuhan died on Thursday [23 Jan 2020]. He had no chronic diseases or other existing health conditions and had been treated with anti-virus medication and antibiotics since being admitted to a hospital on [9 Jan 2020].

Another death occurred in Suihua in Heilongjiang province, near the border with Russia and some 1500 miles from Wuhan.

Three cases of the coronavirus have been "confirmed" in France, the 1st in Europe, officials said Friday [24 Jan 2020]. The 1st case involved a patient in hospital in the southwestern city of Bordeaux while the other was in Paris, French Health Minister Agnes Buzyn told reporters. A 3rd person, who is a close relative of one of the other 2, has also been confirmed to have the virus, the health ministry said later.

All 3 had recently traveled to China and had now been placed in isolation. "We are in the process of tracing the history of these patients who have tested positive in order to get in touch with the people they have been in contact with," Buzyn said earlier.

"We have today the 1st European cases probably because we developed the test very quickly and we are capable of identifying them."

The 1st patient, 48, who returned to France on [22 Jan 2020] after having "passed through Wuhan," the Chinese city at the center of the

deadly outbreak, was described as "well." "We know that since the patient has been on French soil they have had contact with a dozen people, we are going to contact them."

She said she had only just received information on the 2nd case and was not yet in a position to make it public. "You have to treat an epidemic as you treat a fire, quickly to locate the source" and "contain it as quickly as possible," Buzyn added.

Three people have been confirmed to have the Wuhan coronavirus in Malaysia, Malaysian Health Minister Dzulkefly Ahmad said on Saturday ([25 Jan 2020]), marking the 1st cases there of the potentially deadly disease. The 3 Chinese citizens, who entered Malaysia via Johor Baru, are the wife and grandchildren of a 66-year-old man from Wuhan who is currently being treated in Singapore for the same virus. The 3 patients have since been transferred to Sungai Buloh Hospital in Selangor, said Datuk Seri Dzulkefly.

The patients were said to have boarded a plane from Guangzhou to Singapore on [20 Jan 2020]. The 66-year-old man and his son tested positive for the virus and were admitted to hospital in Singapore on [22 Jan 2020].

There were a total of 9 people in the group who were travelling together with the 1st male patient: his wife, son, daughter-in-law, 2 grandchildren and another family of 4 comprising husband and wife and 2 children.

They were quarantined upon arrival in Johor while awaiting test results for the virus. Initial tests had found that they were not experiencing fever or any other symptoms.

Summary

-----

Situation update:

- A total of 846 confirmed cases have been reported for novel coronavirus (2019-nCoV) globally;
- Of the 846 cases reported, 830 cases were reported from China;
- 11 confirmed cases have been reported outside of China in 6 countries (see Table 1 at source URL);
- Of these 11 confirmed cases, 10 had travel history to Wuhan;
- 1 confirmed case in Viet Nam had no travel history to any part of China but was a family member of a confirmed case who visited Wuhan. This suggests an instance of human-to-human transmission that occurred in Viet Nam.
- Of the 830 confirmed cases in China, 375 cases were confirmed from Hubei Province
- Of the 830 cases, 177 cases have been reported as severely ill (severe illness according to any of the following criteria: [1] dyspnea; [2] respiratory rate more than 30 bpm; [3] hypoxemia; [4] chest X-ray with multi-lobar infiltrates or pulmonary infiltration progressed more than 50% within 24-48 hours);
- 25 deaths have been reported to date;
- On [24 Jan 2020], the number of reported confirmed cases of 2019-nCoV has increased by 265 cases since the last situation report published on 23 Jan 2020, including China which reported additional 259 confirmed cases.

New epidemiological information reinforces the evidence that the 2019-nCoV can be transmitted from one individual to another. During previous outbreaks due to other coronavirus [Middle-East Respiratory Syndrome (MERS) and the Severe Acute Respiratory Syndrome (SARS)], human-to-human transmission occurred through droplets, contact and fomites, suggesting that the transmission mode of the 2019-nCoV can be similar. The strategic objectives of the response are to interrupt the transmission of the virus from one person to another in China, to prevent exportation of cases from China to other countries and territories, and to prevent further transmission from exported case if they were to happen. This can be achieved through a combination of public health measures, such as rapid identification, diagnosis and management of the cases, identification and follow up of the contacts, infection prevention and control in healthcare settings, implementation of health measures for travellers, awareness raising in the population, risk communication.

<[promed@promedmail.org](mailto:promed@promedmail.org)>

[The evidence is mounting that there is significant person-to-person transmission ongoing in this outbreak. In the case of Viet Nam, it does appear that there has been person-to-person transmission to a presumably close contact. A good map of Viet Nam can be found at <https://protect2.fireeye.com/url?k=0189dda4-5ddcd474-0189ec9b-0cc47a6a52de-94b6a5b631b2ab98&u=https://www.mapsofworld.com/vietnam/vietnam-political-map.html>>. - Mod.MPP]

[8] More cases in countries with prior importations

- USA ex Wuhan, China, 2nd case confirmed; Chicago. Submitted by Mary Marshall (b)(6)

- South Korean authorities confirmed Friday [24 Jan 2020] that a 2nd person has tested positive for the new coronavirus. The 55-year-old South Korean man had been living in Wuhan and had landed at Gimpo Airport in Seoul on a flight from Shanghai. He is now hospitalized. Submitted by ProMED-mail Rapporteur Kunihiko Iizuka

- Japan also confirmed a 2nd and a 3rd case. The 2nd case is a man in his 40s from Wuhan who arrived in Japan on Sunday [19 Jan 2020] on a flight through Hong Kong. He is currently being treated, the Health Ministry said. The 3rd case is a woman in her 30's, and a resident of Wuhan, who by self-report had not stopped by the seafood market in Wuhan. She came to Japan on January 18 (no symptoms at this time). Fever and cough appeared on the night of January 21. She visited a medical institution in Tokyo on January 23. Submitted by ProMED-mail Rapporteur Kunihiko Iizuka

- 5th confirmed case in Thailand, Chinese tourist from Wuhan. Submitted by John Cathey (b)(6) Thailand's 6th confirmed case of coronavirus, a Chinese tourist in Hua Hin. <https://protect2.fireeye.com/url?k=a4478da8-f8128478-a447bc97-0cc47a6a52de-7b80953c52258fef&u=https://forum.thaivisa.com/topic/1145125-chinese-tourist-in-hua-hin-confirmed-as-thailand%E2%80%99s-sixth-case-of-coronavirus/>>. **Subject:** URGENT APPROVAL REQUIRED: Potential PHEIC - Confirmation of 2nd case of novel coronavirus (nCoV) in the United States

Good Afternoon Dr. Kadlec –

As the Message Authorizing Official for all official IHR communications with the World Health Organization (WHO), please advise in the next **two hours** if you have any revisions or questions and whether you authorize the transmission of the message to WHO.

IHR Program requires approval of a potential public health emergency of international concern (PHEIC) notification to the WHO. In the event the IHR Program does not make contact with you within the two-hour timeline, the IHR Program will seek PDASPR's or his designee's approval and authorization to transmit the message to WHO.

This is the 2nd potential USG notification of 2020.

