The Nakamoto Group, Inc.

April 20, 2017

TO: Tae D. Johnson
Assistant Director for Detention Management

FROM: (b)(6); (b)(7)(C)
Lead Compliance Inspector
The Nakamoto Group, Inc.

SUBJECT: **Annual Detention Inspection of the Northwest Detention Center**

The Nakamoto Group, Inc. performed an annual inspection for compliance with the ICE Performance-Based National Detention Standards (PBNDS) 2011 of the Northwest Detention Center, Tacoma, WA during the period of April 18-20, 2017. This is a CDF.

The inspection was performed under the guidance of (b)(6); (b)(7)(C) Lead Compliance Inspector. Team Members were:

Subject Matter Field	Team Member
Detainee Rights	(b)(6); (b)(7)(C)
Security	
Medical Care	
QMC	
Safety	

Type of Inspection

This is a scheduled annual inspection, which is performed to determine overall compliance with the ICE PBNDS 2011 for Over 72 hour facilities. The facility received a previous rating of Meets Standards during the April 2016 inspection.

Inspection Summary

The Northwest Detention Center is currently accredited by:

- The American Correctional Association (ACA) - Yes
- The National Commission on Correctional Health Care (NCCHC) - Yes
- The Joint Commission (TJC) - No
- Prison Rape Elimination Act (PREA) - No

Standards Compliance

The following information is a summary of the standards that were reviewed and overall compliance that was determined as a result of the 2016 and 2017 PBNDS 2011 compliance annual inspections:

11820 Parklawn Drive, Suite 240 • Rockville, Maryland • phone: 301.468.6535 • fax: 301.468.6536 • www.nakamotogroup.com

Funds and Personal Property—1, which is a repeat deficiency
Recreation—1, which is a priority component

Facility Snapshot/Description

The Northwest Detention Center, a CDF, is owned and operated by the GEO Group, Inc. The facility is located in Tacoma, WA in a primarily industrial area approximately 25 miles south of the Sea-Tac International Airport, Seattle, WA. The facility houses all custody levels of male and female ICE detainees. The facility has a rated capacity of 1575. The population count on the first day of the inspection was 1295. The average length of stay for the previous twelve months was 79 days with an average daily population of 1435.

The Northwest Detention Center was constructed in 2004. In 2010, additional capacity was added to the facility. There are currently no plans for future construction or renovation. The administration building and the additional housing units constructed in 2010 are two levels; all other areas of the facility are single level. There are six general population housing units; four of the housing units each contain three housing pods and two of the housing units each contain four housing pods. Capacities of the housing units range from 205-278 beds. Both dormitory beds and cell housing is available at the facility. Dorm capacities range from 64-80 beds. Additionally, there are forty cells, each containing two beds, in the segregation management unit designated for males. All housing units are provided direct supervision around the clock. Detainees are afforded the opportunity for both indoor and outdoor recreation and were observed participating in both areas. Each housing unit has a large dayroom area equipped with tables, chairs, televisions, board games, ping pong tables, exercise equipment and microwaves. The entire facility is climate controlled. Telephones are available in the general population housing units at an optimal ratio of one telephone for every ten detainees. Detainees are issued color-coded uniforms and wristbands according to custody level.

The inspection team found the atmosphere to be calm with no obvious indicators of high stress levels. During the inspection sanitation at the facility was observed to be above average and noise levels were minimal. All facility and ICE staff encountered by the inspection team exhibited a professional demeanor. Interactions between staff and detainees were observed to be respectful and professional.

The facility does not charge co-pays for medical, mental health or dental care. Health services are provided by IHSC.

During the inspection, the Medical SME and QMC SME reviewed 123 medical files. Combined, all of the SMEs interviewed no less than fifty detainees which included detainees housed in the general population and in the segregation management units. Some interviews were confidential and included de-

tainees who had limited English proficiency. Detainees' statements indicated general satisfaction with living conditions and with access to the law library, command staff, ICE personnel, telephones, medical care and translation services when needed.

One detainee stated that he was aware of a problem with foot fungus at the facility due to unsanitary shower conditions. The Security SME and the Medical SME followed-up on this complaint. The showers were observed to be very clean and sanitary and the medical department had no knowledge or record of any issues regarding foot fungus. Another detainee complained of lack of diversity in menu offerings. However, the safety SME reviewed the menu and observed meals during the inspection and found that the menu offerings meet the requirements of the standard. Additionally, the menu has been certified by a registered dietitian as exceeding minimum daily nutritional requirements.

Areas of Concern/Significant Observations

The inspection team identified one (1) deficient priority component:

Recreation
Component #5—All facilities shall have an individual responsible for the development and oversight of the recreation program. Every facility with a rated capacity of 350 or more detainees shall employ a full-time recreation specialist with special training in implementing and overseeing a recreation program, who assesses the needs and interests of the detainees.

Finding: The facility has a rated capacity of 1575. The total facility population on the first day of the inspection was 1295. The average daily population for the previous twelve months was 1435. The full-time recreation specialist position was eliminated since the previous annual inspection. The duties of the full-time recreation specialist have been assigned to the law library supervisor as collateral duties.

AMERICAN OVERSIGHT

Port Isabel Service Processing Center, TX
July 19, 2019

The National Commission on Correctional Health Care is dedicated to improving the quality of correctional health services and helping correctional facilities provide effective and efficient care. NCCHC grew out of a program begun at the American Medical Association in the 1970s.

The standards are NCCHC's recommended requirements for the proper management of a correctional health services delivery system. These standards have helped correctional facilities improve the health of their inmates and the communities to which they return, increase the efficiency of their health services delivery, strengthen their organizational effectiveness, and reduce their risk of adverse patient outcomes and legal judgments.

On May 15-17, 2019, NCCHC conducted its review for continued accreditation of this facility. We commend the facility staff for their professional conduct, assistance, and candor during the course of our review. The NCCHC's team of experienced certified correctional health professionals utilized NCCHC's 2018 *Standards for Health Services in Jails* as the basis of its health services analysis. This report focuses primarily on issues in need of correction or enhancement. It is most effective when read in conjunction with the *Standards* manual. The information in this report is privileged and confidential and is intended for the sole use of persons addressed.

There are 39 essential standards. One hundred percent (100%) of the applicable essential standards must be met for accreditation. 37 are applicable to this facility and 37 (100%) were found to be in full compliance. Listed below are standards that were not compliant, partially compliant, or not applicable.

Standard number and name not compliant:
None

Standard number and name partially compliant:
None

Standard number and name not applicable:
J-C-06 Inmate Workers
J-E-03 Transfer Screening

There are 20 important standards; 19 are applicable to this facility and 19 (100%) were found to be in compliance. Eighty-five percent or more of the applicable important standards must be met. Listed below are standards that were not compliant, partially compliant, or not applicable.

Standard number and name not compliant:
None

Standard number and name partially compliant:
None

Standard number and name not applicable:
J-C-08 Health Care Liaison

AMERICAN OVERSIGHT

Decision: On July 19, 2019, NCCHC's Accreditation and Standards Committee awarded the facility accreditation.

AMERICAN OVERSIGHT

I. Facility Profile

The facility's security classification is: Medium
The facility was built in: 2005
The facility's mission or purpose has not change in the last year or since their last survey.
The facility is located in the southwestern United States.
The facility's supervision style is: Direct supervision
The facility's structural layout is: Linear and dormitory-style housing
Since the last NCCHC survey, there have not been any major renovations/expansions/closures in the facility, and none were anticipated at the time of the survey.
Total Inmate Count on day of survey: 1086
Total number of adult males on day of the survey: 1079
Total number of adult females on day of the survey: 7
Average Daily Population (ADP) for last completed calendar year: 1054
The design-rated capacity for the facility is: 1200
There has not been a substantial increase or decrease in the inmate population.
Admissions to the facility arrive: Scheduled, but any time of day or night
The total number of admissions to the facility last year was: 26,869
The average daily intake to the facility last year was: 77
The total number of correctional staff assigned to this facility is: (b)(7)(E)
The usual shift coverage for correctional staff is: (b)(7)(E)
There has not been a recent change in health care contractor
Health services are provided by a contracted vendor.
They have provided health services since: 2018
There have not been any distinctive events that may affect the delivery of health care.
The facility has no satellites.

II. Survey Method

We toured the clinic area, inmate housing areas, infirmary and segregation. We reviewed 16 health records; policies and procedures; provider licenses; administrative, health staff, and continuous quality improvement (CQI) meeting minutes; job descriptions; statistical and environmental inspection reports; and health services personnel and CO training records. We interviewed the Captain, responsible physician, health services administrator (HSA), other health, mental health, and dental staff, intake officer, two COs, and eight inmates selected at random.

AMERICAN OVERSIGHT

III. Survey Findings and Comments

A. GOVERNANCE AND ADMINISTRATION

Standards in this section address the establishment of a health care system that ensures access to care, professional administration of all aspects of health care, and monitoring and quality improvement policies that effectively process health care issues from identification through resolution.

Standard Specific Findings

J-A-01 Access to Care (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The responsible health authority identifies and eliminates any unreasonable barriers, intentional and unintentional, to inmates receiving health care.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-A-02 Responsible Health Authority (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The RHA arranges for all levels of health care and ensures quality, accessible, and timely health services for inmates.	X		
2. The RHA's responsibilities are documented in a written agreement, contract, or job description.	X		
3. The RHA must be on-site at least weekly.	X		
4. Final clinical judgments rest with a single, designated, licensed *responsible physician*.	X		
5. Where there is a separate organizational structure for mental health services, there is a *designated mental health clinician*.	NA		
6. Where there is a separate organizational structure for dental services, there is a *designated dental clinician*.	NA		
7. The responsible physician (and designated mental health clinician and dental clinician, if applicable) is available to the facility frequently enough to fulfill the position's clinical and administrative responsibilities.	X		
8. All aspects of the standard are addressed by written policy and defined procedures.	X		

AMERICAN OVERSIGHT

Compliance concern(s) or positive findings:
The mental health and dental operations are under the same authority as medical services.
The following corrective action is required:
None

J-A-03 Medical Autonomy (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Clinical decisions are determined by qualified health care professionals and implemented in an effective and safe manner.	X		
2. Administrative decisions are coordinated, if necessary, with clinical needs so that patient care is not jeopardized.	X		
3. *Custody staff* support the implementation of clinical decisions.	X		
4. *Health staff* recognize and follow security regulations.	X		
5. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-A-04 Administrative Meetings and Reports (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Administrative meetings are attended by the facility administrator and the responsible health authority (RHA) or their designees, and other members of the medical, dental, and mental health and correctional staffs as appropriate.	X		
2. Administrative meetings are held at least quarterly. Minutes or summaries are made and retained for reference, and copies available and reviewed by all appropriate personnel.	X		
3. Health staff meetings occur at least monthly to address pertinent health care issues. Minutes or summaries are made and retained for reference, and copies are available and reviewed by all health staff.	X		
4. Statistical reports of health services are made at least monthly. They are provided to the facility administrator and others as appropriate and are used to monitor trends in the delivery of health care.	X		
5. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

AMERICAN OVERSIGHT

J-A-05 Policies and Procedures (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Policies and procedures address each applicable standard in the *Standards for Health Services in Jails*.	X		
2. Health care policies and procedures are site specific.	X		
3. Health care policies and procedures are reviewed at least annually by the RHA and responsible physician.	X		
4. Documentation of this review includes signatures of the RHA and responsible physician and the date of the review.	X		
5. Health staff review policies and procedures any time they are revised or new policies are introduced.	X		
6. Other policies, such as those for custody, kitchen, industries, and health care vendor or other contractors, do not conflict with health care policies.	X		
7. The manual or compilation is accessible to health staff.	X		
8. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-A-06 Continuous Quality Improvement Program (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The responsible health authority establishes a continuous quality improvement program that includes a *quality improvement committee* with representatives from the major program areas. The committee meets as required but no less than quarterly. The committee:	X		
a. Identifies aspects of health care to be monitored and establishes *thresholds*	X		
b. Designs quality improvement monitoring activities	X		
c. Analyzes the results for factors that may have contributed to below threshold performance	X		
d. Designs and implements improvement strategies to correct the identified health care concern	X		

AMERICAN OVERSIGHT

e. Monitors the performance after implementation of the improvement strategies	X		
2. CQI meeting minutes or summaries are made and retained for reference, and copies are available and reviewed by all appropriate personnel.	X		
3. *Health record reviews* are done under the guidance of the responsible physician or designee to ensure that appropriate care is ordered and implemented and that care is coordinated by all health staff, including medical, dental, mental health, and nursing.	X		
4. Beyond chart reviews, the responsible physician is involved in the CQI process.	X		
5. When the committee identifies a site-specific health care concern from its monitoring, a *process* and/or *outcome quality improvement study* is initiated and documented.	X		
6. At least one process and/or outcome quality improvement study is completed per year.	X		
7. The committee documents a written annual review of the effectiveness of the CQI program by reviewing CQI studies and minutes of CQI, administrative, and/or staff meetings, or other pertinent written materials.	X		
8. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
CQI studies are well documented and consist of the required elements.			
The following corrective action is required:			
None			

J-A-07 Privacy of Care (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Discussions of protected patient health information and *clinical encounters* are conducted in private.	X		
2. Privacy (e.g., privacy screen, curtain, private area) should be afforded during physical exams, with special considerations for pelvic, rectal, breast, or other genital exams.	X		
3. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

AMERICAN OVERSIGHT

J-A-08 Health Records (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The method of recording entries in the health record and the *health record contents* and format are approved by the responsible health authority (RHA) or designee.	X		
2. If electronic health records are used, procedures address integration of health information in electronic and paper forms.	X		
3. Where mental health or dental records are separate from medical records:	NA		
a. A process ensures that pertinent information is shared			
b. At a minimum, a listing of current problems, allergies, and medications is common to all medical, dental, and mental health records of an inmate			
4. Evidence exists that the health record is available to health staff and health encounters are documented.	X		
5. Criminal justice information that is pertinent to clinical decisions is available to qualified health care professionals.	X		
6. Health records stored in the facility are maintained under secure conditions separate from correctional records.	X		
7. Access to health records and health information is controlled by the RHA.	X		
8. Evidence exists that health staff receive instruction in maintaining confidentiality.	X		
9. If records are transported by nonhealth staff, the records are sealed.	X		
10. When an inmate is transferred to another correctional facility:	X		
a. A copy of the current health record or a *comprehensive health summary* accompanies the inmate	X		
b. The transfer and sharing of health records complies with state and federal law	X		
11. There is a system for the reactivation of records when requested by health staff.	X		
12. The jurisdiction's legal requirements regarding records retention and release are followed.	X		
13. All aspects of the standard are addressed by written policy and defined procedures.	X		

AMERICAN OVERSIGHT

Compliance concern(s) or positive findings:
Mental health and dental operations fall under the same authority as medical services, and are all documented in the same charts.
The following corrective action is required:
None

J-A-09 Procedure in the Event of an Inmate Death (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. A *clinical mortality review* is conducted within 30 days.	X		
2. An *administrative review* is conducted in conjunction with custody staff.	X		
3. A *psychological autopsy* is performed on all deaths by suicide within 30 days.	X		
4. Treating staff are informed of pertinent findings of all reviews.	X		
5. A log is maintained that includes:	X		
a. Patient name or identification number	X		
b. Age at time of death	X		
c. Date of death	X		
d. Date of clinical mortality review	X		
e. Date of administrative review	X		
f. Cause of death (e.g., hanging, respiratory failure)	X		
g. Manner of death (e.g., natural, suicide, homicide, accident)	X		
h. Date pertinent findings of review(s) shared with staff	X		
i. Date of psychological autopsy, if applicable	X		
6. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-A-10 Grievance Process for Health Care Complaints (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. A grievance process is in place.	X		
2. The grievance policy includes:	X		

AMERICAN OVERSIGHT

a. A time frame for response	X		
b. The process for appeal	X		
3. Responses to inmate grievances are:	X		
a. Timely	X		
b. Based on principles of adequate medical care	X		
c. Include documentation of response	X		
4. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

B. HEALTH PROMOTION, SAFETY, AND DISEASE PREVENTION

Standards in this section address the need to optimize education, safety, and preventive care. Policies and procedures related to these standards require involvement by all facility staff.

Standard Specific Findings

J-B-01 Health Lifestyle Promotion (I)			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Health staff document that patients receive individual *health education* and instruction in *self-care* for their health conditions.	X		
2. General health education (e.g., pamphlets, news articles, video, classes) is accessible to all inmates.	X		
3. The facility provides a *nutritionally adequate* diet to the general population.	X		
4. A *registered dietitian nutritionist* (RDN), or other licensed qualified nutrition professional, as authorized by state scope of practice laws, documents a review of the regular diet for nutritional adequacy at least annually.	X		
5. The facility has a procedure in place to notify the RDN whenever the regular diet menu is changed.	X		
6. Health staff promote and provide education on exercise and physical activity options in the facility.	X		
7. Smoking is prohibited indoors. If the facility allows smoking outside, specific areas are designated.	X		

AMERICAN OVERSIGHT

8. Information on the health hazards of tobacco is available to inmates.	X		
9. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-B-02 Infectious Disease Prevention and Control (E)			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The facility has a written *exposure control plan* that is approved by the responsible physician. The plan is reviewed and updated annually.	X		
2. The responsible health authority ensures that:	X		
a. Medical, dental, and laboratory equipment and instruments are appropriately cleaned, decontaminated, and sterilized per applicable recommendations and/or regulations	X		
b. Sharps and biohazardous wastes are disposed of properly	X		
c. Surveillance to detect inmates with infectious and communicable disease is effective	X		
d. Inmates with contagious diseases are identified and, if indicated, *medically isolated* in a timely fashion	X		
e. Infected patients receive medically indicated care	X		
3. *Standard precautions* are always used by health staff to minimize the risk of exposure to blood and body fluids.	X		
4. Inmate workers, if used, are trained in appropriate methods for handling and disposing of biohazardous materials and spills.	X		
5. Patients requiring respiratory isolation are housed in a functional negative pressure room.	X		
6. Inmates who are released with communicable or infectious diseases have documented community referrals, as medically indicated.	X		
7. The facility completes and files all reports as required by local, state, and federal laws and regulations.	X		
8. Effective *ectoparasite* control procedures are used to treat infected inmates and to disinfect bedding and clothing.	X		

AMERICAN OVERSIGHT

a. Inmates, bedding, and clothing infected with ectoparasites are disinfected.	X		
b. Prescribed treatment considers all conditions (such as pregnancy, open sores, or rashes) and is ordered only by *providers*.	X		
c. If the facility routinely delouses inmates, only over-the-counter medications, such as those containing pyrethrin's, are used.	X		
9. An environmental inspection of health services areas is conducted monthly to verify that:	X		
a. Equipment is inspected and maintained	X		
b. The unit is clean and sanitary	X		
c. Measures are taken to ensure the unit is occupationally and environmentally safe	X		
10. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-B-03 Clinical Preventive Services (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The responsible physician determines the medical necessity and/or timing of screenings and other preventive services (e.g., mammograms, colorectal screening, prostate screening, Pap smears).	X		
2. The responsible physician determines the frequency and content of periodic health assessments.	X		
3. The dentist determines the frequency and content of periodic dental evaluations.	X		
4. The responsible physician determines the medical necessity and/or timing of screening for communicable diseases (e.g., HIV, syphilis, gonorrhea, chlamydia), to include laboratory confirmation, treatment, and follow-up as clinically indicated.	X		
5. Immunizations are administered to patients as clinically indicated.	X		
6. All aspects of the standard are addressed by written policy and defined procedures.	X		

AMERICAN OVERSIGHT

Compliance concern(s) or positive findings:
None
The following corrective action is required:
None

J-B-04 Medical Surveillance of Inmate Workers (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. There is an institutional committee or equivalent body that identifies and oversees inmate occupational-associated risks through a *medical surveillance* program	X		
2. An initial *medical screening* of an inmate for contraindications to a work program, based on job risk factors and patient condition, is conducted prior to enrollment in the program.	NA		
3. Ongoing medical screening of inmates in work programs is conducted in a way that affords the same health protections as medical screening of employee workers in equivalent jobs.	NA		
4. The responsible physician reviews and approves the health aspects of the medical surveillance program.	X		
5. Inmate illness or injury potentially related to occupational exposure or with occupational implications is identified and the information provided to the quality improvement committee for review.	X		
6. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
There is no work program at the facility due to the very transient nature of the inmate population. Food service and maintenance is conducted by civilian contractors and facility staff. Inmates are only used for minor clean up tasks, when needed.			
The following corrective action is required:			
None			

J-B-05 Suicide Prevention and Intervention (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The responsible health authority and facility administrator approve the facility's suicide prevention program.	X		
2. A suicide prevention program includes the following:	X		
a. Facility staff identify suicidal inmates and immediately initiate precautions.	X		
b. Suicidal inmates are evaluated promptly by the designated health professional, who directs the intervention and ensures follow-up as needed.	X		

AMERICAN OVERSIGHT

c. *Acutely suicidal* inmates are monitored by facility staff via constant observation.	X		
d. *Nonacutely suicidal* inmates are monitored by facility staff at unpredictable intervals with no more than 15 minutes between checks.	X		
3. The use of other inmates in any way (e.g., companions, suicide-prevention aides) is not a substitute for staff supervision.	X		
4. Treatment plans addressing suicidal ideation and its reoccurrence are developed.	X		
5. Patient follow-up occurs as clinically indicated.	X		
6. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-B-06 Contraception (I). ☐ **NOT APPLICABLE**			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Emergency contraception is available to women at intake.	X		
2. For planned releases to the community, arrangements are made to initiate contraception for women, upon request.	X		
3. Information about contraceptive methods and community resources is available.	X		
4. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-B-07 Communication on Patients' Health Needs (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Correctional staff are advised of inmates' special health needs that may affect:	X		
a. Housing	X		
b. Work assignments	X		
c. Program assignments or selection	X		

AMERICAN OVERSIGHT

d. Disciplinary measures		X		
e. Transport to and from outside appointments		X		
f. Admissions to and transfers from facilities		X		
g. Clothing or appearance		X		
h. Activities of daily living		X		
2. Communication of health needs is documented.		X		
3. All aspects of the standard are addressed by written policy and defined procedures.		X		
Compliance concern(s) or positive findings:				
None				
The following corrective action is required:				
None				

J-B-08 Patient Safety (I).				
		The compliance indicator is:		
		Fully Met	**Partially Met**	**Not Met**
1. Facility staff implement *patient safety systems* to prevent *adverse* and *near-miss* clinical events.		X		
2. The responsible health authority (RHA) implements a reporting system for health staff to voluntarily report, in a nonpunitive environment, adverse and near-miss events that affect patient safety.		X		
3. All aspects of the standard are addressed by written policy and defined procedures.		X		
Compliance concern(s) or positive findings:				
None				
The following corrective action is required:				
None				

J-B-09 Staff Safety (I).				
		The compliance indicator is:		
		Fully Met	**Partially Met**	**Not Met**
1. Methods of communication (e.g., radio, panic button, voice proximity) between health staff and custody staff are available.		X		
2. When a safety concern arises, custody staff are requested and readily available to health staff.		X		
3. On each shift where health staff are present, inventories are maintained on items subject to abuse (e.g., needles, scissors, other sharp instruments) and discrepancies are immediately reported to the custody staff.		X		

AMERICAN OVERSIGHT

4. As in the community, health staff identify and use contemporary equipment during the course of their duties (e.g., personal protective equipment, needle safety devices such as self-sheathing needles or needleless systems).	X		
5. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

C. PERSONNEL AND TRAINING

Standards in this section ensure that appropriately trained personnel are in place to deliver health care to the inmate population and that qualified health care professionals are evaluated for continuing competency.

Standard Specific Findings

J-C-01 Credentials (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. All qualified health care professionals have credentials and provide services consistent with the licensure, certification, and registration requirements of the jurisdiction.	X		
2. The responsible health authority (RHA) ensures that new hires undergo a credential verification process that confirms current licensure, certification, or registration.	X		
3. The credential verification process includes inquiry regarding sanctions or disciplinary actions of state boards and, for *prescribers*, the National Practitioner Data Bank (NPDB).	X		
4. Qualified health care professionals do not perform tasks beyond those permitted by their credentials.	X		
5. The RHA maintains verification of current credentials for all qualified health care professionals at a readily accessible location.	X		
6. A license that limits practice to only correctional health care is not in compliance with this standard.	X		
7. Specialists providing on-site or telehealth care services have appropriate licenses and certifications on file.	X		
8. All aspects of the standard are addressed by written policy and defined procedures.	X		

AMERICAN OVERSIGHT

Compliance concern(s) or positive findings:
None
The following corrective action is required:
None

J-C-02 Clinical Performance Enhancement (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Clinical performance enhancement reviews are conducted, at a minimum, on all full-time, part-time, or per diem:	X		
a. Providers	X		
b. RNs	X		
c. LPNs	X		
d. Psychologists	X		
e. Licensed clinical social workers	X		
f. Dentists	X		
2. The clinical performance enhancement review is conducted annually.	X		
3. Clinical performance enhancement reviews are kept confidential and incorporate at least the following elements:	X		
a. The name and credentials of the individual being reviewed	X		
b. The date of the review	X		
c. The name and credentials of the reviewer	X		
d. A summary of the findings and corrective action, if any	X		
e. Confirmation that the review was shared with the individual being reviewed	X		
4. A log or other written record listing the names of the individuals reviewed and the dates of their most recent reviews is available.	X		
5. The responsible health authority (RHA) implements an *independent review* when there is concern about any individual's competence.	X		
6. The RHA implements procedures to improve an individual's competence when such action is necessary.	X		
7. All aspects of the standard are addressed by written policy and defined procedures.	X		

Compliance concern(s) or positive findings:
None
The following corrective action is required:
None

AMERICAN OVERSIGHT

J-C-03 Professional Development (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. All qualified health care professionals obtain at least 12 hours of continuing education per year or have proof of a valid license in states where continuing education is required for licensure.	X		
2. The responsible health authority (RHA) documents compliance with continuing education requirements.	X		
3. The RHA maintains a list of the state's continuing education requirements for each category of licensure of all qualified health care professionals.	X		
4. All qualified health care professionals who have patient contact are current in cardiopulmonary resuscitation technique.	X		
5. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-C-04 Health Training for Correctional Officers (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. A training program is established and approved by the responsible health authority in cooperation with the facility administrator.	X		
2. An outline of the training, including course content and length, is kept on file.	X		
3. Correctional officers who work with inmates receive health-related training at least every 2 years. This training includes, at a minimum:	X		
a. Administration of first aid	X		
b. Cardiopulmonary resuscitation including the use of an automated external defibrillator	X		
c. Acute manifestations of certain chronic illnesses (e.g., asthma, seizures, diabetes)	X		
d. Intoxication and withdrawal	X		
e. Adverse reactions to medications	X		
f. Signs and symptoms of mental illness	X		
g. Dental emergencies	X		
h. Procedures for suicide prevention	X		

AMERICAN OVERSIGHT

i. Procedures for appropriate referral of inmates with medical, dental, and mental health complaints to health staff	X		
j. Precautions and procedures with respect to infectious and communicable diseases	X		
k. Maintaining patient confidentiality	X		
4. A certificate or other evidence of attendance is kept on-site for each employee.	X		
5. While it is expected that 100% of the correctional staff who work with inmates are trained in all of these areas, compliance with the standard requires that at least 75% of the staff present on each shift are current in their health-related training.	X		
6. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
The training program is robust, and documented well. We had access to all lesson plans, power point presentations, attendance records, and test results.			
The following corrective action is required:			
None			

J-C-05 Medication Administration Training (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Correctional or health staff who administer or deliver prescription medication to inmates must be permitted by state law to do so.	X		
2. Staff who administer or deliver prescription medications are trained in matters of:	X		
a. Security	X		
b. Accountability X	X		
c. Common side effects	X		
d. Documentation of administration of medicines	X		
3. The training is approved by the responsible physician or designee and facility administrator or designee.	X		
4. Documentation of completed training and testing is kept on file for staff who administer or deliver medications.	X		
5. All aspects of the standard are addressed by written policy and defined procedures.	X		

AMERICAN OVERSIGHT

Compliance concern(s) or positive findings:
None
The following corrective action is required:
None

J-C-06 Inmate Workers (E). X NOT APPLICABLE	The compliance indicator is:		
	Fully Met	Partially Met	Not Met
1. Inmates do not make treatment decisions or provide patient care.	X		
2. Inmates are not substitutes for health staff, but may be involved in appropriate peer health-related programs or *reentry health care training programs*.	X		
3. Other than those in a reentry health care training program, inmates are not permitted to:			
a. Distribute or collect sick-call slips	X		
b. Schedule appointments	X		
c. Transport or view health records	X		
d. Handle or administer medications	X		
e. Handle surgical instruments and sharps	X		
4. Inmates in peer-health related programs are permitted to:			
a. Assist patients in *activities of daily living* (except for infirmary-level care patients)	X		
b. Participate in a buddy system for nonacutely suicidal inmates after documented training	X		
c. Participate in hospice programs after documented training (see F-07 Care for the Terminally Ill)	X		
5. Patients have the right to refuse care delivered by inmates who are in a reentry health care training program (e.g., dental assistant, nursing assistant).	N/A		
6. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
Inmates are not used for any of the services addressed in this standard			
The following corrective action is required:			
None			

AMERICAN OVERSIGHT

J-C-07 Staffing (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The RHA approves the staffing plan.	X		
2. Prescriber and nursing time must be sufficient to fulfill clinical responsibilities.	X		
3. Responsible physician time must be sufficient to fulfill administrative responsibilities.	X		
4. A documented plan is in place for custody staff to follow when a health situation arises and health staff are not present.	X		
5. The adequacy and effectiveness of the staffing plan are assessed by the facility's ability to meet the health needs of the inmate population.	X		
6. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

Staffing Plan

Number of On-Site Health Staff (Full-Time Equivalents) *Someone working a regular 40 hour week is considered 1.0 FTE. To calculate FTEs, take the total number of hours by employee category and divide by 40 (or the jurisdiction's equivalent of a full-time workweek). For example, someone working 16 hours would be a .40 FTE (16/40 = .40); 5 part-time LPNs working a total of 60 hours would be 1/5 FTE (60/40 = 1.5).*

Employee Category	Main Unit	Satellites		Vacant
		1	2	
Administrator (HSA)	(b)(7)(E)			
Administrative Assistant				
Medical Assistant				
Discharge Planner				
Physician				
Physician Assistant				
Nurse Practitioner				
Registered Nurse				
Licensed Practical Nurse				
Psychiatrist				
Psychologist				
Mental Health Worker				
Dentist				
Dental Assistant/Hygienist				
Pharmacist				
Health Records Personnel				
Lab/X-ray Technician				
EMT or MA				
Assistant HSA				
Infirmary control				
Program manager				

AMERICAN OVERSIGHT

J-C-08 Health Care Liaison (I).	X NOT APPLICABLE		
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. A designated, trained *health care liaison* coordinates health services delivery in the facility and satellite(s) on days when no qualified health care professionals are on-site for a continuous 24-hour period.			
2. The health care liaison is instructed in the role and responsibilities by the responsible physician or designee.			
3. The health care liaison should have a plan that includes contact information for the on-call health staff, ambulance, and other emergency community contacts.			
4. The health care liaison receives instruction in reviewing patient information.			
5. The health care liaison maintains confidentiality of patient information.			
6. Duties assigned to the health care liaison post are appropriately carried out.			
7. All aspects of the standard are addressed by written policy and defined procedures.			
Compliance concern(s) or positive findings:			
Health staff are present 24 hours a day.			
The following corrective action is required:			
None			

J-C-09 Orientation for Health Staff (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The orientation program is approved by the responsible health authority and the facility administrator.	X		
2. The orientation lesson plan is reviewed annually or more frequently, as needed.	X		
3. All health staff receive a *basic orientation* on or before the first day of on-site service.	X		
4. Within 90 days of employment, all health staff complete an *in-depth orientation*.	X		
5. Completion of the orientation program is documented and kept on file.	X		
6. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

AMERICAN OVERSIGHT

D. ANCILLARY HEALTH CARE SERVICES

Standards in this section address the establishment and maintenance of all necessary procedures for the provision of ancillary health care services.

Standard Specific Findings

J-D-01 Pharmaceutical Operations (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The facility complies with all applicable state and federal regulations regarding prescribing, *dispensing*, *administering*, *procuring,* and *disposing* of pharmaceuticals.	X		
2. The facility maintains procedures for the timely procurement, dispensing, *distribution*, *accounting*, and disposal of pharmaceuticals.	X		
3. The facility maintains records as necessary to ensure adequate control and accountability for all medications, except those that may be purchased over the counter.	X		
4. The facility maintains maximum security storage of, and accountability by use for, Drug Enforcement Agency *(DEA)-controlled substances*.	X		
5. Drug storage and medication areas are devoid of outdated, discontinued, or recalled medications, except in a designated area for disposal.	X		
6. A staff or consulting pharmacist documents inspections and consultations of all sites, including satellites, at least quarterly.	X		
7. All medications are stored under proper conditions of sanitation, temperature, light, moisture, ventilation, segregation, and security.	X		
8. Antiseptics, other medications for external use, and disinfectants are stored separately from internal and injectable medications. Medications requiring special storage (e.g., refrigeration) for stability are so stored.	X		
9. An adequate and proper supply of antidotes and other emergency medications (e.g., naloxone, epinephrine) and related information are readily available to the staff.	X		
10. The poison control telephone number is posted in areas where overdoses or toxicologic emergencies are likely.	X		
11. All aspects of the standard are addressed by written policy and defined procedures.	X		

AMERICAN OVERSIGHT

Compliance concern(s) or positive findings:
This facility is to be commended for their pharmacy operations. It is staffed by (b)(7)(E) who hold high rank within the organization, and (b)(7)(E) are the only people with access to the pharmacy. Great detail is paid to security of medication practices, as well as procurement, administration, and dispensing practices, accountability and staff education in medication management .
The following corrective action is required:
None

J-D-02 Medication Services (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Medications are administered or delivered to the patient in a timely and safe manner.	X		
2. Prescription medications are given only by order of a physician, dentist, or other legally authorized individual.	X		
3. A policy identifies the expected time frames from ordering to administration or delivery to the patient and a backup plan if the time frames cannot be met.	X		
4. The responsible physician determines prescribing practices in the facility.	X		
5. If the facility maintains a *formulary*, there should be a documented process for obtaining nonformulary medications in a timely manner.	X		
6. Medications are prescribed only when clinically indicated.	X		
7. Medications are kept under the control of appropriate staff members, except for *self-medication programs* approved by the facility administrator and responsible physician.	X		
8. Inmates are permitted to carry medications necessary for the emergency management of a condition when ordered by a prescriber.	X		
9. Inmates entering the facility on verifiable prescription medication continue to receive the medication in a timely fashion, or justification for an alternate treatment plan is documented.	X		
10. The ordering prescriber is notified of the impending expiration of an order so that the prescriber can determine whether the drug administration is to be continued or altered.	X		
11. All aspects of the standard are addressed by written policy and defined procedures.	X		

AMERICAN OVERSIGHT

Compliance concern(s) or positive findings:
None
The following corrective action is required:
None

J-D-03 Clinic Space, Equipment, and Supplies (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Examination and treatment rooms for medical, dental, and mental health care are available and equipped to meet the needs of the patient population.	X		
2. Pharmaceuticals, medical supplies, and mobile emergency equipment are available and checked in accordance with policy.	X		
3. There is adequate office space with administrative files, secure storage of health records, and writing desks.	X		
4. When laboratory, radiological, or other ancillary services are provided on-site, the designated area is adequate to hold equipment and records.	X		
5. When patients are placed in a waiting area for more than a brief period, the waiting area has seats and access to drinking water and toilets.	X		
6. The facility has, at a minimum, the following equipment, supplies, and materials for the examination and treatment of patients:	X		
a. Hand-washing facilities or alternate means of hand sanitization	X		
b. Examination table	X		
c. A light capable of providing direct illumination	X		
d. Scale	X		
e. Thermometers	X		
f. Blood pressure monitoring equipment	X		
g. Stethoscope	X		
h. Ophthalmoscope	X		
i. Otoscope	X		
j. Transportation equipment (e.g., wheelchair, stretcher)	X		
k. Trash containers for biohazardous materials and sharps	X		
l. Sterilizer for non-disposable medical or dental equipment	X		
m. Appropriate space, equipment, and supplies for pelvic examinations if the facility houses females.	X		

AMERICAN OVERSIGHT

n. Oxygen	X		
o. Automated external defibrillator	X		
p. Pulse oximeter	X		
q. Personal protective equipment (e.g., gloves, eye protection, gowns, masks)	X		
7. Basic equipment required for on-site dental examinations includes, at a minimum:	X		
a. Hand-washing facilities or alternate means of hand sanitization	X		
b. Dental examination chair	X		
c. Examination light	X		
d. Instruments	X		
e. Trash containers for biohazardous materials and sharps	X		
f. A dentist's stool	X		
g. Personal protective equipment	X		
8. The presence of a dental operatory requires the addition of at least:	X		
a. An X-ray unit with developing capability	X		
b. Blood pressure monitoring equipment	X		
c. Oxygen	X		
9. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
The lab equipment and dental operatory include advanced technological equipment, including a state of the art autoclave, three dental chairs and very high-tech X-ray capabilities.			
The following corrective action is required:			
None			

J-D-04 On-Site Diagnostic Services (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The responsible health authority maintains documentation that on-site diagnostic services (e.g., laboratory, radiology) are certified or licensed to provide that service.	X		
2. There is a procedure manual for each on-site diagnostic service, including protocols for the calibration of testing devices to ensure accuracy.	X		

AMERICAN OVERSIGHT

3. Facilities have, at a minimum, multiple-test dipstick urinalysis, finger-stick blood glucose tests, peak flow meters (handheld or other), stool blood-testing material, and in facilities housing women, pregnancy test kits.	X		
4. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-D-05 Medical Diets (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Medical diets are provided per prescriber order and documented in the health record.	X		
2. Orders for medical diets are communicated in writing to dietary staff and include the type of diet, the duration for which it is to be provided, and special instructions, if any.	X		
3. A registered dietitian nutritionist (RDN) or other licensed qualified nutrition professionals, as authorized by state scope of practice laws, documents a review of all medical diets for nutritional adequacy at least annually.	X		
4. The facility has a procedure in place to notify the RDN whenever the medical diet menu is changed.	X		
5. Written documentation of menu reviews includes the date, signature, and title of the dietitian.	X		
6. Workers who prepare medical diets are supervised in diet preparation.	X		
7. When inmates refuse prescribed diets, follow-up nutritional counseling is provided.	X		
8. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
All food service workers are civilian contractors. Inmates do not prepare foods or assist in preparation of food.			
The following corrective action is required:			
None			

J-D-06 Patient Escort (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Patients are transported safely and in a timely manner for medical, dental, and mental health clinic appointments both inside and outside the facility.	X		

AMERICAN OVERSIGHT

2. Patient confidentiality is maintained during transport.	X		
3. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-D-07 Emergency Services and Response Plan (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The facility provides 24-hour emergency medical, dental, and mental health services.	X		
2. Facility staff provide emergency services until qualified health care professionals arrive.	X		
3. The health aspects of the documented emergency response plan are approved by the responsible health authority and facility administrator, and include, at a minimum:	X		
a. Responsibilities of health staff	X		
b. Procedures for triage for multiple casualties	X		
c. Predetermination of the site for care	X		
d. Emergency transport of the patient(s) from the facility	X		
e. Use of an emergency vehicle	X		
f. Telephone numbers and procedures for calling health staff and the community emergency response system (e.g., hospitals, ambulances)	X		
g. Use of one or more designated hospital emergency departments or other appropriate facilities	X		
h. Emergency on-call physician, dental, and mental health services when the emergency health care facility is not nearby	X		
i. Security procedures for the immediate transfer of patients for emergency care	X		
j. Procedures for evacuating patients in a mass disaster	X		
k. Alternate backups for each of the plan's elements	X		
l. Time frames for response	X		
m. Notification to the person legally responsible for the facility	X		

AMERICAN OVERSIGHT

4. *Mass disaster drills* are conducted so that each shift has participated over a 3-year period, including satellites.	X		
5. A health emergency *man-down drill* is practiced once a year on each shift where health staff are regularly assigned, including satellites.	X		
6. The mass disaster and man-down drills are *critiqued*, the results are shared with all health staff, and recommendations for health staff are acted upon.	X		
7. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-D-08 Hospital and Specialty Care (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Evidence demonstrates that there is appropriate and timely access to hospital and specialist care when necessary.	X		
2. When patients are referred for outside care, written or verbal information about the patient and the specific problem to be addressed must be communicated to the outside entity.	X		
3. The health record contains results and recommendations from off-site visits, or attempts by health staff to obtain these results.	X		
4. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

AMERICAN OVERSIGHT

E. PATIENT CARE AND TREATMENT

Standards in this section ensure the delivery of health care from arrival through discharge for health care issues. All care is timely and appropriate and continues until resolution of the problem or until discharge.

Standard Specific Findings

J-E-01 Information on Health Services (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. A sign explaining how to access health services is posted in the intake/processing area.	X		
2. Within 24 hours of their arrival, inmates are provided with written, electronic, or video information about:	X		
a. How to access emergency and routine medical, dental, and mental health services	X		
b. The fee-for-service program, if one exists	X		
c. The grievance process for health-related complaints	X		
3. Procedures ensure that inmates who have difficulty communicating (e.g., foreign speaking, developmentally disabled, illiterate, mentally ill, deaf) understand how to access health services.	X		
4. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-E-02 Receiving Screening (E) ☐ NOT APPLICABLE			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Reception personnel ensure that persons who are unconscious, semiconscious, bleeding, mentally unstable, severely intoxicated, exhibiting symptoms of alcohol or drug withdrawal, or otherwise urgently in need of medical attention are referred immediately for care and *medical clearance* into the facility.	X		
a. If they are referred to a community hospital and then returned, admission to the facility is predicated on written medical clearance from the hospital.	X		
2. A *receiving screening* takes place as soon as possible upon acceptance into custody.	X		

AMERICAN OVERSIGHT

3. The receiving screening form is approved by the responsible health authority and inquires as to the inmate's:	X		
a. Current and past illnesses, health conditions, or special health requirements (e.g., hearing impairment, visual impairment, wheelchair, walker, sleep apnea machine dietary)	X		
b. Past infectious disease	X		
c. Recent communicable illness symptoms (e.g., chronic cough, coughing up blood, lethargy, weakness, weight loss, loss of appetite, fever, night sweats)	X		
d. Past or current mental illness, including hospitalizations	X		
e. History of or current suicidal ideation	X		
f. Dental problems (decay, gum disease, abscess)	X		
g. Allergies	X		
h. Dietary needs	X		
i. Prescription medications (including type, amount, and time of last use)	X		
j. Legal and illegal drug use (including type, amount, and time of last use)	X		
k. Current or prior withdrawal symptoms	X		
l. Possible, current, or recent pregnancy	X		
m. Other health problems as designated by the responsible physician	X		
4. The form also records reception personnel's observations of the inmate's:	X		
a. Appearance (e.g., sweating, tremors, anxious, disheveled)	X		
b. Behavior (e.g., disorderly, appropriate, insensible)	X		
c. State of consciousness (e.g., alert, responsive, lethargic)	X		
d. Ease of movement (e.g., body deformities, gait)	X		
e. Breathing (e.g., persistent cough, hyperventilation)	X		
f. Skin (including lesions, jaundice, rashes, infestations, bruises, scars, tattoos, and needle marks or other indications of drug abuse)	X		
5. The disposition of the inmate (e.g., immediate referral to an appropriate health care service, placement in the general population) is appropriate to the findings of the receiving screening and is indicated on the receiving screening form.	X		

AMERICAN OVERSIGHT

6. Receiving screening forms are dated and timed immediately on completion and include the name, signature and title of the person completing the form.	X		
7. All immediate health needs are identified through the screening and properly addressed by qualified health care professionals.	X		
8. Potentially infectious inmates are isolated from the general inmate population	X		
9. If a woman is pregnant, an opiate history is obtained.	X		
10. If a woman reports current opiate use, she is immediately offered a test for pregnancy to avoid opiate withdrawal risks to fetus.	X		
11. When health-trained correctional personnel perform the receiving screening, they have documented training by the responsible physician or designee in early recognition of medical, dental, and mental health conditions requiring clinical attention.	X		
12. Health staff regularly monitor receiving screenings to determine the safety and effectiveness of this process.	X		
13. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-E-03 Transfer Screening (E).	**X NOT APPLICABLE**		
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Qualified health care professionals review each transferred inmate's health record or summary to ensure continuity of care and medications.			
2. When transferred from an intake facility, inmates who do not have initial medical, dental, or mental health assessments are to be evaluated at the receiving facility in a timely manner.			
3. Documentation in the health record demonstrates continuity of health care and medication administration.			
4. All aspects of the standard are addressed by written policy and defined procedures.			
Compliance concern(s) or positive findings:			
All inmates undergo a receiving screening			
The following corrective action is required:			
None			

AMERICAN OVERSIGHT

J-E-04 Initial Health Assessment (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
Compliance Indicators: Full Population Assessment (1-9) ☐ **NOT APPLICABLE**			
1. Receiving screening results are reviewed within 14 days.	X		
2. All inmates receive an initial health assessment as soon as possible, but no later than 14 calendar days after admission to the facility.	X		
3. If the health assessment is deferred because of a documented health assessment within the last 12 months, documentation in the health record must confirm that the new receiving screening shows no change in health status.	X		
a. If the receiving screening shows a change in health status, the initial health assessment is repeated.	X		
4. The responsible physician determines the components of an initial health assessment.	X		
5. Initial health assessments include, at a minimum:	X		
a. A qualified health care professional collecting additional data to complete the medical, dental, and mental health histories, including any follow-up from positive findings obtained during the receiving screening and subsequent encounters	X		
b. A qualified health care professional recording of vital signs (including height and weight)	X		
c. A *physical examination* (as indicated by the patient's gender, age, and risk factors) performed by a physician, physician assistant, nurse practitioner, or RN.	X		
d. A screening test for latent tuberculosis (e.g., PPD, chest X-ray, laboratory test), unless completed prior to the initial health assessment.	X		
6. All abnormal findings (i.e., history and physical, screening, and laboratory) are reviewed by the provider.	X		
7. Specific problems are integrated into an initial problem list.	X		
8. Diagnostic and therapeutic plans for each problem are developed as clinically indicated.	X		
9. All aspects of the standard are addressed by written policy and defined procedures.	X		

AMERICAN OVERSIGHT

Compliance Indicators: Individual Assessment When Clinically Indicated (10-16)	X	NOT APPLICABLE	
10. Inmates identified with *clinically significant findings* as the result of a comprehensive receiving screening receive an initial health assessment as soon as possible, but no later than 2 working days after admission. To qualify for this option, an institution:			
a. Has 24-hour, 7-day on-site health staff coverage			
b. Allows only licensed health care personnel to conduct a comprehensive receiving screening on all inmates			
c. Includes in its comprehensive receiving screening all elements of the receiving screening standard plus:			
i. Further inquiry into past history and symptoms of chronic diseases			
ii. Finger stick on individuals with diabetes			
iii. Vital signs (including pulse, respirations, blood pressure, and temperature)			
iv. Further inquiry into medication and dosages where possible			
v. A screening test for latent tuberculosis (e.g., PPD, chest X-ray, laboratory test.			
11. If the health assessment is deferred because of a documented health assessment within the last 12 months, documentation must confirm that the new receiving screening shows no change in health status.			
a. If the comprehensive receiving screening shows a change in health status, the initial health assessment is repeated.			
12. The responsible physician determines the components of an initial health assessment.			
13. Individual health assessments include, at a minimum:			
a. A review of comprehensive receiving screening results			
b. A qualified health care professional collecting additional data to complete the medical, dental, and mental health histories, including any follow-up from positive findings obtained during the receiving screening and subsequent encounters			
c. A qualified health care professional recording of vital signs (including height and weight)			
d. A physical examination (as indicated by the patient's gender, age, and risk factors) performed by a provider.			
e. Laboratory and/or diagnostic tests for disease, such as peak flow for asthma patients and blood work for diabetes patients.			
14. Specific problems are integrated into an initial problem list.			

AMERICAN OVERSIGHT

15. Diagnostic and therapeutic plans for each problem are developed as clinically indicated.			
16. All aspects of the standard are addressed by written policy and defined procedures.			
Compliance concern(s) or positive findings:			
The facility only uses the full population screening			
The following corrective action is required:			
None			

J-E-05 Mental Health Screening and Evaluation (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Mental health screening is performed as soon as possible but no later than 14 calendar days after admission.	X		
2. Mental health screening may be conducted by *qualified mental health professionals* or qualified health care professionals who have received documented training.	X		
3. The initial mental health screening includes a structured interview with inquiries into:	X		
a. A history of:	X		
i. Psychiatric hospitalization and outpatient treatment	X		
ii. Substance use hospitalization	X		
iii. Withdrawal seizures	X		
iv. Detoxification and outpatient treatment	X		
v. Suicidal behavior	X		
vi. Violent behavior	X		
vii. Victimization	X		
viii. Special education placement	X		
ix. Cerebral trauma	X		
x. Sexual abuse	X		
xi. Sex offenses	X		
b. The current status of:	X		
i. Psychotropic medications	X		
ii. Suicidal ideation	X		
iii. Drug or alcohol use	X		

AMERICAN OVERSIGHT

iv. Drug or alcohol withdrawal or intoxication	X		
v. Orientation to person, place, and time	X		
c. Emotional response to incarceration	X		
d. A *screening for intellectual functioning* (i.e., mental retardation, developmental disability, learning disability)	X		
4. The patient's health record contains results of the initial screening.	X		
5. Inmates who screen positive for mental health problems are referred to *qualified mental health professionals* for further evaluation.	X		
6. Mental health evaluations of patients with positive screens should be completed within 30 days or sooner if clinically indicated.	X		
7. Patients who require acute mental health services beyond those available on-site are transferred to an appropriate facility.	X		
8. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-E-06 Oral Care (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. *Oral care* under the direction and supervision of a licensed dentist is provided to each inmate.	X		
2. Care is timely and includes immediate access for urgent conditions.	X		
3. *Oral screening* is performed as soon as possible but no later than 14 calendar days from admission.	X		
4. Oral screening may be done by the dentist or qualified health care professional who has received documented training approved or provided by the dentist.	X		
5. Instruction in oral hygiene and preventive oral education are given within 14 days of admission.	X		
6. An initial *oral examination* is performed by a dentist within 12 months of admission.	X		

AMERICAN OVERSIGHT

7. *Oral treatment*, not limited to extractions, is provided according to a treatment plan based on a system of established priorities for care when, in the dentist's judgment, the patient's health would otherwise be adversely affected.	X		
8. Radiographs are used in the development of the treatment plan.	X		
9. Consultation through referral to oral health care specialists is available as needed.	X		
10. Each inmate has access to the preventive benefits of fluorides in a form determined by the dentist to be appropriate for the individual's needs.	X		
11. Extractions are performed in a manner consistent with community standards of care.	X		
12. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
Staffing includes (b)(7)(E) The dental area has three chairs and is very modern, with high-tech equipment.			
The following corrective action is required:			
None			

J-E-07 Nonemergency Health Care Requests and Services (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. All inmates, regardless of housing assignment, are given the opportunity to submit oral or written *health care requests* at least *daily*.	X		
2. The health care requests are picked up daily by health staff.	X		
3. Health care requests are reviewed and prioritized daily by qualified health care professionals, or the health care liaison if applicable.	X		
4. A face-to-face encounter for a health care request is conducted by a qualified health care professional, or the health care liaison (if applicable), within 24 hours of receipt by health staff.	X		
5. Patients are evaluated in a *clinical setting* as indicated.	X		
6. All aspects of the health care request process, from review and prioritization to subsequent encounter, are documented, dated, and timed.	X		
7. The frequency and duration of response to health services requests is sufficient to meet the health needs of the inmate population.	X		
8. All aspects of the standard are addressed by written policy and defined procedures.	X		

AMERICAN OVERSIGHT

Compliance concern(s) or positive findings:
Sick call slips are picked up every morning and each inmate is seen that day. Many inmates are seen within an hour of submitting a health services request.
The following corrective action is required:
None

J-E-08 Nursing Assessment Protocols and Procedures (I). ☐ NOT APPLICABLE	The compliance indicator is:		
	Fully Met	Partially Met	Not Met
1. Nursing assessment protocols and nursing procedures:	X		
a. Are used by nursing personnel	X		
b. Are appropriate to the level of competency and preparation of the nurses who will carry them out	X		
c. Comply with the state practice act in the facility's jurisdiction	X		
2. Protocols and procedures are developed and reviewed annually by the nursing administrator and responsible physician based on the level of care provided in the facility.	X		
3. The protocols and procedures are accessible to all nursing staff.	X		
4. There is documentation of nurses' training in use of nursing assessment protocols and nursing procedures based on the level of care provided by the nurse. Documentation includes:	X		
a. Evidence that new nursing staff are trained and demonstrate knowledge and competency for the protocols and procedures that are applicable to their scope of practice	X		
b. Evidence of annual review of competency	X		
c. Evidence of retraining when protocols or procedures are introduced or revised	X		
5. Nursing assessment protocols for nonemergency health care requests include over-the-counter medications only.	X		
6. Approved assessment protocols pertaining to emergency life-threatening conditions (e.g., chest pain, shortness of breath) may contain prescription medications and must include immediate communication with a provider.	X		
7. Emergency administration of prescription medications requires a provider's order before or immediately after administration.	X		
8. All aspects of the standard are addressed by written policy and defined procedures.	X		

AMERICAN OVERSIGHT

Compliance concern(s) or positive findings:
None
The following corrective action is required:
None

J-E-09 Continuity, Coordination, and Quality of Care During Incarceration (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Patients receive medical, dental, and mental health services from admission to discharge per prescribers' recommendations, orders, and evidence-based practices.	X		
2. Prescriber orders are implemented in a timely manner.	X		
3. If deviations from evidence-based practices are indicated, clinical justification for the alternative treatment plan while in custody is documented.	X		
4. Diagnostic tests are reviewed by the provider in a timely manner.	X		
5. Treatment plans are modified as clinically indicated by diagnostic tests and treatment results.	X		
6. Treatment plans, including test results, are shared with patients.	X		
7. For hospitalization, urgent care, emergency department, or specialty visits:	X		
a. Patients are seen by a qualified health care professional or health care liaison (if appropriate) upon return	X		
b. Recommendations are reviewed for appropriateness of use in the correctional environment	X		
c. A provider is contacted in a timely manner to ensure proper implementation of any orders and to arrange appropriate follow-up	X		
8. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-E-10 Discharge Planning (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. For planned discharges, health staff arrange for a *reasonable supply* of current medications.	X		

AMERICAN OVERSIGHT

2. For patients with serious medical, dental, or mental health needs, arrangements or referrals are made for follow-up services with community prescribers, including exchange of clinically relevant information.	X		
3. All aspects of discharge planning are documented in the health record.	X		
4. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

F. SPECIAL NEEDS AND SERVICES

Standards in this section address patients with special health care needs and establish compliance requirements specific to each health care issue

Standard Specific Findings

J-F-01 Patients with Chronic Disease and Other Special Needs (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Patients with chronic diseases and other *special needs* are identified.	X		
2. The responsible physician establishes and annually approves clinical protocols.	X		
3. Clinical protocols are consistent with *national clinical practice guidelines*.	X		
4. Clinical protocols for the identification and management of chronic diseases or other special needs include, but are not limited to, the following:	X		
a. Asthma	X		
b. Diabetes	X		
c. HIV	X		
d. Hyperlipidemia	X		
e. Hypertension	X		
f. Mood Disorders	X		
g. Psychotic disorders	X		

AMERICAN OVERSIGHT

5. Individualized *treatment plans* are developed by a physician or other qualified provider at the time the condition is identified and updated when warranted.	X		
6. Documentation in the health record confirms that providers are following chronic disease protocols and special needs treatment plans as clinically indicated by:	X		
a. Determining the frequency of follow-up for medical evaluation based on disease control	X		
b. Monitoring the patient's condition (e.g., poor, fair, good) and status (e.g., stable, improving, deteriorating) and taking appropriate action to improve patient outcome	X		
c. Indicating the type and frequency of diagnostic testing and therapeutic regimens (e.g., diet, exercise, medication)	X		
d. Documenting patient education (e.g., diet, exercise, medication)	X		
e. Clinically justifying any deviation from the protocol	X		
7. Chronic illnesses and other special needs requiring a treatment plan are listed on the master problem list.	X		
8. Medical and dental orthoses, prostheses, and other *aids to reduce effects of impairment* are supplied in a timely manner when patient health would otherwise be adversely affected, as determined by the responsible physician or dentist.	X		
9. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-F-02 Infirmary-Level Care (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Policy defines the scope of medical, psychiatric, and nursing care available on-site to patients who need infirmary-level care.	X		
2. Patients who need infirmary-level care are always within sight or hearing of a facility staff member, and a qualified health care professional can respond in a timely manner.	X		

AMERICAN OVERSIGHT

3. The number of qualified health care professionals providing infirmary level care is based on the number of patients, the severity of their illnesses, and the level of care required for each.	X		
4. At least daily, a supervising RN ensures that care is being provided as ordered. Initiation and discontinuation of infirmary-level care is by provider order.	X		
5. The frequency of provider and nursing rounds for patients who need infirmary-level care is specified based on clinical acuity and the categories of care provided.	X		
6. Health records for patients who need infirmary-level care include:	X		
a. Initial clinical note that documents the reason for infirmary-level care and outlines the treatment and monitoring plan	X		
b. Complete documentation of the care and treatment given	X		
7. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
The infirmary is well-staff and equipped with modern equipment. It includes eight functional negative pressure rooms.			
The following corrective action is required:			
None			

J-F-03 Mental Health Services (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Patients' mental health needs are addressed on-site or by referral to appropriate alternative facilities.	X		
2. Outpatient services include, at a minimum:	X		
a. Identification and referral of inmates with mental health needs	X		
b. Crisis intervention services	X		
c. Psychotropic medication management, when indicated	X		
d. Individual counseling	X		
e. Group counseling and/or psychosocial/psychoeducational programs	X		
f. Treatment documentation and follow-up	X		
3. When commitment or transfer to an inpatient psychiatric setting is clinically indicated:	X		
a. Required procedures are followed	X		

AMERICAN OVERSIGHT

b. The transfer occurs in a timely manner	X		
c. The patient is safely housed and adequately monitored until the transfer occurs	X		
4. Outpatients receiving mental health services are seen as clinically indicated and as prescribed in their individual treatment plans.	X		
5. Mental health, medical, and substance abuse services are sufficiently coordinated such that patient management is appropriately integrated, medical and mental health needs are met, and the impact of these conditions on each other is adequately addressed.	X		
6. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-F-04 Medically Supervised Withdrawal and Treatment (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Protocols exist for managing inmates under the influence of or undergoing withdrawal from alcohol, sedatives, opioids, and/or other substances.	X		
2. Protocols for intoxication and withdrawal are approved by the responsible physician annually and are consistent with nationally accepted treatment guidelines.	X		
3. Individuals showing signs of intoxication or withdrawal are monitored by qualified health care professionals using approved protocols as clinically indicated until symptoms have resolved.	X		
4. Individuals being monitored are housed in a safe location that allows for effective monitoring.	X		
5. If the findings from patient monitoring meet the national guidelines to begin prescription medications, *medically supervised withdrawal* is implemented.	X		
6. Medically supervised withdrawal is done under provider supervision.	X		
7. Inmates experiencing severe or progressive intoxication (overdose) or severe alcohol/sedative withdrawal are transferred immediately to a licensed acute care facility.	X		
8. The facility has a policy that addresses the management of inmates on medication-assisted treatment (MAT).	X		

AMERICAN OVERSIGHT

9. Inmates entering the facility on MAT have their medication continued, or a plan for medically supervised withdrawal is initiated.	X		
10. Disorders associated with alcohol and other drugs (e.g., HIV, liver disease) are recognized and treated.	X		
11. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
While all elements of this standard are covered by applicable policy, in practice, any inmate showing symptoms of detoxification is immediately transferred to the hospital. While awaiting transport, CIWA or COWS protocols apply.			
The following corrective action is required:			
None			

J-F-05 Counseling and Care of the Pregnant Inmate (E).	☐ **NOT APPLICABLE**		
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Counseling and assistance are provided and documented in accordance with the pregnant inmate's expressed desires regarding her pregnancy, whether she elects to keep the child, use adoptive services, or have an abortion.	X		
2. Prenatal care includes:	X		
a. Medical examinations by a provider qualified to provide prenatal care	X		
b. Prenatal laboratory and diagnostic tests in accordance with national guidelines	X		
c. Orders and treatment plans documenting clinically indicated levels of activity, nutrition, medications, housing, and safety precautions	X		
d. Counseling and administering recommended vaccines in accordance with national guidelines	X		
3. Pregnant patients with active opioid use disorder receive evaluation upon intake, including offering and providing medication-assisted treatment (MAT) with methadone or buprenorphine.	X		
4. Emergency delivery kits are available in the facility.	X		
5. Custody restraints are not used during labor and delivery.	X		

AMERICAN OVERSIGHT

6. Custody restraints, if used, at other points of pregnancy and the postpartum period shall be limited to handcuffs in front of the body.	X		
7. *Postpartum care* is provided and documented.	X		
8. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-F-06 Response to Sexual Abuse (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The facility has guidelines or protocols regarding the detection, prevention, and reduction of sexual abuse.	X		
2. Health staff are trained in how to:	X		
a. Detect, assess, and respond to signs of sexual abuse and sexual harassment	X		
b. Preserve physical evidence of sexual abuse	X		
3. Emergency contraception is available to female victims of sexual assault.	X		
4. Recent sexual assault is either referred to a community facility for treatment and gathering of evidence, or if these procedures are performed in-house, the following guidelines are used:	X		
a. A history is taken and qualified health care professionals conduct an examination to document the extent of physical injury and to determine whether referral to another medical facility is indicated.	X		
b. Personnel trained in examination of sexual abuse victims will conduct the exam.	X		
c. Whenever possible, the examiner will not have a therapeutic relationship with individuals involved in the incident.	X		
d. With the victim's consent, the examination includes collection of evidence from the victim, using a kit approved by the local legal authority.	X		
5. In all cases, whether the victim is treated in-house or referred to an outside facility, the following activities occur:	X		

AMERICAN OVERSIGHT

a. Prophylactic treatment and follow-up care for sexually transmitted infections or other communicable diseases (e.g., HIV, hepatitis B) are offered to all victims, as appropriate.	X		
b. There is an evaluation by a qualified mental health professional for crisis intervention counseling and follow-up.	X		
c. A report is made to the correctional authorities to effect a separation of the victim from the abuser in their housing assignments.	X		
6. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-F-07 Care for the Terminally Ill (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. A program to address the needs of terminally ill inmates includes *palliative care*.	X		
2. When the responsible physician determines that care in a community setting is medically preferable, a recommendation is made to the appropriate legal authority regarding the patient's transfer or *early release*.	X		
3. If there is an on-site palliative care program:	X		
a. Enrollment is a patient's informed choice	X		
b. Qualified health care professionals working in the program have received training in palliative care techniques	X		
c. Inmate workers or volunteers providing services in the program are properly trained and supervised	NA		
4. *Advance directives*, health care proxies, and "do not resuscitate" (DNR) orders are available when medically appropriate.	X		
5. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
No inmates are involved in this type of program.			
The following corrective action is required:			
None			

AMERICAN OVERSIGHT

G. MEDICAL – LEGAL ISSUES

The standards in this section ensure that health services comply with legal requirements.

Standard Specific Findings

J-G-01 Restraint and Seclusion (E).	*The compliance indicator is:*		
	Fully Met	**Partially Met**	**Not Met**
1. With regard to *clinically ordered restraint* and *seclusion*:			
a. Policies and procedures specify:	NA		
i. The types of restraints or conditions of seclusion that may be used	NA		
ii. When, where, how, and for how long restraints or seclusion may be used	NA		
iii. How proper peripheral circulation is maintained when restraints are used	NA		
iv. That proper nutrition, hydration, and toileting are provided	NA		
b. In each case, use is authorized by a physician or other qualified health care professional where permitted by law, after reaching the conclusion that no other less restrictive treatment is appropriate.	NA		
c. Unless otherwise specified by a physician or other qualified health care professional, health-trained personnel or health staff evaluate any patient placed in clinically ordered restraints or seclusion at an interval of no greater than every 15 minutes and document their findings.	NA		
d. The treatment plan provides for removing patients from restraints or seclusion as soon as possible.	NA		
e. The same types of restraints that would be appropriate for individuals treated in the community are used in the facility.	NA		
f. Patients are not restrained in a position that could jeopardize their health.	NA		
2. With regard to *custody-ordered restraints*:			
a. When restraints are used by custody staff for security reasons, a qualified health care professional is notified immediately in order to:	X		

AMERICAN OVERSIGHT

i. Review the health record for any contraindications or accommodations required, which, if present, are immediately communicated to appropriate custody staff	X		
ii. Initiate health monitoring, which continues at medically appropriate intervals as long as the inmate is restrained. If the inmate's health is at risk, this is immediately communicated to appropriate custody staff.	X		
iii. If health staff are not on duty when custody-ordered restraints are initiated, it is expected that health staff review the health record and initiate monitoring upon arrival	X		
b. If the restrained inmate has or develops a medical or mental health condition, the provider is notified immediately so that appropriate orders can be given.	X		
c. When health staff note use of restraints that may be jeopardizing an inmate's health, this is communicated to custody staff immediately.	X		
3. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
Clinical restraints are not used at this facility.			
The following corrective action is required:			
None			

J-G-02 Segregated Inmates (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Upon notification that an inmate has been placed in segregation:	X		
a. A qualified health care professional reviews the inmate's health record	X		
b. If existing medical, dental, or mental health needs require accommodation, custody staff are notified	X		
c. The review and notification, if applicable, are documented in the health record	X		
2. The health professional's monitoring of a segregated inmate is based on the degree of isolation:	X		
a. Inmates in *solitary confinement* with little or no contact with other individuals are monitored daily by medical staff and at least once a week by mental health staff.	X		

AMERICAN OVERSIGHT

b. Inmates who are segregated and have limited contact with staff or other inmates are monitored 3 days a week by medical or mental health staff.	X		
3. Documentation of segregation rounds is made on individual logs or cell cards, or in an inmate's health record, and includes:	X		
a. The date and time of the contact	X		
b. The signature or initials of the health staff member making the rounds	X		
4. Significant health findings are documented in the inmate's health record.	X		
5. Health staff promptly identify and inform custody officials of inmates who are physically or psychologically deteriorating and those exhibiting other signs or symptoms of failing health.	X		
6. All aspects of the standard are addressed by written policy and defined procedures	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-G-03 Emergency Psychotropic Medication (E).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. The policies on *emergency forced psychotropic medication*:	X		
a. Require licensed provider authorization prior to use	X		
b. Specify when, where, and how the psychotropic medication may be forced	X		
2. When a provider orders psychotropic medication to be forced, he or she documents in the patient's record:	X		
a. The patient's condition	X		
b. The threat posed	X		
c. The reason for forcing the medication	X		
d. Other treatment modalities attempted, if any	X		
e. Treatment plan goals for less restrictive treatment alternatives as soon as possible	X		

AMERICAN OVERSIGHT

3. Appropriate follow-up care is provided when medication is forced.	X		
4. Follow-up documentation is made by nursing staff at least once within the first 15 minutes, then every 30 minutes until transfer to an inpatient setting or the patient no longer requires monitoring.	X		
5. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
While policy is available to govern the elements in this standard, in practice such intervention is not used. Patients requiring this level of care are immediately transferred to the hospital.			
The following corrective action is required:			
None			

J-G-04 Therapeutic Relationship, Forensic Information, and Disciplinary Actions (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Health staff are not involved in the collection of *forensic information*.	X		
2. Health staff do not participate in disciplinary action nor are compelled to provide clinical information solely for the purposes of discipline.	X		
3. Treatments and medications are never withheld as a form of punishment.	X		
4. Segregation and restraints are never clinically implemented as disciplinary action.	X		
5. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-G-05 Informed Consent and Right to Refuse (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. All examinations, treatments, and procedures are governed by *informed consent* practices applicable in the jurisdiction.	X		
2. For procedures and medications that in the community setting would require informed consent, written documentation of informed consent is required.	X		
3. Any health evaluation and treatment refusal is documented and must include the following:	X		

AMERICAN OVERSIGHT

a. Description of the service being refused	X		
b. Evidence that the inmate has been informed of any adverse health consequences that may occur because of the refusal	X		
c. The signature of the patient	X		
d. The signature of a health staff witness	X		
4. If the patient does not sign the refusal form, it is to be noted on the form by a second health or custody staff witness.	X		
5. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
None			
The following corrective action is required:			
None			

J-G-06 Medical and Other Research (I).			
	The compliance indicator is:		
	Fully Met	**Partially Met**	**Not Met**
1. Guidelines are in place that specify:	X		
a. The process for obtaining approval to conduct the research	X		
b. The steps to be taken to preserve the subject's rights	X		
2. When inmates who are participants in a community-based research protocol are admitted to the facility, procedures provide for:	X		
a. Continuation of participation	X		
b. Consultation with community researchers so that withdrawal from the research protocol is done without harming the health of the inmate	X		
3. All aspects of the standard are addressed by written policy and defined procedures.	X		
Compliance concern(s) or positive findings:			
Medical research does not occur at this facility. The policy governs the elements of this standard.			
The following corrective action is required:			
None

Washington, Dc 20536

Dear (b)(6); (b)(7)(C)

The Accreditation Committee of the National Commission on Correctional Health Care (NCCHC) met on August 24, 2018 to review the findings from a recent survey and to consider the accreditation status of Eloy Detention Center. The Committee voted to continue the accreditation of this facility with the following qualification: that compliance be demonstrated with all of the essential standards and at least 85% of the applicable important standards. Compliance should be documented in a report and submitted to NCCHC by January 2, 2019. Enclosed is the accreditation report for the facility, listing cited standards and recommendations for achieving compliance.

The Committee acknowledged the facility's significant level of compliance with a number of NCCHC standards. However, in order to maintain accreditation, it is important that you address the cited standards in a timely manner.

Following receipt of documentation and verification of compliance, a Certificate of Accreditation will be sent to the health services administrator, indicating the facility's accreditation status. Please let us know if we can be of any assistance.

Sincerely,

(b)(6); (b)(7)(C)

(b)(6); (b)(7)(C) RN, CCHP-RN
Vice President, Accreditation

Enclosure

AMERICAN OVERSIGHT

National Commission on Correctional Health Care

To Whom It May Concern:

NCCHC's Accreditation Committee has requested further verification of compliance with one or more standards in the enclosed report. Please take a moment to review the guidelines below for submitting corrective action to NCCHC. Following these guidelines will expedite the processing and review of the documentation. Please allow 60 to 90 days after submission for an update report to be returned to the facility. The accreditation staff are available to answer any questions you may have after reviewing the report and the corrective action requirements. We can be reached at 773-880-1460.

Submission of Corrective Action Guidelines

- **All documentation must be scanned and submitted on a thumb drive or a CD**
- Please organize and clearly label materials by the standard it is intended to address
- Documents should be in Word or PDF format and files should not be "zipped"
- **Please be sure to highlight relevant portions of documents: revisions to policies and procedures, screening/assessment forms, etc.**
- Clearly identify the *name of your facility* on the submission, rather than noting only a state name, corporate vendor, or system headquarters
- If we have not received corrective action by the noted deadline, NCCHC will contact the facility HSA
- Review your submission to ensure it is complete and addresses all standards with compliance issues
- Please send only the information that is requested (e.g., if corrective action requires specific protocols for G-01, send only the requested protocols and not others that may not be required by the standard)
- Remember, evidence of practice is key and implementation of a plan, study results, and other clear documentation of compliance is what NCCHC looks for to assess whether a standard is met
- We recommend that you send materials via FedEx, UPS, or another reliable delivery service that can be tracked
- **Due to the volume of incoming materials, we ask that you verify receipt through your delivery service rather than contact NCCHC**

Please submit the thumb drive or CD to:

AMERICAN OVERSIGHT

Eloy Detention Center, AZ
August 24, 2018

The National Commission on Correctional Health Care is dedicated to improving the quality of correctional health services and helping correctional facilities provide effective and efficient care. NCCHC grew out of a program begun at the American Medical Association in the 1970s. The standards are NCCHC's recommended requirements for the proper management of a correctional health services delivery system. These standards have helped correctional facilities improve the health of their inmates and the communities to which they return, increase the efficiency of their health services delivery, strengthen their organizational effectiveness, and reduce their risk of adverse patient outcomes and legal judgments.

On May 31-June 1, 2018. NCCHC conducted its review for continued accreditation of this facility. We commend the facility staff for their professional conduct, assistance, and candor during the course of our review. The NCCHC's team of experienced certified correctional health professionals utilized NCCHC's 2014 *Standards for Health Services in Jails* as the basis of its health services analysis. This report focuses primarily on issues in need of correction or enhancement. It is most effective when read in conjunction with the *Standards* manual. The information in this report is privileged and confidential and is intended for the sole use of persons addressed.

There are 40 essential standards; 39 are applicable to this facility and 38 (97%) were found to be in compliance. One hundred percent of the applicable essential standards must be met. Our findings include:

Essential Standard Not in Compliance
J-C-01 Credentials

Essential Standard Not Applicable
J-G-03 Infirmary Care

There are 27 important standards; 26 are applicable to this facility and 25 (96%) were found to be in compliance. Eighty-five percent or more of the applicable important standards must be met. Our findings include:

Important Standard Not in Compliance
J-F-02 Medical Diets

Important Standard Not Applicable
J-C-08 Health Care Liaison

Decision: On August 24, 2018, NCCHC's Accreditation Committee awarded the facility Continuing Accreditation with Verification (CAV), *contingent* upon receiving requested compliance verification by January 2, 2019.

AMERICAN OVERSIGHT

Eloy Detention Center, AZ
August 24, 2018

I. Facility Profile

The facility's security classification is: Medium
The facility was built in: 1994
The facility's mission or purpose has not changed since the facility opened.
The facility is located in the Southwestern United States.
The facility's supervision style is: Direct Supervision.
The facility's structural layout is: Modular-Style Housing
There are no major renovations/expansions/closures anticipated.
Total Inmate Count on day of survey: 1440
Total number of adult males on day of the survey: 988
Total number of adult females on day of the survey: 453
Average Daily Population (ADP) for last completed calendar year: 1375
The design-rated capacity for the facility is: 1596
There hasn't been a substantial increase or decrease in the inmate population.
Admissions to the facility arrive: Unscheduled admissions
The total number of admissions to the facility last year was: 7104
The average daily intake to the facility last year was: 19
The total number of correctional staff assigned to this facility is (b)(7)(E)
The usual shift coverage for correctional staff is: (b)(7)(E)
There has been no change in the health care contractor: No
Health services are provided by the IHSC Immigration Health Service Corp
They have provided health services since: 2007
There have not been distinctive events that may affect the delivery of health care.
The facility has no satellites.

