

**Case No. 2020-00717-FOIA-OS**  
**American Oversight v. HHS, Civil No. 20-1169**

**January 8, 2024**

Austin Evers  
Executive Director  
American Oversight  
Sent via email: [foia@americanoversight.org](mailto:foia@americanoversight.org)

Dear Mr. Evers:

This letter is the thirty second interim response to your March 18, 2020, Freedom of Information Act (FOIA) request.

American Oversight requests that HHS produce the following records as soon as practicable, and at least within twenty business days:

All email communications (including email messages, complete email chains, email attachments, calendar invitations) sent by the government officials specified below containing any of the following key terms:

1. Coronavirus
2. Corona
3. Virus
4. Disease
5. Pandemic
6. Epidemic
7. Outbreak
8. containment
9. "public health emergency"
10. "COVID-19"
11. "COVID 19"
12. COVID19
13. SARS
14. "2019-nCoV"
15. POTUS
16. Test
17. Tests
18. Testing
19. EUA
20. Emergency
21. Wuhan
22. Hoax
23. Hubei
24. Princess
25. Cruise
26. Kirkland
27. Seattle
28. "New Rochelle"
29. "BioGen Conference"
30. CPAC
31. AIPAC
32. RNA

33. "Extraction kits"
34. Roche
35. Vaccine
36. Antiviral
37. Antiretroviral
38. Quarantine
39. Distancing
40. Isolation
41. N95
42. Mask
43. Respirator

#### Government Officials

1. Alex Azar, Secretary
2. Brian Harrison, Chief of Staff
3. Eric Hargan, Deputy Secretary
4. Jerome Adams, Surgeon General
5. Robert Kadlec, Assistant Secretary for Preparedness and Response
6. John Brooks, Senior Advisor to the Secretary for Drug Pricing Reform

On February 10, 2021, you narrowed your request per the following:

Eliminate attachments, documents regarding "Red Dawn" and obvious marketing and news bulletins

- a. Limit the date range of the following key terms as stand-alone search terms from January 15, 2020 through February 29, 2020. [[Limit responsive records to those that also include: (Test OR Tests OR Vaccine OR EUA OR "Emergency Use" OR Shortage OR Shortages OR Supplies OR "the WHO" OR States OR Governor OR Governors OR PPE OR Ventilators OR Respirators OR Swabs OR DPA OR "Defense Production Act" OR Trump OR Pence OR Jared OR Kushner OR "White House" OR "the WH")]]]
  - i. Coronavirus
  - ii. Corona
  - iii. "COVID-19"
  - iv. "COVID 19"
  - v. COVID19
  - vi. "2019-nCoV"
  - ~~vii. SARS~~
  - ~~viii. Epidemic~~
  - ~~ix. Pandemic~~
  - ~~x. Outbreak~~
  - ~~xi. "Public Health Emergency"~~

-

- b. After March 1, 2020, for the key terms listed in Column A below (the same search terms as identified above), limit responsive records to those that also include one or more of the terms from Column B:

| Column A                                                                                                                                                                                                                                                                                                                                        | Column B                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>• Coronavirus</li> <li>• Corona</li> <li>• “COVID-19”</li> <li>• “COVID 19”</li> <li>• COVID19</li> <li>• “2019-nCOV”</li> <li>• <del>SARS</del></li> <li>• <del>Epidemic</del></li> <li>• <del>Pandemic</del></li> <li>• <del>Outbreak</del></li> <li>• <del>“Public Health Emergency”</del></li> </ul> | <ul style="list-style-type: none"> <li>• Test</li> <li>• Tests</li> <li>• Vaccine</li> <li>• <del>Antiviral</del></li> <li>• <del>Antiretroviral</del></li> <li>• EUA</li> <li>• “Emergency Use”</li> <li>• Shortage</li> <li>• Shortages</li> <li>• Supplies</li> <li>• <del>“Emergency Use”</del></li> <li>• <del>EUA</del></li> <li>• “the WHO”</li> <li>• <del>“W.H.O.”</del></li> <li>• <del>“World Health Organization”</del></li> <li>• States</li> <li>• Governor</li> <li>• Governors</li> <li>• PPE</li> <li>• Ventilators</li> <li>• Respirators</li> <li>• Swabs</li> <li>• DPA</li> <li>• “Defense Production Act”</li> </ul> |

- c. For the key terms that are in Column A below, limit responsive records to those that also include one or more of the terms from Column B, for the full time period of the search.

| Column A                                                                                                          | Column B                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

~~xiii. Containment~~

h. Cut the following key terms completely: [[no changes]]

- i. Disease
- ii. Virus

The Department processed **401 pages** of potentially responsive records captured in the agency's search for FOIA request 2020-00717-FOIA-OS. After a careful review of these pages, I have determined to release **247 pages** to you in their entirety and I am further releasing in part **54 pages**, with portions redacted, pursuant to Exemptions (b)(4), (b)(5), and (b)(6) of the FOIA (5 U.S.C. §552 (b)(4), (b)(5), and (b)(6)). Furthermore, I have determined that **100 pages** should be sent for consultation to others and returned to this Department for final disposition.

FOIA exemption (b)(4) permits the withholding of trade secrets and commercial or financial information that is privileged or confidential.

FOIA exemption (b)(5) protects inter-agency or intra-agency memoranda or letters which would not be available by law to a party other than an agency in litigation with the agency. This exemption protects documents that would be covered by any privilege an agency could assert in a civil proceeding. These privileges include, among others, the deliberative process privilege, the attorney-client privilege, the attorney work-product privilege and the presidential communications privilege. I have considered the foreseeable harm standard when reviewing these records and applying the (b)(5) exemption.

FOIA exemption (b)(6) permits a federal agency to withhold information and records about individuals in "personnel and medical files and similar files, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy." The definition of "similar files" has historically been broadly interpreted to include a wide variety of files, and the United States Supreme Court has held that Congress intended the term "similar files" to be interpreted broadly, rather than narrowly. I have analyzed these records and find they meet the threshold requirement of this exemption. Additionally, I have reviewed and weighed the public interest in disclosure of this information against the privacy interest in nondisclosure and found that the privacy interest outweighs the public's interest in disclosure.

I have found that it is reasonably foreseeable that disclosure would harm an interest protected by one or more of the exemptions to the FOIA's general rule of disclosure and/or that disclosure is prohibited by law.

We will continue to review the remaining records as efficiently and expeditiously as possible, consistent with our available resources. Should you have questions or concerns regarding the Department's response and/or the processing of your request, any such issues should be communicated to your legal counsel and Department of Justice Attorney representing the Department in this matter.

Sincerely yours,

Alesia Y. Williams-S

One additional note, sir...

You may have seen that Vice President Pence announced that we will be expanding to the 20 ports of entry where CDC quarantine stations are -- planning/logistics are underway **but CDC has not officially announced that yet.**

Thanks. If they want before I'm sure an 830am might work depending on how long.

Just a heads up that the White House is coordinating a bipartisan all House Members briefing on coronavirus for tomorrow (time, location TBD).

HHS will plan send CDC, NIAID and ASPR (same briefers we sent to the Senate briefing on Friday). They will be joined on the panel by DHS and State.

The briefing will be unclassified. No press in the room.

**Subject:** Re: House Members Coronavirus Briefing tomorrow

Thanks. If they want before I'm sure an 830am might work depending on how long.

Just a heads up that the White House is coordinating a bipartisan all House Members briefing on coronavirus for tomorrow (time, location TBD).

HHS will plan send CDC, NIAID and ASPR (same briefers we sent to the Senate briefing on Friday). They will be joined on the panel by DHS and State.

The briefing will be unclassified. No press in the room.

Hi ADM Giroir, VADM Adams, RADM Trent-Adams, RADM Schwartz, RADM Orsega and Team,

We would like to share updates from the NICCL call today:

- (b)(5)
- Attached, please find the latest set of CDC talking points from today.  
(b)(5)
- Updates from CDC's telebriefing today: 110 persons identified within 26 states. Of those PUIs, 5 confirmed positive 32 confirmed negative.
- CDC will provide updates every Monday, Wednesday, and Friday. Here is the link: <https://www.cdc.gov/media/index.html> that also includes the latest numbers.
- (b)(5)
- HHS is hosting a press conference tomorrow. It will be at 11:15 in the HHS Auditorium. The Surgeon General will attend and represent the service since the ASH will be on the Hill. Below, please find the details. It will be live-streamed. The ASPR will also be in attendance.

**Subject:** Updated 2019-nCoV Media Talking Points

Hi ADM Giroir, VADM Adams, RADM Trent-Adams, RADM Schwartz, RADM Orsega and team,

Attached, please find the latest taking points. We will continue to send you the updated taking points as we receive them.

We are also working on getting the Commissioned Corps included.

Thank you,

Kate

Hi Jerome,

VP Pence was Governor when Indiana experiences the first case of MERS in the US in April-May, 2014. ISDH response team issued periodic briefings to Gov team, beginning every two hours after case was confirmed then going down from there. We traveled with Gov Pence to Lake County for large media event when case was released the hospital.

Let me know if you need anything else—sorry this is so late!

Best,  
Pam

## 2. Coronavirus misinformation is spreading fast

**Misinformation about the coronavirus** is testing governments, tech platforms and health officials — not to mention a nervous public — in both the U.S. and China, Axios' Sara Fischer and Ina Fried report.

**Why it matters:** Experts say misinformation makes it harder to get outbreaks under control by undermining people's confidence in legitimate science and public-health messages.

**Big Tech platforms** — including Facebook, Twitter and Google — are scrambling to stop the spread of misinformation about the virus, much of which violates their own content rules.

- Buzzfeed News has documented several examples of misinformation about the virus, including fabricated government warnings and false information about the number of people affected in U.S. cities.

**The big picture:** Health care has long been a target of misinformation, because it plays into existing fears. This is especially true for disease outbreaks, which can spread faster than the news cycle is equipped to handle.

- • Axios wrote last year that Russian efforts to sow discord ahead of the 2020 elections appeared to be focused on spreading inaccurate information about vaccines and 5G wireless technology.
- • The Council on Foreign Relations wrote last year that online disinformation about the Democratic Republic of Congo's Ebola virus outbreak in 2018 and 2019 made the crisis worse, because it undermined confidence in the underlying science being used to stop the spread of the disease.

## Vitals

By Caitlin Owens · Jan 28, 2020

Good morning. I didn't watch "The Bachelor" last night. So sorry, no trashy TV-related intro for you today.

**Today's word count** is 799, or a 3-minute read.

1 big thing: The health care swamp has not been drained

Illustration of a drain plugged up with cash.

Illustration: Aïda Amer/Axios

**The health care industry** has dramatically increased its federal lobbying under President Trump, and it has paid off for those companies, Axios' Bob Herman reports.

**Why it matters:** The influence economy has only gotten bigger over the past three years, despite Trump's calls to "drain the swamp."

- • Lobbying expenses have soared, and in the process, the health care industry has largely gotten what it wanted in Washington.

**Bob analyzed** the federal lobbying reports of 60 health care companies and trade organizations from 2014 through 2019 — the last three years of the Obama administration, and the first three years of Trump's.

- • These 60 entities are among the largest trade groups and companies based on revenue.

**What we found:** The 60 groups in this analysis spent a collective \$309 million on federal lobbying in 2019.

- • Lobbying among these 60 groups soared 10% in 2017. Spending then grew more slowly in 2018, before jumping another 9% this past year.
- • The pharmaceutical industry — and specifically its main trade

group, PhRMA — have spent the most money by far on lobbying under Trump, as both he and Democrats have called out the industry's pricing tactics.

**How it works:** The lobbying apparatus isn't just about fending off proposals that threaten health care's lucrative system.

- • Lobbyists also have helped score new industry victories under Trump, like the tax law that immediately boosted profits for many health care companies, or the year-end package that repealed a handful of ACA taxes.

**Between the lines:** The \$309 million these groups spent lobbying last year is, for them, a bargain.

- • These figures don't reflect campaign contributions — another very important source of leverage, especially for drugmakers.

### 3. New concerns about the pharma supply chain

**The spread of the coronavirus** in China has raised concerns about the pharmaceutical industry's global supply chain, STAT reports.

**Between the lines:** China produces a large portion of the ingredients used to make drugs. As the coronavirus spreads and sends China increasingly into lockdown, it's causing experts to question whether the supply chain is stable.

**By the numbers:** 13% of all facilities that make ingredients for drugs sold in the U.S. are located in China, and 85% of medicines in the U.S. strategic national stockpile use some component that comes from China.

**Yes, but:** Most drugmakers have more than one supplier for the ingredients they need for each medicine.

PRESCRIPTION DRUGS

## Retired teachers deserve access to affordable medicine

Without their PBM, one retired  
teachers' health plan would pay

# \$280 million

in higher drug costs.

Learn how PBMs help deliver savings  
for millions of American retirees.

Businesses, unions and public sector employees and retirees need  
solutions that preserve and build on the tools that pharmacy benefit  
managers (PBMs) are using to help them keep drug costs in check.  
[Learn more.](#)

## 4. SCOTUS allows "public charge" rules, for now

**The Trump administration can begin enforcing** new rules that  
penalize immigrants who rely on Medicaid, in addition to other federal  
programs, Axios' Sam Baker reports.

**Driving the news:** The Supreme Court said yesterday that the

administration's "public charge" rules can take effect while lawsuits challenging those rules work their way through the system.

- The "public charge" rules make it more difficult for immigrants to get green cards, change their immigration status or become citizens if they're poor and likely to rely on public programs, including Medicaid, food stamps and public housing.

**Why it matters:** Medicaid is a big program. These rules will likely be a real obstacle to a significant number of immigrant families, especially if they're ultimately upheld on the merits.

- And people who avoid this crackdown by avoiding public programs — those who forego health insurance or nutrition assistance — could also face health risks.

## 5. "Pharma Bro" Martin Shkreli is sued, again

**Federal officials and New York state** have sued Martin Shkreli for allegedly violating antitrust law when he raised the price of Daraprim by 4,000%, [Bloomberg reports](#). Shkreli is already in prison on a separate charge.

**Why it matters:** Shkreli and Vyer Pharmaceuticals, formerly Turing Pharmaceuticals, became the face of out-of-control drug pricing. The lawsuit suggests that such behavior could have been illegal.

**Details:** The massive Daraprim price hike came in 2015, after Shkreli acquired the drug.

- The Federal Trade Commission and New York say that he also blocked generic competitors through contractual restrictions.

**The other side:** "Mr. Shkreli looks forward to defeating this baseless and unprecedented attempt by the FTC to sue an individual for monopolizing a market," Benjamin Brafman, Shkreli's lawyer, said in a statement.

Re: What You Need to Know About the Coronavirus Outbreak: A Civil Liberties Perspective

Dear Secretary and Congressional Leaders:

The world is watching anxiously to see what happens with the coronavirus that originated in Wuhan, China. As scientists and public health officials in the United States learn more about the virus, and as we all see how bad the outbreak turns out to be, it is important that public policymaking remain firmly centered around science.

Unfortunately, our history of reactions to infectious disease outbreaks suggests that if this outbreak becomes severe, we're likely to see strong pressure to the contrary. In particular, we can expect three things:

We can expect some to panic.

Unfortunately, there tends to be disproportionate hysteria and exaggerated fear around infectious diseases — especially when they are new. In 2009, the appearance of the H1N1 (aka "swine flu") virus prompted some to call for measures like closing the U.S.-Mexico border, an enormously disruptive measure that, among other things, would have led to billions of dollars in lost economic activity. The H1N1 turned out to be a normal strain of the seasonal flu virus. In late 2014, many panicked over the Ebola outbreak ravaging West Africa, including a number of U.S. governors who imposed politically-motivated quarantines on health care workers and others returning from West Africa. Those quarantines were completely unjustified by science. (In 2015 the ACLU, the Yale School of Public Health, and Yale Law School released a major report analyzing the response to Ebola.)

Every disease is different and merits different public health responses. A person infected with Ebola, for example, is not contagious until after fever and other symptoms begin. That appears not to be the case with the coronavirus, and scientists' recommendations will no doubt differ as a result. But no matter how bad any disease outbreak may get, responding in ways that are not supported by science is never the right thing to do.