**Changes/Comments made during the USG IHR Stakeholder review period:** *no comments/changes*

## **Event information**

The IHR Program has been notified of a potential PHEIC involving a 2<sup>nd</sup> travel associated case of nCoV in the United States

**Title:** Confirmation of 2<sup>nd</sup> Case novel coronavirus (nCoV) in U.S.

**Location:** Chicago, IL, U.S.

## **PHEIC notification criteria met:**

Criteria 1- Public health impact of the event is serious

Criteria 2- Event is unusual/unexpected

Criteria 3 –Significant Risk of International Spread

Criteria 4- Significant Risk of Travel or Trade Restrictions

The U.S. Centers for Disease Control and Prevention (CDC) is closely monitoring an outbreak caused by a novel (new) coronavirus (nCoV) in Wuhan City, Hubei Province, China. Chinese authorities first identified the new coronavirus, which has, as of January 24, 2020, resulted in over 800 confirmed human infections, including some deaths, in China. A number of countries, including the United States, are actively screening incoming travelers from Wuhan, and exported cases have been confirmed in Japan, Republic of Korea, Thailand, Taiwan, United States, Hong Kong SAR, Macau SAR, Singapore, and Vietnam. The first case confirmed case in the United States was announced on January 21, 2020. The second case confirmed in the United States was announced on January 24, 2020.

## **United States Patient Case #2 Summary:**

The patient is a 63 year old female with co-morbidities including hyperlipidemia and hypertension who traveled to Wuhan from the end of December through Jan 13th. Symptoms of fever and myalgias began on Jan 14th followed by cough and shortness of breath on Jan 20th. The patient sought medical care and was found to be febrile and hypoxic with a chest x-ray that noted multifocal ground glass opacities. The patient was hospitalized for oxygen support and clinically improved. Specimens obtained on Jan 22nd returned positive for nCoV on Jan 23rd. Of note, while in Wuhan the patient spent time in a hospital with an ill family member who died on Dec 31st from viral pneumonia. In addition, two other family members in Wuhan required hospitalization and were diagnosed with viral pneumonia.

On Behalf of the IHR Program,

Adam Tewell

Sat, 01/25/2020 - 15:41

---

## **Summary**

- • 1497 Cases Worldwide; 42 Deaths: 3% rate (SARS was 11%) **official mortality**
- • 18 Chinese cities - 56 million people - **quarantined**

- President Xi said China faces a 'grave situation' as the spread is 'accelerating'
- US and Russia planning evacuation of citizens from Wuhan
- Australia and Malaysia join the list of global nations with CoV cases, in addition to France, Pakistan, Singapore, the US and Nepal
- Chinese President Xi Jinping empowered local governments and said teams from Beijing will be sent to severely impacted areas to strengthen front-line prevention and containment
- The US and France chartered planes to evacuate diplomats and nationals in containment zones
- The director of the CDC says she expects cases of human-to-human transmission in the US
- China banned all domestic tour groups immediately and overseas group tours from Jan 27
- Starbucks and China said they were closing some stores in China
- Wuhan is building a second emergency hospital, this one with 1300 beds
- 3 doctors in Beijing who visited Wuhan are confirmed to have the virus

\* \* \*

Update (1530ET): Now that the market is closed, local authorities apparently feel it's safe to start dribbling out the real numbers. The number of confirmed coronavirus cases soared on Saturday as China confirmed roughly 500 new cases. The number of cases outside China has also grown as Japan, Hong Kong, Macau, Taiwan, Singapore, Malaysia and Australia have all confirmed new cases. Meanwhile, another death has been confirmed, bringing the total to 42.

According to the South China Morning Post, a newspaper that has been keeping probably the most comprehensive tally of confirmed CoV cases around the world, put the total number at 1,497 Saturday afternoon in Hong Kong, New York.

## Wuhan Virus

During a meeting of China' Politburo on Saturday, President Xi not only urged disparate ethnic groups to work together and suppress the virus, but added that the "grave situation" seemed to be "accelerating," according to the BBC and SCMP.

"Party committees and governments at different levels have to make proper plans to contain the virus under the guidance of the Central Committee," he was quoted as saying.

"Hubei province has to regard virus prevention work as the most important task, and enforce stricter measures to stop the virus from spreading inside the province and spilling out into other areas. Isolation treatment should be provided for all infected patients."

Wuhan will soon be under complete lock down: Beginning Sunday private vehicles will be banned from its streets. All events have been canceled, travel into and out of the city has been shut down, and, as we showed below, crude roadblocks have been set up to essentially seal off the city - a city of 11 million people - off from the rest of China. At least some form of travel restrictions are in place in some 18 cities in central Hubei. Restrictions include cutting off access to public transit and highways. Already, the economic fallout from the outbreak is being estimated in percentage points of local GDP, as we've previously discussed. The disruption of the holiday travel season will hammer China's tourism industry, possibly even worse than 17 years ago during the SARS outbreak.

Horror images of patients infected with the virus have popped up on Twitter.

about this

As the situation grows increasingly serious, the senior Communist Party leadership, which has formed a group of top officials to oversee the crisis response, is giving local authorities carte blanche to take any necessary action to ensure hospitals remain fully staffed and supplied. There has reportedly been talk of punishing local officials who may have been slow to respond to the crisis during its early days.

After confirming its fifth case, Hong Kong has declared a state of emergency - the highest tier of public alert, according to the HKFP.

"Today I declare the lifting of the response level to emergency," chief executive Carrie Lam told reporters. She is under pressure to limit arrivals from the Chinese mainland. Right now, anybody arriving from the mainland in Hong Kong must sign a "health declaration form", though it's not clear how that will stop patients carrying the virus who may be asymptomatic. However, schools in the city will not reopen until at least Feb. 17 and transportation to and from Wuhan will be canceled until further notice. Oh, and so much for that mask ban Lam declared that the city will invest necessary

to prevent the spread of disease, including increasing the supply of surgical masks after several cases of extreme price gouging were reported.

**Hong Kong** **Free Press✓@HongKongFP**

---

The **#HongKong** Centre for Health Protection shares advice to prevent pneumonia and respiratory tract infection.  
[https://www.hongkongfp.com/2020/01/25/breaking-hong-kong-declares-wuhan-virus-outbreak-emergency-highest-warning-tier/ ...](https://www.hongkongfp.com/2020/01/25/breaking-hong-kong-declares-wuhan-virus-outbreak-emergency-highest-warning-tier/)

To prevent pneumonia and respiratory tract infection, members of the public should always maintain good personal and environmental hygiene. They are advised to:

- Wear a surgical mask when taking public transport or staying in crowded places. It is important to wear a mask properly, including hand hygiene before wearing and after removing a mask;
- Perform hand hygiene frequently, especially before touching the mouth, nose or eyes; after touching public installations such as handrails or door knobs; or when hands are contaminated by respiratory secretions after coughing or sneezing;
- Maintain drainage pipes properly and regularly (about once a week) pour about half a liter of water down each drain outlet (U-traps) to ensure environmental hygiene;
- Wash hands with liquid soap and water, and rub for at least 20 seconds. Then rinse with water and dry with a disposable paper towel. If hand washing facilities are not available, or when hands are not visibly soiled, performing hand hygiene with 70 to 80 per cent alcohol-based handrub is an effective alternative;
- Cover your mouth and nose with tissue paper when sneezing or coughing. Dispose of soiled tissues in a covered rubbish bin, then wash hands thoroughly; and
- When having respiratory symptoms, wear a surgical mask, refrain from work or attending class at school, avoid going to crowded places and seek medical advice promptly.

The public should take heed of the health advice below when travelling outside Hong Kong:

- Do not travel to places with community transmission of novel coronavirus. If it is unavoidable to travel to such places, put on a surgical mask and continue to do so until 14 days after returning to Hong Kong;
- Avoid close contact with persons with fever or respiratory symptoms in countries/areas with possible community transmission of novel coronavirus infection. If it is unavoidable to come into contact with such persons, put on a surgical mask and continue to do so until 14 days after returning to Hong Kong;
- Avoid visiting hospitals. If it is necessary to visit a hospital, put on a surgical mask and observe strict personal and hand hygiene;
- Avoid touching animals (including game), poultry/birds or their droppings;
- Avoid visiting wet markets, live poultry markets or farms;
- Avoid making close contact with patients, especially those with symptoms of acute respiratory infection;
- Do not consume game meat and do not patronise food premises where game meat is served;
- Adhere to food safety and hygiene rules such as avoiding consuming raw or undercooked animal products, including milk, eggs and meat, or foods which may be contaminated by animal secretions, excretions (such as urine) or contaminated products, unless they have been properly cooked, washed or peeled;
- If feeling unwell when outside Hong Kong, especially if experiencing a fever or cough, wear a surgical mask, inform the hotel staff or tour escort and seek medical advice at once; and
- After returning to Hong Kong, consult a doctor promptly if experiencing a fever or other symptoms, take the initiative to inform the doctor of any recent travel history and any exposure to animals, and wear a surgical mask to help prevent spread of the disease.