II. Survey Method

We toured the clinic area, inmate housing areas, segregation (Special Management Unit or SMU), health services, intake area, food service, library, school, inside activity rooms, and outside exercise area, We reviewed 39 health records; policies and procedures; provider licenses; administrative, health staff, and continuous quality improvement (CQI) meeting minutes; job descriptions; statistical and environmental inspection reports; and health services personnel and CO training records. We interviewed the wardens, health services administrator (HSA), clinical and medical directors, other health, dental and pharmacy staff, intake officer, compliance manager, 17 COs, and 15 inmates selected at random.

AMERICAN OVERSIGHT

Eloy Detention Center, AZ
August 24, 2018

III. Survey Findings and Comments

A. GOVERNANCE AND ADMINISTRATION

The standards in this section address the foundation of a functioning correctional health services system and the interactions between custody and health services authorities. Any model of organization is considered valid, provided the outcome is an integrated system of health care in which medical orders are carried out and documented appropriately and the results are monitored as indicated. Policies and procedures are to include site-specific operating guidelines.

Standard Specific Findings

J-A-01 Access to Care (E). Inmates have access to health care. Patients see a qualified clinician and receive care for their serious medical, mental health, and dental needs. There was no fee-for-service policy at the time of the survey. The standard is met.

J-A-02 Responsible Health Authority (E). The responsible health authority (RHA) is the Immigration Health Services Corp, whose on-site representative is the full-time HSA. Her responsibilities are outlined in a job description. Clinical judgments rest with a designated, full-time responsible physician. The clinical director is also on-site full-time. The standard is met.

J-A-03 Medical Autonomy (E). Qualified health care professionals make decisions regarding inmates' serious medical, dental, and mental health needs in the inmates' best interests. We noted excellent cooperation between custody and medical staff. Administrative decisions are coordinated, if necessary, with clinical needs so that patient care is not jeopardized. The health staff is subject to the same security regulations as other facility employees. The standard is met.

J-A-04 Administrative Meetings and Reports (E). The department heads and warden meet monthly to discuss administrative matters with health staff and detention supervisors. Health staff meets quarterly to discuss health services operations. Attendees include the responsible physician, HSA, mental health, dental, and nursing staff. Statistical reports of health services are completed at least monthly, and are provided to the facility administrator and supervising health services administrators. These are used to monitor trends in the delivery of health care. The standard is met.

J-A-05 Policies and Procedures (E). The health services policy and procedure manual was site-specific. The RHA and responsible physician review the manually annually, most recently on April 14, 2018. Policies such as those for custody, kitchen, or headquarters, do not conflict with health care policies, which we observed to be accessible to health staff. The standard is met.

J-A-06 Continuous Quality Improvement Program (E). The CQI program identifies health care aspects to be monitored, implements and monitors corrective action when necessary, and studies the effectiveness of the corrective action plan. The quality improvement committee, which meets quarterly, consists of the CQI coordinator, responsible physician, clinical director, HSA, facility safety manager, mid-level providers, and medical records, mental health, and dental representatives. Other facility staff attends, if indicated. More than five site-specific studies have been completed annually since the last survey. Recent process studies examined medication administration records (MARs), continuity of care, suicide risk assessment, urgent care, dental care, grievances, asthma, diabetes, and special needs. We confirmed the studies

AMERICAN OVERSIGHT

consisted of a clearly identified problem, a baseline study, a corrective action plan that had been implemented, and results after restudying the effectiveness of the corrective action plan.

The responsible physician is involved in the CQI program. He attends the meetings, reviews charts, and helps determine trends and other areas for study. The program has been reviewed annually for its effectiveness, as well. The standard is met.

J-A-07 Emergency Response Plan (E). The RHA and facility administrator approved the health aspects of the emergency response plan, which included the required elements, on December 20, 2017. Multiple casualty disaster drills have been conducted and spanned each of the three shifts. The scenarios included a kitchen fire, an inmate fight, and a stabbing. Community agencies also participated. We confirmed the drills were critiqued and the results were shared with the health staff.

Man-down events had been documented and confirmed that health staff on each shift has been able to participate annually; we also confirmed these have been critiqued and the results shared with health staff.

Other measures taken at this facility include monthly fire drills. The HSA attends meetings of the Public Health, Safety, and Preparedness Committee. The standard is met.

J-A-08 Communication on Patients' Health Needs (E). Communication between designated correctional and health services staff with regard to inmates' special health needs occurs in writing and verbally. The standard is met.

J-A-09 Privacy of Care (I). Clinical encounters and discussion of patient information are conducted in auditory and visual privacy. Security personnel are present only if the patient poses a probable risk to the safety of the health care professional or others. Privacy screens are utilized, and a chaperone may be present in the exam room, if indicated. The standard is met.

J-A-10 Procedure in the Event of an Inmate Death (I). Since the last survey, there have been two inmate deaths, one due to natural causes and the other a suicide. The mortality reviews consisted of the required elements (including a psychological autopsy for the case of suicide), and were completed within 30 days. We verified that the findings had been shared with the staff. The standard is met.

J-A-11 Grievance Mechanism for Health Complaints (I). The health-related grievance program is integrated with the facility's formal grievance program. Inmates can also discuss their issues informally with a staff member before issuing a written grievance. Grievances are to be answered within five days. We found the responses to be timely. If necessary, inmates may appeal to the warden and a committee to resolve the problem. On an average, ten health-related grievances are filed per month. The standard is met.

AMERICAN OVERSIGHT

B. MANAGING A SAFE AND HEALTHY ENVIRONMENT

The standards in this section address the importance of preventative monitoring of the physical plant. Health staff has a crucial role in identifying issues that could have a negative impact on the health and safety of facility staff and the inmate population if left unaddressed.

Standard Specific Findings

J-B-01 Infection Prevention and Control Program (E). The responsible physician had approved the written exposure control plan, which has been updated annually, most recently on April 25, 2018. Infection control matters are addressed at the CQI, administrative, health and safety committee, and health staff meetings. The compliance officer and infection prevention nurse provide oversight and coordinate infection prevention and control practices at the facility. Patients with communicable diseases are housed in one of the four negative pressure rooms in the health care unit. These rooms are checked daily to assure proper functioning, while a contracted engineering company inspects them annually. Effective ectoparasite control procedures are used to treat infected inmates. The captain inspects the health services areas monthly for environmental concerns. An annual infection control risk assessment is also completed. The standard is met.

J-B-02 Patient Safety (I). The safety management plan/manual guides efforts to prevent adverse and near-miss clinical events, which we confirmed staff can report in a non-punitive environment. Safety issues are regular topics at the meetings of the health and safety and CQI committees, and health staff meetings. The standard is met.

J-B-03 Staff Safety (I). Health staff appeared to work under safe and sanitary conditions. The safety officer oversees all aspects of a safe environment. We also noted that all staff had been trained on workplace violence prevention. The standard is met.

J-B-04 Federal Sexual Abuse Regulations (E). The warden described the facility as compliant with the 2003 Federal Prison Rape Elimination Act (PREA). Written policies and procedures address the detection, prevention and reduction of sexual abuse, and staff undergoes annual training. The assistant deputy warden is responsible for PREA compliance at this facility. We reviewed the results of two federal PREA audits, both of which were successful. The standard is met.

J-B-05 Response to Sexual Abuse (I). Health staff had been trained in how to detect, assesses, and responds to signs of sexual abuse and sexual harassment, including evidence preservation. The Federal Bureau of Prisons' training is utilized during orientation and annual refresher units. Completion is documented electronically and in the employees' personnel files. Victims of sexual assault are referred to a community facility for treatment and evidence collection. In all cases, the victim is evaluated by a qualified mental health professional and a report is made to correctional authorities to effect a housing separation of the victim from the assailant. There have been no substantiated incidents of sexual assault since the last survey. The standard is met.

AMERICAN OVERSIGHT

Eloy Detention Center, AZ
August 24, 2018

C. PERSONNEL AND TRAINING

The standards in this section address the need for a staffing plan adequate to meet the needs of the inmate population, and appropriately trained and credentialed health staff. Correctional officers are to have a minimum amount of health-related training in order to step in during an emergency, if health staff is not immediately available.

Standard Specific Findings

J-C-01 Credentials (E). Health care personnel who provide services to inmates had credentials. Human resources staff is responsible for the monthly, on-going credential verification process, which includes inquiry regarding sanctions or disciplinary actions of state boards, employers, and the National Practitioner Data Bank.

However, the physician assistants were providing services that were not consistent with the jurisdiction's licensure, certification, and registration requirements. All physician assistants need a current supervising physician to practice in this state. The paperwork approved by the Board of Medicine listed the supervising physician as someone no longer employed at the agency. New paperwork needed to be submitted for approval, and was initiated during the survey. **The standard is not met.**

> Corrective action is required for Compliance Indicator #3. Health professionals should not perform tasks beyond those permitted by their credentials. Acceptable documentation includes a plan by the RHA on how this standard has been corrected, including evidence that the physician assistants are properly supervised by a physician employed at the agency. In order to receive accreditation, verification that this standard has been met is required.

J-C-02 Clinical Performance Enhancement (I). A clinical performance enhancement process evaluates the appropriateness of services delivered by all direct patient care clinicians, registered nurses (RN) and licensed practical nurses (LPN). A professional of at least equal training in the same general discipline completes the reviews annually. We reviewed a log listing the names of the individuals being reviewed and the date of their most recent review, which included required elements. We also verified that the findings had been shared with them. If there were to be a concern about an individual's competency, a corrective action plan would be developed with that employee. The standard is met.

J-C-03 Professional Development (E). We confirmed that qualified health care professionals had the required number of continuing education credits. All were current in cardiopulmonary resuscitation (CPR) training. We reviewed a list of completed courses and number of hours to confirm compliance, and noted that the state requires continuing education credits for license renewal for all of the professions employed at the facility. The standard is met.

J-C-04 Health Training for Correctional Officers (E). Correctional staff had the required training in health-related topics and almost all were current in their health-related training. All officers are required to participate in annual training as a condition of employment. We reviewed the training outline (including course content and length), and confirmed it included all the required topics. The standard is met.

AMERICAN OVERSIGHT

J-C-05 Medication Administration Training (E). Nurses administer medications. Medication administration is part of orientation and reviewed annually thereafter. This includes work with an on-the-job preceptor. Both trainings include a written test. We verified that the curriculum has been approved by the HSA and facility administrator, and included matters of security, accountability, common side effects, and documentation. The standard is met.

J-C-06 Inmate Workers (E). Inmate workers do not provide health services, nor are they involved in peer health-related programs. They may work in the kitchen or in a janitorial capacity, but do not handle bio-hazardous materials or clean such spills. We verified they had been trained on use of personal protective equipment, cleaning procedures, and general safety issues. We verified compliance by reviewing the training documentation, which both the inmates and officer signed. The standard is met.

J-C-07 Staffing (I). Full-time equivalent health staff includes:

(b)(7)(E)

At the time of the survey, the following positions were vacant: (b)(7)(E)
The standard is met.

J-C-08 Health Care Liaison (I). Health staff is on site 24 hours a day. The standard is not applicable.

J-C-09 Orientation for Health Staff (I). We confirmed that health staff had received the appropriate orientation by reviewing the completed checklists filed in the employees' files. We also confirmed that the HSA and facility administrator had reviewed the orientation lesson plan at least every two years, most recently on April 25, 2018. The standard is met.

AMERICAN OVERSIGHT

Eloy Detention Center, AZ
August 24, 2018

D. HEALTH CARE SERVICES AND SUPPORT

The standards in this section address the manner in which health services are delivered–the adequacy of space, the availability and adequacy of materials, and, when necessary, documented agreements with community providers for health services.

Standard Specific Findings

J-D-01 Pharmaceutical Operations (E). The medical services includes an on-site pharmacy. Medications are either stored in the pharmacy, or in a locked medication room or locked medication cart. The narcotics are counted every shift and stored in a locked narcotic cabinet in the pharmacy. We verified the accuracy of the counts.

Orders are placed electronically, and dispensed in blister packs for the nursing staff to administer. Stock medications need to be signed out of a locked cabinet and counted each time to ensure adequate control of and accountability of all medications. Pharmaceuticals to be disposed of are secured in the pharmacy. The pharmacist inspects the medication administration areas and carts monthly. We reviewed the results since the last survey.

We observed all medications were stored under proper conditions and an adequate supply of antidotes and other emergency medications was readily available to staff. The pharmacy and therapeutics committee meets quarterly. While a formulary was in place, we verified that providers may order "off formulary," when clinically indicated. The medical director approves the non-formulary medication requests, generally within 24 hours. The standard is met.

J-D-02 Medication Services (E). Medication services are clinically appropriate and provided in a timely, safe, and sufficient manner. Most inmates come to the medication room's pill line. Medications are delivered to those that are housed in segregation. The policy defines the expected time frames from ordering to delivery, and a backup plan if the time frames cannot be met. During regular business hours, inmates will receive medication within 24 hours after the medication is prescribed by a provider. If it is unavailable, it is either taken out of the stock supply or obtained from a local pharmacy.

The responsible physician determines the prescriptive practices at this facility. Medications are prescribed only when clinically indicated. Inmates entering the facility on prescription medication continue to receive it or an acceptable alternative, as clinically indicated. Inmates may keep medications with a low abuse potential on their persons, and they must be reliable to comply with their orders. The standard is met.

J-D-03 Clinic Space, Equipment, and Supplies (I). The clinic area includes a medication room, examination rooms, office space for providers, an emergency room, a two-chair dental operatory, a lab area, a conference room, medical records storage, a waiting area, a pharmacy, an x-ray suite, a nursing station, and two negative pressure rooms. Items subject to abuse are inventoried each shift. We verified the accuracy of the counts, and confirmed that there were adequate supplies and equipment, including three automated external defibrillators. The standard is met.

J-D-04 Diagnostic Services (I). On-site diagnostic services include stool blood-testing material, finger-stick blood glucose tests, peak flow meters, multiple-test dipstick urinalysis, and pregnancy tests. X-rays are available on-site, while an off-site laboratory had been contracted to

AMERICAN OVERSIGHT

process specimens. We observed that lab and x-ray procedure manuals were available. The CLIA waiver was due to expire on October 20, 2018, and the dental x-ray machine was certified on January 30, 2020. The standard is met.

J-D-05 Hospital and Specialty Care (E). Hospitalization and specialty care is available to patients in need of these services. We verified through record review that off-site facilities or health professionals provide a summary of the treatment given and any follow-up instructions. No specialty services were provided on site at the time of the survey. The standard is met.

E. INMATE CARE AND TREATMENT

The standards in this section address the core of a health services program: that all inmates have access to health services, how they are to request emergency and non-emergency care, that health histories are obtained, that assessments and care can be demonstrated to be provided in a timely fashion, and that discharge planning is considered. In short, health care for the inmates is to be consistent with current community standards of care.

Standard Specific Findings

J-E-01 Information on Health Services (E). Inmates receive verbal and written instructions in English and Spanish on access to health care services, and the health-related grievance procedures. Those who speak other languages or who have a hearing impairment can use an interpretation service. We observed an access-to-care sign had been posted at intake. The standard is met.

J-E-02 Receiving Screening (E). New admissions arrive directly from the community. Reception personnel identify those individuals in need of emergency care and refer them immediately to a hospital or mental health facility for care. Their subsequent admission to the facility is predicated on a written medical clearance.

Nurses complete the receiving screening. An RN reviews a screening completed by an LPN. Receiving screening takes place immediately after inmates' arrival. We verified that it includes a disposition and addresses the required areas of inquiry. If a woman reports current opiate use, she is referred immediately for a pregnancy test. All pregnant women who are using opiates are immediately referred to the hospital. Prescribed medications are reviewed and appropriately maintained as clinically indicated. Health staff regularly monitors receiving screenings to determine the safety and effectiveness of the process as part of CQI efforts. The standard is met.

J-E-03 Transfer Screening (E). A transfer screening is performed by qualified health care on all intrasystem transfers immediately upon their arrival. Transfers receive the same intake screening as new admissions, and the record is reviewed to assure continuity-of-care. Medications, any necessary care, and referrals are provided. The review is documented in the EMR. The standard is met.

J-E-04 Initial Health Assessment (E). The full population health assessment has been implemented at this facility. All inmates receive an initial health assessment no later than 14 calendar days after admission. A trained RN or mid-level completes the health assessment, usually one or two days after arrival. We verified that the health assessment consists of the

AMERICAN OVERSIGHT

required elements, including a review of the receiving screening results, and laboratory or diagnostic tests for communicable diseases. TB skin tests are performed on all inmates. The treating clinician reviews all the positive findings. Specific problems are integrated into an initial problem list. Diagnostic and therapeutic plans for each problem are developed as clinically indicated. The standard is met.

J-E-05 Mental Health Screening and Evaluation (E). A trained RN completes the mental health screening during the initial intake screening. We confirmed that it includes the required areas of inquiry. Patients with positive results are referred to qualified mental health professionals for further evaluation. Mental health professionals review all intakes. If the inmate's mental health needs cannot be met at the facility, they are immediately transferred to a mental health facility for treatment. The standard is met.

J-E-06 Oral Care (E). Midlevel providers and trained RNs complete the oral screening during the health assessment. Inmates are instructed in oral hygiene and preventive oral education upon intake, and the dentist completes an oral examination within 12 months of their admission. We found oral care to be timely and confirmed it includes immediate access for urgent or painful conditions. The system of established priorities for oral treatment was not limited to extractions. An oral surgeon is available for referrals and can provide emergency treatment. The standard is met.

J-E-07 Nonemergency Health Care Requests and Services (E). All inmates, regardless of housing assignment, have access to regularly scheduled times for routine health care. The frequency and duration of response to requests for health services was sufficient for the inmate population. The inmate walks in to be seen in sick call in the morning. They can address urgent/emergent needs with an officer, who calls health services, or walk into health services at any time. Nursing guidelines are utilized. If a referral to a provider is indicated, the inmate is scheduled for the next business day, or they are seen immediately, if urgent. The standard is met.

J-E-08 Emergency Services (E). The RHA maintains emergency drugs, supplies, and medical equipment, which are checked each shift. Inmates are taken to the hospital by ambulance or facility van. The emergency facility is ten minutes away. Emergency on-call services were available as well. The standard is met.

J-E-09 Segregated Inmates (I). There were 40 men's segregation cells, and three women's cells, at the time of the survey. Before being segregated, inmates are brought to health care for a face-to-face assessment to determine if there are any contraindications or special accommodations needed.

Conditions of segregation at this facility meet NCCHC's category b. This requires health rounds at least three times per week; in practice, health rounds are conducted daily, and mental health rounds weekly. We verified that the rounds are documented in the medical record, on a door card, and in a logbook. Health staff informs custody officials of the latest scientific information concerning the health effects of segregation during the administrative meetings. The standard is met.

J-E-10 Patient Escort (I). Patients are escorted to on-site and off-site clinical appointments in a timely manner. Transporting officers are alerted to special accommodations, such as medication

AMERICAN OVERSIGHT

administration. The patient's confidentiality is maintained during the period of transfer. The standard is met.

J-E-11 Nursing Assessment Protocols (I). Nursing assessment protocols (Nursing Guidelines) are utilized. These do not include prescription medications, except epinephrine in an emergency, and a subsequent provider's order is obtained. The responsible physician and nursing administrator last reviewed the protocols on April 25, 2018. We verified that the nurses are trained to use the protocols upon hire and when they are revised or introduced. We also verified they undergo annual reviews of competency. Proper use of the protocols has also been a topic of CQI studies. The standard is met.

J-E-12 Continuity and Coordination of Care During Incarceration (E). We confirmed that continuity of care is appropriate. Clinician orders are evidence-based and implemented in a timely manner. Deviations are clinically justified, documented and shared with the patient. The clinician review diagnostic tests in a timely manner, and they are appropriately acted upon. Treatment plans are modified as clinically indicated as well.

Patients receive treatment and diagnostic tests ordered by clinicians, who discuss such care with them. When a patient returns from the emergency room, urgent care or hospitalization, protocols are followed in accordance with the standard. The clinicians review and act upon specialty consultants' recommendations in a timely manner.

The responsible physician determines the frequency of periodic health assessments on the basis of protocols promulgated by nationally recognized professional organizations (Bureau of Prisons). Chart reviews were of sufficient frequency and number to assure that clinically appropriate care is ordered and implemented by attending health staff. The standard is met.

J-E-13 Discharge Planning (E). The nursing staff and HSA are involved in discharge planning, which includes arranging for a two-week to 30-day supply of medication, and appointments for those inmates requiring follow-up after discharge. All inmates also leave with a discharge summary, and a list of referral sources. The standard is met.

F. HEALTH PROMOTION AND DISEASE PREVENTION

The standards in this section address health and lifestyle education and practices, as well as patient-specific instruction during clinical encounters.

Standard Specific Findings

J-F-01 Healthy Lifestyle Promotion (I). The RHA utilizes the National Health Education Manual for inmate health education. We observed a variety of health-related brochures and pamphlets were generally available. Individual health education and instruction in self-care was documented in the health record during clinical encounters. The standard is met.

J-F-02 Medical Diets (I). At the time of the survey, approximately 185 medical diets were being prepared for patients with specific dietary needs. Inmates who refuse prescribed diets receive receive follow up nutritional counseling. Workers who prepare medical diets are trained and supervised while doing so. A "heart healthy" diet was being served at the time of the survey.

AMERICAN OVERSIGHT

However, a registered dietitian reviews the medical diet menus annually, most recently on June 29, 2017, rather than semi-annually. **The standard is not met.**

> Corrective action is required for Compliance Indicator #2. A registered or licensed dietitian should review medical diets for nutritional adequacy at least every six months, and whenever a substantial change in the menu is made, through a documented on-site visit or by written consultation. The following is acceptable documentation for compliance: (a) evidence that reviews will take place at least every six months; and (b) a copy of the most recently dietitian approved and signed medical diet menu. Corrective action is required in order to meet this standard.

J-F-03 Use of Tobacco (I). Smoking is prohibited at this facility. We observed literature on the hazards of tobacco to be available to the inmates. The standard is met.

G. SPECIAL NEEDS AND SERVICES

The standards in this section address the needs of inmates with chronic conditions or other health conditions that require a multidisciplinary approach to treatment. These special needs include mental health issues.

Standard Specific Findings

J-G-01 Chronic Disease Services (E). Care as reflected in the health record appeared in compliance with current community standards. The responsible physician had established and annually approves clinical protocols, consistent with national clinical practice guidelines, which we verified included the nine required disease entities. The protocols were last reviewed in March 2018. We verified that the guidelines were in use at the time of the survey.

The treatment plans included all the appropriate elements: frequency of follow-up, monitoring condition and status and taking action as indicated; type and frequency of diagnostic testing and therapeutic regiments; instruction on diet, exercise, medication and adaptation to correctional environment, and clinical justification of deviation from the protocols. Chronic illnesses were listed on the problem list, and we confirmed that the RHA maintains a list of chronic care patients. The standard is met.

J-G-02 Patients With Special Health Needs (E). When required by the health condition(s) of the patient, multi-disciplinary treatment plans define the individual's care, and include the frequency of follow-up; type and frequency of diagnostic testing and therapeutic regimens; and instructions about diet, exercise, medication, and adaptation to the correctional environment. Special needs were listed on the problem list, and we confirmed that the RHA maintains a list of special needs patients. The standard is met.

J-G-03 Infirmary Care (E). There was no infirmary at the time of the survey. The standard is not applicable.

J-G-04 Basic Mental Health Services (E). Patients with mental health needs are either followed by the psychiatrist every 30 days or as clinically indicated, if they are on psychotropic medication, or by mental health workers if they are not. When clinically appropriate, a patient's commitment or transfer to an inpatient psychiatric setting is timely (within hours), and

AMERICAN OVERSIGHT

accomplished according to procedures. Health services are integrated for patient management and to ensure their medical and mental health needs are met.

Basic on-site outpatient services include the identification and referral of inmates with mental health needs, crisis intervention services, psychotropic medication management when indicated, individual counseling, group counseling, psychosocial/psychoeducational programs, and treatment documentation and follow-up. The standard is met.

J-G-05 Suicide Prevention Program (E). The suicide prevention program addresses each of the 11 key components as described by the standard. The RHA has approved the training curriculum for staff. Treatment plans address suicidal ideation and recurrence. Patient follow-up occurs as clinically indicated. Mental health staff must see the inmate within 24 hours of his or her placement on precautions, which only mental health staff can continue.

The suicide prevention program was revised in 2016, after a completed suicide. All inmates are placed on one-on-one observation, whether considered acute or non-acute. An officer also documents observations at staggered intervals. Acutely suicidal inmates are placed on constant observation in a "safe cell," until they can be transferred to a mental health facility.

The whole suicide program was revised in 2016, after a successful suicide. All inmates are placed on constant monitoring, and the officer documents checks at staggered intervals not exceeding 15 minutes. If an inmate were to make an attempt, they would be transferred to a more appropriate/therapeutic setting. The standard is met.

J-G-06 Patients with Alcohol And Other Drug Problems (AOD) (E). Disorders associated with AOD, such as HIV and liver disease, are recognized and treated. Correctional staff had been trained to recognize inmates' AOD problems. Medical, mental health, and substance abuse staff communicates and coordinates with each other regarding patients' AOD care. Self-help substance abuse programs, individual counseling and group therapy are offered on site as well. The standard is met.

J-G-07 Intoxication and Withdrawal (E). Detoxification and withdrawal is not provided at this facility. Any inmate requiring detoxification or experiencing withdrawal is assessed (using protocols and a screening tool), and would be sent to the hospital for care. The inmate would be discharged back to the facility when they are stable.

If a pregnant inmate is admitted with opioid dependence, she is transferred to the hospital for assessment and treatment. The facility's policy addresses the management of inmates, including pregnant inmates, on methadone or similar substances. Arrangements would be made to transfer the pregnant inmate to another facility for appropriate care and follow-up.

The protocols were lasted approved by the physician on July, 20, 2017. The standard is met.

J-G-08 Contraception (I). Emergency and continuing contraception is offered and can be obtained from the pharmacy. We observed written information about contraception methods and community resources to be available. The standard is met.

J-G-09 Counseling And Care Of The Pregnant Inmate (E). Pregnant inmates are housed at this facility. Counseling (by an off-site provider) and assistance are offered in accordance to the

AMERICAN OVERSIGHT

inmate's wishes. Their pre-natal and postpartum care is provided by an off-site obstetrical/gynecological specialist. Pregnant inmates would be transferred to the hospital to deliver. At the time of the survey, there were four pregnant women. The standard is met.

J-G-10 Aids to Impairment (I). We observed inmates using wheelchairs, canes, hearing aids, and other forms of assistance, during the tour. Health records documentation also indicated aids are provided as necessary. Nothing had been contraindicated for security reasons. Patients' special needs accommodations are communicated to custody staff in writing. The standard is met.

J-G-11 Care for the Terminally Ill (I). Although it would be rare for a terminally ill patient to be held at this facility, procedures were in place to make the appropriate accommodations, including discharge or transfer to a more appropriate setting. We confirmed there were policies and procedures to direct staff on caring for this type of patient. The standard is met.

H. HEALTH RECORDS

The standards in this section address the importance of accurate health record documentation, health record organization and accessibility, and need to ensure that medical and mental health information is communicated when those records are separate documents.

Standard Specific Findings

J-H-01 Health Record Format and Contents (E). Inmates' medical and mental health records are integrated into the electronic medical record, which is available to all health staff. We verified that all the essential elements were present. The standard is met.

J-H-02 Confidentiality of Health Records (E). Health records are password-protected, with backups secured in the medical records room. Health and health staff both had documented instruction in maintaining patient confidentiality as part of orientation and annually thereafter. If non-health staff transports health records, the records are sealed in an envelope. Custody staff also signs a confidentiality statement. The standard is met.

J-H-03 Management of Health Records (I). When an inmate is transferred to another facility, copies of the current health record or a comprehensive health summary accompanies him/her. The system maintains all medical records indefinitely, and we confirmed they can be re-activated when the inmate re-enters the system. The standard is met.

J-H-04 Access to Custody Information (I). Qualified health care professionals have access to information in the inmate's custody record when such information may be relevant to the inmate's health and course of treatment. The standard is met.

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-001449

Eloy Detention Center, AZ
August 24, 2018

I. MEDICAL-LEGAL ISSUES

The standards in this section address the most complex issues facing correctional health care providers. While the rights of inmate-patients in a correctional setting are generally the same as those of a patient in the free world, the correctional setting often adds additional considerations when patient care is decided. The rights of the patient, and the duty to protect that patient and others, may conflict; however, ethical guidelines, professional practice standards, and NCCHC's standards are the determining factors regarding these interventions and issues.

Standard Specific Findings

J-I-01 Restraint and Seclusion (E). Neither clinical nor custody restraints are used at this facility. Anyone requiring restraints would be sent to another facility.

Seclusion has been used twice in the last three years. The inmate would be placed on a constant observation and assessed by a nurse or mental health staff member every 15 minutes (in addition to an initial assessment). The inmate must be of harm to himself or others for seclusion to be implemented; s/he is removed from seclusion as quickly as possible. The standard is met.

J-I-02 Emergency Psychotropic Medication (E). Such intervention had been implemented once since the last survey. It was administered as a one-time dose. We verified that the documentation was appropriate. The policy and procedure were appropriate. The standard is met.

J-I-03 Forensic Information (I). Health staff does not collect forensic information; rather, the patient is sent off-site for collection. The standard is met.

J-I-04 End-of-life Decision Making (I). Patients approaching the end of life (less than one year to live) are permitted to execute advance directives, and after being counseled as to the meaning and consequences of such actions. This is documented in the health record. Such directives are reviewed by the deputy director of clinical services. In practice, terminally ill patients are not housed at this facility; they would be discharged or transferred to another facility. The standard is met.

J-I-05 Informed Consent and Right to Refuse (I). All informed consents and refusals of care are documented and consist of the required elements, including the signatures of the patient and a health staff witness. Patients are counseled as to possible adverse consequences to health that may occur as a result of a refusal. If the inmate refuses to sign a refusal form, two staff members (one of whom must be from health services) would sign as witnesses. The standard is met.

J-I-06 Medical and Other Research (I). Medical research does not take place at this facility. If an inmate were to arrive who was part of a community-based research project, the case would be reviewed by the Institutional Review Board to consider his or her continued participation. Federal regulations would guide the decision. The standard is met.

AMERICAN OVERSIGHT

TRINITY SERVICES GROUP, INC

Nutrition Adequacy Statement
Eloy Detention Center

The cycle menu, dated June 29, 2017, for this facility was developed by Trinity Services Group, based on specifications and guidelines from CoreCivic, to be served as the regular menu in the adult population. The menu has been reviewed, analyzed and approved, using the NetMenu Nutritional Analysis program from the CBORD Group, Inc. of Ithaca, New York. Per standard nutritional analysis protocol, the menu was averaged in seven-day periods.

The analysis confirms that the menu provides a nutritionally adequate diet for sedentary and/or incarcerated adults. As written and analyzed, the regular menu and common fare alternate menu satisfies the Dietary Reference Intakes/EARs recommendations published by the National Academy of Sciences-National Research Council for major nutrients recommended for adults. The menu also meets ACA standards for basic nutritional requirements.

Some nutrient values may vary based on the nutrient data available from manufacturers, the nutrient listings available under FDA labeling requirements, and the specified items used for analysis.

The therapeutic diets for this facility have been developed, using the master general population menu as a base and modified as necessary to meet the criteria for each diet, have been reviewed. The planned diet menus meet the requirements, as outlined in the approved diet manual, for the therapeutic diets utilized at this facility.

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-001453

LaSalle Detention Center, LA
October 23, 2018
UPDATE REPORT

The National Commission on Correctional Health Care is dedicated to improving the quality of correctional health services and helping correctional facilities provide effective and efficient care. NCCHC grew out of a program begun at the American Medical Association in the 1970s. The standards are NCCHC's recommended requirements for the proper management of a correctional health services delivery system. These standards have helped correctional facilities improve the health of their inmates and the communities to which they return, increase the efficiency of their health services delivery, strengthen their organizational effectiveness, and reduce their risk of adverse patient outcomes and legal judgments.

On July 19-21, 2017 NCCHC conducted its review for continuing accreditation of the LaSalle Detention Center under the NCCHC *2014 Standards for Health Services in Jails*. On November 5, 2017, NCCHC granted continuing accreditation with verification. The RHA subsequently submitted corrective action that brought the facility into compliance with additional standards. This report focuses primarily on issues that required corrective action for compliance with the standards and is most effective when read in conjunction with NCCHC's reports of November 5, 2017 and May 9, 2018.

There are 40 essential standards; 39 are applicable to this facility and 35 (90%) were found to be in compliance. One hundred percent of the applicable essential standards must be met. ***The LaSalle Detention Center has not met this condition.***

Essential Standards Not in Compliance
J-A-04 Administrative Meetings and Reports
J-A-07 Emergency Response Plan
J-E-04 Initial Health Assessment
J-E-07 Nonemergency Health Care Requests and Services

Essential Standard Not Applicable
J-G-03 Infirmary Care

There are 27 important standards; 26 are applicable to this facility and 24 (92%) were found to be in compliance. Eighty-five percent or more of the applicable important standards must be met. **The LaSalle Detention Center has met this condition.**

Important Standards Not in Compliance
J-C-02 Clinical Performance Enhancement
J-C-09 Orientation for Health Staff

Important Standard Not Applicable
J-C-08 Health Care Liaison

Decision: NCCHC's Accreditation Committee voted to continue the facility's Continuing Accreditation with Verification (CAV) status, contingent upon receiving requested compliance verification by November 26, 2018.

AMERICAN OVERSIGHT

J-A-04 Administrative Meetings and Reports (E). The warden, AFOD, and HSA meet monthly to discuss administrative matters. We were informed that health staff meet monthly to discuss health services operations but were unable to validate this by evidence of staff meeting minutes. Attendees include the responsible physician, HSA, mental health staff, and nursing staff. Statistical reports of health services are made at least monthly and provided to headquarters staff, but not to the facility administrator. These reports are used to monitor trends in the delivery of health care. The standard is not met.

Corrective action is required for Compliance Indicator #3. Health staff meetings, held monthly or more frequently, give the health staff an opportunity to receive current information on all aspects of the institution's health care delivery.(b)(5)

(b)(5)

Corrective action is required for Compliance Indicator #4. Statistical reports of health services should be made at least monthly and provided to the facility administrator. The

(b)(5)

In March 2018, the RHA submitted several meeting minutes and attendance rosters dated 2014, 2015, 2016, 2017, and 2018 (one set of meeting minutes for the latter three years). Dating on the documentation was inconsistent, and it was difficult to confirm exact dates. The submission was not sufficient to confirm that health staff consistently meet monthly, as required.

The RHA also submitted "TRIAD" meeting minutes (indicating attendance by the warden), dated November 2017 and January and February 2018 where the monthly statistics were discussed. Further corrective action is required. The standard is not met.

In July 2018, the RHA submitted evidence of monthly health staff meetings from October 2017 through May 2018 (including lists of attendees). Additional "TRIAD" meeting minutes, or other documentation to confirm the facility administrator receives monthly health services statistics was not evident, and required for full compliance. **The standard is not met.**

J-A-07 Emergency Response Plan (E). Two multiple casualty disaster drills have been held annually so that over the course of three years, staff on each shift has had an opportunity to participate (health staff works 12-hour shifts). The scenarios included: a tornado hitting the facility involving community agencies and an actual tornado that passed by the facility. The drills have been critiqued and the results were shared with the health staff. Man-down drills have been held so that health staff on each shift has been able to participate annually. The man-down drills have been critiqued and the results were shared with all health staff.

AMERICAN OVERSIGHT

The RHA has approved the health aspects of the emergency response plan, which includes the required elements, although the facility administrator had not. The standard is not met.

Corrective action is required for Compliance Indicator #1. (b)(5)

(b)(5)

In March 2018, the RHA submitted a documented entitled 2016 Emergency Plan, which appears to be an executive plan and summary of a tornado strike. It is unclear how this is intended to address the facility's administrator's approval of the plan. The standard is not met.

In July 2018, the RHA submitted the June 2018 General Emergency Response Plan, which, while it did include a brief section entitled "Emergency Medical Aid Station," generally addresses security concerns during an emergency event. The RHA also submitted a memo (initialed by the warden) stating that the warden was aware of ICE Health Service Corp.'s policies and procedures regarding medical care, to include medication administration and emergency response plan. An emergency plan that addresses the requirements of the standard, and has been approved by the facility administrator as well as the responsible health authority, is required for full compliance. **The standard is not met.**

J-C-02 Clinical Performance Enhancement (I). A clinical performance enhancement process evaluates the appropriateness of services delivered by all direct patient care clinicians, registered nurses (RN) and licensed practical nurses (LPN). A professional of at least equal training in the same general discipline completes the reviews annually. We reviewed a log listing the names of the individuals being reviewed and the date of their most recent review, which included required elements; however, eight of the 11 registered nurses and five of the 10 licensed practical nurses had no evidence of a current review. The standard is not met.

Corrective action is required for Compliance Indicator #1. (b)(5)

(b)(5)

In March 2018, the RHA indicated the nurse manager resigned before all the peer reviews were completed; peer reviews for the nursing staff were underway for the new fiscal year at the time of the submission. The submission included a list of reviews completed in 2016, but nothing indicating any reviews were completed in 2017. Verification that all nurses have received a clinical

AMERICAN OVERSIGHT

performance review, with all the required components (name and credentials of the reviewer and verification the results had been shared with the nurse in question) is required for full compliance. The standard is not met.

No further corrective action was received. **The standard is not met.**

J-C-05 Medication Administration Training (E). Nursing staff administer medications. They are trained upon hire and review it annually thereafter. We confirmed it includes matters of security, accountability, and documentation.

However, while the RHA has approved it, the facility administrator has not. The training material also does not address side effects. The standard is not met.

Corrective action is required for Compliance Indicator #1 and #2. (b)(5)

(b)(5)

In March 2018, the RHA indicated that the medication administration training is developed and approved at IHSC headquarters. A copy of the policy and procedure was provided and includes the requirements for training.

However, the training content did not address common side effects and there was no evidence of approval by the facility administrator. Further corrective action is required. The standard is not met.

In July 2018, the RHA submitted the power point outline from ICE (which includes common side effects), and the memo from ICE Health Services Corp (see J-A-07 Emergency Response Plan). **The standard is now met.**

J-C-09 Orientation for Health Staff (I). We confirmed that health staff has received the appropriate orientation by reviewing the computer attendance log.

However, there was no evidence of the last review or approval by the RHA and facility administrator. The standard is not met.

Corrective action is required for Compliance Indicators #1 and #2. (b)(5)

(b)(5)

AMERICAN OVERSIGHT

In March 2018, the RHA indicated at all employees complete 80 hours of training, which is documented on a checklist and filed appropriately. The RHA also indicated that refresher training has been requested on various correctional aspects. However, approval of the training by the RHA and facility administrator, and a plan to ensure it is reviewed and approved at least every two years was not evident. The standard is not met.

No further corrective action was received. **The standard is not met.**

J-E-04 Initial Health Assessment (E). The full population has been implemented at this facility. All inmates receive an initial health assessment generally within 10 days of admission. A trained registered nurse or nurse practitioner completes the hands-on portion of the health assessment. The health assessment consists of all the required elements, including laboratory or diagnostic tests for communicable diseases when indicated. The treating clinician reviews all positive findings. Specific problems are integrated into an initial problem list. Diagnostic and therapeutic plans for each problem is developed as clinically indicated.

However, a review of the receiving screening results was not consistently documented. The standard is not met.

Corrective action is required for Compliance Indicator #2a. (b)(5)

(b)(5)

In March 2018, the RHA indicated that the compliance officers reviews charts to ensure that the screening results are read and used by providers during their examinations, and submitted a sample indicating the prescreening results had been reviewed. It was not clear what corrective action was taken regarding this issue, nor was a CQI study submitted as required. The standard is not met.

In July 2018, the RHA submitted the ICE Health Service Corp's intake screening and physical examination/health appraisal forms (both blank), and what was described as a CQI study (dated fourth quarter of 2017) of 10 records for 13 measures; however, the measures were not identified, so compliance with review of receiving screening results during the health assessment could not be verified. The latter form does include space to document that the intake screening was reviewed. Further corrective action is required to clarify what corrective action was taken, as well as a CQI study confirming its effectiveness regarding health assessment review of intake screenings. **The standard is not met.**

J-E-06 Oral Care (E). A trained registered nurse or nurse practitioner completes the oral screening during intake and the initial health assessment, generally within 10 days. The dentist completes an oral examination within 12 months of inmates' admission. Oral care is timely and it includes immediate access for urgent or painful conditions. The dentist has developed a system of established priorities for oral treatment, not limited to extractions.

AMERICAN OVERSIGHT

However, we could not confirm that inmates are instructed in oral hygiene and preventive oral education within one month of admission. The standard is not met.

Corrective action is required for Compliance Indicator #2. (b)(5)

(b)(5)

In March 2018, the RHA submitted the handout which includes dental care instructions, but a CQI study confirming that this information is consistently provided to inmates upon intake, or at least within 30 days of admission, was not included. The standard is not met.

In July 2018, the RHA submitted a CQI study (dated fourth quarter of 2017) of 10 records, which indicated that all 10 had documented health education regarding dental hygiene. **The standard is now met.**

J-E-07 Nonemergency Health Care Requests and Services (E). All inmates, regardless of housing assignment, have access to routine health care. Inmates sign up in their housing units; the sign-up sheet consists of their name and identification number and is retrieved at 5:00 a.m. Sick call takes place in either the main medical clinic or the dormitory exam rooms.

When a provider visit is necessary, clinical need dictates timing. However, triage occurs when the inmate is seen, which may take up to three days or more after signing up for sick call (a day's sick call list oftentimes is not completed the same day, and "rolled over" to the next day, thereby creating a backlog of requests that are not triaged until the inmate is actually seen. The standard is not met.

Corrective action is required for Compliance Indicator #1 and #4. (b)(5)

(b)(5)

In March 2018, the RHA indicated that additional staffing has enabled the backlog to be eliminated and all detainees to be seen. Dedicated sick call nurses will be assigned to make rounds to every dorm, every day, as well. The submission included a log that consisted of some of the required elements (inmate name/number, date received, date seen, and nurses' comments). While the log indicated that inmates were seen the same day or next as the request was received, it could not

AMERICAN OVERSIGHT

be determined when the request was submitted. Further, the nurses' comments column, while generally seeming to indicate the nature of the request, was blank in a number of examples. Finally, the submitted log documented for only a few days in February 2018 (February 2, and February 26-28, for a total of approximately a dozen entries). Further corrective action is required, including a 60-day log that consists of all the required elements. The standard is not met.

In July 2018, the RHA submitted evidence of staff training on sick call processes (although it was not dated), and sick call logs. However, it was difficult to confirm consistent compliance; the individual pages were dated at the top (although frequently not clearly due to holes having been punched in the same location in order to file the pages in a binder), and it is unclear what date this signifies. The table itself consisted of the same elements as described in the March 2018 submission of corrective action; however, there were numerous blanks for "date received," so it was difficult to assess the timeliness of the sick call process. Further logs (at least 30 days) consisting of the required elements (inmate number, date of request, nature of complaint, date of triage, and date of face-to-face assessment by qualified health care professional) should be submitted. **The standard is not met.**

Washington, DC 20536

Dear (b)(6); (b)(7)(C)

Congratulations! The Accreditation Committee of the National Commission on Correctional Health Care (NCCHC), during its meeting on April 22, 2018, voted to continue to accredit Houston Contract Detention for its compliance with NCCHC's *Standards for Health Services in Jails*. Please find the accreditation report. Your health services administrator will also receive a copy of the accreditation report and the Certificate of Accreditation.

NCCHC congratulates you on your achievement and wishes you continued success in the future. It is anticipated that the next scheduled on-site survey of the facility will occur sometime prior to February 1, 2021. If we can be of any assistance to you, please feel free to contact us.

Sincerely,

(b)(6); (b)(7)(C)

AMERICAN OVERSIGHT

Houston Contract Detention, TX
April 22, 2018

The National Commission on Correctional Health Care is dedicated to improving the quality of correctional health services and helping correctional facilities provide effective and efficient care. NCCHC grew out of a program begun at the American Medical Association in the 1970s. The standards are NCCHC's recommended requirements for the proper management of a correctional health services delivery system. These standards have helped correctional facilities improve the health of their inmates and the communities to which they return, increase the efficiency of their health services delivery, strengthen their organizational effectiveness, and reduce their risk of adverse patient outcomes and legal judgments.

On February 12- 14, 2018, NCCHC conducted its review for continuing accreditation of this facility. We commend the facility staff for their professional conduct, assistance, and candor during the course of our review. The NCCHC's team of experienced certified correctional health professionals utilized NCCHC's 2014 *Standards for Health Services in Jails* as the basis of its health services analysis. This report focuses primarily on issues in need of correction or enhancement. It is most effective when read in conjunction with the *Standards* manual. The information in this report is privileged and confidential and is intended for the sole use of persons addressed.

There are 40 essential standards; 39 are applicable to this facility and 39 (100%) were found to be in compliance. One hundred percent of the applicable essential standards must be met. Our findings include:

Essential Standards Not in Compliance
None

Essential Standards Not Applicable
J-G-03 Infirmary Care

There are 27 important standards; 26 are applicable to this facility and 25 (96%) were found to be in compliance. Eighty-five percent or more of the applicable important standards must be met. Our findings include:

Important Standard Not in Compliance
J-F-02 Special Diets

Important Standards Not Applicable
J-G-08 Health Care Liaison

Decision: On April 22, 2018, NCCHC's Accreditation Committee awarded the facility Accreditation.

AMERICAN OVERSIGHT

Houston Contract Detention, TX
April 22, 2018

I. Facility Profile

The facility's security classification is: Medium
The facility was built in: April 1984 and expansion was completed July 2005
The facility's mission or purpose has not changed since the facility opened.
The facility is located in the Southwestern United States.
The facility's supervision style is: Direct Supervision.
The facility's structural layout is: Dormitory-Style Housing
No major renovations/expansions/closures were anticipated at the time of the survey.
Total Inmate Count on day of survey: 918
Total number of adult males on day of the survey: 767
Total number of adult females on day of the survey: 151
Average Daily Population (ADP) for last completed calendar year: 904
The design-rated capacity for the facility is: 1000
There hasn't been a substantial increase or decrease in the inmate population.
Admissions to the facility arrive: unscheduled and at any time of day.
The total number of admissions to the facility last year was: unavailable
The average daily intake to the facility last year was: unavailable
The total number of correctional staff assigned to this facility is: unavailable
The usual shift coverage for correctional staff is: unavailable
There has been no change in the health care contractor: No
Health services are provided by Immigration and Customs Enforcement Health Service Corps (IHSC)
They have provided health services since: 1984
There have not been distinctive events that may affect the delivery of health care.
The facility has no satellites.

II. Survey Method

We toured the clinic area, detainee housing areas, segregation (Special Management Unit), health services, intake area, food service, library, school, inside activity rooms, and outside exercise area, We reviewed 20 health records; policies and procedures; provider licenses; administrative, health staff, and continuous quality improvement (CQI) meeting minutes; job descriptions; statistical and environmental inspection reports; and health services personnel and CO training records. We interviewed the warden, health services administrator (HSA),facility medical director, other health, dental, mental health, and pharmacy staff, intake officer, laundry officer, three COs, and nine detainees selected at random.

AMERICAN OVERSIGHT

Houston Contract Detention, TX
April 22, 2018

III. Survey Findings and Comments

A. GOVERNANCE AND ADMINISTRATION

The standards in this section address the foundation of a functioning correctional health services system and the interactions between custody and health services authorities. Any model of organization is considered valid, provided the outcome is an integrated system of health care in which medical orders are carried out and documented appropriately and the results are monitored as indicated. Policies and procedures are to include site-specific operating guidelines.

Standard Specific Findings

J-A-01 Access to Care (E). Inmates have access to health care. Patients see a qualified clinician and receive care in a timely manner as ordered for their serious medical, mental health, and dental needs. There was no fee-for-service program in place at the time of the survey. The standard is met.

J-A-02 Responsible Health Authority (E). The responsible health authority (RHA) is IHSC. The on-site representative is the full-time HSA, whose responsibilities are outlined in a job description. Clinical judgments rest with a designated, full-time responsible physician. The clinical director is also full-time. The standard is met.

J-A-03 Medical Autonomy (E). Qualified health care professionals make decisions regarding detainees' serious medical, dental, and mental health needs in the inmates' best interests. We noted excellent cooperation between custody and medical staff. Administrative decisions are coordinated, if necessary, with clinical needs so that patient care is not jeopardized. The health staff is subject to the same security regulations as other facility employees. The standard is met.

J-A-04 Administrative Meetings and Reports (E). The department heads and warden meet monthly to discuss administrative matters with health staff, and detention supervisors. Health staff also meets monthly to discuss health services operations. Attendees include the responsible physician, HSA, mental health, dental, and nursing staff. Statistical reports of health services are completed at least monthly, and are provided to the facility administrator and health services administrators. They are used to monitor trends in the delivery of health care. The standard is met.

J-A-05 Policies and Procedures (E). The health services policy and procedure manual is site-specific. The RHA and responsible physician review them annually, most recently in March 2017. Other policies, such as those for custody, kitchen, or headquarters, do not conflict with health care policies. We confirmed the policies were accessible to health staff. The standard is met.

J-A-06 Continuous Quality Improvement Program (E). The CQI program identifies health care aspects to be monitored, implements and monitors corrective action when necessary, and studies the effectiveness of the corrective action plan. The quality improvement committee, which meets quarterly, consists of the CQI nurse, responsible physician, clinical director HSA, safety manager, mid-levels, medical records, mental health, and dental representatives; other staff attends as needed. More than 15 site-specific studies have been completed since the last survey. Recent process studies examined, medications, continuity of care, suicide watch, urgent care, dental care, grievances, and intake screening. When the results did not meet threshold,

AMERICAN OVERSIGHT

new plans were developed and implemented, and the topic re-audited. We confirmed the studies consisted of a clearly identified problem, a baseline study, a corrective action plan that had been implemented, and the results after restudying the effectiveness of the corrective action plan. A patient satisfaction survey was also conducted. The results were very positive.

The responsible physician is involved in the CQI program. He attends the meetings, reviews charts, and helps determine trends and areas for further study. The program is reviewed for its effectiveness during the new year's first CQI meeting. The standard is met.

J-A-07 Emergency Response Plan (E). The RHA and facility administrator have approved the health aspects of the emergency response plan (March 2017), which includes the required elements. Multiple casualty disaster drills were conducted. The scenarios included a roof collapse, a tornado, and a fire. All staff from the three shifts participated, as did representatives from community agencies. We confirmed that the drills were critiqued, and the results were shared with the health staff.

Man-down events were documented and confirmed that health staff on each shift has been able to participate. We also verified that these have been critiqued and the results were shared with all health staff. The standard is met.

J-A-08 Communication on Patients' Health Needs (E). Communication between designated correctional and health services staff with regard to inmates' special health needs occurs in writing and verbally. The standard is met.

J-A-09 Privacy of Care (I). Clinical encounters and discussion of patient information are conducted in auditory and visual privacy. Security personnel are present only if the patient poses a probable risk to the safety of the health care professional or others. Methods used to ensure patient privacy include privacy screens and a chaperone, as indicated. The standard is met.

J-A-10 Procedure in the Event of an Inmate Death (I). Since the last survey, there has been one death (natural causes). The mortality review was conducted within 30 days, and the findings were shared with the staff. The standard is met.

J-A-11 Grievance Mechanism for Health Complaints (I). The health-related grievance program is integrated with the facility's formal grievance program. Detainees may informally discuss their issues with a health staff member before writing a formal grievance. A response is due in five days. If necessary, detainees may appeal to the warden and a committee to resolve the issue. On average, three health-related grievances are filed per month. The responses are timely. The standard is met.

AMERICAN OVERSIGHT

B. MANAGING A SAFE AND HEALTHY ENVIRONMENT

The standards in this section address the importance of preventative monitoring of the physical plant. Health staff has a crucial role in identifying issues that could have a negative impact on the health and safety of facility staff and the inmate population if left unaddressed.

Standard Specific Findings

J-B-01 Infection Prevention and Control Program (E). The responsible physician has approved the written exposure control plan. It is updated annually, most recently on March 1, 2017. Infection control matters are addressed at the CQI, health and safety committee, administrative and staff meetings. The compliance officer and infection prevention nurse provide oversight and coordinate infection prevention and control efforts. Patients with communicable diseases are housed in one of the four negative pressure rooms in the health unit. These are checked daily to assure proper functioning, and an engineering company inspects annually. Effective ectoparasite control procedures are used to treat infected inmates. The captain inspects the health services areas monthly for environmental concerns. The infection control risk assessment is also completed annually. The standard is met.

J-B-02 Patient Safety (I). The safety management plan/manual provides guidance in preventing adverse and near-miss clinical events, which staff can report in a non-punitive environment. Any such issues are discussed at the health and safety committee, CQI and staff meetings. The standard is met.

J-B-03 Staff Safety (I). Health staff appears to work under safe and sanitary conditions. The safety officer oversees all aspects of a safe environment. All staff had been trained on workplace violence prevention as well. The standard is met.

J-B-04 Federal Sexual Abuse Regulations (E). The warden described the facility as compliant with the 2003 Federal Prison Rape Elimination Act (PREA). The assistant deputy warden is responsible for PREA compliance at this facility. Written policies and procedures address the detection, prevention and reduction of sexual abuse, and the training is reviewed annually. The standard is met.

J-B-05 Response to Sexual Abuse (I). Health staff had been trained in how to detect, assesses, and responds to signs of sexual abuse and sexual harassment, as well as evidence preservation. The Federal Bureau of Prisons' training is utilized, during orientation and annual review. We verified that training is documented electronically and in the personnel file. Victims of sexual assault are referred to a community facility for treatment and evidence collection. In all cases, the victim is evaluated by a qualified mental health professional, and a report is made to correctional authorities to effect a housing separation of the victim from the assailant. There have been no substantiated incidents of sexual assault since the last survey. The standard is met.

AMERICAN OVERSIGHT

C. PERSONNEL AND TRAINING

The standards in this section address the need for a staffing plan adequate to meet the needs of the inmate population, and appropriately trained and credentialed health staff. Correctional officers are to have a minimum amount of health-related training in order to step in during an emergency, if health staff is not immediately available.

Standard Specific Findings

J-C-01 Credentials (E). Health care personnel who provide services to inmates had credentials and were providing services consistent with the jurisdiction's licensure, certification, and registration requirements. Human Resources staff is responsible for the monthly, on-going credential verification process. The credential verification process includes inquiry regarding sanctions or disciplinary actions of state boards, employers, and the National Practitioner Data Bank. The standard is met.

J-C-02 Clinical Performance Enhancement (I). A clinical performance enhancement process evaluates the appropriateness of services delivered by all direct patient care clinicians, registered nurses (RN) and licensed practical nurses (LPN). A professional of at least equal training in the same general discipline completes the reviews annually. We reviewed a log listing the names of the individuals being reviewed and the date of their most recent review, which included required elements. We confirmed that all findings are reviewed with the employee. If there is a concern about an individual's competency, a corrective action plan is developed with that employee. The standard is met.

J-C-03 Professional Development (E). We confirmed that qualified health care professionals had the required number of continuing education credits. All were current in cardiopulmonary resuscitation (CPR) training. The state requires continuing education credits for license renewal, for all of the professions employed at the facility. We confirmed compliance by reviewing a list of completed courses and number of hours. The standard is met.

J-C-04 Health Training for Correctional Officers (E). Correctional staff had the required training in health-related topics, and all were current in their health-related training. This is a condition of employment. We reviewed the training outline including course content and length and confirmed it included all the required topics. The standard is met.

J-C-05 Medication Administration Training (E). Nurses administer medications. They are trained during orientation which includes on-the-job training with a preceptor and annually thereafter. The training also includes a written test. It is documented electronically and in the personnel files. We verified the HSA and facility administrator have approved the training curriculum, which includes matters of security, accountability, common side effects, and documentation. The standard is met.

J-C-06 Inmate Workers (E). Detainee workers do not provide health services, nor are they involved in any peer health-related programs. They may work in the kitchen or in a janitorial capacity. A civilian employee cleans the health unit. Detainee workers do not handle bio-hazardous materials or clean such spills. We verified that they are trained on the use of personal protective equipment, and general cleaning instructions. The training is documented in writing. The standard is met.

AMERICAN OVERSIGHT

J-C-07 Staffing (I). Full-time equivalent health staff includes:

(b)(7)(E)

At the time of the survey, there no vacancies. The standard is met.

J-C-08 Health Care Liaison (I). Health staff is on site 24 hours a day. The standard is not applicable.

J-C-09 Orientation for Health Staff (I). We confirmed that health staff had received the appropriate orientation via a signed check list in each employee's personnel file. The HSA and facility administrator review the lesson plan at least every two years. The orientation lesson plan is reviewed at least once every two years, most recently on October 8, 2017. Employees receive three weeks of administrative orientation and four-six weeks of discipline-specific training, with a preceptor. The standard is met.

D. HEALTH CARE SERVICES AND SUPPORT

The standards in this section address the manner in which health services are delivered–the adequacy of space, the availability and adequacy of materials, and, when necessary, documented agreements with community providers for health services.

Standard Specific Findings

J-D-01 Pharmaceutical Operations (E). The on-site pharmacy provides pharmaceutical services that are sufficient to meet the needs of the detainees. Medications are either stored in the pharmacy, or in the medication room or medication cart, both of which are locked. The narcotics are secure in a locked cabinet and safe in the pharmacy. We confirmed they are counted every shift. We verified the counts were correct. Medications are ordered electronically and dispensed to nursing staff in blister packs. Pharmaceuticals needing disposal are secured in the pharmacy until they are destroyed. The pharmacist inspects the medication area and carts quarterly. We confirmed this has been consistent since the last survey. Stock medications

AMERICAN OVERSIGHT

need to be signed out of a locked cabinet, and are counted each time one is removed to ensure adequate control of and accountability of all medications. We verified that medications were stored under proper conditions, and an adequate supply of antidotes and other emergency medications was readily available to staff. The Pharmacy and Therapeutics Committee meets quarterly. We also confirmed a formulary was in place, and providers may order "off formulary," if necessary. The standard is met.

J-D-02 Medication Services (E). Medication services are clinically appropriate and provided in a timely, safe and sufficient manner. Medications are delivered at a pill line for most detainees, while they are delivered to segregated detainees. The policies identifies the expected time frames from ordering to delivery, and a backup plan if the time frames cannot be met. A detainee will receive medication within 24 hours of prescription. Otherwise, it is either taken from stock or obtained from a local pharmacy. The responsible physician determines the prescriptive practices at this facility. Medications are prescribed only when clinically indicated. Detainees entering the facility on prescription medication continue to receive the medication or an acceptable alternate medication as clinically indicated. The formulary includes a listing of medications detainees may keep on their persons, which include those with a low abuse potential. The detainee must also be reliable about taking their medications as prescribed. Tuberculosis, HIV, and psychotropic medications are exempt from the policy. The standard is met.

J-D-03 Clinic Space, Equipment, and Supplies (I). The clinic area includes: a medication room, five examination rooms, office space for providers, an emergency room, a one-chair dental operatory, a lab area, a conference room, medical records space, a waiting area, eight offices, a pharmacy, an x-ray suite, a nursing station, four negative pressure rooms, and two intake/exam rooms. Inventories are maintained on each shift for items subject to abuse. We verified the accuracy of the counts, and confirmed that adequate supplies and equipment, including three automated external defibrillators, were available. The standard is met.

J-D-04 Diagnostic Services (I). On-site diagnostic services include stool blood-testing material, finger-stick blood glucose tests, peak flow meters, multiple-test dipstick urinalysis, and pregnancy tests. X-rays are provided on site, and an off-site laboratory had been contracted to process specimens. We confirmed that lab and x-ray procedures manuals. The CLIA waiver was due to expire on November 29, 2018. The standard is met.

J-D-05 Hospital and Specialty Care (E). Hospitalization and specialty care is available to patients in need of these services. We verified through record review that off-site facilities or health professionals provide a summary of the treatment given and any follow-up instructions. At the time of the survey, there were no on-site specialty services. The standard is met.

AMERICAN OVERSIGHT

E. INMATE CARE AND TREATMENT

The standards in this section address the core of a health services program: that all inmates have access to health services, how they are to request emergency and non-emergency care, that health histories are obtained, that assessments and care can be demonstrated to be provided in a timely fashion, and that discharge planning is considered. In short, health care for the inmates is to be consistent with current community standards of care.

Standard Specific Findings

J-E-01 Information on Health Services (E). Detainees receive verbal and written instruction in English and Spanish on access to health services, and the health-related grievance procedures. The appropriate accommodations are made for those who speak other languages or who have a hearing impairment. We observed an access-to-care sign had been posted in the intake area. The standard is met.

J-E-02 Receiving Screening (E). New admissions arrive directly from the community. Reception personnel identify those individuals in need of emergency care and refer them immediately to a hospital or mental health facility. Their subsequent admission to the facility is predicated on a written medical clearance.

Qualified nurses complete the receiving screening, which includes a disposition and addresses the required areas of inquiry, immediately upon detainees' arrival. An RN reviews the screenings completed by an LPN. If a woman reports current opiate use, she is referred immediately for a pregnancy test. All pregnant women who are using opiates are immediately referred to the hospital. Prescribed medications are reviewed and maintained as clinically indicated. Health staff regularly monitors receiving screenings to determine the safety and effectiveness of the process. The standard is met.

J-E-03 Transfer Screening (E). A transfer screening is performed by qualified health care on all intrasystem transfers, immediately upon arrival at the facility. This consists of a record review and a face-to-face encounter. Medications, any necessary care, and referrals are provided. The review is documented in the electronic medical record. The standard is met.

J-E-04 Initial Health Assessment (E). The full population health assessment has been implemented at this facility. All detainees receive an initial health assessment by a physician or mid-level provider no later than 14 calendar days after admission. We confirmed the assessment consists of the required elements, including a review of the receiving screening results, and laboratory or diagnostic tests for communicable diseases. TB skin tests are performed on all detainees as well. The treating clinician reviews all the positive findings. Specific problems are integrated into an initial problem list, and diagnostic and therapeutic plans for each problem are developed as clinically indicated. The standard is met.

J-E-05 Mental Health Screening and Evaluation (E). A trained RN completes the mental health screening during intake. We confirmed that it includes the required areas of inquiry. Patients with positive results are referred to qualified mental health professionals for further evaluation.

AMERICAN OVERSIGHT

Mental health professionals review all intakes. If the detainee's mental health needs cannot be met at the facility, they are immediately transferred to a mental health facility for treatment. The standard is met.

J-E-06 Oral Care (E). Mid-level providers or physicians complete the oral screening at the health assessment. We verified that they had been trained to do so. Detainees are also instructed in oral hygiene and preventive oral education during intake, and we confirmed the dentist completes an oral examination within 12 months of their admission. Oral care is timely and it includes immediate access for urgent or painful conditions. The system of established priorities for oral treatment was not limited to extractions. An oral surgeon is available for referrals and emergency treatment. The standard is met.

J-E-07 Nonemergency Health Care Requests and Services (E). All inmates, regardless of housing assignment, have access to regularly scheduled times for routine health care. The frequency and duration of response to requests for health services is sufficient for the inmate population. Detainees can sign up for sick call, or they can deposit a request into the unit mailbox. Nurses retrieve the slips daily and triages all requests. Urgent/emergent needs are seen right away, and other are scheduled to be seen later the same day. Patients can also request to be seen for urgent/emergent needs by requesting that the officer call health services, or the detainees can walk into health services at any time. Detainees are scheduled to see a provider as necessary, usually the next business day, or immediately if appropriate. The standard is met.

J-E-08 Emergency Services (E). The RHA maintains emergency drugs, supplies, and medical equipment, which is checked each shift. Detainees can be transferred to the hospital by a facility vehicle or an ambulance. The emergency facility is five minutes away. We also verified that emergency on-call services were available. The standard is met.

J-E-09 Segregated Inmates (I). The segregation unit consisted of 24 cells for men, and eight for women. Detainees are first brought to health services for a face-to-face assessment for possible contraindications or special accommodations.

Conditions of segregation at this facility meet NCCHC's category b, which required health rounds at least three times a week. In practice health staff conducts daily rounds, and mental health staff does so weekly. We confirmed the rounds are documented on a door care, in a logbook, and in the health record. Health staff informs custody officials of the latest scientific information concerning the health effects of segregation during the administrative meetings. The standard is met.

J-E-10 Patient Escort (I). Patients are escorted to on-site and off-site clinical appointments in a timely manner. Transporting officers are alerted to special accommodations, such as medication administration. The patient's confidentiality is maintained. The standard is met.

J-E-11 Nursing Assessment Protocols (I). Nursing assessment protocols are utilized at this facility. They do not include prescription medications, except epinephrine in an emergency, and a subsequent provider's order is obtained. The responsible physician and nursing administrator last reviewed them on November 6, 2017. We confirmed the nurses are trained to use the protocols upon hire and when they are introduced or revised. We also confirmed they undergo

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-001472

annual reviews of competency. They are also the subject of CQI process studies to determine if they are being used appropriately. The standard is met.

J-E-12 Continuity and Coordination of Care During Incarceration (E). We confirmed that continuity of care is appropriate. Clinician orders are evidence-based and implemented in a timely manner. Deviations are clinically justified, documented and shared with the patient. The clinician review diagnostic tests in a timely manner, and acts upon them appropriately. Treatment plans are modified as clinically indicated.

Patients receive treatment and diagnostic tests ordered by clinicians, who discuss such care with them. When a patient returns from the emergency room, urgent care or hospitalization, protocols are followed in accordance with the standard. The clinicians review and act upon specialty consultants' recommendations in a timely manner.

The responsible physician determines the frequency of periodic health assessments on the basis of protocols promulgated by nationally recognized professional organizations (Bureau of Prisons). Chart reviews were of sufficient frequency and number to assure that clinically appropriate care is ordered and implemented by attending health staff. The standard is met.

J-E-13 Discharge Planning (E). The nursing staff and HSA are involved in discharge planning. They arrange follow-up appointments as indicated. All detainees leave with a discharge summary, a 30-day supply of medication, and a list of referral sources. The standard is met.

F. HEALTH PROMOTION AND DISEASE PREVENTION

The standards in this section address health and lifestyle education and practices, as well as patient-specific instruction during clinical encounters.

Standard Specific Findings

J-F-01 Healthy Lifestyle Promotion (I). The RHA utilizes the National Health Education Manual for detainee health education, and we confirmed that a variety of health-related brochures and pamphlets was available. Individual health education and instruction in self-care is documented in the health record during clinical encounters. The standard is met.

J-F-02 Medical Diets (I). At the time of the survey, approximately 96 medical diets were being prepared for patients with specific dietary needs. Detainees who refuse prescribed diets receive follow up nutritional counseling. Workers who prepare medical diets are trained and supervised.

However, a registered dietitian reviews the medical diet menus annually instead of every six months. The most recent review occurred on April 13, 2017. **The standard is not met.**

Corrective action is required for Compliance Indicator #2. (b)(5)

(b)(5)

AMERICAN OVERSIGHT

(b)(5)

J-F-03 Use of Tobacco (I). Smoking is prohibited at this facility. We confirmed that literature on the hazards of tobacco use was available to the detainees. The standard is met.

G. SPECIAL NEEDS AND SERVICES

The standards in this section address the needs of inmates with chronic conditions or other health conditions that require a multidisciplinary approach to treatment. These special needs include mental health issues.

Standard Specific Findings

J-G-01 Chronic Disease Services (E). Care as reflected in the health record appears in compliance with current community standards. The responsible physician establishes and annually approves clinical protocols, consistent with national clinical practice guidelines (most recently in March 2018). We verified that there were guidelines for all nine disease entities. We verified the guidelines are used.

The treatment plans include all the appropriate elements: frequency of follow-up; monitoring condition, and status and taking action as indicated; type and frequency of diagnostic testing and therapeutic regiments; instruction on diet, exercise, medication and adaptation to correctional environment; and clinical justification of deviation from the protocols. Chronic illnesses were listed on the problem list, and we verified the RHA maintains a list of chronic care patients. The standard is met.

J-G-02 Patients With Special Health Needs (E). When required by the health condition(s) of the patient, multi-disciplinary treatment plans define the individual's care, and include the frequency of follow-up, type and frequency of diagnostic testing and therapeutic regimens and instructions about diet, exercise, medication, and adaptation to the correctional environment. We confirmed that special needs were listed on the problem list, and that the RHA maintains a list of special needs patients. The standard is met.

J-G-03 Infirmary Care (E). There was no infirmary at the time of the survey. The standard is not applicable.

J-G-04 Basic Mental Health Services (E). Patients with mental health needs are either followed by the psychiatrist, if they are on psychotropic medication, or mental health workers, if not. The psychiatrist sees them at least every 30 days, or as clinically indicated. When clinically appropriate, a patient's commitment or transfer to an inpatient psychiatric setting is timely and accomplished according to procedures. Health services are integrated for patient management and to ensure patients' medical and mental health needs are met.

Basic on-site outpatient services include the identification and referral of inmates with mental health needs, crisis intervention services, psychotropic medication management when indicated, individual counseling, group counseling, psychosocial/psychoeducational programs, and treatment documentation and follow-up. The standard is met.

AMERICAN OVERSIGHT

J-G-05 Suicide Prevention Program (E). The suicide prevention program addresses each of the 11 key components as described by the standard. The RHA has approved the training curriculum for staff. Treatment plans address suicidal ideation and recurrence, and patient follow-up occurs as clinically indicated. Acutely suicidal inmates are placed on constant observation in a "safe cell," until they can be transferred to a mental health facility. The officer sits right outside the room with the door open. The non-acutely suicidal detainees are checked on a staggered schedule that does not exceed 15 minutes.

Mental health staff must see the detainee within 24 hours when they are placed on suicide precautions, and only they can discontinue suicide precautions.

There have been no suicides at this facility since the last survey. If there were an attempt, the patient would be sent to a mental health hospital for a more therapeutic milieu. The standard is met.

J-G-06 Patients with Alcohol And Other Drug Problems (AOD) (E). Disorders associated with AOD, such as HIV and liver disease, are recognized and treated. Correctional staff is trained to recognize detainees' AOD problems. Medical, mental health, and substance abuse staff communicate and coordinate with each other regarding patients' AOD care. Self-help substance abuse programs, individual counseling and group therapy are offered on site. The standard is met.

J-G-07 Intoxication and Withdrawal (E). Detoxification and withdrawal are provided at this facility. The nurses utilize protocols and a screening tool to assess the detainees. Any detainee requiring detoxification or experiencing withdrawal would be sent to the hospital for care, if indicated, and returned to the facility only when stable.

The facility's policy addresses the management of inmates, including pregnant inmates, on methadone or similar substances. If a pregnant inmate is admitted with opioid dependence, she is transferred to the hospital for assessment and treatment. The standard is met.

J-G-08 Contraception (I). Emergency and continuing contraception are available and can be obtained from the pharmacy. We confirmed that written information about contraception methods and community resources was available. The standard is met.

J-G-09 Counseling And Care Of The Pregnant Inmate (E). Pregnant detainees are housed at this facility. Counseling and assistance are provided in accordance to the detainee's wishes. Counseling is provided during the health assessment, which is completed the next business day after a detainee's arrival. Pregnant patients would then be transferred to a facility that has the necessary obstetrical services available. The standard is met.

J-G-10 Aids to Impairment (I). We observed detainees using wheelchairs, canes, hearing aids, and other devices during the tour. Health records documentation indicated that aids are provided as necessary. Nothing had been contraindicated for reasons of security. The standard is met.

J-G-11 Care for the Terminally Ill (I). Although it would be rare for a terminally ill patient to be held at this facility, procedures were in place to make the appropriate accommodations

AMERICAN OVERSIGHT

(discharge or transfer to another facility). There have been no such patients since the facility opened. Policies and procedures direct staff on caring for these detainees. The standard is met.

H. HEALTH RECORDS

The standards in this section address the importance of accurate health record documentation, health record organization and accessibility, and need to ensure that medical and mental health information is communicated when those records are separate documents.

Standard Specific Findings

J-H-01 Health Record Format and Contents (E). Inmates' medical and mental health records are integrated into the electronic medical record, which is available to all health staff. We confirmed that all the essential elements of a medical record were present. The standard is met.

J-H-02 Confidentiality of Health Records (E). Health records are password-protected. Back-up records are locked in cabinets in the medical records room. Health staff have documented instruction in maintaining patient confidentiality during orientation and annually thereafter. If non-health staff transports health records, the records are sealed in an envelope. Custody staff also receives annual confidentiality training, and sign a confidentiality statement. The standard is met.

J-H-03 Management of Health Records (I). The electronic health record is available for each patient care encounter. When an inmate is transferred to another facility, copies of the current health record or a comprehensive health summary accompany him/her. The system maintains all medical records indefinitely. We verified they can be re-activated when the detainee re-enters the system. The standard is met.

J-H-04 Access to Custody Information (I). Qualified health care professionals have access to information in the inmate's custody record when such information may be relevant to the inmate's health and course of treatment. The standard is met.

I. MEDICAL-LEGAL ISSUES

The standards in this section address the most complex issues facing correctional health care providers. While the rights of inmate-patients in a correctional setting are generally the same as those of a patient in the free world, the correctional setting often adds additional considerations when patient care is decided. The rights of the patient, and the duty to protect that patient and others, may conflict; however, ethical guidelines, professional practice standards, and NCCHC's standards are the determining factors regarding these interventions and issues.

Standard Specific Findings

J-I-01 Restraint and Seclusion (E). Clinical restraint and seclusion are not used at this facility, nor are custody-ordered restraints. Anyone requiring restraints would not be sent to this facility. The policy and procedure was appropriate. The standard is met.

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-001476

J-I-02 Emergency Psychotropic Medication (E). Such intervention would not be implemented at this facility; rather, the detainee would be transferred to a mental health facility. There has been no such instances since the facility opened. The policy and procedure were appropriate. The standard is met.

J-I-03 Forensic Information (I). Health staff does not collect forensic information; rather, the detainee is transferred off-site. The standard is met.