We can expect pressure for counterproductive responses.

Most panicky responses to disease outbreaks, according to epidemiologists and other experts, only make things worse. In particular, law enforcement-type approaches to stopping the spread of communicable disease such as quarantine and forced treatment are, as three preeminent public health experts put it, "generally acknowledged by experts to be either completely ineffective or only potentially marginally effective" in slowing the spread of disease.

Public panic will predictably spark calls for "tough," even draconian measures that treat the problem like a law enforcement or national security issue rather than a public health matter. We at the ACLU have always acknowledged that civil liberties must sometimes give way when it comes to fighting a communicable disease — but only in ways that are scientifically justified. And the public health community has learned over time that treating sick people like potential enemies only spurs them to "go underground" and avoid the authorities, which exacerbates the spread of disease. The evidence is clear that travel bans and quarantines are not the solution. Also counterproductive are the targeting and stigmatization of vulnerable populations, another historically frequent response to frightening epidemics.

We can expect that Trump will lead the panic, not calm it.

In previous disease scares, Donald Trump has been among the most panicky and scientifically ungrounded public voices in the United States. During the West African Ebola outbreak in 2014-15, he opposed allowing American doctors infected with the disease to be airlifted back to the United States for lifesaving treatment (tweeting, "KEEP THEM OUT OF HERE"). He also called for blocking all air traffic from West Africa.

As one expert advised in 2015, "Officials should avoid unrealistic reassurances or taking unnecessarily stringent measures so as to appear decisive." Even in the earliest stages of the present outbreak, President Trump managed to violate the first half of that guidance, rashly and unrealistically telling the nation of the Wuhan virus, "We have it totally under control." If things get worse, history suggests he'll violate the second half as well and react with theatrical, counterproductive "toughness."

The job of political leaders is to solicit and follow the guidance of public health experts in crafting a calm and rational response to an outbreak, to help the public understand the scientific facts of this disease, and to present an honest and mature appraisal of risk and the limits of human power to curb nature. Unfortunately, Trump and his administration have a terrible record when it comes to listening to scientists.

We don't know how bad this outbreak will be. If this one is not severe, another one probably will be in the future. And the more dangerous an actual outbreak, the more important it is that our authorities respond with cool heads and based on science, and not intrude any more than strictly necessary on people's civil liberties.

Yours sincerely,  
Robert E. Rutkowski

Good Morning,

If your schedule permits, please make your way to the small auditorium (First Floor of the Humphrey Building) – for a press conference hosted by Secretary Azar on the Coronavirus.

*This event will start promptly at 11:15 AM.*

**Trent Morse**

*White House Liaison*

### FOR IMMEDIATE RELEASE

January 28, 2020

### Secretary Azar Remarks at Coronavirus Press Briefing

*As Prepared for Delivery*

Good morning, everyone, and thank you for joining us here at HHS today.

Today's press conference aims to do two things: provide an overview of what we know about the current novel coronavirus outbreak and highlight some of what HHS and the entire Trump Administration are doing to prepare for and respond to this threat.

Today, I'm joined by Dr. Robert Redfield, Director of the CDC; Dr. Nancy Messonnier, Director of CDC's National Center for Immunization and Respiratory Diseases; and Dr. Tony Fauci, Director of NIH's National Institute of Allergy and Infectious Diseases.

Today's briefing replaces CDC's daily telebriefing, as we thought it important to provide the media with a face-to-face opportunity to ask questions of our public health experts.

First, let me provide a brief update on the situation: As of today, the CDC has reported 5

cases of the novel coronavirus infection here in the United States. China has now reported more than 4,500 cases.

Americans should know that this is a potentially very serious public health threat, but, at this point, Americans should not worry for their own safety.

This is a very fast moving, constantly changing situation.

Dr. Redfield and Fauci will walk through some more details of the current situation and response.

Part of the risk we face right now is that we don't yet know everything we need to know about this virus.

But, I want to emphasize, that does not prevent us from preparing and responding.

We have the experience of responding to two earlier coronaviruses that emerged to cause serious illness in people, SARS and MERS, and we have experience responding to bird flu outbreaks in Asia.

One challenge is that, with an emerging virus like this, our current assessments are based on an uncertain denominator.

Our denominator is the 4,500-plus cases that have been identified in China, as well as more than 60 cases in other countries.

But these early cases are naturally the most severe cases, because patients presented themselves to healthcare providers.

How does this skew our understanding of the virus?

First, we are still determining the real speed of spread, which is represented by a number known as  $R_0$ , the average number of additional people infected by a given person with the disease.

One paper found  $R_0$  estimates for this virus ranging from 1.5 to 3.5, as compared with, say, a number of 12 to 18 for measles.

We are also still learning about the severity of the virus.

Currently, China is reporting more than 100 deaths from the more than 4,500 cases.

That is a high rate, but, again, the cases that have been identified skew severe, including patients who are older or have other illnesses. The mortality rate may drop over time as we identify a broader set of cases.

We are working to understand the incubation period.

This number varies for coronaviruses, with the extremes being anywhere from 2 to 14

days.

That number could be higher or lower for this virus.

Finally, we are working to determine whether there is asymptomatic transmission. Normally with a coronavirus, we see more viral shedding and more transmission when a person is most symptomatic.

China has reported there may be evidence of asymptomatic transmission.

All of these questions must and will be answered in order to provide a proper risk assessment.

But they are not stopping us from focusing on applying tried and true public health methods in the meantime.

The playbook for responding to an infectious disease outbreak is relatively simple: You identify cases, isolate the people, diagnose them, and treat them.

Then you track down all of the contacts of the infected person, and you do the same with those people, and the same with contacts of contacts if necessary.

That approach is how public health departments and healthcare providers, working with the CDC, are handling the cases here in the United States, and I am grateful for the hard work they're doing.

This kind of work, coupled with studies and analysis, is also how we answer the questions I described earlier.

On January 6, we offered to send a CDC team to China that could assist with these public health efforts.

I reiterated that offer when I spoke to China's Minister of Health on Monday, and it was reiterated again via the World Health Organization today.

We are urging China: More cooperation and transparency are the most important steps you can take toward a more effective response.

Beyond that, all options for dealing with infectious disease spread have to be on the table, including travel restrictions.

But diseases are not terribly good at respecting borders, so we would have to assess carefully whether the evidence recommends any steps beyond the thoroughly tested methods I just described.

I know this playbook well in part because I was in this same building in the 2000s, serving as General Counsel and then Deputy Secretary, alongside some of these same fine scientists and public health officials, when we responded to the SARS outbreak and a

number of other infectious threats.

That has given me a deep appreciation for the institutions that oversee our response. The United States has the world's finest public health system.

We've been monitoring this virus and preparing a response since back in December, but it's more than that. Preparing for these kinds of outbreaks is part of daily life at HHS and for America's public health professionals.

Preparedness is a day job around here.

We are constantly making investments, training personnel at all levels, carrying out simulations and exercises, and sharing information.

This commitment goes straight to the top: The President and I have been speaking regularly about this outbreak, and I have been speaking with the senior officials at HHS and the White House multiple times each day since the outbreak began to represent an international threat.

The President is highly engaged in this response, and closely monitoring the work we're doing to keep Americans safe.

I'll give you a brief sense of the work being done across HHS, beyond the CDC activities I mentioned.

Our emergency response arm, the Assistant Secretary for Preparedness and Response or ASPR, is assessing the level of preparedness we have with the Strategic National Stockpile, which includes pharmaceuticals and other necessary medical supplies.

HHS's Administration for Children and Families is working with the State Department to assist any Americans who will need assistance being repatriated.

NIH, ASPR, and FDA are pursuing research into and assessing the possibilities for vaccines, diagnostics, and therapeutics, which is necessarily a longer term project.

In addition to the work being done in government, there are basic precautions all Americans can take.

Healthcare providers should be on the lookout for patients with travel history to China, especially Hubei Province, and relevant symptoms.

Late on Monday, CDC and the State Department issued a Level 3 travel advisory for all of China. This higher level of alert means that Americans should reconsider or postpone travel to any part of China.

The State Department has also maintained a Level 4 warning for Hubei, meaning Americans should not travel there.

In closing, I will remind the American people one more time: We are working hard to keep you safe, we are constantly preparing for the possibility that the situation could worsen, and your health and safety has been and will be our top priority.

To discuss more about the current state of the epidemiology and the CDC's work, I will now hand things over to Dr. Redfield. Dr. Redfield?

### FOR IMMEDIATE RELEASE

January 28, 2020

### Secretary Azar Remarks at Coronavirus Press Briefing

*As Prepared for Delivery*

Good morning, everyone, and thank you for joining us here at HHS today.

Today's press conference aims to do two things: provide an overview of what we know about the current novel coronavirus outbreak and highlight some of what HHS and the entire Trump Administration are doing to prepare for and respond to this threat.

Today, I'm joined by Dr. Robert Redfield, Director of the CDC; Dr. Nancy Messonnier, Director of CDC's National Center for Immunization and Respiratory Diseases; and Dr. Tony Fauci, Director of NIH's National Institute of Allergy and Infectious Diseases.

Today's briefing replaces CDC's daily telebriefing, as we thought it important to provide the media with a face-to-face opportunity to ask questions of our public health experts.

First, let me provide a brief update on the situation: As of today, the CDC has reported 5

cases of the novel coronavirus infection here in the United States. China has now reported more than 4,500 cases.

Americans should know that this is a potentially very serious public health threat, but, at this point, Americans should not worry for their own safety.

This is a very fast moving, constantly changing situation.

Dr. Redfield and Fauci will walk through some more details of the current situation and response.

Part of the risk we face right now is that we don't yet know everything we need to know about this virus.

But, I want to emphasize, that does not prevent us from preparing and responding.

We have the experience of responding to two earlier coronaviruses that emerged to cause serious illness in people, SARS and MERS, and we have experience responding to bird flu outbreaks in Asia.

One challenge is that, with an emerging virus like this, our current assessments are based on an uncertain denominator.

Our denominator is the 4,500-plus cases that have been identified in China, as well as more than 60 cases in other countries.

But these early cases are naturally the most severe cases, because patients presented themselves to healthcare providers.

How does this skew our understanding of the virus?

First, we are still determining the real speed of spread, which is represented by a number known as  $R_0$ , the average number of additional people infected by a given person with the disease.

One paper found  $R_0$  estimates for this virus ranging from 1.5 to 3.5, as compared with, say, a number of 12 to 18 for measles.

We are also still learning about the severity of the virus.

Currently, China is reporting more than 100 deaths from the more than 4,500 cases.

That is a high rate, but, again, the cases that have been identified skew severe, including patients who are older or have other illnesses. The mortality rate may drop over time as we identify a broader set of cases.

We are working to understand the incubation period.

This number varies for coronaviruses, with the extremes being anywhere from 2 to 14

days.

That number could be higher or lower for this virus.

Finally, we are working to determine whether there is asymptomatic transmission. Normally with a coronavirus, we see more viral shedding and more transmission when a person is most symptomatic.

China has reported there may be evidence of asymptomatic transmission.

All of these questions must and will be answered in order to provide a proper risk assessment.

But they are not stopping us from focusing on applying tried and true public health methods in the meantime.

The playbook for responding to an infectious disease outbreak is relatively simple: You identify cases, isolate the people, diagnose them, and treat them.

Then you track down all of the contacts of the infected person, and you do the same with those people, and the same with contacts of contacts if necessary.

That approach is how public health departments and healthcare providers, working with the CDC, are handling the cases here in the United States, and I am grateful for the hard work they're doing.

This kind of work, coupled with studies and analysis, is also how we answer the questions I described earlier.

On January 6, we offered to send a CDC team to China that could assist with these public health efforts.

I reiterated that offer when I spoke to China's Minister of Health on Monday, and it was reiterated again via the World Health Organization today.

We are urging China: More cooperation and transparency are the most important steps you can take toward a more effective response.

Beyond that, all options for dealing with infectious disease spread have to be on the table, including travel restrictions.

But diseases are not terribly good at respecting borders, so we would have to assess carefully whether the evidence recommends any steps beyond the thoroughly tested methods I just described.

I know this playbook well in part because I was in this same building in the 2000s, serving as General Counsel and then Deputy Secretary, alongside some of these same fine scientists and public health officials, when we responded to the SARS outbreak and a

number of other infectious threats.

That has given me a deep appreciation for the institutions that oversee our response. The United States has the world's finest public health system.

We've been monitoring this virus and preparing a response since back in December, but it's more than that. Preparing for these kinds of outbreaks is part of daily life at HHS and for America's public health professionals.

Preparedness is a day job around here.

We are constantly making investments, training personnel at all levels, carrying out simulations and exercises, and sharing information.

This commitment goes straight to the top: The President and I have been speaking regularly about this outbreak, and I have been speaking with the senior officials at HHS and the White House multiple times each day since the outbreak began to represent an international threat.

The President is highly engaged in this response, and closely monitoring the work we're doing to keep Americans safe.

I'll give you a brief sense of the work being done across HHS, beyond the CDC activities I mentioned.

Our emergency response arm, the Assistant Secretary for Preparedness and Response or ASPR, is assessing the level of preparedness we have with the Strategic National Stockpile, which includes pharmaceuticals and other necessary medical supplies.

HHS's Administration for Children and Families is working with the State Department to assist any Americans who will need assistance being repatriated.

NIH, ASPR, and FDA are pursuing research into and assessing the possibilities for vaccines, diagnostics, and therapeutics, which is necessarily a longer term project.

In addition to the work being done in government, there are basic precautions all Americans can take.

Healthcare providers should be on the lookout for patients with travel history to China, especially Hubei Province, and relevant symptoms.

Late on Monday, CDC and the State Department issued a Level 3 travel advisory for all of China. This higher level of alert means that Americans should reconsider or postpone travel to any part of China.

The State Department has also maintained a Level 4 warning for Hubei, meaning Americans should not travel there.

In closing, I will remind the American people one more time: We are working hard to keep you safe, we are constantly preparing for the possibility that the situation could worsen, and your health and safety has been and will be our top priority.

To discuss more about the current state of the epidemiology and the CDC's work, I will now hand things over to Dr. Redfield. Dr. Redfield?

### FOR IMMEDIATE RELEASE

January 28, 2020

### Secretary Azar Remarks at Coronavirus Press Briefing

*As Prepared for Delivery*

Good morning, everyone, and thank you for joining us here at HHS today.

Today's press conference aims to do two things: provide an overview of what we know about the current novel coronavirus outbreak and highlight some of what HHS and the entire Trump Administration are doing to prepare for and respond to this threat.

Today, I'm joined by Dr. Robert Redfield, Director of the CDC; Dr. Nancy Messonnier, Director of CDC's National Center for Immunization and Respiratory Diseases; and Dr. Tony Fauci, Director of NIH's National Institute of Allergy and Infectious Diseases.

Today's briefing replaces CDC's daily telebriefing, as we thought it important to provide the media with a face-to-face opportunity to ask questions of our public health experts.

First, let me provide a brief update on the situation: As of today, the CDC has reported 5

cases of the novel coronavirus infection here in the United States. China has now reported more than 4,500 cases.

Americans should know that this is a potentially very serious public health threat, but, at this point, Americans should not worry for their own safety.

This is a very fast moving, constantly changing situation.

Dr. Redfield and Fauci will walk through some more details of the current situation and response.

Part of the risk we face right now is that we don't yet know everything we need to know about this virus.

But, I want to emphasize, that does not prevent us from preparing and responding.

We have the experience of responding to two earlier coronaviruses that emerged to cause serious illness in people, SARS and MERS, and we have experience responding to bird flu outbreaks in Asia.

One challenge is that, with an emerging virus like this, our current assessments are based on an uncertain denominator.

Our denominator is the 4,500-plus cases that have been identified in China, as well as more than 60 cases in other countries.

But these early cases are naturally the most severe cases, because patients presented themselves to healthcare providers.

How does this skew our understanding of the virus?

First, we are still determining the real speed of spread, which is represented by a number known as  $R_0$ , the average number of additional people infected by a given person with the disease.