South Korea, which has confirmed at least two cases of the virus, said Saturday that it would declare all of China a "coronavirus watch zone" as local public health officials work to protect the public and suppress the virus. Several dozen people have already been tested for the virus in SK and come back negative, per Korea Times.

What a way to kick off the four-day lunar new year holiday.

\* \* \*

As we move into Saturday evening on the ground in Wuhan, it's becoming increasingly obvious to the broader global community that China's authoritarian government has failed to contain this viral outbreak.

Chinese authorities expanded the travel restrictions on Saturday to cover 56 million Chinese, Al Jazeera reports. At

least 18 cities in central Hubei are now dealing with at least some level of travel restrictions.

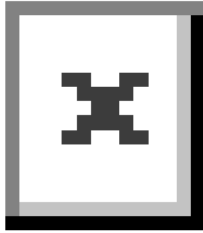

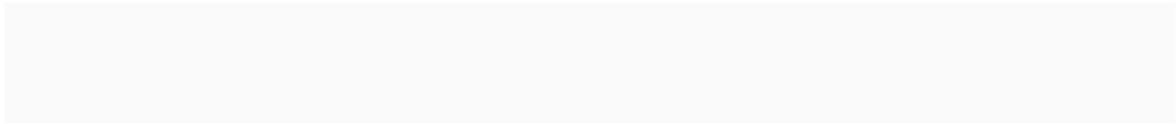

Unsurprisingly, some of the roadblocks remind us of 'Mad Max'.

In Wuhan, the situation looks grim. The number of confirmed cases is exploding: another 300 were announced on Saturday, while the death toll is steady at 41. Yesterday, videos flooded western social media (after being assiduously removed from Weibo and the rest of the Chinese Internet) purporting to show bodies piling up in hallways

in Wuhan, with rumors that a doctor had succumbed to the virus.

Those rumors have now been confirmed: A doctor who worked at a hospital in Wuhan, China, where coronavirus patients are being treated died Saturday morning, according to the Wall Street Journal. Meanwhile, a two-year-old Chinese girl has become the youngest to be diagnosed with the virus.

As it has all week, the South China Morning Post has kept an up-to-date running total of the confirmed cases & deaths. As of 10 am ET on Saturday, the total number stood at exactly 1400.

## Wuhan Virus

SCMP

A map of the various cases shows the spread, though even the most up-to-date maps by Western news agencies appear to already be out of date, including this one by BBG.

Though China has pledged transparency, some suspect that the true tally of cases within Wuhan is much higher. With the epidemic spiraling out of control, President Xi called a meeting of the Politburo Standing Committee, a group of China's top leaders, to discuss a response to the virus. At the meeting, the

Communist Party set up a group to manage the response to the virus. The group will comprise members of the Party's Central Committee, while being directed by the Standing Committee. During the meeting, President Xi said various ethnic groups must work together to contain the spread of the deadly virus. Xi also ordered party authorities to ensure that there are enough medical supplies in Wuhan - the capital of Hubei province and a city of 11 million five times the size of London and bigger than any US city.

"Party committees and governments at different levels have to make proper plans to contain the virus under the guidance of the Central Committee," he was quoted as saying.

China's National Health Commission announced on Saturday a nationwide plan to identify suspected cases of the deadly virus on trains, airplanes and buses. Inspection stations will be set up and passengers with suspected pneumonia will be "immediately transported" to a medical center. In the city of Haikou, the authorities said they would set up a 14-day observation center for all tourists who came from Hubei. They will not be allowed to leave the hotels where they are staying. At least 450 additional military and medical personnel have been deployed in Hubei to help with the situation.

Following reports last night of a suspected case in Sydney, Australian authorities have confirmed the first case of the virus. Yesterday, several cases were also identified in France. But that's not all: Malaysia has confirmed that three cases of the virus have been detected. Japan is now up to three cases, all Chinese nationals, according to the Nikkei Asian Review.

Following reports that the virus may have originated from people eating bats or rats, the party has ordered more inspections of agricultural products, and has temporarily banned the trade in wild animals. It has also shut down movie theaters, LNY-related

events and other mass gatherings across the country, warning that people should avoid coming together en masse until the outbreak is contained.

Qinghai province in northwestern China confirmed its first case on Saturday, leaving Tibet as the only administrative area of China that remains virus-free.

In Wuhan, the horror stories are getting worse: One woman told the SCMP that her husband was turned away by several hospitals despite coughing up blood, a sign of very advanced pneumonia.

"I have nothing. No protective clothing, only a raincoat, and I am standing outside the hospital in the rain," said the woman, who gave her name as Xiaoxi.

"I am desperate, I have lost count of time and days. I don't know if we will both live to see the new year."

The rapid rise in the number of cases doesn't necessarily mean the outbreak is getting worse, according to a spokesman from the WHO. Instead, it could reflect better monitoring and intervention by government authorities. As far as determining the severity of the epidemic, it's still too early to say.

"It's still too early to draw conclusions about how severe the virus is because, at the beginning of any outbreak, you would focus more on the severe cases," said Tarik Jasarevic, a spokesman for the World Health Organization in Geneva.

Video from inside Wuhan, a city that has been nearly entirely sealed off from the outside world, the situation appears increasingly dire.

<https://www.youtube.com/watch?v=CfcIHUdOl8w>

A lot of attention has been paid in the Western press about the effort to build a new, 1,000 bed hospital in Wuhan as the city's current health-care infrastructure has been completely overwhelmed. They're hoping to finish the building in under a week, an astonishing pace. State media reported Saturday that a second hospital will also be built.

<https://www.youtube.com/watch?v=IbPkINQvYxs>

Foreign governments including the US and Russia are hatching plans to airlift their citizens out of Wuhan. This could include journalists covering the outbreak, meaning the flow of information out of the city could soon slow to a trickle. Meanwhile, scientists are scrambling to determine the virus's infectious potential before victims start showing symptoms. If it's confirmed that the virus spreads in this way, then that would make full containment virtually impossible.

Good Afternoon Dr. Kadlec –

As the Message Authorizing Official for all official IHR communications with the World Health Organization (WHO), please advise in the next **two hours** if you have any revisions or questions and whether you authorize the transmission of the message to WHO.

IHR Program requires approval of a potential public health emergency of international concern (PHEIC) notification to the WHO. In the event the IHR Program does not make contact with you within the two-hour timeline, the IHR Program will seek PDASPR's or his designee's approval and authorization to transmit the message to WHO.

This is the 2nd potential USG notification of 2020.

**Changes/Comments made during the USG IHR Stakeholder review period:** *no comments/changes*

#### **Event information**

The IHR Program has been notified of a potential PHEIC involving a 2<sup>nd</sup> travel associated case of nCoV in the United States

**Title:** Confirmation of 2<sup>nd</sup> Case novel coronavirus (nCoV) in U.S.

**Location:** Chicago, IL, U.S.

#### **PHEIC notification criteria met:**

Criteria 1- Public health impact of the event is serious

Criteria 2- Event is unusual/unexpected

Criteria 3 –Significant Risk of International Spread

Criteria 4- Significant Risk of Travel or Trade Restrictions

The U.S. Centers for Disease Control and Prevention (CDC) is closely monitoring an outbreak caused by a novel (new) coronavirus (nCoV) in Wuhan City, Hubei Province, China. Chinese authorities first identified the new coronavirus, which has, as of January 24, 2020, resulted in over 800 confirmed human infections, including some deaths, in China. A number of countries, including the United States, are actively screening incoming travelers from Wuhan, and exported cases have been confirmed in Japan, Republic of Korea, Thailand, Taiwan, United States, Hong Kong SAR, Macau SAR, Singapore, and Vietnam. The first case confirmed case in the United States was announced on January 21, 2020. The second case confirmed in the United States was announced on January 24, 2020.