J-I-04 End-of-life Decision Making (I). Patients approaching the end of life are permitted to execute advance directives, if they terminal and have less than one year to live. Patients would be counseled as to the meaning and consequences of such actions, which would be documented in the health record, and the deputy director of clinical services would review them. In practice, such patients would be discharged or transferred. The standard is met.

J-I-05 Informed Consent and Right to Refuse (I). All informed consents and refusals of care are documented and consist of the required elements, including the signatures of the patient and a health staff witness. Patients are counseled as to possible adverse consequences to health that may occur as a result of a refusal. If the inmate refuses to sign a refusal form, two staff members, one of whom must be from health staff, would document it. The standard is met.

J-I-06 Medical and Other **Research (I).** Medical research does not occur at this facility. The standard is met.

February 20, 2019
UPDATE REPORT

The National Commission on Correctional Health Care is dedicated to improving the quality of correctional health services and helping correctional facilities provide effective and efficient care. NCCHC grew out of a program begun at the American Medical Association in the 1970s. The standards are NCCHC's recommended requirements for the proper management of a correctional health services delivery system. These standards have helped correctional facilities improve the health of their inmates and the communities to which they return, increase the efficiency of their health services delivery, strengthen their organizational effectiveness, and reduce their risk of adverse patient outcomes and legal judgments.

On February 26-27, 2018 NCCHC conducted its review for continuing accreditation of the South Texas Detention Complex under the NCCHC *2014 Standards for Health Services in Jails*. On April 22, 2018, NCCHC granted continuing accreditation with verification. Subsequently, the RHA has submitted corrective action, which brought the facility into compliance with applicable essential and important standards. Further corrective action brought the facility into full compliance. This report focuses primarily on issues that required corrective action for compliance with the standards and is most effective when read in conjunction with NCCHC's reports of April 22, and November 2, 2018.

There are 40 essential standards; 39 are applicable to this facility and 39 (100%) were found to be in compliance. One hundred percent of the applicable essential standards must be met. **The South Texas Detention Complex has now met this condition.**

Essential Standards Not in Compliance
None

Essential Standard Not Applicable
J-G-03 Infirmary Care

There are 27 important standards; 26 are applicable to this facility and 26 (100%) were found to be in compliance. Eighty-five percent or more of the applicable important standards must be met. **The South Texas Detention Complex has met this condition.**

Important Standards Not in Compliance

Important Standard Not Applicable
J-G-08 Health Care Liaison

Decision: On February 20, 2019, the Accreditation Committee granted accreditation to the South Texas Detention Complex.

AMERICAN OVERSIGHT

the revised (effective January 2019) policy and procedure that emphasizes this. A CQI study on nine patients on suicide precautions (spanning November 29 through December 29, 2019) found that of the nine patients identified, eight were considered as non-acutely suicidal. All nine were placed on constant observation, and all met or exceeded the suicide observation standard: Eight of nine exceeded the requirements for non-acute monitoring, and one met the requirements for acute observation. Of the 10 days of continuous watch, nine days were documented as within 15 minutes, while one day's documentation occasionally fell outside. Overall compliance had improved to 90%.

The RHA also indicated monitoring for compliance would continue. **The standard is now met.**

Decision: On May 9, 2018, NCCHC's Accreditation Committee voted to continue the facility's Continuing Accreditation with Verification (CAV) status, contingent upon receiving requested compliance verification by July 9, 2018.

AMERICAN OVERSIGHT

J-G-01 Chronic Disease Services (E). Chronic illnesses are listed on the problem list, and the RHA maintains a list of chronic care patients. The responsible physician establishes and annually approves clinical protocols consistent with national clinical practice guidelines. We confirmed there were guidelines for all nine disease entities.

However, the RHA uses Medical Practice Guidelines, dated 2012. We noted that new guidelines have been developed, although there was no documentation of the date that they were implemented. The providers were unaware that they existed, and there was no documentation of any training for them, nor was there documentation to confirm the guidelines are followed.

The treatment plans do not include all the appropriate elements; frequency of follow-up, monitoring condition, and status and taking action as indicated, type and frequency of diagnostic testing and therapeutic regiments; instruction on diet, exercise, medication and adaptation to correctional environment, and clinical justification of deviation from the protocols. The standard is not met.

Corrective action is required for Compliance Indicator #1. (b)(5)

(b)(5)

Corrective action is required for Compliance Indicator #2. (b)(5)

(b)(5)

In February 2018, the RHA submitted the results of a CQI study of eight chronic care records (representing the most common conditions from February 14-22, 2018). The records were reviewed for the following criteria: 1) provider determined frequency of follow-up based on disease control; 2) provider noted condition and status; 3) appropriate action taken to improve outcome; 4) provider indicated type and frequency of diagnostic testing and therapeutic regiments (e.g., diet, medication, exercise); 5) documented instruction on diet, exercise, adaptation to correctional environment and/or medication; and 6) documented clinical deviation from protocol. A threshold

AMERICAN OVERSIGHT

of 87% was selected. Compliance was demonstrated at 100% in all applicable cases for the first five criteria (the sixth was not applicable in this study).

The RHA also submitted a list of guidelines based on national guidelines (such as the Federal Bureau of Prisons), and evidence of provider training in February 2018.

Further corrective action is required regarding compliance with the protocols: (b)(5)
(b)(5)
(b)(5) **The standard is not met.**

AMERICAN OVERSIGHT

National Commission on Correctional Health Care

To Whom It May Concern:

NCCHC's Accreditation Committee has requested further verification of compliance with one or more standards in the enclosed report. Please take a moment to review the guidelines below for submitting corrective action to NCCHC. Following these guidelines will expedite the processing and review of the documentation. Please allow 60 to 90 days after submission for an update report to be returned to the facility. The accreditation staff are available to answer any questions you may have after reviewing the report and the corrective action requirements. We can be reached at 773-880-1460.

Submission of Corrective Action Guidelines

- **All documentation must be scanned and submitted on a thumb drive or a CD**
- Please organize and clearly label materials by the standard it is intended to address
- Documents should be in Word or PDF format and files should not be "zipped"
- **Please be sure to highlight relevant portions of documents: revisions to policies and procedures, screening/assessment forms, etc.**
- Clearly identify the *name of your facility* on the submission, rather than noting only a state name, corporate vendor, or system headquarters
- If we have not received corrective action by the noted deadline, NCCHC will contact the facility HSA
- Review your submission to ensure it is complete and addresses all standards with compliance issues
- Please send only the information that is requested (e.g., if corrective action requires specific protocols for G-01, send only the requested protocols and not others that may not be required by the standard)
- Remember, evidence of practice is key and implementation of a plan, study results, and other clear documentation of compliance is what NCCHC looks for to assess whether a standard is met
- We recommend that you send materials via FedEx, UPS, or another reliable delivery service that can be tracked
- **Due to the volume of incoming materials, we ask that you verify receipt through your delivery service rather than contact NCCHC**

Please submit the thumb drive or CD to:

The National Commission on Correctional Health Care is dedicated to improving the quality of correctional health services and helping correctional facilities provide effective and efficient care. NCCHC grew out of a program begun at the American Medical Association in the 1970s. The standards are NCCHC's recommended requirements for the proper management of a correctional health services delivery system. These standards have helped correctional facilities improve the health of their inmates and the communities to which they return, increase the efficiency of their health services delivery, strengthen their organizational effectiveness, and reduce their risk of adverse patient outcomes and legal judgments.

On January 29-30, 2018, NCCHC conducted its review for continued accreditation of this facility. We commend the facility staff for their professional conduct, assistance and candor during the course of our review. The NCCHC's team of experienced certified correctional health professionals utilized NCCHC's 2014 *Standards for Health Services in Jails* as the basis of its health services analysis. This report focuses primarily on issues in need of correction or enhancement. It is most effective when read in conjunction with the *Standards* manual. The information in this report is privileged and confidential and is intended for the sole use of persons addressed.

There are 40 essential standards; 38 are applicable to this facility and 33 (87%) were found to be in compliance. One hundred percent of the applicable essential standards must be met. Our findings include:

Essential Standards Not in Compliance
J-A-07 Emergency Response Plan
J-E-01 Information on Health Services
J-E-02 Receiving Screening
J-E-05 Mental Health Screening and Evaluation
J-G-05 Suicide Prevention Program

Essential Standards Not Applicable
J-G-03 Infirmary Care
J-G-09 Counseling and Care Of The Pregnant Inmate

There are 27 important standards; 25 are applicable to this facility and 25 (100%) were found to be in compliance. Eighty-five percent or more of the applicable important standards must be met. Our findings include:

Important Standards Not in Compliance
None

Important Standards Not Applicable
J-C-08 Health Care Liaison
J-G-08 Contraception

Decision: On April 22, 2018, NCCHC's Accreditation Committee awarded the facility Continuing Accreditation with Verification (CAV), *contingent* upon receiving requested compliance verification by August 22, 2018.

AMERICAN OVERSIGHT

Stewart Detention Center, GA

I. Facility Profile

The facility's security classification is: Medium
The facility was built in: 1999
The facility's mission or purpose has not changed since the last survey.
The facility is located in the southeastern United States.
The facility's supervision style is: Direct Supervision.
The facility's structural layout is: Dormitory-Style Housing.
Since the last NCCHC survey medical expanded into the former ICE office space.
There is a major renovation in progress of the medical clinic.
Total Inmate Count on day of survey: 1884
Total number of adult males on day of the survey: 1884
Average Daily Population (ADP) for last completed calendar year: 1826
The design-rated capacity for the facility is: 2042
There has not been a substantial increase in the inmate population.
Admissions to the facility arrive on a scheduled basis.
The total number of admissions to the facility last year was: 11794
The average daily intake to the facility last year was: 45
The total number of correctional staff assigned to this facility is: (b)(7)(E)
The usual shift coverage for correctional staff is: (b)(7)(E)
There has not been a recent change in health care contractor.
Health services are provided by United States Public Health Services.
They have provided health services since: 2006
There have not been distinctive events that may affect the delivery of health care.
The facility has no satellites.

II. Survey Method

We toured the clinic area, detainee housing areas, and segregation. We reviewed 25 health records; policies and procedures; provider licenses; administrative, health staff, and continuous quality improvement (CQI) meeting minutes; job descriptions; statistical and environmental inspection reports; and health services personnel and CO training records. We interviewed the warden, assistant warden, safety officer, chief of security, facility training officer, responsible physician, health services administrator (HSA), other health, dental, and mental health staff, medical records clerk, 13 COs, and nine detainees selected at random.

AMERICAN OVERSIGHT

Stewart Detention Center, GA
April 22, 2018

III. Survey Findings and Comments

A. GOVERNANCE AND ADMINISTRATION

The standards in this section address the foundation of a functioning correctional health services system and the interactions between custody and health services authorities. Any model of organization is considered valid, provided the outcome is an integrated system of health care in which medical orders are carried out and documented appropriately and the results are monitored as indicated. Policies and procedures are to include site-specific operating guidelines.

Standard Specific Findings

J-A-01 Access to Care (E). Detainees have access to health care. Patients see a qualified clinician and receive care for their serious medical, mental health, and dental needs. There was no fee-for-service policy at the time of the survey. The standard is met.

J-A-02 Responsible Health Authority (E). The responsible health authority (RHA) is the United States Public Health Services (USPHS), the on-site representative is the full-time health services administrator (HSA). Clinical judgments rest with a designated, full-time, responsible physician. The designated mental health clinician is also a full-time employee. The standard is met.

J-A-03 Medical Autonomy (E). Qualified health care professionals make decisions regarding detainees' serious medical, dental, and mental health needs in the detainees' best interests. We noted good cooperation between custody and medical staff. Administrative decisions are coordinated, if necessary, with clinical needs so that patient care is not jeopardized. Health staff is subject to the same security regulations as other facility employees. The standard is met.

J-A-04 Administrative Meetings and Reports (E). The warden meets weekly with all the stake holders to discuss administrative and health-related matters. Membership includes the warden, assistant warden, chiefs of security and housing, assistant field officer, deportation officer, a lawyer from the General Counsel's office, medical director, HSA, and mental health clinician.

Health staff meets monthly to discuss health services operations. Attendees include the health services leadership team, HSA and assistant HSA, mental health staff, medical director, nurse practitioners, physician assistants and nursing staff. Statistical reports of health services are collected monthly and provided to the members of the facility stake holders' meeting, medical staff and corporate office staff. The statistical report is used to monitor trends in the delivery of health care. The standard is met.

J-A-05 Policies and Procedures (E). The health services policy manual is site-specific. The RHA, warden and responsible physician last reviewed it in December 2017. Other policies, such as those for custody, kitchen, or corporate, do not conflict with health care policies. The policies are accessible to health staff. The standard is met.

J-A-06 Continuous Quality Improvement Program (E). The CQI program identifies health care aspects to be monitored, implements and monitors corrective action when necessary, and studies the effectiveness of the corrective action plan. The quality improvement committee

AMERICAN OVERSIGHT

consists of HSA, nurse practitioner, physician assistant, director of nursing, mental health clinician, medical director, assistant HSA, and nursing staff.

Three site-specific process studies have been completed since the last survey. The topics included: 1) correct identification of asthmatic patients during the screening process; 2) completion of blood sugar during intake screening of diabetic patients; and 3) proper documentation on the suicide log by nursing staff. All studies contained a clearly identified problem and a baseline study. All required a corrective action plan, and after staff retraining, 100% compliance was demonstrated upon re-evaluation.

The HSA reported active physician involvement in the CQI program, and we confirmed that the program has been reviewed annually for its effectiveness. The standard is met.

J-A-07 Emergency Response Plan (E). The RHA approved the health aspects of the facility's emergency response plan. Multiple casualty disaster drills have been held annually. The scenarios included: a riot on the recreation yard, a fight in the housing unit involving 80 detainees, and a tornado destroying a portion of the facility. These were all simulated events that involved community emergency response personnel. The drills had been critiqued and the results were shared with the health staff.

Man-down drills (simulated events) are held monthly on all three shifts. We confirmed that these have also been critiqued and the results are shared with all health staff.

However, the multiple casualty drills were only held on the day shift. **The standard is not met.**

Corrective action is required for Compliance Indicator #2. (b)(5)

(b)(5)

J-A-08 Communication on Patients' Health Needs (E). Communication between designated correctional and health services staff with regards to detainees' special health needs occurs both in writing, verbally and electronically. The standard is met.

J-A-09 Privacy of Care (I). Clinical encounters and discussion of patient information is conducted in auditory and visual privacy. Security personnel are present only if the patient poses a risk to the safety of the health care professional or others. The standard is met.

J-A-10 Procedure in the Event of an Inmate Death (I). Since the last survey, there was one detainee death, which was a suicide. A death review was conducted within 30 days, and consisted of the required elements: administrative and clinical mortality reviews, and a psychological autopsy. We also confirmed that treating staff were informed of the findings. The standard is met.

AMERICAN OVERSIGHT

J-A-11 Grievance Mechanism for Health Complaints (I). The health-related grievance program is integrated with the formal grievance program. On average, ten health-related grievances are filed per month. The facility grievance monitor collects all grievances, assigns a tracking number, and forwards them to the correct department for resolution. The HSA has five days to answer. If a detainee is not satisfied with the grievance resolution, he may appeal. The grievance is returned to the HSA for reconsideration. If the grievance remains unresolved, it is forwarded to the facility grievance manager.

We reviewed the log the HSA maintains, and confirmed the responses are timely. The standard is met.

B. MANAGING A SAFE AND HEALTHY ENVIRONMENT

The standards in this section address the importance of preventative monitoring of the physical plant. Health staff has a crucial role in identifying issues that could have a negative impact on the health and safety of facility staff and the inmate population if left unaddressed.

Standard Specific Findings

J-B-01 Infection Prevention and Control Program (E). The responsible physician has approved the written exposure control plan, which is updated annually, most recently on January 23, 2018. Infection control matters are addressed at the weekly stakeholders' meeting, and CQI and health staff meetings. Patients with communicable diseases are housed in the negative airflow room on site. Effective ectoparasite control procedures are used to treat infected detainees. Health services areas are inspected monthly for environmental concerns. The standard is met.

J-B-02 Patient Safety (I). Patient safety systems were in place to prevent adverse and near-miss clinical events, which staff can report in a non-punitive environment. All incidents that could affect a patient's safety are examined to determine the cause, and that information is shared with the staff. The standard is met.

J-B-03 Staff Safety (I). Health staff appears to work under safe and sanitary conditions. Appropriate personal protective equipment, biohazard containers and supplies were on hand. Workplace safety systems included security presence in the medical clinic area, a camera system to monitor staff and detainee movement, and security escorts for medical staff during medication administration rounds. The standard is met.

J-B-04 Federal Sexual Abuse Regulations (E). Written policies and procedures address the detection, prevention and reduction of sexual abuse. The warden described the facility as compliant with the 2003 Federal Prison Rape Elimination Act (PREA). The facility's PREA audit was conducted September 19-20, 2017, and the facility was found to be in full compliance with PREA standards. We observed signs posted throughout the facility regarding the reporting of sexual offenses. Upon arrival, detainees are also given written instructions and watch a PREA video regarding reporting procedures. The standard is met.

J-B-05 Response to Sexual Abuse (I). All health staff had been trained in how to detect, assess, and respond to signs of sexual abuse and sexual harassment, as well as how to preserve physical evidence. Training is part of orientation, and reviewed annually thereafter. All

AMERICAN OVERSIGHT

detainees undergo a PREA screening upon arrival to assess their risk of victimization. All victims of sexual assault are referred to the local emergency room for treatment and evidence collection. Victims of sexual assault are evaluated by a qualified mental health professional and a report is made to correctional authorities for housing separation of the victim from the assailant. The standard is met.

C. PERSONNEL AND TRAINING

The standards in this section address the need for a staffing plan adequate to meet the needs of the inmate population, and appropriately trained and credentialed health staff. Correctional officers are to have a minimum amount of health-related training in order to step in during an emergency, if health staff is not immediately available.

Standard Specific Findings

J-C-01 Credentials (E). Health care personnel who provide services to detainees had credentials and were providing services consistent with the jurisdiction's licensure, certification, and registration requirements. The administrative assistant is responsible for the credentialing process for local hires, and maintains the original file. The staff at the national personnel office is responsible for the credentialing process for the USPHS personnel. We reviewed copies of licenses and certificates on site, including a copy of the National Practitioner Data Bank query. The standard is met.

J-C-02 Clinical Performance Enhancement (I). A clinical performance enhancement process evaluates the appropriateness of services delivered by all direct patient care clinicians, registered nurses (RN) and licensed practical nurses (LPN). A professional of at least equal training in the same general discipline completes the reviews annually. We reviewed written documentation listing the names of the individuals being reviewed and the date of their most recent review, and confirmed that provider staff had a documented review completed. The standard is met.

J-C-03 Professional Development (E). We confirmed that qualified health care professionals had the required number of continuing education credits. State licensure requires continuing education in order to maintain a clinical license to practice. We reviewed a list of completed courses, dates, and number of hours per course to confirm compliance. We also verified that all staff were current in cardiopulmonary resuscitation (CPR) training. The standard is met.

J-C-04 Health Training for Correctional Officers (E). Correctional staff had the required training in health-related topics, and all were current in their health-related training. The facility training officer tracks all requirements electronically. We reviewed sign-in rosters and the training outline including course content and length, which included the required topics. The standard is met.

J-C-05 Medication Administration Training (E). Registered nurses and licensed practical nurses administers medications. Medication administration training is addressed during orientation, and annually during competency assessments. We verified that it includes matters of security, accountability, common side effects, and documentation, that completion is documented appropriately, and that the facility administrator and RHA have approved the curriculum. The standard is met.

AMERICAN OVERSIGHT

J-C-06 Inmate Workers (E). Detainee workers are trained by the safety officer on personal safety, infection control and blood borne pathogens topics, and they are supervised by security staff to perform basic janitorial services as laundry and food service workers. They do not handle biohazardous materials or clean such spills, or provide health services. Their training was appropriately documented. The standard is met.

J-C-07 Staffing (I). Full-time equivalent health staff includes:

(b)(7)(E)

At the time of the survey the following health staff positions were vacant:

(b)(7)(E)

The standard is met.

J-C-08 Health Care Liaison (I). Health staff is on site 24 hours a day. The standard is not applicable.

J-C-09 Orientation for Health Staff (I). We confirmed that health staff had received the appropriate orientation, which was documented electronically. We also verified that the RHA and facility administrator have approved it at least every two years. The standard is met.

AMERICAN OVERSIGHT

Stewart Detention Center, GA
April 22, 2018

D. HEALTH CARE SERVICES AND SUPPORT

The standards in this section address the manner in which health services are delivered–the adequacy of space, the availability and adequacy of materials, and, when necessary, documented agreements with community providers for health services.

Standard Specific Findings

J-D-01 Pharmaceutical Operations (E). An on-site pharmacy, staffed by (b)(7)(E) (b)(7)(E) provides pharmaceutical services that are sufficient to meet the needs of the detainees. Medication are ordered from a national company, or a local pharmacy as back-up. Pharmacy technicians deliver keep-on-person (KOP) medications to the detainees and stock the medication cart as needed. Medications administered by nursing staff come from stock supply. While there was a formulary, we confirmed that clinicians may order non-formulary medications if necessary.

We also confirmed that medications were under the control of appropriate heath care staff and stored under appropriate conditions. The RHA maintain records as necessary to ensure adequate control of, and accountability for, controlled medications. Stock medication is inventoried weekly, although at the time of the survey, the pharmacist was developing another system to track usage. The medication room was clean, uncluttered and secure, and controlled substances were properly monitored. The number for the poison control center was accessible in the clinic. Discontinued medications, or outdated medications are retrieved for destruction via a reverse distribution contract. We confirmed there was an adequate supply of antidotes and other emergency medications, and that the on-site pharmacist inspects the pharmacy monthly, most recently in January 2018. The standard is met

J-D-02 Medication Services (E). Medication services were clinically appropriate and provided in a timely, safe and sufficient manner. Once ordered, they are usually delivered during the next medication pass, usually within 24 hours. Medications are delivered to the detainee housing area four times a day. If a medication is not available within 24 hours, there was a back-up plan to ensure timely administration. The responsible physician determines the prescriptive practices at the facility. Detainees entering the facility on prescription medication continue to receive the medication as prescribed. Medications are prescribed only when clinically indicated. A keep-on-person (KOP) self-medication program was in place at the time of the survey. The standard is met.

J-D-03 Clinic Space, Equipment, and Supplies (I). The clinic area includes a waiting area, five examination rooms, nursing office space, two dental operatories, two mental health offices, two mental health examination rooms, a radiology room, a laboratory, and two medical housing rooms both of which were negative pressure rooms. Items subject to abuse are inventoried daily. We verified the accuracy of sharps and narcotics counts, and confirmed that adequate supplies and equipment were available, including two automated external defibrillators. The standard is met.

J-D-04 Diagnostic Services (I). On-site diagnostic services include stool blood-testing material, finger-stick blood glucose tests, peak flow meters, multiple-test dipstick urinalysis, electrocardiograms and chest x-rays. More complex studies are completed at the local hospital. Dental x-rays are also taken on site. A contracted provider supplies laboratory services. A

AMERICAN OVERSIGHT

Clinical Laboratory Improvement Amendment (CLIA) wavier with an expiration date of November 17, 2018 was on file. Diagnostic procedure manuals were available, and included the protocols for testing device calibration. The standard is met.

J-D-05 Hospital and Specialty Care (E). Hospitalization and specialty care is available to patients in need of these services. We verified through record review that off-site facilities or health professionals provide a summary of the treatment given and any follow-up instructions. If summaries are not returned with the patient, a release of information form is sent to the local hospital to request it. The standard is met.

E. INMATE CARE AND TREATMENT

The standards in this section address the core of a health services program: that all inmates have access to health services, how they are to request emergency and non-emergency care, that health histories are obtained, that assessments and care can be demonstrated to be provided in a timely fashion, and that discharge planning is considered. In short, health care for the inmates is to be consistent with current community standards of care.

Standard Specific Findings

J-E-01 Information on Health Services (E). During receiving, detainees receive verbal and written instructions (in English and Spanish) on access to health care services and the health-related grievance procedures. A licensed clinical social worker sees hearing-impaired/deaf, developmentally disabled, illiterate, and mentally ill detainees to develop a plan of care. Those who speak other languages can use the language conversion system (Interpret Talk) to communicate.

However, there was no access to care sign posted in the intake area. **The standard is not met.**

Corrective action is required for Compliance Indicator #1. (b)(5)

(b)(5)

J-E-02 Receiving Screening (E). New admissions seldom arrive directly from the community. Medical staff complete a pre-screening to identify those individuals in need of care and refer them immediately to the local hospital. Their subsequent admission to the facility is predicated on a written medical clearance from the hospital.

After the pre-screening, the intake screening is conducted which consists of the required areas of inquiry and includes a disposition. Prescribed medications are verified and maintained as clinically indicated. The HSA and the assistant HSA monitors the receiving screenings daily to determine the safety and effectiveness of the process.

AMERICAN OVERSIGHT

While medical staff completes a receiving screening on all detainees entering the facility, this does not take place until eight to ten hours after arrival. **The standard is not met**.

Corrective action is required for Compliance Indicator #5 (b)(5)

(b)(5)

J-E-03 Transfer Screening (E). Qualified health care professionals review each transferred detainee's health record or summary to ensure continuity of care. Receiving screening is completed for all incoming detainees. The standard is met.

J-E-04 Initial Health Assessment (E). The full population health assessment has been implemented at this facility. A nurse practitioner or physician assistant completes the health assessment on detainees identified with a chronic condition or health concern within 48 hours. A trained RN completes a health assessment on detainees with no identified health concerns within 14 days. We verified that the health assessment consists of the required elements, including a review of the receiving screening. Specific problems are integrated into an initial problem list, diagnostic and therapeutic plans for each problem are developed as clinically indicated, and immunizations are offered as needed. The standard is met.

J-E-05 Mental Health Screening and Evaluation (E). Trained medical staff completes the mental health screening. Patients who screen positive on the mental health screening are referred to qualified mental health professionals for further evaluation.

However, the screening does not address the following required areas of inquiry: substance use hospitalization, detoxification, outpatient treatment and cerebral trauma or seizures. **The standard is not met.**

Corrective action is required for Compliance Indicators # 2a-d (b)(5)

(b)(5)

AMERICAN OVERSIGHT

revised initial mental health screening form including all of the noted elements, with evidence of its implementation. In order to receive accreditation, verification that this standard has been met is required.

J-E-06 Oral Care (E). A trained RN completes the oral screening during the receiving screening. Detainees are instructed in oral hygiene and preventive oral education during the intake process. The dentist completes an oral examination within 12 months of detainees' admission. The oral care is timely and includes immediate access for urgent or painful conditions. The system of established priorities for oral treatment is not limited to extractions. The standard is met.

J-E-07 Nonemergency Health Care Requests and Services (E). All detainees, regardless of housing assignment, have access to regularly scheduled times for routine health care. Security staff announces sick call, and escort any detainee desiring to see a provider to the clinic. All requests for health services are completed by a provider in a face-to-face encounter. The standard is met.

J-E-08 Emergency Services (E). The RHA provides 24-hour emergency medical, mental health, and dental services, and maintains emergency drugs, supplies, and medical equipment. We verified that emergency on-call services were also available. Detainees are transported to the local emergency treatment facility by emergency medical services. The standard is met.

J-E-09 Segregated Inmates (I). Conditions of segregation at this facility (NCCHC's category 2b) require health rounds at least three times a week, and once a week by mental health staff. In practice, health staff rounds are completed daily, and mental health rounds are completed weekly. We confirmed these rounds are documented appropriately, and significant findings noted in the health record.

Upon notification that a detainee is to be segregated, a qualified health care professional assesses the detainee, and reviews his health record to determine whether there are any contraindications for segregation. Health staff promptly identifies and inform custody officials when detainees are physically/psychologically deteriorating, or are exhibiting other signs of failing health. They also inform custody officials of the latest scientific information concerning the health effects of segregation during the weekly segregation meeting. The standard is met.

J-E-10 Patient Escort (I). Patients are escorted to on-site and off-site clinical appointments in a timely manner. Transporting officers are alerted to special accommodations that are necessary during transport. Appropriate steps are taken to ensure patient confidentially, such as carrying medical information in sealed envelopes. The standard is met.

J-E-11 Nursing Assessment Protocols (I). Nursing assessment protocols are utilized, and do not include prescription medications. We verified that nurses are trained to use the protocols upon hire, when they are revised and annually during competency review. The protocols were last reviewed January 30, 2018. The standard is met.

J-E-12 Continuity and Coordination of Care During Incarceration (E). We confirmed that continuity of care is appropriate. Clinician orders are evidence-based and implemented in a timely manner. Deviations are clinically justified, documented and shared with the patient. The

AMERICAN OVERSIGHT

clinician reviews diagnostic tests in a timely manner, and modified treatment plans as clinically indicated.

When a patient returns from the emergency room, urgent care or hospitalization, he sees a provider to ensure discharge orders are implemented and appropriate follow-up completed. Specialty consultants' recommendations are reviewed and acted upon in a timely manner. Changes in treatment are shared with the patient. Treatment protocols are followed in accordance with the standard.

The responsible physician determines the frequency of periodic health assessments. The medical director reviews all detainee medical records to assure that clinically appropriate care is ordered and implemented by attending health staff. The standard is met.

J-E-13 Discharge Planning (E). Discharge planning is coordinated between medical, ICE and embassy personnel. Every attempt is made to determine the availability of health care in other countries for detainees being repatriated. Repatriated individuals receive a 30-day supply of medication upon deportation. The standard is met.

F. HEALTH PROMOTION AND DISEASE PREVENTION

The standards in this section address health and lifestyle education and practices, as well as patient-specific instruction during clinical encounters.

Standard Specific Findings

J-F-01 Healthy Lifestyle Promotion (I). A variety of health-related information is available to all detainees. Detainees are instructed on health care access, oral hygiene, healthy life styles, personal hygiene, the risks of smoking and tobacco use, safe medication usage, and mental health issues as part of the receiving screening. We verified that individual health education and instructions in self-care is documented in the health record during clinical encounters. The standard is met.

J-F-02 Medical Diets (I). At the time of the survey, approximately 299 medical diets were being prepared for patients with specific dietary needs. Detainees who refuse prescribed diets receive follow up nutritional counseling. A registered dietitian reviews the medical diet menus at least every six months, most recently on September 25, 2017. Workers who prepare medical diets are supervised by food service personnel while doing so. The standard is met.

J-F-03 Use of Tobacco (I). Smoking is prohibited indoors. Information on the health hazards of tobacco is given to all detainees during intake screening. The standard is met.

AMERICAN OVERSIGHT

G. SPECIAL NEEDS AND SERVICES

The standards in this section address the needs of inmates with chronic conditions or other health conditions that require a multidisciplinary approach to treatment. These special needs include mental health issues.

Standard Specific Findings

J-G-01 Chronic Disease Services (E). Care as reflected in the health record appears in compliance with current community standards. The responsible physician establishes and annually approve clinical protocols consistent with national clinical practice guidelines. Clinical guidelines for all nine diseases were in place, including guidelines on sickle cell.

Health records documentation confirmed that clinicians follow the chronic disease protocols. Treatment plans include the appropriate elements (frequency of follow-up; monitoring condition and status and taking action as indicated; type and frequency of diagnostic testing and therapeutic regiments; instruction on diet, exercise, medications and adaptation to correctional environment; and clinical justification of deviation from the protocols). Chronic illnesses were listed on the problem list, and we confirmed the RHA maintain a list of chronic care patients. The standard is met.

J-G-02 Patients With Special Health Needs (E). When required by the health conditions of the patient, treatment plans define the individual's care, and include the frequency of follow-up, type and frequency of diagnostic testing and therapeutic regimens, and instructions about diet, exercise, adaptation to the detention environment and medications. Special needs were listed on the problem list, and we confirmed the RHA maintains a list of special needs patients. The standard is met.

J-G-03 Infirmary Care (E). There was no infirmary at the time of the survey, although there were two medical housing cells in the clinic which were also negative pressure rooms. Infirmary-level patients would be transferred to the local hospital. The standard is not applicable.

J-G-04 Basic Mental Health Services (E). On-site mental health services include a full range of which, to include the identification and referral of detainees with mental health needs, crisis intervention services, psychotropic medication management when indicated, individual and group counseling, psychosocial/psychoeducational programs, and treatment documentation and follow-up. When clinically appropriate, a patient's commitment or transfer to an inpatient psychiatric setting is timely and accomplished according to procedures. Outpatients receiving basic mental health services are seen at least every 90 days or as clinically indicated. Mental health and medical services are coordinated to facilitate integrated patient management and to ensure patients' medical and mental health needs are met. Special programs include crisis intervention, individual and group counseling. The standard is met.

J-G-05 Suicide Prevention Program (E). There has been one suicide at this facility since the last survey.

The suicide prevention program addresses each of the 11 key components as described by the standard. The RHA has approved the training curriculum for staff. Treatment plans address suicidal ideation and recurrence, and patient follow-up occurs as clinically indicated. There are three levels of observation for suicidal patients. Patients on levels one and two are placed on

AMERICAN OVERSIGHT

constant observation in the segregated housing area where such observation can be maintained. Non-acutely suicidal detainees (level three) are housed in the same housing area, but they are not monitored on an unpredictable (staggered) schedule. We observed documentation is recorded is on a preprinted form describing precise, 15-minute intervals. **The standard is not met.**

Corrective action is required for Compliance Indicator #1d. (b)(5)

(b)(5)

J-G-06 Patients with Alcohol And Other Drug Problems (AOD) (E). Disorders associated with AOD, such as HIV and liver disease, are recognized and treated. Detention staff had been trained to recognize detainees' AOD problems. Medical and mental health communicates and coordinates with each other regarding patients' AOD care. Individual counseling and group therapy are offered on site. The standard is met.

J-G-07 Intoxication and Withdrawal (E). All detainees are screened for their degree of reliance on substances, and potential for withdrawal, upon arrival. Those who demonstrate acute symptoms of intoxication or withdrawal are transferred to the local hospital for treatment. The RHA had approved the protocols, which are consistent with nationally accepted treatment guidelines for intoxication and withdrawal. The Clinical Opiate Withdrawal Scale (COWS) and health vendor's assessment guidelines were last approved on March 24, 2017. The standard is met.

J-G-08 Contraception (I). The population at this facility is all male. The standard is not applicable.

J-G-09 Counseling And Care Of The Pregnant Inmate (E). The standard is not applicable.

J-G-10 Aids to Impairment (I). We observe detainees using crutches and wearing glasses during the tour. Health records documentation indicated aids are provided as necessary. All aids to impairment are approved by security if considered medically necessary. The standard is met.

J-G-11 Care for the Terminally Ill (I). Although it would be rare for a terminally ill patient to be held at this facility, procedures were in place to make the appropriate accommodations, such as arranging for advance directives, a compassionate release, or the patient's transfer to a hospital. At the time of the survey, one terminally ill detainee was being housed as an inpatient at the Mayo Clinic. The standard is met.

AMERICAN OVERSIGHT

H. HEALTH RECORDS

The standards in this section address the importance of accurate health record documentation, health record organization and accessibility, and need to ensure that medical and mental health information is communicated when those records are separate documents.

Standard Specific Findings

J-H-01 Health Record Format and Contents (E). Detainees' medical and mental health records are integrated in electronic format. The health record includes a problem list, as well as all other critical elements. The standard is met.

J-H-02 Confidentiality of Health Records (E). Health records are password-protected, and are separate from correctional records. Instructions on maintaining patient confidentiality is provided during new employee orientation and is documented. When non-health staff transports health records, the records are secured in a sealed envelope to ensure patient confidentiality. The standard is met.

J-H-03 Management of Health Records (I). The health record is available for each patient care encounter. When a detainee is deported, a copy of the current health record or a comprehensive health summary accompanies him. The jurisdiction's legal requirements regarding records retention are followed. If detainees return to the system, their health record is reactivated and available during patient encounters. The standard is met.

J-H-04 Access to Custody Information (I). Qualified health care professionals have access to information in the detainee's detention record when such information may be relevant to the detainee's health and course of treatment. The standard is met.

I. MEDICAL-LEGAL ISSUES

The standards in this section address the most complex issues facing correctional health care providers. While the rights of inmate-patients in a correctional setting are generally the same as those of a patient in the free world, the correctional setting often adds additional considerations when patient care is decided. The rights of the patient, and the duty to protect that patient and others, may conflict; however, ethical guidelines, professional practice standards, and NCCHC's standards are the determining factors regarding these interventions and issues.

Standard Specific Findings

J-I-01 Restraint and Seclusion (E). Clinical restraints, seclusion or custody-ordered restraints are not used at this facility. The standard is met.

J-I-02 Emergency Psychotropic Medication (E). Although emergency psychotropic medication is not implemented at his facility, the policies require a licensed clinician's authorization for its use. The standard is met.

J-I-03 Forensic Information (I). Health staff does not collect forensic information at this facility. The standard is met.

AMERICAN OVERSIGHT

J-I-04 End-of-life Decision Making (I). By policy, detainees approaching the end of life are permitted to execute advances directives, after being counseled as to the meaning and consequences of such actions. In practice, terminally ill detainees would be transferred to an inpatient facility. The standard is met.

J-I-05 Informed Consent and Right to Refuse (I). We verified that all informed consents and refusals of care are documented in the health record and include the signatures of the patient and a health staff witness. Patients are counseled as to possible adverse consequences to their health that may occur as a result of a refusal. Should a patient refuse to sign the refusal of care form, a health staff member and a second person would sign as witnesses. The standard is met.

J-I-06 Medical and Other Research (I). No health-related research is conducted at this facility. The standard is met.

Washington, DC 20536

Dear (b)(6); (b)(7)(C)

The Accreditation Committee of the National Commission on Correctional Health Care (NCCHC) met on February 24, 2017 to review the findings from a recent survey and to consider the accreditation status of El Paso Service Processing Center. The Committee voted to continue the accreditation of your facility with the following qualification: that compliance be demonstrated with all of the essential standards and at least 85% of the applicable important standards. Compliance should be documented in a report and submitted to NCCHC by June 23, 2017. Enclosed is the accreditation report for your facility, listing cited standards and recommendations for achieving compliance.

The Committee acknowledged the facility's significant level of compliance with a number of NCCHC standards. However, in order to maintain your accreditation, it is important that you address the cited standards in a timely manner.

Following receipt of documentation and verification of compliance, a Certificate of Accreditation will be sent to you indicating your facility's accreditation status. Please let us know if we can be of any assistance.

Sincerely,

(b)(6); (b)(7)(C)

AMERICAN OVERSIGHT

El Paso Service Processing Center, TX
February 24, 2017

The National Commission on Correctional Health Care is dedicated to improving the quality of correctional health services and helping correctional facilities provide effective and efficient care. NCCHC grew out of a program begun at the American Medical Association in the 1970s. The standards are NCCHC's recommended requirements for the proper management of a correctional health services delivery system. These standards have helped correctional facilities improve the health of their inmates and the communities to which they return, increase the efficiency of their health services delivery, strengthen their organizational effectiveness, and reduce their risk of adverse patient outcomes and legal judgments.

On December 7-9, 2016, NCCHC conducted its review for continued accreditation of this facility. We commend the facility staff for their professional conduct, assistance, and candor during the course of our review. The NCCHC's team of experienced certified correctional health professionals utilized NCCHC's 2014 *Standards for Health Services in Jails* as the basis of its health services analysis. This report focuses primarily on issues in need of correction or enhancement. It is most effective when read in conjunction with the *Standards* manual. The information in this report is privileged and confidential and is intended for the sole use of persons addressed.

There are 40 essential standards; 38 are applicable to this facility and 36 (95%) were found to be in compliance. One hundred percent of the applicable essential standards must be met. Our findings include:

Essential Standards Not in Compliance
J-E-06 Oral Care
J-E-12 Continuity and Coordination of Care

Essential Standards Not Applicable
J-E-03 Transfer Screening
J-G-03 Infirmary Care

There are 27 important standards; 26 are applicable to this facility and 26 (100%) were found to be in compliance. Eighty-five percent or more of the applicable important standards must be met. Our findings include:

Important Standards Not in Compliance
None

Important Standard Not Applicable
J-C-08 Health Care Liaison

Decision: On February 24, 2017, NCCHC's Accreditation Committee awarded the facility Continuing Accreditation with Verification (CAV), *contingent* upon receiving requested compliance verification by June 23, 2017.

AMERICAN OVERSIGHT

El Paso Service Processing Center, TX
February 24, 2017

I. Facility Profile

The facility's security classification is: Multi-level (minimum, medium, and maximum).
The facility was built in: 1967
The facility's mission or purpose has not changed since their last survey.
The facility is located in the Southwestern United States.
The facility's supervision style is: Direct Supervision.
The facility's structural layout is: Linear-Style Housing
Since the last NCCHC survey, there have not been any major renovations/expansions/closures, although major renovations/expansions/closures were anticipated at the time of the survey: A double-wide, portable building has been brought on-site. A building was being constructed for additional health care offices. The current offices will be utilized for providing health care services. Their exact usage had not been decided, at the time of the survey.
Total Detainee Count on day of survey: 849
Total number of adult males on day of the survey: 634
Total number of adult females on day of the survey: 215
Total number of juvenile males on day of the survey: Facility doesn't house juveniles.
Total number of juvenile females on day of the survey: Facility doesn't house juveniles.
Average Daily Population (ADP) for last completed calendar year: 708
The design-rated capacity for the facility is: 870
There has not been a substantial increase or decrease in the detainee population.
Admissions to the facility arrive: unscheduled and at any time of day.
The total number of admissions to the facility last year was: 6,855.
The average daily intake to the facility last year was: 19.
The total number of correctional staff assigned to this facility is: (b)(7)(E)
The usual shift coverage for correctional staff is: (b)(7)(E)
There has not been a recent change in health care contractor.
Health services are provided by a federal agency.
They have provided health services since: 1989.
There have not been distinctive events that may affect the delivery of health care.
The facility has no satellites.

II. Survey Method

We toured the clinic area, detainee housing areas, intake area, food service, and segregation. We reviewed 14 health records; policies and procedures; provider licenses; administrative, health staff, and continuous quality improvement (CQI) meeting minutes; job descriptions; statistical and environmental inspection reports; and health services personnel and CO training records. We interviewed the warden, responsible physician, health services administrator (HSA), assistant health services administrator (AHSA), other health, mental health, and dental staff, the pharmacist, intake officer, food services supervisor, medical records clerk, four COs, and six detainees selected at random.

AMERICAN OVERSIGHT

El Paso Service Processing Center, TX
February 24, 2017

III. Survey Findings and Comments

A. GOVERNANCE AND ADMINISTRATION

The standards in this section address the foundation of a functioning correctional health services system and the interactions between custody and health services authorities. Any model of organization is considered valid, provided the outcome is an integrated system of health care in which medical orders are carried out and documented appropriately and the results are monitored as indicated. Policies and procedures are to include site-specific operating guidelines.

Standard Specific Findings

J-A-01 Access to Care (E). Detainees have access to health care. Patients see a qualified clinician and receive care for their serious medical, mental health, and dental needs. There was no fee-for-service program at the time of the survey. The standard is met.

J-A-02 Responsible Health Authority (E). The responsible health authority (RHA) is the federal agency, whose on-site representative is the full-time HSA. Clinical judgments rest with a designated, full-time responsible physician. The standard is met.

J-A-03 Medical Autonomy (E). Qualified health care professionals make decisions regarding detainees' serious medical, dental, and mental health needs in the detainees' best interests. We noted good cooperation between custody and medical staff. Administrative decisions are coordinated, if necessary, with clinical needs so that patient care is not jeopardized. The health staff is subject to the same security regulations as other facility employees. The standard is met.

J-A-04 Administrative Meetings and Reports (E). The department heads and facility administrator meet monthly to discuss administrative matters with health staff and detention supervisors. Health staff meets monthly to discuss health services operations. Attendees include the responsible physician, HSA, the compliance officer, and mental health, pharmacy, dental, and nursing staff. The facility administrator receives monthly statistical reports of health services utilization, which are used to monitor trends in the delivery of health care. The standard is met.

J-A-05 Policies and Procedures (E). The health services policy manual is site-specific. The RHA and responsible physician last reviewed it in October and November, 2016. Other policies such as those for custody, kitchen, or corporate do not conflict with health care policies. The policies are accessible to health staff. The standard is met.

J-A-06 Continuous Quality Improvement Program (E). The CQI program identifies health care aspects to be monitored, implements and monitors corrective action when necessary, and studies the effectiveness of the corrective action plan. The quality improvement committee consists of the responsible physician, HSA, AHSA, nurse manager, compliance officer, mid-levels providers, and representatives from medical records, mental health, pharmacy, and dental. The committee identifies problems, establishes thresholds, designs monitoring activities, analyzes the results and remonitors performance after implementing improvement strategies. More than 45 site-specific process and outcome studies have been completed since the last survey. Recent studies examined mental health screening, reasonable accommodations, sick call, training, hypertension, diabetes, dental care, hunger strikes, and other aspects of care.

AMERICAN OVERSIGHT

Studies contained clearly identified problems, baseline studies, corrective action plans that had been implemented, and restudied to evaluate effectiveness. The established thresholds were also met.

The responsible physician involved in the CQI program. She attends the meetings, review charts, and helps determine trends and areas that should be studied. The CQI program is reviewed for its efficacy at the end of each year. The standard is met.

J-A-07 Emergency Response Plan (E). The RHA and facility administrator have approved the health aspects of the emergency response plan, which includes the required elements. Multiple casualty disaster drills have been held annually so that over the course of three years, staff on each shift has had an opportunity to participate. The scenarios included: a riot, a vehicular accident, and a warehouse explosion. Community agencies also participated. The drills have been critiqued and the results were shared with the health staff.

Man-down events have been documented and confirmed that health staff on each shift has been able to participate annually. These have also been critiqued and the results were shared with all health staff. The standard is met.

J-A-08 Communication on Patients' Health Needs (E). Communication between designated correctional and health services staff with regard to detainees' special health needs occurs in writing and electronically. The standard is met.

J-A-09 Privacy of Care (I). Clinical encounters and discussion of patient information are conducted in auditory and visual privacy. Security personnel are present only if the patient poses a probable risk to the safety of the health care professional or others. The standard is met.

J-A-10 Procedure in the Event of an Inmate Death (I). Since the last survey, there have been no detainee deaths. We verified that policy and procedure were in compliance with the standard. The standard is met.

J-A-11 Grievance Mechanism for Health Complaints (I). The health-related grievance program is integrated with the facility's formal grievance program. Detainees may also informally discuss their concerns with a staff member before submitting a formal grievance. On average 10 health-related grievances are filed per quarter. Detainees may appeal to the warden and a committee, if necessary. We verified the responses have been timely. The standard is met.

B. MANAGING A SAFE AND HEALTHY ENVIRONMENT

The standards in this section address the importance of preventative monitoring of the physical plant. Health staff has a crucial role in identifying issues that could have a negative impact on the health and safety of facility staff and the inmate population if left unaddressed.

Standard Specific Findings

J-B-01 Infection Prevention and Control Program (E). The responsible physician has approved the written exposure control plan and is updated annually, most recently on January 26, 2016. Infection control matters are addressed at the monthly Safety Infection Prevention Committee, CQI, and staff meetings. Patients with communicable diseases are placed in one of

AMERICAN OVERSIGHT

the three on-site negative pressure rooms. Effective ectoparasite control procedures are used to treat infected detainees. The health services areas inspected monthly for environmental concerns. The standard is met.

J-B-02 Patient Safety (I). A written safety management plan has been implemented to prevent adverse and near-miss clinical events, which staff can report in a non-punitive environment. The standard is met.

J-B-03 Staff Safety (I). Health staff appears to work under safe and sanitary conditions. The standard is met.

J-B-04 Federal Sexual Abuse Regulations (E). The Warden described the facility as compliant with the 2003 Federal Prison Rape Elimination Act (PREA). Written policies and procedures address the detection, prevention and reduction of sexual abuse. The standard is met.

J-B-05 Response to Sexual Abuse (I). Health staff has been trained during orientation and annually thereafter in how to detect, assesses, and respond to signs of sexual abuse and sexual harassment, as well as how to preserve physical evidence of sexual abuse. Completion is documented electronically and in the personnel files. Victims of sexual assault are referred to a community facility for treatment and evidence collection. In all cases, the victim is evaluated by a qualified mental health professional, and a report is made to correctional authorities to effect a housing separation of the victim from the assailant. The standard is met.

C. PERSONNEL AND TRAINING

The standards in this section address the need for a staffing plan adequate to meet the needs of the inmate population, and appropriately trained and credentialed health staff. Correctional officers are to have a minimum amount of health-related training in order to step in during an emergency, if health staff is not immediately available.

Standard Specific Findings

J-C-01 Credentials (E). Health care personnel who provide services to detainees had credentials and were providing services consistent with the jurisdiction's licensure, certification, and registration requirements. The administrative assistant on site and representative of the health vendor are responsible for the monthly on-going credential verification process, which includes inquiry regarding sanctions or disciplinary actions of state boards, employers, and the National Practitioner Data Bank. The standard is met.

J-C-02 Clinical Performance Enhancement (I). A clinical performance enhancement process evaluates the appropriateness of services delivered by all direct patient care clinicians, registered nurses (RN) and licensed practical nurses (LPN). A professional of at least equal training in the same general discipline completes the reviews annually. We reviewed a log listing the names of the individuals being reviewed and the date of their most recent review, which included required elements. The standard is met.

J-C-03 Professional Development (E). We confirmed that qualified health care professionals had the required number of continuing education credits, All were current in cardiopulmonary

AMERICAN OVERSIGHT

resuscitation (CPR) training, as well. The state requires continuing education credits for license renewal. The standard is met.

J-C-04 Health Training for Correctional Officers (E). Correctional staff had the required training in health-related topics, and all were current in their health-related training. All officers have to participate annually. We reviewed the training outline, including course content and length, and confirmed it includes all the required topics. The standard is met.

J-C-05 Medication Administration Training (E). Nurses administer medications. They are trained during orientation and annually thereafter, and complete a post-test. The training, which the HSA and facility administrator have approved, includes matters of security, accountability, common side effects, and documentation. It is documented electronically and in the personnel files. The standard is met.

J-C-06 Inmate Workers (E). Detainee workers do not provide health services, nor are they involved in any peer health-related programs. They may work in a janitorial capacity, but do not handle bio-hazardous materials or clean such spills. They have been trained on personal protective equipment, proper cleaning procedures, and general safety. The standard is met.

J-C-07 Staffing (I). Full-time equivalent health staff includes:

(b)(7)(E)

At the time of the survey, (b)(7)(E) The standard is met.

J-C-08 Health Care Liaison (I). Health staff is on site 24 hours a day. The standard is not applicable.

J-C-09 Orientation for Health Staff (I). We confirmed that health staff had received the appropriate orientation. A signed check list is maintained in the employee's personnel file. The orientation lesson plan reviewed at least once every two years by the HSA and facility administrator, most recently in November, 2016. The standard is met.

AMERICAN OVERSIGHT

El Paso Service Processing Center, TX
February 24, 2017

D. HEALTH CARE SERVICES AND SUPPORT

The standards in this section address the manner in which health services are delivered–the adequacy of space, the availability and adequacy of materials, and, when necessary, documented agreements with community providers for health services.

Standard Specific Findings

J-D-01 Pharmaceutical Operations (E). The on-site pharmacy provides pharmaceutical services that are sufficient to meet the needs of the detainees. Staffing includes (b)(7)(E) (b)(7)(E) Orders are processed in the electronic medical record. The narcotics are stored in a locked narcotic cabinet and counted regularly. We verified the counts during the survey. Medications are dispensed in bottles or plastic bags for the nursing staff, to administer. Stock medications must be signed out of a locked cabinet, and counted each time one is removed. Pharmaceuticals to be disposed of are secured on-site until Reverse Distributors come on-site to destroy them. The pharmacist inspects the medication area and the medication carts monthly, and maintains records as necessary to ensure adequate control of all medications. All medications were stored under proper conditions and an adequate supply of antidotes and other emergency medications was readily available to staff. The standard is met.

J-D-02 Medication Services (E). Medication services are clinically appropriate and provided in a timely, safe, and sufficient manner. Nurses take medication carts to the housing units for administration. The policy identifies the expected time frames from ordering to delivery and a backup plan if the time frames cannot be met. Detainees receive medication within 24 hours if prescribed during regular business hours. If it is not available, it is taken out of stock or obtained from a local pharmacy.

The responsible physician determines the prescriptive practices at this facility. Medications are prescribed only when clinically indicated. Detainees entering the facility on prescription medication continue to receive it or an acceptable alternate medication as clinically indicated. The formulary describes which medications may be classified as "keep-on-person" (KOP) and the detainees must be trustworthy to take their medication correctly. The standard is met.

J-D-03 Clinic Space, Equipment, and Supplies (I). The clinic area includes four examination rooms, office space for a provider, HSA and AHSA, nurse manager, mental health staff, one-chair dental operatory, medical records storage, and a nursing station. Sick call is conducted in a trailer, which has an exam room and a waiting room. Items subject to abuse are inventoried weekly. We verified the accuracy of the counts and confirmed that adequate supplies and equipment, including five automated external defibrillators (AED), were available. The standard is met.

J-D-04 Diagnostic Services (I). On-site diagnostic services include stool blood-testing material, finger-stick blood glucose tests, peak flow meters, multiple-test dipstick urinalysis, and pregnancy tests. An off-site laboratory had been contracted to process the samples. Chest x-rays can be performed on-site, while others are taken at the local hospital. We confirmed that lab and x-ray procedure manuals were available. The CLIA waiver was due to expire on December 23, 2018. The standard is met.

AMERICAN OVERSIGHT

J-D-05 Hospital and Specialty Care (E). Hospitalization and specialty care is available to patients in need of these services. We verified through record review that off-site facilities or health professionals provide a summary of the treatment given and any follow-up instructions. No on-site specialty services were being provided at the time of the survey. The standard is met.

E. INMATE CARE AND TREATMENT

The standards in this section address the core of a health services program: that all inmates have access to health services, how they are to request emergency and non-emergency care, that health histories are obtained, that assessments and care can be demonstrated to be provided in a timely fashion, and that discharge planning is considered. In short, health care for the inmates is to be consistent with current community standards of care.

Standard Specific Findings

J-E-01 Information on Health Services (E). Detainees receive verbal and written instructions (in English and Spanish) on access to health care services, and the health-related grievance procedures. An access-to-care sign had been posted in the intake area. Interpretation servicescan be provided as needed. The standard is met.

J-E-02 Receiving Screening (E). New admissions arrive directly from the community. Reception personnel identify those individuals in need of emergency care and refer them immediately to a hospital. Their subsequent admission to the facility is predicated on a written medical clearance from the hospital.

Qualified health professionals complete the receiving screening, which includes a disposition and addresses all the required elements, immediately upon detainees' arrival. If a woman reports current opiate use, she is referred immediately for a pregnancy test. All pregnant women who are using opiates are immediately referred to the hospital. Prescribed medications are reviewed and appropriately maintained as clinically indicated. Health staff regularly monitors receiving screenings to determine the safety and effectiveness of the process through the CQI program. The standard is met.

J-E-03 Transfer Screening (E). All new detainees entering the facility are treated as new admissions, even if they are transferring from a different facility. The standard is not applicable.

J-E-04 Initial Health Assessment (E). The full population health assessment has been implemented at this facility. All detainees receive an initial health assessment no later than 14 calendar days after admission. A trained RN completes the hands-on portion of the health assessment, which consists of the required elements, including a review of the receiving screening results and laboratory or diagnostic tests for communicable diseases. TB skin tests or chest x-rays are performed on all detainees. The treating clinician reviews all the positive findings. Specific problems are integrated into an initial problem list, and diagnostic and therapeutic plans for each problem are developed as clinically indicated. The standard is met.

J-E-05 Mental Health Screening and Evaluation (E). A trained RN completes the mental health screening, which includes the required elements, during the initial intake screening. Patients who screen positive on the mental health screening are referred to qualified mental health professionals for further evaluation. The standard is met.

AMERICAN OVERSIGHT

J-E-06 Oral Care (E). Trained RNs complete the oral screening and provide instructions in oral hygiene and preventive oral education during intake. Oral care is timely and it includes immediate access for urgent or painful conditions. The system of established priorities for oral treatment is not limited to extractions.

However, the dentist does not complete an oral examination within 12 months of detainees' admission. At the time of the survey, we found that 16 detainees had not received their annual oral screening, and were scheduled to be completed the following week. **The standard is not met.**

Corrective action is required for Compliance Indicator #3. (b)(5)

(b)(5)

J-E-07 Nonemergency Health Care Requests and Services (E). All detainees, regardless of housing assignment, have access to regularly scheduled times for routine health care. The frequency and duration of response to requests for health services is sufficient for the detainee population. Open sick call is conducted each morning from 6:00 a.m. until 10:00 a.m. Each barrack is called to send the detainees over to the trailer for sick call. Patients can also request health care by requesting the officer call health services or they can walk into health services at any time. A nurse practioner assists with sick call and sees anyone that the nurse refers the same day. The standard is met.

J-E-08 Emergency Services (E). The RHA maintains emergency drugs, supplies, and medical equipment. Detainees are taken to the hospital by ambulance or facility van. The emergency facility is located five to ten minutes away. We verified that emergency on-call services are available as well. The standard is met.

J-E-09 Segregated Inmates (I). Conditions of segregation at this facility meet NCCHC's category 2b. and require health rounds at least three times per week. In practice, health rounds take place daily and mental health rounds take place weekly. We verified that the rounds are documented in the electronic health record. Upon notification that a detainee has been segregated, qualified health care professionals review the detainee's health record to determine whether there are any contraindications and they also see the detainee in a face-to-face encounter. Health staff informs custody officials of the latest scientific information concerning the health effects of segregation at the medical administrative committee meetings. The standard is met.

J-E-10 Patient Escort (I). Patients are escorted to on-site and off-site clinical appointments in a timely manner. Transporting officers are alerted to special accommodations, such as medication administration. The patient's confidentiality is maintained. The standard is met.

AMERICAN OVERSIGHT

J-E-11 Nursing Assessment Protocols (I). Nursing assessment protocols (Nursing Guidelines) are utilized and do not include prescription medications. The responsible physician and nursing administrator last reviewed them on October 24, 2016. We verified the nurses are trained to use the protocols upon hire and when protocols are revised or introduced. They also undergo annual reviews of competency. The standard is met.

J-E-12 Continuity and Coordination of Care During Incarceration (E). Clinician orders are evidence-based and implemented in a timely manner. Deviations are clinically justified, documented and shared with the patient. Patients receive treatment and diagnostic tests ordered by clinicians, who discuss such care with them. When a patient returns from the emergency room, urgent care or hospitalization, protocols are followed in accordance with the standard.

The responsible physician determines the frequency of periodic health assessments on the basis of protocols promulgated by nationally recognized professional organizations (the Bureau of Prisons).

However, while the clinician review diagnostic tests in a timely manner, they are not appropriately acted upon, nor are treatment plans modified as clinically indicated. The clinicians review, but do not always act upon, the recommendations of specialty consultants in a timely manner. Chart reviews are not of sufficient frequency and number to assure that clinically appropriate care is ordered and implemented by attending health staff. **The standard is not met.**

Corrective action is required for Compliance Indicators #3, #7, and #9. (b)(5)

(b)(5)

J-E-13 Discharge Planning (E). The providers and discharge coordinators are involved in discharge planning. Discharging detainees are given a reasonable supply of medication and a referral list. The standard is met.

F. HEALTH PROMOTION AND DISEASE PREVENTION

The standards in this section address health and lifestyle education and practices, as well as patient-specific instruction during clinical encounters.

Standard Specific Findings

AMERICAN OVERSIGHT

J-F-01 Healthy Lifestyle Promotion (I). The RHA utilizes the National Health Education Manual for detainee health education. We confirmed that a variety of health-related brochures and pamphlets is available to all detainees, and that individual health education and instruction in self-care is documented in the health record during clinical encounters. The standard is met.

J-F-02 Medical Diets (I). At the time of the survey, approximately 100 medical diets were being prepared for patients with specific dietary needs. Detainees who refuse prescribed diets receive receive follow up nutritional counseling. A registered dietitian reviews the medical diet menus at least every six months, most recently on October 15, 2016. Workers who prepare medical diets are supervised while doing so. The standard is met.

J-F-03. Use of Tobacco (I). Smoking is prohibited in all indoor and outdoor areas. Literature on the hazards of tobacco was available to the detainees at the time of the survey. The standard is met.

G. SPECIAL NEEDS AND SERVICES

The standards in this section address the needs of inmates with chronic conditions or other health conditions that require a multidisciplinary approach to treatment. These special needs include mental health issues.

Standard Specific Findings

J-G-01 Chronic Disease Services (E). Care as reflected in the health record appears in compliance with current community standards. The responsible physician establishes and annually approves clinical protocols, consistent with national clinical practice guidelines. We verified there were guidelines for all nine diseases, including sickle cell.

The health records documentation confirmed that clinicians follow the chronic disease protocols. The treatment plans include the appropriate elements of frequency of follow-up, monitoring condition, status and taking action as indicated, type and frequency of diagnostic testing and therapeutic regiments, instruction on diet, exercise, medication and adaptation to correctional environment, and clinically justification of deviation from the protocols. Chronic illnesses are listed on the problem list. The RHA maintains a list of chronic care patients. The standard is met.

J-G-02 Patients With Special Health Needs (E). When required by the health condition(s) of the patient, treatment plans define the individual's care. The treatment plans include the frequency of follow-up, type and frequency of diagnostic testing and therapeutic regimens and instructions about diet, exercise, medication, and adaptation to the correctional environment. Special needs are listed on the problem list. The RHA maintains a list of special needs patients. The standard is met.

J-G-03 Infirmary Care (E). The facility had a six-bed medical housing unit at the time of the survey. The level of nursing care provided in the unit does not reach the level of nursing care that would be provided in an infirmary. The standard is not applicable.

J-G-04 Basic Mental Health Services (E). Patients with mental health needs are either followed by the psychiatrist, if they are on psychotropic medication, or by the psychologist or social worker. Mental health patients see the psychiatrist every 90 days or they see the psychologist or social worker every 30 days. When clinically appropriate, a patient's commitment

AMERICAN OVERSIGHT

or transfer to an inpatient psychiatric setting is timely and accomplished according to procedures. Health services are integrated for patient management and to ensure medical and mental health needs are met. Basic on-site outpatient services include the identification and referral of detainees with mental health needs, crisis intervention services, psychotropic medication management when indicated, individual counseling, group counseling, psychosocial/psycho educational programs, and treatment documentation and follow-up. Special programs include: stress groups and sleep disturbance groups. The standard is met.

J-G-05 Suicide Prevention Program (E). The suicide prevention program addresses each of the 11 key components as described by the standard. The RHA has approved the training curriculum for staff. Treatment plans address suicidal ideation and recurrence. Patient follow-up occurs as clinically indicated. Suicidal detainees, whether acute or non-acute, are placed on constant observation in the medical housing unit. The officer sits outside of the room with the door open. There have been no suicides at this facility, since it opened. The standard is met.

J-G-06 Patients with Alcohol And Other Drug Problems (AOD) (E). Disorders associated with AOD, such as HIV and liver disease, are recognized and treated. Correctional staff has been trained to recognize detainees' AOD problems. Medical, mental health, and substance abuse staff communicates and coordinates with each other regarding patients' AOD care. Self-help substance abuse programs, on-site individual counseling and group therapy are offered on site. The standard is met.

J-G-07 Intoxication and Withdrawal (E). The responsible physician has approved current protocols, consistent with nationally accepted treatment guidelines for intoxication and withdrawal The protocols were last approved on October 16, 2016. Individuals are housed in the medical housing unit, which allows for effective monitoring by health professionals using recognized standard assessments at appropriate intervals. A physician supervises detoxification.

If a pregnant detainee is admitted with opioid dependence, she is transferred to the hospital for assessment and treatment. The facility's policy addresses the management of detainees, including pregnant detainees, on methadone or similar substances. Therapy is continued in the hospital. Individuals experiencing severe intoxication or withdrawal are transferred immediately to a licensed, acute care facility. The local hospital is utilized. The standard is met.

J-G-08 Contraception (I). Emergency and continuing contraception are available through the on-site pharmacy. Written information about contraception methods and community resources are available. The standard is met.

J-G-09 Counseling And Care Of The Pregnant Inmate (E). Comprehensive counseling services are available to pregnant detainees. The chaplain, mental health, and the obstetrical/gynecological physician discuss pregnancy outcomes with the patient. Prenatal care, specialized obstetrical services, when indicated, and postpartum care are available and documented appropriately. We reviewed a list of pregnancies and transfer dates, as pregnant detainees would be transferred at 25 weeks. The standard is met.

J-G-10 Aids to Impairment (I). We observed detainees using aids to impairment (wheelchairs, canes, hearing aids, and other aids to impairment) during the tour. Health record documentation indicated aids are provided as necessary and nothing had been contraindicated for reasons of

AMERICAN OVERSIGHT

security. Detainees' special needs are communicated to custody staff in writing. The standard is met.

J-G-11 Care for the Terminally Ill (I). Although it would be rare for a terminally ill patient to be held at this facility, procedures are in place to make the appropriate accommodations for discharge. There have been no terminally ill patients at this facility since it opened. The standard is met.

H. HEALTH RECORDS

The standards in this section address the importance of accurate health record documentation, health record organization and accessibility, and need to ensure that medical and mental health information is communicated when those records are separate documents.

Standard Specific Findings

J-H-01 Health Record Format and Contents (E). Detainees' medical and mental health records are integrated into the electronic medical record, which is accessible to all health staff. We confirmed that the record consists of the required elements. The standard is met.

J-H-02 Confidentiality of Health Records (E). Health records are maintained under secure conditions with password protection. Health staff had documented instruction in maintaining patient confidentiality as part of orientation and annually thereafter. If non-health staff transports health records, the records are sealed in an envelope. Custody staff also receives annual confidentiality training. The standard is met.

J-H-03 Management of Health Records (I). The health record is available for each patient care encounter. When a detainee is transferred to another facility, copies of the current health record or a comprehensive health summary accompany them. All of the intra-system facilities have access to the electronic medical record, which is maintained indefinitely, and can be re-activated when the detainee re-enters the system. The standard is met.

J-H-04 Access to Custody Information (I). Qualified health care professionals have access to information in the detainee's custody record when such information may be relevant to the detainee's health and course of treatment. The standard is met.

I. MEDICAL-LEGAL ISSUES

The standards in this section address the most complex issues facing correctional health care providers. While the rights of inmate-patients in a correctional setting are generally the same as those of a patient in the free world, the correctional setting often adds additional considerations when patient care is decided. The rights of the patient, and the duty to protect that patient and others, may conflict; however, ethical guidelines, professional practice standards, and NCCHC's standards are the determining factors regarding these interventions and issues.

Standard Specific Findings

AMERICAN OVERSIGHT

J-I-01 Restraint and Seclusion (E). Clinical restraint and seclusion are not used at this facility, nor are custody-ordered restraints. Anyone known to require restraints or exhibiting behavioral issues would not be sent to this facility and would be transferred should such a need arise. The standard is met.

J-I-02 Emergency Psychotropic Medication (E). Emergency psychotropic medications are not administered at this facility; rather, a detainee requiring such intervention would be transferred to a mental health facility. This has not occurred since the facility opened. Policy and procedure were in place to direct staff in such cases. The standard is met.

J-I-03 Forensic Information (I). Health staff does not collect forensic information; rather, the detainee would be referred off-site for such collection. The standard is met.

J-I-04 End-of-life Decision Making (I). Patients approaching the end of life are permitted to execute advance directives, after being counseled as to the meaning and consequences of such actions. This is documented in the health record. Before utilizing advanced directives, a physician not directly involved in the patient's treatment completes an independent review. The standard is met.

J-I-05 Informed Consent and Right to Refuse (I). All informed consents and refusals of care are documented and consist of the required elements, including the signatures of the patient and a health staff witness. Patients are counseled as to possible adverse consequences to health that may occur as a result of a refusal. If the detainee refuses to sign a refusal form, two staff members, one of whom must be health staff, document and witness it. The standard is met.

J-I-06 Medical and Other Research (I). No health-related research is conducted at this facility. The standard is met.

Washington, DC 20536

Dear (b)(6); (b)(7)(C)

Congratulations! The Accreditation Committee of the National Commission on Correctional Health Care (NCCHC), during its meeting on April 22, 2018, voted to continue to accredit Tacoma Contract Detention for its compliance with NCCHC's *Standards for Health Services in Jails*. Please find the accreditation report enclosed. Your health services administrator will also receive a copy of the accreditation report and the Certificate of Accreditation.

NCCHC congratulates you on your achievement and wishes you continued success in the future. It is anticipated that the next scheduled on-site survey of the facility will occur sometime prior to January 1, 2021. If we can be of any assistance to you, please feel free to contact us.

Sincerely,

(b)(6); (b)(7)(C) CCHP-RN

AMERICAN OVERSIGHT

Tacoma Contract Detention, WA
April 22, 2018

The National Commission on Correctional Health Care is dedicated to improving the quality of correctional health services and helping correctional facilities provide effective and efficient care. NCCHC grew out of a program begun at the American Medical Association in the 1970s. The standards are NCCHC's recommended requirements for the proper management of a correctional health services delivery system. These standards have helped correctional facilities improve the health of their inmates and the communities to which they return, increase the efficiency of their health services delivery, strengthen their organizational effectiveness, and reduce their risk of adverse patient outcomes and legal judgments.

On January 22-24, 2018, NCCHC conducted its review for continuing accreditation of this facility. We commend the facility staff for their professional conduct, assistance, and candor during the course of our review. The NCCHC's team of experienced certified correctional health professionals utilized NCCHC's 2014 *Standards for Health Services in Jails* as the basis of its health services analysis. This report focuses primarily on issues in need of correction or enhancement. It is most effective when read in conjunction with the *Standards* manual. The information in this report is privileged and confidential and is intended for the sole use of persons addressed.

There are 40 essential standards; 39 are applicable to this facility and 39 (100%) were found to be in compliance. One hundred percent of the applicable essential standards must be met. Our findings include:

Essential Standards Not in Compliance
None

Essential Standard Not Applicable
J-G-03 Infirmary Care

There are 27 important standards; 26 are applicable to this facility and 26 (100%) were found to be in compliance. Eighty-five percent or more of the applicable important standards must be met. Our findings include:

Important Standards Not in Compliance
None

Important Standard Not Applicable
J-C-08 Health Care Liaison

Decision: On April 22, 2018, NCCHC's Accreditation Committee awarded the facility Accreditation.

AMERICAN OVERSIGHT

Tacoma Contract Detention, WA
April 22, 2018

I. Facility Profile

The facility's security classification is: medium
The facility was built in: 2004
There has been no change in mission or purpose.
The facility is located in the northwestern United States.
The facility's supervision style is: Direct Supervision
The facility's structural layout is: Modular and Dormitory-Style Housing
Since the last NCCHC survey, there has no) been any major renovations/expansions/closures in the facility, and none were anticipated.
Total Inmate Count on day of survey: 1452
Total number of adult males on day of the survey: 1316
Total number of adult females on day of the survey: 136
Average Daily Population (ADP) for last completed calendar year: 1398
The design-rated capacity for the facility is: 1575
The population dropped and an officer reduction in force occurred. At the time of the survey, many of the officers were reportedly being rehired.
Admissions to the facility arrive: scheduled mostly in the afternoon.
The total number of admissions to the facility last year was: 6251
The average daily intake to the facility last year was: 18
The total number of correctional staff assigned to this facility is (b)(7)(E)
The usual shift coverage for correctional staff is: three shifts.
There has not been a recent change in health care contractor.
Health services are provided by a national health care vendor.
They have provided health services since: 2004 (inception)
There have not been distinctive events that may affect the delivery of health care
The facility has no satellites.

II. Survey Method

We toured the clinic area, inmate housing areas, intake, medical observation and segregation. We reviewed 31 health records; policies and procedures; provider licenses; administrative, health staff, and continuous quality improvement (CQI) meeting minutes; job descriptions; statistical and environmental inspection reports; and health services personnel and CO training records. We interviewed the assistant warden, responsible physician, health services administrator (HSA), other health, mental health, and dental staff, pharmacist, medical records clerk, seven COs, and nine inmates selected at random.

AMERICAN OVERSIGHT

Tacoma Contract Detention, WA
April 22, 2018

III. Survey Findings and Comments

A. GOVERNANCE AND ADMINISTRATION

The standards in this section address the foundation of a functioning correctional health services system and the interactions between custody and health services authorities. Any model of organization is considered valid, provided the outcome is an integrated system of health care in which medical orders are carried out and documented appropriately and the results are monitored as indicated. Policies and procedures are to include site-specific operating guidelines.

Standard Specific Findings

J-A-01 Access to Care (E). Inmates have access to health care. Patients see a qualified clinician and receive care for their serious medical, mental health, and dental needs. There was no co-pay policy in place at the time of the survey. The responsible physician can authorize all specialty care himself, with no utilization review. Health care is accessible at any time of day. Some inmates are issued special cards to expedite access to medical services if they have special needs, but we verified that all inmates did have prompt access, regardless. The standard is met.

J-A-02 Responsible Health Authority (E). The responsible health authority (RHA) is the full-time HAS (who we verified had a job description. Clinical judgments rest with a designated, full-time responsible physician. There was not a separate structure for mental health services. The LCSW is the designated, full-time mental health clinician. The standard is met.

J-A-03 Medical Autonomy (E). Qualified health care professionals make decisions regarding inmates' serious medical, dental, and mental health needs in the inmates' best interests. We noted good cooperation between custody and medical staff. Administrative decisions are coordinated, if necessary, with clinical needs so that patient care is not jeopardized. Health staff is subject to the same security regulations as other facility employees. The standard is met.

J-A-04 Administrative Meetings and Reports (E). Weekly "shareholders" meetings are held and include legal counsel, a court representative, field medical coordinator, on-site medical staff such as the HSA and clinical director, detention services manager, the warden and associates, contract officers, and others. The quarterly governing board meetings include regional managers and all department heads of disciplines. They develop graphs, look at trends, and evaluate cost effectiveness and service delivery flow, amongst other items. The findings are subsequently shared with all staff. Other meetings include those for special case review classification, and special care committee.

Health staff meets monthly to discuss health services operations. Attendees include the responsible physician, HSA, mental health, dental, and nursing staff. Statistical reports of health services are made at least monthly and provided to the facility administrator. They are used to monitor trends in the delivery of health care. We reviewed the health staff meeting minutes, as well as the statistical reports. The standard is met.