One paper found  $R_0$  estimates for this virus ranging from 1.5 to 3.5, as compared with, say, a number of 12 to 18 for measles.

We are also still learning about the severity of the virus.

Currently, China is reporting more than 100 deaths from the more than 4,500 cases.

That is a high rate, but, again, the cases that have been identified skew severe, including patients who are older or have other illnesses. The mortality rate may drop over time as we identify a broader set of cases.

We are working to understand the incubation period.

This number varies for coronaviruses, with the extremes being anywhere from 2 to 14

days.

That number could be higher or lower for this virus.

Finally, we are working to determine whether there is asymptomatic transmission. Normally with a coronavirus, we see more viral shedding and more transmission when a person is most symptomatic.

China has reported there may be evidence of asymptomatic transmission.

All of these questions must and will be answered in order to provide a proper risk assessment.

But they are not stopping us from focusing on applying tried and true public health methods in the meantime.

The playbook for responding to an infectious disease outbreak is relatively simple: You identify cases, isolate the people, diagnose them, and treat them.

Then you track down all of the contacts of the infected person, and you do the same with those people, and the same with contacts of contacts if necessary.

That approach is how public health departments and healthcare providers, working with the CDC, are handling the cases here in the United States, and I am grateful for the hard work they're doing.

This kind of work, coupled with studies and analysis, is also how we answer the questions I described earlier.

On January 6, we offered to send a CDC team to China that could assist with these public health efforts.

I reiterated that offer when I spoke to China's Minister of Health on Monday, and it was reiterated again via the World Health Organization today.

We are urging China: More cooperation and transparency are the most important steps you can take toward a more effective response.

Beyond that, all options for dealing with infectious disease spread have to be on the table, including travel restrictions.

But diseases are not terribly good at respecting borders, so we would have to assess carefully whether the evidence recommends any steps beyond the thoroughly tested methods I just described.

I know this playbook well in part because I was in this same building in the 2000s, serving as General Counsel and then Deputy Secretary, alongside some of these same fine scientists and public health officials, when we responded to the SARS outbreak and a

number of other infectious threats.

**FOR IMMEDIATE RELEASE**  
January 28, 2020

### Secretary Azar Remarks at Coronavirus Press Briefing

*As Prepared for Delivery*

Good morning, everyone, and thank you for joining us here at HHS today.

Today's press conference aims to do two things: provide an overview of what we know about the current novel coronavirus outbreak and highlight some of what HHS and the entire Trump Administration are doing to prepare for and respond to this threat.

Today, I'm joined by Dr. Robert Redfield, Director of the CDC; Dr. Nancy Messonnier, Director of CDC's National Center for Immunization and Respiratory Diseases; and Dr. Tony Fauci, Director of NIH's National Institute of Allergy and Infectious Diseases.

Today's briefing replaces CDC's daily telebriefing, as we thought it important to provide the media with a face-to-face opportunity to ask questions of our public health experts.

First, let me provide a brief update on the situation: As of today, the CDC has reported 5

cases of the novel coronavirus infection here in the United States. China has now reported more than 4,500 cases.

Americans should know that this is a potentially very serious public health threat, but, at this point, Americans should not worry for their own safety.

This is a very fast moving, constantly changing situation.

Dr. Redfield and Fauci will walk through some more details of the current situation and response.

Part of the risk we face right now is that we don't yet know everything we need to know about this virus.

But, I want to emphasize, that does not prevent us from preparing and responding.

We have the experience of responding to two earlier coronaviruses that emerged to cause serious illness in people, SARS and MERS, and we have experience responding to bird flu outbreaks in Asia.

One challenge is that, with an emerging virus like this, our current assessments are based on an uncertain denominator.

Our denominator is the 4,500-plus cases that have been identified in China, as well as more than 60 cases in other countries.

But these early cases are naturally the most severe cases, because patients presented themselves to healthcare providers.

How does this skew our understanding of the virus?

First, we are still determining the real speed of spread, which is represented by a number known as  $R_0$ , the average number of additional people infected by a given person with the disease.

One paper found  $R_0$  estimates for this virus ranging from 1.5 to 3.5, as compared with, say, a number of 12 to 18 for measles.

We are also still learning about the severity of the virus.

Currently, China is reporting more than 100 deaths from the more than 4,500 cases.

That is a high rate, but, again, the cases that have been identified skew severe, including patients who are older or have other illnesses. The mortality rate may drop over time as we identify a broader set of cases.

We are working to understand the incubation period.

This number varies for coronaviruses, with the extremes being anywhere from 2 to 14

days.

That number could be higher or lower for this virus.

Finally, we are working to determine whether there is asymptomatic transmission. Normally with a coronavirus, we see more viral shedding and more transmission when a person is most symptomatic.

China has reported there may be evidence of asymptomatic transmission.

All of these questions must and will be answered in order to provide a proper risk assessment.

But they are not stopping us from focusing on applying tried and true public health methods in the meantime.

The playbook for responding to an infectious disease outbreak is relatively simple: You identify cases, isolate the people, diagnose them, and treat them.

Then you track down all of the contacts of the infected person, and you do the same with those people, and the same with contacts of contacts if necessary.

That approach is how public health departments and healthcare providers, working with the CDC, are handling the cases here in the United States, and I am grateful for the hard work they're doing.

This kind of work, coupled with studies and analysis, is also how we answer the questions I described earlier.

On January 6, we offered to send a CDC team to China that could assist with these public health efforts.

I reiterated that offer when I spoke to China's Minister of Health on Monday, and it was reiterated again via the World Health Organization today.

We are urging China: More cooperation and transparency are the most important steps you can take toward a more effective response.

Beyond that, all options for dealing with infectious disease spread have to be on the table, including travel restrictions.

But diseases are not terribly good at respecting borders, so we would have to assess carefully whether the evidence recommends any steps beyond the thoroughly tested methods I just described.

I know this playbook well in part because I was in this same building in the 2000s, serving as General Counsel and then Deputy Secretary, alongside some of these same fine scientists and public health officials, when we responded to the SARS outbreak and a

number of other infectious threats.

That has given me a deep appreciation for the institutions that oversee our response. The United States has the world's finest public health system.

We've been monitoring this virus and preparing a response since back in December, but it's more than that. Preparing for these kinds of outbreaks is part of daily life at HHS and for America's public health professionals.

Preparedness is a day job around here.

We are constantly making investments, training personnel at all levels, carrying out simulations and exercises, and sharing information.

This commitment goes straight to the top: The President and I have been speaking regularly about this outbreak, and I have been speaking with the senior officials at HHS and the White House multiple times each day since the outbreak began to represent an international threat.

The President is highly engaged in this response, and closely monitoring the work we're doing to keep Americans safe.

I'll give you a brief sense of the work being done across HHS, beyond the CDC activities I mentioned.

Our emergency response arm, the Assistant Secretary for Preparedness and Response or ASPR, is assessing the level of preparedness we have with the Strategic National Stockpile, which includes pharmaceuticals and other necessary medical supplies.

HHS's Administration for Children and Families is working with the State Department to assist any Americans who will need assistance being repatriated.

NIH, ASPR, and FDA are pursuing research into and assessing the possibilities for vaccines, diagnostics, and therapeutics, which is necessarily a longer term project.

In addition to the work being done in government, there are basic precautions all Americans can take.

Healthcare providers should be on the lookout for patients with travel history to China, especially Hubei Province, and relevant symptoms.

Late on Monday, CDC and the State Department issued a Level 3 travel advisory for all of China. This higher level of alert means that Americans should reconsider or postpone travel to any part of China.

The State Department has also maintained a Level 4 warning for Hubei, meaning Americans should not travel there.

In closing, I will remind the American people one more time: We are working hard to keep you safe, we are constantly preparing for the possibility that the situation could worsen, and your health and safety has been and will be our top priority.

To discuss more about the current state of the epidemiology and the CDC's work, I will now hand things over to Dr. Redfield. Dr. Redfield?

### **WHO, China leaders discuss next steps in battle against Coronavirus outbreak**

<https://www.who.int/news-room/detail/28-01-2020-who-china-leaders-discuss-next-steps-in-battle-against-coronavirus-outbreak>

**28 January 2020, Beijing** – The Director-General of the World Health Organization (WHO), Dr Tedros Adhanom Ghebreyesus, today met President Xi Jinping of the People's Republic of China in Beijing. They shared the latest information on the novel coronavirus 2019 (2019-nCoV) outbreak and reiterated their commitment to bring it under control.

Dr Tedros was joined by WHO Regional Director Dr Takeshi Kasai and Executive Director of the WHO Health Emergencies Programme Dr Mike Ryan, and also met State Councilor and Minister of Foreign Affairs Wang Yi and Minister of Health Ma Xiaowei.

The National Health Commission presented China's strong public health capacities and resources to respond and manage respiratory disease outbreaks. The discussions focused on continued collaboration on containment measures in Wuhan, public health measures in other cities and provinces, conducting further studies on the severity and transmissibility of the virus, continuing to share data, and for China to share biological material with WHO. These measures will advance scientific understanding of the virus and contribute to the development of medical countermeasures such as vaccines and treatments.

The two sides agreed that WHO will send international experts to visit China as soon as possible to work with Chinese counterparts on increasing understanding of the outbreak to guide global response efforts.

"Stopping the spread of this virus both in China and globally is WHO's highest priority," said Dr Tedros. "We appreciate the seriousness with which China is taking this outbreak, especially the commitment from top leadership, and the transparency they have demonstrated, including sharing data and genetic sequence of the virus. WHO is working closely with the government on measures

to understand the virus and limit transmission. WHO will keep working side-by-side with China and all other countries to protect health and keep people safe.”

The WHO mission comes as the number of people confirmed with the virus rose to over 4500 globally on 28 January, the greatest number being in China.

The WHO delegation highly appreciated the actions China has implemented in response to the outbreak, its speed in identifying the virus and openness to sharing information with WHO and other countries.

Much remains to be understood about 2019-nCoV. The source of the outbreak and the extent to which it has spread in China are not yet known. While the current understanding of the disease remains limited, most cases reported to date have been milder, with around 20% of those infected experiencing severe illness. Both WHO and China noted that the number of cases being reported, including those outside China, is deeply concerning. Better understanding of the transmissibility and severity of the virus is urgently required to guide other countries on appropriate response measures.

WHO is continually monitoring developments and the Director-General can reconvene the International Health Regulations (2005) Emergency Committee on very short notice as needed. Committee members are on stand-by and are informed regularly of developments.

### Secretary Azar Remarks at Coronavirus Press Briefing

*As Prepared for Delivery*

Good morning, everyone, and thank you for joining us here at HHS today.

Today's press conference aims to do two things: provide an overview of what we know about the current novel coronavirus outbreak and highlight some of what HHS and the entire Trump Administration are doing to prepare for and respond to this threat.

Today, I'm joined by Dr. Robert Redfield, Director of the CDC; Dr. Nancy Messonnier, Director of CDC's National Center for Immunization and Respiratory Diseases; and Dr. Tony Fauci, Director of NIH's National Institute of Allergy and Infectious Diseases.

Today's briefing replaces CDC's daily telebriefing, as we thought it important to provide the media with a face-to-face opportunity to ask questions of our public health experts.

First, let me provide a brief update on the situation: As of today, the CDC has reported 5 cases of the novel coronavirus infection here in the United States. China has now reported more than 4,500 cases.

Americans should know that this is a potentially very serious public health threat, but, at this point, Americans should not worry for their own safety.

This is a very fast moving, constantly changing situation.

Dr. Redfield and Fauci will walk through some more details of the current situation and response.

Part of the risk we face right now is that we don't yet know everything we need to know about this virus.

But, I want to emphasize, that does not prevent us from preparing and responding.

We have the experience of responding to two earlier coronaviruses that emerged to cause serious illness in people, SARS and MERS, and we have experience responding to bird flu outbreaks in Asia.

One challenge is that, with an emerging virus like this, our current assessments are based on an uncertain denominator.

Our denominator is the 4,500-plus cases that have been identified in China, as well as more than 60 cases in other countries.

But these early cases are naturally the most severe cases, because patients presented themselves to healthcare providers.

How does this skew our understanding of the virus?

First, we are still determining the real speed of spread, which is represented by a number known as  $R_0$ , the average number of additional people infected by a given person with the disease.

One paper found  $R_0$  estimates for this virus ranging from 1.5 to 3.5, as compared with,

say, a number of 12 to 18 for measles.

We are also still learning about the severity of the virus.

Currently, China is reporting more than 100 deaths from the more than 4,500 cases.

That is a high rate, but, again, the cases that have been identified skew severe, including patients who are older or have other illnesses. The mortality rate may drop over time as we identify a broader set of cases.

We are working to understand the incubation period.

This number varies for coronaviruses, with the extremes being anywhere from 2 to 14 days.

That number could be higher or lower for this virus.

Finally, we are working to determine whether there is asymptomatic transmission. Normally with a coronavirus, we see more viral shedding and more transmission when a person is most symptomatic.

China has reported there may be evidence of asymptomatic transmission.

All of these questions must and will be answered in order to provide a proper risk assessment.

But they are not stopping us from focusing on applying tried and true public health methods in the meantime.

The playbook for responding to an infectious disease outbreak is relatively simple: You identify cases, isolate the people, diagnose them, and treat them.

Then you track down all of the contacts of the infected person, and you do the same with those people, and the same with contacts of contacts if necessary.

That approach is how public health departments and healthcare providers, working with the CDC, are handling the cases here in the United States, and I am grateful for the hard work they're doing.

This kind of work, coupled with studies and analysis, is also how we answer the questions I described earlier.

On January 6, we offered to send a CDC team to China that could assist with these public health efforts.

I reiterated that offer when I spoke to China's Minister of Health on Monday, and it was reiterated again via the World Health Organization today.

We are urging China: More cooperation and transparency are the most important steps you

can take toward a more effective response.

Beyond that, all options for dealing with infectious disease spread have to be on the table, including travel restrictions.

But diseases are not terribly good at respecting borders, so we would have to assess carefully whether the evidence recommends any steps beyond the thoroughly tested methods I just described.

I know this playbook well in part because I was in this same building in the 2000s, serving as General Counsel and then Deputy Secretary, alongside some of these same fine scientists and public health officials, when we responded to the SARS outbreak and a number of other infectious threats.

That has given me a deep appreciation for the institutions that oversee our response. The United States has the world's finest public health system.

We've been monitoring this virus and preparing a response since back in December, but it's more than that. Preparing for these kinds of outbreaks is part of daily life at HHS and for America's public health professionals.

Preparedness is a day job around here.

We are constantly making investments, training personnel at all levels, carrying out simulations and exercises, and sharing information.

This commitment goes straight to the top: The President and I have been speaking regularly about this outbreak, and I have been speaking with the senior officials at HHS and the White House multiple times each day since the outbreak began to represent an international threat.

The President is highly engaged in this response, and closely monitoring the work we're doing to keep Americans safe.

I'll give you a brief sense of the work being done across HHS, beyond the CDC activities I mentioned.

Our emergency response arm, the Assistant Secretary for Preparedness and Response or ASPR, is assessing the level of preparedness we have with the Strategic National Stockpile, which includes pharmaceuticals and other necessary medical supplies.

HHS's Administration for Children and Families is working with the State Department to assist any Americans who will need assistance being repatriated.

NIH, ASPR, and FDA are pursuing research into and assessing the possibilities for vaccines, diagnostics, and therapeutics, which is necessarily a longer term project.

In addition to the work being done in government, there are basic precautions all

Americans can take.

Healthcare providers should be on the lookout for patients with travel history to China, especially Hubei Province, and relevant symptoms.

Late on Monday, CDC and the State Department issued a Level 3 travel advisory for all of China. This higher level of alert means that Americans should reconsider or postpone travel to any part of China.

The State Department has also maintained a Level 4 warning for Hubei, meaning Americans should not travel there.

In closing, I will remind the American people one more time: We are working hard to keep you safe, we are constantly preparing for the possibility that the situation could worsen, and your health and safety has been and will be our top priority.