#### United States Patient Case #2 Summary:

The patient is a 63 year old female with co-morbidities including hyperlipidemia and hypertension who traveled to Wuhan from the end of December through Jan 13th. Symptoms of fever and myalgias began on Jan 14th followed by cough and shortness of breath on Jan 20th. The patient sought medical care and was found to be febrile and hypoxic with a chest x-ray that noted multifocal ground glass opacities. The patient was hospitalized for oxygen support and clinically improved. Specimens obtained on Jan 22nd returned positive for nCoV on Jan 23rd. Of note, while in Wuhan the patient spent time in a hospital with an ill family member who died on Dec 31st from viral pneumonia. In addition, two other family members in Wuhan required hospitalization and were diagnosed with viral pneumonia.

On Behalf of the IHR Program,

Adam Tewell

10th January 2020

This posting is communicated by Edward C. Holmes, University of Sydney on behalf of the consortium led by Professor Yong-Zhen Zhang, Fudan University, Shanghai

The Shanghai Public Health Clinical Center & School of Public Health, in collaboration with the Central Hospital of Wuhan, Huazhong University of Science and Technology, the Wuhan Center for Disease Control and Prevention, the National Institute for Communicable Disease Control and Prevention, Chinese Center for Disease Control, and the University of Sydney, Sydney, Australia is releasing a coronavirus genome from a case of a respiratory disease from the Wuhan outbreak. The sequence has also been deposited on [GenBank](#) (accession MN908947) and will be released as soon as possible.

The sequence can be downloaded here:

[WH-Human\\_1.fasta.gz](#) (8.9 KB – this is a fasta file compressed using gzip. Uncompress using gzip -d WH-Human\_1.fasta.gz)

**Disclaimer:**

Please feel free to download, share, use, and analyze this data. We ask that you communicate with us if you wish to publish results that use these data in a journal. If you have any other questions –then please also contact us directly.

Professor Yong-Zhen Zhang,

**SEE THE LATEST NEWS: Here is the latest from the BBC:**

Coronavirus doctor: 'Everyone is stuck here and can't leave' ... *from BBC as of Jan. 23, 2020*  
<https://www.bbc.com/news/world-asia-china-51222384>

-

Today from 10:00 (China time), all boundaries in the city were closed - no in or out. People are not allowed to leave. We don't know how long this will last.

The hospitals have been flooding with patients, *there are thousands*, I haven't seen so many before.

They have to wait for hours before they see a doctor - *you can imagine their panic*.

It's a new virus, so there isn't much information.

The incubation period is usually **seven days**, with **two to three days** the minimum period and **10 to 12 days the maximum**.

It is spread through **human-to-human transmission** and there are *also medical-staff infections*.

The virus **may mutate**, so there is further risk of spread.

=====

Look at this ... 'dreadful' ... and globally-important Report:

Report 2: Estimating the *potential total number* of novel Coronavirus cases in Wuhan City, China

<https://www.imperial.ac.uk/mrc-global-infectious-disease-analysis/news--wuhan-coronavirus>

-  
-

**Imperial College London** today in a new estimate of 2019-nCoV activity in Wuhan said the city probably now has 4,000 symptomatic cases. **The report's 95% confidence interval ranges from 1,000 to 9,700.**

-

From: <https://www.imperial.ac.uk/news/194815/coronavirus-outbreak-china-have-infected-thousands>

-

Calculations:

The report estimates that a total of 1,723 cases of 2019-nCoV in Wuhan City had onset of symptoms by 12th January 2020 (the last reported onset date of any case before the report's publication).

This estimate is based on the following assumptions:

- Wuhan International Airport has a catchment population of 19 million individuals.
- There is a mean 10-day delay between infection and detection, comprising a 5-6 day incubation period and a 4-5 day delay from symptom onset to detection/hospitalisation of a case (the cases detected in Thailand and Japan were hospitalised 3 and 7 days after onset, respectively).
- Total volume of international travel from Wuhan over the last two months has been 3,301 passengers per day. This estimate is derived from the 3,418 foreign passengers per day in the top 20 country destinations based on 2018 IATA data, and uses 2016 IATA data held by Imperial College to correct for the travel surge at Chinese New Year present in the latter data (which has not happened yet this year) and for travel to countries outside the top 20 destination list.

The report concludes it is likely that the **Wuhan outbreak** of a novel coronavirus has caused substantially more cases of moderate or severe respiratory illness than currently reported.

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

## **HHS Executive Summary: Sunday, 26Jan20**

### **1. HHS**

#### **Today's Noteworthy Topics:**

##### Novel Coronavirus (2019-nCoV)

There are 1,323 cases of confirmed 2019-nCoV in 14 locations worldwide as of 25Jan20, with two of these cases confirmed in the United States (Washington and Illinois). To date, 2,266 persons on 275 flights have been screened as of 24Jan20 and 2 were referred for medical evaluation. CDC has deployed multidisciplinary teams to Washington and Illinois to assist health departments with clinical management, contact tracing, and communications. The CDC travel health notice for Wuhan (level 3, avoid non-essential travel) was expanded to include all of Hubei Province, China. The sequence of the 2019-nCoV from the first identified US case has been made available on GenBank (Accession ID: MN985325).

#### **Daily Operational Schedule:**

0830 – DHS & CDC Daily 2019 Novel Coronavirus Sync Call  
1400 – ASPR SLT Concall for Novel Coronavirus

#### **Public Health Emergency of National Significance:**

Puerto Rico (Earthquake): 08Jan20  
Opioid Crisis, Nationwide: 24Jan20

#### **HHS Response Status Summary:**

HHS SOC: Level III (Virtual)  
CDC EOC: Level III (Polio/Ebola)  
CDC EOC: 2019 Novel Coronavirus (Agency-Wide Response)  
FDA EOC: Level II (Vape Product Response)

#### **Emergency Support Function (ESF) Activation:**

ESF – 8: Not Activated  
ESF – 6: Not Activated

#### **Recovery Support Function (RSF) Activation:**

H&SS RSF: Activated Region II (2017 Irma/Maria, Puerto Rico projected end date of 05Mar20). Activated Region IX (2018 California Wildfires projected end date of 31Mar20)

#### **HHS Deployments: (Total = 181)**

**ASPR: 11** – (5) Irma/Maria, (1) 2018 California Wildfires, (5) 2020 Earthquake Puerto Rico  
**CDC: 170** – (31) Polio, (48) Ebola, (8) Puerto Rico, (83) Coronavirus

**FMS Status:**

- • \* 32 (250 Bed) FMS sets are deployable
- • \* 10 (50 Bed) FMS sets are deployable

**New Mission Assignments (MA):** 4473DR-PR-HHS-03: FEMA has sent, and A&F has accepted, a Mission Assignment in support of 2020 Earthquake, Puerto Rico. This mission assignment replaces FEMA-3426EM-PR-HHS-O5 mission assignment for funding purposes and provides \$442,000.00 with an estimated projected end date of 23Mar20.