J-A-05 Policies and Procedures (E). The health services policy manual is site-specific. We also reviewed the national policies which the RHA has signed annually and local operating procedures. The RHA and responsible physician last reviewed the manual in 2017. The policies were accessible to health staff. The standard is met.

AMERICAN OVERSIGHT

J-A-06 Continuous Quality Improvement Program (E). The CQI program identifies health care aspects to be monitored, implements and monitors corrective action when necessary, and studies the effectiveness of the corrective action plan. The quality improvement committee meets quarterly and consists of the responsible physician, HSA, mental health representatives, compliance officer, two assistant HSAs, public health safety and preparedness officer, pharmacist, dentist, training officer and CQI nurse. The committee is chaired by the CQI coordinator. The agenda includes routine reviews of grievances, suicides, mortality reviews and other incident reports. Trends are all reviewed.

A variety of process studies have been completed since the last survey. Studies in 2017 included intake screening results from referral, medication refusal, informing providers, and follow up. An outcome study examined inmates and weight gain after incarceration and after a number of months in the facility. The diet was reviewed and results included change in diet calorie count by approximately 200 to 400 calories. An overall healthier diet resulted in less inmate weight gain than in the past.

In 2016, studies included an outcome study for TB management, and hyperlipidemia. Process studies included suicide watch examination and special diets related to allergies. A 2018 binder included documentation injuries to workers and recreation-related injuries.

We verified that the program has been reviewed annually for its effectiveness. The responsible physician is involved in the CQI program and attends committee meetings. The standard is met.

J-A-07 Emergency Response Plan (E). The RHA and facility administrator have approved the health aspects of the emergency response plan, which included the required elements. Multiple casualty disaster drills have been held annually so that over the course of three years, staff on each shift has had an opportunity to participate. The scenarios included: simulated explosions, an active shooter, and a disturbance by protesters at the facility. The drills were well critiqued and the results were shared with the health staff.

Man-down drills/events have been documented and confirmed that health staff on each shift has been able to participate annually. Staff actually practice man-down drills monthly. They have been well critiqued and shared with all health staff. The standard is met.

J-A-08 Communication on Patients' Health Needs (E). Communication between designated correctional and health services staff about inmates' special health needs occurs electronically and in writing. The inmate also gets a copy. The standard is met.

J-A-09 Privacy of Care (I). Clinical encounters and discussion of patient information are conducted in auditory and visual privacy. Magnetic privacy covers are placed on the exam room windows if needed. Security personnel are present only if the patient poses a probable risk to the safety of the health care professional or others. The standard is met.

J-A-10 Procedure in the Event of an Inmate Death (I). Since the last survey, there have been no inmate deaths. Policy includes the required reviews to be completed in a timely manner in the event of an inmate death. The standard is met.

J-A-11 Grievance Mechanism for Health Complaints (I). The health-related grievance program is separate from the formal grievance program. Staff will attempt to intervene and

AMERICAN OVERSIGHT

resolve issues informally, if possible. The assistant HSA responds to most grievances within five business days. Appeals are answered within 72 hours, with most being treated as urgent. There has not been an appeal in the past two years. On average, 14 health-related grievances are filed per month. They are tracked monthly and reviewed in CQI meetings. Trends are reviewed and categorized. The standard is met.

B. MANAGING A SAFE AND HEALTHY ENVIRONMENT

The standards in this section address the importance of preventative monitoring of the physical plant. Health staff has a crucial role in identifying issues that could have a negative impact on the health and safety of facility staff and the inmate population if left unaddressed.

Standard Specific Findings

J-B-01 Infection Prevention and Control Program (E). The responsible physician has approved the written exposure control plan, which is updated annually, most recently on January 17, 2017. Infection control matters are addressed at CQI and health staff meetings. Patients are screened for STD based upon symptomatology and request. If necessary, they can be treated in one of the four on-site medical isolation rooms. During the survey, three of the rooms were in use to rule out tuberculosis. Nurses conduct a daily tissue test and record the digital monitor results. Custody staff are responsible to routinely monitor and change the filters in the rooms. Monthly and annual inspections monitor such equipment as autoclaves, centrifuge, ophthalmoscopes, etc., and repair plans are implemented as necessary.

Effective ectoparasite control procedures are used to treat infected inmates. The health services area is inspected monthly for environmental concerns. Inmates receive immunizations for flu, varicella, and HIV. The standard is met.

J-B-02 Patient Safety (I). Patient safety systems were in place to prevent adverse and near-miss clinical events. Staff can report incidents in a non-punitive environment. Medication errors are tracked electronically as "incident reports," which the HSA, CQI nurse, and corporate staff review. A 2017 implementation of the electronic medication administration record has reduced errors to an average of one a month. The standard is met.

J-B-03 Staff Safety (I). Health staff appears to work under safe and sanitary conditions. Safety and cleanliness checks are routinely conducted and documented. All inspection results are tracked. We found the facility to be very clean. Staff training is conducted throughout the year. The standard is met.

J-B-04 Federal Sexual Abuse Regulations (E). The assistant warden described the facility as compliant with the 2003 Federal Prison Rape Elimination Act (PREA). Written policies and procedures address the detection, prevention and reduction of sexual abuse. The PREA audit was successfully completed in March 2017. All inmates are screened for PREA at intake, and we observed informational posters throughout the facility. The standard is met.

J-B-05 Response to Sexual Abuse (I). All health staff have been trained in how to detect, assess, and respond to signs of sexual abuse and sexual harassment, as well as evidence preservation. The training includes a post-test to evaluate comprehension.

AMERICAN OVERSIGHT

Victims of sexual assault are referred to a community hospital for treatment and evidence collection by a SANE nurse. In all cases, the victim is evaluated by a qualified mental health professional and a report is made to correctional authorities to affect a housing separation of the victim from the assailant. There has been no reported assault in the past three years. The standard is met.

C. PERSONNEL AND TRAINING

The standards in this section address the need for a staffing plan adequate to meet the needs of the inmate population, and appropriately trained and credentialed health staff. Correctional officers are to have a minimum amount of health-related training in order to step in during an emergency, if health staff is not immediately available.

Standard Specific Findings

J-C-01 Credentials (E). Health care personnel, including contractors, who provide services to inmates had credentials and were providing services consistent with the jurisdiction's licensure, certification, and registration requirements. The HSA and corporate staff are responsible for the credential verification process, which includes inquiry regarding sanctions or disciplinary actions of state boards, employers, and the National Practitioner Data Bank. This is documented electronically. The standard is met.

J-C-02 Clinical Performance Enhancement (I). A clinical performance enhancement process evaluates the appropriateness of services delivered by all direct patient care clinicians, registered nurses (RN), and licensed practical nurses (LPN), including contracted staff.

A professional of at least equal training in the same general discipline completes the reviews annually. We reviewed an electronic record listing the names of the individuals being reviewed and the date of their most recent review, which included required elements. The standard is met.

J-C-03 Professional Development (E). We confirmed that qualified health care professionals had more than the required number of continuing education credits. All were current in cardiopulmonary resuscitation (CPR) training. Additionally, staff who maintain a current license must meet the state requirement. By facility policy, 40 hours of training is required, which the staff also met. We confirmed compliance by reviewing a list of completed courses, dates, and number of hours per course for each employee. The standard is met.

J-C-04 Health Training for Correctional Officers (E). Correctional staff had the required training in health-related topics, and at least 75% were current in their health-related training. Officers carry current CPR cards on their person. We verified training by reviewing the attendance rosters and schedules. We reviewed the training outline, including course content and length, and confirmed it included all the required topics. Officers receive annual training in suicide prevention, medical, mental health, screening, STDs, special needs, and other topics. The RHA and corporate representatives had approved and signed the training documentation. The standard is met.

J-C-05 Medication Administration Training (E). Nurses administer medications. Their training, which the facility administrator and responsible physician had approved, includes

AMERICAN OVERSIGHT

matters of security, accountability, common side effects, and documentation. It is part of orientation and reviewed annually thereafter. The standard is met.

J-C-06 Inmate Workers (E). Inmate workers do not provide health services, nor are they involved in peer health-related programs. They work only in a janitorial capacity or in the laundry, and do not handle biohazardous materials or clean such spills. The standard is met.

J-C-07 Staffing (I). Full-time equivalent health staff includes:

(b)(7)(E)

At the time of the survey, there were (b)(7)(E) health staff. The following health staff positions were vacant: (b)(7)(E) The standard is met.

J-C-08 Health Care Liaison (I). Heath staff is on site 24 hours a day. The standard is not applicable.

J-C-09 Orientation for Health Staff (I). We confirmed that health staff had received the appropriate orientation within 90 days of employment. It includes two weeks of orientation and self-study, policies, videos and webinars, followed by two weeks of on-the-job training, rotating to gain exposure to all areas of health services. The preceptors verify completion of orientation.

The corporate clinical director and on-site RHA review the lesson plans at least every two years. The standard is met.

AMERICAN OVERSIGHT

D. HEALTH CARE SERVICES AND SUPPORT

The standards in this section address the manner in which health services are delivered–the adequacy of space, the availability and adequacy of materials, and, when necessary, documented agreements with community providers for health services.

Standard Specific Findings

J-D-01 Pharmaceutical Operations (E). A national vendor provides pharmaceutical services that are sufficient to meet the inmates' needs. The clinic includes a spacious pharmacy, and a separate medication room. A full-time pharmacist dispenses medications in patient-specific bottles within one day or less of providers' orders. There is an afterhours locked box for emergencies outside of the pharmacy for those medications that cannot wait until the following day. Stock prescriptions are secured here for the night shift nurses when the pharmacist leaves each day, and he checks it in the morning. The pharmacist maintains routine monitoring and inspection schedules, as well as records to ensure adequate control of and accountability for all medications, including stock. The federal pharmacy requires no state license, but a DEA license was due to expire on November 30, 2018. We verified that the pharmacist and the pharmacy technician maintain control of all medications, which we verified to be stored under proper conditions. An adequate supply of antidotes and other emergency medications was readily available to staff. The standard is met.

J-D-02 Medication Services (E). Medication services are clinically appropriate and provided in a timely, safe and sufficient manner. Nurses conduct "pill line" three times a day, and go to the segregation area three times a day a well. The policy identifies the expected time frames from ordering to delivery, and a backup plan if the time frames cannot be met. Generally, medication orders are delivered within 24 hours. The responsible physician determines the prescriptive practices at this facility. Medications are prescribed only when clinically indicated. Inmates entering the facility on prescription medication continue to receive the medication or acceptable alternate medication as clinically indicated. The physician verifies it and provides a new order. The keep-on-person program was extensive, allowing inmates to keep most medications, including those for chronic care, on their persons. Psychotropic medications, however, were not part of the program. The standard is met.

J-D-03 Clinic Space, Equipment, and Supplies (I). The clinic area was spacious and included seven examination rooms, multiple offices and cubicle space for mental health and administrative staff, a break room, a two-chair dental operatory, panorex and dental x-ray equipment, medical records storage, a laboratory, an x-ray room with digital x-ray, an urgent care triage room, and a pharmacy and medication room. Items subject to abuse are inventoried each shift. We verified the accuracy of the counts, and confirmed that adequate supplies and equipment, including an automated external defibrillator in the clinic and two others in the facility, were available. We found the clinic to be well organized and clean. The standard is met.

J-D-04 Diagnostic Services (I). On-site diagnostic services include stool blood-testing material, finger-stick blood glucose tests, peak flow meters, multiple-test dipstick urinalysis, and pregnancy tests. Laboratory services were provided by a contracted vendor. Chest x-rays can be taken on site, while other x-ray needs are met at the local hospital. We verified that each service had a procedure manual that included the protocols for testing device calibration. The CLIA waiver was due to expire on February 11, 2020. The standard is met.

AMERICAN OVERSIGHT

J-D-05 Hospital and Specialty Care (E). Hospitalization and specialty care is available to patients in need of these services. Several local hospitals can be consulted as needed. We verified through record review that off-site facilities or health professionals provide a summary of the treatment given and any follow-up instructions. At the time of the survey, there were no on-site specialty services used regularly for medical or mental health care. The standard is met.

E. INMATE CARE AND TREATMENT

The standards in this section address the core of a health services program: that all inmates have access to health services, how they are to request emergency and non-emergency care, that health histories are obtained, that assessments and care can be demonstrated to be provided in a timely fashion, and that discharge planning is considered. In short, health care for the inmates is to be consistent with current community standards of care.

Standard Specific Findings

J-E-01 Information on Health Services (E). During intake, inmates receive verbal and written instructions in English and Spanish on access to care and health-related grievances. The inmate population speaks several languages, arrangements were in place to provide interpretation assistance as needed. Accommodations are also made for the hearing impaired. We observed access-to-care signs had been posted in the intake area. Other efforts to educate the inmate population included showing videos in the housing areas, and weekly briefings by health staff. The standard is met.

J-E-02 Receiving Screening (E). New admissions arrive directly from the community or an ICE facility or local jail. Reception personnel identify those individuals in serious need and refer them immediately to a local hospital. Their subsequent admission to the facility is predicated on a written medical clearance from the hospital. The clinic is adjacent to the intake area and nurses are available for screening 24 hours a day. Officers can request that a nurse prescreen if there are any immediate concerns.

Receiving screening is completed by a nurse (RN and LPN), who generally attempts to screen within 15 minutes of arrival. Our review found the screenings to be timely, generally within one to three hours, and comprehensive, consisting of a disposition and addressing the required areas of inquiry.

If a woman reports current opiate use, she is referred immediately for a pregnancy test. A pregnant inmate would not remain at this facility, but a transfer would be processed the same day. Prescribed medications are reviewed and maintained as clinically indicated. Health staff regularly monitors receiving screenings through the CQI process to determine the safety and effectiveness of the process through CQI. The standard is met.

J-E-03 Transfer Screening (E). Qualified health care professionals review each transferred inmate's health record or summary within 12 hours of arrival to ensure continuity of care. Receiving screening is completed for all incoming inmates, regarding medications and any follow-up or pending medical needs and visits. The standard is met.

J-E-04 Initial Health Assessment (E). The full population has been implemented at this facility. Health assessments were timely and completed within one day of arrival. A trained RN

AMERICAN OVERSIGHT

completes health assessments on inmates with non-complicated cases, while the mid-level provider or physician does so for those with chronic care or mental health issues. The physician reviews and signs assessments conducted by the RN or a mid-level provider.

We verified that the health assessment consists of the required elements, including a review of the receiving screening results, and laboratory or diagnostic tests for communicable diseases STDs, hepatitis, etc., based upon risk factors.

The treating clinician reviews all positive findings and specific problems are integrated into an initial problem list. Diagnostic and therapeutic plans for each problem are developed as clinically indicated. The standard is met.

J-E-05 Mental Health Screening and Evaluation (E). A trained nurse completes the mental health screening during intake. We verified that it consists of the required areas of inquiry. Patients with positive results are referred to qualified mental health professionals for further evaluation. The staff are either psychologist-level or licensed social workers. These patients receive a full mental health clinical assessment within 72 hours of referral. All patients are assessed for stress and sleep. The standard is met.

J-E-06 Oral Care (E). A trained nurse or provider completes the oral screening during the health assessment. Inmates are also instructed in oral hygiene and preventive oral education during the health assessment. Oral education is also described in the inmate handbook. The dentist regularly schedules inmates in advance and completes an oral examination within 12 months of admission. Staffing includes (b)(7)(E). We found oral care to be timely, and the system of established priorities for oral treatment included cleaning, root canals, and fillings. The standard is met.

J-E-07 Nonemergency Health Care Requests and Services (E). All inmates, regardless of housing assignment, have access to regularly scheduled times for routine health care. The frequency and duration of response to requests for health services is sufficient for the inmate population. Nurses collect slips or record verbal requests daily in the early morning hours in each housing unit. This includes segregation. An RN triages the requests the same day, and patients are seen either that day or the next. If triage requires a face-to-face assessment, the inmate is seen in sick call generally the same day. Patients can access the clinic daily. The standard is met.

J-E-08 Emergency Services (E). The RHA maintains emergency drugs, supplies, and medical equipment. On-call services are available, and the local 911 service can be activated if necessary. The internal policy requires a four-minute response time that is monitored. The standard is met.

J-E-09 Segregated Inmates (I). Conditions of segregation at this facility (NCCHC's category 2b) require health rounds at least three times a week. In practice, nurses conduct daily rounds, and mental health staff does so weekly. We verified that the rounds are documented and scanned into the health record. Upon notification that an inmate has been segregated, nurses interview the inmate in the clinic and also review the health record for possible contraindications. Inmates must be cleared for segregation.

AMERICAN OVERSIGHT

Health staff inform custody officials of the latest scientific information concerning the health effects of segregation. Weekly meetings are held to discuss segregated inmates. These are attended by the warden, director of mental health, medical representative, the lieutenant in charge of segregation, and the chief of security. Since many inmates housed in segregation have mental health issues, they are reviewed for any decompensation and socialization needs, and to ensure that efforts are made to mitigate effects of 23 hours of "lock down." Officers who work in segregation also receive additional training in medical, screening and mental health areas. The 20 cells were occupied during the survey. The standard is met.

J-E-10 Patient Escort (I). Patients are escorted to on-site and off-site clinical appointments in a timely manner. Transporting officers are alerted to special accommodations such as medication administration when necessary, and patient confidentiality is maintained. Some special needs patients are issued "medical pink cards" that allow them expedient access to be taken to the clinic without questioning or delay, such as seizure patients. Officers have been trained to expedite escort anytime the pink card is presented to them. The standard is met.

J-E-11 Nursing Assessment Protocols (I). Nursing assessment protocols are utilized, and they do not include prescription medications. The local emergency service would be activated in a life-threatening situation. The responsible physician and nursing administrator last reviewed the protocols on November 9, 2017. We verified that the nurses are trained to use the protocols upon hire and when protocols are introduced or revised. Nurses must take an annual written test, which the RHA reviews and signs. The standard is met.

J-E-12 Continuity and Coordination of Care During Incarceration (E). We confirmed that continuity of care is appropriate. Clinician orders are evidence-based and are implemented in a timely manner. Any deviations are clinically justified, documented and shared with the patient. The clinician reviews diagnostic tests in a timely manner, and signs all labs, outside visits and outside care. Treatment plans are modified as clinically indicated.

Patients receive treatment and diagnostic tests ordered by clinicians, who discuss such care with them. When a patient returns from the emergency room, urgent care or hospitalization, protocols are followed in accordance with the standard. The clinician reviews and acts upon specialty consultants' recommendations in a timely manner.

The responsible physician determines the frequency of periodic health assessments on the basis of protocols promulgated by nationally recognized professional organizations. All patients receive annual physical exams.

Chart reviews are of sufficient number and frequency to assure that clinically appropriate care is ordered and implemented by attending health staff. The standard is met.

J-E-13 Discharge Planning (E). Arrangements are made for discharging inmates to have a reasonable supply of medication from 7 days to as much as thirty days. Health staff work with consulates in various countries to connect inmates with health care departments in the receiving country through the internet. The standard is met.

AMERICAN OVERSIGHT

F. HEALTH PROMOTION AND DISEASE PREVENTION

The standards in this section address health and lifestyle education and practices, as well as patient-specific instruction during clinical encounters.

Standard Specific Findings

J-F-01 Healthy Lifestyle Promotion (I). A variety of health-related brochures and pamphlets was evident, and in a variety of languages. We observed through health record review that individual health education and instruction in self-care is documented in the health record progress notes during clinical encounters. The standard is met.

J-F-02 Medical Diets (I). At the time of the survey, approximately 81 medical diets were being prepared for patients with specific dietary needs. Inmates who refuse prescribed diets receive follow up nutritional counseling. A registered dietitian reviews the medical diet menus at least every six months, most recently on November 5, 2017. Staff kitchen workers prepare medical diets. Inmates who are kitchen workers are supervised while performing their duties, but do not prepare the diets. The standard is met.

J-F-03 Use of Tobacco (I). Smoking is prohibited indoors, although staff may smoke outdoors in designated areas. Inmates are not permitted to smoke. Information on the health hazards of tobacco was evident. The standard is met.

G. SPECIAL NEEDS AND SERVICES

The standards in this section address the needs of inmates with chronic conditions or other health conditions that require a multidisciplinary approach to treatment. These special needs include mental health issues.

Standard Specific Findings

J-G-01 Chronic Disease Services (E). Care as reflected in the health record appeared in compliance with current community standards. Chronic care patients are promptly identified and scheduled for medical evaluation and follow-up care. The responsible physician establishes and annually approves clinical protocols consistent with national clinical practice guidelines (a compilation of guidelines, including the Bureau of Prisons, ICE Department of Health Services, CDC, NIH and other national organizations).

Health records documentation confirmed that clinicians follow the chronic disease protocols. The treatment plans include the appropriate elements (frequency of follow-up; monitoring condition and status and acting as indicated; type and frequency of diagnostic testing and therapeutic regiments; instruction on diet, exercise, medication and adaptation to correctional environment; and clinical justification of deviation from the protocols). Chronic illnesses were listed on the problem list and we verified that the RHA maintains a list of chronic care patients. The standard is met.

J-G-02 Patients With Special Health Needs (E). When required by the health condition(s) of the patient, treatment plans define the individual's care, and include the frequency of follow-up; type and frequency of diagnostic testing and therapeutic regimes; and instructions about diet,

AMERICAN OVERSIGHT

exercise, adaptation to the correctional environment and medication. Special needs are listed on the problem list and we verified that the RHA maintains a list of special needs patients. Mental health staff develops treatment plans for their patients in accordance with policy. The standard is met.

J-G-03 Infirmary Care (E). There was no infirmary at the time of the survey. The medical housing unit consisted of eight rooms in close proximity to the clinic. Both medical and psychiatric patients are managed in this area. Inmates with serious conditions are sent to a hospital or other appropriate facility. The standard is not applicable.

J-G-04 Basic Mental Health Services (E). Mental health coverage is available 12 hours daily. Staffing consists of (b)(7)(E)
While there was no special mental health unit, patients may be assigned to the medical observation area. Segregation is used for overflow as well. Officers who work in segregation receive additional training in responding to mentally ill patients.

Patients with acute mental health needs are referred to appropriate alternative facilities. When clinically appropriate, a patient's psychiatric commitment or transfer to an inpatient psychiatric setting is timely and accomplished with assistance to a facility in another state, if necessary.

Outpatients receiving basic mental health services are seen at least every 90 days or as clinically indicated. Mental health, medical and program services are coordinated to facilitate integrated patient management, and to ensure patients' medical and mental health needs are met. Psychoeducational programs include chess facilitated by a psychiatrist with tournaments and unit team building. Custody-operated programs address nontherapeutic activities. The standard is met.

J-G-05 Suicide Prevention Program (E). The suicide prevention program addresses each of the 11 key components as described by the standard. The RHA has approved the training curriculum for staff. Treatment plans address suicidal ideation and recurrence. Patient follow-up occurs as clinically indicated. Acutely suicidal inmates are placed on constant observation. Officers conduct one-on-one monitoring in the medical observation area. Non-acutely suicidal inmates are monitored on an unpredictable, staggered schedule not exceed 15 minutes. If the non-acutely suicidal inmate is placed in an isolation cell, constant observation is maintained. We reviewed a printout of the officers' electronic monitor use. Only the psychiatrist may remove someone from suicide watch within the first 24 hours. Mental health staff may then assess and remove the inmate as needed.

There have been no suicides since the last survey. During the survey, there was one inmate on non-acute watch located in the medical observation unit. The standard is met.

J-G-06 Patients with Alcohol And Other Drug Problems (AOD) (E). Disorders associated with AOD, such as HIV and liver disease, are recognized and treated. Correctional staff had been trained to recognize inmates' AOD problems. Medical, mental health, and program staff communicates and coordinates with each other regarding patients' AOD care. There were no formal substance abuse programs on site at the time of the survey. Self-help substance abuse videos and workbooks were evident. Custody staff operates groups, primarily recreational in nature, to allow socializing with incentive programs. The standard is met.

AMERICAN OVERSIGHT

J-G-07 Intoxication and Withdrawal (E). The responsible physician has approved current protocols consistent with nationally accepted treatment guidelines for intoxication and withdrawal. The protocols were last approved in 2017. Individuals are housed in a safe location that allows for effective monitoring by health professionals using recognized standard assessments at appropriate intervals. A physician supervises detoxification. This facility does not incur a large population with intoxication and withdrawal problems. Those who meet the limited thresholds established with COWS and CIWA scales are transferred to another facility or the hospital. Individuals experiencing severe intoxication or withdrawal are transferred immediately to a licensed, acute care facility.

If a pregnant inmate is admitted with opioid dependence, she is assessed and transferred to the hospital. Such patients are not treated at this facility, although the policy complies with the standard. There was no inmate on detoxification status during the survey. Such patients would generally be placed in medical observation. The standard is met.

J-G-08 Contraception (I). Emergency contraception is available by policy, although reportedly it is has never been requested. Continuing contraception is available as well. Reference material about contraception methods and community resources was evident. The standard is met.

J-G-09 Counseling And Care Of The Pregnant Inmate (E). Comprehensive counseling services are available to pregnant inmates through the obstetrical/gynecological provider, as are prenatal care, specialized obstetrical services when indicated, and postpartum care. No inmate has delivered while at this facility. During the survey there was only one pregnant inmate on site. Pregnant inmates are often transferred to the hospital for their incarceration and delivery and do not remain in this facility for any long-term pregnancy. By policy, restraints are not used during active labor and delivery. The standard is met.

J-G-10 Aids to Impairment (I). We did not observe inmates using aids to impairment during the tour. However, aids such as wheelchairs, crutches, etc. are said to be available if needed. Health records documentation indicated that aids are provided as necessary. When specific aids are contraindicated for security reasons, alternatives are considered. The standard is met.

J-G-11 Care for the Terminally Ill (I). Although it would be rare for a terminally ill patient to be held at this facility, procedures were in place to make the appropriate accommodations including transfer to an appropriate hospital or long-term care facility. Policy states that palliative therapies would be provided for terminally ill patients. The standard is met.

H. HEALTH RECORDS

The standards in this section address the importance of accurate health record documentation, health record organization and accessibility, and need to ensure that medical and mental health information is communicated when those records are separate documents.

Standard Specific Findings

J-H-01 Health Record Format and Contents (E). Inmates' medical, dental and mental health records are integrated in electronic format. The health record includes a problem list, as well as all other critical elements. The standard is met.

AMERICAN OVERSIGHT

J-H-02 Confidentiality of Health Records (E). Health records are maintained under secure conditions with password protection, and locked in archival areas. Health and custody staff had documented instruction in maintaining patient confidentiality. If non-health staff carries health records, the records are secure, and marked "confidential." Most records are transferred electronically. The standard is met.

J-H-03 Management of Health Records (I). The health record is available for each patient care encounter. Each exam room was equipped with computers, and we also observed laptops in use. The building was also equipped with wireless connectivity. When an inmate is transferred to another facility, a comprehensive health summary generally accompanies them electronically. The jurisdiction's legal requirements regarding records retention are followed. We confirmed that health records can be reactivated when a treating health professional requests it. The standard is met.

J-H-04 Access to Custody Information (I). Qualified health care professionals have access to information in the inmate's custody record when such information may be relevant to the inmate's health and course of treatment. The standard is met.

I. MEDICAL-LEGAL ISSUES

The standards in this section address the most complex issues facing correctional health care providers. While the rights of inmate-patients in a correctional setting are generally the same as those of a patient in the free world, the correctional setting often adds additional considerations when patient care is decided. The rights of the patient, and the duty to protect that patient and others, may conflict; however, ethical guidelines, professional practice standards, and NCCHC's standards are the determining factors regarding these interventions and issues.

Standard Specific Findings

J-I-01 Restraint and Seclusion (E). Clinical restraint and seclusion is rarely ordered for patients who exhibit behavior that is dangerous to self or others as a result of medical or mental illness. Policies and procedures were appropriate. In the past three years, three patients had been restrained for medical reasons and this was carried out in the medical observation rooms. Medical staff was present, and we verified that the monitoring was well documented. The physician order was comprehensive. Preventing self-harm was the reason given in two cases.

Custody-ordered restraints are also rarely applied, and health staff would be notified for reasons of documentation and monitoring the inmate's health status. The physician would be notified immediately should the inmate develop a medical or mental health condition. If health staff notes improper restraint use that is jeopardizing the health of the inmate, they communicate this to the appropriate custody staff. The standard is met.

J-I-02 Emergency Psychotropic Medication (E). The use of forced psychotropic medication is not implemented at this facility; rather, a court order must be obtained prior to use. It was reported that the patient would be sent to the hospital for acute psychiatric care. The standard is met.

J-I-03 Forensic Information (I). Health staff does not collect forensic information at this facility. The standard is met.

AMERICAN OVERSIGHT

J-I-04 End-of-life Decision Making (I). Although terminal patients do not remain at this facility, they would be permitted to execute advance directives. The policy was very comprehensive and required that patients be counseled as to the meaning and consequences of such actions, and that counseling to be documented in the health record. A physician not directly involved in the patient's care would first complete an independent review. The standard is met.

J-I-05 Informed Consent and Right to Refuse (I). All informed consents and refusals of care were documented in the health record and consisted of the required elements, including the signatures of the patient and a health staff witness. Significant refusals would result in an appointment with a medical staff for counseling as to possible adverse consequences to health that may occur as a result of a refusal. If the inmate refuses to sign a refusal form, it would be documented by a health staff member. The standard is met.

J-I-06 Medical and Other Research (I). No health-related research is conducted at this facility. The standard is met.

The Nakamoto Group, Inc.

SUBJECT: **Annual Detention Inspection of the Rio Grande Detention Center**

The Nakamoto Group, Inc. performed an annual inspection for compliance with the ICE Performance-Based National Detention Standards (PBNDS) 2008 of the Rio Grande Detention Center in Laredo, TX, during the period of March 12-14, 2019. This is an IGSA facility.

The annual inspection was performed under the guidance of (b)(6); (b)(7)(C) Lead Compliance Inspector. Team members were:

Subject Matter Field	Team Member
Security	(b)(6); (b)(7)(C)
Detainee Rights	
Medical Care	
Safety	
Medical Care	

Type of Inspection

This is a scheduled annual inspection, which is performed to determine overall compliance with the ICE PBNDS 2008 for Over 72 hour facilities. The facility received a rating of Meets Standards during the March 2018 inspection.

Inspection Summary

The Rio Grande Detention Center is currently accredited by:

- The American Correctional Association (ACA) – Yes
- The National Commission on Correctional Health Care (NCCHC) – Yes
- The Joint Commission (TJC) – No
- Prison Rape Elimination Act (PREA) – No

Standards Compliance

The following information is a summary of the standards that were reviewed and overall compliance that was determined as a result of the 2018 and 2019 PBNDS 2008 compliance annual inspections:

Detainee Handbook – 3

Facility Snapshot/Description

The Rio Grande Detention Center is operated by The GEO Group, Inc. The facility is located fifteen miles south of Laredo, Texas bordering the Rio Grande River and Mexico. It has a rated capacity of 1900. The facility houses low custody level adult male ICE detainees and male and female U.S. Marshals Service detainees of all custody levels. ICE detainees are kept separate from non-ICE detainees. During the inspection the average daily population of the facility was 1681 of which 600 were ICE detainees. The average length of stay for an ICE detainee is 22 days.

The compound is comprised of eight structures. (b)(7)(E)
(b)(7)(E)
(b)(7)(E)

There is one administrative building and one maintenance building located outside the secure fenced perimeter. Inside the secure perimeter there is one support services building, which also houses the female special management population, five general population housing units configured into dormitory settings ranging from 64 to 84 beds and one male special management unit. Two of the housing units are dedicated to ICE detainees. Housing unit day rooms are furnished with televisions, telephones, fixed tables and seats and ample open space. Each detainee is assigned a personal unsecured property storage bin; locks are not provided. During the inspection two of the housing units, one ICE and one non-ICE, were quarantined due to a mumps outbreak.

The inspection team toured the housing units' multiple times during the inspection and detainees were interviewed each time. Interviews involved LEP and English-speaking detainees. Interpreters and the language line were used when canvassing detainees. None of the detainees expressed any concerns about their treatment or safety. There were no complaints about the quality of the food, medical care, access to recreation, the law library, telephones, visiting or ICE personnel. Detainees were satisfied with all conditions of their confinement.

2020-ICFO-29037 2539 of 2966

The atmosphere in the housing units was relaxed and quiet. The majority of security staff are bilingual. The cleanliness inside the living units, including showers and bathrooms was average. A case manager is assigned to each housing unit and maintains office space in the unit. ICE personnel are generally onsite five days a week. Facility command staff make shift rounds through each housing unit daily.

Medical services are provided by Wellpath personnel. There are no medical co-payments. Food and maintenance services are provided by GEO personnel. The overall facility maintains an average level of cleanliness.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2008. No (0) standards were found Does Not Meet Standards and two (2) standards were Not Applicable (N/A). All remaining thirty-nine (39) standards were found to be in compliance.

LCI Assurance Statement

The findings of compliance and noncompliance are accurately and completely documented on the G-324A Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

- ICE Officials – (b)(6); (b)(7)(C)
- Facility Staff – (b)(6); (b)(7)(C)

The inspection team identified one (1) deficient component in the following standard:

Funds and Personal Property- 1, which is a repeat deficiency

Facility Snapshot/Description

The Adelanto ICE Processing Center East is located in the high desert southwest region of Adelanto, California, neighboring other correctional facilities and government buildings. The Adelanto ICE Processing Center East is owned and operated by the Geo Group, Inc. The Geo Group has an intergovernmental services agreement with ICE and the City of Adelanto, California. The facility is a Dedicated IGSA facility housing male and female detainees of all classification levels. During the inspection the count was 529, with 276 male and 253 female detainees. The average length of stay is 72 days.

Adelanto East consists of direct supervision dormitory-style housing. (b)(7)(E) (b)(7)(E) Dayroom areas provide adequate open space and sedentary activities such as television viewing and card games. Detainees spend the majority of their time socializing in the dayrooms, watching television, working, or participating in indoor/outdoor recreation activities. There is a large outdoor recreation area, as well as two smaller areas, which are available to detainees on a daily basis. Recreation is offered at the optimal level. The atmosphere throughout the facility was relaxed. Interactions among the staff and detainees was professionally courteous, as observed by the inspection team. There are kiosks in each housing unit programmed with LexisNexis. Detainees have access to the kiosks 24 hours per day, seven days per week. This feature, combined with the main law libraries' hours, provide optimal access to legal services for detainees.

Without exception, detainees stated that they feel safe at the facility. Detainees freely approached the inspectors to converse and no less than 71 detainees were interviewed during the inspection, 26 of which were formal confidential interviews. The language line was used as necessary. LEP detainees stated that they had no issues obtaining services. Confidential interviews revealed no concerns. Two detainees complained that one officer did not treat them with respect, but they had not filed any complaints or grievances about the officer. The detainees were advised of the processes for filing grievances to ICE and contacting the OIG. One detainee complained that they had not seen their ICE officer. Logs and visiting liaison checklists combined to indicate that ICE officers had been in the housing unit to interview detainees at least weekly during the inspection period. The detainee was advised to send a request form to ICE to guarantee an interview. One detainee asked about the permissibility of crafts for recreation in the housing units, and she was referred to facility staff. There were seven complaints regarding medical services. One was about the lack of an eye exam, for which the detainee was already scheduled. Three were regarding the lack of follow-up appointments, and the Medical SME determined that all three were scheduled for follow-up appointments the next day. One complained that her medication had been taken by staff, and the Medical Inspector learned that the medication was expired and had to be re-issued. One detainee stated that she had a rash, and it was discovered that she is currently receiving medical care for the rash. The last complaint was about a follow-up appointment for a toothache. The Medical Inspector found that the detainee is scheduled for an appointment with an oral surgeon.

Facility employees appeared and conducted themselves professionally, and most seemed to understand the requirements of the standards. Many of the staff are bilingual.

AMERICAN OVERSIGHT

2020-ICFO-29037 2542 of 2966

DHS-ICE-20-0618-A-001542

There is no medical co-pay. Medical services are provided by Correct Care Solutions. All other services are provided by GEO Group employees.

Areas of Concern/Significant Observations

ICE and facility staff expressed concerns over the recent OIG report in terms of the characterizations of certain information and erroneous reporting. Of note were the OIG's reference to "nooses" in the living areas. Examination of the pictures presented as evidence in the report indicated that the sheets were being used as privacy curtains or clotheslines, and were tied up loosely so that they could be easily pulled down for use by the detainees. The local staff indicated that they explained this to the OIG inspectors, but nonetheless they chose to use the inflammatory term of "nooses", even though there was no question about the purpose of the sheets. The OIG report also tied the privacy curtains and clotheslines to suicide prevention, when in fact there was no evidence to suggest that any privacy curtain or clothesline was used for such purposes. In the expert judgement of the inspection team, this mischaracterization in the OIG report only serves to exaggerate a housekeeping infraction. There were no makeshift clotheslines or privacy curtains observed during this inspection.

The OIG report also stated there had been no dental fillings or cleanings performed by the dental staff for the past four years; and that a dentist indicated that detainees could use strings from their socks as dental floss. Records revealed that a number of cleanings and fillings had been completed during the months prior to the OIG inspection, and have continued throughout the inspection period. Further, the witnessing staff indicated that the dentist was relaying a story from his past employment at a state correctional facility when he talked about threads being used as dental floss. He never suggested that detainees should do so.

The G-324 records more examples of inaccurately reported findings in the recent OIG report, to include those regarding the presence of segregation orders and medical rounds in segregation. It would be advantageous for OIG to use inspectors with detention and corrections backgrounds for future inspections to avoid this type of embarrassment to their office and ICE, especially since the inaccuracies have now been reported by the news media as fact.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Acceptable. The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standards and two (2) standards were Not Applicable (N/A). The remaining forty (40) standards were found to be in compliance.

LCI Assurance Statement

The findings of compliance and noncompliance are accurately and completely documented on the G-324A Inspection Form and are supported by documentation in the inspection file. An outbrief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

ICE Officials – FOD Thomas Giles (b)(6); (b)(7)(C)
(b)(6); (b)(7)(C)

Facility Staff – Warden James Janecka, (b)(6); (b)(7)(C)
and various supervisors and staff

Facility Snapshot/Description

The Adelanto ICE Processing Center West is owned and operated by the GEO Group, Inc. (GEO) and is located in a commercial district of southwestern Adelanto, CA, a high desert region. The current ICE contract was promulgated between ICE and the City of Adelanto. GEO is the sub-contractor for the City. The one-story direct-supervision facility houses adult male detainees of all classification levels. Female detainees are not housed at this facility except when severe mental illness requires temporary segregated housing for a female from the adjacent facility. During the inspection, the total count was 1198. The average length of stay for an ICE detainee is 70 days.

The housing units consist of upper and lower ranges of cells in every housing unit. There are four general population housing units, each containing four 80-person cellblocks. There are also two segregation cellblocks. The housing units have spacious dayrooms and the cell doors are never locked, except in the segregation areas. Every unit has two televisions, telephone banks and various board games. Each housing unit is equipped with two kiosks programmed with LexisNexis which are available to detainees 24 hours a day, seven days a week. There is one outdoor recreation area for every two cellblocks. There is also a large centralized outdoor recreation yard in which all detainees are offered recreation at least one hour per day. The atmosphere throughout the housing units was relaxed. Detainees interacted with staff and each other without hesitation or noticeable anxiety. Detainees were forthcoming in interviews with the inspection team. No common complaints were noted. Without exception, detainees stated that they felt safe at this facility and knew how to contact ICE officers if they had questions or concerns.

The staff were professional and displayed a clear understanding of the concept of civil detention and the PBNDS 2011 Standards. Many of the staff are bilingual. Interviews with LEP detainees indicated that they had no issues communicating with staff and no problems obtaining services. Confidential interviews revealed no concerns. The inspection team interviewed no less than 105 detainees during the inspection.

Medical services are provided by Correct Care Solutions. All other services are provided by the GEO Group employees. There is no medical co-pay.

Funds and Personal Property- 1, which is a repeat deficiency

Facility Snapshot/Description

The Adelanto ICE Processing Center West is owned and operated by The GEO Group, Inc. (GEO) and is located in a commercial district of southwestern Adelanto, California, a high desert region. The current ICE contract was promulgated between ICE and the City of Adelanto. GEO is the sub-contractor for the City. The one-story direct supervision facility houses adult male detainees of all classification levels. The facility is a Dedicated IGSA facility. During the first day of the inspection, the count on was 1204. The average length of stay for an ICE detainee is 72 days.

The physical plant includes visitor and reception areas, five court rooms, indoor and outdoor recreation, an artificial soccer field and a 112-bed special management unit. The building is air-conditioned. The housing units consist of upper and lower ranges of cells in every housing unit. The facility is made up of sixteen (16) dormitory style housing units equipped with eighty beds each. There are also two segregation cellblocks. The housing units have spacious dayrooms. Cell doors are never locked, except in the segregation areas. Every unit includes two televisions, telephone banks and various board games. Each housing unit is equipped with two kiosks programmed with LexisNexis which are available to detainees 24 hours a day, seven days a week. There is one outdoor recreation area for every two cellblocks. There is also a large centralized outdoor recreation yard in which all detainees are offered recreation at least one hour per day. Detainees have access to movies and x-box games in each day room. The atmosphere throughout the housing units was relaxed. Detainee visitation is offered seven days per week. Detainee programs include religious services, 12-step addiction/recovery, anger management, mindfulness, self-esteem and positive coping skills. Detainees interacted with staff and each other without hesitation. Detainees were forthcoming in interviews with the inspection team. No common complaints were noted. Without exception, detainees stated that they felt safe at this facility and knew how to contact ICE officers if they had questions or concerns. There were no complaints about food, telephone access, or recreation. None of the detainees voiced any concerns relative to their care and treatment while being housed in the SMU. A couple of detainees voiced complaints about officers being disrespectful. This complaint was reported to the chief of security who stated supervisory staff was already aware of this and monitoring the situation. Ten detainees were interviewed by the medical SME. There was one complaint. The detainee complained that he was not receiving appropriate medication for his condition and that he could not understand the medical provider. Further review of this detainee's medical record confirmed that he was seen by a medical provider who was fluent in Spanish. The medical record confirmed that the detainee was treated according to medical protocol.

The staff was professional and displayed a clear understanding of the concept of civil detention and the PBNDS 2011 Standards. Many of the staff are bilingual. Interviews with LEP detainees indicated that they had no issues communicating with staff and no problems obtaining services. Confidential interviews revealed no concerns. The inspection team interviewed no less than 125 detainees during the inspection.

Medical services are provided by Correct Care Solutions. All other services are provided by The GEO Group, Inc. employees. Detainees are not charged a co-payment for medical or mental health services.

Areas of Concern/Significant Observations

The recent OIG report indicated that a detainee had been confined to a wheelchair for nine days without moving from the chair. A medical record review and interviews with staff and the detainee during this annual inspection revealed that the detainee is in fact not confined to a wheelchair, but was rather issued a wheelchair out of courtesy so that he could sit in his cell and watch television. Segregation records indicate that, during the nine days cited on the OIG report as the detainee having no movement, he in fact was walking, standing, eating, and lying on his bed. He was clearly not in the wheelchair for nine consecutive days with no movement, as reported by OIG. This fact was easily documented via records review. Although the detainee is legally blind, he could make out enough images to enjoy television viewing, and the facility made the decision to give him a wheelchair to sit in while watching television, for his convenience. All of these facts were readily available, but it seems that the OIG inspection team chose not to check them or include them in their report. ICE and facility staff also reported that an OIG inspector spent two hours trying to talk the same detainee into another housing assignment, to no avail. The detainee ultimately dismissed the OIG inspector so that he could return to his personal recreation in his cell. There was apparently no thought given by the OIG inspector to the possibility that the detainee preferred his living arrangement to others offered throughout the facility, as records indicate that the detainee had been housed in a number of settings throughout the facility, including the medical area, general population housing, disciplinary housing, and administrative segregation housing. The onsite staff question the appropriateness of an OIG inspector involving themselves in the counseling or daily management of detainees at the facility; an excellent question in the view of the annual inspection team.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standards and two (2) standards were Not Applicable (N/A). All remaining forty (40) standards were found to be in compliance.

TO: Tae D. Johnson
Assistant Director for Detention Management

FROM: (b)(6); (b)(7)(C)
Lead Compliance Inspector
The Nakamoto Group, Inc.

SUBJECT: **Annual Detention Inspection of the Adelanto ICE Processing Center East**

The Nakamoto Group, Inc. performed an annual inspection for compliance with the ICE Performance-Based National Detention Standards (PBNDS 2011) of the Adelanto ICE Processing Center East in Adelanto, California, during the period of November 19-21, 2019. This is a DIGSA facility.

The inspection was performed under the guidance of (b)(6); (b)(7)(C) Lead Compliance Inspector. Team Members were:

Subject Matter Field	Team Member
Detainee Rights	(b)(6); (b)(7)(C)
Security	
Medical Care	
Safety	
Medical Care	

Type of Inspection

This is a scheduled annual inspection, which is performed to determine overall compliance with the ICE PBNDS 2011 for Over 72 hour facilities. The facility received a previous rating of Meets Standards during the October 2018 inspection.

Inspection Summary

The Adelanto Ice Processing Center East is currently accredited by:

- The American Correctional Association (ACA) - Yes
- The National Commission on Correctional Health Care (NCCHC) - Yes
- The Joint Commission (TJC) - No
- Prison Rape Elimination Act (PREA) - Yes

Standards Compliance

The following information is a summary of the standards that were reviewed and overall compliance that was determined as a result of the 2018 and 2019 annual compliance inspections:

The inspection team identified six (6) deficient components in the following three (3) standards:

Classification System - 1
Medical Care - 2
Terminal Illness, Advance Directives, and Death - 3

Facility Snapshot/Description

The Adelanto ICE Processing Center East is located in the desert southwest region of Adelanto, California, neighboring other correctional facilities and government buildings. The facility is owned and operated by the GEO Group, Inc. The facility is a Dedicated IGSA facility housing male and female detainees of all classification levels. On the first day of the inspection the total population at the facility was 479; with 210 male and 269 female detainees. The average length of stay is 75 days.

(b)(7)(E)

(b)(7)(E) Dayroom areas provide adequate open space and sedentary activities such as television viewing and board games. Telephones are provided in the housing units and are available to detainees 24 hours a day. There are also two computer kiosks providing access to LexisNexis in each housing unit. Outdoor recreation is available seven days a week. Sanitation was observed to be average with some clutter noted in the sleeping areas. Detainees interviewed during the inspection voiced few complaints regarding sanitation. Two female detainees complained of mold in housing unit D-1. One of the detainees pointed out an area on a back wall underneath a bunk that had a black discoloration on the wall and baseboard that may be mold. The other detainee stated that there was mold underneath the bench in one of the showers. Some soap scum was noted; however, there did not appear to be any mold. These areas were pointed out to facility staff. It was also noted that the heating vents and ceiling in the upper level sleeping area was in need of cleaning.

A male detainee approached an inspector with a litany of complaints about his treatment by officers and the lack of medical care for his high blood pressure. Investigation of his complaints found that he had been moved from the West facility because he was continually late when detainees from his housing unit were taken to the dining room for meals resulting in him missing meals from time to time. He was moved to the East facility where the meals are served in the housing units and he won't miss any meals. The Medical SME reviewed his medical chart and found that he has been seen by medical staff regularly and his blood pressure is being monitored. The detainee also stated that he had been on a hunger strike but when questioned further he admitted that he had only refused a couple of meals and never declared a hunger strike.

A female detainee stated that she has sent numerous requests to her ICE officer and has not received a response to these requests. A review of the request log and copies of the requests from the detainee indicated that her requests have all been responded to in a timely manner by the officer. The detainee also stated that she had suffered a concussion and had received no follow-up treatment. A review of her medical records indicated that she had been injured when another detainee fell on her while climbing up to the bunk above her. She was treated at the time of the accident and has been seen several times for ongoing complaints. She has been seen by a neurologist. Another female detainee complained about the lack of medical care. A review of her medical record indicated that she has been seen numerous times by medical staff and all of her complaints have been addressed.

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-001552
2020-ICFO-29037 2552 of 2966

The telephonic translation line was used to conduct interviews of LEP detainees from Mexico and China. All of the detainees stated they felt safe at the facility. None of the detainees expressed any concerns about the facility. Several detainees from China informed inspectors that they had been unable to call their families. It was determined that the telephone provider (TALTON) is in negotiations with China to permit detainee calls. Facility staff stated that the detainees would be permitted to attempt to contact their families using a facility telephone.

The inspection team visited the housing units several times during the inspection to conduct group and confidential interviews. The atmosphere was relaxed and detainees were observed interacting with facility staff and other detainees. They approached the inspection team without hesitation. No detainees expressed any concerns about their safety. There were no concerns regarding the law library or recreation. Detainees were aware of the procedures to request health care.

Medical services are provided by WellPath. All other services are provided by the GEO Group, Inc. Detainees are not charged a co-payment for medical or mental health services.

Areas of Concern/Significant Observations

The facility achieves optimal compliance with a number of standard requirements such as telephone ratios, law library access, and outdoor recreation.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS 2011). No (0) standards were found Does Not Meet Standard and two (2) standards were Not Applicable (N/A). All remaining forty (40) standards were found to be in compliance.

LCI Assurance Statement

The findings of compliance and non-compliance are accurately and completely documented on the G-324 Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

- ICE Officials – (b)(6); (b)(7)(C)
  (b)(6); (b)(7)(C)
- Facility Staff – (b)(6); (b)(7)(C)
  (b)(6); (b)(7)(C)

Repeat Finding	0
Not Applicable	3

The inspection team identified seven (7) deficient components in the following three (3) standards:

Classification System- 1
Medical Care- 2
Terminal Illness, Advance Directives, and Death- 4

Facility Snapshot/Description

The Adelanto ICE Processing Center West is located in the high desert southwest region of Adelanto, California, neighboring other correctional facilities and government buildings. The facility is owned and operated by the Geo Group, Inc.; as is the adjacent facility, Adelanto ICE Processing Center East. The Geo Group has an intergovernmental services agreement with ICE and the City of Adelanto, California. The facility is a Dedicated IGSA housing male ICE detainees of all classification levels under the direct supervision model. During the inspection the count was 1,037. The average length of stay is 63 days.

Detainees are housed in sixteen cellblocks in two- or four-person cells situated on upper and lower ranges in each housing unit. There is a segregation unit as well. The entire building is air-conditioned. The housing units have dayrooms with televisions, video games, board games, and telephones. Attached to each unit is an outdoor recreation area which detainees may use up to six hours per day, seven days per week, resulting in optimal compliance for the outdoor recreation requirements. Detainees are offered additional recreation on a large centralized outdoor recreation yard for at least one hour per day. Each housing unit is equipped with two kiosk computers loaded with the LexisNexis program available to detainees every day during waking hours as well as two stand-alone law libraries providing optimal compliance in regards to access to legal services.

The atmosphere was relaxed throughout the facility and detainees were observed interacting with one another and recreating for the most part. Staff and detainees interact informally and without apparent hesitation. Staff are professional in appearance and tend to be informed regarding the standards as related to their individual duties. A significant percentage of the staff are bilingual.

The inspection team conducted no less than eighty detainee interviews; 23 of which were formal interviews. One detainee stated that an officer had made a sarcastic comment to him. He did not file a complaint or a grievance. The inspector suggested that he do so if he wanted the complaint investigated. Five detainees complained that they did not like the food and one detainee stated that the meal portions were too small; yet another did not like the menu variety. The Safety SME confirmed that the menu was approved by a dietician; that the serving size of food portions met the minimum daily requirements; and that the menu had sufficient variety for the demographics of the detainee population. One detainee stated that there were ventilation problems and a lack of air conditioning in the housing units. The Safety SME confirmed that the ambient temperatures in the housing units were within the guidelines of the standards. One detainee complained of mold in the showers. Every shower in the facility was inspected and one individual shower had a small patch of mildew on the ceiling; and upon notification of the findings, the facility took immediate action to eradicate the mildew. One detainee complained that an x-ray was overdue. The Medical SME checked and determined that the medical department had not ordered the x-ray as intended; the facility then scheduled the x-ray for the next day. Three detainees complained of miscellaneous medical issues and all were under current, active care of the health services department with their conditions being addressed. Without exception, detainees stated that they felt safe at this facility and

AMERICAN OVERSIGHT

2020-ICFO-29037 2555 of 2966
DHS-ICE-20-0618-A-001555

knew how to contact ICE officers if they had questions or concerns. Interviews with LEP detainees indicated that they had no problem obtaining services. Confidential interviews revealed no concerns.

Medical services are provided by Wellpath. All other services are provided by the GEO Group, Inc. Detainees are not charged a co-payment for medical or mental health services.

Areas of Concern/Significant Observations

Of significance is that the facility achieves optimal compliance with a number of standards' requirements such as telephone ratios, law library access, and outdoor recreation opportunities.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standard and three (3) standards were Not Applicable (N/A). The remaining thirty-nine (39) standards were found to be in compliance.

LCI Assurance Statement

The findings of compliance and noncompliance are accurately and completely documented on the G-324A Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

Facility Snapshot/Description

The Cibola County Correctional Center is owned and operated by CoreCivic, formerly known as Corrections Corporation of America. (b)(7)(E)
(b)(7)(E)
(b)(7)(E) The facility is located in the city of Milan, New Mexico, near Interstate 40. The facility houses only male ICE detainees. The facility capacity is 1204. The population count on the first day of the inspection was 581 ICE detainees. The average length of stay for an ICE detainee is 28 days.

Detainees are housed in various sized dormitories, ranging from eight to forty-eight beds. There are a total of thirty-three housing pods. The segregation area is single-celled. Each dormitory has a dayroom area with ample tables, chairs, television viewing space, telephones, showers and wash basins. Cards and board games are also available There are two large outdoor recreation yards and a spacious gymnasium for detainee use.

A majority of facility staff are bilingual; possibly even all of them, as the inspection team did not encounter any staff that was not. Staff members are aware of their responsibilities and the rights afforded the detainees, as applicable to the standards. Staff enthusiastically took ownership of their individual areas. However, the setting is that of a typical jail, making the concepts of civil detention difficult to incorporate into the daily operations.

The environment is calm and without obvious tension. Detainees were observed interacting with themselves and staff without hesitation or apparent fear. Interviews with detainees of Limited English Proficiency revealed no issues with them obtaining services or understanding their environment. Confidential interviews gave no indication of fear or mistrust of staff. Detainee interviews were void of any complaints, and in fact were complimentary about both the quality and quantity meals served, the medical dare, and the treatment they received from the facility staff. ICE officers engage detainees frequently, and the inspection team received no questions or complaints about ICE-related issues, such as court dates, asylum requests, etc., as is the norm at most facilities. The inspection team interviewed no less than 75 detainees.

Food service is contracted through and provided by Trinity Services Group. Medical services are provided by Correct Care Solutions. All other services are provided by CoreCivic.

Areas of Concern/Significant Observations

Of significance is the fact there were no deficient components identified during this inspection.

The inspection team identified five (5) deficient components in the following four (4) standards:

Environmental Health and Safety – 1
Hold Rooms in Detention Facilities – 2, both are priority components
Staff-Detainee Communication – 1
Use of Force and Restraints – 1, which is a priority component

Facility Snapshot/Description

The Cibola County Correctional Center is owned and operated by CoreCivic. The facility is located in the city of Milan, New Mexico, near Interstate 40. The 1,204-bed facility houses male and female detainees for the U.S. Marshals and local jurisdictions and male ICE detainees. The facility also houses transgender ICE detainees who are biologically male and self-identify as female. These detainees are housed in a separate housing unit away from other detainees. The count on May 8, 2018 was 982 with 332 ICE detainees. Thirty-two of the ICE detainees were transgender. The average length of stay for most ICE detainees was reported to be 25 days. The average length of stay for a transgender ICE detainee is 81 days.

The inspection team visited all ICE detainee housing units several times during the inspection. It was noted that the facility is clean and in good repair. Detainees were interviewed in all housing units. Detainees were complimentary of staff interactions noting that staff is respectful and professional. All detainees interviewed stated that they did not fear for their safety and noted that there is a low level of violence at the facility. Detainees were observed playing board games and socializing with other detainees. Televisions, telephones, microwaves, video games and movies are available in the housing units. An inspection of the transgender unit revealed that detainees may participate in gardening programs and English as a Second Language classes.

There were no substantive complaints regarding food or access to telephones. Four detainees voiced concerns regarding timely follow-up of sick call requests. The review of the medical records for each detainee did not show any delay in evaluation, examination or treatment. Interviews with transgender detainees elicited no concerns regarding access to health care or privacy.

Several detainees complained of the lack of daily outdoor recreation time. A review of housing unit logs revealed that detainees are offered one hour and fifteen minutes of outside recreation each day which exceeds the requirement of the standard. Outdoor recreational activities include basketball, soccer, volleyball, jogging and intramural games between housing areas.

11820 Parklawn Drive, Suite 240 • Rockville, Maryland • phone: 301.468.6535 • fax: 301.468.6536 • www.nakamotogroup.com

Individual libraries containing pleasure reading books and LexisNexis computers are located inside each detainee living unit for easy access. Detainees have access to the library, upon request, during facility waking hours.

Medical services are provided by Correct Care Solutions (CCS). Detainees are not charged medical, dental or mental health copay fees.

Areas of Concern/Significant Observations

Hold Rooms in Detention Facilities:

Priority Component #4: Detainees are not held in hold rooms for more than twelve hours.

Finding:

A random review was conducted to determine the amount of time detainees were held in hold rooms during the inspection period. The review determined that more than 50% of the detainees were held longer than twelve hours.

Recommendation:

(b)(5)

Priority Component #1: Officers closely supervise hold rooms through direct supervision to ensure;

- Continuous auditory monitoring
- Visual monitoring at irregular intervals at least every 15 minutes
- Constant surveillance of any detainee exhibiting signs of hostility, depression, or similar behaviors

Finding:

Documentation of visual monitoring of ICE detainees being held in hold rooms, revealed that visual monitoring was being conducted every thirty minutes instead of every fifteen minutes as required by the standard.

Recommendation:

(b)(5)

Use of Force and Restraints:

Priority Component #11: All use of force incidents are documented and reviewed. Staff prepare a use of force form that identifies the detainee(s), staff, and others involved, describes the incident, and documents the location of strikes if intermediate force weapons are used. All calculated use of force incidents are properly audio-visually documented and forwarded for review. Use of force documentation at a minimum, shall include the

11820 Parklawn Drive, Suite 240 • Rockville, Maryland • phone: 301.468.6535 • fax: 301.468.6536 • www.nakamotogroup.com

AMERICAN OVERSIGHT

medical examination through the conclusion of the incident. All calculated use of force incidents must be audio-visually recorded in its entirety from the beginning of the incident to its conclusion.

Finding:

There were four use of force incidents involving ICE detainees during this inspection period. Two of the four were calculated uses of force. It was observed that the after-action review date for three of the incidents was sixty days or more past the incident date. The after-action review procedure approved by ICE/ERO and outlined in the facility's incident reporting policy 5-1, requires that after-action reviews of use of force incidents convene on the workday after the incident.

Recommendation:

(b)(5)

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2011. No (0) standards were rated Does Not Meet Standards, two (2) standards were non-applicable (N/A). The remaining forty (40) standards were found to Meet Standards.

LCI Assurance Statement

The findings of Meets Standards and Does Not Meet Standards are accurately and completely documented on the G-324A Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

Facility Snapshot/Description

The Cibola County Correctional Center is located in Milan, NM, 87 miles west of the Albuquerque International Sunport Airport, Albuquerque, NM. The facility, constructed in 1994 and renovated in 2000, is owned and operated by CoreCivic, a private prison corporation headquartered in Nashville, TN. CoreCivic operates the facility pursuant to a contract with Cibola County which has an IGSA with the United States Department of Homeland Security ICE. The facility has a rated capacity of 1204 beds and an operational capacity of 1116 beds. Low and medium-low custody adult male ICE detainees and all custody levels of transgender ICE detainees, male and female U.S. Marshals Service prisoners and male and female county inmates are housed at the facility. On the first day of the inspection the population count was 882 of which 356 were ICE detainees. The average daily population for ICE for the previous twelve months was 328.62 with an average length of stay of 25.7 days.

The facility is a one-story structure which contains nine detainee housing units, administrative offices, the medical department and various programmatic and service areas. The housing units consist of either one or two tiers and several housing pods within each housing unit. During the inspection, four housing units were occupied by ICE detainees. The ICE detainee general population housing pods range in capacities from 38 to 60 beds. Both cell and dormitory housing is available. (b)(7)(E)
(b)(7)(E)
(b)(7)(E) A restrictive housing unit is available for administrative and disciplinary segregation housing. ICE detainees are not commingled with non-ICE detainees.

(b)(7)(E)

The facility provides both indoor and outdoor recreation areas. Detainees in the general population are offered either indoor or outdoor recreation two hours per day, seven days per week. Housing areas provide dayroom space, adequate restroom facilities and seating areas for their maximum occupancy. Televisions, playing cards, board games, kiosks for purchasing commissary items and a microwave oven are available in the dayrooms.

The entire facility is climate controlled. Cleanliness and sanitation throughout the facility were observed to be average with the exception of the restricted housing unit which was observed to be above average.

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-001565
2020-ICFO-29037 2565 of 2966

All housing units and common areas of the facility were visited and/or observed during the inspection with the exception of two housing units which were under cohort (quarantine); 32 detainees for varicella (chickenpox) and 29 for mumps. The inspection team members did not enter the cohort housing units and the medical authorities disapproved the LCI's request to escort detainees from those housing units to a private room for interviews. The 29 detainees under cohort for mumps were identified as transgender.

Numerous detainees were interviewed; some interviews were in housing units or work areas with small groups of detainees and several were private and confidential and included detainees with limited English proficiency (LEP). Interviews included detainees who had recently arrived at the facility and some who had been housed at the facility for longer periods of time. The detainees voiced no concerns regarding life/safety issues. Detainees stated they felt safe and were generally satisfied with the interaction, responsiveness and professionalism of facility and ICE staff and with access to medical services, mail, the law library, telephones, visitation and recreation. Detainees expressed general satisfaction with the quantity and quality of food provided.

Detainee telephone services are provided via the ICE contract with Talton Communications, Inc.; medical services are provided by Wellpath; and food service operations are contracted with Trinity Services Group. All other services are provided by CoreCivic. ICE detainees do not incur medical co-pays.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standard and two (2) standards were Not Applicable (N/A). All remaining forty (40) standards were found to be in compliance.

LCI Assurance Statement

The findings of compliance and non-compliance are accurately and completely documented on the G-324 Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

- ICE Officials – (b)(6); (b)(7)(C)
- Facility Staff – (b)(6); (b)(7)(C)

SUBJECT: **Annual Inspection of the Denver Contract Detention Facility**

The Nakamoto Group, Inc. performed an annual inspection for compliance with the ICE Performance-Based National Detention Standards (PBNDS) 2011 of the Denver Contract Detention Facility in Aurora, CO during the period of September 26-28, 2017. This is a CDF.

The annual inspection was performed under the guidance of (b)(6); (b)(7)(C) Lead Compliance Inspector. Team Members were:

Subject Matter Field	Team Member
Security	(b)(6); (b)(7)(C)
Detainee Rights	
Medical Care	
Safety	
QMC	

Type of Inspection

This is a scheduled annual inspection, which is performed to determine overall compliance with the ICE PBNDS 2011 for Over 72 hour facilities. The facility received a previous rating of Meets Standards during the September 2016 inspection.

Inspection Summary

The Denver Contract Detention Facility is currently accredited by:

- The American Correctional Association (ACA) – Yes
- The National Commission on Correctional Health Care (NCCHC) – Yes
- The Joint Commission (TJC) – No
- Prison Rape Elimination Act (PREA) – No

Standards Compliance

Facility Snapshot/Description

The Denver Contract Detention Facility is a 1,108 bed facility operated by GEO Group, Inc. It currently houses male and female ICE detainees and male U.S. Marshals detainees. The facility is a single structure one-story building which opened in 1987. (b)(7)(E) (b)(7)(E) The facility perimeter is comprised of exterior walls of building; (b)(7)(E) (b)(7)(E) (b)(7)(E) The facility is located in Aurora, Colorado approximately fifteen miles west of Denver, Colorado. The average daily population of the facility during the inspection period was 689, of which 611 were ICE detainees. The average length of stay for an ICE detainee is 45 days.

The facility has thirteen different general population detainee housing units ranging from four man cells to a 48 bed dormitory. There are two separate 48-cell segregation units; they are referred to as restricted housing units (RHU). All RHU cells are single man occupancy. ICE detainees can be housed in any of the housing units based on their classification score. The day rooms are furnished with a television, telephones, tables and open space. Each detainee has a lockable personal property storage bin. Indoor and outdoor recreation is made available to all populations for at least one hour a day, seven days a week. The outdoor recreational yards have accessible water and toilet facilities. The RHU has its own outdoor recreation area.

ICE maintains an on-site presence in the facility. ICE personnel were seen talking with detainees throughout the facility during the entire inspection. The atmosphere in the housing units was relaxed and detainees openly communicated with the inspection team. Facility employees are experienced and very knowledgeable of the ICE standards, their demands and the duties of their posts. Staff interaction with detainees was direct, respectful and responsive to their requests. Detainees were orderly in their daily movements, housing unit behaviors and program/activity participation. The inspection team interviewed 72 LEP and English speaking detainees publicly and privately in the housing unit and in the common areas. They registered no substantive complaints or concerns when questioned about personal safety, treatment by staff, medical care, asylum requests, consulate/court access, ICE availability, telephone access, visiting privileges, law library access or food services.

Medical and food services are provided by GEO Management & Training Corporation. The facility is well maintained and represents above average sanitation.

The inspection team identified three (3) deficient components in the following three (3) standards:

Hold Rooms in Detention Facilities – 1, which is a Priority component
Special Management Units – 1, which is a Priority component
Grievance System - 1

Facility Snapshot/Description

The Aurora ICE Processing Center (formerly Denver CDF) is a 1108 bed facility operated by The GEO Group, Inc. (GEO). The facility currently houses male and female ICE detainees and male U.S. Marshals Service detainees. The facility is a single structure one-story building. (b)(7)(E)

(b)(7)(E)

(b)(7)(E) The facility is located in Aurora, Colorado, approximately fifteen miles west of Denver, Colorado. The population of the facility on the first day of the inspection was 951, of which 891 were ICE detainees (811 males and 80 females). Male detainees are classified low, medium low, medium high and high. Female detainees are classified low, medium low and medium high. The average length of stay for an ICE detainee was reported as 46 days.

The facility has thirteen different general population detainee housing pods ranging from four-person cells to 48-bed dormitories. There are two 48-cell segregation pods, referred to as restricted housing units (RHU). All RHU cells are single occupancy. ICE detainees are not commingled with U.S. Marshal detainees. Day rooms are furnished with a multipurpose room, television, telephones, tables and a day room. Electronic tablets are available in each housing unit. The tablets include the following information: detainee request forms, text message function, law library, detainee handbooks, religious material, video visitation, audio books, E-books, games, movies, television shows, music education materials, calculator, dictionary, news, meditation and sports. The tablets supplement the programs and services provided at the facility. Detainees stated, in summary, "that the tablets are readily available and there is rarely a waiting list to use a tablet". Each detainee has a lockable personal property storage bin. Indoor and outdoor recreation is provided at least one hour a day, seven days a week. The outdoor recreational yards have accessible water and toilet facilities. Each housing unit is equipped with an outdoor recreation area.

During the inspection, there was one active case of chicken pox, and the detainee was housed in isolation in the medical department. The detainee's housing pod was quarantined for twenty-one days in order to monitor for additional cases. The HSA had written documentation of her email notice to the field office.

11820 Parklawn Drive, Suite 240 • Rockville, Maryland • phone: 301.468.6535 • fax: 301.468.6536 • www.nakamotogroup.com

AMERICAN OVERSIGHT
DHS-ICE-20-0618-A-001571
2020-ICFO-29037 2571 of 2966

ICE maintains an on-site presence in the facility. ICE personnel were seen talking with detainees during the inspection. The atmosphere in the housing units was relaxed and detainees openly communicated with the inspection team. Facility employees are experienced and very knowledgeable of the ICE standards, their demands and the duties of their posts. Staff interaction with detainees was direct, respectful and responsive to their requests. Detainees were orderly in their daily movements, housing unit behaviors and program/activity participation. The inspection team interviewed no less than 85 detainees. Confidential and LEP interviews were conducted. Interviews were conducted in the special management unit, kitchen, law library, dayrooms, recreation and visiting rooms. Detainees voiced no concerns regarding safety, conditions of confinement, treatment by staff, asylum requests, consulate/court access, ICE availability, telephone access, visiting privileges, law library access or food services. None expressed any concerns about their treatment and all stated they felt safe at the facility. Everyone stated they were treated respectfully by security officers. Two detainees expressed concerns regarding the treatment they were receiving for specific medical issues. These concerns were conveyed to the medical SME for follow-up. As a result of the follow up, one of the detainees was seen by medical staff and evaluated. The second detainee's medical issue requires that he be seen by a specialist at a local hospital. This requires ICE field office approval which was still pending during the inspection. The medical SME addressed this issue with the HSA who stated she would follow up with an ICE official. The SDDO was advised during the inspection. Cleanliness inside the facility was viewed as above average.

Medical and food services are provided by The GEO Group, Inc. Detainees are not charged a co-payment for medical services.

Areas of Concern/Significant Observations

There were two Priority Components rated Does Not Meet Standard:

Hold Rooms in Detention Facilities

Component #4 – Detainees are not held in hold rooms for more than twelve hours.

Findings: A review of detention intake logs revealed that intake officers had failed to enter either the time a detainee was placed in a hold room or the time a detainee was released from a hold room. Documentation was not available to determine whether or not the twelve-hour limit for holding a detainee in a hold room was within standard guidelines.

Recommendation: (b)(5)
(b)(5)

Special Management Units

Component #18 – Health care personnel conduct face-to-face medical assessments for every detainee in an SMU at least once daily.

Findings: Observation of the mid-morning medication pass conducted by medical personnel revealed that not all detainees were being seen by the medical staff. Interviews conducted with the medical staff, SMU officer and SMU detainees confirmed that all detainees (in SMU) are not being seen on a daily basis. Only detainees requiring medication are being seen.

Recommendation: (b)(5)

The inspection team identified five (5) deficient components in the following three (3) standards:

Hold Rooms – 1
Significant Self-Harm and Suicide Prevention and Intervention – 1, which is a priority component
Grievance System – 3, two of which are priority components

Facility Snapshot/Description

The Aurora ICE Processing Center is located in Aurora, CO, which is approximately ten mile east of Denver, CO. The facility is owned and operated by The GEO Group, Inc., a private corrections company. It is a CDF which currently houses adult male and female ICE detainees of all custody levels and adult male U.S. Marshals detainees. ICE/ERO maintains an on-site presence Monday through Friday. The facility is composed of two units; the main unit, in which most of the support services are delivered; and the annex which provides additional housing and some duplicate support services from the main unit. The facility has a rated capacity of 1,304. The average daily population of the entire facility during the inspection was 934 detainees, of which 878 were ICE detainees; 611 in the main unit and 267 in the annex. The average length of stay for a detainee is 55 days.

The facility opened in 1987 and expanded to its current size in 2019. The compound consists of two distinct sections inside the fence; the main facility (North) and the annex (South). Many of the support services are shared. Travel between the two buildings is frequent. (b)(7)(E)

(b)(7)(E)

All general population detainees are housed in five separate housing units, each with various sections ranging in configuration of eight to sixty bed dormitories and four to eight bed cells. There is one ICE/ERO special management unit (referred to as restricted housing unit at this facility) consisting of 48 one-bed cells. All main housing units are managed under direct supervision. Annex housing units are supervised by assigned roving officers.

Each housing unit has a dayroom equipped with three televisions, fixed dining/seating tables where detainees can play board games, cards, engage in social interactions with one another and watch television, and electronic tablets on which detainees can order commissary, participate in video-visits, watch movies, send e-mails and play games. Each housing unit has a kiosk on which detainees can place their weekly commissary orders.

11820 Parklawn Drive, Suite 240 • Rockville, Maryland • phone: 301.468.6535 • fax: 301.468.6536 • www.nakamotogroup.com

.
Each detainee has a lockable personal property storage bin. All detainees have access to indoor and outdoor recreation. There are nine outdoor recreational yards. Outdoor recreation is provided at least one hour a day, seven days a week for all detainees. Detainees have access to water and toilet access when using the yard.

Several detainees were interviewed throughout the inspection using the language line and a bi-lingual inspector. Interviews were with detainees of various custody levels from different housing units. The interviews took place in a private setting. Detainees had no reservations about speaking with their interviewers. Overall, the detainees voiced no substantive complaints or concerns when questioned about their personal safety, treatment by staff, conditions of confinement, medical care, asylum requests, consulate/court access, ICE/ERO services, visiting privileges, law library access, food services or recreational opportunities. One Nigerian detainee was unhappy with the food selections as it did not reflect the dietary customs of his home land. The food service SME discussed the concern with the food service manager. The cycle menu is adequate and reflects many different ethnic cuisines, just not his. There were two minor medical concerns raised by two different detainees. Both concerns were discussed with health care staff by the medical SME. The first issue concerned a vision problem. It was determined the detainee has extremely poor vision. The detainee has requested his family to send in his special eyeglasses, they have not yet been received. Upon receipt and a subsequent security clearance, they will be issued. The second issue was a detainee receiving the results of his September 23, 2019 MRI. Health care staff have made frequent requests to the provider but the results have not yet been forwarded. In both instances, the concerns were previously addressed; proper protocols are being followed. Both detainee concerns will be satisfied upon receipt of the requested article/test results.

Cleanliness inside the facility is considered to be above average.

All security and support services are provided by The GEO Group, Inc. employees. Detainees are not charged a co-payment for medical services.

Areas of Concern/Significant Observations

There were three priority components rated Does Not Meet Standard:

4.6 Significant Self-Harm and Suicide Prevention and Intervention:

Component #6: PRIORITY: Suicidal detainees should be closely supervised in a setting that minimizes opportunities for self-harm. The isolation room designed for evaluation and treatment must be free of objects or structural elements that could facilitate a suicide attempt, and security staff shall ensure that the area for suicide observation is initially inspected so that there are no objects that pose a threat to the detainee's safety. A suicidal detainee may be placed in the Special Management Unit only if space has been approved for this purpose by medical staff and such space allows for unobstructed observation.

Finding: The suicide precautions/watch rooms are free of objects which may facilitate a suicide attempt. However, one of the two rooms (#535) has a floor to ceiling wall which completely obscures the view of the officer while the detainee is in that area.