To discuss more about the current state of the epidemiology and the CDC's work, I will now hand things over to Dr. Redfield. Dr. Redfield?

## Azar stops short of declaring public health emergency for Wuhan coronavirus

By Brianna Ehley

01/28/2020 12:15 PM EST

The Trump administration today stopped short of declaring a public health emergency for the Wuhan coronavirus but extended screening for the virus to 20 U.S. airports.

HHS Secretary Alex Azar said at a briefing the administration has offered assistance from the CDC to Chinese authorities either directly or in conjunction with the World Health Organization but has not yet received the go-ahead, though representatives are still talking. The CDC already has a limited presence in China but U.S. public health officials want more epidemiological expertise on the ground, both to assist the Chinese and learn more about the virus.

Regarding an emergency declaration, which could unlock more resources for a response, Azar said experts are monitoring when such a designation may be needed. "I won't hesitate at all to invoke any steps we need to take" when appropriate, Azar said.

The outbreak has killed at least 106 people in China, with more than 4,500 confirmed cases. There are only five confirmed cases in the United States.

The U.S. public should not "worry for their safety" and the threat in the country remains low, Azar said.

On Monday CDC reported more than 100 potential cases of coronavirus in the United States and officials expect to confirm more cases.

### **Azar stops short of declaring public health emergency for Wuhan coronavirus**

By Brianna Ehley

01/28/2020 12:15 PM EST

The Trump administration today stopped short of declaring a public health emergency for the Wuhan coronavirus but extended screening for the virus to 20 U.S. airports.

HHS Secretary Alex Azar said at a briefing the administration has offered assistance from the CDC to Chinese authorities either directly or in conjunction with the World Health Organization but has not yet received the go-ahead, though representatives are still talking. The CDC already has a limited presence in China but U.S. public health officials want more epidemiological expertise on the ground, both to assist the Chinese and learn more about the virus.

Regarding an emergency declaration, which could unlock more resources for a response, Azar said experts are monitoring when such a designation may be needed. "I won't hesitate at all to invoke any steps we need to take" when appropriate, Azar said.

The outbreak has killed at least 106 people in China, with more than 4,500 confirmed cases. There are only five confirmed cases in the United States.

The U.S. public should not "worry for their safety" and the threat in the country remains low,

Azar said.

On Monday CDC reported more than 100 potential cases of coronavirus in the United States and officials expect to confirm more cases.

**Subject:** RE: Please

Non-UNMC email

The challenge associated with implementing community mitigation measures (and for them to be effective), is doing so in time. It is like implementing evacuation for a hurricane—need to do it while the sun is shining and winds are light. I'm not sure that leaders understand that these measures aren't nearly as effective if you implement them in reaction (like closing schools when you get above a given absenteeism threshold like some schools do during flu season). I think that is the single greatest challenge—pulling the trigger on what will be perceived as pretty draconian actions when it doesn't seem that bad (the equivalent of sunny day with little wind, but a cat 4 hurricane, hundreds of miles away over the ocean barreling your way).

Will do.

Looking for POC for Jim LeDuke (sp?) and there was another person you mentioned Mark ??? expert on Coronavirus.

Call will be Wednesday, 19:30 hours unless other time is preferred, invite to follow.

Notes from TX DSHS call today below. John Hellerstedt is TX PHO. Dave Gruber (we met him when he visited WH HSC in 2008) is his deputy. They are echoing the CDC line:

1. Moving to daily calls.
2. Monitoring CDC recommendations.
3. Still no known cases in TX. 8 under investigation.
4. Not announcing PUI's, only confirmed cases.
5. Downplaying blog hyperbole.
6. Need to be timely and accurate.
7. Response must remain rationale, measured.
8. Reassurance to public is important.
9. DSHS Infectious Dz MO Jennifer Shufert
  - a. Still collecting data. Not much new information, and liable to change
  - b. Not seeing much variation across viruses implying likely single source with H2H
  - c. Reproductive number R0 1.5-3 is likely.
  - d. Not clear of viral shedding prior to symptom onset. CDC not seen the data or independent evidence
  - e. Believed that virus survives only several hours on surfaces.
  - f. Incubation period 2-14 days, clinical illness being updated
  - g. Risk of exposure to virus believed to be low for nCoV. Other exposure risk remains (flu, etc)
  - h. TestKit available for distribution in about 2 weeks via LRN
  - i. CDC Turnaround time for results is at least 24/ 48 hours. Only testing Lower Resp, oro/ nasal swabs or nasal aspirates.
  - j. EMS Transport, Hospital isolation, updated contact info for LHDs in development
  - k. DSHS hotline script, 211 call tree scripts under development
  - l. Higher education board guidance, FAQs for students

- m. Will include in the state 2019-nCoV website
- 10. Web page established and being updated. Available in Spanish.
- 11. This is a germ. We know how to handle germs.

Questions:

- Any information from borders?
- Working with Office of Border Health, getting information from Mexico, 0 cases reported in Mexico.
- PPE requirements for EMS?
- Gloves, mask, eye pro, and gown as appropriate

Hey y'all,

Please see the attached letter to Secretary Azar from Senator Cotton. Let us know if you have any questions or concerns.

Thanks!  
Vu

@OANN: Johnson & Johnson to create coronavirus vaccine <https://www.oann.com/johnson-johnson-to-create-coronavirus-vaccine/> #OANN

Story:

OAN Newsroom  
 UPDATED 10:56 AM PT — Tuesday, January 28, 2020

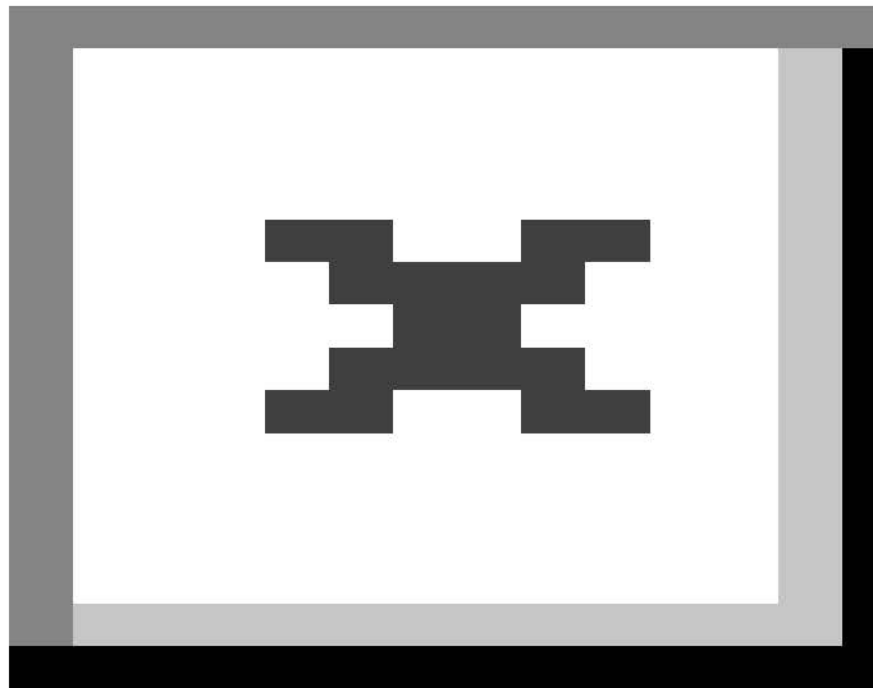

Pharmaceutical company Johnson & Johnson is working on a vaccine to counter the deadly coronavirus. In a recent interview, the chief scientist for Johnson & Johnson, Dr. Paul Stoffels, said he's confident they can create a vaccine within months. However, it could take up to a year before it becomes available to the public.

This comes after the Centers for Disease Control (CDC) reported more than 100 people across 26 states are currently being screened for the fast spreading illness.

Health and Human Services Secretary Alex Azar spoke out on the current state of the epidemic Tuesday.

"The CDC has reported five cases of the novel coronavirus infection here in the United States...China has now reported more than 4,500 cases," he

stated. “American’s should know that this is a potentially very serious public health threat, but at this point American’s should not worry for their own safety.”

Health and Human Services Secretary Alex Azar speaks at a news conference about the federal government’s response to a virus outbreak originating in China, Tuesday, Jan. 28, 2020, in Washington. (AP Photo/Patrick Semansky)

According to the CDC, five cases of the coronavirus have been reported in the U.S. and all of those who were affected had previously traveled to Wuhan, China. The capital city of Central China's Hubei province has been deemed the epicenter of the outbreak.

In the meantime, the U.S. State Department has issued a Level 4 advisory warning and are urging American's to hold off on traveling to China.

**Subject:** RE: Please

Non-UNMC email

The challenge associated with implementing community mitigation measures (and for them to be effective), is doing so in time. It is like implementing evacuation for a hurricane—need to do it while the sun is shining and winds are light. I'm not sure that leaders understand that these measures aren't nearly as effective if you implement them in reaction (like closing schools when you get above a given absenteeism threshold like some schools do during flu season). I think that is the single greatest challenge—pulling the trigger on what will be perceived as pretty draconian actions when it doesn't seem that bad (the equivalent of sunny day with little wind, but a cat 4 hurricane, hundreds of miles away over the ocean barreling your way).

Will do.

Looking for POC for Jim LeDuke (sp?) and there was another person you mentioned Mark ??? expert on Coronavirus.

Call will be Wednesday, 19:30 hours unless other time is preferred, invite to follow.

Notes from TX DSHS call today below. John Hellerstedt is TX PHO. Dave Gruber (we met him when he visited WH HSC in 2008) is his deputy. They are echoing the CDC line:

1. Moving to daily calls.
2. Monitoring CDC recommendations.
3. Still no known cases in TX. 8 under investigation.
4. Not announcing PUI's, only confirmed cases.
5. Downplaying blog hyperbole.
6. Need to be timely and accurate.

7. Response must remain rationale, measured.
8. Reassurance to public is important.
9. DSHS Infectious Dz MO Jennifer Shufert
  - a. Still collecting data. Not much new information, and liable to change
  - b. Not seeing much variation across viruses implying likely single source with H2H
  - c. Reproductive number R0 1.5-3 is likely.
  - d. Not clear of viral shedding prior to symptom onset. CDC not seen the data or independent evidence
  - e. Believed that virus survives only several hours on surfaces.
  - f. Incubation period 2-14 days, clinical illness being updated
  - g. Risk of exposure to virus believed to be low for nCoV. Other exposure risk remains (flu, etc)
  - h. TestKit available for distribution in about 2 weeks via LRN
  - i. CDC Turnaround time for results is at least 24/ 48 hours. Only testing Lower Resp, oro/ nasal swabs or nasal aspirates.
  - j. EMS Transport, Hospital isolation, updated contact info for LHDs in development
  - k. DSHS hotline script, 211 call tree scripts under development
  - l. Higher education board guidance, FAQs for students
  - m. Will include in the state 2019-nCoV website
10. Web page established and being updated. Available in Spanish.
11. This is a germ. We know how to handle germs.

Questions:

- Any information from borders?
- Working with Office of Border Health, getting information from Mexico, 0 cases reported in Mexico.
- PPE requirements for EMS?
- Gloves, mask, eye pro, and gown as appropriate

IN THIS ISSUE OF JAMA

## **Audio Highlights**

**Audio Summary: Diastolic Hypertension and CVD, Type 1 Diabetes Screening, Review of Medical Malpractice, and more**

---

## **ORIGINAL INVESTIGATION**

### **Association of Isolated Diastolic Hypertension as Defined by the 2017 ACC/AHA Blood Pressure Guideline With Incident Cardiovascular Outcomes**

John W. McEvoy, MBBCh, MEd, MHS; Natalie Daya, MPH; Faisal Rahman, MD; et al.

### **Yield of a Public Health Screening of Children for Islet Autoantibodies in Bavaria, Germany**

Anette-Gabriele Ziegler, MD; Kerstin Kick, PhD; Ezio Bonifacio, PhD; et al.

| **Earn CME credit**

---

## **PRELIMINARY COMMUNICATION**

### **Effect of Treating Parents Colonized With *Staphylococcus***

**aureus on Transmission to Neonates in the Intensive Care Unit: A Randomized Clinical Trial**

Aaron M. Milstone, MD, MHS; Annie Voskertchian, MPH; Danielle W. Koontz, MAA; et al.

**Editorial: Decreasing *Staphylococcus aureus* in the Neonatal Intensive Care Unit by Decolonizing Parents;**

Philip Zachariah, MD, MSc; Lisa Saiman, MD,

MPH

---

RESEARCH LETTER

**Intravenous Ondansetron in Pregnancy and Risk of Congenital Malformations**

Krista F. Huybrechts, MS, PhD; Sonia Hernandez-Diaz, MD, DrPH; Loreen Straub, MD, MS; et al.

**First-Trimester Pregnancy Exposure to Modafinil and Risk of Congenital Malformations**

Per Damkier, MD, PhD; Anne Broe, MD, PhD

[Latest Episode: Coronavirus Infections—More Than Just the Common Cold](#)

---

VIEWPOINT

Scientific Discovery and the Future of Medicine

## **Manipulating the Human**

### **Microbiome to Manage Disease**

Catriona P. Harkins, MBChB, PhD; Heidi H. Kong, MD, MHSc; Julia A. Segre, PhD

**Audio Interview: The Potential of Manipulating the Human Microbiome to Manage Disease**

## **Challenges to the Reproducibility of Machine Learning Models in Health Care**

Andrew L. Beam, PhD; Arjun K. Manrai, PhD; Marzyeh Ghassemi, PhD

## **DNA-Based Population Screening: Potential Suitability and Important Knowledge Gaps**

Michael F. Murray, MD; James P. Evans, MD, PhD; Muin J. Khoury, MD, PhD

## **Strategic Need for Large Prospective Studies in Different Populations**

Zhengming Chen, DPhil; Jonathan Emberson, MD; Rory Collins, MBBS

---

A PIECE OF MY MIND

## **A Call for Help—Reflections on Burnout, CABG Surgery, and the Super Bowl**

Jayson S. Greenberg, MD

---

EDITORIAL

**Decreasing *Staphylococcus aureus* in the Neonatal Intensive Care Unit by Decolonizing Parents**

Philip Zachariah, MD, MSc; Lisa Saiman, MD, MPH

**Malpractice Liability and Quality of Care: Clear Answer, Remaining Questions**

William M. Sage, MD, JD; Kristen Underhill, JD, DPhil

**JAMA Health Forum—A New Channel of Information**

Howard Bauchner, MD; Thomas J. Easley

---

REVIEW

**Malpractice Liability and Health Care Quality: A Review**

Michelle M. Mello, JD, PhD; Michael D. Frakes, JD, PhD; Erik Blumenkranz, JD, MBA; et al.

**Earn CME credit**

**Editorial: Malpractice Liability and Quality of Care: Clear Answer, Remaining Questions;**

William M. Sage, MD, JD;

Kristen Underhill, JD, DPhil

---

## JAMA INSIGHTS

Women's Health

**Osteoporosis Screening in  
Younger Postmenopausal Women**

Carolyn J. Crandall, MD, MS; Kristine E. Ensrud, MD, MPH

---

## JAMA CLINICAL CHALLENGE

**Fever, Diarrhea, and Weight Loss in a Man With Inflammatory Polyarthritis**

Arjun R. Sondhi, MD; Kevin D. Platt, MD; Amit Gupta, MD

**Earn CME credit**

---

## MEDICAL NEWS & PERSPECTIVES

### **In Alzheimer Research, Glucose Metabolism Moves to Center Stage**

Bridget M. Kuehn, MSJ

---

## NEWS FROM THE CENTERS FOR DISEASE CONTROL AND PREVENTION

### **Prediabetes in Youth**

Bridget Kuehn, MSJ

### **Studies Support HPV Safety**

Bridget Kuehn, MSJ

**Subject:** RE: Please

Non-UNMC email

The challenge associated with implementing community mitigation measures (and for them to be effective), is doing so in time. It is like implementing evacuation for a hurricane—need to do it while the sun is shining and winds are light. I'm not sure that leaders understand that these measures aren't nearly as effective if you implement them in reaction (like closing schools when you get above a given absenteeism threshold like some schools do during flu season). I think that is the single greatest challenge—pulling the trigger on what will be perceived as pretty draconian actions when it doesn't seem that bad (the equivalent of sunny day with little wind, but a cat 4 hurricane, hundreds of miles away over the ocean barreling your way).