**Active Situations (7):**

- • \* Influenza Season
- • \* Irma/Maria, Puerto Rico, & USVI (Recovery)
- • \* Ebola in Eastern Democratic Republic of the Congo
- • \* California Wildfires (Recovery)
- □ Novel Coronavirus
- □ Bravo Response
- □ Earthquake, Puerto Rico

**U.S. International Health Regulation National Focal Point Status:** The potential PHEIC on the confirmation of the 2<sup>nd</sup> case of Novel Coronavirus (nCoV) – Chicago, IL, U.S. was approved by the ASPR; submitted to the WHO and PAHO; and to USG Stakeholders.

**2. FEMA:**

**Interagency Response Status Summary:**

NWC: Monitoring

NRCC: Blue

National IMATs: Red – Fully Mission Capable; Blue – Deployed – PR; Gold – Fully Mission Capable

Regional IMATs: Region II, PR

**Significant National Weather:**

Mixed precipitation with heavy rain in the lower elevations and snow in higher elevations expected in the Pacific Northwest; up to a foot of snow possible in the Cascades. Showers and localized thunderstorms in the Southern Plains to Lower Mississippi Valley which could move into the Southeast later in the day on Sunday.

**3. OPDIV/STAFFDIV Overnight Reports:**

**CDC:** NSTR

**FDA:** NSTR

**Subject:** Coronavirus PCC calls

Could I please be added to the White House Coronavirus update calls like the one I joined at 7:30 am on Friday? I was able to hear some important OMB guidance Friday about funding with existing resources

and my understanding is that funding information has been discussed or referenced since then. I'm flying blind when we are getting pinged by divisions who are on the calls. Thanks

Jen Moughalian

Assistant Secretary for Financial Resources (ASFR)

**Subject:** UPDATE: CLEARANCE\_0058: CDC "2019 Novel Coronavirus Update"

**Importance:** High

URGENT

Please see updated CDC press release related to additional travel-related case of 2019 Novel Coronavirus detected in United States

Review deadline: 12 noon today, Sunday Jan. 26

Planned release date: Today, Sunday Jan. 26

Driving event: nCov in USA

Note: Details in this statement are tentative re: states confirmed by CDC. When the statement goes out, it would be adjusted to only mention the state(s) that have indeed announced their cases.

#### U.S. Department of Health and Human Services

*CDC works 24/7 protecting America's health, safety and security. Whether diseases start at home or abroad, are curable or preventable, chronic or acute, or from human activity or deliberate attack, CDC responds to America's most pressing health threats. CDC is headquartered in Atlanta and has experts located throughout the United States and the world.*

**Subject:** RE: Summary: Novel Coronavirus

Scott my understanding is and others may correct me that two cases did not/not go through screening and reflected entry into the US Seattle and Chicago that were at the time not part of the screening program. Best Bob

**Subject:** RE: Summary: Novel Coronavirus

Do we know if the last 2 cases came through an airport screening that had onward travel? If not, how did they get from China to current destinations?

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

Good afternoon Dr. Kadlec,

Open source media is reporting:

- CDC has confirmed a case of Novel Coronavirus in Maricopa county Arizona.
- • The case is a traveler from Wuhan, China.
- • CDC confirmed this case via CDC media advisory call that convened today at 1500ET.
- • This is the fifth confirmed case within the United States (CA-2, WA, IL, AZ).

The SOC will continue to monitor this situation and provide updates as needed. This message was sent to the ASPR SLT, ASPR R9, SOC Leadership, and appropriate SMEs.

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

Very Respectfully,

**Secretary's Operation Center**

Nancy Messonnier was just posed this question by media about 10 minutes ago. She referred them to State Officials for a response. Not sure if they don't yet or felt like it was better for AZ and CA to disclose.

Scott my understanding is and others may correct me that two cases did not/not go through screening and reflected entry into the US Seattle and Chicago that were at the time not part of the screening program. Best Bob

**Subject:** RE: Summary: Novel Coronavirus

Do we know if the last 2 cases came through an airport screening that had onward travel? If not, how did they get from China to current destinations?

**Subject:** Summary: Novel Coronavirus

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

Good afternoon Dr. Kadlec,

Open source media is reporting:

- CDC has confirmed a case of Novel Coronavirus in Maricopa county Arizona.
- The case is a traveler from Wuhan, China.
- CDC confirmed this case via CDC media advisory call that convened today at 1500ET.
- This is the fifth confirmed case within the United States (CA-2, WA, IL, AZ).

The SOC will continue to monitor this situation and provide updates as needed. This message was sent to the ASPR SLT, ASPR R9, SOC Leadership, and appropriate SMEs.

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

Very Respectfully,

**Secretary's Operation Center**

## Public Health and Medical Services Conference Call (2020 Novel Coronavirus)

Host: HHS SOC

When: **Monday, January 27, 2020, 13000ET**

## Access Information

Audio Connection: (b)(6)  
Access Code: (b)(6)

## Public Health and Medical Services Conference Call (2020 Novel Coronavirus)

Host: HHS SOC

When it's time, join the meeting from here:

**Join the meeting**

### AGENDA:

- Roll Call and Opening Comments
- CDC Situation Overview
- Ongoing HHS Activities
- Medical Counter Measures
- Healthcare System Resilience
- Supply Chain
- Communication
- Repatriation
- Others by exception only
- Modeling Scenarios and TTX
- Ongoing Interagency Activities
- DHS
- FEMA
- DoD OSD
- NORTHCOM (LNOs by exception only)
- VHA
- USDA
- Others by exception only

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

**Subject:** Summary: Novel Coronavirus

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

Good afternoon Dr. Kadlec,

Open source media is reporting:

- CDC has confirmed a case of Novel Coronavirus in Maricopa county Arizona.
- The case is a traveler from Wuhan, China.
- CDC confirmed this case via CDC media advisory call that convened today at 1500ET.
- This is the fifth confirmed case within the United States (CA-2, WA, IL, AZ).

The SOC will continue to monitor this situation and provide updates as needed. This message was sent to the ASPR SLT, ASPR R9, SOC Leadership, and appropriate SMEs.

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

Very Respectfully,

**Secretary's Operation Center**

+ Bob  
+ Mike Wargo

Just spoke with Bob and he'd be willing to have the first Wolverine call this evening.  
*How does 5:30 work for everyone, or we could shoot for after dinner, 7:30ish? Let me know.*

Also, I've set up a Max page for 2019-nCoV in our DHS Partners Public Health Engagement Enclave and can sponsor accounts for non-feds to reach the page. I've resurrected the "The Swine Flu Affair", "Carter's Almanac-Higher Order Effects of Community Mitigation", and the Mann Gulch Fire sections from the H1N1 Flu Page. Could also resurrect the Petrophoneticus abacus on further request.

Also adding Mike Wargo here. Mike is now chair of the Medical and Public Health Sector SCC and someone you should all know.

Best,  
Duane

---

Am recommending to VA to focus initial preparedness efforts in 5 cities where we likely have the most seeding of cases—NYC, LA, Chicago, Atlanta, San Francisco and Seattle. Getting them prepared for full implementation of TLC and to begin to get their heads around the potential impact to staffing and operational capability. We'll use the VAMCs in those first 5 cities to help us iron out the wrinkles for the rest of the VA system. I suspect that a significant number of infected individuals made it past the CDC entry screening and have likely already infected others. We are already behind the curve and fire is racing up the hill, but we haven't gone far enough down the valley to see it. Like SARS, I expect hospitals to be amplifiers of disease transmission. Would like to know more about disease transmission in healthcare settings in China. Need to think of strategies to mitigate (maybe HLC). Also thinking back to Mann Gulch and wondering what other strategies could serve as the equivalent of an escape fire. And what useless things are we doing or thinking (preconceptions that are wrong) that will unnecessarily weigh us down (and slow us down) like Pulaskis?