11820 Parklawn Drive, Suite 240 • Rockville, Maryland • phone: 301.468.6535 • fax: 301.468.6536 • www.nakamotogroup.com

AMERICAN OVERSIGHT
DHS-ICE-20-0618-A-001576
2020-ICFO-29037 2576 of 2966

Recommendation: (b)(5)

(b)(5)

6.2 Grievance System:

Component #6: PRIORITY: Each facility shall have written policy and procedures for a detainee grievance system that:

- Establishes a procedure for any detainee to file a formal grievance;
- Establishes a procedure to track or log all ICE detainee grievances separately from other facility populations;
- Establishes reasonable time limits for:
  Processing, investigating, and responding to grievances;
  Convening a grievance committee (or actions of a single designated grievance officer) to review formal complaints; and
  Providing written responses to detainees who filed formal grievances, including the basis for the decision.
- Ensures a procedure in which all medical grievances are received by the administrative health authority within 24 hours or the next business day, with a response from medical staff within five working days, where practicable;
- Establishes a special procedure for time-sensitive, emergency grievances, including having a mechanism by which emergency medical grievances are screened as soon as practicable by appropriate personnel;
- Ensures each grievance receives appropriate review;
- Provides at least one independent appeal that excludes individuals previously involved in the decision-making process for the same grievance;
  Includes guarantees against reprisal; and
- Ensures information, advice, and directions are provided to detainees in a language or manner they can understand, or interpretation/translation services are utilized.

Finding: The facility has written policy and procedures for a detainee grievance system. A review of documentation revealed: medical grievances are not being logged or tracked consistently; a high number of medical grievances were not accounted for on a grievance log; responses to medical grievances are not consistently made within five working days; there is no mechanism in place in which emergency medical grievances are screened as soon as practicable; and the medical grievance system does not provide at least one independent appeal that excludes the individual involved in the decision making process for the same grievance.

Recommendation: (b)(5)

(b)(5)

11820 Parklawn Drive, Suite 240 • Rockville, Maryland • phone: 301.468.6535 • fax: 301.468.6536 • www.nakamotogroup.com

AMERICAN OVERSIGHT

Component #11: PRIORITY: Each facility shall maintain a Detainee Grievance Log. The documentation shall include: the date the grievance was filed, the name of the detainee that filed the grievance, the nature of the grievance, the date the decision was provided to the detainee, and the outcome of the adjudication.

A copy of the grievance disposition shall be placed in the detainee's detention file and provided to the detainee. Medical grievances are maintained in the detainee's medical file.

Findings: The facility has written policy and procedures regarding maintaining detainee grievance logs. The facility uses a computerized system (GEOTrack) for entering all grievances. A review of the non-medical grievance log reveals that the entries did not consistently include the date the grievance was filed, the name of the grievant, along with the nature of the grievance, the date the decision was provided to the detainee nor the outcome of the adjudication.

Recommendations: (b)(5)

(b)(5)

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standards and one (1) standard was Not Applicable (N/A). All remaining forty-one (41) standards were found to be in compliance.

LCI Assurance Statement

The findings of Meets Standards and Does Not Meet Standards are accurately and completely documented on the G324A Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

- ICE Officials – (b)(6); (b)(7)(C) personnel
- Facility Staff – Warden J. Choate, (b)(6); (b)(7)(C)

SUBJECT: **Annual Detention Inspection of the Imperial Regional Detention Facility**

The Nakamoto Group, Inc. performed an annual inspection for compliance with the ICE Performance-Based National Detention Standards (PBNDS) 2011 of the Imperial Regional Detention Facility Center in Calexico, CA during the period of January 24-26, 2017. This is a dedicated IGSA facility.

The annual inspection was performed under the guidance of (b)(6); (b)(7)(C) Lead Compliance Inspector. Team Members were:

Subject Matter Field	Team Member
Security	(b)(6); (b)(7)(C)
Detainee Rights	
Medical Care	
Safety	
QMC	

Type of Inspection

This is a scheduled annual inspection, which is performed to determine overall compliance with the ICE PBNDS 2011 for Over 72 hour facilities. The facility received a previous rating of Meets Standards during the January 2016 inspection.

Inspection Summary

The Imperial Regional Detention Facility is currently accredited by:

- The American Correctional Association (ACA) – Yes
- The National Commission on Correctional Health Care (NCCHC) – No
- The Joint Commission (TJC) – No
- Prison Rape Elimination Act (PREA) – No

Standards Compliance

Facility Snapshot/Description

The Imperial Regional Detention Facility is managed by Management and Training Corporation (MTC) and is located in the eastern outskirts of Calexico, CA. The 704-bed, direct supervision facility is an ICE-dedicated IGSA facility that houses adult male and female detainees of all classification levels in cells and dormitories. Detainees do not incur medical co-pay fees.

The count on the first day of the inspection was 687, of which 57 were female detainees. The average length of stay for a detainee was reported to be 67 days. ICE personnel maintain an office in the facility and interact with detainees daily. Detainees were observed conversing with ICE staff during the inspection.

It was noted that the facility is well maintained and sanitation levels are above average. There is a calm atmosphere. Each housing unit houses 64 detainees. There is a large day room where detainees may watch television and participate in other indoor recreational activities. Each dormitory has an attached outdoor recreation area that is available to the detainees throughout the day. Detainees are also offered two hours outside recreation in the large yard each day. They may participate in walking, jogging, and various sports. They also have access to exercise equipment. Telephones are provided in the units and detainees have access to them during facility waking hours. The facility offers education and training classes to all detainees. The classes currently being offered are: Anger Management, INEA (Mexican Education: Primary and Secondary), Parenting classes, Typing/Computer, Reading Horizon (ESL) and Basic English Reading Education, Meditation, Zumba, Art, Crochet and Guitar.

Detainees were relaxed and spoke freely with inspectors and were observed interacting with facility staff. No less than eighty detainees were interviewed by the inspectors and all stated that they feel safe and that they are treated with respect by staff. LEP detainees stated that they have no problem communicating with staff.
Detainees were questioned about health care, food service, recreation, and access to the law library and other services. None of the detainees voiced any concerns. One detainee stated that his funds had been deposited into his Talton phone account and he was having problems getting the funds transferred to his commissary account. The compliance officer was made aware of the issue.

Facility personnel interviewed were knowledgeable about the requirements of the standards and they stated that they feel safe in the facility and are able to communicate with the detainees.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations.

Facility Snapshot/Description

The Imperial Regional Detention Facility is owned by the city of Holtville, CA. The city of Holtville has an IGSA with ICE and has contracted with Management and Training Corporation (MTC) to operate the facility. The facility is physically located in the eastern outskirts of Calexico, CA, approximately 130 miles east of the San Diego International Airport. The facility, which opened in 2014, and has an operational capacity of 704 beds, is designated as an ICE-dedicated IGSA that houses adult male ICE detainees of all classification levels and female ICE detainees classified as low and medium custody. The facility does not house juveniles.

The facility is a single level structure containing eleven general population housing units each with a capacity of sixty-four beds. Both cell and dormitory housing are available. All housing units are provided direct supervision. The facility also has a restrictive housing unit which contains sixty-four beds, however, these beds are not counted as part of the operational capacity. On the first day of the inspection the total population was 661 which included 601 male and sixty female ICE detainees. The average daily population for the previous twelve months was 606 male and fifty-seven female detainees with an average length of stay of ninety-four days.

Each general population housing unit has a dayroom area with tables, chairs, two televisions, seven telephones, board games, card games and a sufficient number of showers and wash basins. There is a small outdoor recreation area attached to each general population housing unit which is available to detainees daily between the hours of 7:30 a.m. and 9:00 p.m. Additionally, the facility has a large recreation yard where detainees may engage in various exercise activities such as walking, jogging, basketball, volleyball and intramural games between housing units of appropriate custody designations. Detainees housed in general population have access to this large outdoor recreation area two hours per day, seven days a week. Detainees housed in the restrictive housing unit, for administrative reasons, have access to recreation areas out of their cells for two hours per day, seven days a week, and those housed in disciplinary segregation status have access to the recreation areas one hour per day, seven days a week. Detainees are permitted to participate in the voluntary work program. The facility also offers a variety of educational and training classes to detainees.

Overall, the team found the atmosphere in the facility to be calm with no obvious indicators of high stress. Facility staff was observed interacting with detainees; the interactions appeared to be professional and productive. Sanitation and cleanliness was observed to be above average.

Numerous ICE detainees were interviewed during the course of the inspection. Both male and female detainees, some with limited English proficiency, were interviewed. Some interviews were in a group forum and several were private and confidential. The detainees voiced no concerns regarding life/safety issues. Detainees were generally very satisfied with living conditions and with the interaction and responsiveness of facility and ICE staff.

AMERICAN OVERSIGHT
DHS-ICE-20-0618-A-001583
2020-ICFO-29037 2583 of 2966

One male detainee housed in the restrictive housing unit, administrative segregation, told the Security SME that medical personnel do not visit each detainee in the restrictive housing unit on a daily basis. The SME interviewed several other detainees, detention officers and medical staff. Based on the totality of these interviews and a review of housing unit records, the detainee's assertion that medical personnel do not visit detainees in the restrictive housing unit on a daily basis was not supported.

One female detainee stated she needed a special diet which requires approval by a doctor. The detainee further stated that although she had been seen by a nurse who told her she would be referred to a doctor, she had not yet been seen by the doctor. The Medical SME followed up on this issue and found that the detainee had been interviewed by the nurse approximately one hour prior to voicing her concern to the Lead Compliance Inspector/Detainee Rights SME. Per the medical record, the detainee is scheduled to see a doctor.

The facility houses a substantial number of detainees from India. Several of these detainees stated their desire to have access to Indian television programming. This request was discussed with the OIC and the compliance manager. Both stated that Indian movies are occasionally shown on weekends and that they would further explore the possibility of more television programming from India.

The facility does not charge co-pays for medical, mental health or dental care.

Detainee telephone services are provided via the ICE contract with Talton Communications.

Areas of Concern/Significant Observations

The Medical SME identified a Best Practice regarding the SAAPI program. Every newly arriving detainee receives a one-on-one orientation directly from the SAAPI/PREA coordinator. During this orientation, the detainee is provided counseling to ensure that he or she is knowledgeable about the program. The coordinator uses Language Line when necessary to provide the counseling to detainees who have limited English proficiency. Detainees sign that they have received this information.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS-2011). No standards were found Does Not Meet Standards and one (1) standard was Not Applicable (N/A). All remaining forty-one (41) standards were found to Meet Standards.

LCI Assurance Statement

The findings of compliance and non-compliance are accurately and completely documented on the G-324A Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

Facility Snapshot/Description

The Imperial Regional Detention Facility is designated as an ICE dedicated IGSA (DIGSA) facility owned by the city of Holtville, CA. The city of Holtville has an IGSA with ICE and has contracted with Management and Training Corporation (MTC) to operate the facility. The facility is physically located in the eastern outskirts of Calexico, CA, approximately 130 miles east of the San Diego International Airport. The facility opened in 2014 and has an operational capacity of 704 beds. This DIGSA houses adult male ICE detainees of all classification levels and currently houses female ICE detainees classified as low custody. The facility accepts medium custody female detainees. Juveniles are not housed in this facility.

The facility is a single level structure containing eleven general population housing units. Of the eleven units, two housing units consist of double bed cells. The other nine are open bay dormitories. Both cell and dormitory housing units have a 64 bed capacity. Direct supervision is provided in all housing units. The facility also has a restrictive housing unit which contains 64 beds. However, the beds are not counted as part of the operational capacity. On the first day of the inspection the total population was 661 which included 601 male and sixty female ICE detainees. The average length of stay is 98 days.

Each general population housing unit has a dayroom area with tables, chairs, two televisions, seven telephones, board games, card games and a sufficient number of showers and wash basins. There is a small outdoor recreation area attached to each general population housing unit which is available to detainees daily between the hours of 7:30 a.m. and 9:00 p.m. The facility also has a large recreation yard where detainees may engage in various exercise activities such as walking, jogging, basketball, volleyball and intramural games between housing units of appropriate custody designations. Detainees housed in general population have access to this large outdoor recreation area two hours per day, seven days a week. Detainees housed in the restrictive housing unit, for administrative reasons, have access to recreation areas out of their cells for two hours per day, seven days a week, and those housed in disciplinary segregation status have access to the recreation areas one hour per day, seven days a week. Detainees are permitted to participate in the voluntary work program. The facility also offers a variety of educational and training classes to detainees.

In general, the team found the atmosphere in the facility to be calm with no obvious indicators of high stress. Facility staff was observed interacting with detainees; the interactions appeared to be professional and productive. Sanitation and cleanliness was observed to be above average.

AMERICAN OVERSIGHT

2020-ICFO-29037 2587 of 2966

Numerous ICE detainees, selected at random from all classification levels, were interviewed during the course of the inspection. Both male and female detainees, some with limited English proficiency, were interviewed. Some interviews were in a group forum and several were private and confidential. The detainees voiced no concerns regarding life/safety issues. In general, detainees were satisfied with living conditions and with the interaction and responsiveness of facility and ICE staff. Except for minor concerns about the amount of food provided, the detainees interviewed did not express any other concerns. The food service inspector confirmed that the food portions provided by food service are in compliance with the requirements of the standard.

The facility does not charge co-pays for medical, mental health or dental care.

Detainee telephone services are provided via the ICE contract with TALTON Communications.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations identified during this inspection.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS-2011). Facility Snapshot/Description

The Imperial Regional Detention Facility is owned by the Imperial Valley Gateway Center, LLC. Management and Training Corporation (MTC) has contracted with ICE to operate the facility. The facility is physically located in the eastern outskirts of Calexico, California, approximately 130 miles east of the San Diego International Airport. The facility, constructed in 2014, has a total capacity of 781 beds and an operational capacity of 704 beds. As of December 20, 2019, the facility's designation changed from a dedicated IGSA (DIGSA) to an ICE Contract Detention Facility (CDF). The facility houses adult male ICE detainees of all classification levels and female ICE detainees classified as low and medium custody. On the first day of the inspection the total population was 660 which included 597 male and 63 female ICE detainees. The average daily population for the previous twelve months was 592 male and 64 female detainees with an average length of stay of 101.72 days.

The facility is a single level structure containing eleven general population housing units each with a capacity of 64 beds. Both cell and dormitory beds are available. The facility has a special management unit (SMU) which contains 64 beds. A (b)(7)(E)

(b)(7)(E)

Each general population housing unit has a dayroom area equipped with tables, chairs, two televisions, seven telephones, nine electronic tablets, board games, card games and a sufficient number of showers and wash basins. There is an outdoor recreation area attached to each general population housing unit which is available to detainees daily between the hours of 7:30 a.m. and 9:00 p.m. Additionally, the facility has a large recreation yard where detainees may engage in various exercise activities such as walking, jogging, basketball, volleyball and intramural games between housing units of appropriate custody designations. Detainees housed in general population have access to this large outdoor recreation area two hours per day, seven days a week. Detainees housed in the SMU have access to recreation areas out of their cells one hour per day, seven days a week. Detainees in low and medium-low custody are permitted to participate in the voluntary work program outside of their housing unit. The facility also offers a variety of educational and training classes to detainees.

Each general population housing unit was recently provided nine electronic tablets. Detainees may use an electronic tablet to communicate with various facility and ICE staff, file a grievance, order commissary and access various educational and gaming applications. For a fee, detainees may communicate with family and friends via email, engage in a video visit, or download music and videos.

AMERICAN OVERSIGHT

2020-ICFO-29037 2590 of 2966

DHS-ICE-20-0618-A-001590

Overall, the inspection team found the atmosphere in the facility to be calm with no obvious indicators of high stress. Facility and ICE staff were observed interacting with detainees in the housing units. Sanitation and cleanliness throughout the facility were observed to be above average.

All housing units and common areas of the facility were visited and/or observed during the inspection. No less than fifty detainees were interviewed informally, either individually or in small groups. Twenty-two formal interviews were conducted. Nineteen formal interviews were with detainees with limited English proficiency (LEP); three were with transgender detainees. Language line was used to interview detainees who spoke neither English nor Spanish. A bi-lingual member of the inspection team conducted formal interviews with Spanish speaking detainees. The detainees voiced no concerns regarding life/safety issues. Detainees stated they felt safe and were generally satisfied with the interaction, responsiveness, and professionalism of facility and ICE staff and with access to medical services, mail, the law library, telephones, visitation, and recreation. Detainees expressed general satisfaction with the quantity and quality of food provided.

During detainee interviews, one detainee complained of pain in the back of his head and that he was not getting his prescribed diet. A review of his medical record showed that he was sent for a CT scan of the head which was found to be normal. He also has a low salt diet ordered by the provider.

Three transgender detainees were interviewed and voiced no concerns; the detainees stated they felt safe in this facility.

Some detainees stated that ICE officers do not visit with them in their housing units. The LCI, as part of the Staff-Detainee Communication standard inspection, reviewed this issue. A schedule for ICE visits is posted in each housing unit and each housing unit has a sign-in log which is only used to document ICE visits. The logs substantiated that ICE staff are in the housing units three times weekly on Tuesday, Wednesday and Thursday. ICE officers were observed visiting housing units during the inspection. Detention staff interviewed confirmed that ICE officers routinely visit the housing units and speak to detainees.

Detainee telephone services are provided via the ICE contract with Talton Communications. All other services are provided by MTC.

ICE detainees do not incur medical co-pays.

Areas of Concern/Significant Observation

There were no areas of concern or significant observations.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS) 2011. No standards were found Does Not Meet Standard and one (1) standard was Not Applicable (N/A). All remaining forty-one (41) standards were found to be in compliance.

LCI Assurance Statement

Type of Inspection

This review is a scheduled annual inspection, which is performed to determine overall compliance with the ICE NDS for Over 72 hour facilities. The facility was not inspected in 2016.

Inspection Summary

The Otero County Prison Facility is currently accredited by:

- The American Correctional Association (ACA) - Yes
- The National Commission on Correctional Health Care (NCCHC) - No
- The Joint Commission (TJC) - No
- Prison Rape Elimination Act (PREA) - Yes

Standards Compliance

The following information is a summary of the standards that were reviewed and overall compliance that was determined as a result of the 2017 NDS compliance annual inspection:

Facility Snapshot/Description

The Otero County Prison Facility is a high security correctional facility owned by Otero County, New Mexico and operated under contract by Management & Training Corporation (MTC). The facility is located approximately nine miles northwest of Chaparral, New Mexico and twenty five miles north of El Paso, Texas. Prior to February 3, 2017, when thirty-two female ICE detainees were processed into the facility, there had been no ICE detainees housed in this facility for the past 5 years. Consequently, there is no average length of stay for ICE detainees.

The Otero County Prison Facility was constructed and activated in September 2003. An upgrade to the facility that added eighty additional beds was completed in October 2005. The Otero County Prison physical plant consists of sixteen general population housing units. Fourteen male units have 72 beds each, one housing unit contains sixty beds and one housing unit has 68 beds. There are four separate female housing units; two of these units contain 22 beds and the other two housing units contain eighteen beds. Additionally, the male special management unit (SMU) contains 125 beds and the female segregation unit has 8 beds. There are 6 medical beds and there are 4 beds in the intake area

The facility houses adult male and female detainees for the U.S. Marshals Service, the state of New Mexico, the Federal Bureau of Prisons, Otero County, and the city of Alamogordo, New Mexico. On February 7, 2017, the total facility count was 1,071 of which 32 were female ICE detainees. There were 961 male and 110 female detainees, including the 32 ICE female detainees. The facility can house all classification levels of ICE detainees.

The facility provides detainees with the opportunity to use their time socializing in the dayrooms, watching television, working or participating in indoor/outdoor recreation. There are three indoor recreation areas, in addition there are two outdoor recreation soccer fields, one of which is exclusively for ICE detainees.

All ICE detainees were interviewed and all stated that they felt safe and there were no issues or concerns expressed. Detainees were knowledgeable about the programs and services available. LEP detainees indicated that they had no issues communicating with staff and no problems obtaining services. All the detainees interviewed knew how to contact their assigned ICE officer.

Employees are professional and knowledgeable of their duties and areas of responsibility. All services are provided by MTC employees. ICE detainees do not incur medical co-payments.

The facility is clean and maintains high sanitation standards.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations identified during this inspection.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Acceptable. The facility complies with the ICE National Detention Standards (NDS). No (0) standards were found Deficient and three (3) standards were Not Applicable (N/A). All remaining thirty-six (36) standards were found to be in compliance.

LCI Assurance Statement

The findings of Meets Standards and Does Not Meet Standards are accurately and completely documented on the G-324 Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

Facility Snapshot/Description

The Otero County Processing Center (OCPC) is contracted with the Immigration Customs Enforcement division. The facility is owned by Otero County, New Mexico and operated by Management and Training Corporation (MTC). The facility is located on State Route 54 near Chaparral, New Mexico approximately fifteen miles north of El Paso, Texas. The population on the first day of the inspection was 781 male detainees. The average length of stay is sixteen days. This DIGSA facility houses male ICE detainees of all custody levels. The facility is equipped with office space for ICE officials. There are four courtrooms available for judicial review of on-site detainees.

The three building complex consists of one-story structures with approximately 225,400 total square feet. The complex is comprised of an administration/support building, housing units building and the warehouse. (b)(7)(E)

(b)(7)(E)

(b)(7)(E) There are twenty fifty-bed dormitory-style housing units. Additionally, there is a seventy-six-bed special management unit and a medical housing area capable of housing sixteen detainees. Six detainees were housed in SMU status during the inspection. Total capacity for the facility is 1,086. Each dormitory is furnished with a dayroom, a bank of telephones, televisions and an adequate number of showers, wash basins and toilets. The facility offers indoor and outdoor recreation daily. Detainees were observed playing volleyball, weight lifting, watching television, using the library and visiting. Electronic games and movies are available. Building access is managed by the central control. All detainee movement is escorted.

The facility maintains an excellent level of sanitation and cleanliness. There is a relaxed atmosphere throughout the facility. One unit housing eighteen detainees was in quarantine status due to chicken pox exposure. The detainees showed no restraint in speaking with facility staff, ICE officers or inspectors. Detainees stated that they felt safe and had no concerns communicating with facility staff. No less than ninety detainees were interviewed. The detainees expressed no concerns. Detainees were satisfied with their treatment by staff, living conditions, availability of programs and services and accessibility to ICE personnel and Mexican consulate staff. Facility personnel are experienced and knowledgeable of the daily event schedule, ICE standards and their responsibilities.

The inspection team identified two (2) deficient components in the following two (2) standards:

Funds and Personal Property- 1
Correspondence and Other Mail – 1, which is a repeat deficiency

Facility Snapshot/Description

The Otero County Processing Center (OCPC) is owned and operated by the Management and Training Corporation. The facility is located in the desert in the eastern portion of Chaparral, NM, bordered by a United States Military installation and a neighboring correctional facility. This Dedicated IGSA facility houses male ICE detainees of all classification levels. The population during the inspection was 967. The average length of stay is 68 days. There are ICE offices onsite, facilitating a daily onsite presence of several ICE employees. There are four courtrooms available for judicial review of on-site detainees.

The one-story facility encompasses approximately 225,400 total square feet. The complex is comprised of an administration/support building, the housing units building, and the warehouse. (b)(7)(E) (b)(7)(E) There are twenty fifty-bed dormitories, a 76-bed special management unit, and a medical housing area capable of housing sixteen detainees. Sixteen detainees were housed in SMU status during the inspection. Each dormitory is furnished with a dayroom, telephones, televisions, and an adequate number of showers, wash basins, and toilets. The facility offers indoor and outdoor recreation daily. Detainees may participate in volleyball, weight lifting, television viewing, and have use of the library and law library. Additionally, there are electronic tablets in every housing unit that make games, movies, and other entertainment available. The tablets may also be used for video visitation, for a fee.

The facility is clean and orderly. The atmosphere is relaxed throughout the facility. One housing unit was in quarantine status at the onset of the inspection due to chicken pox exposure. The quarantine was lifted during the inspection because the remaining five detainees who had no documented immunity were placed into medical housing. Detainees freely approached the inspectors and facility staff during the inspection.

AMERICAN OVERSIGHT

2020-ICFO-29037 2600 of 2966
DHS-ICE-20-0618-A-001600

No less than 125 detainee interviews were conducted, nineteen of which were formal interviews. Without exception, detainees stated that they felt safe at the facility. LEP detainees reported no issues communicating with facility staff or accessing services. One detainee stated that the water was not hot enough in the showers. The water temperatures were checked and were within the parameters of the Standards. One detainee stated that he wanted the toilets to be fully enclosed. The facility has no plans to install full enclosures around the toilets and the Standards do not require such. Five detainees stated that they wanted more food items offered that are from their home country. They were all from countries that partake in non-traditional foods that are most likely not approved for consumption in the United States. One detainee stated that his mattress was too thin. Mattress width is not addressed by the Standards.

Facility staff were professional in appearance and demeanor, and seemed knowledgeable of the Standards. Most of the staff are bilingual, greatly contributing to the general level of understanding the detainees experience.

Medical services are provided by MTC Medical. All other services are provided by MTC employees. There is no medical co-pay.

Areas of Concern/Significant Observations

There were 93 hunger strikes reported during the inspection period but none requiring outside medical treatment. The facility explained that hunger strikes are occurring in such high numbers among certain nationalities of detainees because they know that when they declare a hunger strike, they are immediately interviewed by ICE staff. It is a method of manipulating the ICE visits to their preference, as opposed to waiting for the next case officer visit to their unit. ICE case officer visits routinely occur no less than one time per week. The detainees of these nationalities housed here apparently believe that they should be catered to at a higher rate of service than other detainees.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standard and three (3) standards were Not Applicable (N/A). All remaining thirty-nine (39) standards were found to be in compliance.

LCI Assurance Statement

The findings of compliance and non-compliance are accurately and completely documented on the G-324A Inspection Form and are supported by documentation in the inspection file. The inspection team identified two (2) deficient components in the following two (2) standards:

Food Service – 1
Interviews and Tours - 1

Facility Snapshot/Description

The Otero County Processing Center (OCPC) is owned and operated by the Management and Training Corporation (MTC). MTC contracts with the Immigration Customs Enforcement (ICE) division of the federal government. The facility is located 27 miles north of the El Paso International Airport in Chaparral, New Mexico. The facility is bordered by a United States Military installation and a neighboring correctional facility. This Dedicated IGSA (DIGSA) facility houses male ICE detainees in all classification levels. There were 890 detainees housed in the facility on the first day of the inspection. The average length of stay was reported by the facility to be 72 days. ICE offices are located on-site. There are also on-site four courtrooms available for judicial review. The inspection team observed ICE officers and ICE supervisors interviewing detainees each day of the inspection.

The one-story facility encompasses approximately 225,400 total square feet. The complex is comprised of an administration/support building, housing unit building and a warehouse. (b)(7)(E) (b)(7)(E) (b)(7)(E) The housing unit consists of twenty fifty-bed dormitories, an 86-bed special management unit, and a sixteen-bed medical housing area. Fourteen detainees were housed in SMU status during the inspection. Each dormitory is furnished with a dayroom, telephones, televisions, and an adequate number of showers, wash basins, and toilets. The facility offers indoor and outdoor recreation daily. Detainees may participate in volleyball, weight lifting, television viewing, and may schedule time for the law library/general library. Additionally, electronic Telmate Tablets are available in each dormitory which provide games, movies, television applications and reading materials. The tablets may be used for video visitation at a cost of $0.21 per minute. Tablets may be used for staff-detainee communication including grievances, sick call and detainee requests (both ICE and facility staff).

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-001604
2020-ICFO-29037 2604 of 2966

The facility is clean and orderly. The atmosphere is relaxed throughout the facility. Detainees freely approached the inspectors and facility staff during the inspection. Each dormitory was toured on each day of the inspection.

No less than 100 detainee interviews were conducted. Approximately 45 formal interviews were conducted with LEP detainees. Without exception, detainees stated that they felt safe at the facility. During one confidential interview, a detainee voiced a concern regarding his classification level. He stated that he was classified as a level high and did not understand "why he could not be classified as level medium". He advised the SME that he had no criminal history. Follow up confirmed that the detainee had served 21 months in prison. Classification worksheets were reviewed and confirmed the level high classification. Follow up information was shared with the detainee. Four detainees housed in the transgender unit complained that religious services are not offered to them. The chaplain confirmed that he visits the unit twice per week and provides religious materials upon request. LEP detainees reported no issues communicating with facility staff or accessing services. Detainees were observed communicating with the housing unit officers, administrative staff and ICE officers.

Facility staff were professional in appearance and demeanor, and were knowledgeable of the Standards. Most of the staff are bilingual. The orientation to the facility is conducted face-to-face and is comprehensive. The orientation is presented by the department heads.

Medical services are provided by MTC Medical. All other services are provided by MTC employees. There is no medical co-payment.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standard and three (3) standards were Not Applicable (N/A). All remaining thirty-nine (39) standards were found to be in compliance.

Repeat Finding	0
Not Applicable	2

The inspection team identified two (2) component deficiencies in the following two (2) standards:

Medical Care – 1, which is a repeat deficiency
Staff-Detainee Communication - 1

Facility Snapshot/Description

The Rio Grande Detention Center is operated by GEO Corrections. The 276,883 square foot complex occupies 200 acres of land on the outskirts of Laredo, in South Texas, just across the Rio Grande River from Mexico. The 1900-bed facility houses male and female detainees for the United States Marshal Service and male detainees of all classification levels for ICE. During the inspection only Low and Medium custody ICE detainees were being housed. On March 13, 2018 the total count was 1682 with 561 ICE detainees. The average length of stay for an ICE detainee was reported to be fifteen days.

The general population housing units are 84-bed dormitories furnished with sufficient wash basins, showers, toilets and telephones. The dayrooms provide ample space for the detainees to socialize, eat their meals, watch television and participate in board games and other indoor recreation. There are two microwaves in each housing unit and commissary services are available.

The inspection team toured the housing units multiple times during the inspection and detainees were interviewed each time. None of the detainees expressed any concerns about their treatment. All detainees stated that they were treated respectfully by security officers and that they felt safe in the facility. There were no complaints about the quality of the food, access to recreation, the law library, telephones or visiting. There were no complaints about access to medical care or the treatment received. Multiple detainees stated they were taking medication and had no complaints about receiving their medication. There were two minor complaints regarding dental treatment, which upon review by the medical SME, proved unfounded. One detainee had failed to respond to a scheduled appointment and the other had failed to submit a request for treatment.

The atmosphere in the housing units was observed to be relaxed with cordial interaction between officers and detainees. The majority of security staff are bilingual. The cleanliness inside the living units, including showers and bathrooms, was viewed as above average. Case managers are assigned to the housing units and respond to detainee requests promptly. Case managers assist detainees with placing legal/confidential calls and calls to family members who are housed in other facilities. They also conduct Townhall Meetings in the housing units to ensure that the detainees receive the information that they need and to address any concerns. The HSA was observed speaking at one of the meetings to address any concerns about medical care and to ensure that newly arrived detainees are aware of the procedure to request care. ICE personnel were observed meeting with detainees also. Facility command staff make rounds throughout the facility daily.

AMERICAN OVERSIGHT
2020-ICFO-29037 2609 of 2966
DHS-ICE-20-0618-A-001609

Medical care is provided by Correct Care Solutions (CCS). Detainees are not charged medical, dental or mental health co-pay fees.

Areas of Concern/Significant Observations

Just prior to the inspection, two ICE detainees were bitten by a bat in their housing unit. The bat was not preserved for testing for rabies. The detainees were sent to the community hospital for evaluation and are undergoing prophylaxis treatment. During the inspection, several bats were trapped in the housing units. The facility maintenance personnel were inspecting the facility and sealing any possible entry points.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2008. No (0) standards were found Does Not Meet Standards and two (2) standards were Not Applicable (N/A). All remaining thirty-nine (39) standards were found to be in compliance.

LCI Assurance Statement

The findings of compliance and noncompliance are accurately and completely documented on the G-324A Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

- ICE Officials – (b)(6); (b)(7)(C)

Instructions for Corrective Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the deficiencies identified in the review. Please ensure that each corrective action corrects the noted deficiency to the fullest extent possible. In the event a deficiency cannot be corrected within the authorized timeline, an explanation is required in the "Corrective Actions" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date. If an extension is needed, the Field Office must contact the appropriate DMD staff member with this request in advance of the specified timelines for submission.

Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.

Funds and Personal Property (Key: H)

This detention standard ensures that detainees' personal property, including funds, valuables, baggage and other personal property, is safeguarded and controlled, and that contraband does not enter a detention facility.

Item No.	Component	Deficiency Identified	Corrective Action	Projected Completion Date	Date Completed
1	For recordkeeping and accounting purposes, use of the G-589 Property Receipt form is mandatory to inventory any funds removed from a detainee's possession, and a separate form G-589 is required for each kind of currency and negotiable instrument. (Key: H10)	This component was rated as Does Not Meet Standard during the previous inspection because the facility identifies all detainee property on one GEOTrack (jail management system) inventory form. The G-589 is not used for each kind of currency and negotiable instrument removed from the detainee. This is a repeat finding.			

Staff-Detainee Communication (Key: P)

This detention standard enhances security, safety, and orderly facility operations by encouraging and requiring informal direct and written contact among staff and detainees, as well as informal supervisory observation of living and working conditions.

This standard also requires the posting of hotline informational posters from the Department of Homeland Security (DHS) Office of the Inspector General (OIG).

Item No.	Component	Deficiency Identified	Corrective Action	Projected Completion Date	Date Completed
2	In facilities with ICE/ERO on-site presence: The ICE/ERO staff member receiving the request shall normally respond in person or in writing as soon as possible and practicable, but no longer than within 3 business days of receipt. (Key: P04)	This facility has on-site ICE/ERO presence. A review of the detainee written request log revealed that requests are not consistently responded to within three business days of receipt.			

This UCAP has been reviewed and concurred with by an ERO field office official equivalent to an AFOD or above.

The Nakamoto Group, Inc.

February 2, 2017

TO: Tae D. Johnson
Assistant Director for Detention Management

FROM: (b)(6); (b)(7)(C)
Lead Compliance Inspector
The Nakamoto Group, Inc.

SUBJECT: **Annual Detention Inspection of the Eloy Federal Contract Facility**

The Nakamoto Group, Inc. performed an annual inspection for compliance with the ICE Performance-Based National Detention Standards (PBNDS) 2011 of the Eloy Federal Contract Facility, Eloy, AZ during the period of January 31 - February 2, 2017. This is a dedicated IGSA (DIGSA) facility.

The annual inspection was performed under the guidance of (b)(6); (b)(7)(C) Lead Compliance Inspector. Team Members were:

Subject Matter Field	Team Member
Security	(b)(6); (b)(7)(C)
Detainee Rights	
Medical Care	
Safety	
QMC	

Type of Inspection

This is a scheduled annual inspection, which is performed to determine overall compliance with the ICE PBNDS 2011 for Over 72 hour facilities. The facility received a previous rating of Meets Standards during the February 2016 inspection.

Inspection Summary

The Eloy Federal Contract Facility is currently accredited by:

- The American Correctional Association (ACA) – Yes
- The National Commission on Correctional Health Care (NCCHC) – Yes
- The Joint Commission (TJC) – No
- Prison Rape Elimination Act (PREA) – No

Standards Compliance

The following information is a summary of the standards that were reviewed and overall compliance that was determined as a result of the 2016 and 2017 PBNDS 2011 compliance annual inspections:

11820 Parklawn Drive, Suite 240 • Rockville, Maryland • phone: 301.468.6535 • fax: 301.468.6536 • www.nakamotogroup.com

Facility Snapshot/Description

The Eloy Federal Contract Facility, a DIGSA owned and operated by CoreCivic, formerly known as Corrections Corporation of America (CCA), is located in Eloy, AZ, approximately eighteen miles east of Casa Grande, AZ. The facility houses low, medium, medium-high and high custody adult male and female detainees. The facility has 1596 beds. The population count on the first day of the inspection was 1448 which included 931 male and 517 female detainees. The average length of stay for a detainee is 77 days.

The Eloy Federal Contract Facility was built and opened in 1994. It is a single level building consisting of six housing units, each containing six housing pods with capacities ranging from 43 to 50 beds. Direct supervision is provided during the first and second shifts. Third shift officers provide indirect supervision. Detainees are afforded both indoor and outdoor recreation. Each dormitory has a large dayroom area equipped with tables, chairs, telephone banks, commissary kiosks, and televisions. Board games, puzzles, playing cards, x-box gaming systems, exercise videos game systems and movies are available. Outdoor activities include pull-up and sit-up stations, volleyball, basketball, handball, soccer and walking in the exercise areas. The facility provides a generous schedule of activities including karaoke, basketball tournaments, piñata contests, soccer tournaments, holiday tournaments, crochet programs, photograph projects, and Zumba.

The inspection team found the atmosphere to be calm with no obvious indicators of high stress levels. During the inspection the facility was very clean and noise levels were minimal. Supervisors and officers exhibited a professional demeanor in both attire and attitude. Interactions between officers and detainees were observed to be respectful and professional.

The facility does not charge co-pays for medical, mental health or dental care. Health services are provided by IHSC. Food service operations are provided via a contract with Trinity Services Group.

No less than 150 detainees were interviewed during the inspection. Interviews included LEP, detainees in administration and disciplinary segregation, males and females, detainees in each housing unit, confidential interviews. Detainee interviews yielded overall general satisfaction with living conditions, access to the law library, telephones, food services and medical care. Detainees did not express any concerns regarding life and/or safety issues. Conditions of confinement were observed to be above a satisfactory level. Cleanliness standards are consistently high throughout the facility. During the inspection, 120 medical records were reviewed.

Facility Snapshot/Description

Eloy Detention Center (EDC) is owned and operated by CoreCivic. The City of Eloy has an Intergovernmental Service Agreement (IGSA) with Immigration and Customs Enforcement (ICE). Eloy Detention Center, with a capacity of 1596 is located in Eloy, Arizona, approximately eighteen miles east of Casa Grande, Arizona. The facility houses low, medium, medium-high and high custody adult male and female detainees. The detainee count on the first day of the inspection was 1434 which included 797 male and 637 female detainees. The average length of stay for a detainee is 62 days.

Eloy Detention Center was opened in 1994. This is a campus-style facility with individual housing units. The facility is secured by dual security fences. The physical plant consists of eight housing units, six of which consist of five fifty-person pods. Direct supervision is provided during the first and second shifts. Third shift officers provide indirect supervision. Detainees are afforded outdoor recreation, including turf fields, volleyball net, basketball court, track and handball. Each dormitory has a large dayroom area equipped with tables, chairs, telephone banks, commissary kiosks, and televisions. Board games, puzzles, playing cards, x-box gaming systems, exercise videos, and movies are available. Outdoor activities include pull-up and sit-up stations, volleyball, basketball, handball, soccer and walking in the exercise areas. The facility provides a robust schedule of activities including karaoke, basketball tournaments, piñata contests, soccer tournaments, holiday tournaments, crochet programs, cleanest pod contest and Zumba classes.

The inspection team found the atmosphere to be calm with no obvious indicators of high stress levels. The facility sanitation levels are above average. Noise levels were observed to be minimal. Supervisors and officers exhibited a professional demeanor in both attire and attitude. Interactions between officers and detainees were observed to be respectful and professional.

The facility does not charge a co-payment for medical, mental health or dental care. Health services are provided by IHSC and their contractors. Food service operations are provided by Trinity Services Group, Inc.

No less than 150 detainees were interviewed during the inspection. Interviews included detainees with LEP using the language line, detainees in administrative and disciplinary segregation (males and females), detainees on work assignments, detainees in each housing unit, as well as, confidential interviews. Detainee interviews yielded overall general satisfaction with living conditions, access to law libraries, telephones, food services and medical care. Detainees expressed no concerns regarding life and/or safety issues. During interviews in one of the female pods, several detainees expressed concerns regarding the professionalism of

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-001621

two female correctional officers. The detainees stated during confidential interviews "that the officers are rude, disrespectful and intimidating". The warden advised that both officers have been disciplined and are enrolled in the Performance Improvement Program (PIP). Detainees also stated that "some of their issued property needs to be replaced". One detainee showed the inspector her socks which had holes in the bottom of the sock. The unit manager was assigned to follow up and provide new clothing. One LEP detainee stated through the assistance of the language line that she wanted to move to another pod. The other pod housed another detainee who could speak mandarin and English. The unit manager stated that she would follow up immediately to research the detainee request. Conditions of confinement were observed to be above a satisfactory level. Cleanliness standards are consistently high throughout the facility.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations.

Detention Files - 1

Facility Snapshot/Description

Eloy Detention Center (EDC) is owned and operated by CoreCivic. The City of Eloy has an Intergovernmental Service Agreement (IGSA) with Immigration and Customs Enforcement (ICE). Eloy Detention Center, with a capacity of 1,585, is located in Eloy, Arizona, approximately eighteen miles east of Casa Grande, Arizona. The facility houses low, medium-low, medium-high and high custody adult male and female detainees. The detainee count on the first day of the inspection was 1,215, which included 508 male and 707 female detainees. The average length of stay for a detainee is 74 days.

Eloy Detention Center opened in 1994 and was renovated in 2007. The EDC physical plant is campus style with individual housing units. The buildings are primarily constructed of concrete and comprise almost 400,000 square feet of space. There are six general population (one unit is closed at this time) and two special confinement housing units, as well as, seventeen support buildings. (b)(7)(E) (b)(7)(E) The facility includes four courtrooms which are used for deportation hearings. Direct supervision is provided during the first and second shifts. Third shift officers provide indirect supervision. Detainees are afforded outdoor recreation, including turf fields, volleyball nets, basketball court, track and handball. Each dormitory has a large dayroom area equipped with tables, chairs, telephone banks, commissary kiosks and televisions. Board games, puzzles, playing cards, x-box gaming systems, exercise videos and movies are available. The facility provides a robust schedule of activities including karaoke, basketball tournaments, piñata contests, soccer tournaments, holiday tournaments, crochet programs, cleanest pod contest and aerobic dance classes.

The inspection team found the atmosphere to be calm with no obvious indicators of high stress levels. The facility sanitation levels are above average. Noise levels were observed to be minimal. Supervisors and officers exhibited a professional demeanor in both attire and attitude. Interactions between facility officers and detainees were observed to be respectful and professional. Housing unit case managers were observed in each unit. Interactions between ICE officers and detainees were also observed to be respectful and professional.

The facility does not charge a co-payment for medical, mental health or dental care. Health services are provided by IHSC and their contractors. Food service operations are provided by Trinity Services Group, Inc.

No less than 120 detainees were interviewed during the inspection. Interviews included detainees with LEP using the language line and the bilingual SME, detainees in administrative and disciplinary segregation (males and females), detainees on work assignments, detainees

in each housing unit, as well as, confidential interviews. Detainee interviews yielded overall general satisfaction with living conditions, access to law libraries, telephones, food services and medical care. One detainee complained that she was "stuck with the same needle twice". The medical SME followed up with the medical file and interviewed the medical staff. Follow-up confirmed that proper protocols were followed. Conditions of confinement were observed to be above a satisfactory level.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standards and one (1) standard was Not Applicable (N/A). All remaining forty-one (41) standards were found to Meet Standards.

Facility Snapshot/Description

The El Paso Service Processing Center is located in El Paso, TX proper, neighboring the El Paso International Airport. It is owned and operated by U.S. Immigration and Custom Enforcement. The facility shares land with the U.S. Border Patrol. The direct supervision facility has a bed capacity of 840 and houses male and female ICE detainees of all classification levels. During the inspection, the population count was 751, which included 560 male and 191 female ICE detainees. The average length of stay for an ICE detainee is 89 days.

There are eight buildings that contain general population living units, all of which are dormitory-style. The administrative and disciplinary special housing units consist of two-person cells. The medical department has a six-bed infirmary ward and three medical isolation cells. Facility staffing is more than adequate, ensuring the provision of detainee services and the security of the compound. Staff are professional in appearance and demeanor. They understand the concepts of civil detention and are familiar with the standards. A large majority of the staff is bilingual.

In general population housing, dayrooms are large and open, and offer numerous activities. Outdoor recreation areas are adjacent to every living unit, and detainees enjoy optimal outside recreation opportunities; that is, no less than two hours per day, seven days per week. Every detainee has a securable personal storage locker in the housing unit. The atmosphere in the housing units was relaxed and detainees freely approached facility staff and the inspection team to converse.

No less than 100 detainees were interviewed during the course of the inspection. Confidential interviews indicated that detainees feel safe at the facility. LEP detainees stated, without exception, that they have no problem accessing services. There were two detainee complaints regarding medical services. One involved the lack of medication and one was about back pain. The Medical SME followed up on both complaints and discovered that the detainee complaining about the lack of medication was in fact receiving the medication prescribed by the physician. The detainee that complained about back pain had 58 contacts with medical services during the course of his stay. His record indicated that he requested marijuana and oxycodone for his treatment. The physician prescribed other medications, which the detainee has refused on eleven occasions. Two detainees complained that their grievances were not responded to. The Safety SME checked, and both detainees had grievances on file that were responded to within the time frame mandated by the standard. Further, the Safety SME did not discover any grievances during his inspection that were not responded to in a timely manner. Two detainees complained that they did not want to wear the electronic anklets that all detainees must wear while detained at the facility. There is no remedy for these complaints, as electronic anklets are not prohibited by the standards. Twenty male and eighteen female detainees were interviewed in the processing area as they were preparing to leave the facility for deportation. Of the 38, only one detainee stated that they had any problems while at the facility, and he declined to provide details.

AMERICAN OVERSIGHT
DHS-ICE-20-0618-A-001627
2020-ICFO-29037 2627 of 2966

The facility issues electronic anklets to every detainee to monitor their location in the facility, as a tool to enhance safety and security. Detainees are required to keep the anklet on at all times. The anklets have the capacity to locate detainees at any time, and also record all detainee movement during their entire stay at the facility. Detainees are permitted to keep no more than $100 cash on their persons. The detainees have access to vending machines, and no commissary is provided. There is no medical co-payment.

IHSC manages and partially staffs the medical services department, with the contractor InGenesis providing supplemental medical staff. GPS/Asset Security provides detention, transportation, and food services for the facility. Argos Security provides Quality Assurance services; Mavagi performs the janitorial services; and K-CORP provides maintenance service for the facility.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS) 2011. One (1) standard was rated as Not Applicable. The remaining forty-one (41) standards were found to Meet Standards.

LCI Assurance Statement

The findings of Meets Standards and Does Not Meet Standards are accurately and completely documented on the G-324 Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

- ICE Officials – (b)(6); (b)(7)(C)
  (b)(6); (b)(7)(C)
- Facility Staff – (b)(6); (b)(7)(C)
  (b)(6); (b)(7)(C) and various other contract employees

The inspection team identified five (5) deficient components in the following two (2) Standards:

Environmental Health and Safety- 1
Food Service- 4, one of which is a Priority Component

Facility Snapshot/Description

The El Paso Service Processing Center is located in El Paso, TX, in a largely industrial area close to the El Paso International Airport. It is owned and operated by U.S. Immigration and Custom Enforcement. The facility shares land with the U.S. Border Patrol. The direct supervision facility has a bed capacity of 840 and houses male and female ICE detainees of all classification levels. During the inspection the population count was 681, which included 519 male and 162 female ICE detainees. The average length of stay for an ICE detainee is 74 days.

There are eight buildings that contain general population living units, all of which are dormitory-style. The administrative and disciplinary special housing units consist of two-person cells. The medical department has a six-bed infirmary ward and three medical isolation cells. Staffing is adequate. Staff were professional in appearance and demeanor while interacting with the inspection team. Many staff displayed an understanding of the concepts of civil detention and were familiar with the standards. A large majority of the staff is bilingual.

Dayrooms are large and open, and offer numerous activities. Outdoor recreation areas are adjacent to every living unit, and detainees are offered outdoor recreation for no less than two hours per day, seven days per week. Every detainee has a securable personal storage locker in the housing unit. The facility operates at optimal levels in terms of telephone access and law library access. The atmosphere in the housing units was relaxed and detainees freely approached the inspection team members to ask questions or discuss their issues.

No less than 92 detainees were interviewed during the course of the inspection, twenty of which were formal interviews. Confidential interviews indicated that detainees feel safe at the facility, with the exception of three detainees: Two of them had lodged formal complaints prior to the inspection, and the third detainee's complaint was elevated to the Assistant OIC by the inspection team during the inspection. Interviews with LEP detainees indicated that they have no problem accessing services. Several detainees complained that the facility does not have good mir-

2020-ICFO-29037 2630 of 2966

rors. They were advised that the Standards do not require mirrors. One detainee complained that there is no commissary at the facility. He was advised that the Standards do not require commissaries. One detainee inquired about the availability of notary services, and he was directed to the appropriate source. One detainee stated that he filed a number of grievances and they were not responded to. The Safety SME checked the grievance log and determined that the detainee had filed one grievance, which was responded to. It was denied based on two staff witness statements. Two female detainees stated that they filed grievances about unfair treatment from corrections officers. The Safety SME determined that there was a grievance from these detainees, with their names, and several other detainee names, listed on the grievance as complainants. The grievance officers indicated that the allegations are under investigation. One detainee complained that she was misdiagnosed for stomach issues. The Medical SME checked the medical record and determined that the detainee had an ultrasound, which did not show anything. The medical staff then ordered an abdominal CT scan, and a gall stone was found. Surgery was performed successfully. One male detainee complained that two officers were treating him badly. The detainee claimed that he was too afraid to complain through any of the systems in place. The Assistant OIC was informed and he indicated that he would initiate a proper investigation. One detainee stated that he wanted larger food portions. The Safety SME determined that the food portions are within the requirements of the Standard and are in compliance with the nutritional analysis. Two detainees complained of minor medical problems. The Medical SME checked the medical records and determined that both detainees had received appropriate medical attention. Three detainees complained that they had only seen their ICE Officer one time during their detention. However, they then stated that an ICE Officer comes into their housing unit to return request forms and interview detainees frequently. The housing unit logs confirmed that the ICE Officer visits the housing units every Tuesday and Thursday to interview detainees and provide responses to request forms.

The facility issues electronic anklets to every detainee to monitor their location in the facility, as a tool to enhance safety and security. Detainees are required to keep the anklet on at all times. The anklets have the capacity to locate detainees at any time, and also record all detainee movement during their entire stay at the facility. Detainees are permitted to keep no more than $100 cash on their persons. The detainees have access to vending machines, and no commissary is provided. There is no medical co-payment.

IHSC manages and partially staffs the medical services department, with the contractor InGenesis providing supplemental medical staff. GPS/Asset Security provides detention, transportation, quality assurance, and food services for the facility; Mavagi performs the janitorial services; Jesuit Refugees Services provides contract chaplaincy services; and K-CORP provides maintenance service for the facility.

Areas of Concern/Significant Observations

The inspection team observed small amounts of mold beginning to form in some of the showers.

(b)(5)

Priority Component #10 in the Food Service Standard was rated as Does Not Meets.

AMERICAN OVERSIGHT

The inspection team identified two (2) deficient components in the following two (2) standards:

Use of Force and Restraints - 1
Significant Self-Harm and Suicide Prevention and Intervention - 1

Facility Snapshot/Description

The El Paso Service Processing Center is an immigration detention facility located in El Paso, Texas, near the El Paso International Airport. It is owned and operated by U.S. Immigration and Custom Enforcement (ICE). The facility shares land with the U.S. Border Patrol Sector Headquarters and an El Paso Border Patrol Station. The facility houses all classification levels of ICE detainees who are either awaiting deportation or have pending cases before the El Paso Immigration Court. The facility, originally constructed in 1966 and renovated with new construction in 1996, has a capacity of 840 beds. On the first day of the inspection the total population count was 785 which included 512 male and 273 female ICE detainees. The average daily population for the inspection period was 815 with an average length of stay of 48 days.

Ten buildings at the complex contain beds for housing detainees. All general population housing is dormitory/open bay with capacities ranging from twenty beds to 74 beds. Two buildings house the special management units (SMU); there are seven double cells for administrative segregation housing in one of the buildings and six single cells in the building designated for disciplinary segregation. Male and female detainees may be housed in either of the SMU buildings. Six of the ten buildings are military barracks style design and two buildings are a more traditional institutional design with four housing pods surrounding a control center. Linear supervision is employed on the campus style layout, i.e., officers are stationed outside the buildings in order to observe detainee movement throughout the compound. Direct supervision is provided for detainees by a custodial officer stationed inside each of the general population housing pods. Direct and irregular supervision is employed inside the SMU. Additionally, the facility issues electronic ankle bracelets to every detainee to monitor their location within the facility as a tool to enhance safety and security. Detainees are always required to wear the ankle bracelet.

Outdoor recreation is available seven days per week, two hours per day, in several outdoor recreation yards. Additionally, the general population housing units provide adequate open space for detainees to socialize and move freely between their assigned bunks and the dayroom area. Each housing unit is equipped with tables and seats, televisions, telephones, vending machines, and board games. Some of the housing units also have foosball and ping-pong tables. Detainees are permitted to keep up to $100 cash on their person to use in the vending machines; the facility does not have a commissary. Detainees may also check out a tablet on which at no charge they can communicate with various facility staff and ICE, file a grievance, and access a version of LexisNexis. For a fee, detainees can download music and videos, make telephone calls, and visit via video with family and friends. Depending on custody level, detainees may participate in the voluntary work program. The atmosphere during the inspection was calm and detainees were observed interacting with staff and other detainees. Most staff at the facility speak English and Spanish. Overall cleanliness and sanitation were observed to be average.

AMERICAN OVERSIGHT

2020-ICFO-29037 2634 of 2966
DHS-ICE-20-0618-A-001634

Numerous detainees were interviewed. Some interviews were in housing units, programmatic areas, or work areas with individuals or small groups of detainees. Several interviews were private and confidential and included detainees with limited English proficiency (LEP). Language line was used to facilitate interviews with detainees who spoke neither English nor Spanish. A bilingual member of the inspection team conducted private interviews with several Spanish speaking detainees from various countries. Interviews included detainees who had recently arrived at the facility and some who had been housed at the facility for longer periods of time. Both male and female detainees were interviewed. The detainees voiced no life safety concerns. All the detainees interviewed stated they felt safe and were generally satisfied with the interaction, responsiveness, and professionalism of facility and ICE staff and with access to medical services, mail, the law library, telephones, visitation, and recreation. Detainees expressed general satisfaction with the quantity and quality of food provided. Two detainees from Romania stated they did not care for the food; not because it was of poor quality but because it was different from what they eat at home. Two detainees from China asked if the rules could be made available to them in their language. This request was shared with the SDDO.

Detainee telephone services are provided via the national ICE contract with Talton Communications. Security services, transportation, food service operations, mail processing, recreation supervision, and the librarian are contracted with GPS-Asset. IHSC has on-site oversight of medical services which are supplemented through a contract with STG International.

ICE detainees do not incur medical co-pays.

Areas of Concern/Significant Observation

There were no areas of concern or significant observations.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance-Based National Detention Standards (PBNDS 2011). One standard was rated Not Applicable. The remaining forty-one (41) standards were found to Meet Standards.

LCI Assurance Statement

The findings of compliance and non-compliance are accurately and completely documented on the G-324 Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

The inspection team identified one (1) deficient component in the following standard:

Hold Rooms in Detention Facilities – 1, which is a priority component

Facility Snapshot/Description

The Houston Contract Detention Facility, a CDF, is owned and operated by CoreCivic. The original building was constructed in 1983 and was expanded in 2004. The facility is located in an industrial district approximately 3.3 miles southeast of the Houston George Bush Intercontinental Airport. The facility houses low, medium and high custody adult male and female detainees for ICE. The total facility capacity is 1000. The population count on the first day of the inspection was 1094 which included 933 male and 161 female ICE detainees. The average length of stay for ICE detainees for the previous twelve months was 68 days with an average daily population of 925 detainees; 722.5 males and 202.5 females.

The Houston Contract Detention Facility is a one-level, single building structure consisting of 27 dormitories with capacities ranging from twenty to sixty general population detainees. Additionally, there is a 34 bed segregation unit for males and a four bed segregation unit for females. All housing units are provided direct supervision. Detainees are afforded the opportunity for both indoor and outdoor recreation and detainees were observed participating in both areas. Each dormitory has a large dayroom area equipped with tables, chairs, televisions, board games and microwaves. The entire facility is climate controlled. Telephones are available in the general population housing units at an optimal ratio of one telephone for every ten detainees. Each detainee wears a uniform and wristband which is color coded according to custody level. Each wristband also contains the photograph of the detainee to which it is assigned.

The inspection team found the atmosphere to be calm with no obvious indicators of high stress levels. During the inspection the facility was very clean and noise levels were minimal. All staff encountered by the inspection team exhibited a professional demeanor. Interactions between staff and ICE detainees were observed to be respectful and professional.

The facility does not charge co-pays for medical, mental health or dental care. Health services are provided by IHSC. Food service operations are contracted with Trinity Services Group. Transportation services are contracted with TransCor America, LLC.

The QMC and Medical SMEs reviewed 192 medical files during the inspection. Combined, all of the SMEs interviewed no less than fifty ICE detainees, both men and women. Some interviews were confidential and included detainees who had limited English proficiency. Detainees' statements indicated general satisfaction with living conditions, access to the law library, telephones and medical care. Detainees did not express any concerns regarding life and safety issues.

Several detainees stated they had not received a handbook upon arrival. The Detainee Rights SME checked the detention files of these detainees and found that in every case the detainee had signed for receipt of the handbooks (both the National Detainee Handbook and the local supplement are issued during intake). One detainee complained that he was not receiving treatment for a previous injury to his left arm. The medical SME reviewed this detainee's medical file and found that he is scheduled for specialty therapy clinic later this month.

Areas of Concern/Significant Observations

Priority Component Rated Does Not Meet Standard

Hold Rooms in Detention Facilities
Component #4 - Detainees are not held in hold rooms for more than twelve hours.

Finding: Several detainees were found to be held in hold rooms for more than twelve hours due to the number of detainees at the facility exceeding the bed capacity.

Recommendation: (b)(5)
(b)(5)

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standards and one (1) standard was Not Applicable (N/A). All remaining forty-one (41) standards were found to Meet Standards.

LCI Assurance Statement

The findings of Meets Standards and Does Not Meet Standards are accurately and completely documented on the G-324 Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

Facility Snapshot/Description

The Houston CDF is a 1000-bed contract detention facility operated by CoreCivic (formerly Corrections Corporation of America). The facility is located in the Northeast section of Houston, Texas near Bush Intercontinental Airport. The facility is a one-story, single building facility encompassing 182,786 square feet. The detainee housing areas consist of twenty-seven (27) dormitories that house from twenty (20) to sixty (60) detainees, a four (4) cell female segregation unit, a thirty-four (34) cell male segregation unit and a fourteen (14) bed medical short stay unit that includes negative air pressure cells. All dormitories have large dayroom areas equipped with televisions, telephones and a microwave. Board games, puzzles, cards and X-box are provided for indoor recreation. The outdoor recreation areas provide a track, basketball, soccer and handball courts and a covered area. The facility houses male and female ICE detainees of all classification levels. The count during the inspection was 921 of which 143 were female. The average length of stay was reported to be 75.8 days for male detainees and 69.9 days for female detainees.

It was noted that the facility was clean, well maintained and there was a calm atmosphere. Detainees were relaxed and spoke freely with inspectors and were observed interacting with facility staff.

No less than one hundred detainees were interviewed by the inspectors. Detainees stated that ICE personnel visit them often and are responsive to their requests. All detainees stated that they feel safe at the facility and that all the officers treat them with respect. LEP detainees stated that they have no problem communicating with staff as many of them are bi-lingual. No detainees voiced any substantive complaints. Numerous detainees complained that the food was cold. The Safety SME followed-up on the complaint and it was determined that the food temperatures were within standards. All housing units operate under a unit management system complemented by a case manager and counselors. Shift supervisors, case managers and unit managers were observed in the housing units making rounds and interacting with the detainees throughout the inspection. All personnel interviewed were well-versed in the requirements of the standards and the concept of civil detention.

Food Services are contracted to Trinity Services Group. Health care is provided by IHSC. Detainees are not charged medical, dental or mental health co-pay fees.

Areas of Concern/Significant Observations

There were no areas of concern identified during this inspection.

Facility Snapshot/Description

The Houston CDF is a 1,000-bed contract detention facility operated by CoreCivic. The facility is located in the Northeast section of Houston, Texas near Bush Intercontinental Airport. The facility is a one-story, single building facility encompassing 182,786 square feet. The detainee housing areas consist of twenty-seven (27) dormitories that house from twenty (20) to sixty (60) detainees, a four (4) cell female segregation unit, a thirty-four (34) cell male segregation unit and a fourteen (14) bed short stay unit that includes negative air pressure cells. The facility houses male and female ICE detainees of all classification levels. The count on the first day of the inspection was 944 of which 146 were female. The average length of stay was reported to be thirty to thirty-five days. During the inspection, five housing units were designated as COHORT units due to an outbreak of mumps beginning in December. Four active cases of mumps were being housed in the alternative housing unit.

All dormitories have large dayroom areas equipped with television, telephones and a microwave. Board games, puzzles, cards and X-Box are provided for indoor recreation in the housing units. Exercise areas for both male and female detainees provide a variety of equipment. The outdoor recreation areas provide a track, basketball, soccer and handball courts and a covered area. Opportunities for intramural competition between housing units are provided.

The detainees were observed socializing in the dayrooms and engaging in activities in the outdoor recreation areas. Supervisors and officers were professional in demeanor and attire. They were observed interacting with detainees in the housing units. It was noted that detainees greeted the Warden and Assistant Warden during the tour of the facility and it was obvious that the detainees were used to seeing them and other command staff in the housing units. All housing units operate under a unit management system complemented by a case manager and counselors. Case manages and unit managers were observed in the housing units making rounds and interacting with the detainees throughout the inspection.

The inspection team visited the housing units multiple times during the inspection, interviewing detainees in groups and in a confidential setting. All detainees stated that they felt safe at the facility and they were treated with respect by facility and ICE personnel. LEP detainees stated that they have no problem communicating with staff as many of them are bi-lingual and the language line is utilized if needed. Confidential interviews were conducted with male and female detainees ranging in age from 22-66 years of age. The detainees have been housed at the facility from three weeks to two years. Only two detainees voiced complaints. Both detainees were female. One stated that the food was bland and not seasoned to her liking. The other complained that she did not receive adequate medical treatment for chest pain and that she was not being treated for her high blood pressure. She stated that was not evaluated/treated by medical staff. The complaint was forwarded to the medical SME who reviewed the detainee's medical record. It was noted that the detainee was on blood pressure medication and reported to sick call on October 24, 2018 complaining of chest pain off and on for about one week. The detainee was evaluated and EMS was called after phone consultation with the clinical director. EMS performed their initial evaluation and were about to transport the detainee when she refused to go. Based on review

2020-ICFO-29037 2644 of 2966

of the medical record, this detainee has received proper monitoring of her blood pressure and treatment for her multiple medical complaints.

The inspection team found the atmosphere to be calm with no obvious indicators of high stress levels. During the inspection, sanitation at the facility was observed to be above average and noise levels were minimal.

ICE detainees are not charged medical co-payments. Medical care is provided by IHSC uniformed and contract personnel. Food Services are contracted to Trinity Services Group.

Areas of Concern/Significant Observations

4.6 Significant Self Harm and Suicide Prevention and Intervention

Priority Component #3: Detainees who are identified as being "at risk" for significant self-harm or suicide shall immediately be referred to a mental health provider, who shall evaluate the detainee within 24 hours of the referral.

Finding: Review of medical records confirmed that detainees who are identified as being "at risk" are immediately referred to a behavioral health provider but are not always evaluated within 24 hours of referral. One of seventeen detainees on suicide watch since the last inspection was not evaluated by a mental health professional within 24 hours.

Recommendation: (b)(5)
(b)(5)

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standards and one (1) standard was Not Applicable (N/A). All remaining forty-one (41) standards were found to Meet Standards.

LCI Assurance Statement

The findings of Meets Standards and Does Not Meet Standards are accurately and completely documented on the G-324 Inspection Form and are supported by documentation in the inspection file. Facility Snapshot/Description

The Houston CDF is a contract detention facility operated by CoreCivic and located near Bush Intercontinental Airport in Houston, Texas. The single-story facility maintains 1,000 bed capacity and was built in 1984 with physical plant upgrades in 2005. Facility security and unit management staff directly supervise all custody levels of adult male and female detainees for ICE. The count on the first day of the inspection was 658; including 91 female detainees. The average length of stay for ICE detainees was reported to be fifty days.

Detainees are housed throughout 26 dormitories that range from twenty to sixty bed housing areas. Male detainees occupy 22 of the housing units; while the six remaining housing units are reserved for female detainees. There is a four-cell female segregation unit and a 32-cell male segregation unit. The medical unit has sixteen beds, including four negative air pressure cells. Living units are well lit with both natural and artificial light and have adequate open space for detainees. The dayrooms in each of the housing units are furnished with tables and chairs for detainees to participate in leisure time activities, socialize and eat their meals. Detainees were observed playing board games, reading, playing cards, visiting, watching television, and talking on the telephones. Computer tablets were recently installed in the living units to assist detainees in communicating with ICE staff, ordering commissary items and checking their account balances. The facility provides large indoor and outdoor recreation areas separately for male and female detainees. The female outdoor recreation area is equipped with exercise stations, basketball court and a flower garden for detainees to plant and care for flowers. The male outdoor recreation area has a basketball court, weight machine and a designated area to play soccer. Indoor recreation areas for both male and female detainees are equipped with stationary exercise bicycles and basketball courts.

The entire facility is climate controlled. The inspection team found the environment to be relaxed with detainees freely approaching inspectors, ICE officials and facility personnel to participate in formal interviews and general discussions. The facility appeared in good repair and the sanitation level was found to be above average. All officers interviewed were well-versed in facility guidelines and operating procedures as well as the National Detention Standards. Officers and staff were professional when dealing with detainees and the inspection team.

The inspection team conducted several open and confidential interviews with LEP and English-speaking detainees using the language line interpreter service. There were no substantive concerns voiced when asked about their personal safety, ICE services, treatment by staff, access to telephones, access to the law library, or food services. Most detainees expressed appreciation for the variety of exercise equipment, but some stated that they would like more than one hour a day of outside recreation. During one LEP confidential interview, a female detainee of Spanish descent shared that she had pending criminal charges at the time that ICE detained her and was concerned that she would be cited for failing to attend the court proceedings. Unit management personnel were made aware of her concern and the detainee was immediately shown how to use the computer tablet to request a meeting with the ICE officer.

The inspection team identified one (1) deficient component in the following standard:

Hold Rooms In Detention Facilities – 1

Facility Snapshot/Description

The LaSalle ICE Processing Center is owned by the Geo Group, Inc. The Geo Group has an intergovernmental services agreement with ICE and the LaSalle Economic Development District. The facility is located in a rural area on the outskirts of Jena, Louisiana. The facility is a dedicated IGSA facility housing male and female detainees of all security classification levels. On September 13, 2016, the facility count was 1,180, including 1,066 male detainees and 114 female detainees. The average length of stay is 12 days. An onsite administrative building serves the needs of ICE officials and the Executive Office of Immigration Review (EOIR).

(b)(7)(E)

(b)(7)(E) The housing units consist of thirteen dormitory bays as well as four units equipped with two-person cells ranging in size from 24to48 beds. Detainees in the housing areas are directly supervised by assigned housing unit officers and are under constant camera surveillance. Housing units provide generous open space. Detainees spend the majority of their time socializing in the dayrooms, watching television, working or participating in indoor/outdoor recreation activities. There is also a game room provided outside of the housing unit with multiple television stations and X-boxes for detainee use during recreation time. The outdoor recreation areas are adjacent to the housing units.

Every housing unit was inspected by one or more inspection team members. Without exception, detainees stated that they felt safe. A minimum of 200 interviews included: detainees with limited English proficiency; males and females; detainees housed in general population and the restricted housing unit; detainees in the recreation areas and several detainees being processed for release. Detainees were knowledgeable about the services available. LEP detainees indicated that they had no issues communicating with staff and no problems obtaining services. All the detainees knew how to contact ICE personnel. Documentation confirmed that the detainees are receiving responses from the ICE officers in a timely manner. A review of the medical files confirmed that detainees receive required medical services in a timely manner.

Sanitation is maintained at an above average level throughout the facility.

Facility employees are a professional workforce, and skilled in the administration of the PBNDS 2011 standards. Medical services are provided by IHSC clinicians and contracted support services. All other services are provided by GEO Group employees. ICE detainees do not incur medical co-payments.

The Medical SME and QMC SME reviewed 127 medical charts during this inspection.

The inspection team identified one (1) deficient component in the following standard:

> Hold Rooms in Detention Facilities – 1, which is a Priority component and a repeat deficiency

Facility Snapshot/Description

The LaSalle ICE Processing Center is owned and operated by the Geo Group, Inc. The Geo Group has an intergovernmental services agreement with ICE and the LaSalle Economic Development District. The facility is located in a rural area on the outskirts of Jena, Louisiana. The facility is a dedicated IGSA facility (DIGSA) housing adult male and female ICE detainees of all security classification levels. On September 25, 2018 the facility count was 1,216, including 1,054 male and 192 female detainees. The average length of stay was reported to be sixteen days. An onsite administrative building serves the needs of ICE officials and the Executive Office of Immigration Review (EOIR). ICE staff assigned to the facility includes an AFOD, three SDDOs and seven DOs.

The 1,160-bed facility consists of (b)(7)(E) (b)(7)(E) (b)(7)(E) Detainees are housed in a combination of dormitories and celled units and are directly supervised by assigned housing unit officers. The housing units provide generous open space. Detainees spend the majority of their time socializing in the dayrooms, watching television, or participating in indoor or outdoor recreational activities. The outdoor recreation areas are adjacent to the housing units. General population detainees are permitted four hours of outdoor recreation per day, seven days a week.

An inspection of the housing units, medical unit, and the facility overall reflected a positive environment, with above-average sanitation conditions being observed. There were no issues or concerns expressed by detainees in regard to conditions of confinement or quality of life. Numerous detainee interviews were conducted both in groups and individually. Detainees stated they felt safe and were satisfied with the sanitation conditions in the facility. All stated they were treated respectfully by the officers and were receiving the services that the standards require. There were no substantive complaints regarding the food. One detainee stated that he was not receiving the appropriate diet. Investigation of this issue revealed that the detainee is required to receive a soy free diet and that the food service department is in fact providing the appropriate diet.

Several LEP detainees from general population and the Special Management Unit were interviewed in Spanish using the telephonic translation service. One general population female detainee stated that she was not able to speak with the ICE officer because she did not speak English. The AFOD was notified of her concern. Two male and one female LEP detainees who were housed in the Special Management Unit were interviewed. The female detainee expressed no concerns about her treatment. One male detainee

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-001654
2020-ICFO-29037 2654 of 2966

stated he was being treated in a disrespectful manner by a single officer on the night shift and was thinking of harming the officer. This information was passed on to the chief of security and the SMU sergeant who both stated they would follow up on the issue. The other male detainee stated he had no complaints about his treatment at the facility but stated he had just been transferred to the facility and had not received his funds from the previous facility. This information was passed on to the chief of security who stated he would follow-up on the issue.

The facility does not charge co-pays for medical, mental health or dental care. Health services are provided by IHSC. Commissary services are provided by Keefe. All other services are provided by GEO Group employees.

Areas of Concern/Significant Observations

The inspection team identified one (1) deficient priority component:

Hold Rooms in Detention Facilities

Component #4: Detainees are not held in hold rooms for more than twelve hours.

Finding: A review of detention/intake logs from 9/22/2017 to 10/31/2017 revealed three instances in which significant numbers (73) of detainees were held in the hold rooms for more than twelve hours.

Recommendation: (b)(5)
(b)(5)

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS) 2011 for Over 72 hour facilities. No (0) standards were found Does Not Meet Standards. Forty-one (41) standards were found to Meet Standards and one (1) standard was Not Applicable (N/A).

LCI Assurance Statement

The Nakamoto Group, Inc.

SUBJECT: **Annual Detention Inspection of the LaSalle ICE Processing Center**

The Nakamoto Group, Inc. performed an annual inspection for compliance with the ICE Performance-Based National Detention Standards (PBNDS 2011) of the LaSalle Ice Processing Center in Jena, Louisiana, during the period of September 24-26, 2019. This is a DIGSA facility.

The inspection was performed under the guidance of (b)(6); (b)(7)(C) Lead Compliance Inspector. Team members were:

Subject Matter Field	Team Member
Detainee Rights	(b)(6); (b)(7)(C)
Security	
Medical Care	
Medical Care	
Safety	

Type of Inspection

This is a scheduled annual inspection, which is performed to determine overall compliance with the ICE PBNDS 2011 for Over 72 hour facilities. The facility received a previous rating of Meets Standards during the September 2018 inspection.

Inspection Summary

The LaSalle Ice Processing Center is currently accredited by:

- The American Correctional Association (ACA) - Yes
- The National Commission on Correctional Health Care (NCCHC) - Yes
- The Joint Commission (TJC) - No
- Prison Rape Elimination Act (PREA) - Yes

Standards Compliance

Facility Snapshot/Description

The LaSalle ICE Processing Center is owned and operated by The Geo Group, Inc. (GEO), who has an intergovernmental services agreement with ICE and the LaSalle Economic Development District. The facility is located in a rural area on the outskirts of Jena, Louisiana. The facility is a dedicated IGSA (DIGSA) facility housing adult male and female detainees of all security classification levels. On September 24, 2019 the facility count was 1,254, including 965 male and 289 female detainees. The average length of stay was reported to be 56 days. An onsite administrative building is used by ICE and Executive Office of Immigration Review (EOIR) officers. Three Supervisory Detention and Deportation Officers (SDDO) and seven Deportation Officers (DO) are detailed to the facility.

The 1,328-bed facility consists of (b)(7)(E) (b)(7)(E) (b)(7)(E) Detainees are housed in a combination of dormitories and celled units and are directly supervised by assigned housing unit officers. The housing units provide generous open space. Detainees spend the majority of their time socializing in the dayrooms, watching television, using the electronic tablets (video visitation, video chatting, messaging, games, library of books, law library, movies and music) or participating in indoor or outdoor recreational activities. The outdoor recreation areas are adjacent to the housing units. General population detainees are permitted four hours of outdoor recreation per day, seven days a week.