**Subject:** RE: Please

Will do.

Looking for POC for Jim LeDuke (sp?) and there was another person you mentioned Mark ??? expert on Coronavirus.

Call will be Wednesday, 19:30 hours unless other time is preferred, invite to follow.

Notes from TX DSHS call today below. John Hellerstedt is TX PHO. Dave Gruber (we met him when he visited WH HSC in 2008) is his deputy. They are echoing the CDC line:

1. Moving to daily calls.
2. Monitoring CDC recommendations.
3. Still no known cases in TX. 8 under investigation.
4. Not announcing PUI's, only confirmed cases.
5. Downplaying blog hyperbole.

6. Need to be timely and accurate.
7. Response must remain rationale, measured.
8. Reassurance to public is important.
9. DSHS Infectious Dz MO Jennifer Shufert
  - a. Still collecting data. Not much new information, and liable to change
  - b. Not seeing much variation across viruses implying likely single source with H2H
  - c. Reproductive number R0 1.5-3 is likely.
  - d. Not clear of viral shedding prior to symptom onset. CDC not seen the data or independent evidence
  - e. Believed that virus survives only several hours on surfaces.
  - f. Incubation period 2-14 days, clinical illness being updated
  - g. Risk of exposure to virus believed to be low for nCoV. Other exposure risk remains (flu, etc)
  - h. TestKit available for distribution in about 2 weeks via LRN
  - i. CDC Turnaround time for results is at least 24/ 48 hours. Only testing Lower Resp, oro/ nasal swabs or nasal aspirates.
  - j. EMS Transport, Hospital isolation, updated contact info for LHDs in development
  - k. DSHS hotline script, 211 call tree scripts under development
  - l. Higher education board guidance, FAQs for students
  - m. Will include in the state 2019-nCoV website
10. Web page established and being updated. Available in Spanish.
11. This is a germ. We know how to handle germs.

Questions:

  - Any information from borders?
  - Working with Office of Border Health, getting information from Mexico, 0 cases reported in Mexico.
  - PPE requirements for EMS?
  - Gloves, mask, eye pro, and gown as appropriate

**Subject:** RE: Please

Non-UNMC email

The challenge associated with implementing community mitigation measures (and for them to be effective), is doing so in time. It is like implementing evacuation for a hurricane—need to do it while the sun is shining and winds are light. I'm not sure that leaders understand that these measures aren't nearly as effective if you implement them in reaction (like closing schools when you get above a given absenteeism threshold like some schools do during flu season). I think that is the single greatest challenge—pulling the trigger on what will be perceived as pretty draconian actions when it doesn't seem that bad (the equivalent of sunny day with little wind, but a cat 4 hurricane, hundreds of miles away over the ocean barreling your way).

**Subject:** Time on Brian's calendar in next week or two to discuss Health Resources and Priorities Allocation System (HRPAS)—

Hi Sam,

We will need some time in next week or two to discuss HRPAS/DPA with Brian. I realize times are hectic. This has applicability if the 2019-nCoV takes off domestically and we may need to take actions regarding supply chain. I attached a brief ppt that explains it some more that we can have on hand at the time of said meeting. Thanks, Bryan

**Subject:** Time on Brian's calendar in next week or two to discuss Health Resources and Priorities Allocation System (HRPAS)—

Hi Sam,

We will need some time in next week or two to discuss HRPAS/DPA with Brian. I realize times are hectic. This has applicability if the 2019-nCoV takes off domestically and we may need to take actions regarding supply chain. I attached a brief ppt that explains it some more that we can have on hand at the time of said meeting. Thanks, Bryan

## What the best public health minds know — and don't know — about Wuhan coronavirus

By Joanne Kenen

01/28/2020 05:29 PM EST

Four top U.S. health officials — all veterans of previous public health threats and new disease outbreaks — gave a joint news conference Tuesday to discuss the Wuhan coronavirus that has killed over 100 and sickened thousands. The virus is mostly concentrated in one Chinese province but has been detected in more than a dozen other countries, including the U.S.

The four officials — HHS Secretary Alex Azar; CDC Director Dr. Robert Redfield; Dr. Nancy Messonnier, director of CDC's National Center for Immunization and Respiratory Diseases; and Anthony Fauci, director of the National Institute for Allergy and Infectious Diseases — stressed that the situation is fluid but outlined what is known and still unknown about the virus. Here's a recap of their main points.

### How big is the threat to the United States?

Azar acknowledged the virus is a "potentially very serious public health threat," but he added that Americans "should not worry for their own safety right now." There are five confirmed cases in the U.S. and just over 100 under investigation. There have been no fatalities in the U.S. But Azar noted that viruses know no borders and this is "a very fast-moving, constantly changing situation."

### How soon could there be a cure, diagnostic tests, or a vaccine?

The CDC has already created a diagnostic test, although public health officials are working on faster tests that can be widely disseminated to hospitals so patients can be rapidly diagnosed. Fauci said a vaccine could start human trials in as little as three months, but that's just the first step in a longer journey to establishing that the vaccine is safe and effective. He noted that it's possible the outbreak could end before a vaccine is available, but "we are proceeding as if we will have to deploy a vaccine."

New drugs will take longer to develop, although there are already studies underway based on drugs that were tested earlier for SARS and MERS, which are also coronaviruses. Other compounds are being screened to see if they can target this virus. (There are drugs that can help

treat pneumonia symptoms and support seriously ill patients, but that's not the same thing as a cure for this virus.) Azar said the HHS branch responsible for emergency preparedness and response is assessing whether the Strategic National Stockpile, the largest national repository of emergency treatments, has adequate medical supplies.

In the meantime, authorities are using basic public health measures: expanding checks to travelers coming from China to 20 U.S. airports, monitoring the people who have become sick and tracing their contacts.

### **Can the Wuhan virus be spread from one person to another — and if so, how contagious is it? And what's the incubation period?**

China has reported some human-to-human transmission, although that has not yet been seen in the U.S. Scientists don't really know how contagious it is yet. Azar noted one research paper estimated an infected patient can pass on the virus to anywhere between 1.5 to 3.5 people. Measles, for instances, is much more contagious, with one person spreading that disease to up to 18 other people.

Other coronaviruses have an incubation periods that can range from two to 14 days, but it's too soon to know if the Wuhan virus has a longer or shorter range.

### **Can people spread the virus if they have been exposed but show no symptoms?**

China has said there "may be evidence" of asymptomatic transmission but U.S. scientists want to get a better look at that data. That's one big reason Redfield said the U.S. wants to get CDC experts on the ground in China.

"We're watching closely," for such transmission, Messonnier said. Fauci also emphasized that even if there is some transmission among people not experiencing symptoms, everything scientists know about coronaviruses strongly suggests that it would not be what propels an epidemic.

"The driver of outbreaks is always a symptomatic person," Fauci said "An epidemic is not driven by asymptomatic carriers."

### **How lethal is it?**

Another unanswered question. China has reported 4,500 cases and slightly more than 100 deaths. That's a high mortality rate, but we don't know if the reported cases are an accurate representation of the outbreak. It's possible there are many more people with far milder cases — so mild that they haven't even gone to seek treatment. In that case, the fatality rate would be much lower.

Azar said our perception of the virus can be skewed by these earliest cases, since we're looking at the sickest subset of people who have been exposed. "One challenge is that, with an emerging virus like this, our current assessments are based on an uncertain denominator," he said.

Early reports also indicate that patients who are most at risk of severe disease or death are older

or have other health conditions.

Same story, but new headline

## **Azar: Coronavirus 'a fast-moving, constantly changing situation'**

The Trump administration today stopped short of declaring a public health emergency for the Wuhan coronavirus but extended screening for the virus to 20 U.S. airports.

HHS Secretary Alex Azar said at a briefing the administration has offered assistance from the CDC to Chinese authorities either directly or in conjunction with the World Health Organization but has not yet received the go-ahead, though representatives are still talking. The CDC already has a limited presence in China but U.S. public health officials want more epidemiological expertise on the ground, both to assist the Chinese and learn more about the virus.

As Azar spoke, the WHO announced it struck an agreement with China to bring in international experts "as soon as possible," but didn't elaborate on details such as whether American officials will be involved.

Regarding an emergency declaration, which could unlock more resources for a response, Azar said experts are monitoring when such a designation may be needed. "I won't hesitate at all to invoke any steps we need to take" when appropriate, Azar said.

The outbreak has killed at least 106 people in China, with more than 4,500 confirmed cases. There are only five confirmed cases in the United States.

"Americans should know that this is a potentially very serious public health threat, but, at this point, Americans should not worry for their own safety," Azar said. "This is a very fast-moving, constantly changing situation."

On Monday CDC reported more than 100 potential cases of coronavirus in the United States and officials expect to confirm more cases.

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

Good Afternoon All,

Attached is the 28Jan20 2019 Novel Coronavirus Social Media Report.

BLUF: The number of confirmed cases and deaths are dramatically increased since yesterday. There are no new confirmed U.S. cases. A confirmed German case shows potential human-to-human transmission outside of China among two unrelated persons. 3M ramps up mask production. Repatriation efforts are underway for U.S. citizens in Wuhan, and open media volume regarding repatriation is relatively low.

Epidemiology:

- Please refer to the CDC SITREP for official case counts by location.
- Traditional news media reports death toll of 106 worldwide, with 4,585 cases confirmed (4,515 in China). This represents a dramatic increase from yesterday's

reporting of <2,800 cases in China. There are no new confirmed US cases since yesterday's open media report.

- □ Since yesterday's open media report, first cases reported in Germany, Cambodia, and Sri Lanka. See list of [affected countries](#).

#### Public Health Response:

- □ Johnson and Johnson is working on a potential vaccine.
- □ University of Hong Kong developed vaccine ready for animal testing
- □ Tweets noted NIH working with Moderna to develop vaccine.

#### Supply Chain:

- □ 3M ramps up production of masks to meet demand, and 3M's facility in China is fully operational despite outbreak.
- □ Despite low risk of infection in the US, tweets include desire to use or buy masks in the homeland ([example](#)).

#### Evacuation/Repatriation

- □ Overall, open media volume is relatively low regarding current repatriation efforts.
- □ ABC News reports that charter flight travelers from Wuhan, China to Ontario, CA through Anchorage, AL will be screened for symptoms at the [unstated] airport prior to departure and will be subject to additional screening, observation, and monitoring requirements by the CDC. Passengers who become sick in the air may be separated in Alaska and flown onward. independently. All persons will be quarantined in Ontario, CA for at least 3 days, with those showing illness and needing additional testing held up to 14 days.

Please see the attached Open Media Report for additional information. This message was distributed to ASPR SLT, SOC Section Chiefs, SOC Leadership, and appropriate SMEs.

#### **Sent to White House (Night Note):**

- **CDC released updated lung injury cases and deaths**  
Today, CDC issued a [press release](#) announcing the updated number of hospitalized EVALI cases and EVALI deaths. As of [Jan. 21, 2020](#), 2,711 cases of hospitalized EVALI or deaths were reported by all 50 states, the District of Columbia, and two U.S. territories (Puerto Rico and U.S. Virgin Islands). Sixty deaths have been confirmed in 27 states and the District of Columbia.

INTERNAL, CONFIDENTIAL, MARKET SENSITIVE, NOT FOR PUBLIC DISTRIBUTION

- **FDA to modernize, provide greater access to information about antiretrovirals eligible for purchase under President's Emergency Plan for AIDS Relief**  
Tomorrow, FDA is expected to unveil an updated interactive database that will offer a wealth of critical information about drugs available for procurement under the President's Emergency Plan for AIDS Relief or PEPFAR program. For the first time, providers and procurers will be able to easily access FDA-reviewed product labeling.
- **Federal District Court vacates portion of HIPAA Privacy Rule right of access**  
A D.C. federal district court in *Ciox Health, LLC v. Azar* vacated a portion of the HIPAA Privacy Rule's individual right of access where it went beyond the HITECH Act's authorization concerning an individual's right to have his/her electronic health record transmitted in an electronic format to a third party, which OCR had done based on authority in the HIPAA statute. Additionally, the court held that the HIPAA right of access fee limitations apply only to an individual's request for access to their own records, and does not apply to an individual's request to transmit records to a third party.
- **State of California Medicaid Deferral**  
Tomorrow, CMS will issue fourteen deferrals to California for their Medicaid program totaling \$111,351,929. The majority of the deferrals relate to insufficient documentation to support Medicaid claims and were identified as part of CMS's routine oversight review of California's Medicaid expenditures.

- **California Medicaid Managed Care Organization Tax Waiver Decision**

Tomorrow, CMS will notify the state of California of its decision to deny the state's request for a waiver that would allow the state to modify the structure of its existing Managed Care Organization (MCO) tax to essentially exempt MCOs that do not participate in Medicaid from paying the tax.

**Other Newsworthy Items:**

#### **Sent to White House (Night Note):**

- **CDC released updated lung injury cases and deaths**

Today, CDC issued a [press release](#) announcing the updated number of hospitalized EVALI cases and EVALI deaths. As of [Jan. 21, 2020](#), 2,711 cases of hospitalized EVALI or deaths were reported by all 50 states, the District of Columbia, and two U.S. territories (Puerto Rico and U.S. Virgin Islands). Sixty deaths have been confirmed in 27 states and the District of Columbia.

INTERNAL, CONFIDENTIAL, MARKET SENSITIVE, NOT FOR PUBLIC DISTRIBUTION

- **FDA to modernize, provide greater access to information about antiretrovirals eligible for purchase under President's Emergency Plan for AIDS Relief**

Tomorrow, FDA is expected to unveil an updated interactive database that will offer a wealth of critical information about drugs available for procurement under the President's Emergency Plan for AIDS Relief or PEPFAR program. For the first time, providers and procurers will be able to easily access FDA-reviewed product labeling.

- **Federal District Court vacates portion of HIPAA Privacy Rule right of access**

A D.C. federal district court in *Ciox Health, LLC v. Azar* vacated a portion of the HIPAA Privacy Rule's individual right of access where it went beyond the HITECH Act's authorization concerning an individual's right to have his/her electronic health record transmitted in an electronic format to a third party, which OCR had done based on authority in the HIPAA statute. Additionally, the court held that the HIPAA right of access fee limitations apply only to an individual's request for access to their own records, and does not apply to an individual's request to transmit records to a third party.

- **State of California Medicaid Deferral**

Tomorrow, CMS will issue fourteen deferrals to California for their Medicaid program totaling \$111,351,929. The majority of the deferrals relate to insufficient documentation to support Medicaid claims and were identified as part of CMS's routine oversight review of California's Medicaid expenditures.

- **California Medicaid Managed Care Organization Tax Waiver Decision**

Tomorrow, CMS will notify the state of California of its decision to deny the state's request for a waiver that would allow the state to modify the structure of its existing Managed Care Organization (MCO) tax to essentially exempt MCOs that do not participate in Medicaid from paying the tax.

## U.S. officials praise Chinese transparency on virus — up to a point

By Sarah Karlin-Smith

01/28/2020 07:24 PM EST

The U.S. government is praising China for its cooperation as the world tries to get a grip on the Wuhan coronavirus. But political and public health leaders point to gaps in information that are critical to tackling the public health crisis.

China is under intense scrutiny following its poor track record in alerting the international community to other potential global health pandemics. During the SARS outbreak in the early 2000s, China was criticized for failing to transparently share information in a timely manner.

HHS Secretary Alex Azar praised China Tuesday for sharing the genetic sequencing of the Wuhan virus, enabling CDC to quickly invent a diagnostic test for the disease and NIH to rapidly advance a potential vaccine. But he noted that China hadn't accepted his first two offers to send CDC experts to China to help — although he was optimistic Tuesday that American experts could be part of the international team the World Health Organization and China have agreed to assemble.