Am thinking about strategies for pre-hospital care, tele-care, tele-triage, early segregation of suspected patients, patient flow, diagnostic algorithms, role of employee health/occupational health in assisting with TLC (especially monitoring of workforce, isolation of sick employees and home quarantine of employees with sick household members), mitigation strategies to deal with impact of school closure (child minding strategies), etc.

And I am anticipating curveballs and unexpected twists and turns, so I don't become flustered but tell myself I knew something like this would happen.

Wuhan started building a 1,000 bed hospital and has started building a second 1,300 bed hospital (both of which are expected to open by Feb 4th). Does the story about Philadelphia sound like Wuhan?

By October 1st every hospital bed in the city of Philadelphia was filled with sick people. The city opened a 500 bed emergency hospital which was filled the same day. 10 more emergency hospitals were eventually opened to handle the sick.

Expert: New coronaviruses are infectious when they do not have any typical symptoms during the incubation period

Published: 2020-01-26 14:35:08 | Source: Xinhua | Author: Huang Xiao Wangbing Yang

Xinhua News Agency, Hangzhou, January 26th, reporters learned from Sheng Jifang, director of the Department of Infectious Diseases of Zhejiang University First Hospital, deputy director of the State Key Laboratory of Infectious Diseases Diagnosis and Treatment, and member of the pneumonia expert group for the diagnosis and treatment of new coronavirus infection in Zhejiang Province. Case studies of pneumonia associated with a new coronavirus infection have been contagious when there were no typical symptoms during the incubation period.

'We encountered a patient who came to Hangzhou from Wuhan to attend a conference. When he arrived in Hangzhou, he did not have any symptoms. He did not have the typical symptoms of cough and fever. But it didn't take long before several colleagues he had contacted were infected. Symptoms appeared one after another. But at this time, he still did not have the disease himself. After returning to Wuhan at the end of the meeting, he did not get the disease after another two days. 'Sheng Jifang introduced.

Sheng Jifang said that after different people are infected with the new coronavirus, the course of disease development and clinical symptoms may be very different. It is possible that this person developed symptoms immediately after infection, while another person had no obvious symptoms during the incubation period after infection. Therefore, it is difficult for ordinary citizens to identify.

According to the 'Pneumonitis Prevention and Control Plan for New Coronavirus Infection (Second Edition)' released by the National Health and Health Committee on the evening of the 22nd, the longest incubation period of the disease is about 14 days based on the current knowledge of pneumonitis infected by the new Coronavirus.

'This case tells everyone that even during the incubation period, when there are no typical symptoms, it is already contagious.' Sheng Jifang said. 'If you come back from Wuhan or have contact with the epidemic source, you should do your own quarantine. Do not contact others during the quarantine, and do not spread the virus to family, colleagues and friends. This is very important.'

Sheng Jifang hopes that those who have come out of Wuhan but have not yet reached 14 days should be isolated by themselves, or those who have symptoms should go to the hospital for screening in time for effective treatment.

See translation of article below. No data, just a summary of discussion. If true (contagious during incubation period), will need all the layers of TLC to control. That also has implications for all the people who travelled to the US recently from Wuhan. And it means entry and exit screening and border closures will be as ineffective as with panful. I also need to double check the numbers from yesterday—I

had two different sources (one gave an increase of 975 new cases in China on 1/25 and one gave a new total of 1,975 total cases in China as of 1/25). So the new total is either 2,298 or 2,011 depending on which number I use. Will wait to correct.

Caution-<https://www.hk01.com/%E5%8D%B3%E6%99...99%BC%E7%97%85> <Caution-  
<https://www.hk01.com/%E5%8D%B3%E6%99...99%BC%E7%97%85> >

The outbreak of new coronavirus pneumonia continues to spread. 30 provinces, municipalities and autonomous regions in the Mainland have initiated first-level responses to major public health emergencies.

At 3 pm today (26th), the Information Office of the State Council held a press conference to introduce the prevention and control of new coronavirus pneumonia.

According to Ma Xiaowei, from the perspective of gene sequencing, the new coronavirus is different from SARS and MESR. The new coronavirus is contagious during the incubation period, which is very different from SARS. The outbreak is expected to continue for some time.

He pointed out that from the point of view of transmission characteristics, the patient's early body temperature was not high or normal, there were many mild cases, the infectivity of the virus had increased, and the source of infection walking greatly increased the difficulty of prevention and control. The understanding of new coronaviruses is still very limited, and the source of infection has not yet been found. The mechanism of transmission and the risk of mutation are unclear. In other words, for a new infectious disease, there will be some new situations in the period when the virus changes, and the degree of harm of the virus to people of different ages also changes.

He said that according to the experience during the SARS period, it took three to four months from the discovery to the outbreak. From the observations of some early mild patients, the incubation period was about 10 days, the shortest incubation period was one day, and the longest was The incubation period is 14 days. The incubation period is contagious, which is very different from SARS.

He said that from the speed of the development of the epidemic, the epidemic will continue for some time, and it is a possible phenomenon that some cases will increase in the future. With the implementation of personnel control measures in Wuhan, corresponding measures on health emergencies at the first level have been proposed throughout the country. The prevention and control efforts will be further strengthened. The prevention and control measures will gradually take effect over a period of time, and the epidemic intensity will fail.

Subject: Re: [Non-DoD Source] RE: 2019-nCoV (UNCLASSIFIED)

Carter,

You mentioned earlier and I had been thinking about the weird phenomenon of losing sight of the epidemic when CDC stopped counting H1N1 cases. We've already lost sight of the epidemic in China although case counts in countries outside may still be helpful for a while.

We have a new cognitive/perceptual challenge to think about though - given that we've never really had sight of the full epidemic, how are we going to assess the steps the Chinese have taken? How will we know if they are working. I suspect one way could be by the changes in velocity in the number of confirmed deaths, which will continue to increase for a while even if transmission stopped today (probably a month's lag in that indicator before a clear trend would emerge).

But could there be any other indicators? Maybe a national daily text message poll about symptoms? Remember NYC DOHMH's clever Doodle poll of the school kids after the school outbreak in NYC? Other ideas?

Best,

Richard

On 26 Jan 2020, at 03:17, Carter Mecher <cmecher@charter.net>wrote:

The case counts have increased fivefold in 4 days (from 446 on 1/21 to 2,298 on 1/25). Epidemics don't behave like this. This rapid rise has to be an artifact (would need a very short incubation period

and high  $R_0$  for this to be real). That suggests that China is catching up on its case counts. The curve I generated using only the data for the deaths (date of onset of symptoms), is probably the most accurate curve (unaffected by working down this backlog). I was initially thinking that current case counts being reported by the media were about 4 weeks behind the actual count of ill/infected individuals. [Think about the delays from time of initial symptoms to seeking healthcare services (up to a week), to receiving care (imagine the crowded ERs and clinics), to being screened for 2019-nCoV, to getting the test results, to notification, to media reporting. That delay is likely pushing 2 weeks.] But let's say that it is closer to 2-3 weeks behind and assume that is 2-3 doubling periods. That would mean the current number of ill/infected is 4-8 times as high (so somewhere around 12,000-24,000). The average time from symptom onset to death is 2 weeks or about 2 doubling periods. So the true denominator for estimating mortality is about 3,000-6,000. We now have 56 deaths, so CFR is between 1-2%. That is in the 1918 pandemic range. This outbreak looks to be more transmissible than SARS and less transmissible than 2009 H1N1. That is still pretty bad. I know there is a lot of uncertainty in these estimates (including my estimate of 1 week doubling period)—just a back of the envelope estimate.

Updated numbers (up thru 1/25).

Total cases: 2,298

Deaths: 56

Cases in Hubei Province (Wuhan): 1,052

Cases in rest of China: 1,210

Since more cases are now appearing outside of Wuhan, how is airport screening being handled in the US (I know that flights out of Wuhan have been stopped) ? It would seem that we should be screening all flights coming from China. I assume we must be doing that.