An inspection of the housing units, medical unit, and the facility overall reflected a positive environment, with above-average sanitation conditions being observed. There were no issues or concerns expressed by detainees in regard to conditions of confinement or quality of life. No less than 100 detainee interviews were conducted. Detainees stated they felt safe and were satisfied with the sanitation conditions in the facility. All stated they were treated respectfully by the officers and were receiving services required by the standards. Two detainees requested housing unit changes “due to concerns with gang activities”. The concern was shared with the warden and classification specialist. The classification specialist will follow-up with the concern. Several LEP detainees from general population and the Special Management Unit were interviewed using the telephonic translation service. One detainee complained about the price of commissary items. The concern was shared with the warden.

The facility does not charge a co-pay for medical, mental health or dental care. Health services are provided by IHSC. Commissary services are provided by Keefe. All other services are provided by GEO employees.

Facility Snapshot/Description

Port Isabel Detention Center (PIDC) is located in rural Los Fresnos, in the southern portion of the state of Texas, approximately 15 miles north of the Gulf of Mexico. The United States/Mexico border is approximately 22 miles south of PIDC. PIDC has a 350-acre footprint, comprised of 262 acres of developed land and 88 acres of undeveloped protected habitat for local wildlife. The facility houses low, medium and high custody adult male detainees and low security female detainees for ICE. The total rated capacity is 960. The population count during the inspection was 967 which included 663 male and 304 female detainees. The average length of stay is five days.

The Port Isabel Detention Center is a multi-storied, direct supervision facility. The four main housing units are two-story buildings, and each contains four housing pods with a capacity of 75 general population detainees per pod. There is a 14-bed segregation unit and a 35-bed infirmary. Detainees are afforded the opportunity for both indoor and outdoor recreation daily, and detainees were observed participating in both. Each dormitory has a large dayroom area equipped with tables, chairs, televisions, board games, laundry equipment, and microwaves, and an adjacent outdoor recreation area that has basketball hoops and workout stations. Each of the outdoor recreation areas are shared between two housing pods. There is also a large main outdoor recreation field that is scheduled for weekly use by all detainees. All detainees are forced to go to outdoor recreation for both the unit and main outdoor recreation periods. The entire facility is climate controlled. Telephones are available in the general population housing units and the recreation areas. Detainees have access to vending machines and are permitted to have $20.00 cash in their possession.

No less than 110 detainees were interviewed by the inspection team, and interviews indicated general satisfaction with the entire PIDC experience. In fact, no complaints were voiced to the inspectors. Detainees feel safe at the facility and claim that their needs are met. Confidential and LEP interviews revealed that detainees have no problems accessing services and are comfortable in this environment, inasmuch as one can be comfortable in a detention setting.

The inspection team found the atmosphere to be calm with no obvious indicators of high stress levels. The facility presents as very clean and noise levels were minimal. Supervisors and officers exhibited a professional demeanor in both attire and attitude, and possessed a working knowledge of the standards as well as an understanding of the concepts of civil detention. Interactions between staff and ICE detainees were observed to be respectful and professional.

Medical services are provided by IHSC. There are no medical co-payments. Security is contracted to Ahtna STS. Ahtna STS subcontractors include: Trinity Group Services for commissary services; Superi-

Facility Snapshot/Description

The Port Isabel Detention Center is a Service Processing Center operated by ICE personnel and contract Ahtna security/detention personnel under the general oversight of the OIC, who is employed by ICE. The center is located in the tip of southern Texas near the Gulf of Mexico coast about 150 miles south of Corpus Christi and twenty miles north of the Mexico border. The center houses adult male and female ICE detainees of all classification levels. The center has an operational capacity of 1175 detainees. The average daily population of the facility during this inspection was 1038 of which 754 were male detainees and 284 were female detainees. The average length of stay for a detainee is ten days.

The center sits on a tract of 262 acres of native land in an isolated setting. The original physical plant was built in 1940; it was originally a U.S. Navy airfield. The center repurposed the land and its multiple remote buildings to serve as a detention facility. (b)(7)(E)

(b)(7)(E)

The center has four large housing units each divided into four separate dormitory wings, each with sixty beds. The center has one special management unit. It houses male and female segregation status detainees. The remainder of the buildings are used for administrative, support and program services. Travel distances between the buildings are lengthy. The center is maintaining an above average level of cleanliness and sanitation.

Indoor and outdoor recreation is available to all detainees. Detainees have access to televisions, board games, cards, library books and a microwave in the dayrooms. Telephones are provided in the dayrooms and are accessible during posted waking hours. Each housing unit has access to outdoor recreation which is available to all detainees for at least two hours each day. During the inspection, detainees were observed socializing in the dayrooms and recreating in the outdoor yard areas. Detainees have access to vending machines and are permitted to have $20.00 cash in their possession. There are microwaves in the housing units.

2020-ICFO-29037 2663 of 2966

Over forty LEP and English-speaking detainees were interviewed in either public or confidential settings. The language line was used during some of these encounters. Detainees were comfortable speaking with the inspectors and did not register any substantive complaints. The Ahtna detention personnel and ICE staff have frequent interaction with the detainees. Detainees voiced no pressing concerns and, when questioned, were satisfied with their living conditions, access to programs and activities and treatment by all staff. Observations of staff administering their shift duties revealed a polite and polished regulation of the daily schedule. Their interactions with the detainees was direct, calm and consummate. Detainees freely approached facility staff and the inspection team to converse.

Security services are contracted to Ahtna. Medical services are provided by IHSC. Detainees are not charged medical, dental or mental health co-pay fees.

Areas of Concern/Significant Observations

There were no areas of concern identified during this inspection.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2011. All forty-two (42) standards were found to be in compliance.

Facility Snapshot/Description

The Port Isabel Service Processing Center is located in rural Los Fresnos, Texas, in the southern portion of the state, approximately 22 miles north of the U.S./Mexico border. The 1,200-bed facility is located on a 350-acre site; 262 acres of developed land and 88 acres of undeveloped native grounds that serve as a habitat for local wildlife. The facility houses male ICE detainees of all classification levels. The facility previously held female ICE detainees; however, there are no females housed at this time. The population count on the first day of the inspection was 1,055. The average length of stay was reported to be eleven days.

The direct supervision facility houses detainees in four main housing units. Each unit contains four 75-bed dorms for general population detainees. There is a fourteen-bed segregation unit and a 35-bed infirmary. Both indoor and outdoor recreation is offered. Detainees were observed participating in both. The facility has two soccer fields. Indoor recreation includes board games, cards, viewing television, and playing ping pong. Tablets are available in the housing units. Detainees may play games, watch movies or "face time" with family and friends on the tablets. Movies are shown in the recreation building. Inspectors observed numerous detainees attending the movies. Telephones are available in the housing units and recreation yards. Microwaves are available in the housing units as are vending machines.

The inspection team visited all areas of the facility. Sanitation was observed to be good in the common areas and housing units. It was noted that while the shower areas were clean, they are in need of maintenance. A few broken/cracked tiles and missing grout were observed. No mold or soap scum was noted.

Detainees were interviewed throughout the facility in groups or in a private, confidential setting. No less than fifty detainees were interviewed during the inspection. There were no issues or complaints. Fourteen LEP detainees from China, Somalia, Sri Lanka, and Latin American countries were interviewed using the telephonic translation service. All detainees stated that they felt safe at the facility and were treated well by the staff. One detainee from China stated that he had some difficulty understanding the orientation but that he had since been provided with information in Mandarin.

The inspection team visited the housing units' multiple times during the inspection. Detainees were relaxed and approached the inspectors without hesitation. It was noted that the detainees were familiar with the ICE officers and command staff. A review of the housing unit logs verified that supervisors make

AMERICAN OVERSIGHT

multiple rounds of the facility each day. Staff interaction with detainees was noted to be respectful and cordial and no issues were noted regarding the conditions of confinement.

Detainees are not charged co-pay fees for medical, dental or mental health services. Medical services are provided by IHSC. Security services are contracted to Ahtna.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations during this inspection.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standard and one (1) standard was Not Applicable (N/A). All remaining forty-one (41) standards were found to be in compliance.

LCI Assurance Statement

The findings of compliance and non-compliance are accurately and completely documented on the G-324 Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

- ICE Officials – (b)(6); (b)(7)(C)
  (b)(6); (b)(7)(C)
- Facility (Ahtna) Staff – (b)(6); (b)(7)(C) and various other department supervisors and administrative staff.

Facility Snapshot/Description

The South Texas Detention Complex is owned and operated by The GEO Group, Inc. The facility is located sixty miles south of San Antonio in Pearsall, TX. It has a rated capacity of 1904. The facility is a linear structure with all support services, administrative offices and housing units accessible off of one central quarter mile corridor (b)(7)(E)
(b)(7)(E)
(b)(7)(E) The facility houses only adult male and female ICE detainees of all custody levels. During the inspection, the average population was 1440 which included 129 female detainees. The average length of stay for a detainee is sixty days.

The facility has twenty-three general population housing units, all configured into dormitory settings ranging from 16 to 100 beds. The day rooms are furnished with a television, telephones, tables and open space. Each detainee has a personal property storage locker. The special management unit, a separate housing structure, has two levels with a total of 36 one-man cells. The atmosphere in the housing units was relaxed and detainees openly communicated with the inspection team. Each general population housing unit has direct access to an outdoor recreation area, which is available seven days a week.

Facility employees are experienced in their correctional tenures and highly professional in their daily conduct. Many staff members are bilingual. Staff interaction with detainees is frequent, quiet and respectful. Detainees were orderly throughout their daily movements and program/activity participation. The inspection team interviewed several LEP detainees publicly and privately in the housing unit, common areas and on work assignments. They registered no substantive complaints or concerns when questioned about their personal safety, treatment by staff, medical care, asylum requests, consulate/court access, ICE services, visiting privileges, law library access or food services.

Medical services are provided by IHSC. Over 100 medical records were reviewed. There are no medical co-payments. Food services are provided by GEO.

The Nakamoto Group, Inc.

March 22, 2018

TO: Tae D. Johnson
Assistant Director for Detention Management

FROM: (b)(6); (b)(7)(C)
Lead Compliance Inspector
The Nakamoto Group, Inc.

SUBJECT: **Annual Detention Inspection of the South Texas Detention Complex**

The Nakamoto Group, Inc. performed an annual inspection for compliance with the ICE Performance-Based National Detention Standards (PBNDS) 2011 of the South Texas Detention Complex in Pearsall, TX during the period of March 20-22, 2018. This is a CDF.

The inspection was performed under the guidance of (b)(6); (b)(7)(C) Lead Compliance Inspector. Team Members were:

Subject Matter Field	Team Member	
Detainee Rights	(b)(6); (b)(7)(C)	
Security		
Medical Care		
Safety		
Medical Care		

Type of Inspection

This is a scheduled annual inspection, which is performed to determine overall compliance with the ICE PBNDS 2011 for Over 72 hour facilities. The facility received a previous rating of Meets Standards during the March 2017 inspection.

Inspection Summary

The South Texas Detention Complex is currently accredited by:

- The American Correctional Association (ACA) - Yes
- The National Commission on Correctional Health Care (NCCHC) - Yes
- The Joint Commission (TJC) - No
- Prison Rape Elimination Act (PREA) - Yes

Facility Snapshot/Description

The South Texas Detention Complex is owned and operated by The GEO Group, Inc. The facility is located sixty miles south of San Antonio in Pearsall, TX. It has a rated capacity of 1904. The facility only houses adult male and female ICE detainees of all custody levels. During the inspection the average population was 1774 which included 209 female detainees. The average length of stay for a detainee is sixty days.

The facility is a linear structure with all support services, administrative offices and housing units accessible off of one central quarter mile corridor.(b)(7)(E)

(b)(7)(E)

The facility has 22 general population housing units, all configured into dormitory settings ranging from 16 to 100 beds. The day rooms are furnished with televisions, telephones, tables with fixed seats and ample open space. Each detainee has a personal property storage locker. The special management unit has separate housing areas for males and females combining for a total of 181 beds configured into one and two bed cells.

The atmosphere in the housing units was relaxed. Detainees openly communicated with the inspection team and facility staff. Each general population housing unit has direct access to an outdoor recreation area, which is available seven days a week.

Facility employees are highly professional in their daily conduct and management techniques. Many staff members are bilingual. Staff interaction with detainees is frequent, easy and respectful. Detainees were orderly throughout their daily escorted movements and program/activity participation. The inspection team interviewed 74 English speaking and LEP detainees publicly and privately in the housing unit, common areas and on work assignments. They registered no substantive complaints or concerns when questioned about their personal safety, treatment by staff, medical care, asylum requests, consulate/court access, ICE services, visiting privileges, law library access or food services.

Medical services are provided by IHSC uniformed and contract personnel. There are no medical co-payments. Food and maintenance services are provided by GEO personnel. The facility maintains an above average level of cleanliness.

The inspection team identified two (2) deficient components in the following two (2) standards:

Grievance System – 1
Staff-Detainee Communication – 1

Facility Snapshot/Description

The South Texas Detention Complex is owned and operated by The GEO Group, Inc. The facility is located sixty miles south of San Antonio in Pearsall, TX. It has a rated capacity of 1904. The facility only houses adult male and female ICE detainees of all custody levels. During the inspection, the average daily population was 1687 detainees. The average length of stay for a male detainee is 59 days and 53 days for a female detainee.

The facility is a linear structured building with all support services, administrative offices and housing units accessible off one long central corridor.(b)(7)(E)

(b)(7)(E)

The facility has 26 general population housing units configured into dormitory settings ranging from 64 to 100 beds. Five of the housing units were quarantined during the inspection due to a mumps outbreak. The day rooms are furnished with televisions, telephones, tables with fixed seats and ample open space. Each detainee has a personal property storage locker and is provided a combination lock at no charge. The special management unit is divided into two separate units; a 32-bed male unit at one end of the facility and an 18-bed female unit at the opposite end.

The atmosphere in the housing units was relaxed and muted. Detainees were communicative when approached by staff and they chatted freely with the inspectors. The inspection team interviewed several male and female detainees publicly and privately in segregation, the housing units, in intake, on work assignments and in the medical unit. There were 42 transgender detainees housed in the facility during the inspection, six were interviewed by the inspectors. Interviews were conducted with the assistance of bilingual staff and use of the language line. Throughout all detainee interviews no substantive complaints or concerns were registered when questioned about personal safety, treatment by staff, medical care, asylum requests, consulate/court access, ICE services, visiting privileges, law library access or food services. All detainees have access to indoor/outdoor recreation every day.

Security staff orchestrate the daily schedule in choreographed escorted line movements from housing units to program and activity sites. Most staff are bilingual and manage the demands of their posts with no sense of importunity.

Does Not Meet Standards	0
Repeat Finding	0
Not Applicable	2

The inspection team found two (2) component deficiencies in the following two (2) standards:

Staff-Detainee Communication – 1, which is a repeat deficiency
Grievance System – 1, which was a repeat deficiency.

Facility Snapshot/Description

The South Texas ICE Processing Center is owned and operated by The GEO Group, Inc. (GEO). The facility is located sixty miles south of San Antonio in Pearsall, Texas. It has a rated capacity of 1800. The facility only houses adult male and female ICE detainees of all custody levels. During the inspection, the average daily population was 1,398 detainees. The average length of stay for a male detainee is 81 days and 93 days for a female detainee.

The facility is a linear structured building with all support services, administrative offices, and housing units accessible off one long central corridor. (b)(7)(E)

(b)(7)(E)

The facility has 26 general population housing units configured into dormitory settings ranging in size from 64 to 100 beds. Five of the housing units were empty during the inspection. The day rooms are furnished with televisions, telephones, tables with fixed seats, and ample open space. Each detainee has a personal property storage locker and is provided a combination lock at no charge. The special management unit (SMU) is divided into two separate units; a 36-bed male unit at one end of the facility and an eighteen-bed female unit at the opposite end. All general population detainees receive at least four hours of outdoor recreation daily. SMU detainees in administrative segregation status receive at least two hours of outdoor recreation seven days a week; and SMU detainees in disciplinary segregation status receive at least one hour of outdoor recreation five days a week.

The Talton (telephone contractor) electronic tablets have the capability to process grievances, detainee requests, and many other services, but the menu options and/or ability of the system does not allow for medical grievances to be directly submitted to medical staff. They simply go into a general grievance bin and when identified as a medical grievance they are forwarded to medical by a non-medical staff member. Detainee requests can be submitted electronically but the electronic log is not user friendly when retrieving and/or tracking adherence to the response requirements dictated by the standard.

The atmosphere in the housing units was relaxed and kept. Detainees were communicative when approached by staff and they chatted freely with the inspectors. The inspection team formally interviewed approximately 43 male and female detainees casually and privately in the housing units, in intake, on work assignments, in the medical unit, and in a private confidential setting. There were thirteen transgender detainees housed in the facility during the inspection; five were interviewed by the medical

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-001678
2020-ICFO-29037 2678 of 2966

SME. All interviews were conducted with the assistance of bilingual staff, the use of the language line, or in English. Throughout all detainee interviews no substantive complaints or concerns were registered when questioned about personal safety, treatment by staff and other detainees, medical care, ICE contact, handbook information, law library access, or food services. Out of all the interviews two medical concerns rose to the level of further investigation. Both were followed up by the medical SME and revealed both concerns had been recently treated by health care staff and follow-up appointments were already scheduled. No further action was necessary. One detainee alleged he had not been seen by ICE/ERO staff in three years. The detainee rights SME discussed the statement with the detainee's deportation officer and the COR. Both individuals immediately knew of the detainee and stated he had been seen many, many times. The detainee is just impatiently awaiting action on the next level of his case review.

All movement is escorted. Most staff are bilingual and manage the demands of their posts with a thorough sense of certitude and thorough knowledge of the daily schedule and required responses to emergency situations.

Medical services are provided by a combined effort from IHSC uniformed staff and SDG International contract personnel. There are no medical copayments. Food and maintenance services are provided by GEO personnel. The facility maintains a very good level of sanitation and cleanliness.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance-Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standards and two (2) standards were Not Applicable (N/A). All remaining forty (40) standards were found to be in compliance.

LCI Assurance Statement

The findings of compliance and noncompliance are accurately and completely documented on the G-324A Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

Facility Snapshot/Description

The Stewart Detention Center, a DIGSA facility, is owned and operated by CoreCivic, formerly known as Corrections Corporation of America (CCA). The facility is located in a rural community approximately 141 miles south of Atlanta. The facility houses low, medium, medium-high and high custody adult male detainees. The facility has 1924 beds. The population count on the first day of the inspection was 1874. The average length of stay for a detainee is 66 days.

The Stewart Detention Center was opened in 2006. The 297,550 square foot facility includes seven units, three of which are dormitory style consisting of six pods each. Three units are of cellblock (linear) design and include three pods. Three pods in each cellblock unit contain between 40-44 cells. The restrictive housing unit consists of two pods with 40 cells each. Direct supervision is provided during the first and second shifts. Third shift officers provide indirect supervision. Detainees are afforded both indoor and outdoor recreation. Each dormitory has a large dayroom area equipped with tables, chairs, telephone banks, commissary kiosks, and televisions. Board games, puzzles, playing cards, x-box gaming systems, exercise and video game systems and movies are available. Outdoor activities include pull-up and sit-up stations, volleyball, basketball, handball, soccer and walking in the exercise areas.

The inspection team found the atmosphere to be calm with no obvious indicators of high stress levels. Supervisors and officers exhibited a professional demeanor in both attire and attitude. Interactions between officers and detainees were observed to be respectful and professional.

The facility does not charge co-pays for medical, mental health or dental care. Health services are provided by IHSC. Food service operations are provided via a contract with Trinity Services Group.

No less than 220 detainees were interviewed during the inspection. Interviews included LEP, detainees in administrative and disciplinary segregation, detainees in each housing unit, detainees working in food services, detainees participating in programs and services and confidential interviews. Detainee interviews yielded overall general satisfaction with living conditions, recreation, telephones, food services and medical care. Detainees did not express any concerns regarding life and/or safety issues. Cleanliness standards are average throughout the facility. During the inspection, 109 medical records were reviewed.

Tool Control—1
Food Service—1
Law Libraries and Legal Material—3

Facility Snapshot/Description

The Stewart Detention Center is owned and operated by CoreCivic via a contract with Stewart County which has an IGSA with the Department of Homeland Security (ICE). The facility is physically located in Lumpkin, GA approximately 143 miles south of Atlanta. Construction on the facility began in 1999. The facility was subsequently acquired by the former Corrections Corporation of America (CCA) and was opened in 2006. The OIC reports an operational capacity of 1924 beds. The facility houses all custody levels of adult male ICE detainees.

The facility is a single level structure which contains six general population housing units; three of which contain dormitory beds in six pods and three contain cell housing in three pods. Additionally, the facility has a segregation management unit consisting of 39 single cells. A housing pod containing 80 beds is used for overflow. All housing units are provided direct supervision on each of the first two shifts; indirect supervision is provided on the overnight (third) shift. On the first day of the inspection the total population of the facility was 1863. The average daily population since the previous inspection in May 2017 was 1816 male detainees with an average length of stay of 56 days.

Detainees in both the general population and segregation management unit housing areas are afforded both indoor and outdoor recreation. In the general population units, each dormitory has a large dayroom area equipped with tables, chairs, telephone banks, commissary kiosks, and televisions. Board games, puzzles, playing cards, x-box gaming systems, exercise and video game systems and movies are available. A microwave oven is also provided. Outdoor activities include pull-up and sit-up stations, volleyball, basketball, handball, soccer and walking in the exercise yards. Detainees may participate in the voluntary work program.

Overall, the team found the atmosphere in the facility to be calm with no obvious indicators of high stress. Facility staff was observed interacting with detainees; the interactions appeared to be professional and productive. Sanitation and cleanliness was observed to be average.

Numerous ICE detainees were interviewed during the course of the inspection, which included some interviews with detainees with limited English proficiency. Several interviews were in a group forum and some were private and confidential. The detainees voiced no concerns regarding life/safety issues. Detainees were generally satisfied with living conditions, food service, access to medical care and the responsiveness of facility and ICE staff.

11820 Parklawn Drive, Suite 240 • Rockville, Maryland • phone: 301.468.6535 • fax: 301.468.6536 • www.nakamotogroup.com

AMERICAN OVERSIGHT
DHS-ICE-20-0618-A-001684
2020-ICFO-29037 2684 of 2966

Two detainees complained about the use of a substitute milk product referred to as a dairy drink on the menu. Several other detainees voiced concerns about the lack of variety of food items on the menu. The lead compliance inspector and the safety SME followed up on these concerns. Detainees on special diets, to include religious diets, are provided milk. However, all other detainees receive a substitute milk product. The safety SME found that meals are prepared utilizing approved recipes and ingredients. The menus have been nutritionally analyzed, certified and approved by a registered dietitian. A review of the menus indicated that the ethnic diversity of the facility has been considered when the menus were developed.

Some detainees complained that ICE personnel do not visit their housing units on a regular basis. A review of the logbook which records visits by ICE staff, maintained in each housing unit, indicated that ICE personnel visit each housing unit at least weekly. The ICE compliance officer and unit management staff confirmed that ICE personnel routinely visit the housing units.

Medical care is provided by ICE Health Service Corp (IHSC). The facility does not charge copays for medical, mental health or dental care.

Detainee telephone services are provided via the national ICE contract with Talton Communications, Inc. Food service operations are provided via a contract with Trinity Services Group, Inc.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standards and three (3) standards were Not Applicable (N/A). All remaining thirty-nine (39) standards were found to Meet Standards.

LCI Assurance Statement

The findings of Meets Standards and Does Not Meet Standards are accurately and completely documented on the G-324A Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

- ICE Officials – (b)(6); (b)(7)(C)

Lead Compliance Inspector
The Nakamoto Group, Inc.

SUBJECT: **Annual Detention Inspection of the Stewart Detention Center**

The Nakamoto Group, Inc. performed an annual inspection for compliance with the ICE Performance Based National Detention Standards (PBNDS) 2011 of the Stewart Detention Center, Lumpkin, Georgia during the period of May 7- 9, 2019. This is a dedicated IGSA (DIGSA) facility.

The annual inspection was performed under the guidance of (b)(6); (b)(7)(C) Lead Compliance Inspector. Team members were:

Subject Matter Field	Team Member
Detainee Rights	(b)(6); (b)(7)(C)
Security	
Medical Care	
Medical Care	
Safety	

Type of Inspection

This is a scheduled annual inspection which is performed to determine overall compliance with the ICE PBNDS 2011 for Over 72 hour facilities. The facility received a previous rating of Meets Standards during the May 2018 inspection.

Inspection Summary

The Stewart Detention Center is currently accredited by:

- The American Correctional Association (ACA) – Yes
- The National Commission on Correctional Health Care (NCCHC) – Yes
- The Joint Commission (TJC) – No
- Prison Rape Elimination Act (PREA) – Yes

Standards Compliance

The following information is a summary of the standards that were reviewed and overall compliance that was determined as a result of the 2018 and 2019 PBNDS 2011 annual inspections:

The inspection team identified four (4) deficient components in the following four (4) standards:

Environmental Health and Safety - 1
Funds and Personal Property—1, which is a repeat deficiency
Tool Control—1
Detention Files - 1

Facility Snapshot/Description

The Stewart Detention Center is owned and operated by CoreCivic via a contract with Stewart County which has an IGSA with the Department of Homeland Security (ICE). The facility is located in Lumpkin, Georgia approximately 140 miles south of Atlanta. Construction on the facility began in 1999. The facility was subsequently acquired by the former Corrections Corporation of America (CCA) and was opened in 2006. The warden reports an operational capacity of 1924 beds. The facility houses adult male ICE detainees in all custody levels.

The facility is a single level structure containing six general population housing units, three of which contain dormitory beds in six pods and three contain cell housing in three pods. Additionally, the facility has a segregation management unit consisting of 39 single cells. An 80-bed housing pod is used for overflow. All housing units are provided direct supervision on each of the first two shifts; indirect supervision is provided on the night (third) shift. On the first day of the inspection the total population of the facility was 1874 detainees. The average length of stay is fifty days.

Detainees are afforded both indoor and outdoor recreation. Each dormitory contains a large dayroom area equipped with tables, chairs, telephone banks, commissary kiosks and televisions. Board games, puzzles, playing cards, exercise equipment, video game systems and movies are available. A microwave oven is also provided. Outdoor activities include pull-up and sit-up stations, volleyball, basketball, handball, soccer and walking in the exercise yards. Detainees may participate in the voluntary work program.

Overall, the team found the atmosphere in the facility to be calm with no obvious indicators of high stress. Facility staff were observed interacting with detainees. Interactions were observed to be professional and productive. Sanitation and cleanliness were observed to be average.

Approximately seventy-five detainees were interviewed and included detainees with limited English proficiency, detainees with disabilities, detainees in the recreation yard, detainees in the dining room and detainees in the special management unit. Confidential interviews were conducted. Interviews with LEP detainees were done with the InterpreTalk language line. Two detainees stated that their names were incorrectly spelled during the admission process. The unit manager provided immediate follow up. Two detainees complained that food portions are "too small". The safety SME found that meals are prepared utilizing approved recipes and ingredients. The menus have been nutritionally analyzed, certified and approved by a registered dietitian.

AMERICAN OVERSIGHT

2020-ICFO-29037 2688 of 2966
DHS-ICE-20-0618-A-001688

Detainees voiced no concerns regarding life/safety issues. Detainees were generally satisfied with living conditions, food service, access to medical care, access to the law library, visitation privileges and the responsiveness of facility and ICE staff.

During this inspection period, medical care was provided by ICE Health Service Corp (IHSC) from May 4, 2018 through November 10, 2018. On November 11, 2018, CoreCivic Medical took over the health care responsibilities. The facility does not charge copayments for medical, mental health or dental care.

Food service operations are provided via a contract with Trinity Services Group, Inc. All other services are provided by CoreCivic.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS) 2011. Facility Snapshot/Description

The Otay Mesa Detention Facility is a newly constructed 350,000 square foot medium-maximum security facility owned and operated by CoreCivic, formerly Corrections Corporation of America (CCA), under contract with Immigration and Customs Enforcement (ICE). The facility is located approximately four miles from the Otay Mesa U.S./Mexico border crossing. The facility began admitting ICE detainees on October 16, 2015.

The facility houses adult male and female ICE and U.S. Marshals Service detainees. On January 26, 2017, the total facility count was 1572, of which 1162 were ICE detainees. There were 1020 male and 142 female ICE detainees. The average length of stay for an ICE detainee is 36 days. The facility houses all classification levels of ICE detainees.

(b)(7)(E)

(b)(7)(E) There are fourteen separate housing unit configurations ranging from three separate segregation units designed as two-bed cells, to eleven 64-128 bed dormitories. Detainees in the housing areas are under the direct supervision of assigned housing unit officers and under constant camera surveillance. Detainees are provided with the opportunity to use their time socializing in the dayrooms, watching television, working or participating in indoor/outdoor recreation. Each general population housing unit has an adjacent outdoor recreation area. Detainees are allowed access to the housing unit outdoor recreation area during out of cell time, excluding meal service and count. In addition, on a weekly basis detainees are given access to a soccer field and a gymnasium.

All detainees interviewed stated that they felt safe and there were no issues or concerns expressed. Interviews included: detainees with special needs and limited English proficiency; males and females; detainees housed in general population and the special management unit; new admissions, and a detainee processed for release. Detainees were knowledgeable about the programs and services available. LEP detainees indicated that they had no issues communicating with staff and no problems obtaining services. All the detainees interviewed knew how to contact their assigned ICE officer.

The facility is clean with high sanitation standards.

The facility workforce is professional and knowledgeable of the ICE standards' requirements. Medical services are provided by IHSC and food services are provided by Trinity Services Group. All other services are provided by CoreCevic employees. ICE detainees do not incur medical co-payments.

Facility Snapshot/Description

The Otay Mesa Detention Facility is privately owned and operated by CoreCivic under contract with Immigration and Customs Enforcement (ICE). The facility is located on the southeastern outskirts of San Diego, CA, a short distance from Tijuana, Mexico. The facility houses adult male and female ICE and U.S. Marshals Service detainees of all security levels under the direct supervision model. During the inspection, the total count was 1424, including 821 male and 139 female ICE detainees. The average length of stay for an ICE detainee is 110 days.

(b)(7)(E)

(b)(7)(E) Detainees spend the majority of their time socializing in the dayrooms, watching television, working, or participating in indoor and outdoor recreation. Detainees enjoy optimal recreational opportunities, as each general population housing unit has an adjacent outdoor recreation area which detainees may use during the majority of their waking hours. Additionally, detainees are given access to a soccer field and a gymnasium no less than weekly. The facility offers a wide variety of social and self-help programs to ICE detainees, as well.

Without exception, detainees stated that they felt safe at this facility. LEP interviews indicated that they have no issues accessing services or communicating with staff. All the detainees interviewed knew how to contact their assigned ICE officer. Two detainees complained that applesauce is served every time fruit is on the menu. The Safety SME reviewed the menu and determined that applesauce is the only fruit item served. The facility is now considering adding other fruit items, such as fruit cocktail and pineapple, to the menu. Two detainees complained of medical issues. One detainee claimed that he could not get a walker from the medical department. It was determined that the detainee had a walker, issued by the medical department, in his living area. Ultimately, the detainee admitted that he wanted to order his own personal walker because he did not like the walker that the medical department had issued to him. He then complained that it would take too long to arrive if he ordered his own walker. He also stated that he wanted physical therapy. His medical record indicated that he was being scheduled for physical therapy. Another detainee stated that he had undergone hernia surgery while at the facility, and was having complications. A review of his medical record indicated that he had been to outside specialty doctors on no less than twenty occasions, but was not happy with the options presented to him to address the complications. One detainee complained that he could not get approval to exclude his conversations with a family member on the telephone from being recorded. He claimed that as a pro se detainee, his conversations with his family about his case were protected and should not be recorded. The facility explained that they did in

11820 Parklawn Drive, Suite 240 • Rockville, Maryland • phone: 301.468.6535 • fax: 301.468.6536 • www.nakamotogroup.com

AMERICAN OVERSIGHT

fact deny the request, as the detainee is not an attorney and therefore did not have the right to unrecorded conversations with his family.

Two detainees complained that the telephones did not lend themselves to a reasonable amount of privacy. In every unit, at least one telephone is located in an isolated area. Further, requests for confidential calls in the privacy of the unit team offices are liberally granted. No less than 115 detainees were interviewed by the inspection team.

Employees were professional in appearance and demeanor, and many displayed some knowledge of the standards. A majority of the employees are bilingual.

There were fifty-six physical responses to detainee resistance during the inspection period, as opposed to eighteen during the previous inspection period. ICE explained this discrepancy as being due to the large increase of detainees with serious mental illness in the facility. As most of the incidents involved minor interaction for redirection and non-routine application of restraints, the explanation is reasonable.

Medical services are provided by IHSC and food services are provided by Trinity Services Group. All other services are provided by CoreCivic employees. ICE detainees do not incur medical co-payments.

Areas of Concern/Significant Observations

Of significance is the fact that there were no deficient components identified by the inspection team.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS) 2011. Forty-one (41) standards were found to Meet Standards. One (1) standard is Not Applicable.

LCI Assurance Statement

The findings of Meets Standards and Does Not Meet Standards are accurately and completely documented on the G-324 Inspection Form and are supported by documentation in the inspection file. Facility Snapshot/Description

The Otay Mesa Detention Facility is privately owned and operated by CoreCivic under contract with Immigration and Customs Enforcement (ICE). The facility is located about 25 miles South of San Diego, CA on the border of Mexico. The facility houses adult male and female ICE and U.S. Marshals Service detainees of all classification levels. The facility has an operational capacity of 1572 detainees. The average daily population of the facility during this inspection was 1458, of which 933 were ICE detainees. The average length of stay for an ICE detainee is 69 days.

The physical plant was built in 2015. The facility has fifteen general population housing units, of which eleven are dedicated to ICE detainees. Nine of the housing units are for general population. The remaining two housing units are segregation blocks; one 32 cell unit with two beds in each for males, and one six cell unit with two beds in each for females. ICE detainees neither mingle nor are they housed with non-ICE detainees.

(b)(7)(E)

Detainees have access to televisions, board games, cards, library books and a microwave in the dayrooms. Telephones are provided in the dayrooms. Each housing unit has direct access to outdoor recreation which is available to all detainees for at least two hours each day. During the inspection, detainees were observed socializing in the dayrooms and recreating in the outdoor yard areas. Conditions of confinement were orderly and the facility is kept in an exceptional level of cleanliness. Detainees were engaging with the inspectors during their frequent tours through the housing units. The staff and ICE personnel interactions with the detainees carried no sense of uncertainty and the detainees' responses to these encounters appeared contented. Detainees freely approached facility staff and the inspection team to converse.

The inspection team visited the housing units several times to interview all detainees wishing to speak to them. Inspectors conducted seven confidential LEP detainee interviews using the language line and on-site bi-lingual staff, in excess of sixty interviews, with English/Spanish speaking detainees in the housing units and common areas and formal interviews with six transgender detainees. None of the detainees voiced any substantive concerns regarding their safety, conditions of confinement, meals, medical care, treatment by staff, access to ICE personnel or the availability of activities and programs.

Medical services are provided by IHSC and food services are provided by Trinity Services. All other services are provided by CoreCivic employees. ICE detainees do not incur medical co-payments.

The inspection team found two (2) component deficiencies in the following two (2) standards:

Environmental Health and Safety – 1
Staff- Detainee Communication – 1

Facility Snapshot/Description

The Otay Mesa Detention Facility is privately owned and operated by CoreCivic under contract with Immigration and Customs Enforcement (ICE). The facility is located about 25 miles South of San Diego, California, on the border of Mexico. The facility houses adult male and female ICE and U.S. Marshals Service detainees of all classification levels. The facility has a rated capacity of 1,970 beds. The average daily population of the facility during this inspection was 1,4222 of which 951 were ICE detainees. The average length of stay for an ICE detainee is 84 days.

The physical plant was built in 2015. It is a two-story building that houses the detention center and all of its support services network, ICE/ERO offices, five court rooms, and multiple attorney visiting rooms. The facility has seventeen general population housing units of which twelve are dedicated to ICE detainees. The ICE housing units are all configured into four to eight-bed bays divided into a two-tier wing. There are two special management units which house all populations; one 64-bed unit for males and one twelve-bed unit for females. General population ICE detainees are not housed with non-ICE detainees.

(b)(7)(E)

Detainees have access to televisions, board games, cards, library books, and a microwave in the dayrooms. Telephones are provided in the dayrooms for detainee use. Each general population housing unit has direct access to outdoor recreation which is available to all detainees for at least two hours each day. During the inspection, detainees were observed socializing in the dayrooms and recreating in the outdoor yard areas. Conditions of confinement were orderly and the facility is maintaining a high level of sanitation. Detainees were freely engaging with the inspectors and staff during the frequent tours conducted during this inspection. Staff and ICE/ERO personnel interactions with the detainees carried no sense of uncertainty and the detainees' responses to these encounters appeared contented and respectful.

The inspection team conducted casual interviews with the detainees in the housing units, on work assignment and in the health care unit; and several confidential interviews with LEP detainees and two transgender detainees using the language line. None of the detainees voiced any substantive concerns regarding their safety, conditions of confinement, meals, medical care, treatment by staff, access to ICE personnel, or the availability of activities and programs.

AMERICAN OVERSIGHT

Medical services are provided by IHSC staff and two independent medical contract groups. Food services are provided by Trinity Services. All other services are provided by CoreCivic employees. ICE detainees do not incur medical co-payments.

Areas of Concern/Significant Observations

There were no areas of concern or significant observations.

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance-Based National Detention Standards (PBNDS 2011). No (0) standards were found Deficient and one (1) standard was Not Applicable (N/A). All remaining forty-one (41) standards were found to be in compliance.

LCI Assurance Statement

The findings of compliance and noncompliance are accurately and completely documented on the G-324A Inspection Form and are supported by documentation in the inspection file. An out brief was conducted at the facility and in addition to the entire Nakamoto Group, Inc. Inspection Team, the following were present:

- ICE Officials – (b)(6); (b)(7)(C)
  (b)(6); (b)(7)(C)
- Facility Staff – Warden Christopher LaRose, (b)(6); (b)(7)(C)

SUBJECT: **Annual Detention Inspection of the Northwest Detention Center**

The Nakamoto Group, Inc. performed an annual inspection for compliance with the ICE Performance-Based National Detention Standards (PBNDS) 2011 of the Northwest Detention Center, Tacoma, WA during the period of April 18-20, 2017. This is a CDF.

The inspection was performed under the guidance of (b)(6); (b)(7)(C) Lead Compliance Inspector. Team Members were:

Subject Matter Field	Team Member
Detainee Rights	(b)(6); (b)(7)(C)
Security	
Medical Care	
QMC	
Safety	

Type of Inspection

This is a scheduled annual inspection, which is performed to determine overall compliance with the ICE PBNDS 2011 for Over 72 hour facilities. The facility received a previous rating of Meets Standards during the April 2016 inspection.

Inspection Summary

The Northwest Detention Center is currently accredited by:

- The American Correctional Association (ACA) - Yes
- The National Commission on Correctional Health Care (NCCHC) - Yes
- The Joint Commission (TJC) - No
- Prison Rape Elimination Act (PREA) - No

Standards Compliance

The following information is a summary of the standards that were reviewed and overall compliance that was determined as a result of the 2016 and 2017 PBNDS 2011 compliance annual inspections:

Facility Snapshot/Description

The Northwest Detention Center, a CDF, is owned and operated by the GEO Group, Inc. The facility is located in Tacoma, WA in a primarily industrial area approximately 25 miles south of the Sea-Tac International Airport, Seattle, WA. The facility houses all custody levels of male and female ICE detainees. The facility has a rated capacity of 1575. The population count on the first day of the inspection was 1295. The average length of stay for the previous twelve months was 79 days with an average daily population of 1435.

The Northwest Detention Center was constructed in 2004. In 2010, additional capacity was added to the facility. There are currently no plans for future construction or renovation. The administration building and the additional housing units constructed in 2010 are two levels; all other areas of the facility are single level. There are six general population housing units; four of the housing units each contain three housing pods and two of the housing units each contain four housing pods. Capacities of the housing units range from 205-278 beds. Both dormitory beds and cell housing is available at the facility. Dorm capacities range from 64-80 beds. Additionally, there are forty cells, each containing two beds, in the segregation management unit designated for males. All housing units are provided direct supervision around the clock. Detainees are afforded the opportunity for both indoor and outdoor recreation and were observed participating in both areas. Each housing unit has a large dayroom area equipped with tables, chairs, televisions, board games, ping pong tables, exercise equipment and microwaves. The entire facility is climate controlled. Telephones are available in the general population housing units at an optimal ratio of one telephone for every ten detainees. Detainees are issued color-coded uniforms and wristbands according to custody level.

The inspection team found the atmosphere to be calm with no obvious indicators of high stress levels. During the inspection sanitation at the facility was observed to be above average and noise levels were minimal. All facility and ICE staff encountered by the inspection team exhibited a professional demeanor. Interactions between staff and detainees were observed to be respectful and professional.

The facility does not charge co-pays for medical, mental health or dental care. Health services are provided by IHSC.

During the inspection, the Medical SME and QMC SME reviewed 123 medical files. Combined, all of the SMEs interviewed no less than fifty detainees which included detainees housed in the general population and in the segregation management units. Some interviews were confidential and included de-

tainees who had limited English proficiency. Detainees' statements indicated general satisfaction with living conditions and with access to the law library, command staff, ICE personnel, telephones, medical care and translation services when needed.

One detainee stated that he was aware of a problem with foot fungus at the facility due to unsanitary shower conditions. The Security SME and the Medical SME followed-up on this complaint. The showers were observed to be very clean and sanitary and the medical department had no knowledge or record of any issues regarding foot fungus. Another detainee complained of lack of diversity in menu offerings. However, the safety SME reviewed the menu and observed meals during the inspection and found that the menu offerings meet the requirements of the standard. Additionally, the menu has been certified by a registered dietitian as exceeding minimum daily nutritional requirements.

Areas of Concern/Significant Observations

The inspection team identified one (1) deficient priority component:

Recreation
Component #5—All facilities shall have an individual responsible for the development and oversight of the recreation program. Every facility with a rated capacity of 350 or more detainees shall employ a full-time recreation specialist with special training in implementing and overseeing a recreation program, who assesses the needs and interests of the detainees.

Finding: The facility has a rated capacity of 1575. The total facility population on the first day of the inspection was 1295. The average daily population for the previous twelve months was 1435. The full-time recreation specialist position was eliminated since the previous annual inspection. The duties of the full-time recreation specialist have been assigned to the law library supervisor as collateral duties.

Recommendation: (b)(5)
(b)(5)

Recommended Rating and Justification

The Lead Compliance Inspector recommends that the facility receive a rating of Meets Standards. The facility complies with the ICE Performance Based National Detention Standards (PBNDS) 2011. No (0) standards were found Does Not Meet Standards and one (1) standard was Not Applicable (N/A). All remaining forty-one (41) standards were found to Meet Standards.

LCI Assurance Statement

The findings of Meets Standards and Does Not Meet Standards are accurately and completely documented on the G-324 Inspection Form and are supported by documentation in the inspection file. Facility Snapshot/Description

The Northwest Detention Center (NWDC), a CDF, is owned and operated by the GEO Group, Inc. The facility is located in Tacoma, Washington in an industrial area approximately twenty-five miles south of Sea-Tac International Airport. The facility houses all custody levels of male and female detainees. The facility has a rated capacity of 1575. The population count on the first day of the inspection was 1389, which included 126 females and 1263 males. The facility reported an average length of stay for the previous twelve months as eighty-one days.

The Northwest Detention Center was constructed in 2004. In 2010, additional capacity was added to the facility. There are currently no plans for future construction or renovation. The administration building and the additional housing units constructed in 2010 are two levels; all other areas of the facility are single level. There are six general population housing units; four of the housing units contain three housing pods and two of the housing units contain four housing pods. Capacities of the housing units range from 205-278 beds. Both dormitory and cell housing is available at the facility. Dorm capacities range from 64-80 beds. Additionally, there are forty cells, each containing two beds, in the segregation management unit designated for males. Housing units are provided direct supervision around-the-clock. Detainees are afforded the opportunity for both indoor and outdoor recreation and were observed participating in both areas. Each housing unit has a large dayroom area equipped with tables, chairs, televisions, board games, ping pong tables, exercise equipment and microwaves. The entire facility is climate controlled.

The inspection team found the atmosphere to be calm with no obvious indicators of high stress levels. The sanitation levels were observed to be above average. Noise levels were minimal. Facility and ICE staff exhibited professional demeanor. Interactions between staff and detainees were observed to be respectful and professional.

The facility does not charge co-pays for medical, mental health or dental care. Medical and mental health services are provided by ICE Health Service Corp.

No less than seventy-five detainees were interviewed. Detainee statements indicated overall satisfaction with living conditions, access to the law library, telephones, medical care and translation services. Without exception, detainees stated that “they feel safe” and that "officers are respectful".

CHRONIC DISEASE – DIABETES

DATE 01/09/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Otero County Processing Center

Purpose: To assess conformance with nationally-accepted guidelines for chronic disease and to prevent deterioration in function and cost of unnecessary care.
Source: Chronic disease registry or MARs.
Sample: 10 patients with diabetes chosen at random.
What clinical practice guideline does the facility use to manage diabetes? BOP

Item # Measure

1. Was blood sugar measured and recorded on intake?
2. Was patient seen for chronic care by a mid-level provider or physician within 14** days of illness identification?
3. Was a baseline HgbA1c performed within 30 days of intake or within past 3 months
4. Were lipids measured within one year?
5. Was patient followed at least every 90 days with appropriate vital signs?
6. Was aspirin prescribed, as clinically indicated?*
7. Was degree of control (goal GgbA1C<8.0) documented?
8. Was a strategy to attain diabetes control documented in HgbA3C was above goal?

HEALTH ASSESSMENT

DATE 01/09/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Otero County Processing Center

Purpose: To determine compliance with detention standards to assure continuity and coordination of care for serious medical needs.

Source: Detainees arriving during recent period, at least 2 weeks prior to review, to allow for evaluation of timely follow-up.

Sample: 20 medical records chosen at random.

Item # Measure

1 Initial screen complete within 12 hours of booking?

2 PPD placed during medical screening and read within 48-72 hours, or chest x-ray is taken, or if PPD is positive by history, chest x-ray is ordered and read?

3 Are detainees who screen positive for mental illness or suicide risk referred for evaluation?

4 Is there timely follow-up for significant findings of acute and chronic conditions?*

5 Is there a complete health evaluation? Vital signs, adequate medical and behavioral health history, physical examination by licensed MD/PA/NP/RN within 14 days of booking? Patients with HIV, diabetes, dialysis, asthma (on daily meds), and other chronic illness will be seen within 48 hours or addressed by phone and seen on the next business day.

CHRONIC DISEASE – HIV

DATE 01/09/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Otero County Processing Center

Purpose: To assess conformance with nationally-accepted guidelines for chronic disease and to prevent deterioration in function and cost of unnecessary care.

Source: Chronic disease registry or MARs for current detainees and those detained within the last 6 months.

Sample: 10 patients with HIV chosen at random or the universe of HIV-infected detainees, if < 10.
What clinical practice guideline does the facility use to manage HIV BOP

Item #	Measure
1	How was HIV status identified? By laboratory, prior medical records or patient report?
2	Was a CD4+ and viral load completed within 14 days of arrival, or within the last 3 months?
3	Was patient seen by an HIV or ID specialist within 30 days of HIV identification?
4	Was antiretroviral treatment considered and documented?
5	Was the patient seen by a mid-level provider or physician for chronic care at least every 90 days?
6	Was a chest x-ray completed within 72 hours of problem identification, if not already done?

MEDICATION ADMINISTRATION PRACTICES

DATE 01/09/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Otero County Processing Center

Purpose: To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.

Source: MARS.

Sample: MAR and medical record for 10 patients. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.

1 Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up? NO

2 Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs?

3 In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month?

4 Estimate the percentage of patients on self-administered medication ordered by a provider. 10

5 OTCs provided by medical, commissary or both? Both

Item # Measure

1 What is the number of refusals and/or no shows during the previous month for each patient?

2 Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?

3 Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

AMERICAN OVERSIGHT

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.

- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody $\geq$ 14 days.
- In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq$ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.

TIPS FOR REVIEWERS

- Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

- Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.

AMERICAN OVERSIGHT

• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

MEDICAL RECORD-KEEPING PRACTICES

Number of Files Reviewed for Patients Meeting this Criteria:* (please select # of no files/patients reviewed)	10
Purpose:	To assess completeness of the medical record and appropriateness of medical record practices.
Source:	Medical Records, Chronic Care Log, and MARs.
Sample:	10 records of detainees with chronic disease, if available.
Instructions:	For all answers that are "partial compliance" or "non-compliant", the reviewer should insert a comment in the remarks section of the report. For example, if most of the progress notes are legible, but one or two practitioner's notes are barely legible, the appropriate comment would be "Dr. XX's notes are not legible."
Guidelines:	NCCHC 2014 J-H-01, J-H-03.
Remarks:	
Reviewer:	(b)(6); (b)(7)(C) **Date Reviewed:** 4/5/2019

Medical Care

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
There were no identified medical care standards deficiencies.

Prior site visit finding form August 2017:
There were no identified medical care standards deficiencies.

Chronic Care

Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.

Total number with chronic conditions:	Total number with unstable chronic conditions:
98	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
The chronic care log is updated daily and documents the status and control of chronic conditions. Medical orders for chronic patients were noted to be followed appropriately. For those detainees with chronic conditions who remain for 90 days or greater, their special diets are reviewed and renewed every 90 days. The facility uses BOP guidelines for chronic illnesses.

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:
0	2

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of 2 hunger strike medical records noted to comply with NCCHC and PBNDS standards. Review of medical staff training records had required hunger strike education documentation.

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
0	14

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of 10 suicide watch medical records noted to comply with NCCHC and PBNDS standards. All were placed on 1:1 constant watch, and every 15 minute documentation of patient observation was noted in the medial charts. Review of medical staff training records had required suicide prevention and intervention documentation.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of facility terminal illness policy is compliant with PBNDS and NCCHC standards.

Other Observations

Site Visit from 1/8/2018 to 1/11/2018. A total of 106 medical records were reviewed during this site visit.

Facility Data:

IGSA operated by Management and Training Corporaton (MTC), including medical.
Maximum ICE population 1089, current population 667, all male facility, to include all three levels of ICE detainees.
Designated ICE/ERO Interior Repatriation Initiative (IRI) facility with most detainees staying less than 2 weeks.

NCCHC Certification - December 2015
ACA Certification - November 2015
PBNDS (Nakamoto Group) Feb 2017- No medical deficiencies found.

Type of Medical Records: Paper charts, no current plan for Electronic Medical Record.

The Medical Housing Unit has 15 beds. Seven medical/negative pressure rooms, seven medical observation rooms, and one suicide prevention room.

Current Staffing:

(b)(7)(E)

AMERICAN OVERSIGHT

Type of Medical Records: Paper charts, no current plan for Electronic Medical Record.

The Medical Housing Unit has 15 beds. Seven medical/negative pressure rooms, seven medical observation rooms, and one suicide prevention room.

--(b)(7)(E) Licensed personnel had current copies of licensing, and the staff had up-to-date BLS certification.
--Review of all medical staff training records found to have the mandatory training and job specific training documents up-to-date.
--Man-Down drills documented and completed by medical staff once a month.
--Sick call observed, process and procedure reviewed; no issues were identified.
--Pill line observed, process and procedure reviewed; no issues were identified.
--Pharmacy area reviewed and was noted to be secure. Quarterly review by pharmacy noted; temperature logs checked and accurate.
--Medical housing, suicide watch, and segregation areas observed; no issues were identified.
--Lab area refrigerator temperature log verified and accurate.
--Non-prescription commissary list reviewed annually by medical and facility administrators.
--Transfers and intakes usually occur in the evening/night.
--Consents and refusals were noted accurately in charts reviewed.
--Medical diets are available and ordered. The diets are renewed as needed.
--Noted lab results are being acknowledged by the ordering provider and reviewed with the detainees.
--Transgender housing and care is based on the PBNDS 2011 standards; no issues were identified.
--Chronic care patients are not being evaluated in a chronic care visit by a provider within 14 days of identification.

Deficiencies for Areas Evaluated

PBNDS 2011:
There were no identified medical care standards deficiencies.

Quality of Care:
--Chronic care patients are not being evaluated in a chronic care visit by a provider within 14 days of identification.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES

Suicide Screening

10 Charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

-There have been 14 suicide watches the since last site visit.
-The facility mental health professional uses a suicide risk management screening instrument that does include the asking for a history of suicide attempts and for current suicidal ideation.
-All medical staff in direct contact with detainees are trained to assess suicide risk.

Ten of ten (100%) were evaluated by a mental heal professional within 24 hours of identification, and daily while on suicide watch.
Ten of ten (100%) were on constant 1:1 watch by a security officer with checks documented consistently.
Ten of ten (100%) had no evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch.

Health Assessment

20 Charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

Twenty of twenty (100%) had initial screenings that were completed within 12 hours of arrival.
Twenty of twenty (100%) had PPD placed during medical screen when applicable and read within 48-72. If not having a completed TB screening chest x-ray prior to arriving to facility, per facility policy, a chest x-ray was completed on site.
Two of two (100%) of charts with positive screening for mental illness or suicide risk were referred for evaluation. The other eighteen charts has negative screenings.
Twelve of twelve (100%) had timely follow up of a chronic condition. The other 8 charts had no chronic conditions.
Twenty of twenty (100%) had completed health assessments within 14 days of arrival by a mid-level provider (MLP) or physician (MD), with those with chronic conditions being seen by a MLP or MD in 2 working days.

Urgent Care (Sick Call)

10 charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

Ten of ten (100%) had timely and appropriate evaluations by nursing staff, care delivered within the scope of the nurse's license, and documented vital signs.
Three of three (100%) had referrals to MD/MLP/DMD within 24 hours where appropriate.
Three of three (100%) that had been referred, had MD/MLP/DMD documented assessment and plan.

Sick call requests were collected and triaged daily if indicated. Non-urgent requests were evaluated the following day. The urgent care room had appropriate supplies and equipment needed for urgent/emergent care within the capabilities stated in facility policy (BLS).

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

10 charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

Ten of ten (100%) had notes for each outbound emergency encounter and had no evidence that earlier intervention may have prevented the need for ED referral or admission.
Ten of ten (100%) had discharge documentation from the hospital/Emergency Department(ED), and an inbound assessments with no deviations from hospital/ED recommendations upon return to the facility.

Medication Administration Practices

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

No charts reviewed needed to be referred to a provider for 3 or more refusals.

The facility currently uses electronic MARs which showed no missed doses other than for

AMERICAN OVERSIGHT

refusals, which were verified as having been documented in the patient medical charts. There was no evidence that staff was pre-pouring medication. Hand washing with gel hand sanitizer observed. Patient "medication administration rights" were observed, and at least two identifiers were in use, including the detainee armband scanner. The pharmacy storage area was inspected and was properly secured; refrigerator logs are maintained properly, and quarterly pharmacist inspection and certification documented.

AMERICAN OVERSIGHT

Continuity of Medication

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had medication ordered in less than 24 hours from time of completed intake screening.
Ten of ten (100%) had the first dose of medication administered in less than 24 hours.

Mental Health Screen

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of Ten (100%) that had a positive screen for mental illness or suicide risk were referred for evaluation and were evaluated by the LPC in a timely manner (emergent = immediately; urgent = within 24 hours; routine = within 7 days).

Medical Recordkeeping Practices

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

The facility uses paper charting and currently has no plans for a electronic health record. Facility medical records were found to be complaint in identifying information, current problem list, receiving screen and health assessment forms, encounters with significant findings/ diagnosis/treatments/and dispositions, signed clinician orders for medications, placement of Medication Administration Records within 2 weeks of previous month, acknowledgment and dating of lab and diagnostic reports, flowsheets, consents for medical care and treatment, signing of refusals of care, documented date and time on each encounter, integrating medical/dental/mental health records, and timely filing within 72 hours.

Pregnant Women

Females are not detained at this facility at this time.

Dental Care

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) were screened for dental symptoms during the intake process.
Ten of ten (100%) were evaluated by a qualified health professional within 48 hours of request, and dental clinical notes described findings, diagnosis, treatment and plan.
Ten of ten (100%) that required follow-up treatment were scheduled for an appointment.

AMERICAN OVERSIGHT

Acute Laboratory Testing

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had blood drawn or test done within 1 business day of the ordered date. One detainee was transfered/removed prior to blood being drawn.
Ten of ten (100%) with non acute routine lab orders had a report of results within 7 days, clinical acknowledgment, and an appropriate clinical response.
Nine of nine (100%) had documentation that the lab results were reviewed with the detainee. One detainee chart was not-applicable due to being transfered/removed prior to follow up appointment to review laboratory results.

Diagnostic Services and Specialty Care Access

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had a documented time of urgency included on the order for specialty care or diagnostic services.
Ten of ten (100%) had the appointment accomplished within 45 days of the order or within the ordered time-frame, e.g. "return in 90 days."
Zero of Zero (100%) needed re-evaluation for deterioration every 30 days until off-site since all had their appointments completed withing 30 days.
Ten of ten (100%) specialist reports had documentation of acknowledgment by the facility clinician within 7 days of the date the service was performed.

Mental Health Treatment Planning

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had a clinical assessment, treatment, and follow-up plan documented.
Ten of ten (100%) had a treatment plan updated at a minimum of every 90 days.

El Paso Behavioral Health Hospital is used as needed for inpatient psychiatric services.

Treatment of Disability

No charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

There were no identified detainees with disabilities since the last site visit. Review of facility disabilities policy noted to follow NCCHC and PBNDS standards.

Complaints and Grievances

No charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

There have been no medical grievances in the last three months.

Review of the grievance process did not reveal any possible barriers to care or repetitive concerns that could affect clinical care.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES
CHRONIC DISEASES

Diabetes

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had blood sugar measured and recorded on intake.
Nine of nine (100%) were seen for chronic care by MLP/MD within 14 days of illness identification. One patient was transfered/removed prior to the scheduled appointment.
Six of six (100%) had HgbA1c performance within 30 days; the other four were deported/ released prior to 30 days.
Three of three (100%) had lipids measured within one year. The other 7 had either not been at the facility for one year or were deported/released prior to one year.
Five of five (100%) had been followed at least every 90 days with appropriate vital signs. The other 5 patients were transfered/removed prior to the scheduled appointment.
None had any clinical indications for aspirin.
Four of four (100%) had the degree of diabetes control or a strategy to attain diabetes control when HbBA1C was above goal. Six were not-applicable due being transfered/removed prior to follow up appointment or prior to blood draw.

Human Immunodeficiency Virus (HIV)

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had HIV status identified by prior medical records and had antiretroviral treatment considered and documented.
Eight of eight (100%) had CD4+ and viral load completed within 14 days of arrival or within the last 3 months. One was not-applicable due to being transfered/removed prior to having blood drawn, and another refused the laboratory testing.
Four of four (100%) were seen by an HIV or ID specialist within 30 days of HIV identification. Six were not-applicable due to being transfered/removed prior to 30 days.
Ten of ten (100%) were seen by a mid-level provider or physician for chronic care at least every 90 days.
Ten of ten (100%) had a chest x-ray completed within 72 hours of problem identification, if not already done.

Hypertension

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had documented blood pressure reading at intake
Nine of nine (100%) were seen by an MD/PA/ NP within 14 days of illness identification. One was non-applicable due to being transfered/removed prior to the scheduled appointment.
Two of two (100%) whose blood pressure was >140 systolic or >90 diastolic had a treatment plan initiated within 14 days of identification.
Ten of ten (100%) had chronic disease guideline usage with included baseline laboratory.

Asthma

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Three of four (75%) were see by a provider within 14 days of illness identification.
Ten of ten (100%) had peak flow completed on initial physical exam.
Three of three (100%) had peak flow completed at the Chronic Care visit. The other six were transfered/removed prior to the scheduled appointment.
Ten of ten (100%) followed chronic disease guidelines, which addressed disease severity, prescription of medication consistent with severity, and documented degree of control.

Seizure Disorder

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had an appropriate neurological history completed at the initial physical

AMERICAN OVERSIGHT

examination.
One of three (33%) were seen by a provider within 14 days of illness identification.
Five of five (100%) had serum drug levels performed and acknowledged in the medical record at least every 3 months until stable. Five were either transfered/removed prior to blood being drawn or arrived to the facility with recent documented drug levels.
Ten of ten (100%) had a treatment plan established.
Ten of ten (100%) had orders for a bottom bunk.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

HSA and Director of Nursing had a short meeting with FMC to discuss issues identified. Per HSA statements:
--Staff will be educated on scheduling initial chronic care visits within 14 days of chronic illness identification.

Total number on suicide watch:	Total number of suicide watches in last 12 months:
0	40

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of 10 suicide watch medical records noted to comply with NCCHC and PBNDS standards. All were placed on 1:1 constant watch, and every 15 minute documentation of patient observation was noted in the medical charts. Review of medical staff training records had required suicide prevention and intervention training documented.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of facility terminal illness policy is compliant with PBNDS and NCCHC standards.

Other Observations

Site Visit from 4/5/2019 to 4/8/2019. A total of 112 medical records were reviewed during this site visit.

Facility Data:

IGSA operated by Management and Training Corporaton (MTC), including medical.
Maximum ICE population 1089, current population 1035, all male facility, to include all three levels of ICE detainees. Most detainees stay less than 2 weeks.

NCCHC Certification - February 2019 - No deficiencies found.
ACA Certification - November 2018 - No medical deficiencies found.
PBNDS (Nakamoto Group) Feb 2018- No medical deficiencies found.

Type of Medical Records: Paper charts, no current plan for Electronic Medical Record.

The Medical Housing Unit has 15 beds. Seven medical/negative pressure rooms, seven medical observation rooms, and one suicide prevention room.

Current Staffing:

(b)(7)(E)

--Reviewed (b)(7)(E) Licensed personnel had current copies of

AMERICAN OVERSIGHT

licensing, and the staff had up-to-date BLS certification.
--Review of all medical staff training records found to have the mandatory training and job specific training documents up-to-date.
--Man-Down drills documented and completed by medical staff once a month.
--Sick call observed, process and procedure reviewed; no issues were identified.
--Pill line observed, process and procedure reviewed; no issues were identified.
--Pharmacy area reviewed and was noted to be secure. Quarterly review by pharmacy noted; temperature logs checked and accurate.
--Medical housing, suicide watch, and segregation areas observed; no issues were identified.
--Lab area refrigerator temperature log verified and accurate.
--Non-prescription commissary list reviewed annually by medical and facility administrators.
--Transfers and intakes usually occur in the evening/night.
--Medical diets are available and ordered. The diets are renewed as needed.
--Noted lab results are being acknowledged by the ordering provider and reviewed with the detainees.

Deficiencies for Areas Evaluated

PBNDS 2011:
There were no identified medical care standards deficiencies.

Quality of Care:
--Transgender detainees are not considered chronic medical cases by the facility and are not referred to a medical provider for chronic care
--Detainees with chronic medical conditions are not seen within 14 days by a medical provider for chronic care
--Medical intake detainees identified as having a mental health history are not being referred to a mental health provider.
--The prominent identification on medical record for detainees with disabilities is not completed
--Detainees with disabilities do not have documentation of being assessed for needed assistance with ADLs (Activities of Daily Living).
--Detainees arriving with prescribed medications are not having their medications continued
--Time urgency is not documented by providers on referrals to outside specialties
--The review of the security officer's suicide watch form by medical staff is not documented

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES

Suicide Screening

Refer to QMC Tool.

Health Assessment

Refer to QMC Tool.

Urgent Care (Sick Call)

Refer to QMC Tool.

Sick call requests were collected and triaged daily. Non-urgent requests were evaluated the following day. The urgent care room had appropriate supplies and equipment needed for urgent/ emergent care within the capabilities stated in facility policy (BLS).

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

Refer to QMC Tool.

Medication Administration Practices

Refer to QMC Tool.

The facility currently uses electronic MARs which showed no missed doses other than for refusals, which were verified as having been documented in the patient medical charts. There was no evidence that staff was pre-pouring medication. Hand washing with gel hand sanitizer observed. Patient "medication administration rights" were observed, and at least two identifiers were in use, including the detainee armband scanner. The pharmacy storage area was inspected and was properly secured; refrigerator logs are maintained properly, and quarterly pharmacist inspection and certification documented.

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.

- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody $\geq$ 14 days.
- In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq$ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.

TIPS FOR REVIEWERS

- Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

- Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.

AMERICAN OVERSIGHT

• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

HEALTH ASSESSMENT						
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	20					
Purpose:	To determine compliance with detention standards to assure continuity and coordination of care for serious medical needs.					
Source:	Detainees arriving during recent period, at least 2 weeks prior to review, to allow for evaluation of timely follow-up.					
Sample:	20 medical records chosen at random.					
Guidelines:	NCCHC 2014 J-E-04; ACA 2004 4-ALDF-4C-24, 4-ALDF-4C-25					
Remarks:						
Reviewer:	(b)(6); (b)(7)(C)			**Date Reviewed:**	8/16/2018	
Clinical (c)						
cHA-1	Initial screen complete within 12 hours of booking?					
cHA-2	PPD placed during medical screening and read within 48-72 hours, or chest x-ray is taken, or if PPD is positive by history, chest x-ray is ordered and read?					
cHA-3	Are detainees who screen positive for mental illness or suicide risk referred for evaluation?					
cHA-4	Is there timely follow-up for significant findings of acute and chronic conditions? *A significant finding is a condition that, without timely intervention, could lead to deterioration in function, pain, death, or risk to the public health.					
cHA-5	Is there a complete health evaluation? Vital signs, adequate medical and behavioral health history, physical examination by licensed MD/PA/NP/RN within 14 days of booking? Patients with HIV, diabetes, dialysis, asthma (on daily meds), and other chronic illness will be seen within 2 business days or addressed by phone and seen on the next business day.

MEDICATION ADMINISTRATION RECORDS									
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	10								
Purpose:	To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.								
Source:	MARS.								
Sample:	MAR and medical record for 10 patients, if available. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.								
Guidelines:									
Remarks:	None of the charts reviewed needed to be referred to a provider for 3 or more refusals.								
Reviewer:	(b)(6); (b)(7)(C)			**Date Reviewed:**	8/16/2018				
Facility (f)									
fMAR-1:	Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up?				Y				
fMAR-2:	Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs?				5				
fMAR-3:	In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month?				0				
fMAR-4:	Estimate the percentage of patients on self-administered medication ordered by a provider.				80				
fMAR-5:	OTCs provided by medical, commissary or both?				Medical				
Clinical (c)									
cMAR-1	What is the number of refusals and no shows during the previous month for each patient?								
cMAR-2	Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?								
cMAR-3	Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

CHRONIC DISEASE – SEIZURE DISORDER

DATE 01/09/42018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Otero County Processing Center

Purpose: To prevent deterioration in function and cost of unnecessary care.

Source: Chronic disease registry or MARs.

Sample: 10 patients with seizure disorder chosen at random.
What clinical practice guideline does the facility use to manage seizures? BOP

Item #	Measure
1	Was an appropriate neurological history completed at the initial physical examination?
2	Was the patient seen in CCC by mid-level provider or physician within 14 days of illness identification*?
3	Were serum drug levels performed and acknowledged in the medical record every 3 months until stable, then every 6 months, where indicated?
4	Was a treatment plan established?
5	Are there orders for a bottom bunk?

COMPLAINTS AND GRIEVANCES

DATE 01/09/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Otero County Processing Center

Purpose: To assess use of medical complaint and grievance data as part of the quality management program.

Source: Facility grievance logs.

Sample: Facility's periodic grievance analyses, with underlying data (grievances and responses).

Does your review of the facility's grievances reveal any possible barriers to care or repetitive concerns that could affect clinical care? Please answer yes or no no If yes, please address in the comments section whether and how the facility uses this information to implement change.

How many medical grievances were submitted over the past 3 months? 0

What percentage of this number were appropriately addressed within 5 working days of receipt? n/a %

Item: 1 Of the grievances submitted over the past 3 months, enter the number of grievances in each category, i.e., availability of care, denial of request for care, etc.

2 Enter the A# for each grievance included in this category.

Grievance Type	1	2
Availability of care (sick call hours, etc.)	0

There have been no reported deaths, detainees with terminal illness, or detainees with advance directives within the last 12 months.

Other Observations

This FMC site visit was conducted on June 24-28, 2018. The audit consisted of a review of over 60 medical charts, sick call log, staff training binder, staff credential folders, the policy and procedure manual, and facility clinical protocols. The vast majority of medical charts reviewed were either active charts or charts of recently released detainees. Older medical charts were not accessible because they are not maintained on-site at the facility. At the current time, the facility moves any inactive ICE charts to STDC, IHSC facility, within a week due to lack of on-site storage space.

Facility Data:
Rio Grande Detention Center (RGDC) is a non-dedicated contracted detention facility located in Laredo, Texas. It is owned and operated by GEO Corporation. The facility houses a combination of US Marshal (USM) male and female prisoners and male ICE detainees. The facility consists of eight housing units, two of which are dedicated to ICE detainees.

Population Characteristics:
Total Inmate Capacity- 1900 (672 ICE detainees and 1228 US Marshal prisoners)
-Current total population-1859
---ICE - 734 (at the time of report facility had additional emergency beds added)
---USM - 1120 (70 females, 1050 males)
-Average Daily ICE Population for the last six months- 590
-The average ICE detainee stay is 7-15 days

--ACCREDITATIONS/INSPECTIONS:
-PBNDS 2008 (Nakamoto)- March 2019
-NCCHC - last completed in June 2018; next visit will be in 2020
-ACA- June 10, 2019
-ODO-June 10-13, 2019

AMERICAN OVERSIGHT

--MEDICAL CLINIC/INFIRMARY:
-The medical clinic is spacious with a large centralized nurse's station. There are three exam rooms, a dental suite, a dental procedure room with panoramic x-ray, a locked pharmacy, a locked medical records room and an urgent care suite.
-The urgent care suite has an emergency bag, a gurney, two AEDs, tank oxygen, portable suction, and an electrocardiogram. Emergency equipment is checked daily by the nursing staff.
-Connected to the medical clinic is a 15 bed infirmary. There are three negative pressure rooms and four mental health rooms with cameras.
-There is one suicide observation rooms located in the medical infirmary. The rooms have been modified to accommodate suicidal detainees and all potential harmful objects have been removed.

--MEDICAL STAFFING:

(b)(7)(E)

-The physician, LPCs and Nurse Practitioner all take call. The HSA reports that he can call LPCs in on the weekend as needed when appropriate for patient care needs.
-Staffing policy reviewed during the site visit; the policy was last reviewed by the facility in February 2019. The HSA reported participation in a quarterly meeting to discuss staffing needs.

AMERICAN OVERSIGHT

OTHER SUPPLEMENT INFO:
-All (100%) staff credential folders were reviewed. All folders were found to be in good order and well organized. All had current credentials that were from the State of Texas and a current Basic Life Support (BLS) card.
-The remaining RGDC Policy and Procedure Manual was reviewed. All policies reviewed were found to be consistent with PBNDS 2008 standards. The policies and procedures were last reviewed in February 2019.
-A training folder is maintained on all medical staff. Medical staff receive appropriate training for their position and have competencies documented annually. Staff also receives annual training on several topics including suicide prevention and intervention, the emergency plan, medication administration, dental screening, hunger strikes, mumps, varicella, measles cohorting, vaccination and PREA. Training folders were found to be well organized and up to date. The Registered Nurses who complete History and Physicals have documentation of training in their folders.

AMERICAN OVERSIGHT

Deficiencies for Areas Evaluated

--PBNDS 2008 DEFICIENCIES:
-No findings noted.

--QUALITY OF CARE ISSUES:
-20% of detainees did not receive a timely and appropriate evaluation by nursing staff within 72 hours. (Repeat Finding)
-0% of labs (HgAIC or lipids; labs for HTN or thyroid patients included)were drawn per the doctor's orders. (Repeat Finding)
-0% of routine labs had a report back that was acknowledged within seven days. (Repeat Finding)
-0% of charts with labs did not have an appropriate clinical response, a report back within 24 hours, clinical acknowledgment.(Repeat Finding)
-The two ER detainees could have received early intervention that might have prevented deterioration.
-100% of cases, the nursing staff did not follow the doctor's orders to aid with following the chronic care guidelines for HTN patients. (Repeat Finding)

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES

Suicide Screening

See QMC Audit Tool.

PREVIOUS FINDINGS:
-10% of the charts audited noted that earlier intervention could possibly have prevented deterioration to the point of need for suicide watch.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

Health Assessment

See QMC Audit Tool.

Urgent Care (Sick Call)

See QMC Audit Tool.

PREVIOUS FINDINGS:
-10% of detainees did not receive a timely and appropriate evaluation by nursing staff within 72 hours.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

AMERICAN OVERSIGHT

Acute Laboratory Testing

See QMC Audit Tool.

PREVIOUS FINDINGS:
-40% were routine labs and had a report back and acknowledged within seven days.
-50% of charts with labs did not have an appropriate clinical response, a report back within 24 hours, clinical acknowledgment.
-60% of the patients advised of laboratory results.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

Diagnostic Services and Specialty Care Access

See QMC Audit Tool.

PREVIOUS FINDINGS:
-60% of charts did not have a documented time urgency included on the order for specialty care or diagnostic services.
-44% of charts demonstrated that the appointment was accomplished within 45 days of the order.
-25% of detainees were not re-evaluated for deterioration.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

Mental Health Treatment Planning

See QMC Audit Tool.

Treatment of Disability

See QMC Audit Tool.

PREVIOUS FINDINGS:
-Two disabilities was not prominently displayed in the medical file.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

Complaints and Grievances

See QMC Audit Tool.

ASSESSMENT OF QUALITY OF HEALTH SERVICES
CHRONIC DISEASES

Diabetes

See QMC Audit Tool.

PREVIOUS FINDINGS:
-Two diabetic detainee did not have their blood sugar taken during the intake process.
-The physician ordered labs on all of the diabetic detainees. The nursing staff did not draw labs (HgAIC or lipids) per the doctor's orders.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

Human Immunodeficiency Virus (HIV)

See QMC Audit Tool.

PREVIOUS FINDINGS:
-The CD4+ and viral load was not completed within 14 days.
-Detainee was not seen by HIV or ID Specialist within 30 days.
-Chest x-ray was not completed in 72 hours; it was completed eight days after intake.

Hypertension

See QMC Audit Tool.

PREVIOUS FINDINGS:
-One chart revealed intake blood pressures that had systolic blood pressure greater than 140 or a diastolic pressure greater than 90 that did not include a treatment plan initiated within 14 days of identifications.
-80% of cases, the nursing staff did not follow the doctor's orders to aid with following the chronic care guidelines for HTN patients.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

Asthma

See QMC Audit Tool.