But China quickly putting crucial scientific information in the public domain has “been a game changer” said Peter Hotez, dean of the National School of Tropical Medicine and a professor at Baylor College of Medicine. Hotez has worked on vaccines for SARS and MERS, as well as on international vaccines initiatives in the Obama administration.

But there are some gaps in information provided by the Chinese that have started to emerge in recent days about a disease that has killed over 100 and sickened thousands in just a handful of weeks. The virus is concentrated in one Chinese province but has been detected in more than a dozen other countries — including the United States, where five cases have been confirmed.

CDC Director Robert Redfield and National Institute of Allergy and Infectious Diseases Director Anthony Fauci raised concerns at a Tuesday press conference that China has not provided the data to back up its claims that the virus may be transmissible from person to person before a patient exhibits any symptoms — in the so called asymptomatic stage.

“We would really like to see the data, because if there is asymptomatic transmission, it impacts

certain policies, screening,” Fauci said.

In addition, top U.S. health officials are pushing to get more access to samples of the virus, which would ensure the robustness of any treatments or vaccines developed for the disease, Azar said.

Experts are also watching to see if China shares any information on any vaccine or therapeutic candidates it is working on.

U.S. officials are engaging in a delicate balancing act, experts say, out of caution that any public criticism of China could lead the country to share less information, not more.

“Many government officials and other experts or policy folks actually have been pretty cautious about trying to impugn China for lack of transparency. In fact, we have been all, including me, very positive about the difference between today and what happened during SARS,” said Gerald Parker, associate dean for Global One Health at Texas A&M and former top career official in HHS’s Office of the Assistant Secretary for Preparedness and Response — a key player in responding to any global disease threat.

“I believe the U.S. government is praising them because they want to encourage China to provide access,” said Chris Meekins, who formerly served as the Trump administration’s No. 2 political official in that same HHS preparedness office known as ASPR.

But Meekins said the U.S. government can’t guarantee certain things, such as whether China is giving them the most recent samples of the virus, and simply has to trust China. And while there’s no doubt there’s been an improvement from the days of SARS, he said, “The bar was so incredibly low and the behavior was so incredibly bad” that it’s not hard for the Chinese to “surpass” that past precedent.

Public health officials however also acknowledge that it’s difficult for any government, no matter how well-meaning, to paint a perfectly accurate picture in the early days of an emerging disease outbreak. No matter how good the science, there are just a lot of unknowns.

“To some degree in the early days of any kind of outbreak like this, there is a fog of war where we just have incomplete information, and it takes time for the information to really unfold,” Parker said.

He is optimistic that information transparency will further improve if U.S. scientists can get on the ground saying American-Chinese relationships in the sector have improved over the years, leading to a new level of trust.

“Regardless of what’s happening geopolitically, scientists have a common language” that enables them to communicate and have trusted relationships irrespective of the broader political climate, Parker said.

Some of these Improvements have come, thanks to the Chinese’s government’s exponential investment in science that has fostered this international interaction.

“There is now very much a new tradition and nice tradition of scientific collaboration” between Chinese and American scientists, Hotez said.

Dear Secretary,

Here is the latest Case Report from NEJM on the Wuhan virus □. Case is a Vietnamese traveler to Wuhan whose son was actively ill with the virus in the same sleeping quarters. So we know now that active illness spreads the disease. The question remains: does close contact during incubation period spread the disease?

Case report does not state what antivirals were used to treat the disease. Dr. Fauci can find out. CXR show reverse batwing infiltrates characteristic of viral infection.

NEJM says any new data submitted to them will be sent to WHO directly and published online ASAP. Please ask Dr. Tedros at WHO to immediately share NEJM data with Dr. Fauci.

Moderna and Inovio and Gilead all pitching in for vaccine soon. Please reward them and have others join the cause as a result.

I thank Dr. Morrissey at NEJM for his openness with data sent to the Journal.

RGL MD

Supplemental item:

- NIH Extramural Grant Recipient Charged for Failing to disclose foreign influence.**  
 A Harvard researcher who has received NIH funding has been charged by DOJ for failing to disclose ties with China. NIH is aware and engaged in the ongoing investigation. Similar to the Moffett Center foreign influence discovery, this is an example of active surveillance of research grant recipients

---

#### **Sent to White House (Night Note):**

- CDC released updated lung injury cases and deaths**  
 Today, CDC issued a [press release](#) announcing the updated number of hospitalized EVALI cases and EVALI deaths. As of [Jan. 21, 2020](#), 2,711 cases of hospitalized EVALI or deaths were reported by all 50 states, the District of Columbia, and two U.S. territories (Puerto Rico and U.S. Virgin Islands). Sixty deaths have been confirmed in 27 states and the District of Columbia.
- FDA to modernize, provide greater access to information about antiretrovirals eligible for purchase under President's Emergency Plan for AIDS Relief**  
 Tomorrow, FDA is expected to unveil an updated interactive database that will offer a wealth of critical information about drugs available for procurement under the President's Emergency Plan for AIDS Relief or PEPFAR program. For the first time, providers and procurers will be able to easily access FDA-reviewed product labeling.
- Federal District Court vacates portion of HIPAA Privacy Rule right of access**  
 A D.C. federal district court in *Ciox Health, LLC v. Azar* vacated a portion of the HIPAA Privacy Rule's individual right of access where it went beyond the HITECH Act's authorization concerning an individual's right to have his/her electronic health record transmitted in an electronic format to a third party, which OCR had done based on authority in the HIPAA statute. Additionally, the court

held that the HIPAA right of access fee limitations apply only to an individual's request for access to their own records, and does not apply to an individual's request to transmit records to a third party.

- **State of California Medicaid Deferral**

Tomorrow, CMS will issue fourteen deferrals to California for their Medicaid program totaling \$111,351,929. The majority of the deferrals relate to insufficient documentation to support Medicaid claims and were identified as part of CMS's routine oversight review of California's Medicaid expenditures.

- **California Medicaid Managed Care Organization Tax Waiver Decision**

Tomorrow, CMS will notify the state of California of its decision to deny the state's request for a waiver that would allow the state to modify the structure of its existing Managed Care Organization (MCO) tax to essentially exempt MCOs that do not participate in Medicaid from paying the tax.

**From Today:**

- (NIH) Dr. Fauci participated in the following interviews re: Coronavirus
  - Radio New Zealand – taped

Supplemental item:

- **NIH Extramural Grant Recipient Charged for Failing to disclose foreign influence.**

A Harvard researcher who has received NIH funding has been charged by DOJ for failing to disclose ties with China. NIH is aware and engaged in the ongoing investigation. Similar to the Moffett Center foreign influence discovery, this is an example of active surveillance of research grant recipients

---

**Sent to White House (Night Note):**

- **CDC released updated lung injury cases and deaths**

Today, CDC issued a [press release](#) announcing the updated number of hospitalized EVALI cases and EVALI deaths. As of [Jan. 21, 2020](#), 2,711 cases of hospitalized EVALI or deaths were reported by all 50 states, the District of Columbia, and two U.S. territories (Puerto Rico and U.S. Virgin Islands). Sixty deaths have been confirmed in 27 states and the District of Columbia.

- **FDA to modernize, provide greater access to information about antiretrovirals eligible for purchase under President's Emergency Plan for AIDS Relief**

Tomorrow, FDA is expected to unveil an updated interactive database that will offer a wealth of critical information about drugs available for procurement under the President's Emergency Plan for AIDS Relief or PEPFAR program. For the first time, providers and procurers will be able to easily access FDA-reviewed product labeling.

- **Federal District Court vacates portion of HIPAA Privacy Rule right of access**

A D.C. federal district court in *Ciox Health, LLC v. Azar* vacated a portion of the HIPAA Privacy Rule's individual right of access where it went beyond the HITECH Act's authorization concerning an individual's right to have his/her electronic health record transmitted in an electronic format to a third party, which OCR had done based on authority in the HIPAA statute. Additionally, the court

held that the HIPAA right of access fee limitations apply only to an individual's request for access to their own records, and does not apply to an individual's request to transmit records to a third party.

- **State of California Medicaid Deferral**

Tomorrow, CMS will issue fourteen deferrals to California for their Medicaid program totaling \$111,351,929. The majority of the deferrals relate to insufficient documentation to support Medicaid claims and were identified as part of CMS's routine oversight review of California's Medicaid expenditures.

- **California Medicaid Managed Care Organization Tax Waiver Decision**

Tomorrow, CMS will notify the state of California of its decision to deny the state's request for a waiver that would allow the state to modify the structure of its existing Managed Care Organization (MCO) tax to essentially exempt MCOs that do not participate in Medicaid from paying the tax.

Supplemental item:

- NIH Extramural Grant Recipient Charged for Failing to disclose foreign influence.**  
 A Harvard researcher who has received NIH funding has been charged by DOJ for failing to disclose ties with China. NIH is aware and engaged in the ongoing investigation. Similar to the Moffett Center foreign influence discovery, this is an example of active surveillance of research grant recipients

---

#### **Sent to White House (Night Note):**

- CDC released updated lung injury cases and deaths**  
 Today, CDC issued a [press release](#) announcing the updated number of hospitalized EVALI cases and EVALI deaths. As of [Jan. 21, 2020](#), 2,711 cases of hospitalized EVALI or deaths were reported by all 50 states, the District of Columbia, and two U.S. territories (Puerto Rico and U.S. Virgin Islands). Sixty deaths have been confirmed in 27 states and the District of Columbia.
- FDA to modernize, provide greater access to information about antiretrovirals eligible for purchase under President's Emergency Plan for AIDS Relief**  
 Tomorrow, FDA is expected to unveil an updated interactive database that will offer a wealth of critical information about drugs available for procurement under the President's Emergency Plan for AIDS Relief or PEPFAR program. For the first time, providers and procurers will be able to easily access FDA-reviewed product labeling.
- Federal District Court vacates portion of HIPAA Privacy Rule right of access**  
 A D.C. federal district court in *Ciox Health, LLC v. Azar* vacated a portion of the HIPAA Privacy Rule's individual right of access where it went beyond the HITECH Act's authorization concerning an individual's right to have his/her electronic health record transmitted in an electronic format to a third party, which OCR had done based on authority in the HIPAA statute. Additionally, the court

held that the HIPAA right of access fee limitations apply only to an individual's request for access to their own records, and does not apply to an individual's request to transmit records to a third party.

- **State of California Medicaid Deferral**

Tomorrow, CMS will issue fourteen deferrals to California for their Medicaid program totaling \$111,351,929. The majority of the deferrals relate to insufficient documentation to support Medicaid claims and were identified as part of CMS's routine oversight review of California's Medicaid expenditures.

- **California Medicaid Managed Care Organization Tax Waiver Decision**

Tomorrow, CMS will notify the state of California of its decision to deny the state's request for a waiver that would allow the state to modify the structure of its existing Managed Care Organization (MCO) tax to essentially exempt MCOs that do not participate in Medicaid from paying the tax.

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

**HHS International SPOTREP: Novel Coronavirus, Wuhan, China (Update #18)**

**What:** There are 4,591 cases of confirmed 2019-nCoV in 18 locations as of 28Jan20, with five of these cases confirmed in the United States (Arizona, California, Washington and Illinois).

- HHS tele-briefing conducted on Jan 28 by HHS Secretary, CDC Director, CDC Response Senior Official (NCIRD Director), and NIH NIAID Director.
- Hosted national call with State, local and territorial health agencies to provide latest information regarding novel coronavirus and current U.S. preparedness efforts.
- Travel health notice elevated to level 3 ( avoid non-essential travel) for Wuhan was expanded to include all of China.

**International Coordination:**

- CDC detailed several staff to WHO in Geneva to assist with response.
- A total of 1994 phone lines connected to the call.

**Laboratory and Epidemiology:**

- CDC laboratory has the capacity to detect 2019-nCoV by sequencing virus isolates and comparing the sequences against the genetic sequence released by China. o Sequence of 2019-nCoV from the first four identified US cases in WA, IL and CA (2) have been made available on GenBank (Accession ID: MN985325, MN988713, MN994467, MN994468).
- Coordinating to provide assays and reagents and initiating manufacturing of reagents for 2019-nCoV real time RT-PCR assay for domestic and international distribution.
- Conducting regular discussions with FDA to complete EUA for 2019-nCoV real time RT-PCR assay. o Collecting laboratory data to support the EUA.
- Developing and continually refining investigation and guidance materials for evaluating cases and contacts, along with specimen collection.

For more details, please see attached CDC SITREP for Novel Coronavirus.

**When:** 28Jan20 2200ET

**Where:** International

**Why:** CIR: Disease - International

**Actions/Follow-Up:** The SOC will continue to monitor this incident and report as needed.  
*This message was distributed to the SOC SPOTREP-SITREP Distribution List.*

BY ADAM CANCRYN

Presented by

**PRMA**

*With Dan Diamond, Alice Miranda Ollstein and Susannah Luthi*

## QUICK FIX

— **The Trump administration is praising China's cooperation** in fighting the coronavirus, even as concerns mount about how forthcoming the nation has been.

— **Health officials are rapidly gathering information on the virus** and how to fight it — but there are still plenty of questions the U.S. is racing to answer.

— **The House is likely to reauthorize a temporary fentanyl ban**, despite objections over its imposition of mandatory minimum sentences.

---

A message from PhRMA:

There's a long line of middlemen collecting a significant portion of what you pay for medicine. New analysis finds nearly 50% of brand medicine spending went to hospitals, health insurers, pharmacy benefit managers, the government and others in 2018, up from 33% five years prior. [More](#).

---

**Welcome to Wednesday PULSE** — Where 2020 candidates in Washington for the impeachment trial are leaning on all manner of Iowa surrogates, perhaps none as Midwestern (or artery clogging) as the [Klobuchar Hot Dish](#).

Dan Diamond is back at the helm tonight — send your tips and best casserole recipes to [ddiamond@politico.com](mailto:ddiamond@politico.com).

## DRIVING THE DAY

## **CORONAVIRUS PUTS US-CHINA RELATIONS TO THE TEST —**

The Trump administration is giving China a passing grade for its work to combat the Wuhan coronavirus — even as other political and public health leaders take a skeptical view of a country dogged by its poor pandemic track record.

HHS Secretary Alex Azar and other federal officials have praised China for its cooperation in fighting the spreading virus, POLITICO's Sarah Karlin-Smith reports — most notably sharing the genetic sequence U.S. health officials needed to invent a diagnostic test and speed work on a vaccine.

**— But China still has work to do** to convince the world it's been forthcoming enough about a virus that's sickened thousands and killed more than 100 people in a matter of weeks. China hasn't accepted two offers of help from CDC experts, and the growing infected population has some lawmakers calling for more extreme measures.

"These are not the actions of a government in control of the outbreak," Sen. Tom Cotton (R-Ark.) wrote of China in a letter to Trump administration officials seeking health screenings, or even a ban, on all travelers from China.

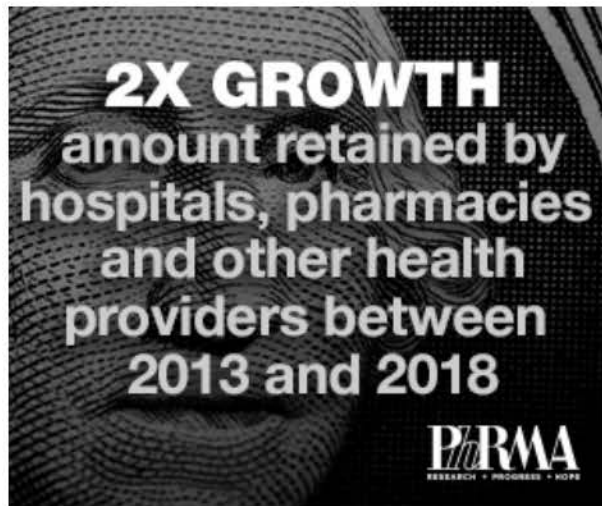

White House officials have since alerted airlines they're considering suspending U.S-China flights, CNBC reported.