Team,

I am tracking each of these emails closely, and they have been extremely helpful. Our team here at DoD is mostly on the therapeutic and vaccine side of things, but all of this information helps. Keep it coming!

I ask myself (what do I wish we had done?) your question on a daily, sometime hourly, basis.

Matt

Two weeks from now, are there things that we wished we would have done to reshape the challenge we will likely face? What steps could we take to shrink the problem (like dealing with seasonal flu and outbreaks of 2019-nCoV? I would also ramp up flu vaccination because although B wasn't a good match, there is a good chance A is. And even though B is waning, I suspect that A is just getting started. So still time to "shape the battlefield." Might also be a good time to check on pneumococcal vaccine coverage among people my age since most of the deaths being reported are in seniors. It would require nuanced communication though since this doesn't affect 2019-nCoV, but it does reduce the burden of the usual resp disease we see this time of year and that can only help. But we have a very narrow window to act.

Subject: RE: 2019-nCoV

I tried to dig thru the blogs and ProMEDmail to pull out all the cases being reported by day as well as pull the data on the 17 deaths (date of illness onset and date of death). I put that data into Excel (the number of cases reported over the past 2 days has been a little confusing) and inserted a couple of graphs and compared the current preliminary data on cumulative numbers of cases with the experience we had with SARS and MERS. I can refine over time, but it is probably good enough to give a sense of speed. All of this brings back memories of the Mann Gulch Fire—not going to be able to outrun it. The concern I have in the response is thinking like SARS (really a non-layered strategy of isolating the ill). They ought to think of the full implementation of TLC (and assume that like flu, we might be missing disease transmission in asymptomatic infected individuals)—at least until we learn more.

Non-UNMC email

One last thing. During H1N1 and other disasters (Deepwater Horizon, Fukushima, Haiti Earthquake), we leveraged blogs as a way to crowdsource all open source information. You have an army of passionate people who are constantly sifting thru the information from across the globe. A number of the blogs that we followed for H1N1 no longer exist. One that is still active is flutrackers. Caution-

+ Brian “Bat” Masterson (UHC)

+ Mike Wargo (HCA)

+ Melissa Harvey and Herb Wolfe (DHS)

+ Dave Wade in his last few days at NSC (the last doctor to leave)...

Colleagues,

Adding some additional folks to the discussion for better crowd-sourcing.

Mike is now Chair of the Medical and Public Health Sector Coordinating Council, so whistle “Hail to the Chief” with any engagement. Bat is at UHC. Melissa is with us at DHS CWMD/ OCMO, formerly with the ASPR HPP.

Reattaching Carter's PPT.

If we had a NHRC, this would be so much easier...

Best,

Duane

Is this accurate? 552 cases and 17 deaths in China alone from 2019-nCoV.

I pulled together a quick historical comparison of SARS, MERS and 2019-nCoV. Will share in a few minutes. This is taking off faster than SARS. It was interesting to compare the timelines. Any lessons from SARS like superspreaders?

+ Bob

+ Mike Wargo

Just spoke with Bob and he'd be willing to have the first Wolverine call this evening.

*How does 5:30 work for everyone, or we could shoot for after dinner, 7:30ish? Let me know.*

Also, I've set up a Max page for 2019-nCoV in our DHS Partners Public Health Engagement Enclave and can sponsor accounts for non-feds to reach the page. I've resurrected the "The Swine Flu Affair",

"Carter's Almanac-Higher Order Effects of Community Mitigation", and the Mann Gulch Fire sections from the H1N1 Flu Page. Could also resurrect the Petrophonic abacus on further request.

Also adding Mike Wargo here. Mike is now chair of the Medical and Public Health Sector SCC and someone you should all know.

Best,  
Duane

CLASSIFICATION: UNCLASSIFIED

Agree, we need to encourage our colleagues to be thinking ahead. Most people are reacting right now.

Matt

---

Am recommending to VA to focus initial preparedness efforts in 5 cities where we likely have the most seeding of cases—NYC, LA, Chicago, Atlanta, San Francisco and Seattle. Getting them prepared for full implementation of TLC and to begin to get their heads around the potential impact to staffing and operational capability. We'll use the VAMCs in those first 5 cities to help us iron out the wrinkles for the rest of the VA system. I suspect that a significant number of infected individuals made it past the CDC entry screening and have likely already infected others. We are already behind the curve and fire is

racing up the hill, but we haven't gone far enough down the valley to see it. Like SARS, I expect hospitals to be amplifiers of disease transmission. Would like to know more about disease transmission in healthcare settings in China. Need to think of strategies to mitigate (maybe HLC). Also thinking back to Mann Gulch and wondering what other strategies could serve as the equivalent of an escape fire. And what useless things are we doing or thinking (preconceptions that are wrong) that will unnecessarily weigh us down (and slow us down) like Pulaskis?

Am thinking about strategies for pre-hospital care, tele-care, tele-triage, early segregation of suspected patients, patient flow, diagnostic algorithms, role of employee health/occupational health in assisting with TLC (especially monitoring of workforce, isolation of sick employees and home quarantine of employees with sick household members), mitigation strategies to deal with impact of school closure (child minding strategies), etc.

And I am anticipating curveballs and unexpected twists and turns, so I don't become flustered but tell myself I knew something like this would happen.

Wuhan started building a 1,000 bed hospital and has started building a second 1,300 bed hospital (both of which are expected to open by Feb 4th). Does the story about Philadelphia sound like Wuhan?

By October 1st every hospital bed in the city of Philadelphia was filled with sick people. The city opened a 500 bed emergency hospital which was filled the same day. 10 more emergency hospitals were eventually opened to handle the sick.

Expert: New coronaviruses are infectious when they do not have any typical symptoms during the incubation period

Published: 2020-01-26 14:35:08 | Source: Xinhua | Author: Huang Xiao Wangbing Yang

Xinhua News Agency, Hangzhou, January 26th, reporters learned from Sheng Jifang, director of the Department of Infectious Diseases of Zhejiang University First Hospital, deputy director of the State Key Laboratory of Infectious Diseases Diagnosis and Treatment, and member of the pneumonia expert group for the diagnosis and treatment of new coronavirus infection in Zhejiang Province. Case studies of pneumonia associated with a new coronavirus infection have been contagious when there were no typical symptoms during the incubation period.

'We encountered a patient who came to Hangzhou from Wuhan to attend a conference. When he arrived in Hangzhou, he did not have any symptoms. He did not have the typical symptoms of cough and fever. But it didn't take long before several colleagues he had contacted were infected Symptoms appeared one after another. But at this time, he still did not have the disease himself. After returning to Wuhan at the end of the meeting, he did not get the disease after another two days. 'Sheng Jifang introduced.

Sheng Jifang said that after different people are infected with the new coronavirus, the course of disease development and clinical symptoms may be very different. It is possible that this person developed symptoms immediately after infection, while another person had no obvious symptoms during the incubation period after infection. Therefore, it is difficult for ordinary citizens to identify.

According to the 'Pneumonitis Prevention and Control Plan for New Coronavirus Infection (Second Edition)' released by the National Health and Health Committee on the evening of the 22nd, the longest incubation period of the disease is about 14 days based on the current knowledge of pneumonitis infected by the new Coronavirus.

'This case tells everyone that even during the incubation period, when there are no typical symptoms, it is already contagious.' Sheng Jifang said. 'If you come back from Wuhan or have contact with the epidemic source, you should do your own quarantine. Do not contact others during the quarantine, and do not spread the virus to family, colleagues and friends. This is very important.'

Sheng Jifang hopes that those who have come out of Wuhan but have not yet reached 14 days should be isolated by themselves, or those who have symptoms should go to the hospital for screening in time for effective treatment.