Seizure Disorder

Recommendations

(b)(5)

Facility Actions

The HSA, Q&A Nurse, and the Warden were notified of all findings/deficiencies during the close-out interview. HSA obtained MedPAR access for additional nursing staff during site visit; FMC gave guidance for additional training and maintaining access. HSA and Q&A Nurse began discussion of revamping lab process to include a request from Wellpath Corporate office to begin a pilot program where a phlebotomist came over to draw labs at the facility to put in place for the labs. Clinical Director developed form for standing order set for use during intake for HTN and DM patients. FMC sent a close out summary of findings, recommendations and HSA plans to Laredo AFOD, CORs, SNA DFOD and SNA FOD.

Instructions for the Corrective Plan of Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the findings identified in the ICE Health Service Corps Field Medical Coordinator (FMC) review. Please ensure that each stated corrective plan of action addresses the noted medical findings to the fullest extent possible, and that it incorporates the recommendations. In the event a finding or recommendation cannot be implemented within the authorized timeline, please include an explanation in the "Corrective Plan of Action" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date. If an extension is needed, the Field Office must contact the appropriate DMD staff member with this request in advance of the specified timelines for submission.

****Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.***

ICE Uniform Corrective Action Plan (August 2017 FMC site visit) Rio Grande Detention Center (SNA)			
Assessment and Findings	**Recommendations**	**Corrective Plan of Action**	**Completion Date**
[PBNDS 2008 Standard Deficiency] A health evaluation was performed greater than 14 days after arrival to the facility (Medical Care) (V) (J). **(Repeat Finding)**	(b)(5)	The Health Services Administrator (HSA) or designee will provide refresher training to the medical records clerk and health care providers on scheduling health assessments on new arrivals within 14 days of arrival. The data entry clerk will be retrained by March 1, 2018 on the requirements of scheduling and	Training with be completed by March 1, 2018. The Quality Assurance (QA) nurse will monitor the corrective action plan for a minimum of 60 days or until 100% compliance is achieved.

AMERICAN OVERSIGHT

		completing health assessments. The HSA/designee will monitor GEO track to verify compliance weekly for the next 60 days. Noncompliance will be reported during the department monthly meetings.	
[PBNDS 2008 Standard Deficiency] Inconsistent completion of dental exam within 14 days of arrival. (Dental Treatment)(V)(M). [CQI Finding] -33% of dental cases were not evaluated by qualified health professional within 48 hours of request. -One dental note did not describe findings, diagnosis, treatment and plans. -75% of detainees were not scheduled for follow-up dental treatment.	(b)(5)	The dentist or designee will provide refresher training to all medical professionals on completing dental screenings during the absence of dental personnel. Dental screenings have been added to all 14-day health appraisals. The dental assistant will conduct monthly audits on 10% of ICE dental cases to verify compliance or until 100% compliance is achieved.	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.
[CQI Finding] One detainee did not receive a documented mental health clinical assessment, treatment and follow-up plan.		The HSA or designee will provide refresher training to all staff on the requirements for timely mental health clinical assessment, treatment and follow-up by March 1, 2018. The mental health counselor will conduct monthly audits for the next 90 days or until	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.

AMERICAN OVERSIGHT

		100% compliance is achieved. Noncompliance will be reported during the department monthly meetings.	
[CQI Finding] An asthma chart was reviewed and the peak flow was not completed on the initial physical exam.	(b)(5)	The HSA or designee will provide refresher training to all staff on the requirements for asthma patients. Peak flows has been added to the intake screening the intake (*See* Attachment 1) and physician's chronic care forms (*See* Attachment 2). The comprehensive health assessment will be completed within 14 days of arrival. The Chronic Care nurse will conduct monthly audits for the next 90 days to verify compliance or until 100% compliance is achieved.	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.
[CQI Finding] 67% of routine labs did not have a report back and acknowledged within seven days. No time urgency noted on labs.		The HSA or designee will provide refresher training to staff on the requirements for time urgency on labs, diagnostic services, and specialty care. Chronic care forms have been revised and include a communication section. In the communication section, the physician documents lab and diagnostic exams (*See* Attachment 2).	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.

AMERICAN OVERSIGHT

[CQI Finding] 10% of charts with labs did not have an appropriate clinical response, a report back within 24 hours, clinical acknowledgment, and patients advised of laboratory results.	(b)(5)	The HSA or designee will provide refresher training to staff on the requirements for a response and acknowledgment of laboratory results by March 1, 2018. The Chronic Care nurse will conduct a chronic care audit on 5% of ICE chronic care charts to verify compliance. Results will be monitored by the HSA. The Chronic Care nurse will conduct monthly audits for the next 90 days to verify compliance or until 100% compliance is achieved.	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.
[CQI Finding] One diabetic detainee did not have his blood sugar taken during the intake process.		The HSA or designee will provide refresher training to staff on the requirements on blood sugar checks on intake process by March 1, 2018. A line item for blood sugar results has been added to the medical intake packet (*See* Attachment 1).	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.
[CQI Finding] A disability was not prominently noted on a disabled detainee's record.		The HSA or designee will provide refresher training to staff on the recommendation of noting the disability on the problem list and/or sticker on the medical chart by March 1, 2018.	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.

AMERICAN OVERSIGHT

[CQI Finding] 75% of charts reviewed by the FMC showed documented time urgency included on the order for specialty care or diagnostic services.	(b)(5)	The HSA will retrain the facility physician no later than March 1, 2018, on the recommended documentation of time urgency in specialty care or diagnostic services. The physician's chronic care forms have been updated and include time urgency on specialist consults (*See* Attachment 2).	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.
[CQI Finding] One instance where a specialty appointment was not completed within ordered time frame.		The HSA or designee will provide refresher training to staff on the recommendation of tracking booking/scheduling of specialty appointments by March 1, 2018. A log will be created for ICE detainees that are referred to a specialty appointment (*See* Attachment 3).	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.
[CQI Finding] A serum drug level was not ordered on a detainee taking anti-convulsant medication; this is a repeat finding from the last site visit. A seizure patient did not have a documented treatment plan.		The facility physician will be retrained by the HSA no later than March 1, 2018, on the requirements of serum drug level ordered on detainees taking anti-convulsant medications. The chronic care forms have been updated and include in the labs section an indicator for serum drug levels (*See* Attachment 4).	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.

AMERICAN OVERSIGHT

[CQI Finding] There was no consistency with blood pressure monitoring on detainees who had a history of HTN and presented with a high systolic blood pressure during intake. One patient received continuity of care with medications on intake, but labs were ordered over 45 days later. There was one chart that included a blood pressure check flowsheet on a detainee who was hypertensive, but the blood pressures where consistently high and there was no treatment plan identified for this patient (i.e. no change of medication). This chart had no time urgency noted on labs and there were no chronic care appointments or notes present in the chart for this patient.	(b)(5)	The HSA or designee will provide refresher training by March 1, 2018, to all staff, inclusive of the practitioners, on the treatment and monitoring of hypertension patients as recommended in the Hypertension Clinical Practice Guidelines. The Chronic Care nurse will conduct a chronic care audit on 5% of chronic care charts for the next 90 days to verify compliance or until 100% compliance is achieved. Results will be monitored by the HSA.	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.
[CQI Finding] One instance where MAR noted consecutive refusals of an antibiotic from a detainee. There was no documentation of the reason for the refusal and no documentation of a response from the clinician.	(b)(5)	The HSA or designee will provide refresher training to staff on the recommendation of documenting a rationale for refusals of medications by March 1, 2018. The Director of Nursing (DON) will conduct an audit on 5% of medical administration records for the	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.

AMERICAN OVERSIGHT

		next 90 days to verify compliance or until 100% compliance is maintained. Results will be monitored by the HSA.	
[CQI Finding] Two records were missing MARs that needed to be filed; the missing MARs were from the previous month.	(b)(5)	The HSA or designee will provide refresher training to all staff by March 1, 2018, on the organization and proper filing of medical information in the health care record. The HSA will verify all staff has received training by March 1, 2018 and that all staff has signed a training acknowledgement. The DON will review a minimum of 20 health care charts monthly for the next 90 days to verify compliance or until 100% compliance is achieved.	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.
[CQI Finding] 60% suicidal patients were not evaluated within 24 hours of identification.	(b)(5)	The HSA or designee will provide refresher training to all staff by March 1, 2018, on the requirement on initial evaluation of suicidal patients within 24 hours by a mental health professional or appropriately trained medical professionals as outlined in PBNDS 2008. The DON will review a minimum of 10 mental health care charts monthly for the next 90 days to verify compliance or until 100% compliance is achieved.	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.

AMERICAN OVERSIGHT

[CQI Finding] 20% of the charts audited noted that earlier intervention could possibly have prevented deterioration to the point of need for suicide watch.	(b)(5)	The HSA or designee will provide refresher training to all staff by March 1, 2018, on the criteria for recommending referrals of detainees with suicide risks to the psychiatrist. The DON will review a minimum of 10 mental health care charts monthly for the next 90 days to verify compliance or until 100% compliance is achieved.	Training with be completed by March 1, 2018. The QA nurse will monitor the corrective action plan for a minimum of 90 days or until 100% compliance is achieved.
[CQI Finding] 20% of detainees did not receive a timely and appropriate evaluation by nursing staff within 72 hours (NCCHC Standard, J-E-07, Nonemergency Health Care Requests and Services, Compliance Indicators, #1)		The HSA or designee will provide refresher training to all staff by March 1, 2018, on the requirement of completing a sick call request within 72 hours (b)(7)(E) (b)(7)(E) The QA nurse will conduct monthly audits for the next 90 days on 10% of sick calls to verify compliance or until 100% compliance is achieved.	Training with be completed by March 1, 2018.
[CQI Finding] One detainee had medications that were not ordered in less than 24 hours from completion of the intake.		The HSA or designee will provide refresher training to all staff by March 1, 2018, on the requirements of ordering medications within 24 hours of the detainee's arrival to the facility. There have been no reported deaths, detainees with terminal illness, or detainees with advance directives within the last 12 months.

Other Observations

This FMC site visit was conducted on August 21-23, 2017. The audit consisted of a review of 75 medical charts, sick call log, staff training binder, staff credential folders, the policy and procedure manual, and facility clinical protocols. The vast majority of medical charts reviewed were either active charts or charts of recently released detainees. Older medical charts were not accessible because they are not maintained on-site at the facility. At the current time, the facility moves any inactive ICE charts to STDC, IHSC facility, within a week due to lack of on-site storage space.

Facility Data:
Rio Grande Detention Center (RGDC) is a non-dedicated contracted detention facility located in Laredo, Texas. It is owned and operated by GEO Corporation. The facility houses a combination of US Marshal (USM) male and female prisoners and male ICE detainees. The facility consists of eight housing units, two of which are dedicated to ICE detainees.

Population Characteristics:
Total Inmate Capacity- 1900 (672 ICE detainees and 1228 US Marshal prisoners)
-Current total population-1487
---ICE - 612
---USM - 875
-Average Daily ICE Population for the last six months- 528
-The average ICE detainee stay is 14 days

--ACCREDITATIONS/INSPECTIONS:
-PBNDS 2008 (Nakamoto)- March 2016
-NCCHC - last completed in June 2017
-ACA- April 2016

AMERICAN OVERSIGHT

--MEDICAL CLINIC/INFIRMARY:
-The medical clinic is spacious with a large centralized nurse's station. There are three exam rooms, a dental suite, a dental procedure room with panoramic x-ray, a locked pharmacy, a locked medical records room and an urgent care suite.
-The urgent care suite has an emergency bag, a gurney, two AEDs, tank oxygen, portable suction, and an electrocardiogram. Emergency equipment is checked daily by the nursing staff.
-Connected to the medical clinic is a 15 bed infirmary. There are two negative pressure rooms and four mental health rooms with cameras.
-There are two suicide observation rooms located in the medical infirmary. The rooms have been modified to accommodate suicidal detainees and all potential harmful objects have been removed.

--MEDICAL STAFFING:

(b)(7)(E)

OTHER SUPPLEMENT INFO:
-All (100%) staff credential folders were reviewed. All folders were found to be in good order and well organized. All had current credentials that were from the State of Texas and a current Basic Life Support (BLS) card.
-The remaining RGDC Policy and Procedure Manuals was reviewed. All policies reviewed were found to be consistent with PBNDS 2008 standards. The policies and procedures were last reviewed in December 2016.

AMERICAN OVERSIGHT

-A training folder is maintained on all medical staff. Medical staff receive appropriate training for their position and have competencies documented annually. Staff also receives annual training on several topics including suicide prevention and intervention, hunger strikes and PREA. Training folders were found to be well organized and up to date. The Registered Nurse who completes History and Physicals has documentation of training in his folder.

Deficiencies for Areas Evaluated

--PBNDS 2008 DEFICIENCIES:
-A chart consisted of a health evaluation that was not completed within 14 days of booking.
-Detainees not consistently receiving a dental exam within 14 days of booking.

--QUALITY OF CARE ISSUES:
-60% suicidal patients were not evaluated within 24 hours of identification.
-20% of the charts audited noted that earlier intervention could possibly have prevented deterioration to the point of need for suicide watch.
-20% of detainees did not receive a timely and appropriate evaluation by nursing staff within 72 hours (NCCHC Standard, J-E-07, Nonemergency Health Care Requests and Services, Compliance Indicators, #1)
-One MAR noted consecutive refusals of an antibiotic from a detainee. There was no documentation of the reason for the refusal and no documentation of a response from the clinician.
-One detainee had medications that were not ordered in less than 24 hours from completion of the intake.
-In 20% of cases, the period of time from medication order to first dose exceeded 24 hours.
-67% of routine labs did not have a report back and acknowledged within seven days. No time urgency noted on labs.
-10% of charts with labs did not have an appropriate clinical response, a report back within 24 hours, clinical acknowledgment, and patients advised of laboratory results.
-One of the detainees did not receive a documented mental health clinical assessment, treatment and follow-up plan.

AMERICAN OVERSIGHT

-One disability was not prominently displayed in the medical file.
-One diabetic detainee did not have his blood sugar taken during the intake process.
-There was no consistency with blood pressure monitoring on detainees who had a history of HTN and presented with a high systolic blood pressure during intake.
-One patient received continuity of care with medications on intake, but labs were ordered over 45 days later.
-One detainee did not have a peak flow measurement completed during the initial physical exam.
-A serum drug level was not ordered on a detainee taking anti-convulsant medication; this is a repeat finding from the last site visit.
-A seizure patient did not have a documented treatment plan.
-75% of charts did not have a documented time urgency included on the order for specialty care or diagnostic services.
-One detainee did not receive a specialty appointment within ordered time frame.
Two records were missing MARs that needed to be filed; the missing MARs were from the previous month.
-33% of dental cases were not evaluated by qualified health professional within 48 hours of request.
-One dental note did not describe findings, diagnosis, treatment and plans.
-75% of detainees were not scheduled for follow-up dental treatment.
-There was one chart that included a blood pressure check flowsheet on a detainee who was hypertensive, but the blood pressures where consistently high and there was no treatment plan identified for this patient (i.e. no change of medication). This chart had no time urgency noted on labs and there was no chronic care appointments or notes present in the chart for this patient.

AMERICAN OVERSIGHT

Suicide Screening

POLICIES REVIEWED: Policy G-05 (Essential) "Suicide Prevention Program" is compliant with PBNDS 2008.

RGDC performs suicide screening on all detainees that enter the facility. During the medical intake, all detainees are asked about current suicidal ideation and past suicide attempts.

In the past six months there have been 11 detainees on suicide watch. Five charts were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose as other charts were already moved to off-site location.
-2 of 5 (40%) suicidal patients were evaluated by the physician within 24 hours of identification. The other patients were seen within two days and each of these occurrences happened when the detainees were placed on watch going into the weekend. The HSA reports that they are currently working with CCS to develop a weekend on-call system for the mental health professionals.
-4 of 4 (100%) were evaluated by a qualified mental health professional every day during the work week (Monday - Friday) and by a nurse on the weekend.
-During the entirety of the suicide watch the detainees were monitored continuously by a detention officer who documented every 15 minutes.
-1 of 5 (20%) of the chart audits noted that earlier intervention could possibly have prevented deterioration to the point of need for suicide watch. The detainee had a history of seizures, mental health, behavior problems and cardiac arrhythmias. There was no serum Dilantin levels drawn on the patient and he had 15 medication refusals. The detainee was seen later in the ER where labs were ordered. The patient was later placed on suicide watch and not seen within 24 hours by a mental health professional due to the weekend. He did not receive a referral for the psychiatrist. During the audit, FMC noted a trend that none of the suicide watches were referred to the psychiatrist. The trend was brought to the HSA's attention to determine the criteria for referral of suicidal patients to the psychiatrist.

PREVIOUS FINDINGS (February 2017): No findings noted.

CURRENT FINDINGS:
-60% suicidal patients were not evaluated within 24 hours of identification.
-20% of the charts audited noted that earlier intervention could possibly have prevented deterioration to the point of need for suicide watch.

Health Assessment

POLICIES REVIEWED: Policy E-04 (Essential) "Initial Health Assessment" is compliant with PBNDS 2008.

Twenty charts were reviewed using the IHSC Quality of Care Audit Tool.
-20 of 20 (100%) had an initial intake screening within 12 hours of booking.
-20 of 20 (100%) had a PPD placed during the initial intake screening and was read within 48-72 hours.
-19 of 19 (100%) received timely follow-up for significant findings of acute or chronic conditions.
-19 of 19 (100%) received timely follow-up for significant findings of acute or chronic conditions.
-18 of 20 (90%) had a complete health evaluation completed within the first 14 days.

-At the time of this audit, health appraisals are completed by the physician, NP or (b)(7)(E) trained RN.

PREVIOUS FINDINGS (February 2017): REPEAT: Several health appraisals were performed greater

AMERICAN OVERSIGHT

than 14 days after arrival to the facility. (Medical Care) (V) (J)

CURRENT FINDINGS:
-One chart consisted of a health evaluation that was not completed within 14 days of booking.

Urgent Care (Sick Call)

POLICIES REVIEWED: Policy E-07 (essential) "Non-Emergency Health Care Requests and Services" is compliant with PBNDS 2008.

According to RGDC nursing staff, the sick call process is initiated by a detainee filling out a paper sick call request. Slips are picked up daily and triaged by the nursing staff. Non-urgent requests are seen by nurses who use clinical protocols and document sick call encounters on standard forms called problem-oriented records, which are available for a large number of medical complaints. Per RGDC policy, all oral and written requests for health care will be triaged within 24 hours by a qualified health care professional. When indicated, the patient will be seen by a qualified health care professional at the next available sick call or clinician's clinic, usually within 24 hours (or up to 72 hours on weekends or holidays).

Ten urgent/sick call encounters were reviewed using the IHSC Quality of Care Audit Tool used to evaluate this area.

-8 of 10 (80%) had a timely and appropriate evaluation by nursing staff (seen within 72 hours). One detainee was seen within four days and the other detainee was seen within five days.
-10 of 10 (100%) encounters demonstrated that care was delivered within the scope of the nurse's license.
-10 of 10 (100%) of sick call encounters had vital signs documented during the nurse's assessment.
-6 of 6 (100%) had a nursing referral to a medical provider within 24 hours when appropriate.
-3 of 3 (100%) of detainees referred to a medical provider had the assessment and plan documented within the note.

PREVIOUS FINDINGS (February 2017): REPEAT: Half of the reviewed encounters received a timely and appropriate evaluation by nursing staff (seen within 72 hours).

CURRENT FINDINGS:
-20% of detainees did not receive a timely and appropriate evaluation by nursing staff within 72 hours.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

POLICIES REVIEWED: Policy E-08 (Essential) "Emergency Services" is complaint with PBNDS 2008.

There were ten medical charts reviewed during the site visit using the IHSC Quality of Care Audit Tool.
-10 of 10 (100%) had an outbound progress note.
-0 of 10 (100%) showed evidence that earlier intervention might have prevented deterioration to the point of needing ED/hospital care.
-10 of 10 (100%) had discharge documentation from the hospital and an inbound assessment.
-9 of 9 (100%) had inbound assessments.
-8 of 8 (100%) demonstrated that the hospital's recommendations were acknowledged and carried out.

PREVIOUS FINDINGS (February 2017): During the time of the February 2017 audit, the HSA was unable to show evidence that QA monitoring or staff education had been done as indicated in the December 2016 UCAP.

CURRENT FINDINGS:
-During the time of this site visit. The HSA was unable to show the evidence as indicated in the December 2016 UCAP.

Medication Administration Practices

POLICIES REVIEWED: Policy D-01 (Essential) "Pharmaceutical Operations" and Policy D-02

AMERICAN OVERSIGHT

(Essential)"Medication Services" are compliant with PBNDS 2008.

RGDC contracts with Correct RX for pharmaceutical services. Orders are placed on a daily basis and as needed. Medication ordered prior to 3 PM are received on the next day.
Ten medication administration records (MARs) were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

-RGDC policy specifies that a patient should be referred to the responsible physician after three refusals of any medication. Policy also indicates that when certain high risk medications (i.e., antiepileptics, antibiotics, anticoagulants, antihypertensives, anti-retrovirals/HIV, cardiac medications, hypoglycemic medications, pulmonary medications, or psychotrophic medications) are refused for three or more doses that a mental health referral also be completed.
-One MAR noted consecutive refusals of an antibiotic from a detainee. There was no documentation for the reason for the refusal and no documentation of a response from the clinician.
-Approximately 80% of patients are on self-administered medication ordered by a provider.
-Two records were missing MARs that needed to be filed; the missing MARs were from the previous month.
-Over the Counter (OTC) medications are provided by both medical and can be purchased at the commissary.
At this site visit, active charts and inactive charts were reviewed. Some of the inactive charts were found to be missing MARs.

PREVIOUS FINDINGS (February 2017): During the time of the audit, the HSA was unable to show evidence that QA monitoring or staff education had been done as indicated in the December 2016 UCAP.

CURRENT FINDINGS:
-During the time of the site visit, HSA was unable to show evidence that QA monitoring or staff education had been does as indicated in the December 2016 UCAP.
-One MAR noted consecutive refusals of an antibiotic from a detainee. There was no documentation of the reason for the refusal and no documentation of a response from the clinician.
-Two records were missing MARs that needed to be filed; the missing MARs were from the previous month.

AMERICAN OVERSIGHT

Continuity of Medication

POLICIES REVIEWED: Policy E-12 (Essential) "Continuity of Care During Incarceration" is compliant with PBNDS 2008.

When a detainee arrives to the facility with chronic medications the intake nurse calls the on-call provider for orders/instructions. After reviewing the medication, the provider will provide a telephone order to continue the medication, if indicated. The medication is continued until the physical exam, at which time it is reordered as necessary.

Ten charts were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-9 of 10 (90%) charts showed that medications were ordered in less than 24 hours from completion of the intake. The one chart showed that the medications were ordered within two days.
-In 8 of 10 (80%) cases, the period of time from order to first dose was less than 24 hours. One chart indicated two days and the other chart reviewed indicated three days and had a note stating that the medication was out of stock.

PREVIOUS FINDINGS (February 2017): No findings noted.

CURRENT FINDINGS:
-One detainee had medications that were not ordered in less than 24 hours from completion of the intake.
-In 20% of cases, the period of time from medication order to first dose exceeded 24 hours.

Mental Health Screen

POLICIES REVIEWED: Policy E-05 (Important) "Mental Health Screening and evaluation (MH Services Provided)" is compliant with PBNDS 2008.

All detainees are screened for mental illness as part of the medical intake. There are several questions that address mental illness including questions that specifically refer to suicide.

Ten charts were reviewed using the IHSC Quality of Care Audit Tool.
-10 of 10 (100%) with positive screens for mental illness were evaluated by a mental health professional in a timely manner. In the majority of cases, the evaluation occurred on the following clinic day.

PREVIOUS FINDINGS (February 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Medical Recordkeeping Practices

POLICIES REVIEWED: Policy H-01 (Essential) "Health Record Format and Contents" is compliant with PBNDS 2008.

All charting at Rio Grande Detention Center is done on paper. Medical records are kept in a locked room to which only medical personnel have access to. At the current time, there are no plans to obtain an electronic medical record.

Ten charts were reviewed using the IHSC Quality of Care Tool. Charts were found to be complete and orderly.

PREVIOUS FINDINGS (February 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Pregnant Women

Rio Grande Detention Facility only houses male ICE detainees.

AMERICAN OVERSIGHT

Dental Care

POLICIES REVIEWED: Policy E-06 (Essential) "Oral Care" is compliant with PBNDS 2008.

There is a vacancy at Rio Grande Detention Facility for a dentist and a dental assistant that opened approximately 1.5 weeks before the site visit. Prior to the resignation of the dentist, the outlined process was for the detainees to be screened by the dentist within the first 14 days of detention. Other dental services are normally requested through a sick call request The dentist evaluated the patient the following working day and decided if treatment is appropriate. During the last site visit, the treatment was scheduled within one week.

Seven charts were reviewed using the IHSC Quality of Care Audit Tool.
-7 of 7 (100%) were screened for symptoms during the intake process.
-4 of 6 (67%) were evaluated by a qualified health professional within 48 hours of request. There were two cases that were seen within three to four days of request.
-6 of 7 (86%) dental notes reviewed described findings, diagnosis, treatment and plans. The dental note states that the detainee needed to be seen by the dentist, but the dentist resigned and the detainee was not seen. The same detainee had a sick call request that was not addressed. At the time of the site visit, there was no plan in place for dental care of detainees during the hiring process of a new dentist.
-1 of 4 (25%) were scheduled for follow-up treatment as recommended. Only one chart had completed dental screening and follow-up treatment as recommended.

PREVIOUS FINDINGS (February 2017): No findings noted.

CURRENT FINDINGS:
-33% of dental cases were not evaluated by qualified health professional within 48 hours of request.
-One dental note did not describe findings, diagnosis, treatment and plans.
-75% of detainees were not scheduled for follow-up dental treatment.

AMERICAN OVERSIGHT

Acute Laboratory Testing

POLICIES REVIEWED: Policy D-04 (Important) "Diagnostic Services" is compliant with PBNDS 2008. Labcorp is contracted to pick up and process the labs collected at the facility. For STAT labs, Laredo Medical Center is utilized.

Ten charts were reviewed. The IHSC Quality of Care Tool was used to evaluate these records.

-3 of 9 (33%) were routine labs and had a report back and acknowledged within seven days. No time urgency noted on labs.
-9 of 10(90%) had report back within 24 hours, as appropriate, for acute labs or within seven days for routine labs
-9 of 10 (90%) charts had clinical acknowledgment.
-9 of 10 (90%) charts had an appropriate clinical response. The detainee didn't have a chronic care appointment or note.
-9 of 9 (100%) of the patients were advised of laboratory results.

PREVIOUS FINDINGS (February 2017):
1) 40% of lab work reviewed by the FMC did not have an appropriate clinical response.
2) 80% of charts did not show documentation that the detainee was notified of lab results.

CURRENT FINDINGS:
-67% of routine labs did not have a report back and acknowledged within seven days. No time urgency noted on labs.
-10% of charts with labs did not have an appropriate clinical response, a report back within 24 hours, clinical acknowledgment, and patients advised of laboratory results.

Diagnostic Services and Specialty Care Access

POLICIES REVIEWED: Policy D-05 (Important) "Hospital and Specialty Care" is compliant with PBNDS 2008.

Eight charts were available for the review using the IHSC Quality of Care Tool.

-2 of 8 (25%) had a documented time urgency included on the order for specialty care or diagnostic services.
-7 of 8 (87%) charts demonstrated that the appointment was accomplished within 45 days of the order. Detainee did not received an orthopedic appointment.
-7 of 7 (100%) of charts reflect the facility clinician acknowledgment of the specialist's report in the medical record within seven days of the date the service was performed.

PREVIOUS FINDINGS (February 2017): There were no charts available for review. At the time of this audit, the HSA was unable to show evidence that QA monitoring has yet been done as indicated in the December 2016 UCAP. The FMC will continue to follow-up with the HSA.

CURRENT FINDINGS:
-During the current site visit, the evidence of the QA monitoring was not available.
-75% of charts did not have a documented time urgency included on the order for specialty care or diagnostic services.
-One detainee did not receive a specialty appointment within ordered time frame.

Mental Health Treatment Planning

POLICIES REVIEWED: Policy E-05 (Important) "Mental Health Screening and Evaluation (MH Services Provided)" is compliant with PBNDS 2008.

Detainees are screened for potential mental health problems to include suicide risk and sexual/physical abuse history during the intake process. Detainees who screen positive are referred to a mental health provider (LPC) and are generally seen on the next day.

Ten records were reviewed using the IHSC Quality of Care Tool.
-9 of 10 (90%) had a clinical assessment, treatment and follow-up plan documented. One of the

AMERICAN OVERSIGHT

detainees had three anxiety attacks within a six day time-frame, concern of suicide risk noted by security, reports of hitting his head on the wall and was eventually put on suicide watch. He was seen by the LPC, but no referral, clinical assessment, treatment or follow-up plan from a psychiatrist.
-5 of 5 (100%) patients reviewed had a treatment plan updated at a minimum of every 90 days. The other mental health notes reviewed were all initial referrals and new additions to the mental health caseload.

PREVIOUS FINDINGS (February 2017): No findings noted.

CURRENT FINDINGS:
-One of the detainees did not receive a documented mental health clinical assessment, treatment and follow-up plan.

Treatment of Disability

POLICIES REVIEWED: POLICY G-02 (Essential) "Patients with Special Health Needs";Policy G-10 "Aids to Impairment" is compliant with PBNDS 2008.

All dorms in RGDC are wheelchair accessible. The facility has a TTY phone available. The facility also has walkers, wheelchairs and canes available.

At the time of this audit, there was only two detainees with documented disabilities. These records were reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.
-The facility maintains a list of all patients with disabilities.
-1 of 2 (50%) had the disability prominently displayed in the medical file. There was a detainee who used a cane and wore diabetic shoes and the disability was documented in the record, but not prominently displayed.
-2 of 2 (100%) detainees were assessed for assistance with activities of daily living (ADL) upon identification of disability and appropriate accommodation orders were entered.

PREVIOUS FINDINGS (February 2017): No findings.

CURRENT FINDINGS:
-One disability was not prominently displayed in the medical file.

Complaints and Grievances

POLICIES REVIEWED: Policy A-11 (Essential) "Grievance Mechanism for Health Complaints" is complaint with PBNDS 2008.

Per HSA, all dorms have access to grievance forms and a drop box labeled for this purpose. The grievance officers picks them up and reviews them daily. All medical grievances are placed in the HSA's mailbox. The HSA is then responsible for answering all medical grievances.

During the site visit, FMC reviewed the Detainee Grievance Log using the IHSC Quality of Care Audit Tool. The review of the log does not show any possible barriers to care or repetitive concerns that could affect clinical care. There were no medical grievances submitted over the past three months.

PREVIOUS FINDINGS (February 2017): RESOLVED-Medical grievances were not tracked and logged in a Detainee Grievance Log (Grievance System) (V) (E).

CURRENT FINDINGS: At the time of this audit, there were no grievances.

AMERICAN OVERSIGHT

Diabetes

POLICIES REVIEWED: Policy G-01 (Essential) "Chronic Disease Services" is complaint with PBNDS 2008.

Two active diabetic medical records were reviewed using the IHSC Quality of Care Tool designed for this purpose; no other charts were available for reasons specified earlier in the report.

-RGDC uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of diabetes.

-1 of 2 (50%) had a blood sugar measured at intake. No accucheck was documented in the file.
-2 of 2 (100%) were seen for chronic care by a medical provider within 14 days.
-2 of 2 (100%) had a baseline HgA1C performed within the first 30 days.
-2 of 2 (100%) had lipids measured within one year.
-2 of 2 (100%) patients were followed every 90 days with appropriate vital signs.
-1 of 1 (100%) were prescribed aspirin as clinically indicated.
-1 of 1 (100%) charts demonstrated a degree of control (goal GgbA1C<8.0) documented.
-2 of 2 (100%) charts demonstrated a strategy to attain diabetes control documented in HgbA3C above the goal.

PREVIOUS FINDINGS (February 2017):
-Intake blood sugars were not consistently recorded on detainees claiming to have diabetes.
-One diabetic detainee was not seen for chronic care within 14 days.
-Baseline HgA1C lab work was not done within 30 days of arrival on all diabetic charts reviewed.

CURRENT FINDINGS:
-One diabetic detainee did not have his blood sugar taken during the intake process.

Human Immunodeficiency Virus (HIV)

At the time of this audit, RGDC had no ICE detainees documented as having HIV and because only active charts are maintained on site, there were no files to review. For this reason, the IHSC Quality of Care Audit Tool designed for this purpose was not used.

-Rio Grande Detention Center uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of HIV.

PREVIOUS FINDINGS (February 2017): No findings.

CURRENT FINDINGS: No findings due to no charts being present to review. RGDC staff reported that the facility has not had any HIV detainees since the last audit.

Hypertension

Ten charts of hypertensive detainees were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.

-RGDC uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of hypertension.

-10 of 10 (100%) had a documented blood pressure on the medical intake.
-10 of 10 (100%) detainees were seen by a medical provider within the first 14 days at the facility.
-9 of 10 (90%) revealed intake blood pressures that had systolic blood pressure greater than 140 or a diastolic pressure greater than 90 that included a treatment plan initiated within 14 days of identifications.
-7 of 10 (70%) cases, it appeared that a chronic disease guideline for HTN, which included

AMERICAN OVERSIGHT

obtaining baseline lab work, was followed.

PREVIOUS FINDINGS (February 2017):
-One detainee with hypertension was not seen for chronic care within 14 days.
-Two hypertension charts reviewed were not seen for chronic care and care was not consistent with clinical practice guidelines. Lab work, EKG, blood pressure monitoring were not ordered.

CURRENT FINDINGS:
-There was no consistency with blood pressure monitoring on detainees who had a history of HTN and presented with a high systolic blood pressure during intake.
-There was one chart that included a blood pressure check flowsheet on a detainee who was hypertensive, but the blood pressures where consistently high and there was no treatment plan identified for this patient (i.e. no change of medication). This chart had no time urgency noted on labs and there was no chronic care appointments or notes present in the chart for this patient.
-One patient received continuity of care with medications on intake, but labs were ordered over 45 days later.

Asthma

Five charts of asthma patients were reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.
-RGDC uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of asthma.
-5 of 5 (100%) were seen for chronic care by a medical provider within 14 days of illness identification. All others left the facility prior to day 14 and before being seen by a medical provider.
-4 of 5 (80%) had a peak flow measurement completed during the initial physical exam.
-4 of 4 (100%) had a peak flow completed at the chronic care visit or within the last three months.
-5 of 5 (100%) showed disease management consistent with BOP clinical practice guidelines.

PREVIOUS FINDINGS (February 2017): No findings noted. At the time of this audit, the HSA was unable to show evidence that QA monitoring or staff education had been done as indicated in the December 2016 UCAP. The FMC will continue to follow-up with the HSA.

CURRENT FINDINGS:
-At the time of this audit, the HSA was not able to show evidence of QA monitoring or staff education as indicated in the December 2016 UCAP.
-One detainee did not have a peak flow measurement completed during the initial physical exam.

Seizure Disorder

One chart was reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.

-RGDC uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of seizures.

-1 of 1 (100%) had an appropriate neurological assessment completed at the initial physical exam.
-1 of 1 (100%) were seen for chronic care by a medical provider within 14 days of illness identification.
-0 of 1 (0%) had serum drug levels ordered. In this case the detainee was taking Dilantin prior to arrival and no labs were ordered. The patient had 15 documented medication refusals. The patient was admitted to the ER later during his stay at the facility and labs were obtained during that visit.
-0 of 1 (0%) had an established treatment plan. No treatment care plan was found in the medical record.
-1 of 1 (100%) had a order for a bottom bunk.

AMERICAN OVERSIGHT

PREVIOUS FINDINGS (February 2017):
-The issue of obtaining a complete neurological history on seizure patients is a repeat finding. At the time of this audit, the HSA was unable to show evidence that QA monitoring or staff education had been done as indicated in the December 2016 UCAP. The FMC will continue to follow-up with the HSA.
-One seizure patient was not seen for chronic care within 14 days of arrival.
-A serum drug level was not ordered on a detainee taking anticonvulsant medication.

CURRENT FINDINGS:
-The HSA was unable to show evidence that QA monitoring or staff education was done as indicated in December 2016 UCAP.
-The chart available for review showed that serum drug levels were not obtained on the detainee who was taking anticonvulsant medications. There were documented refusals in the chart for the medication and the patient was later admitted to the ER where serum levels were taken at that time.
-This detainee did not have a documented treatment plan.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

The HSA and the Warden were notified of all findings/deficiencies during the close-out interview. Conducted a close-out meeting with Laredo AFOD, CORs, SDDOs at the Laredo Field Office to discuss and give a summary of findings.

AMERICAN OVERSIGHT

Additional Comments

Since site visit report, dental provider has been hired. Facility continues to work on developing model for weekend mental health coverage.

POLICIES REVIEWED: Policy A-10 (Essential)"Procedure in the event of a Patient Death"; Policy G-11 (Important) "Care of the Terminally Ill"; Policy I-04 (Important) "End-of-Life Decision Making"

There have been no reported deaths, detainees with terminal illness, or detainees with advance directives within the last 12 months.

Other Observations

This FMC site visit was conducted on March 20-23, 2018. The audit consisted of a review of over 80 medical charts, sick call log, staff training binder, staff credential folders, the policy and procedure manual, and facility clinical protocols. The vast majority of medical charts reviewed were either active charts or charts of recently released detainees. Older medical charts were not accessible because they are not maintained on-site at the facility. At the current time, the facility moves any inactive ICE charts to STDC, IHSC facility, within a week due to lack of on-site storage space.

Facility Data:
Rio Grande Detention Center (RGDC) is a non-dedicated contracted detention facility located in Laredo, Texas. It is owned and operated by GEO Corporation. The facility houses a combination of US Marshal (USM) male and female prisoners and male ICE detainees. The facility consists of eight housing units, two of which are dedicated to ICE detainees.

Population Characteristics:
Total Inmate Capacity- 1900 (636 ICE detainees and 1113 US Marshal prisoners)
-Current total population-1749
---ICE - 636
---USM - 1113 (54 females, 1059 males)
-Average Daily ICE Population for the last six months- 577
-The average ICE detainee stay is 14 days

--ACCREDITATIONS/INSPECTIONS:
-PBNDS 2008 (Nakamoto)- March 2018
-NCCHC - last completed in June 2017
-ACA- April 2016

AMERICAN OVERSIGHT

--MEDICAL CLINIC/INFIRMARY:
-The medical clinic is spacious with a large centralized nurse's station. There are three exam rooms, a dental suite, a dental procedure room with panoramic x-ray, a locked pharmacy, a locked medical records room and an urgent care suite.
-The urgent care suite has an emergency bag, a gurney, two AEDs, tank oxygen, portable suction, and an electrocardiogram. Emergency equipment is checked daily by the nursing staff.
-Connected to the medical clinic is a 15 bed infirmary. There are two negative pressure rooms and four mental health rooms with cameras.
-There are two suicide observation rooms located in the medical infirmary. The rooms have been modified to accommodate suicidal detainees and all potential harmful objects have been removed.

--MEDICAL STAFFING:
(b)(7)(E)

-The physician, LPCs and Nurse Practitioner all take call. The HSA reports that she calls LPCs in on the weekend as needed when appropriate for patient care needs.
-Staffing policy reviewed during the site visit; the policy was last reviewed by the facility in December 2017. The HSA reported participation in a quarterly meeting to discuss staffing needs. (b)(7)(E)
(b)(7)(E)
(b)(7)(E)

OTHER SUPPLEMENT INFO:

AMERICAN OVERSIGHT

-All (100%) staff credential folders were reviewed. All folders were found to be in good order and well organized. All had current credentials that were from the State of Texas and a current Basic Life Support (BLS) card.
-The remaining RGDC Policy and Procedure Manual was reviewed. All policies reviewed were found to be consistent with PBNDS 2008 standards. The policies and procedures were last reviewed in December 1, 2017.
-A training folder is maintained on all medical staff. Medical staff receive appropriate training for their position and have competencies documented annually. Staff also receives annual training on several topics including suicide prevention and intervention, hunger strikes and PREA. Training folders were found to be well organized and up to date. The Registered Nurse who completes History and Physicals has documentation of training in his folder.

AMERICAN OVERSIGHT

Deficiencies for Areas Evaluated

--PBNDS 2008 DEFICIENCIES:
-No findings noted.

--QUALITY OF CARE ISSUES:
-10% of the charts audited noted that earlier intervention could possibly have prevented deterioration to the point of need for suicide watch. (Repeat Finding)
-10% of detainees did not receive a timely and appropriate evaluation by nursing staff within 72 hours. (Repeat Finding)
-One detainee had medications that were not ordered in less than 24 hours from completion of the intake. (Repeat Finding)
-In 10% of cases, the period of time from medication order to first dose exceeded 24 hours. (Repeat Finding)
-Two disabilities was not prominently displayed in the medical file. (Repeat Finding)
-Two diabetic detainee did not have his blood sugar taken during the intake process. (Repeat Finding)
-0% of labs (HgAIC or lipids)were drawn per the doctor's orders.
-40% of routine labs had a report back that was acknowledged within seven days. (Repeat Finding)
-50% of charts with labs did not have an appropriate clinical response, a report back within 24 hours, clinical acknowledgment.(Repeat Finding)
-60% of the patients advised of laboratory results.(Repeat Finding)
-60% of charts did not have a documented time urgency included on the order for specialty care or diagnostic services.(Repeat Finding)
-44% of charts demonstrated that the specialty appointment was accomplished within 45 days of the order.(Repeat Finding)
-25% of detainees were not re-evaluated for deterioration.
-One chart revealed intake blood pressures that had systolic blood pressure greater than 140 or a diastolic pressure greater than 90 that included a treatment plan initiated within 14 days of identifications. (Repeat Finding)
-80% of cases, the nursing staff did not follow the doctor's orders to aid with following the chronic care guidelines for HTN patients. (Repeat Finding)
-The CD4+ and viral load was not completed within 14 days on an HIV patient.
-HIV detainee was not seen by HIV or ID Specialist within 30 days.
-Chest x-ray was not completed in 72 hours on one HIV detainee; it was completed eight days after intake.

AMERICAN OVERSIGHT

Suicide Screening

POLICIES REVIEWED: Policy G-05 (Essential) "Suicide Prevention Program" is compliant with PBNDS 2008.

RGDC performs suicide screening on all detainees that enter the facility. During the medical intake, all detainees are asked about current suicidal ideation and past suicide attempts.

In the past six months there have been 20 detainees on suicide watch. Five charts were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose as other charts were already moved to off-site location.
-10 of 10 (100%) suicidal patients were evaluated by the physician within 24 hours of identification. The HSA reports that she is able to call in the mental health professionals as needed on the weekend.
-10 of 10 (100%) were evaluated by a qualified mental health professional every day during the work week (Monday - Friday) and by a nurse on the weekend.
-10 of 10 (100%) of charts demonstrated that during the entirety of the suicide watch the detainees were monitored continuously by a detention officer who documented every 15 minutes. The documentation of the medical checks are in the record.
-1 of 10 (10%) of the chart audits noted that earlier intervention could possibly have prevented deterioration to the point of need for suicide watch. The detainee had a history of mental health and reported taking psychiatric medications. He went on suicide watch three days after admission to the facility. An appointment was scheduled with the psychiatrist seven days after his admission and the clinic was canceled. The detainee was seen by the psychiatrist thirteen days after admission and ten days after going on suicide watch.

FINDINGS
-10% of the charts audited noted that earlier intervention could possibly have prevented deterioration to the point of need for suicide watch.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

PREVIOUS FINDINGS (August 2017):
-60% suicidal patients were not evaluated within 24 hours of identification.
-20% of the charts audited noted that earlier intervention could possibly have prevented deterioration to the point of need for suicide watch.

Health Assessment

POLICIES REVIEWED: Policy E-04 (Essential) "Initial Health Assessment" is compliant with PBNDS 2008.

Twenty charts were reviewed using the IHSC Quality of Care Audit Tool.
-20 of 20 (100%) had an initial intake screening within 12 hours of booking.
-20 of 20 (100%) had a PPD placed during the initial intake screening and was read within 48-72 hours.
-20 of 20 (100%) received timely follow-up for significant findings of acute or chronic conditions.
-20 of 20 (100%) received timely follow-up for significant findings of acute or chronic

AMERICAN OVERSIGHT

conditions.
-20 of 20 (100%) had a complete health evaluation completed within the first 14 days.

-At the time of this audit, health appraisals are completed by the physician, NP or (b)(7)(E) trained RN.

PREVIOUS FINDINGS (August 2017): One health appraisals were performed greater than 14 days after arrival to the facility. (Medical Care) (V) (J)

Urgent Care (Sick Call)

POLICIES REVIEWED: Policy E-07 (essential) "Non-Emergency Health Care Requests and Services" is compliant with PBNDS 2008.

According to RGDC nursing staff, the sick call process is initiated by a detainee filling out a paper sick call request. Slips are picked up daily and triaged by the nursing staff. Non-urgent requests are seen by nurses who use clinical protocols and document sick call encounters on standard forms called problem-oriented records, which are available for a large number of medical complaints. Per RGDC policy, all oral and written requests for health care will be triaged within 24 hours by a qualified health care professional. When indicated, the patient will be seen by a qualified health care professional at the next available sick call or clinician's clinic, usually within 24 hours (or up to 72 hours on weekends or holidays).

Ten urgent/sick call encounters were reviewed using the IHSC Quality of Care Audit Tool used to evaluate this area.

-9 of 10 (100%) had a timely and appropriate evaluation by nursing staff (seen within 72 hours). The detainee was seen within five days.
-10 of 10 (100%) encounters demonstrated that care was delivered within the scope of the nurse's license.
-10 of 10 (100%) of sick call encounters had vital signs documented during the nurse's assessment.
-3 of 3 (100%) had a nursing referral to a medical provider within 24 hours when appropriate.
-3 of 3 (100%) of detainees referred to a medical provider had the assessment and plan documented within the note.

FINDINGS
-10% of detainees did not receive a timely and appropriate evaluation by nursing staff within 72 hours.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

PREVIOUS FINDINGS (August 2017):
-20% of detainees did not receive a timely and appropriate evaluation by nursing staff within 72 hours.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

POLICIES REVIEWED: Policy E-08 (Essential) "Emergency Services" is complaint with PBNDS 2008.

Seven charts were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose as other charts were already moved to off-site location.

-7 of 7 (100%) had an outbound progress note.
-0 of 7 (100%) showed evidence that earlier intervention might have prevented deterioration to the point of needing ED/hospital care.
-7 of 7 (100%) had discharge documentation from the hospital and an inbound assessment.
-7 of 7 (100%) had inbound assessments.
-7 of 7 (100%) demonstrated that the hospital's recommendations were acknowledged and carried out.

AMERICAN OVERSIGHT

PREVIOUS FINDINGS (August 2017):
-During the time of this site visit, the HSA was unable to show the evidence as indicated in the December 2016 UCAP.

Medication Administration Practices

POLICIES REVIEWED: Policy D-01 (Essential) "Pharmaceutical Operations" and Policy D-02 (Essential)"Medication Services" are compliant with PBNDS 2008.

RGDC contracts with Correct RX for pharmaceutical services. Orders are placed on a daily basis and as needed. Medication ordered prior to 3 PM are received on the next day.
Ten medication administration records (MARs) were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

-RGDC policy specifies that a patient should be referred to the responsible physician after three refusals of any medication. Policy also indicates that when certain high risk medications (i.e., antiepileptics, antibiotics, anticoagulants, antihypertensives, anti-retrovirals/HIV, cardiac medications, hypoglycemic medications, pulmonary medications, or psychotrophic medications) are refused for three or more doses that a mental health referral also be completed.
-There were no MARs that showed consecutive refusals, blanks or no shows.
-Approximately 80% of patients are on self-administered medication ordered by a provider.
-There were no records with missing MARs from the previous month.
-Over the Counter (OTC) medications are provided by both medical and can be purchased at the commissary.
-At this site visit, active charts and inactive charts were reviewed.

PREVIOUS FINDINGS (August 2017):
-During the time of the site visit, HSA was unable to show evidence that QA monitoring or staff education had been does as indicated in the December 2016 UCAP.
-One MAR noted consecutive refusals of an antibiotic from a detainee. There was no documentation of the reason for the refusal and no documentation of a response from the clinician.
-Two records were missing MARs that needed to be filed; the missing MARs were from the previous month.

AMERICAN OVERSIGHT

Continuity of Medication

POLICIES REVIEWED: Policy E-12 (Essential) "Continuity of Care During Incarceration" is compliant with PBNDS 2008.

When a detainee arrives to the facility with chronic medications the intake nurse calls the on-call provider for orders/instructions. After reviewing the medication, the provider will provide a telephone order to continue the medication, if indicated. The medication is continued until the physical exam, at which time it is reordered as necessary.

Ten charts were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-9 of 10 (90%) charts showed that medications were ordered in less than 24 hours from completion of the intake. The one chart showed that the order for the medication was entered 13 days after admission. HSA reports that detainees with mental health histories have to wait to see the LPC before they see the psychiatrist in their current process.
-In 9 of 10 (90%) cases, the period of time from order to first dose was less than 24 hours.

FINDINGS:
-One detainee had medications that were not ordered in less than 24 hours from completion of the intake.
-In 10% of cases, the period of time from medication order to first dose exceeded 24 hours.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

PREVIOUS FINDINGS (August 2017):
-One detainee had medications that were not ordered in less than 24 hours from completion of the intake.
-In 20% of cases, the period of time from medication order to first dose exceeded 24 hours.

Mental Health Screen

POLICIES REVIEWED: Policy E-05 (Important) "Mental Health Screening and evaluation (MH Services Provided)" is compliant with PBNDS 2008.

All detainees are screened for mental illness as part of the medical intake. There are several questions that address mental illness including questions that specifically refer to suicide.

Ten charts were reviewed using the IHSC Quality of Care Audit Tool.
-10 of 10 (100%) with positive screens for mental illness were evaluated by a mental health professional in a timely manner. In the majority of cases, the evaluation occurred on the following clinic day.

PREVIOUS FINDINGS (August 2017): No findings noted.

Medical Recordkeeping Practices

POLICIES REVIEWED: Policy H-01 (Essential) "Health Record Format and Contents" is compliant with PBNDS 2008.

All charting at Rio Grande Detention Center is done on paper. Medical records are kept in a locked room to which only medical personnel have access to. At the current time, there are no plans to obtain an electronic medical record.

Ten charts were reviewed using the IHSC Quality of Care Tool. Charts were found to be complete and orderly.

Incidental finding/observation: MedPARs are not being submitted timely.

PREVIOUS FINDINGS (February 2017): No findings noted.

AMERICAN OVERSIGHT

Pregnant Women

Rio Grande Detention Facility only houses male ICE detainees.

Dental Care

POLICIES REVIEWED: Policy E-06 (Essential) "Oral Care" is compliant with PBNDS 2008.

The vacancy for a dentist and a dental assistant was filled after the last site visit; there is a current vacancy for a part-time dentist. The outlined process includes the detainees being screened by the dentist within the first 14 days of detention. Other dental services are normally requested through a sick call request. The dentist evaluates the patient the following working day and decided if treatment is appropriate.

Ten charts were reviewed using the IHSC Quality of Care Audit Tool.
-10 of 10 (100%) were screened for symptoms during the intake process.
-10 of 10 (100%) were evaluated by a qualified health professional within 48 hours of request.
-10 of 10 (100%) dental notes reviewed described findings, diagnosis, treatment and plans.
-10 of 10 (100%) were scheduled for follow-up treatment as recommended.

PREVIOUS FINDINGS (August 2017):
-33% of dental cases were not evaluated by qualified health professional within 48 hours of request.
-One dental note did not describe findings, diagnosis, treatment and plans.
-75% of detainees were not scheduled for follow-up dental treatment.

AMERICAN OVERSIGHT

Acute Laboratory Testing

POLICIES REVIEWED: Policy D-04 (Important) "Diagnostic Services" is compliant with PBNDS 2008. Labcorp is contracted to pick up and process the labs collected at the facility. For STAT labs, Laredo Medical Center is utilized.

Ten charts were reviewed. The IHSC Quality of Care Tool was used to evaluate these records.

-4 of 10 (40%) had blood drawn within one business day of ordered date.
-5 of 10 (50%) had report back within 24 hours, as appropriate, for acute labs or within seven days for routine labs. Some of the labs for chronic care patients (diabetic, HTN, gout, thyroid, HIV detainees) that the physician order were not completed and the results were not in the chart. When the FMC checked, MedPARs were not entered for the labs.
-5 of 10 (50%) charts had clinical acknowledgment.
-5 of 10 (50%) charts had an appropriate clinical response.
-3 of 5 (60%) of the patients were advised of laboratory results.

FINDINGS:
-40% were routine labs and had a report back and acknowledged within seven days.
-50% of charts with labs did not have an appropriate clinical response, a report back within 24 hours, clinical acknowledgment.
-60% of the patients advised of laboratory results.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

PREVIOUS FINDINGS (August 2017):
-67% of routine labs did not have a report back and acknowledged within seven days. No time urgency noted on labs.
-10% of charts with labs did not have an appropriate clinical response, a report back within 24 hours, clinical acknowledgment, and patients advised of laboratory results.

Diagnostic Services and Specialty Care Access

POLICIES REVIEWED: Policy D-05 (Important) "Hospital and Specialty Care" is compliant with PBNDS 2008.

Ten charts were available for the review using the IHSC Quality of Care Tool.

-4 of 10 (40%) had a documented time urgency included on the order for specialty care or diagnostic services.
-5 of 9 (56%) charts demonstrated that the appointment was accomplished within 45 days of the order. An opthalmology appointment was completed over 50 days after it was ordered. There was no consistency in the completion of the ordered EKGs; some were not done at all and others were completed between nine and over 45 days after the order was entered.
-3 of 4 (75%) detainees were re-evaluated for deterioration.
-8 of 8 (100%) of charts reflect the facility clinician acknowledgment of the specialist's report in the medical record within seven days of the date the service was performed.

FINDINGS:
-60% of charts did not have a documented time urgency included on the order for specialty care or diagnostic services.
-44% of charts demonstrated that the appointment was accomplished within 45 days of the order.
-25% of detainees were not re-evaluated for deterioration.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

PREVIOUS FINDINGS (August 2017):
-During the current site visit, the evidence of the QA monitoring was not available.
-75% of charts did not have a documented time urgency included on the order for specialty care or diagnostic services.

AMERICAN OVERSIGHT

-One detainee did not receive a specialty appointment within ordered time frame.

Mental Health Treatment Planning

POLICIES REVIEWED: Policy E-05 (Important) "Mental Health Screening and Evaluation (MH Services Provided)" is compliant with PBNDS 2008.

Detainees are screened for potential mental health problems to include suicide risk and sexual/physical abuse history during the intake process. Detainees who screen positive are referred to a mental health provider (LPC) and are generally seen on the next day.

Ten records were reviewed using the IHSC Quality of Care Tool.
-10 of 10 (100%) had a clinical assessment, treatment and follow-up plan documented.
-10 of 10 (100%) patients reviewed had a treatment plan updated at a minimum of every 90 days.

PREVIOUS FINDINGS (August 2017):
-One of the detainees did not receive a documented mental health clinical assessment, treatment and follow-up plan.

Treatment of Disability

POLICIES REVIEWED: POLICY G-02 (Essential) "Patients with Special Health Needs";Policy G-10 "Aids to Impairment" is compliant with PBNDS 2008.

All dorms in RGDC are wheelchair accessible. The facility has a TTY phone available. The facility also has walkers, wheelchairs and canes available.

At the time of this audit, there was only two detainees with documented disabilities. These records were reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.
-The facility maintains a list of all patients with disabilities.
-0 of 2 (0%) had the disability prominently displayed in the medical file. There was a detainee deaf/mute detainee and a detainee who was an amputee; the disability was documented in the record, but not prominently displayed. HSA reported that the physician normally noted the disability on the problem list during the first visit.
-2 of 2 (100%) detainees were assessed for assistance with activities of daily living (ADL) upon identification of disability and appropriate accommodation orders were entered.

FINDINGS:
-Two disabilities was not prominently displayed in the medical file.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

PREVIOUS FINDINGS (August 2017):
-One disability was not prominently displayed in the medical file.

Complaints and Grievances

POLICIES REVIEWED: Policy A-11 (Essential) "Grievance Mechanism for Health Complaints" is complaint with PBNDS 2008.

Per HSA, all dorms have access to grievance forms and a drop box labeled for this purpose. The grievance officers picks them up and reviews them daily. All medical grievances are placed in the HSA's mailbox. The HSA is then responsible for answering all medical grievances.

During the site visit, FMC reviewed the Detainee Grievance Log using the IHSC Quality of Care Audit Tool. The review of the log does not show any possible barriers to care or repetitive concerns that could affect clinical care. There were no medical grievances submitted over the past three months.

AMERICAN OVERSIGHT

PREVIOUS FINDINGS (August 2017):
-At the time of this audit, there were no grievances.

AMERICAN OVERSIGHT

Diabetes

POLICIES REVIEWED: Policy G-01 (Essential) "Chronic Disease Services" is complaint with PBNDS 2008.

Five diabetic medical records were reviewed using the IHSC Quality of Care Tool designed for this purpose; no other charts were available for reasons specified earlier in the report.

-RGDC uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of diabetes.

-3 of 5 (60%) had a blood sugar measured at intake. HSA noted that these intakes were completed by a new nurse.
-5 of 5 (100%) were seen for chronic care by a medical provider within 14 days.
-0 of 5 (0%) had a baseline HgA1C performed within the first 30 days. One chart's documentation showed evidence of a diabetic detainee being unresponsive and a code being called in the facility. His blood sugar was over 500. The physician ordered STAT labs that were never drawn; there was other labs that the physician ordered on the initial visit that was never drawn by the nursing staff and was not entered in MedPAR.
-0 of 5 (0%) had lipids measured within one year.
-5 of 5 (100%) were prescribed aspirin as clinically indicated.
-0 of 5 (0%) charts demonstrated a degree of control (goal GgbA1C<8.0) documented.
-0 of 5 (0%) charts demonstrated a strategy to attain diabetes control documented in HgbA3C above the goal.

FINDINGS:
-Two diabetic detainees did not have their blood sugar taken during the intake process.
-The physician ordered labs on all of the diabetic detainees. The nursing staff did not draw labs (HgAIC or lipids) per the doctor's orders.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

PREVIOUS FINDINGS (August 2017):
-One diabetic detainee did not have his blood sugar taken during the intake process.

Human Immunodeficiency Virus (HIV)

At the time of this audit, RGDC had one ICE detainees documented as having HIV and because only active charts are maintained on site, there was only one file to review. For this reason, the IHSC Quality of Care Audit Tool designed for this purpose was used for one chart.

-Rio Grande Detention Center uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of HIV.

-The HIV status was identified by patient interview.
-The CD4+ and viral load was not completed within 14 days.
-Detainee was not seen by HIV or ID Specialist within 30 days.
-Antiviral treatment was considered and documented.
-Chest x-ray was not completed in 72 hours; it was completed eight days after intake.

PREVIOUS FINDINGS (August 2017): No findings.

Hypertension

Ten charts of hypertensive detainees were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.

AMERICAN OVERSIGHT

-RGDC uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of hypertension.
-10 of 10 (100%) had a documented blood pressure on the medical intake.
-10 of 10 (100%) detainees were seen by a medical provider within the first 14 days at the facility.
-9 of 10 (90%) revealed intake blood pressures that had systolic blood pressure greater than 140 or a diastolic pressure greater than 90 that included a treatment plan initiated within 14 days of identifications. On several charts, the nurse did not document if the hypertensive patient was symptomatic. One chart showed that blood pressure checks were not completed as ordered.
-2 of 10 (20%) cases, it appeared that a chronic disease guideline for HTN, which included obtaining baseline lab work, was followed. The physician ordered the labs according to the chronic disease guideline, but the nurses did not follow the doctor's orders. There was no consistency in the completion of lab orders. Some labs were not completed and other labs were completed up to 35 days after it was ordered. EKGs on HTN detainees were not completed in a timely manner; see findings in the diagnostic section of the report. Only one chart showed that the blood pressure checks were not ordered by the physician.

FINDINGS:
-One chart revealed intake blood pressures that had systolic blood pressure greater than 140 or a diastolic pressure greater than 90 that did not include includ a treatment plan initiated within 14 days of identifications.
-80% of cases, the nursing staff did not follow the doctor's orders to aid with following the chronic care guidelines for HTN patients.
-HSA presented proof of training completed with medical staff on February 28, 2018. Q&A Nurse is currently following this area under a Corrective Action plan until 12 May 2018.

PREVIOUS FINDINGS (August 2017):
-There was no consistency with blood pressure monitoring on detainees who had a history of HTN and presented with a high systolic blood pressure during intake.
-There was one chart that included a blood pressure check flowsheet on a detainee who was hypertensive, but the blood pressures where consistently high and there was no treatment plan identified for this patient (i.e. no change of medication). This chart had no time urgency noted on labs and there was no chronic care appointments or notes present in the chart for this patient.
-One patient received continuity of care with medications on intake, but labs were ordered over 45 days later.

Asthma

Five charts of asthma patients were reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.
-RGDC uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of asthma.
-5 of 5 (100%) were seen for chronic care by a medical provider within 14 days of illness identification.
-5 of 5 (100%) had a peak flow measurement completed during the initial physical exam.
-5 of 5 (100%) had a peak flow completed at the chronic care visit or within the last three months.
-5 of 5 (100%) showed disease management consistent with BOP clinical practice guidelines.

PREVIOUS FINDINGS (August 2017):
-At the time of this audit, the HSA was not able to show evidence of QA monitoring or staff education as indicated in the December 2016 UCAP.
-One detainee did not have a peak flow measurement completed during the initial physical exam.

AMERICAN OVERSIGHT

Seizure Disorder

At the time of this audit, RGDC had no ICE detainees documented as having seizures and because only active charts are maintained on site, there were no files to review. For this reason, the IHSC Quality of Care Audit Tool designed for this purpose was not used.

-RGDC uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of seizures.

PREVIOUS FINDINGS (August 2017):
-The HSA was unable to show evidence that QA monitoring or staff education was done as indicated in December 2016 UCAP.
-The chart available for review showed that serum drug levels were not obtained on the detainee who was taking anti-convulsant medications. There were documented refusals in the chart for the medication and the patient was later admitted to the ER where serum levels were taken at that time.
-This detainee did not have a documented treatment plan.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

The HSA, Q&A Nurse, (b)(6); (b)(7)(C) CCS, and the Warden were notified of all findings/ deficiencies during the close-out interview. HSA stated that she had a plan to have the new CMA to aid with MedPARs, the new DON and some additional staff. HSA and Q&A Nurse began discussion of processes to put in place for the labs, EKGs and other diagnostic tests prior to FMC leaving the site visit. HSA and QA nurse implemented plan to have chest x-ray and consult for ID specialist done upon intake for HIV detainees. HSA reported changing the process and emailed the nurses and instructed them to write disabilities on the problem list during intake. Sent a close out summary of findings, recommendation and HSA plans to Laredo AFOD, CORs, SNA DFOD and SNA FOD.

Instructions for the Corrective Plan of Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the findings identified in the ICE Health Service Corps Field Medical Coordinator (FMC) review. Please ensure that each stated corrective plan of action addresses the noted health care findings to the fullest extent possible, and that it incorporates the recommendations. In the event a corrective action cannot be implemented within the authorized timeline, please include an explanation in the "Corrective Plan of Action" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date. If an extension is needed, the facility must contact the FMC with this request in advance of the specified timelines for submission.

Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.

DIAGNOSTIC SERVICES AND SPECIALTY CARE ACCESS

DATE 02/22/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Rio Grande Detention Center

Purpose: To assess timeliness of off-site diagnostic services and specialty care.

Source: Referrals log, medical records or MedPars

Sample: 10 specialty patients chosen by acuity or risk of harm if access is delayed, particularly in specialties where timely access has been a problem for detainees in this facility.

Item # Measure

1 Was there a documented time urgency included on the order for specialty care or diagnostic services?
2 Was the appointment accomplished within 45 days of the order or within the ordered timeframe, e.g., "return in 90 days"?
3 Was the patient re-evaluated for deterioration every 30 days until off-site service completed?
4 Did the facility clinician acknowledge the specialist's report in the medical record within 7 days of the date the service was performed?

EVALUATION OF CARE PRIOR TO EMERGENCY DEPARTMENT/HOSPITAL VISIT FOR CONDITIONS SENSITIVE TO AMBULATORY CARE

DATE 2/22/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Rio Grande Detention Center

Purpose: To determine whether earlier intervention might have prevented morbidity and cost of outside care. To measure continuity and coordination of care for inbound patients.

Source: Emergency Department (ED) logs.

Sample: Within the past 6 months, 10 patients sent to ED with ambulatory sensitive conditions, such as seizure, alcohol and/or substance withdrawal, skin or deep tissue infections, DKA, abdominal pain, or chest pain.

Item #	Measure
1	Is there an outbound progress note?
2	*Is there evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care? If yes, please describe in the narrative portion of the report.
3	Is there discharge documentation from the hospital or ED in the chart?
4	Is there an inbound assessment?
5	Does the assessment reflect hospital findings and concurrence or deviation from hospital recommendations?

HEALTH ASSESSMENT

DATE 2/22/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Rio Grande Detention Center

Purpose: To determine compliance with detention standards to assure continuity and coordination of care for serious medical needs.

Source: Detainees arriving during recent period, at least 2 weeks prior to review, to allow for evaluation of timely follow-up.

Sample: 20 medical records chosen at random.

Item # Measure

1 Initial screen complete within 12 hours of booking?

2 PPD placed during medical screening and read within 48-72 hours, or chest x-ray is taken, or if PPD is positive by history, chest x-ray is ordered and read?

3 Are detainees who screen positive for mental illness or suicide risk referred for evaluation?

4 Is there timely follow-up for significant findings of acute and chronic conditions?*

5 Is there a complete health evaluation? Vital signs, adequate medical and behavioral health history, physical examination by licensed MD/PA/NP/RN within 14 days of booking? Patients with HIV, diabetes, dialysis, asthma (on daily meds), and other chronic illness will be seen within 48 hours or addressed by phone and seen on the next business day.

MEDICATION ADMINISTRATION PRACTICES

DATE 2/22/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Rio Grande Detention Center

Purpose: To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.

Source: MARS.

Sample: MAR and medical record for 10 patients. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.

1 Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up? YES
2 Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs? 0
3 In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month? 1
4 Estimate the percentage of patients on self-administered medication ordered by a provider. 75%
5 OTCs provided by medical, commissary or both? Both

Item # Measure

1 What is the number of refusals and/or no shows during the previous month for each patient?
2 Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?
3 Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

SUICIDE SCREENING

DATE 2/22/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Rio Grande Detention Center

Purpose: To assess conformance with nationally-accepted guidelines for suicide risk assessment and prevention.

Source: Patients on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review.

Sample: Medical records for 10 patients placed on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review.

1 What is the total number of patients placed on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review? 5

2 Does the facility use an acceptable suicide risk management screening instrument, including at a minimum, asking for a history of suicide attempts and for current suicidal ideation? ☑ Yes ☐ No

3 Are all screeners and all staff in direct contact with detainees trained to assess suicide risk (see training logs)? ☑ Yes ☐ No

Item # Measure

1 Was the suicidal patient evaluated by a mental health professional within 24 hours of identification (unless the situation was emergent in which case the evaluation should be immediate)?

2 Was the patient evaluated by a qualified mental health professional daily while on suicide watch?

3 What type of monitoring was practiced while the patient was on suicide watch?

4 Were checks documented consistently?

5 Is there evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch? If yes, please describe.

FACILITY REVIEWED: Rio Grande Detention Center

Purpose: To assess the care of patients with disabilities who need accommodations to access the facility's programs or activities as a result of their disabilities.

An individual is considered to have a "disability" if s/he has a physical or mental impairment that substantially limits one or more major life activities, or has a record of such impairment.
See also: https://www.dhs.gov/sites/default/files/publications/guide-interacting-with-people-who-have-disabilties_09-26-13.pdf

Sources: Facility logs, tour of facility, list of patients who require DME (to include walkers, canes, wheel chairs, hearing aids, or other items to assist the patients to access the facility's programs and activities), and interviews with patients with disabilities who need accommodations to access the facility's programs and activities.

Sample: 10 patients within the population who have a disability that requires medical involvement. Determine if the patients with disabilities received appropriate treatment and disability accommodations through medical record examination. Mark as "Y" for yes, "N" for no, and "N/A" for not applicable. Do not leave any area blank.

General Question: Does the facility maintain a current list of all patients with disabilities on site? yes

Item #	Measure
1	Is the disability prominently noted in the file, along with any needed accommodations?
2	Was the patient assessed for assistance with activities of daily living (ADL) upon identification of disability?
3	Were appropriate accommodation orders entered (e.g., lower bunk, mobility device (wheelchair, walker, canes, crutches), hearing aid, assistive listening device, sign language interpreter, meal, etc.)?
4	Was ADL assistance provided, if applicable?

AMERICAN OVERSIGHT

URGENT CARE (SICK CALL)

DATE 02/22/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Rio Grande Detention Center

Purpose: To assess for timely and appropriate nursing care for acute conditions.

Source: Urgent care log, sick call request list, or sick call visit list, preferably with reason for visit noted on log.

Sample: 10 urgent care visits for detainees with potentially serious complaints that occurred 1 to 3 weeks prior to review. Common potentially serious complaints include chest pain, abdominal pain, seizure, vomiting, skin infection, diabetic complications, etc.

Item # Measure

1 Was there timely and appropriate evaluation by nursing staff, depending on the nature of the complaint?
2 Was care delivered within the scope of the nurse's license?
3 Were vital signs documented during the nurse's assessment?
4 If necessary, was a nursing referral to an MD/PA/NP/DMD submitted within 24 hours where appropriate?
5 If referred, was an MD/PA/NP/DMD assessment and plan documented?

	A #	Chief Complaint	1	2	3	4	5

Medical Care

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

PBNDS 2008 deficiencies:
1) Several health appraisals were performed greater than 14 days after arrival to the facility (Medical Care)(V)(J).

2) Medical grievances are not tracked and logged in a Detainee Grievance Log (Grievance System)(V)(E).

PREVIOUS FINDINGS (July 2016): PBNDS 2008 deficiencies
1) HIV positive detainees did not routinely receive a CXR to rule out TB (Medical Care)(V)(C)
CURRENT FINDING: There were no HIV charts to review during this site visit.

2) There were several long-standing staff vacancies which included key leadership positions (Medical Care)(II)(29).
CURRENT FINDING: There are currently no longstanding vacancies and all leadership positions have been filled.

Chronic Care *Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.*

Total number with chronic conditions:	Total number with unstable chronic conditions:
40	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
No PBNDS 2008 deficiencies or previous deficiencies during July 2016 site visit.

AMERICAN OVERSIGHT

POLICIES REVIEWED: Policy G-01 (Essential) "Chronic Disease Services" is compliant with PBNDS 2008.

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

No PBNDS 2008 deficiencies or previous deficiencies during July 2016 site visit.

POLICIES REVIEWED: Policy I-05 (Important) "Informed Consent and Right to Refuse" is compliant with PBNDS 2008.

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
1	5

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
No PBNDS 2008 deficiencies or previous deficiencies during July 2016 site visit.

POLICIES REVIEWED: Policy G-05 (Essential) "Suicide Prevention Program" is compliant with PBNDS 2008.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
No PBNDS 2008 deficiencies or previous deficiencies during July 2016 site visit.

POLICIES REVIEWED: Policy A-10 (Essential) "Procedure in the Event of a Patient Death"; Policy G-11 (Important) "Care of the Terminally Ill"; Policy I-04 (Important) "End-of-Life Decision Making"

There have been no reported deaths, detainees with terminal illness, or detainees with advance directives within the last 12 months.

Other Observations

This FMC site visit was conducted on February 21-23, 2017. The audit consisted of a review of over 65 medical charts, sick call log, staff training binder, staff credential folders, the policy and procedure manual, and facility clinical protocols. The vast majority of medical charts reviewed were either active charts or charts of recently released detainees. Older medical charts were not accessible because they are not maintained on-site at the facility. At the current time, the facility moves any inactive ICE charts to another nearby GEO facility on a weekly basis due to a lack of on-site storage space.

--FACILITY DATA:
Rio Grande Detention Center (RGDC) is a non-dedicated contracted detention facility located in Laredo, Texas. It is owned and operated by GEO Corporation. The facility houses a combination of US Marshal (USM) male and female prisoners and male ICE detainees. The majority of ICE detainees are citizens of El Salvador pending deportation. The facility consists of eight housing units, two of which are dedicated to ICE detainees.

--POPULATION CHARACTERISTICS:
-Total Inmate Capacity - 1900 (672 ICE detainees and 1228 US Marshall prisoners)
-Current total population - 1621
 --ICE - 621
 --USM - 1000
-Average Daily ICE Population for 2016 - 478
-The average ICE detainee stay is 11.7 days

--ACCREDITATIONS/INSPECTIONS:
-PBNDS 2008 (Nakamoto) - March 2016
-NCCHC - last completed in September 2013/NCCHC is scheduled to visit May 22-24, 2017
-ACA - April 2016

MEDICAL CLINIC/INFIRMARY:
-The medical clinic is spacious with a large centralized nurse's station. There are three exam rooms, a dental suite, a dental procedure room with panoramic x-ray, a locked pharmacy, a locked medical records room, and an urgent care suite.
-The urgent care suite has an emergency bag, a gurney, 2 AEDs, tank oxygen, portable suction,

AMERICAN OVERSIGHT

and an electrocardiogram. Emergency equipment is checked daily by the nursing staff.
-Connected to the medical clinic is a 15 bed infirmary. There are two negative pressure rooms and four mental health rooms with cameras.
-There are 2 suicide observation rooms located in the medical infirmary. The rooms have been modified to accommodate suicidal detainees and all potential harmful objects have been removed.

--MEDICAL STAFFING:

(b)(7)(E)

OTHER SUPPLEMENTAL INFO:
-All (100%) staff credential folders were reviewed. All folders were found to be in good order and well organized. All had a current Basic Life Support (BLS) license and all credentials were current and from the State of Texas.
-The RGDC Policy and Procedure Manual was reviewed. All policies reviewed were found to be consistent with PBNDS 2008 standards. The policies and procedures were last reviewed in December 2016.
-A training folder is maintained on all medical staff. Medical staff receive appropriate training for their position and have competencies documented annually. Staff also receives annual training on several topics including suicide prevention and intervention, hunger strikes, and PREA. Training folders were found to be well organized and up to date.