## **WHAT WE KNOW — AND DON'T KNOW — ABOUT THE CORONAVIRUS**

— There are five confirmed cases in the U.S. and just over 100 under investigation, POLITICO's Joanne Kenen writes. Public health officials are working on tests that can rapidly diagnose patients, with plans to start testing a vaccine as soon as three months from now.

But health officials still aren't sure how lethal the virus is, or how rapidly — and in what ways — it might spread. "Americans should know that this is a potentially very serious public health threat, but, at

this point, Americans should not worry for their own safety," Azar said Tuesday.

#### ON THE HILL

**HOUSE SET TO EXTEND FENTANYL BAN DESPITE SENTENCING CONCERNS** — The House is slated to vote today on a Senate-passed bill to extend the DEA's temporary ban on fentanyl analogues and all chemically similar analogues of the synthetic opioid, ahead of its expiration in early February.

Rep. [Ann Kuster](#) (D-N.H.), co-chair of the Bipartisan Opioid Task Force, told POLITICO's Alice Miranda Ollstein she expects the bill to pass despite pushback from progressive lawmakers and outside groups like the ACLU concerned that it imposes mandatory minimum sentences for possession and distribution of the drug.

"There have been concerns, but I'm hoping we can get past that in order to pass this version before it expires, and that will give us time to sit down and discuss all of it," Kuster said of the 15-month extension, [S. 3201 \(116\)](#). "I don't want to leave my constituents vulnerable to a

lethal substance that is killing them on a daily and weekly basis, but I understand the concerns about mandatory minimums."

The Justice Department is urging Congress to permanently classify fentanyl analogues as schedule I, but that's yet to gain traction on Capitol Hill, where some lawmakers are concerned it could limit research on the drug.

**FIRST IN PULSE: HOUSE DEMOCRATS URGE AZAR, VERMA TO HALT BLOCK GRANT PLAN** — More than 30 Democrats are warning the Trump administration to abandon its soon-to-be-announced plan to let states cap some Medicaid funding, in a letter to Azar and CMS Administrator Seema Verma led by Rep. Joe Kennedy (D-Mass.) and shared first with PULSE.

"Not only do Medicaid block grants directly oppose Congress's intent for the Medicaid program, but they are illegal under Section 1115," the Democrats write, adding that capping funds could limit enrollment, force cuts to services and create more risks for low-income patients. House Energy and Commerce Chair Frank Pallone (D-N.J.) and Senate Finance Ranking Member Ron Wyden (D-Ore.) earlier this month urged the HHS inspector general to closely scrutinize any plan to cap Medicaid funding.

**—Verma has been working to develop the block-grant plan** for more than a year, POLITICO's Dan Diamond writes, following on her controversial effort to let states impose work requirements on Medicaid recipients. She and Azar both clashed with Kennedy last year after HHS failed to produce evidence that work requirements led to better outcomes for Medicaid recipients — a criticism that health experts have raised about block grants, too.

POLITICO first reported this month that Verma's block-grant plan would allow states to cap funds for Obamacare's Medicaid expansion, with the announcement scheduled for Thursday.

---

POLITICO's 10th Annual State Solutions Conference, happening on the sidelines of the National Governors Association's Winter Meeting in Washington, D.C., will take place on **Friday, February 7.**

POLITICO will host a series of conversations with governors from across the country, focusing on the innovative approaches that their states have taken to address complex challenges. [RSVP.](#)

---

## IN THE COURTS

### **FEDERAL APPEALS COURT CONSIDERS ABORTION METHOD**

**BAN** — A legal challenge to a Kentucky abortion ban heads to the 6th Circuit Court of Appeals today, where the ACLU is suing over the state's efforts to prohibit a common method of surgical abortion.

The suit on behalf of an abortion clinic and two doctors who perform dilation and evacuation abortions say the policy effectively bans all abortions after 15 weeks of pregnancy, violating *Roe v. Wade*.

Former Kentucky Gov. Matt Bevin signed the ban into law in April 2018, Alice writes, though a federal district court quickly put it on hold. The new prohibition doesn't allow for exemptions in cases of rape or incest, and carries up to a five-year prison sentence for abortion providers who perform the procedure.

The case will be closely watched: Kansas, Oklahoma, Arkansas and several other states have passed similar bans — all of which have been blocked by courts up to this point.

## EYE ON FDA

**FDA EYES GENE THERAPY STAFF BUILDOUT** — A crush of new

gene therapy drug applications could prompt the FDA to double its number of reviewers on staff, POLITICO's Arthur Allen reports.

The agency has received more than 900 investigational new drug applications for gene therapy, up from about 200 just a couple years ago, FDA Center for Biologics Evaluation and Research Director Peter Marks told Arthur in an interview. That's forced the FDA to think about how to expand its reviewing capacity over the next five years.

—**The FDA on Tuesday also released six final guidances** related to gene therapies and a new draft guidance that includes interpretations of how the agency will consider the "sameness" of gene therapy products under consideration for orphan drug status.

#### REGULATORY CORNER

#### **A NEW CONSERVATIVE CAUSE: TRUMP'S TRANSPARENCY**

**REGS** — Conservative firebrand Candace Owens is directing her activism, and her massive audience, toward a wonky new target: The secret rates that insurers negotiate with hospitals and doctors, and fresh demands for insight into actual health care prices.

Owens — better known for controversial screeds on campus culture and advocacy for the "Blexit" movement — has emerged as a major champion for the Trump administration's new health care transparency rules, POLITICO's Susannah Luthi reports. Owens is plugging the regulations on her show and Facebook page, and urging fans to send supportive comments to HHS — most recently in a Monday post titled "Our healthcare industry is a SCAM."

Thousands of comments have flooded the docket ahead of today's deadline. And while it's unclear how many were prompted by Owens, many referenced her November conversation with former White House official Katy Talento on the issue — and reflect the populist

enthusiasm Trump officials say is at the core of the rules.

"This has always been the problem with health care," one commenter wrote. "The consumer is always kept in the dark about the actual costs."

---

A message from PhRMA:

New data show the amount hospitals, pharmacies and other health care providers retained on the sale of brand medicines nearly doubled between 2013 and 2018, increasing from \$24.7 billion to \$48.6 billion. This trend was primarily driven by unprecedented expansion in the 340B drug pricing program. Policymakers can't help patients afford their medicine if they ignore where almost half the money is going. [More](#).

Bob and Rick:

What a good idea to organize a call like this. Hopefully, you will get something useful out of this amidst the usual grandstanding.

That aside, knowing that it will be a zoo, I will dial in and hope/plan to make some of the suggestions below. But I wanted to transmit them ahead of the call. I suspect that some of this may already be in place given all of the experience of your team(s) their well-honed reflexes but wanted to be sure that this is also viewed through a strategic lens in addition to the many tactical and technical considerations of the response.

That said my three “big ideas” are probably pretty obvious, but nevertheless worth articulating:

### 1) Assumptions v Facts

Keep a running list of assumptions— and go out of your way to list all you can think of.

Next to that list is the data needed to turn assumptions into facts (or to take them off the list), where that data (direct and indirect) might come from, and who is responsible for gathering it, “cleaning” it, and keeping it up to date.

### 2) Decisions

Using an existing playbook (HHS Pandemic Influenza Plan or another if better/more recent), make a comprehensive list of decisions that will need to be made or that someone might be expecting you to make. It may be best to do this by PHASE of the outbreak and by TOPIC (e.g., surveillance/clinical diagnosis, medical countermeasures, community mitigation, communication, legal, etc.)

Accompanying the list of decisions:

- *Data that will be needed to inform each decision* and who is tasked with developing and keeping it up to date

- *Stakeholders that need to be consulted* (somehow) to understand unintended consequences of decisions

### 3) Avoiding echo chamber/group think

Put in place a Red Team/Team B that will question all of the above – and its mantra should be: “There is no such thing as a stupid question.” I’m sure there is a formula for the kinds of people you should include, but in addition to SMEs there should be people who look at all of this from different perspectives: private sector (big and small), politician (a former mayor?), a journalist (who wouldn’t be covering any of this). That list could be infinite, so will need lots of thought. Overall, it will also be important that the group be nimble. I’m sure there is a way to do this that acknowledges the principles of FACA without invoking the things that will keep it from being nimble

I hope that some of this might be helpful.

Looking forward to the call tomorrow.

**From:** ASPR Stake Holder (OS/ASPR) [<mailto:ASPRStakeholder@hhs.gov>]

**Sent:** Tuesday, January 28, 2020 1:15 PM

**Subject:** 2019-nCoV, Coronavirus Listening Session Invite

Dear Colleague,

The U.S. Department of Health and Human Services, Office of the Assistant Secretary for Preparedness and Response (ASPR) is conducting a stakeholder listening session via conference call on Thursday, January 30<sup>th</sup>. The listening session will focus on the 2019 Novel Coronavirus (2019-nCoV) medical countermeasures challenges and issues as well as next steps for enhancing our nation’s ability to strengthen its health security against this outbreak. We invite you, on behalf of your organization, to participate in this important event.

**Date:** Thursday, January 30th, 2020

**Time:** 4:45PM ET

**Phone Number:** (b)(6)

**Participant Code:** (b)(6)

**Speakers:**

Dr. Robert Kadlec, Assistant Secretary for Preparedness and Response

Dr. Rick Bright, Deputy Assistant Secretary and Director, Biomedical Advanced Research and Development Authority, ASPR

Leaders from other partner federal agencies

Additionally, we invite you to submit any questions or specific concerns you'd like addressed on the call no later than 3:00 pm ET on Wednesday, January 29th to [ASPRStakeholder@hhs.gov](mailto:ASPRStakeholder@hhs.gov)

Thank you,

**Cicely L. Waters**

Director, Office of External Affairs

Assistant Secretary for Preparedness and Response

U.S. Department of Health and Human Services

200 C St, SW Washington, D.C. 20201

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

**HHS Executive Summary: Wednesday, 29Jan20**

**1. HHS**

**Today's Noteworthy Topics:**

Novel Coronavirus (2019-nCoV)

As of 28Jan20, there are 4,591 cases of confirmed 2019-nCoV in 18 locations, with five of these cases confirmed in the United States (AZ, CA, WA, and IL). A U.S. Department of State chartered flight to repatriate 201 American Citizens back to the US from Wuhan, China is expected to arrive in Ontario, CA (LA area) at approximately 0830ET, 29Jan20. HHS has deployed 57 personnel in support of the repatriation mission and 9 U.S. Marshals will be on-site at March ARB to support HHS operations. Medical Screening was completed first at Point of Embarkation (POE) Wuhan, China by both the Chinese Government and CDC staff. The second screening was completed upon arrival to Anchorage by CDC staff during aircraft refueling. All passengers were cleared to continue to CA. The third screening will be completed at Point of Debarkation (POD) March ARB, CA. The CDC hosted a national call with state, local, and territorial health agencies to provide the latest information regarding novel coronavirus and current U.S. preparedness efforts.

7.7 Earthquake, Jamaica

At approximately 1425ET on 28Jan20 the United States Geological Survey (USGS), reported a 7.7 magnitude earthquake off shore, near Jamaica. The earthquake occurred more than 100km from land and is unlikely to affect vulnerable infrastructure directly. This earthquake is expected to have a low humanitarian impact based on the magnitude and the affected population and their vulnerability.

**Daily Operational Schedule:**

0830 – FEMA Daily OPS Briefing

0830 – DHS & CDC Daily 2019-2020 Novel Coronavirus Sync Call

1200 – 2020 SOTUA Coordination Call

**Public Health Emergency of National Significance:**

Puerto Rico (Earthquake): 08Jan20

Opioid Crisis, Nationwide: 24Jan20

**HHS Response Status Summary:**

HHS SOC: Level II (On-Site)

CDC EOC: Level III (Polio/Ebola)

CDC EOC: 2019 Novel Coronavirus (Agency-Wide Response)  
FDA EOC: Level II (Vape Product Response)

**Emergency Support Function (ESF) Activation:**

ESF – 8: Not Activated  
ESF – 6: Not Activated

**Recovery Support Function (RSF) Activation:**

H&SS RSF: Activated Region II (2017 Irma/Maria, Puerto Rico projected end date of 05Mar20). Activated Region IX (2018 California Wildfires projected end date of 31Mar20)

**HHS Deployments: (Total = 242)**

**ASPR: 44** – (8) State of the Union, (3) Irma/Maria, (19) Novel Coronavirus, (13) 2020 Earthquake Puerto Rico, (1) 2018 California Wildfires

**CDC: 198** – (36) Polio, (52) Ebola, (6) Puerto Rico, (104) Coronavirus

**FMS Status:**

- • \* 32 (250 Bed) FMS sets are deployable
- • \* 10 (50 Bed) FMS sets are deployable

**New Mission Assignments (MA):** NSTR

**Active Situations (7):**

- • \* Influenza Season
- • \* Irma/Maria, Puerto Rico, & USVI (Recovery)
- • \* Ebola in Eastern Democratic Republic of the Congo
- • \* California Wildfires (Recovery)
- ☐ Novel Coronavirus
- ☐ Bravo Response
- ☐ Earthquake, Puerto Rico

**U.S. International Health Regulation National Focal Point Status:** The potential PHEIC on the confirmation of the 2<sup>nd</sup> case of Novel Coronavirus (nCoV) – Chicago, IL, U.S. was approved by the ASPR; submitted to the WHO and PAHO; and to USG Stakeholders.

**2. FEMA:**

**Interagency Response Status Summary:**

NWC: Monitoring

NRCC: Blue

National IMATs: Red – Fully Mission Capable; Blue – Deployed – PR; Gold – Fully Mission Capable

Regional IMATs: Region II, PR

**Significant National Weather:**

Overall a quiet day or two coming up for the U.S. lower 48. A system will pass through the South and northern Gulf Coast region for some rain and a few thunderstorms, perhaps some light snow on the northern periphery from the Mid-Mississippi Valley into the western Ohio Valley. Another system will sweep through the Northwest to the northern Rockies with some shower activity and mountain snow.

### 3. OPDIV/STAFFDIV Overnight Reports:

#### CDC:

- ☐ Measles (Rubeola) – Bangladesh – Update
- ☐ Ebola – Democratic Republic of the Congo – Update

#### FDA:

- ☐ Adverse Events Possibly Linked to Vaping Products/Unknown/Aug 2019
- ☐ Hepatitis A/Fresh Fruit (suspect)/Nov 2019
- ☐ *Salmonella* Javiana/Cut Fruit (suspect)/Dec 2019
- ☐ *E. coli* O157:H7/Leafy Greens/Nov 2019
- ☐ *E. coli* O157:H7/Leafy Greens (suspect)/Dec 2019
- ☐ *Listeria monocytogenes*/Leafy Greens (suspect)/Dec 2019

## ***British Airways Ends All Flights To China As Virus Spreads To Middle East***

***The decision comes after United Airlines said it would temporarily reduce the number of flights between the US and China***

**Zero Hedge - January 29, 2020**

British Airways Ends All Flights To China As Virus Spreads To Middle East

As the Trump Administration denies plans to shut down all passenger air traffic to China, more airlines around the world are suspending routes, a sign that the coronavirus outbreak could do permanent damage to the industry.

Just hours after the UK Foreign Office warned Britons against traveling to China, British Airways, Britain's flag carrier, and its second-largest airline in the UK, suspended all flights to China.

British Airways operates direct flights from Heathrow to Beijing and Shanghai, but right now, passengers can't book flights on those lines until Feb. 29. CNN called it "the most drastic action yet by a major airline" in response to the crisis.

The decision comes after United Airlines said it would temporarily reduce the number of flights between the US and China.

"We have suspended all flights to and from mainland China with immediate effect following advice from the Foreign Office against all but essential travel," the company said in a statement Wednesday.

*Alex Jones is live on air laying out exclusive information vital to the public. The Coronavirus is now a global pandemic according to previously-used metrics on outbreaks.*

This comes after United said Tuesday that it had seen a “significant decline in demand” and been forced it to suspend flights from Feb. 1 through Feb. 8 between its US hubs and Beijing, Hong Kong and Shanghai. In total, 24 round trips have been impacted between Hong Kong to San Francisco and Newark; Beijing to Dulles, O’Hare and Newark; and Shanghai to San Francisco, Newark and O’Hare.