Subject: RE: [Non-DoD Source] RE: 2019-nCoV (UNCLASSIFIED)

See translation of article below. No data, just a summary of discussion. If true (contagious during incubation period), will need all the layers of TLC to control. That also has implications for all the people who travelled to the US recently from Wuhan. And it means entry and exit screening and border closures will be as ineffective as with panflou. I also need to double check the numbers from yesterday—I had two different sources (one gave an increase of 975 new cases in China on 1/25 and one gave a new total of 1,975 total cases in China as of 1/25). So the new total is either 2,298 or 2,011 depending on which number I use. Will wait to correct.

Caution-<https://www.hk01.com/%E5%8D%B3%E6%99...99%BC%E7%97%85> <Caution-<https://www.hk01.com/%E5%8D%B3%E6%99...99%BC%E7%97%85> >

The outbreak of new coronavirus pneumonia continues to spread. 30 provinces, municipalities and autonomous regions in the Mainland have initiated first-level responses to major public health emergencies.

At 3 pm today (26th), the Information Office of the State Council held a press conference to introduce the prevention and control of new coronavirus pneumonia.

According to Ma Xiaowei, from the perspective of gene sequencing, the new coronavirus is different from SARS and MESR. The new coronavirus is contagious during the incubation period, which is very different from SARS. The outbreak is expected to continue for some time.

He pointed out that from the point of view of transmission characteristics, the patient's early body temperature was not high or normal, there were many mild cases, the infectivity of the virus had increased, and the source of infection walking greatly increased the difficulty of prevention and control. The understanding of new coronaviruses is still very limited, and the source of infection has not yet been found. The mechanism of transmission and the risk of mutation are unclear. In other words, for a new

infectious disease, there will be some new situations in the period when the virus changes, and the degree of harm of the virus to people of different ages also changes.

He said that according to the experience during the SARS period, it took three to four months from the discovery to the outbreak. From the observations of some early mild patients, the incubation period was about 10 days, the shortest incubation period was one day, and the longest was 14 days. The incubation period is contagious, which is very different from SARS.

He said that from the speed of the development of the epidemic, the epidemic will continue for some time, and it is a possible phenomenon that some cases will increase in the future. With the implementation of personnel control measures in Wuhan, corresponding measures on health emergencies at the first level have been proposed throughout the country. The prevention and control efforts will be further strengthened. The prevention and control measures will gradually take effect over a period of time, and the epidemic intensity will fail.

Subject: Re: [Non-DoD Source] RE: 2019-nCoV (UNCLASSIFIED)

Carter,

You mentioned earlier and I had been thinking about the weird phenomenon of losing sight of the epidemic when CDC stopped counting H1N1 cases. We've already lost sight of the epidemic in China although case counts in countries outside may still be helpful for a while.

We have a new cognitive/perceptual challenge to think about though - given that we've never really had sight of the full epidemic, how are we going to assess the steps the Chinese have taken? How will we know if they are working. I suspect one way could be by the changes in velocity in the number of confirmed deaths, which will continue to increase for a while even if transmission stopped today (probably a month's lag in that indicator before a clear trend would emerge).

But could there be any other indicators? Maybe a national daily text message poll about symptoms? Remember NYC DOHMH's clever Doodle poll of the school kids after the school outbreak in NYC? Other ideas?

Best,

Richard

The case counts have increased fivefold in 4 days (from 446 on 1/21 to 2,298 on 1/25). Epidemics don't behave like this. This rapid rise has to be an artifact (would need a very short incubation period and high  $R_0$  for this to be real). That suggests that China is catching up on its case counts. The curve I generated using only the data for the deaths (date of onset of symptoms), is probably the most accurate curve (unaffected by working down this backlog). I was initially thinking that current case counts being reported by the media were about 4 weeks behind the actual count of ill/infected individuals. [Think about the delays from time of initial symptoms to seeking healthcare services (up to a week), to receiving care (imagine the crowded ERs and clinics), to being screened for 2019-nCoV, to getting the test results, to notification, to media reporting. That delay is likely pushing 2 weeks.] But let's say that it is closer to 2-3 weeks behind and assume that is 2-3 doubling periods. That would mean the current number of ill/infected is 4-8 times as high (so somewhere around 12,000-24,000). The average time from symptom onset to death is 2 weeks or about 2 doubling periods. So the true denominator for estimating mortality is about 3,000-6,000. We now have 56 deaths, so CFR is between 1-2%. That is in the 1918 pandemic range. This outbreak looks to be more transmissible than SARS and less transmissible than 2009 H1N1. That is still pretty bad. I know there is a lot of uncertainty in these estimates (including my estimate of 1 week doubling period)—just a back of the envelope estimate.

Updated numbers (up thru 1/25).

Total cases: 2,298

Deaths: 56

Cases in Hubei Province (Wuhan): 1,052

Cases in rest of China: 1,210

Since more cases are now appearing outside of Wuhan, how is airport screening being handled in the US (I know that flights out of Wuhan have been stopped) ? It would seem that we should be screening all flights coming from China. I assume we must be doing that.

Team,

I am tracking each of these emails closely, and they have been extremely helpful. Our team here at DoD is mostly on the therapeutic and vaccine side of things, but all of this information helps. Keep it coming!

I ask myself (what do I wish we had done?) your question on a daily, sometime hourly, basis.

Matt

Two weeks from now, are there things that we wished we would have done to reshape the challenge we will likely face? What steps could we take to shrink the problem (like dealing with seasonal flu and outbreaks of 2019-nCoV? I would also ramp up flu vaccination because although B wasn't a good match, there is a good chance A is. And even though B is waning, I suspect that A is just getting started. So still time to "shape the battlefield." Might also be a good time to check on pneumococcal vaccine coverage among people my age since most of the deaths being reported are in seniors. It would require nuanced communication though since this doesn't affect 2019-nCoV, but it does reduce the burden of the usual resp disease we see this time of year and that can only help. But we have a very narrow window to act.

Subject: RE: 2019-nCoV

I tried to dig thru the blogs and ProMEDmail to pull out all the cases being reported by day as well as pull the data on the 17 deaths (date of illness onset and date of death). I put that data into Excel (the number of cases reported over the past 2 days has been a little confusing) and inserted a couple of graphs and compared the current preliminary data on cumulative numbers of cases with the experience we had with SARS and MERS. I can refine over time, but it is probably good enough to give a sense of speed. All of this brings back memories of the Mann Gulch Fire—not going to be able to outrun it. The concern I have in the response is thinking like SARS (really a non-layered strategy of isolating the ill). They ought to think of the full implementation of TLC (and assume that like flu, we might be missing disease transmission in asymptomatic infected individuals)—at least until we learn more.

Subject: {EXTERNAL} RE: 2019-nCoV

+ Brian "Bat" Masterson (UHC)

+ Mike Wargo (HCA)

+ Melissa Harvey and Herb Wolfe (DHS)

+ Dave Wade in his last few days at NSC (the last doctor to leave)...

Colleagues,

Adding some additional folks to the discussion for better crowd-sourcing.

Mike is now Chair of the Medical and Public Health Sector Coordinating Council, so whistle “Hail to the Chief” with any engagement. Bat is at UHC. Melissa is with us at DHS CWMD/ OCMO, formerly with the ASPR HPP.

Reattaching Carter’s PPT.

If we had a NHRC, this would be so much easier...

Best,

Duane

Subject: Re: 2019-nCoV

I am going to push VA to leverage their daily nursing data for monitoring what is happening in our hospital in near real time in terms of unscheduled leave. Will also reach out to HCA.

Is this accurate? 552 cases and 17 deaths in China alone from 2019-nCoV.

I pulled together a quick historical comparison of SARS, MERS and 2019-nCoV. Will share in a few minutes. This is taking off faster than SARS. It was interesting to compare the timelines. Any lessons from SARS like superspreaders?