American Airlines, Delta and United all extended change fee waivers through the end of February, while Hong Kong flagship carrier Cathay Pacific said it will reduce the capacity of flights to and from mainland China by half or more until the end of March.

Finland’s Finnair is canceling three weekly flights between Helsinki and Beijing between Feb. 5 and March 29, and two weekly flights between Helsinki and Nanjing between Feb. 8 and March 29, because of the suspension of group travel by Chinese authorities. It will continue to operate flights to Beijing, Shanghai, Hong Kong and Guangzhou.

There are now 5,974 cases in China, with 1,239 of whom are severely ill, according to state media on Wednesday. Initial theories, put forward by some infectious disease experts, that the mortality rate of the virus is much lower than reflected in press reports because thousands with mild cases are likely toughing it out in their homes. If anything, it looks like the virus is more lethal than we previously believed.

*And it’s certainly more infectious.*

Per the SCMP, a 48-hour span of no new nCoV infections came to an end Wednesday when Hong Kong authorities announced two more patients tested positive for the potentially deadly illness, bringing the local total to 10, as the HK government suspends high-speed rail travel between the Special Administrative Region and the mainland. The HK Department of Health said the two new patients, an elderly couple, aged 72 and 73, tested positive at Queen Mary Hospital in Pok Fu Lam, and, because of their age, fall into the high-risk category of infections. More than 100 people are still in isolation in HK.

SCMP

The situation is growing increasingly worrisome in Guangdong province, which is centered around the city of Guangzhou, the fifth-largest in China.

Guangzhou is at the center of a massive conurbation stretching out all the way to Shenzhen, and to the other neighboring cities of Foshan, Dongguan, Zhongshan and several other neighboring provinces. This agglomeration is one of the largest of its kind on Earth, home to more than 100 million. City officials announced five new infections, two locals and three foreigners. With more than 270 confirmed cases, this well-connected and economically important province is behind only Hubei and Zhejiang in terms of number of cases.

Now that several countries have copies of the coronavirus genome, the race for a workable vaccine is intensifying. Russia joined that race on Wednesday after receiving a copy of the virus genome from China, Russian state media reported on Wednesday. The US said on Tuesday that it would take

three months to start initial trials for a vaccine that it's developing, and three further months to gather data.

In Hong Kong, infectious diseases expert Professor Yuen Kwok-yung said on Tuesday that the city's researchers had stumbled on a vaccine, but that it would take months to test on animals and at least another year to conduct trials on humans before it could be confirmed ready for human use. Scientists in Melbourne said they grew the virus from a patient sample, which could prove a "game-changer" in combating the outbreak. It was the first time the virus had been grown in a cell culture outside China (here's hoping it isn't misused as a potential bioweapon).

After confirming the first case of human-to-human transmission in Japan, health officials in Tokyo have shared more information about the case with the press: The man did not travel to Wuhan but drove buses with tour groups from the city twice this month. The man is in his 60s and lives in Nara Prefecture, according to the Japan Times.

Overnight, the first case of the virus in the Middle East have been confirmed in the United Arab Emirates, according to the country's Ministry of Health and Community Protection. The 4 infected patients are members of a family that had traveled from Wuhan. In its statement, the health ministry reported the family as being in a stable condition under medical observation, according to CNBC.

As hysteria surrounding the outbreak grows, SCMP reports that resentment toward people from Wuhan is growing across China, as provincial authorities ramp up screenings of those from Wuhan, and citizens build unauthorized roadblocks to keep strangers out of their towns.

Meanwhile, President Xi said Wednesday that “preventing and containing the virus remains a severe and complex task,” a follow up to his claims that China would do whatever is necessary to contain the “demon” virus.

SCMP

The situation is growing increasingly worrisome in Guangdong province, which is centered around the city of Guangzhou, the fifth-largest in China.

Guangzhou is at the center of a massive conurbation stretching out all the way to Shenzhen, and to the other neighboring cities of Foshan, Dongguan, Zhongshan and several other neighboring provinces. This agglomeration is one of the largest of its kind on Earth, home to more than 100 million. City officials announced five new infections, two locals and three foreigners. With more than 270 confirmed cases, this well-connected and economically important province is behind only Hubei and Zhejiang in terms of number of cases.

Now that several countries have copies of the coronavirus genome, the race for a workable vaccine is intensifying. Russia joined that race on Wednesday after receiving a copy of the virus genome from China, Russian state media reported on Wednesday. The US said on Tuesday that it would take

three months to start initial trials for a vaccine that it's developing, and three further months to gather data.

In Hong Kong, infectious diseases expert Professor Yuen Kwok-yung said on Tuesday that the city's researchers had stumbled on a vaccine, but that it would take months to test on animals and at least another year to conduct trials on humans before it could be confirmed ready for human use. Scientists in Melbourne said they grew the virus from a patient sample, which could prove a "game-changer" in combating the outbreak. It was the first time the virus had been grown in a cell culture outside China (here's hoping it isn't misused as a potential bioweapon).

After confirming the first case of human-to-human transmission in Japan, health officials in Tokyo have shared more information about the case with the press: The man did not travel to Wuhan but drove buses with tour groups from the city twice this month. The man is in his 60s and lives in Nara Prefecture, according to the Japan Times.

Overnight, the first case of the virus in the Middle East have been confirmed in the United Arab Emirates, according to the country's Ministry of Health and Community Protection. The 4 infected patients are members of a family that had traveled from Wuhan. In its statement, the health ministry reported the family as being in a stable condition under medical observation, according to CNBC.

As hysteria surrounding the outbreak grows, SCMP reports that resentment toward people from Wuhan is growing across China, as provincial authorities ramp up screenings of those from Wuhan, and citizens build unauthorized roadblocks to keep strangers out of their towns.

Meanwhile, President Xi said Wednesday that “preventing and containing the virus remains a severe and complex task,” a follow up to his claims that China would do whatever is necessary to contain the “demon” virus.

***UNCLASSIFIED // FOR OFFICIAL USE ONLY***

**HHS International SPOTREP: Novel Coronavirus, Wuhan, China (Update #19)**

**Source:** HHS

**What:** The US Department of State has chartered a flight to repatriate 201 American Citizens back to the US from Wuhan, China. The flight will arrive at March Air Reserve Base (ARB), California (LA area) at 0830ET, 29Jan20.

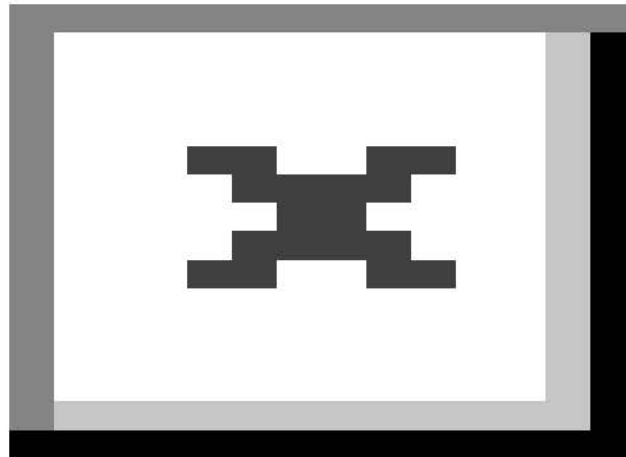

**Activation &Personnel**

- **57 HHS personnel will deploy in support of the repatriation mission.**

- Includes staff from ASPR Region IX, OHSEPR, USPHS, and ASPR HQ IT Specialists
- 3 personnel to Anchorage, Alaska.
- 54 personnel will deploy to Ontario, California.
- 9 US Marshals will be on-site at March ARB to support HHS operations

#### **Medical Screening**

- First screening at Point of Embarkation (POE) Wuhan, China by both Chinese Government and the CDC
- Second screening upon arrival to Anchorage by CDC during aircraft refueling
- Third screening at Point of Debarkation (POD) March ARB, California

For more details, please see attached SLB for Repatriation Wuhan (nCoV).

**When:** 28Jan20 2221ET

**Where:** International

**Why:** CIR: Disease - International

**Actions/Follow-Up:** The SOC will continue to monitor this incident and report as needed.  
*This message was distributed to the SOC SPOTREP-SITREP and Region 9 Distribution Lists.*

**UNCLASSIFIED // FOR OFFICIAL USE ONLY**

## United States Department of State

# TFCN01 - Wuhan Evacuation Task Force

SITREP No. 8

January 29, 2020 0600 ET

SENSITIVE BUT UNCLASSIFIED//FOR OFFICIAL USE ONLY (SBU//FOUO)

### (SBU) Situation on the Ground

- (SBU) The evacuation flight landed in Anchorage at 0125 ET with 198 passengers and 12 crew. The flight was wheels up 0553 ET from Anchorage with an ETA at March Reserve Air Base in Riverside, California at 1026 ET. CDC screened all passengers in Anchorage with no positive results. *(MED)*
- (SBU) American citizens were very impressed by the HHS reception in Alaska which included food, warm clothes, blankets, and toiletries. *(CG Wuhan)*
- (SBU) Embassy Beijing, and Consulates General Shanghai and Guangzhou report local hospitals are not overwhelmed and operating normally. *(Beijing 218)*

### (SBU) Operating Status

- (SBU) Numerous international schools attended by Mission China children in Shanghai, Beijing, Shenyang, Chengdu, and Guangzhou are pushing back their opening date to February 17 or later. *(Beijing 218)*

### (SBU) Support for U.S. Citizens:

- (SBU) As of late January 28, 723 American citizens expressed interest in potential USG assistance to evacuate Wuhan. (*Embassy Beijing*)
- (SBU) Post requested expanded call center support due to an overwhelming amount of coronavirus related calls throughout Mission China. (*Embassy Beijing*)

**(U) Coronavirus Global Developments**

- (U) The death toll rose to 132 in China, with more than 5,974 confirmed cases in China. No deaths have been reported outside China. (*Beijing 218, New York Times*)
- (U) Cases outside China are confirmed in Thailand (14), Hong Kong (8), Japan (7), United States (5), Taiwan (5), Australia (5), Macau (5), Singapore (4), South Korea (4), Malaysia (4), Germany (4), France (4), United Arab Emirates (4), Canada (3), Vietnam (2), Nepal (1), Cambodia (1), and Sri Lanka (1). (*New York Times, Washington Post*)
- (U) Japan's first flight of 206 Wuhan evacuees arrived in Tokyo January 29. Four passengers displayed a fever or cough and were transferred to an infectious disease hospital. (*South China Morning Post*)
- (U) Hong Kong closed two railways, ferries, and cross-border tour buses into China. Flights to mainland China will be cut by half, and individual visas to Chinese will no longer be issued, starting January 30. (*Washington Post*)
- (U) Australia and the UK updated their travel advisories to refrain from travel to Hubei Province, and reconsider non-essential travel to the rest of China. (*Washington Post*)

**(SBU) Political Developments**

- (SBU) Despite announcements Thailand would charter a flight to evacuate citizens, the government changed course January 29 and stated China has the situation under control and that Thailand cannot evacuate its citizens due to Wuhan's travel ban. (*Social Media*)
- (SBU) A China National Health Commission official contacted HHS to join WHO's expert group to prevent and control the coronavirus January 29. (*Beijing 218*)

**(U) Air Travel Updates:**

- (U) British Airways and Air Seoul suspend all flights to and from mainland China. (*The Guardian, Reuters*)
- (U) American Airlines will suspend flights from Los Angeles to mainland China beginning February 9. (*Embassy Beijing*)

Approved: ChangT

Good Morning,

The ASPR Corrective Action Program (CAP) is currently capturing participant observations & feedback for the **2020 Novel Coronavirus**. The ASPR feedback form can be accessed by going to <https://hhscap.hhs.gov> and selecting the appropriate event from the drop-down menu. (Please feel free to forward this link to anyone involved with this response.) Some areas of observation to consider are: pre-planning, notification, travel, mobilization, pre-event training, communication, mission execution, demobilization, etc.

When crafting your After Action comment(s), please consider the following:

- If you have more than one observation to submit, your demographic information will be saved, please submit one observation at a time.
- All comments, both positive and negative, will be treated in a sensitive manner and all personal information provided will be held confidential by the Corrective Action Program (CAP) Working Group Managers.
- Be concise, specific, and honest. Your observation is our only first-hand account of what happened.
- Please include specific names, times, and locations. These are necessary for investigation by the CAP Working Group, but will not be published in final documentation.
- Define all unfamiliar acronyms.
- Recommend specific corrective actions that can be implemented and measured.

<https://hhscap.hhs.gov>

As a reminder, this link is the same for each event and can also be found on the homepage of the EM Portal.

If you have any questions, the CAP Team will be happy to assist.

Thank you,

The CAP Team  
Exercise, Evaluation and After Action Division

Office of The Assistant Secretary for Preparedness and Response

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

United States Department of State  
**TFCN01 - Wuhan Evacuation Task Force**  
**SITREP No. 8**  
**January 29, 2020 0600 ET**  
**SENSITIVE BUT UNCLASSIFIED//FOR OFFICIAL USE ONLY**  
**(SBU//FOUO)**

**(SBU) Situation on the Ground**

- (SBU) The evacuation flight landed in Anchorage at 0125 ET with 198 passengers and 12 crew. The flight was wheels up 0553 ET from Anchorage with an ETA at March Reserve Air Base in Riverside, California at 1026 ET. CDC screened all passengers in Anchorage with no positive results. **(MED)**
- (SBU) American citizens were very impressed by the HHS reception in Alaska which included food, warm clothes, blankets, and toiletries. **(CG Wuhan)**
- (SBU) Embassy Beijing, and Consulates General Shanghai and Guangzhou report local hospitals are not overwhelmed and operating normally. **(Beijing 218)**

**(SBU) Operating Status**

- (SBU) Numerous international schools attended by Mission China children in Shanghai, Beijing, Shenyang, Chengdu, and Guangzhou are pushing back their opening date to February 17 or later. **(Beijing 218)**

**(SBU) Support for U.S. Citizens:**

- • (SBU) As of late January 28, 723 American citizens expressed interest in potential USG assistance to evacuate Wuhan. (*Embassy Beijing*)
- • (SBU) Post requested expanded call center support due to an overwhelming amount of coronavirus related calls throughout Mission China. (*Embassy Beijing*)

#### (U) Coronavirus Global Developments

- • (U) The death toll rose to 132 in China, with more than 5,974 confirmed cases in China. No deaths have been reported outside China. (*Beijing 218, New York Times*)
- • (U) Cases outside China are confirmed in Thailand (14), Hong Kong (8), Japan (7), United States (5), Taiwan (5), Australia (5), Macau (5), Singapore (4), South Korea (4), Malaysia (4), Germany (4), France (4), United Arab Emirates (4), Canada (3), Vietnam (2), Nepal (1), Cambodia (1), and Sri Lanka (1). (*New York Times, Washington Post*)
- • (U) Japan's first flight of 206 Wuhan evacuees arrived in Tokyo January 29. Four passengers displayed a fever or cough and were transferred to an infectious disease hospital. (*South China Morning Post*)
- • (U) Hong Kong closed two railways, ferries, and cross-border tour buses into China. Flights to mainland China will be cut by half, and individual visas to Chinese will no longer be issued, starting January 30. (*Washington Post*)
- • (U) Australia and the UK updated their travel advisories to refrain from travel to Hubei Province, and reconsider non-essential travel to the rest of China. (*Washington Post*)

#### (SBU) Political Developments

- • (SBU) Despite announcements Thailand would charter a flight to evacuate citizens, the government changed course January 29 and stated China has the situation under control and that Thailand cannot evacuate its citizens due to Wuhan's travel ban. (*Social Media*)
- • (SBU) A China National Health Commission official contacted HHS to join WHO's expert group to prevent and control the coronavirus January 29. (*Beijing 218*)

#### (U) Air Travel Updates:

- • (U) British Airways and Air Seoul suspend all flights to and from mainland China. (*The Guardian, Reuters*)
- • (U) American Airlines will suspend flights from Los Angeles to mainland China beginning February 9. (*Embassy Beijing*)

Approved: ChangT