Deficiencies for Areas Evaluated

--PBNDS 2008 DEFICIENCIES:
-60% of health appraisals reviewed were performed greater than 14 days after arrival.
-Medical grievances are not logged and tracked.

--QUALITY OF CARE ISSUES

AMERICAN OVERSIGHT

-50% of sick call encounters reviewed were seen greater than 72 hours from the date of triage.
-40% of the lab work reviewed by the FMC did not have an appropriate clinical response documented.
-80% of charts did not show documentation that the detainee was notified of lab results.
-Intake blood sugars were not consistently recorded on detainees claiming to have diabetes.
-Several detainees received delayed chronic care (greater than 14 days from arrival).
-Baseline HgA1C lab work is not being done within 30 days of arrival on diabetic detainees.
-Two hypertension charts reviewed were not seen for chronic care and care was not consistent with a clinical practice guideline. Lab work, EKG, blood pressure monitoring were not ordered.
-The neurological history completed on a seizure patient was inadequate. (REPEAT FINDING)
-A serum drug level was not ordered on a detainee taking anti-convulsant medication.

AMERICAN OVERSIGHT

Suicide Screening

POLICIES REVIEWED: Policy G-05 (Essential) "Suicide Prevention Program" is compliant with PBNDS 2008.

RGDC performs suicide screening on all detainees that enter the facility. During the medical intake, all detainees are asked about current suicidal ideation and past suicide attempts.

In the past six months there have been five detainees on suicide watch. One chart was reviewed using the IHSC Quality of Care Audit Tool designed for this purpose as other five were already moved to off-site location.
-1 of 1 (100%) suicidal patient was evaluated by the physician within 24 hours of identification.
-1 of 1 (100%) was evaluated by a qualified mental health professional every day during the work week (M-F) and by a nurse on weekend days.
-During the entirety of the suicide watch the patient was monitored continuously by a detention officer who documented every 15 minutes.
-In the one chart reviewed, there is no evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch.

PREVIOUS FINDINGS (July 2016): No findings noted.

Health Assessment

POLICIES REVIEWED: Policy E-04 (Essential) "Initial Health Assessment" is compliant with ICE PBNDS 2008.

Twenty charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-20 of 20 (100%) had an initial intake screening within 12 hours of booking.
-15 of 15 (100%) had a PPD placed during the initial intake screening and was read within 48-72 hours.
-17 of 17 (100%) received timely follow-up for significant findings of acute or chronic conditions.
-12 of 20 (60%) had a complete health evaluation completed within the first 14 days.

-At the time of this audit, all health appraisals are completed by either the NP or the physician. Generally the NP does all of the healthy physicals and the physician sees those with chronic medical conditions.

PREVIOUS FINDINGS (July 2016): No findings noted.

Urgent Care (Sick Call)

POLICIES REVIEWED: Policy E-07 (Essential) "Non-Emergency Health Care Requests and Services" is compliant with PBNDS 2008.

According to the HSA, the sick call process is initiated by a detainee filling out a paper sick call request. Slips are picked up daily and triaged by the nursing staff. Non-urgent requests are seen by nurses who use clinical protocols and document sick call encounters on standard forms called problem-oriented records, which are available for a large number of medical complaints. Per RGDC policy, all oral or written requests for health care will be triaged within 24 hours by a qualified health care professional. When indicated, the patient will be seen by a qualified health care professional at the next available sick call or clinician's clinic, usually within 24 hours (or up to 72 hours on weekends or holidays).

Ten urgent/sick call encounters were reviewed using the IHSC Quality of Care Audit Tool used to evaluate this area.
-5 of 10 (50%) had a timely and appropriate evaluation by nursing staff (seen within 72 hours).
-10 of 10 (100%) encounters demonstrated that care was delivered within the scope of the

AMERICAN OVERSIGHT

nurse's license.
-10 of 10 (100%) of sick call encounters had vital signs documented during the nurse's assessment.
-2 of 2 (100%) had a nursing referral to a medical provider within 24 hours when appropriate.
-2 of 2 (100%) referred to a medical provider had the assessment and plan documented within the note.

According to the HSA, the facility averages around 100 sick call requests daily. On most days, two nurses are assigned to completing sick call. In addition to completing sick call encounters, the same nurses are also responsible for medication pass and completing any provider ordered treatments or procedures (blood pressure checks, blood sugar checks, PPD reads, and wound care).

PREVIOUS FINDINGS (July 2016): No findings noted.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

POLICIES REVIEWED: Policy E-08 (Essential) "Emergency Services" is compliant with PBNDS 2008.

In the past six months, 16 detainees have been sent to an emergency department. There was only one chart available for review during this audit. This chart was reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-1 of 1 (100%) had an outbound progress note.
-0 of 1 (100%) showed evidence that earlier intervention might have prevented deterioration to the point of needing ED/hospital care.
-1 of 1 (100%)had discharge documentation from the hospital and an inbound assessment. There was no evidence to suggest that earlier intervention could have prevented deterioration to the point of needing outside emergency care. In the one chart reviewed, the hospital's recommendations were acknowledged and carried out.

PREVIOUS FINDING (July 2016): Complete hospital records were not found in the charts of detainees who had been sent to the hospital. A UCAP was submitted to the FMC in December 2016 which indicated that RGDC staff would receive training on this subject and that monitoring of compliance would be done through their Quality Assurance (QA) program.
During this site visit, hospital records were found within the one chart reviewed. At the time of this audit, the HSA was unable to show evidence that QA monitoring or staff education had been done as indicated in the December 2016 UCAP. The FMC will continue to follow-up with the HSA.

Medication Administration Practices

POLICIES REVIEWED: Policy D-01 (Essential) "Pharmaceutical Operations" and Policy D-02 (Essential) "Medication Services" are compliant with PBNDS 2008.

RGDC contracts with Correct RX for pharmaceutical services. Orders are placed on a daily basis and as needed. Medication ordered prior to 3 PM are received the next day.

Ten medication administration records (MARs) were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-RGDC policy specifies that a patient should be referred to the responsible physician after three refusals of any medication. Policy also indicates that when certain high risk medications (i.e., antiepileptics, antibiotics, anticoagulants, antihypertensives, anti-retrovirals/HIV, cardiac medications, hypoglycemic medications, pulmonary medications, or psychotropic medications) are refused for 3 or more doses that a mental health referral also be completed.
-10% of the MARs reviewed contained blanks, consecutive refusals, or no shows. In every case a refusal form was completed.
-The only MARs found pending to be filed were from the previous month.
-Approximately 75% of patients are on self-administered medication ordered by a provider.
-Over the Counter (OTC) medications are provided by both medical and can be purchased at the commissary.

AMERICAN OVERSIGHT

-Only one of the MARs reviewed had refusals documented and none contained no-shows. A refusal form was completed on all refusals.

PREVIOUS FINDING (July 2016): MARs were not filed into the appropriate medical record upon discharge from the facility. A UCAP was submitted to the FMC in December 2016 which indicated that staff training would be done and TDY staff would be used to catch up backlog. The UCAP also specified that monitoring of compliance would be done through their Quality Assurance (QA) program.
At this site visit it was noted that the vast majority of records reviewed were active charts; however, all inactive charts reviewed contained a MAR. At the time of this audit, the HSA was unable to show evidence that QA monitoring or staff education had been done as indicated in the December 2016 UCAP. The FMC will continue to follow-up with the HSA.

AMERICAN OVERSIGHT

Continuity of Medication

POLICIES REVIEWED: Policy E-12 (Essential) "Continuity of Care During Incarceration" is compliant with PBNDS 2008.

When a detainee arrives to the facility with chronic medications the intake nurse calls the on-call provider for orders/instructions. After reviewing the medication, the provider will provide a telephone order to continue the medication, if indicated. The medication is continued until the physical exam, at which time it is reordered as necessary.

Ten charts were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) charts showed that medications were ordered in less than 24 hours from completion of the intake.
-In 10 of 10 (100%) cases, the period of time from order to first dose was less than 24 hours.

PREVIOUS FINDINGS (July 2016): No findings noted.

Mental Health Screen

POLICIES REVIEWED: Policy E-05 (Important) "Mental Health Screening and Evaluation (MH Services Provided)" is compliant with PBNDS 2008.

All detainees are screened for mental illness as part of the medical intake. There are several questions that address mental illness including questions that specifically refer to suicide.

Four active charts selected from the mental health caseload were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-4 of 4 (100%) with positive screens for mental illness were evaluated by a mental health professional in a timely manner. In the majority of cases, the evaluation occurred on the following clinic day.

PREVIOUS FINDINGS (July 2016): No findings noted.

Medical Recordkeeping Practices

POLICIES REVIEWED: Policy H-01 (Essential) "Health Record Format and Contents" is compliant with PBNDS 2008.

All charting at Rio Grande Detention Center is done on paper. Medical records are kept in a locked room to which only medical personnel have access to. At the current time, there are no plans to obtain an electronic medical record.

Ten charts were reviewed using the IHSC Quality of Care Audit Tool. Charts were found to be complete and orderly.

PREVIOUS FINDINGS (July 2016): No findings noted.

Pregnant Women

Rio Grande Detention Facility only houses male ICE detainees.

AMERICAN OVERSIGHT

Dental Care

POLICIES REVIEWED: Policy E-06 (Essential) "Oral Care" is compliant with PBNDS 2008.

Rio Grande Detention Facility has (b)(7)(E) All detainees receive a dental screening by the dentist within the first 14 days of detention. Other dental services are normally requested through a sick call request. The dentist evaluates the patient the following working day and decides if treatment is appropriate. The treatment is then scheduled within one week.

Four active charts selected from the sick call log were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-4 of 4 (100%) were screened for symptoms during the intake process.
-4 of 4 (100%) were evaluated by a qualified health professional within 48 hours of the request.
-4 of 4 (100%) dental notes reviewed described findings, diagnosis, treatment, and plans.
-4 of 4 (100%) were scheduled for follow-up treatment as recommended.

PREVIOUS FINDINGS (July 2016): No findings noted.

AMERICAN OVERSIGHT

Acute Laboratory Testing

POLICIES REVIEWED: Policy D-04 (Important) "Diagnostic Services" is compliant with PBNDS 2008.

Labcorp is contracted to pick up and process the labs collected at the facility. For STAT labs, Laredo Medical Center is utilized.

None of the charts reviewed contained STAT or acute lab work orders; however, five contained completed routine lab work. The IHSC Quality of Care Tool was used to evaluate these records.

-5 of 5 (100%) were routine labs and had a report back and acknowledged within seven days.
-3 of 5 (60%) had an appropriate clinical response. There were two lab reports which contained abnormal labs. In both cases, the medical record did not contain an appropriate clinical response or corresponding notation from the reviewing physician.
-1 of 5 (20%) patient charts reviewed had documentation that the patient was advised of the lab results.

PREVIOUS FINDINGS (July 2016): No findings noted.

CURRENT FINDINGS:
1) 40% of lab work reviewed by the FMC did not have an appropriate clinical response.
2) 80% of charts did not show documentation that the detainee was notified of lab results.

Diagnostic Services and Specialty Care Access

POLICIES REVIEWED: Policy D-05 (Important) "Hospital and Specialty Care" is compliant with PBNDS 2008.

There were no charts available for review which contained diagnostic services or specialty care during this FMC audit and therefor the IHSC Quality of Care Tool was not used.

PREVIOUS FINDINGS (July 2016): A time urgency was not included in the majority of physician orders for outside referrals. A UCAP was submitted to the FMC in December 2016 which indicated that the CD had received training from the CCS Chief Medical Officer on outside medical referral utilization and processing. The UCAP specified that the time frame for outside medical referrals would be noted as either "Emergent", "Urgent", or "Routine". The UCAP also says that compliance will be monitored through the QA program.

CURRENT FINDINGS: There were no charts available for review. At the time of this audit, the HSA was unable to show evidence that QA monitoring has yet been done as indicated in the December 2016 UCAP. The FMC will continue to follow-up with the HSA.

Mental Health Treatment Planning

POLICIES REVIEWED: Policy E-05 (Important) "Mental Health Screening and Evaluation (MH Services Provided)" is compliant with PBNDS 2008.

Detainees are screened for potential mental health problems to include suicide risk and sexual/physical abuse history during the intake screening. Detainees who screen positive are referred to a mental health provider and are generally seen on the next day.

Eight records out of the active mental health case load were reviewed using the IHSC Quality of Care tool.
-8 of 8 (100%) had a clinical assessment, treatment, and follow-up plan documented.
-1 of 1 (100%) patient reviewed had a treatment plan updated at a minimum of every 90 days.
The other mental health notes reviewed were all initial referrals and new additions to the mental health caseload.

PREVIOUS FINDINGS (July 2016): No findings noted.

Treatment of Disability

POLICIES REVIEWED: Policy G-02 (Essential) "Patients with Special Health Needs"; Policy G-10

AMERICAN OVERSIGHT

"Aids to Impairment" is compliant with PBNDS 2008.

All dorms at RGDC are wheel chair accessible. The facility has a TTY phone available. The facility also has walkers, wheelchairs, and canes available.

At the time of this audit, there was only one detainee documented to have a disability. This record was reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.
-The facility maintains a list of all patients with disabilities.
-1 of 1 (100%) had the disability prominently displayed in the medical file.
-1 of 1 (100%) was assessed for assistance of activities of daily living (ADL) upon identification of disability and appropriate accommodation orders were entered.

PREVIOUS FINDINGS (July 2016): No findings noted.

Complaints and Grievances

POLICIES REVIEWED: Policy A-11 (Essential) "Grievance Mechanism for Health Complaints" is compliant with PBNDS 2008.

According to the GEO grievance officer, all dorms have access to grievance forms and a drop box labeled for this purpose. The grievance officer picks them up and reviews them daily. All medical grievances are placed in the HSA's mailbox. The HSA is then responsible for answering all medical grievances.

PREVIOUS FINDINGS (July 2016): No findings noted.

CURRENT FINDINGS: At the time of this audit, there was not a grievance log maintained within the medical department. This seems to have been an oversight on the part of the new medical contractor, Correct Care Solutions, when they took over management of the medical department in November 2016. The HSA advised that a grievance binder would be immediately created and maintained. She told the FMC that she has had approximately two ICE medical grievances since she arrived in December 2016. The FMC was unable to review these grievances for the reason stated above. RGDC policy A-11 states that all medical grievances will be tracked on CCS form #00046 Grievance Log. The policy also states that a written response with decision and rationale is provided to the detainee within five working days of receipt of the grievance.

AMERICAN OVERSIGHT

Diabetes

POLICIES REVIEWED: Policy G-01 (Essential) "Chronic Disease Services" is compliant with PBNDS 2008.

Seven diabetic medical records were reviewed using the IHSC Quality of Care Tool designed for this purpose.
-Rio Grande Detention Center uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of diabetes.
-4 of 7 (57%) had a blood sugar measured at intake.
-3 of 4 (75%) were seen for chronic care by a medical provider within 14 days. Three others left the facility before being seen for chronic care and prior to day 14. In every case, diabetic medication was either continued or a new order was received via telephone order during the medical intake.
-0 of 3 (0%) had a baseline HgA1C performed within the first 30 days. In every case, the lab was ordered during the initial chronic care appointment, but not drawn by day 30. According to the chronic care nurse, lab work is usually collected just prior to the next scheduled follow-up, which normally is completed 30 days after the initial chronic care visit. In every case lipids were also ordered as part of the baseline work-up for diabetic patients.

PREVIOUS FINDINGS (July 2016): No findings noted.

CURRENT FINDINGS:
1) Intake blood sugars were not consistently recorded on detainees claiming to have diabetes.
2) One diabetic detainee was not seen for chronic care within 14 days.
3) Baseline HgAIC lab work was not done within 30 days of arrival on all diabetic charts reviewed.

Human Immunodeficiency Virus (HIV)

At the time of this audit, RGDC had no ICE detainees documented as having HIV and because only active charts are maintained on site, their were no files to review. For this reason, the IHSC Quality of Care Audit Tool designed for this purpose was not used.
-Rio Grande Detention Center uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of HIV.

PREVIOUS FINDINGS (July 2016):
1) HIV positive detainees did not routinely receive a CXR to rule out TB.
2) HIV lab work was not consistently obtained within the first 14 days at the facility.
3) Antiretroviral medication was not initiated on HIV-positive detainees who arrived without their own medication.
A UCAP was submitted to the FMC in December 2016 which indicated that the medical providers have been provided and educated on HIV management clinical practice guidelines and that compliance will be monitored through the QA program.

CURRENT FINDING: Because there were no charts to review, the FMC was unable to verify that previous practice has changed. The HSA advised that RGDC has not had any HIV detainees since drafting the UCAP. The FMC will continue to follow-up with the HSA.

Hypertension

10 charts of hypertensive patients were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-Rio Grande Detention Center uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of hypertension.
-10 of 10 (100%) had a documented blood pressure on the medical intake.
-9 of 10 (100%) patients were seen by a medical provider within the first 14 days at the facility.
-4 of 10 (40%) revealed intake blood pressures that had systolic blood pressure greater than 140 or a diastolic pressure greater than 90. In all four (100%) medical records there was

AMERICAN OVERSIGHT

documentation that the nurse called and received a treatment plan from the provider which included medication and blood pressure monitoring.
-In 8 of 10 (80%) cases, a chronic disease guideline was followed for HTN, which included obtaining baseline lab work, was followed. In the other two case, the patients received a physical exam but not a chronic care workup (i.e., lab work, EKG, etc.).

PREVIOUS FINDINGS (July 2016): No findings noted.

CURRENT FINDINGS:
1) One detainee with hypertension was not seen for chronic care within 14 days.
2) Two hypertension charts reviewed were not seen for chronic care and care was not consistent with a clinical practice guideline. Lab work, EKG, blood pressure monitoring were not ordered.

Asthma

Six charts of asthma patients were reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.
-Rio Grande Detention Center uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of asthma.
-2 of 2 (100%) were seen for chronic care by a medical provider within 14 days of illness identification. All others left the facility prior to day 14 and before being seen by a medical provider.
-2 of 2 (100%) had a peak flow measurement completed both during the physical exam and when seen for chronic care.
-2 of 2 (100%) showed disease management consistent with BOP clinical practice guidelines.

PREVIOUS FINDINGS (July 2016): Peak flow measurements were not consistently recorded within the physical exams of asthmatic detainees. A UCAP was submitted to the FMC in December 2016 which indicates that medical providers have been educated on asthma management clinical practice guidelines. The UCAP also says that compliance will be monitored through the QA program.

CURRENT FINDINGS: No findings noted. At the time of this audit, the HSA was unable to show evidence that QA monitoring or staff education had been done as indicated in the December 2016 UCAP. The FMC will continue to follow-up with the HSA.

Seizure Disorder

Three charts of seizure patients were reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.
-Rio Grande Detention Center uses Federal Bureau of Prisons (BOP) Clinical Practice Guidelines for the management of seizures.
-0 of 1 (0%) had an appropriate neurological assessment completed at the initial physical exam. In the one chart reviewed, the only thing that was documented for neurological history was that seizures were secondary to trauma. No further details were documented including type of trauma, frequency of seizures, and last seizure activity. The other two departed the facility prior to day 14 and prior to receiving a physical exam and initial chronic care appointment.
-0 of 1 (0%) were seen for chronic care by a medical provider within 14 days of illness identification. In this case, anticonvulsant medication was continued from intake so he never went without medication; however, the physical exam and initial chronic care appointment occurred greater than 14 days after arrival.
-0 of 1 (0%) had serum drug levels ordered. In this case the detainee was taking Tegretol prior to arrival and when seen by the physician, serum drug levels were not ordered.
-1 of 1 (100%) had an established treatment plan.
-3 of 3 (100%) had orders for a bottom bunk.

PREVIOUS FINDINGS (July 2016): A complete neurological history was not being completed on the majority of seizure patients. A UCAP was submitted to the FMC in December 2016 which indicated that medical providers would be educated on seizure management clinical practice

AMERICAN OVERSIGHT

guidelines. The UCAP also says that compliance will be monitored through the QA program.

CURRENT FINDINGS:
1) The issue of obtaining a complete neurological history on seizure patients is a repeat finding. At the time of this audit, the HSA was unable to show evidence that QA monitoring or staff education had been done as indicated in the December 2016 UCAP. The FMC will continue to follow-up with the HSA.
2) One seizure patient was not seen for chronic care within 14 days of arrival.
3) A serum drug level was not ordered on a detainee taking anticonvulsant medication.

CHRONIC DISEASE – ASTHMA (MODERATE AND SEVERE)

DATE 2/22/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Rio Grande Detention Center

Purpose: To assess conformance with nationally-accepted guidelines for chronic disease and to prevent deterioration in function and cost of unnecessary care.

Source: Chronic disease registry or MARs.

Sample: 10 patients with moderate or severe asthma (for example, those on inhaled or oral steroids), chosen at random.

1 Does the facility follow a particular clinical practice guideline to manage asthma? YES
If so, what is the guideline? BOP

Item # Measure

1 Was patient seen in CCC by mid-level provider or physician within 14** days of illness identification?
2 Was a peak flow completed at the initial physical exam?
3 Was a peak flow completed at the CC visit or within the last 3 months?
4 *Was a chronic disease guideline followed, which addressed disease severity, prescription of medication consistent with severity, and documented degree of control?

COMPLAINTS AND GRIEVANCES

DATE 2/22/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Rio Grande Detention Center

Purpose: To assess use of medical complaint and grievance data as part of the quality management program.

Source: Facility grievance logs.

Sample: Facility's periodic grievance analyses, with underlying data (grievances and responses).

Does your review of the facility's grievances reveal any possible barriers to care or repetitive concerns that could affect clinical care? Please answer yes or no No If yes, please address in the comments section whether and how the facility uses this information to implement change.

How many medical grievances were submitted over the past 3 months? 2

What percentage of this number were appropriately addressed within 5 working days of receipt? NA %

Item: 1 Of the grievances submitted over the past 3 months, enter the number of grievances in each category, i.e., availability of care, denial of request for care, etc.

2 Enter the A# for each grievance included in this category.

Grievance Type	1	2

DENTAL CARE

DATE 2/22/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Rio Grande Detention Center

Purpose: To assess compliance with detention standards and continuity of care.

Source: Dental sick call list or dental referral log

Sample: 10 records from recent schedule of patients evaluated for a dental complaint, selected for acuity, e.g., on pain medication or antibiotics for toothache.

Item # Measure

1 Was patient screened for symptoms during the intake process?
2 Was patient evaluated by a qualified health professional within 48 hours of request?
3 Do dental clinical notes describe findings, diagnosis, treatment and plans?
4 Was the patient scheduled for follow-up treatment as recommended?

ICE Uniform Corrective Action Plan
(Follow up to the February 2017 FMC Site Visit)

Facility Name	**Rio Grande Detention Center**
Address (Street and Name)	**1001 San Rio Boulevard**
City, State and Zip Code	**Laredo, TX 78046**
County	**Webb**
Date[s] of FMC Site Visit	**February 21 - 24, 2017**
Complete and Return to ICE HQ No Later Than:	**September 14, 2017**

Facility Corrective Action Plan Assigned to	**Field Office**

AMERICAN OVERSIGHT

Department of Homeland Security
Immigration and Customs Enforcement
Office of Enforcement and Removal Operations

Date of Final Submission:
September 09, 2017

Instructions for the Corrective Plan of Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the findings identified in the ICE Health Service Corps Field Medical Coordinator (FMC) review. Please ensure that each stated corrective plan of action addresses the noted medical findings to the fullest extent possible, and that it incorporates the recommendations. In the event a finding or recommendation cannot be implemented within the authorized timeline, please include an explanation in the "Corrective Plan of Action" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date. If an extension is needed, the Field Office must contact the appropriate DMD staff member with this request in advance of the specified timelines for submission.

****Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.***

ICE Uniform Corrective Action Plan (February 2017 FMC site visit) Rio Grande Detention Center (SNA)			
Assessment and Findings	**Recommendations**	**Corrective Plan of Action**	**Completion Date**
[PBNDS 2008 Standard Deficiency] Several health appraisals were performed greater than 14 days after arrival to the facility (Medical Care)(V)(J).	(b)(5)	The Health Services Administrator discussed with staff the importance of proper and timely scheduling the health appraisals prior to day 14 to allow for them to be completed (See Attachment 1). The 3 LVNs not in attendance are PRN and the findings will be discussed with them when they report for duty.	August 30&31 2017

AMERICAN OVERSIGHT

		GEOtrack now schedules new arrivals for their health appraisals on day 13 upon their arrival to the facility. If the appointment is missed, then the medical record/date entry clerk reschedules the health appraisal as a priority for day 14. The QA Nurse is now monitoring this requirement through the Medical QA Program for a period of 60 days.	
[PBNDS 2008 Standard Deficiency] Medical grievances are not tracked and logged in a Detainee Grievance Log (Grievance System)(V)(E).	(b)(5)	The Health Services Administrator discussed with staff the management and tracking of Medical Grievances (See Attachment 1). A Medical Grievance Log has been created and is being updated and maintained weekly by the DON (See Attachment 2).	August 30 & 31, 2017
[CQI Finding] **REPEAT FINDING** The neurological history completed on a seizure patient was inadequate.		The Health Services Administrator discussed with staff that they must complete a neurological history during the initial chronic care appointment, to include onset of the seizures, history of head trauma, medication use/compliance, how well are	August 30 & 31, 2017

AMERICAN OVERSIGHT

	(b)(5)	seizures controlled on or off medications, when was the last seizure, and how the seizure manifested (See Attachment 1). Neurological Chronic Care Forms have been updated to include all neurological history during the Initial chronic Care appointment (See Attachment 3). This requirement is now being monitored by the Chronic Care Nurse through the Medical Quality Assurance Program for a period of 60 days.	
[CQI Finding] 50% of sick call encounters reviewed were seen greater than 72 hours from the date of triage.		The Health Services Administrator discussed with staff that sick call requests are to be triaged within 24 hours and detainees seen within 48-72 hours to demonstrate compliance with NCCHC standards (See Attachment 1). Sick Calls are now being triaged and monitored by the CCS/QA nurse, with outcomes reported to the HSA weekly. The Sick Call process is now being monitored by the assigned QA	August 30 & 31, 2017

AMERICAN OVERSIGHT

		nurse through the Medical QA program for a period of 60 days.	
[CQI Finding] 40% of the lab work reviewed by the FMC did not have an appropriate clinical response documented.	(b)(5)	The Health Services Administrator discussed with staff that abnormal labs results must have an appropriate clinical response documented within the medical record (See Attachment 1). The new Chronic Care Nurse, as a matter of practice, is now monitoring abnormal lab results and flagging them for the providers' reviews and responses to be documented in the medical records. This requirement is now being monitored by the new Chronic Care Nurse through the Medical QA program for the next 60 days.	August 30 & 31, 2017
[CQI Finding] 80% of charts did not show documentation that the detainee was notified of lab results.		The Health Services Administrator discussed with staff that the patients need to be educated on the results of any lab work performed at the facility, to include documenting such education in the medical records (See Attachment 1). New notification Forms have been	August 30 & 31, 2017

AMERICAN OVERSIGHT

		developed and implemented (See Attachment 4). This requirement is now being monitored by the assigned QA nurse for 60 days through the Medical QA program.	
I[CQI Finding] Intake blood sugars were not consistently recorded on detainees claiming to have diabetes.	(b)(5)	The Health Services Administrator discussed with staff that blood sugars should be measured during the medical intake for any detainee claiming to be diabetic (See Attachment 1). Intake forms (see attached) have been modified to include a field for recording blood sugars when applicable. This requirement is now monitored by the assigned QA nurse for 60 days through the Medical QA program.	August 30 & 31, 2017
[CQI Finding] Several detainees received delayed chronic care (greater than 14 days from arrival).		The Health Services Administrator discussed with staff that health appraisals on detainees with chronic illness are to be prioritized and, at minimum; these detainees are to be seen for chronic care prior to day 14 from arrival (See Attachment 1).	August 30 & 31, 2017

AMERICAN OVERSIGHT

		The new Chronic Care Nurse is now prioritizing all chronic care patients to be seen within 14 days from arrival. This requirement is now monitored by the assigned QA nurse for 60 days through the Medical QA program.	
[CQI Finding] Baseline HgA1C lab work is not being done within 30 days of arrival on diabetic detainees.	(b)(5)	The Health Services Administrator discussed with staff that the HgA1C is to be collected within the first 30 days from arrival on all diabetic detainees (See Attachment 1). New Chronic Care Forms have been modified to include HgA1C lab work (See Attachment 6). This requirement is now monitored by the Chronic Care Nurse for 60 days through the Medical QA program.	August 30 & 31, 2017
[CQI Finding] Two hypertension charts reviewed were not seen for chronic care and care was not consistent with a clinical practice guideline. Lab work, EKG, blood pressure monitoring were not ordered.		The Health Services Administrator discussed with staff that they are required to follow Clinical practice guidelines, to include performing lab work, obtaining EKGs, and monitoring blood pressure for all hypertensive chronic care patients (See Attachment 1).	August 30 & 31, 2017

AMERICAN OVERSIGHT

		This requirement is now monitored by the assigned QA nurse through the Medical QA program for 60 days.	
[CQI Finding] A serum drug level was not ordered on a detainee taking anti-convulsant medication.	(b)(5)	The Health Services Administrator discussed with staff the requirement for obtaining serum drug levels during the initial chronic care work-up for seizure patients who take anticonvulsant medication. New Chronic Care Forms have been implemented for Seizure patients (See Attachment 3). This requirement is now monitored by the Chronic Care Nurse for 60 days through the Medical QA program.	August 30 – 31, 2017

AMERICAN OVERSIGHT

Health Services Department Monthly Meeting

(August 30 & 31, 2017 - 0700)

1. Medication Carts/Trash/Sharp Containers
   - Need to be cleaned out daily.

2. Staffing - Job Vacancy

(b)(6); (b)(7)(C); (b)(7)(E)

3. ICE Audit
   - The corrective action plans (CAPS) included training for staff - see attached training conducted

4. NCCHC Audit
   - Response includes training of health service staff - see attached training conducted.

5. Monthly Tally and audit sheets are due by COB, September 1, 2017.

6. GEO Training
   - The on-line training is to be completed by the COB, August 31st - this is mandatory training and will affect your work schedule if not completed.

7. Overtime/KRNONOS clock
   - Prior approval of all overtime must be obtained from (b)(6); (b)(7)(C)
   - Charge RN must inform the DON/HSA of any emergencies that resulted in OT
   - Shifts start at the top of the hour – you are expected to clock in on time and report to your post. The 7 minute grace period is for the occasional issue not the norm.

8. ICE Labs
   - All ICE labs tests must have prior approval from ICE
   - There will be a separate log book for ICE labs
   - Medical Records will work from this log and submit the required MEDPAR
   - Medical Records will track the approvals and ensure when it is received they are noted in the log book
   - Blood draws will be done once the MEDPAR approval is noted in the log book
   - MEDPARs will be done for biopsies/cultures, but do NOT wait to collect and send. Patient care is first and foremost.

9. Costal Bend Evacuation
   - AWESOME JOB EVERYONE - We managed 329 CB detainees as the professional team that we are. Thank you
     1. There will be an after-action meeting next week and I need your input - if you have any concerns regarding the process/procedures let me know so we can improve for the next time. Also look at what if we had to evacuate RGDC - Is there something we need to ensure is on our to do list. Email me your suggestions. Thank you again for a job well done!!!

AMERICAN OVERSIGHT

RIO GRANDE DETENTION CENTER
HEALTH DEPARTMENT
ICE/CQI Meeting
August 2017

- In February 2017 ICE Health Service Corps (IHSC) Audit was conducted.
- There was a total of 12 Finding that required a Corrective Action Plan
- Training was conducted on the following Assessments and Finding.

Assessment and Finding

1. Several health appraisals were performed greater than 14 days after arrival to the facility
   - **Training conducted**-- The health services staff have been trained and educated on the importance of properly and timely scheduling the health appraisals several days prior to day 14 to allow for them to be completed.
2. Medical grievances are not tracked and logged in a Detainee Grievance Log
   - **Training conducted**- The health services staff have been trained on management of keeping track of Medical Grievances. The log has been created and is updated and maintained by the DON.
3. The neurological history completed on a seizure patient was inadequate
   - **Training conducted**-- The clinical providers and health services staff have been trained and educated on assessment and documentation of neurological patient. They must complete a neurological history during the initial chronic care appointment. Including when did seizures start, history of head trauma, medication use/compliance, how well are seizures controlled on or off medications, when was the last seizure, how does the seizure manifest (generalized, partial, etc).
4. 50% of sick call encounters reviewed were seen greater than 72 hours from the date of triage.
   - **Training conducted**-- The health services staff have been trained and educated that sick call requests are triaged within 24 hours and seen within 48-72 hours in order to be in compliance with NCCHC standards.
5. 40% of the lab work reviewed by the FMC did not have an appropriate clinical response documented.
   - **Training conducted**-- The clinical providers and the health services staff have been trained and educated that abnormal labs results have to have an appropriate clinical response documented within the medical record.
6. 80% of charts did not show documentation that the detainee was notified of lab results.
   - **Training conducted**-- The clinical providers and the health services staff have been trained and educated that the patients' needs to be notified and educated the detainee's on their results of any lab work done at the facility. The education should be documented in the patient's medical record.
7. Intake blood sugars were not consistently recorded on detainees claiming to have diabetes.
   - **Training conducted**-- The clinical providers and the health services screening nurses have been trained and educated that blood sugars should be measured during the medical intake on any detainee claiming to be diabetic. The new Intake forms now have a sections where they can document the Intake blood sugar checks.

AMERICAN OVERSIGHT

8. Several detainees received delayed chronic care (greater than 14 days from arrival).
    - **Training conducted** -The clinical providers and the health services staff have been trained and educated on health appraisals on detainees with chronic illness be prioritized and at minimum be seen for chronic care prior to day 14.(Currently ICE Chronis's are seen within 7 days)
9. Baseline HgA1C lab work is not being done within 30 days of arrival on diabetic detainees.
    - **Training conducted-** The clinical providers and the health services staff have been trained and educated that an HgA1C be collected within the first 30 days on all diabetic detainees as per RGDC clinical practice guidelines.
10. Lab work, EKG, blood pressure monitoring were not ordered.
    - **Training conducted-** The clinical providers has been trained and educated on the appropriately follow clinical practice guidelines. The new Chronic Care forms now include all the labs, EKG, and diagnostics that are needed per clinical guidelines.
11. The neurological history completed on a seizure patient was inadequate.
    - **Training conducted-** The clinical providers has been trained and educated on the appropriately follow that seizure patients receive a complete neurological history during the initial chronic care appointment.
12. A serum drug level was not ordered on a detainee taking anti-convulsant medication.
    - **Training conducted-**The clinical providers has been trained and educated on the importance of ordering serum drug levels be obtained as part of the initial chronic care work-up on seizure patients who take anticonvulsant medication, as appropriate.

CHRONIC DISEASE – ASTHMA (MODERATE AND SEVERE)

DATE 8/29/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto Processing Center

Purpose: To assess conformance with nationally-accepted guidelines for chronic disease and to prevent deterioration in function and cost of unnecessary care.

Source: Chronic disease registry or MARs.

Sample: 10 patients with moderate or severe asthma (for example, those on inhaled or oral steroids), chosen at random.

1 Does the facility follow a particular clinical practice guideline to manage asthma? YES
If so, what is the guideline? Bureau Of Prisons Clinical Practice Guideline

Item # Measure

1 Was patient seen in CCC by mid-level provider or physician within 14** days of illness identification?
2 Was a peak flow completed at the initial physical exam?
3 Was a peak flow completed at the CC visit or within the last 3 months?
4 *Was a chronic disease guideline followed, which addressed disease severity, prescription of medication consistent with severity, and documented degree of control?

MEDICATION ADMINISTRATION PRACTICES

DATE 9/1/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto Processing Center

Purpose: To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.

Source: MARS.

Sample: MAR and medical record for 10 patients. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.

1 Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up? YES
2 Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs? 3%
3 In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month? 0
4 Estimate the percentage of patients on self-administered medication ordered by a provider. 70%
5 OTCs provided by medical, commissary or both? Both

Item # Measure

1 What is the number of refusals and/or no shows during the previous month for each patient?
2 Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?
3 Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

MENTAL HEALTH TREATMENT PLANNING

DATE 8/29/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto Processing Center

Purpose: To conform with detention standards for mental health intervention, consistent with nationally-accepted clinical guidelines (NCCHC).

Source: Patients on mental health caseload, including all patients on psychotropic medication.

Sample: 10 patients selected from mental health caseload log or MARs, currently or recently in custody.

Item # Measure

1 Is a clinical assessment, treatment, and follow-up plan documented?

2 Are treatment plans updated at a minimum of every 90 days?

SUICIDE SCREENING

DATE 8/29/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto Processing Center

Purpose: To assess conformance with nationally-accepted guidelines for suicide risk assessment and prevention.

Source: Patients on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review.

Sample: Medical records for 10 patients placed on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review.

1 What is the total number of patients placed on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review? 84

2 Does the facility use an acceptable suicide risk management screening instrument, including at a minimum, asking for a history of suicide attempts and for current suicidal ideation? ☑ Yes ☐ No

3 Are all screeners and all staff in direct contact with detainees trained to assess suicide risk (see training logs)? ☑ Yes ☐ No

Item # Measure

1 Was the suicidal patient evaluated by a mental health professional within 24 hours of identification (unless the situation was emergent in which case the evaluation should be immediate)?

2 Was the patient evaluated by a qualified mental health professional daily while on suicide watch?

3 What type of monitoring was practiced while the patient was on suicide watch?

4 Were checks documented consistently?

5 Is there evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch? If yes, please describe.

CHRONIC DISEASE – ASTHMA (MODERATE AND SEVERE)

DATE 1/30/17 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED ADELANTO DETENTION FACILITY

Purpose: To assess conformance with nationally-accepted guidelines for chronic disease and to prevent deterioration in function and cost of unnecessary care.

Source: Chronic disease registry or MARs.

Sample: 10 patients with moderate or severe asthma (for example, those on inhaled or oral steroids), chosen at random.

1 Does the facility follow a particular clinical practice guideline to manage asthma? YES
If so, what is the guideline? BOP CPG

Item # Measure

1 Was patient seen in CCC by mid-level provider or physician within 14** days of illness identification?
2 Was a peak flow completed at the initial physical exam?
3 Was a peak flow completed at the CC visit or within the last 3 months?
4 *Was a chronic disease guideline followed, which addressed disease severity, prescription of medication consistent with severity, and documented degree of control?

COMPLAINTS AND GRIEVANCES

DATE 02/03/17 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto Detention Facility

Purpose: To assess use of medical complaint and grievance data as part of the quality management program.

Source: Facility grievance logs.

Sample: Facility's periodic grievance analyses, with underlying data (grievances and responses).

Does your review of the facility's grievances reveal any possible barriers to care or repetitive concerns that could affect clinical care? Please answer yes or no No If yes, please address in the comments section whether and how the facility uses this information to implement change.

How many medical grievances were submitted over the past 3 months? 41

What percentage of this number were appropriately addressed within 5 working days of receipt? 100 %

Item: 1 Of the grievances submitted over the past 3 months, enter the number of grievances in each category, i.e., availability of care, denial of request for care, etc.

2 Enter the A# for each grievance included in this category.

Grievance Type	1	2

FROM: (b)(6); (b)(7)(C)
IHSC Deputy Assistant Director
Health Care Compliance Branch
(b)(6); (b)(7)(C)

SUBJECT: Report of ICE Health Service Corps Subject Matter Expert Team Visit - Adelanto ICE Processing Center - March 6 to 8, 2018

Executive Summary:

Between March 6 and 8, 2018, a subject matter expert (SME) team of ICE Health Service Corps (IHSC) Officers (IHSC Team – see Appendix A) undertook a visit to the Adelanto ICE Processing Center (AIPC) to: 1) evaluate the status of healthcare at the site; and 2) to assist and offer recommendations to the primary subcontractor, GEO and its subcontracted health care provider, Correct Care Solutions (CCS), regarding systemic processes that may be hindering provision of necessary and appropriate medical care.

The IHSC Team findings indicate serious noncompliance with several PBNDS standards including, the leadership and the quality assurance program; pharmaceutical management; medical record keeping practices; and the mental health program. Other important deficiencies involve aspect of dental and medical care. IHSC Team found, although to a lesser degree, deficiencies in meeting PBNDS pertaining to sick call practices; clinical evaluation and management; disability; and medical grievances. These last four areas are not listed or discussed in the report.

The IHSC Team provides recommendations toward future improvements in and sustained compliance with the described PBNDS standards.

AMERICAN OVERSIGHT

Full Report

Between March 6 and 8, 2018, a subject matter expert (SME) team of ICE Health Service Corps (IHSC) Officers (IHSC Team) undertook a visit to the Adelanto ICE Processing Center (AIPC) to evaluate the status of healthcare at the site. The IHSC Team's visit followed-up deficiencies in health service delivery cited by the U.S. Department of Homeland Security's Office for Civil Rights and Civil Liberties (CRCL) after its on-site investigation in November 2017. The IHSC Team's visit was also intended to assist and offer recommendations to the primary subcontractor, GEO and its subcontracted health care provider, Correct Care Solutions (CCS), regarding systemic processes that may be hindering provision of necessary and appropriate medical care. The composition of the IHSC Team is listed below (Appendix A).

This report is based on, among other things, on record reviews; use of the Quality of Medical Care (QMC) toolkit; interviews with facility and corporate principals; and observations of clinical and administrative practices. The scope of the report is limited to AIPC's compliance with the ICE Performance-based National (PBND) Standards (PBNDS) 2011, required of AIPC under the Intergovernmental Service Agreement (IGSA) with the City of Adelanto.

Findings.

***Note**: Below are listed several values indicating the proportions of medical records found deficient with regards to PBND standards in relation to the number of records reviewed to assess particular standards. These values represent a screening method commonly used as a method of program monitoring and evaluation (M&E) and a means to identifying areas of deficiencies requiring greater scrutiny by other methodologies (e.g., 100% record review and audits). By design, this screening method in not intended to represent statistical analyses.*

***Note**: This report has been abbreviated to address only those deficiencies in health care delivery specific to PBND standards 2011. Standards deficiencies deemed of lesser import per the screening method utilized and as compared to those described below, are not discussed in this report.*

Leadership and Quality Assurance (QA)

1. PBNDS 4.3 V.EE.2.e.7. *The Health Systems Administrator (HSA) shall be authorized and responsible for making decisions about the deployment of health resources and the day-to-day operations of the health services program. The CMA (Chief Medical Authority, together with the HAS, establishes the processes and procedures necessary to meet the medical standards outlined herein.*

2. PBNDS 4.3 V.EE.2.e.7. *The HSA shall implement a system of internal review and quality assurance. The system shall include… (e) on-site monitoring of health service outcomes on a regular basis through the following measures… (7) reevaluating problems or concerns, to determine whether the corrective measures have achieved and sustained the desired results.*

Leadership, or the persons responsible for the administrative and clinical matters that support the facility's management and care delivery, is significantly deficient in establishing processes and procedures for fundamental elements of any medical program, primarily in the areas **quality assurance (QA) program**, **pharmaceutical management, medical record-keeping practices** in

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-001990

particular the facility's **electronic health record (eHR)**], and **mental health program** (see corresponding sections below).

QA processes have been unable to ensure effectiveness of corrective actions in many areas requiring improvement. This is based on an examination of the minutes, (data collection, analyses, and subsequent presentations of results and recommendations considered at AIPC's quarterly Continuous Quality Improvement (CQI) Committee meetings in 2017), along with historical knowledge as it reflects on current problems and concerns at AIPC.

Discussion.

Because the information being tracked and intervened upon at the direction of the CQI Committee has been, for the most part, chosen from findings in audits and reports of prior site visits, upon prior adverse events, external audits, and investigations, the facility's Leadership, and by extension, the QA program is essentially and continuously attempting to correct issues in a reactive manner and retroactively. Even under these circumstances, CQI activities are insufficient in informing improvement actions for current problems and concerns, but more importantly from a prospective view.

It should be noted that the current administrative and clinical leadership was kept on by CCS when healthcare delivery at AIPC was subcontracted to them in early 2017; however, deficiencies in leadership were evident and have been documented before CCS health services began to provide health services at Adelanto.

Quality assurance. A definition of a QA program is one that consists of activities and programs intended to assure or improve the quality of care in either a defined medical setting or a program. The concept includes the assessment or evaluation of the quality of care; identification of problems or shortcomings in the delivery of care; designing activities to overcome these deficiencies; and follow-up monitoring to ensure effectiveness of corrective steps.

The IHSC visit made evident that the information being tracked and intervened upon has been, and for the most part, chosen in reaction to prior findings by external entities. Thus, the facility's Leadership, and by extension, the QA program, is consuming a large part of its effort in continuously attempting to correct issues on-the-spot, leaving little room for proper M&E efforts that might better serve the improvement of current and future problems.

In addition, a number of QA activities instituted to address problems under study by the CQI Committee have not been effective and/or whatever improvement achieve sustainable over time, and part of the reason may be because such QA activities have not been assessed for effectiveness post implementation. For example, medical grievances, which although trended, discussed, and intervened upon at the direction of the CQI Committee, demonstrate a wide fluctuation in the proportion of grievances received in the four quarters (Q) of 2017 (Q1 -20%, Q2 -10%, Q3 - 28%, and Q4 -11%). The number that were "late" were reported as zero for the entire year of 2017 in the graphics presented.

Prominent among the unidentified root causes of problems and concerns include the relatively small number of incident reports generated for any issues, such as medication errors, that may have been encountered. For example, and although the medication administration record (MAR) issues are trended, the causes of errors and other findings are not, except in very few cases such as "Psychotropic

AMERICAN OVERSIGHT

Medications Tracking" (a separately tracked topic). With respect to the latter, the only regularly tracked information of potential clinical usefulness is the number of psychotropic medication prescribed and renewed. With respect to the former (the MAR), only administrative matters such as number of MARs audited are tracked.

Recommendations:

(b)(5)

Pharmaceutical Management

1. PBNDS 4.3. V.G.12. *Each detention facility shall have and comply with written policy and procedures for the management of pharmaceuticals, to include: 12. documentation of accountability for administering or distributing medications in a timely manner, and according to licensed provider orders.*

2. PBNDS 4.3. V.G.10. *Each detention facility shall have and comply with written policy and procedures for the management of pharmaceuticals, to include: (10) supervision by properly licensed personnel.*

In a review of ten psychiatric patient charts, 100% of MARs printed from the pharmacy contained previously discontinued orders that were not recorded as such in the MAR. Each of the MAR records reviewed had an average of four discontinued but still active orders. This means that the patient may have been administered the same medication more than once and/or in higher dosage within the prescribed period. In a review of ten medical care-specific records, 60% of printed MARs contained discontinued but still active orders.

In addition, in an interview of the HSA regarding pharmaceutical management in AIPC, he stated and his statement collaborated by the posted organization chart that the medication procurement and administration process at AIPC is currently overseen by an licensed vocational nurse (LVN).

AMERICAN OVERSIGHT

The purpose of any institutional policy is to provide staff with the compulsory parameters of and for their duties.

Discussion:

Medication administration represents practices of high frequency and potentially serious adverse outcomes. For example (see also below), the MAR of a detainee with mental illness contained four orders for quetiapine, three of which had been discontinued at least two months previously, and three orders for hydroxyzine, two of which had been discontinued the previous month. Drug-drug interaction for these two medications produces additive sedation; and although a rare side-effect, it increases the risk of an irregular heart rhythm that may be serious and potentially life-threatening.

Furthermore, during the interview with the author, one of the members of the AIPC QA team (an LVN) stated, "*I am not comfortable in passing out pills at pill line because you never know if the medication, the dosage, or the quantity is correct in the MAR.*"

Medication management documentation errors seriously diminish AIPC's capability for accountability of medication administration. Medication administration and record documentation errors (see medical record keeping practices below) were recounted proximal to a patient death by the ICE Office of Detention Oversight (ODO) Detainee Death Report. In their report ODO documents that one day before his death by suicide, a detainee in segregation had already refused his psychiatric medications for 48 hours (a twice-a-day medication) and for 24 hours (a once-a-day medication). In an ODO team member's interview with the HSA, the HSA acknowledged that the nurse failed to follow AIPC's medication administration policy by not notifying a provider after the detainee missed three doses of any medication. In addition, the facility psychologist, who had visited the detainee approximately three hours before his death, was not aware that the patient was not compliant with his medications at the time because the information was not available to him at the time. It is not clear whether or not these errors may have contributed to the detainee's death.

Recommendations

(b)(5)

AMERICAN OVERSIGHT

(b)(5)

Medical Record-Keeping Practices

PBNDS 4.3 V.BB. *The HSA shall maintain a complete health record on each detainee that is: organized uniformly in accordance with appropriate accrediting body standards; available to all practitioners and used by them for health care documentation; and properly maintained and safeguarded in a securely locked area within the medical unit.*

Inadequate standardization of policies and procedures for and use of the eHR results in unnecessary searches for information within the system, the potential loss of information because of parallel systems of data management, diminished capacity for the accountability of clinical and administrative functions, and for performing QA activities that require routinely-collected information.

Discussion:

1. Loss of information. Instead of entering information directly into the eHR's structured fields, where the information can be reliably found and used for multiple administrative and clinical purposes, information in the form of filled-out paper forms and other physical documents are frequently scanned into the eHR as non-searchable versions and in non-standardized target locations. This practice constitutes a "work-around," or parallel process of data management that can result in unnecessary, if non-productive, searches for information within the system, and potential loss of information within and exterior to the electronic system.

2. Accountability for clinical and administrative functions. A record review found that seven (23%) of 30 records reviewed listed detainees as being in residence, when in fact, they had left the facility 20 days prior. Incorrect data and reports emanating from these data, as generated by the her, not only cripple any type of visit appointment system, but also the availability of and accountability for essential information such as laboratory results, correct administration of medication, and even detainee physical location. Further, the perception of inaccuracies in the eHR diminishes staff trust in the system, and often results in the creation of additional work-arounds that are subject to a greater degree

3. Continuity and quality of care. With the underuse of the eHR, the efficient, reliable and accountable tracking, analysis, trending, and reporting of information is significantly diminished. It also makes the production of structured reporting for the purposes of quality and enhancement of health care delivery, and administrative and clinical functions become more cumbersome and time-consuming, and therefore inefficient.

AMERICAN OVERSIGHT

Recommendations:

(b)(5)

Mental Health Program

PBNDS 4.3 V.N.3. *Based on intake screening, the comprehensive health assessment, medical documentation, or subsequent observations by detention staff or medical personnel, any detainee referred for mental health treatment shall receive an evaluation by a qualified health care provider no later than 72 hours after the referral, or sooner if necessary. If the practitioner is not a mental health provider and further referral is necessary, the detainee will be evaluated by a mental health provider within the next business day. Such evaluation and screenings shall include: (b). history of any mental health treatment or evaluation; (c) history of illicit drug/alcohol use or abuse or treatment for such; and (d) history of suicide attempts.*

Nine (90%) records of ten reviewed had any mention that the provider had reviewed the medical records for presence of a history of mental health illness prior to the patient encounter. No record reviewed made mention by any mental health provider of drug or alcohol history.

Discussion:

With respect to the documentation by a mental health provider of drug or alcohol history, one particular record reviewed made no mention of the detainee's "*extensive alcohol use, recent DUI and recent detoxification treatment*" history documented elsewhere.

Lack of documentation affirming or negating either the availability of a prior record for review or having elicited a history of mental illness and/or substance abuse would not meet compliance with this standard, since it cannot be verified. Failure to find such information may also be dependent on the deficient standardization of the eHR medical record.

AMERICAN OVERSIGHT

Recommendations:

(b)(5)

Dental Assessments

PBNDS 4.3 V.R. *An initial dental screening shall be performed within 14 days of the detainee's arrival. The initial dental screening may be performed by a dentist or a properly trained qualified health provider.*

Three (33%) of ten records reviewed did not meet the requirement for a dental screening to be done within 14 days of detainee's arrival.

Recommendation:

(b)(5)

Medical Care

PBNDS 4.3 V.U.5. *Detainees who arrive at a detention facility with prescribed medications or who report being on such medications, shall be evaluated by a qualified health care professional as soon as possible, but not later than 24 hours after arrival, and provisions shall be made to secure medically necessary medications.*

Two (20%) of ten records reviewed indicated that the detainees did not receive their medication within 24 hours.

Discussion:

One of the records reviewed showed that one detainee went without cardiac medications for 2-3 days until seen by a provider. The medication was not provided because the detainee's personal supply was in Russian

Recommendation:

(b)(5)

AMERICAN OVERSIGHT

(b)(5)

Disability

PBNDS 4.8 V.F.4.e. *Where an accommodation is granted, facility policy or procedures will ensure that all relevant facility staff, including facility security staff, receive timely notification and, as needed, instructions for successful implementation of the accommodation. These procedures will also account for any applicable privacy and confidentiality considerations*

PBNDS 4.8 V.F.4.g. *After the facility has completed its review of a detainee with a disability or of a request for an accommodation, facility staff shall place written documentation of the following in the detainee's medical and/or detention file.*

Six (33%) of 20 detainee records reviewed were missing appropriate accommodation orders (special needs). Additionally, AIPC does not clearly determine in-record-progress-notes if the provider has assessed the detainees for assistance with activities of daily living.

Recommendation:

(b)(5)

Conclusion

AIPC continues to experience difficulty in meeting PBND standards of health care. In the opinion of the IHSC Team, a concerted effort by AIPC to ensure that (1) strong leadership is in place; (2) the QA program is strengthened and modified to ensure it ability to identify—most importantly prospectively— the correct problems to intervene upon, focusing on processes and procedures; and

AMERICAN OVERSIGHT

evaluate the effectiveness and sustainability of QA interventions implemented to improve deficiencies; (3) Foster a "just" (non-punitive) culture to improve input from and reporting by all staff regarding areas they see as needing improvement; (4) the eHR be optimized to its fullest capacity; (5) the QA program, routine staff training, and regular in-services on standards and best practices of care hold top priority for the administrator and medical director; and (6) peer review-particularly involving mental health—is strengthened.

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.

- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody $\geq$ 14 days.
- In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq$ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.

TIPS FOR REVIEWERS

- Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

- Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.

AMERICAN OVERSIGHT

• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

EVALUATION OF CARE PRIOR TO EMERGENCY DEPARTMENT/HOSPITAL VISIT FOR CONDITIONS SENSITIVE TO AMBULATORY CARE							
Number of Files Reviewed for Patients Meeting this Criteria:	10						
Purpose:	To determine whether earlier intervention might have prevented morbidity and cost of outside care. To measure continuity and coordination of care for inbound patients.						
Source:	Emergency Department (ED) logs.						
Sample:	Within the past 6 months, 10 patients (if available) sent to ED with ambulatory sensitive conditions, such as seizure, alcohol and/or substance withdrawal, skin or deep tissue infections, DKA, abdominal pain, or chest pain.						
Guidelines:	NCCHC 2014 J-E-12.						
Remarks:	(b)(6); (b)(7)(C) No asessment on return (b)(6); (b)(7)(C) No assmnt on return, no intake screen (b)(6); (b)(7)(C) No inbound assmnt. A "NO" answer in the cEED-2 question is the desired answer = met criteria; Therefore should be 100% met for that column.						
Reviewer:	(b)(6); (b)(7)(C)				**Date Reviewed:**	3/8/2018	
	Clinical (c)						
cEED-1	Is there an outbound progress note?						
cEED-2	Is there evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care? If yes, please describe in the remarks portion of the report.*This will require physician review in some cases. If a physician assists with completion of this review, please include his or her name in the report comments.						
cEED-3	Is there discharge documentation from the hospital or ED in the chart?						
cEED-4	Is there an inbound assessment?						
cEED-5	Does the assessment reflect hospital findings and concurrence or justification for deviation from hospital recommendations?

MEDICATION ADMINISTRATION PRACTICES

DATE 02/01/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto Detention Facility

Purpose: To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.

Source: MARS.

Sample: MAR and medical record for 10 patients. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.

1 Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up? YES
2 Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs? 1%
3 In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month? 0
4 Estimate the percentage of patients on self-administered medication ordered by a provider. 70%
5 OTCs provided by medical, commissary or both? Both

Item # Measure

1 What is the number of refusals and/or no shows during the previous month for each patient?
2 Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?
3 Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

CHRONIC DISEASE – SEIZURE DISORDER

DATE 1/30/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED ADELANTO DETENTION FACILITY

Purpose: To prevent deterioration in function and cost of unnecessary care.

Source: Chronic disease registry or MARs.

Sample: 10 patients with seizure disorder chosen at random.
What clinical practice guideline does the facility use to manage seizures? BOP CPG

Item #	Measure
1	Was an appropriate neurological history completed at the initial physical examination?
2	Was the patient seen in CCC by mid-level provider or physician within 14 days of illness identification*?
3	Were serum drug levels performed and acknowledged in the medical record every 3 months until stable, then every 6 months, where indicated?
4	Was a treatment plan established?
5	Are there orders for a bottom bunk?

SUICIDE SCREENING

DATE January 31, 2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto Detention Facility

Purpose: To assess conformance with nationally-accepted guidelines for suicide risk assessment and prevention.

Source: Patients on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review.

Sample: Medical records for 10 patients placed on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review.

1 What is the total number of patients placed on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review? 66

2 Does the facility use an acceptable suicide risk management screening instrument, including at a minimum, asking for a history of suicide attempts and for current suicidal ideation? ☑ Yes ☐ No

3 Are all screeners and all staff in direct contact with detainees trained to assess suicide risk (see training logs)? ☑ Yes ☐ No

Item # Measure

1 Was the suicidal patient evaluated by a mental health professional within 24 hours of identification (unless the situation was emergent in which case the evaluation should be immediate)?

2 Was the patient evaluated by a qualified mental health professional daily while on suicide watch?

3 What type of monitoring was practiced while the patient was on suicide watch?

4 Were checks documented consistently?

5 Is there evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch? If yes, please describe.

TREATMENT OF DISABILITY

DATE: 02/03/2017 REVIEWER: (b)(6); (b)(7)(C)

FACILITY REVIEWED: Adelanto Detention Facility

Purpose: To assess the care of patients with disabilities who need accommodations to access the facility's programs or activities as a result of their disabilities.

An individual is considered to have a "disability" if s/he has a physical or mental impairment that substantially limits one or more major life activities, or has a record of such impairment.
See also: https://www.dhs.gov/sites/default/files/publications/guide-interacting-with-people-who-have-disabilties_09-26-13.pdf

Sources: Facility logs, tour of facility, list of patients who require DME (to include walkers, canes, wheel chairs, hearing aids, or other items to assist the patients to access the facility's programs and activities), and interviews with patients with disabilities who need accommodations to access the facility's programs and activities.

Sample: 10 patients within the population who have a disability that requires medical involvement. Determine if the patients with disabilities received appropriate treatment and disability accommodations through medical record examination. Mark as "Y" for yes, "N" for no, and "N/A" for not applicable. Do not leave any area blank.

General Question: Does the facility maintain a current list of all patients with disabilities on site? yes

Item #	Measure
1	Is the disability prominently noted in the file, along with any needed accommodations?
2	Was the patient assessed for assistance with activities of daily living (ADL) upon identification of disability?
3	Were appropriate accommodation orders entered (e.g., lower bunk, mobility device (wheelchair, walker, canes, crutches), hearing aid, assistive listening device, sign language interpreter, meal, etc.)?
4	Was ADL assistance provided, if applicable?

URGENT CARE (SICK CALL)

DATE 02/01/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto detention Facility

Purpose: To assess for timely and appropriate nursing care for acute conditions.

Source: Urgent care log, sick call request list, or sick call visit list, preferably with reason for visit noted on log.

Sample: 10 urgent care visits for detainees with potentially serious complaints that occurred 1 to 3 weeks prior to review. Common potentially serious complaints include chest pain, abdominal pain, seizure, vomiting, skin infection, diabetic complications, etc.

Item # Measure

1 Was there timely and appropriate evaluation by nursing staff, depending on the nature of the complaint?
2 Was care delivered within the scope of the nurse's license?
3 Were vital signs documented during the nurse's assessment?
4 If necessary, was a nursing referral to an MD/PA/NP/DMD submitted within 24 hours where appropriate?
5 If referred, was an MD/PA/NP/DMD assessment and plan documented?

Office of Enforcement and Removal Operations

Date of Final Submission:

Instructions for the Corrective Plan of Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the findings identified in the ICE Health Service Corps Field Medical Coordinator (FMC) review. Please ensure that each stated corrective plan of action addresses the noted medical findings to the fullest extent possible, and that it incorporates the recommendations. In the event a finding or recommendation cannot be implemented within the authorized timeline, please include an explanation in the "Corrective Plan of Action" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date.

****Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.***

ICE Uniform Corrective Action Plan (FMC Site Visit Reviews) Adelanto Detention Facility (LOS AOR)			
Assessment and Findings	**Recommendations**	**Corrective Plan of Action**	**Completion Date**
Deficiency: PBNDS 2011 4.3.4 Of the nine HIV charts reviewed, there was: one out of nine (11%) of detainees with HIV who had a chest x-ray completed within 72 hours of problem identification. The one detainee did not disclose his HIV status upon intake or during his physical. Once he did disclose his HIV status, medications, labs and follow-up was ordered however; chest x-ray	(b)(5)	1. On May 17, 2017, the Clinical Director held a staff meeting. During the staff meeting Clinical Practice Guidelines to include Management of HIV were discussed with the providers. 2. A full review of all the HIV detainees currently at Adelanto was reviewed on June 15, 2017 to determine if	Meeting: Completed May 17, 2017. June 15, 2017

AMERICAN OVERSIGHT

was not completed.		they have chest x-rays. 3. To ensure compliance, each new detainee arriving at Adelanto will be reviewed to ensure a chest x-ray is completed. Each newly diagnosed HIV patient will be reviewed to ensure compliance with the Clinical Practice Guidelines. The review will be completed by the Chronic Care QA Nurse until compliance is established for three consecutive months. 4. The data will be reported by the QA nurse to the Clinical Director and Health Services Administrator to ensure compliance. 5. The data will be reported on a quarterly basis to the CQI Committee. **FMC November 2017 Update:** Continued finding during the August 2017 site visit; refer to the CAP for additional updates. **FMC February 2019 Update:** Continued finding during the March 2018 FMC Site Visit	CQI data collection continuous on a weekly basis until demonstrated compliance for 12 consecutive weeks has been established.

AMERICAN OVERSIGHT

		refer to the CAP for additional updates. **FMC February 2019 Update:** Compliant during the September 2018 FMC Site Visit.	
Quality of Care Issue: Of the ten sick call charts reviewed, one out of ten (10%) charts reviewed revealed a nursing referral was not submitted within 24 hours when appropriate. One detainee was assessed during sick call was found to have a fever (100.4) and heart rate of 107. The nurse treated the detainee using nursing protocols however, unable to locate the completed nursing protocol form in medical record.	(b)(5)	6 a. The DON will schedule training for all RN's with the eCW Trainer on use of RNSC Nursing Protocols on eCW no later than May 15, 2017. The DON will provide training for all RN's on individualized focused nursing assessment using the established RNSC protocols. The training will be conducted no later than May 15, 2017. b. The DON will provide training for all RN's on triage utilizing guidelines established. The training will be conducted no later than May 15, 2017. c. The DON will provide training for all RN's on proper scheduling of triaged sick call requests to ensure compliance with NCCHC and PBNDS. The	Completed: May 15, 2017 Completed: May 15, 2017 Completed: May 15, 2017.

		sick call request scheduled for the day are completed. The DON will designate a staff to ensure above is completed in their absence. III. QA and Follow-up a. On a daily basis, the DON will review a minimum sample size of 5 RN sick calls to ensure they are properly triaged, scheduled and evaluated following the established nursing protocols. In the absence of the DON, the DON will designate a reviewer. b. On a weekly basis, the report will be forwarded to the HSA and QA for the information to be collated, analyzed and trended for compliance. Corrective actions above will be reviewed if it does not correct the problem. On a quarterly basis, the	CQI data collection continuous on a weekly basis until demonstrated compliance for 12 consecutive weeks has been established.

AMERICAN OVERSIGHT

		report will be presented in the CQI meeting. **FMC November 2017 Update**: No issues identified during August 2017 site visit.	
Quality of Care Issue: Of the ten charts reviewed for evaluation of care provider to the emergency department/hospital visit, one out of ten (10%) charts revealed that the assessment did not reflect the hospital findings and concurrence or deviation from the hospital recommendations. One detainee was released from the hospital with a recommendation for a neurology follow-up in 3-4 weeks. The recommendation was not addressed timely.	(b)(5)	1. A roster of all detainees sent out to the local hospital/ED for the past six months (February -July 2017) will be requested from medical records by July 31, 2017. 2. A review of all detainees currently housed at Adelanto will be reviewed by the QA Nurse to ensure recommendations are being addressed by August 15, 2017. QA Plan: 1. All hospital/ED discharges are tracked by the Chronic Care QA Nurse on a daily basis. 2. The CC QA Nurse sends an e-mail to medical records to ensure records are reviewed by the provider and scanned into eCW within 24-48 hours of receipt.	Completion Date: July 31, 2017 Completion Date: August 15, 2017 CQI data collection continuous on a weekly basis until demonstrated compliance for 12 consecutive weeks has been established.

AMERICAN OVERSIGHT

		3. The CC QA Nurse will sample 5 hospital/ED discharges on a weekly basis to determine if the records were reviewed by a provider, recommendations implemented and the discharge notes scanned into eCW. 4. On a weekly basis, the findings will be provided to the Assistant Health Servcies Administrator and Clinical Director to ensure compliance. Data collection will continue until there is 12 consecutive weeks of demonstrated compliance. **FMC November 2017 Update**: No issues identified during August 2017 site visit.	
Quality of Care Issue: Ten charts were reviewed to further evaluate medical recordkeeping practices. Documents were not scanned into the appropriate section of the medical record consistently. For example consult notes were scanned into the consent section.	(b)(5)	The Assistant Health Services Administrator will provide a template as to what is to be scanned into each section of the patient documents into eCW. The template will be provided to all medical records clerks by July 31, 2017.	Completion date: July 31, 2017

AMERICAN OVERSIGHT

		The AHSA will educate all medical records clerk on scanning of documents into the right sections of the patient documents based on the template. The education will be completed by August 7, 2017. QA Plan: 1. On a weekly basis, a sample of 10 health records will be reviewed by the QA Nurse to ensure patient documents are scanned into the right sections of the eCW. 2. The report will be forwarded to the AHSA by the QA nurse on a weekly basis to ensure compliance. 3. The report will be reported to the CQI Committee every three months. The data collection will continue until there is demonstrated compliance for 12 consecutive weeks. **FMC November 2017 Update**: No issues identified during	Completion date: August 7, 2017 CQI data collection continuous on a weekly basis until demonstrated compliance for 12 consecutive 12 has been established.

AMERICAN OVERSIGHT

		August 2017 site visit.	
Quality of Care Issue: One chart had medications listed on the MAR but unable to find orders for medications . The verbal order was not signed off by the provider.	(b)(5)	On February 7, 2017, a procedure for entering Telephone/Verbal Orders was sent out to staff by the Health Services Administrator. Clinical staff receiving the Telephone Order/ Verbal Order (TO/VO) will enter the order in the message section and send the TO/VO to the provider for review. The provider will review the TO/VO and cosign the order. (On June 1, 2017, a follow up email from the eCW Coordinator was sent to all RN and Provider Staff with proper instructions on entering TO/VO into eCW) QA Plan: 1. The Medical Director reviews TO/VO actions for all providers on a weekly basis to verify the provider staff clear the actions and cosigns the	Completion Date: February 7, 2017. 8/24/16; however, it was not drawn. A refusal was obtained and placed in the chart on 8/30/16.	(b)(5)	have been educated to ensure laboratory or refusals for laboratory studies are documented within the timeframe requested. They were reminded by email again on July 17, 2017. QA Plan: 1. On a weekly basis, a random sampling of 10 laboratory orders will be conducted by the QA nurse. The timeliness of the laboratory study will be checked to ensure the studies were drawn in the time frame ordered. 2. In the sampling, if a detainee refuses the study, the QA Nurse will check for a properly documented refusal form on eCW. 3. The data collected will be reported to the Assistant Health Services Administrator. Non-compliance will be addressed with the laboratory staff for	Completion Date: CQI data collection continuous on a weekly basis until demonstrated compliance for 12 consecutive weeks has been established.

AMERICAN OVERSIGHT

		immediate corrective action. 4. The data will be reported on a monthly basis to the Continuous Quality Improvement Committee. 5. The data will be collected until compliance is demonstrated for 12 consecutive weeks. **FMC November 2017 Update**: No issues identified during August 2017 site visit	
Quality of Care Issue: Of the charts reviewed for diagnostic services and specialty care access, one of six (17%) charts reviewed revealed that the detainee was not re-assessed by the provider at least every 30 days until the off-site service was completed.	(b)(5)	The Clinical Director will address all providers by July 31, 2017 that all detainees requiring non-routine specialty consultations will be followed up by the provider initiating the referral at least every 30 days until the off-site referral is completed. Procedure: 1. Upon writing of a Treatment Authorization Request (TAR) for , the provider will schedule the detainees for a follow-up	Completion Date: July 31, 2017

AMERICAN OVERSIGHT

		within 30 days of the initial TAR request and assess the detainee. 2. The provider will check the record (eCW) under the "R" tab to determine the appointment schedule. The detainee will then be scheduled for another appointment until seen by the specialist and detainee is followed up for recommended actions. QA Plan: 1. On a weekly basis, a roster of new Treatment Authorization Requests (TARs) will be generated by the QA Nurse. 2. A sample of 5 new TARs will be reviewed and compared to the provider schedule to determine if the detainees were scheduled for an evaluation within 30 days of the initial TAR. If a detainee is not scheduled a scheduled will be created by the QA Nurse for the detainee for a follow-up.	CQI data collection continuous on a weekly basis until demonstrated compliance for 12 consecutive weeks has been established.

AMERICAN OVERSIGHT

		3. The above sample will be checked 30 days thereafter by the QA Nurse to check if the detainee was assessed and/or the detainee has been followed-up post specialty consult. The same process will continue if the detainee has not been evaluated after the 30 day assessment until the detainee is evaluated by the specialist. 4. The data collected will be forwarded to the Medical Director to address any non-compliance. 5. The data will be reported to the Continuous Quality Improvement Committee on a monthly basis. 6. The data will be collected until there is a demonstrated compliance for 12 consecutive weeks. **FMC November 2017 Update:** Continued finding during the August 2017 site visit; refer to the CAP for additional updates. **FMC February 2019 Update:**	

AMERICAN OVERSIGHT

		As of the March 2018 FMC site visit diagnostic services and specialty care access compliant.	
Quality of Care Issue: One of seven (14%) charts reviewed revealed that the clinician did not acknowledge the specialist's report within seven days after the service was performed.	(b)(5)	The daily off-site referral are being tracked on a spreadsheet. The Assistant Health Services Administrator will follow-up with medical records and receive a report on a daily basis on the receipt and scanning of off-site specicalty consultation reports. An action to the provider for review of the reports will be sent for their review, and address the recommendations. A roster of all detainees sent out to the local specialist for the past six months (February -July 2017) will be requested from medical records by July 31, 2017. A review of all detainees currently housed at Adelanto will be reviewed by the QA Nurse to ensure recommendations are being	Completion Date: July 31, 2017 Completion date: August 15, 2017

AMERICAN OVERSIGHT

		addressed by August 15, 2017. QA Plan: 1. All detainees returning from specialty consultations are tracked by the Chronic Care QA Nurse on a daily basis. 2. The CC QA Nurse sends an e-mail to medical records to ensure records are reviewed by the provider and scanned into eCW within 24-48 hours of receipt. 3. The CC QA Nurse will sample 5 specialty referrals on a weekly basis to determine if the records were reviewed by a provider, recommendations implemented and notes scanned into eCW. 4. On a weekly basis, the findings will be provided to the Assistant Health Servcies Administrator and Clinical Director to ensure compliance.	CQI data collection continuous on a weekly basis until demonstrated compliance for 12 consecutive weeks has been established.

AMERICAN OVERSIGHT

		Data collection will continue until there is 3 consecutive months of demonstrated compliance. **FMC November 2017 Update:** Continued finding during the August 2017 site visit; refer to the CAP for additional updates. **FMC February 2019 Update:** As of the March 2018 FMC site visit diagnostic services and specialty care access in compliance.	
Quality of Care Issue: Of the mental health treatment planning charts reviewed, one out of seven (14%) did not have a treatment plan that was updated every 90 days. Although each detainee chart reviewed did have a complete assessment, treatment plan and follow-up plan documented, the formal mental health treatment plan was not completed on each detainee. The formal mental health treatment plan is one which includes identification of strengths, weakness, treatment goals and interventions.	(b)(5)	On February 2, 2017, CCS Divisional Mental Health Director conducted a training on mental health treatment plan for all the mental health providers. The mental health treatment plan development and review every 90 days was discussed with the Lead Mental Health Director on July 19, 2017. By July 31, 2017, the Lead Mental Health Director will address all mental health providers to	Completion Date: July 31, 2017

Re: Adelanto ICE Processing Center
Response to Contract Discrepancy Report – IHSC Subject Matter Expert Team Visit March 6-8, 2018
Contract Number EROIGSA-11-0003

Dear (b)(6); (b)(7)(C)

On behalf of The GEO Group, Inc. (GEO), I write regarding Contract Discrepancy Report, dated June 4, 2018, from the Immigration Health Services Core (IHSC) Subject Matter Expert Team Visit March 6-8, 2018, to the Adelanto ICE Processing Center (AIPC). GEO values the strong partnership it enjoys with U.S. Immigration and Customs Enforcement's (ICE) Los Angeles Field Office, and GEO appreciates your trust and confidence in allowing our facility to support ICE's critical law enforcement mission.

GEO, and its medical provider (CCS), strive to quickly resolve concerns and maintain the highest-quality of service. As you know, our Chief Medical Officer, (b)(6); (b)(7)(C) and our Executive Vice President for Quality Control, Dr. (b)(6); (b)(7)(C) were on site for IHSC's visit in March 2018. They heard the concerns from Captain (b)(6); (b)(7)(C) and Captain (b)(6); (b)(7)(C) directly and immediately began addressing them. These issues have also been elevated to GEO's senior leaders. They have directed that every effort be made to quickly and effectively resolve each of the issues identified by IHSC. To further bolster the oversight of AIPC's medical department, CCS leadership has committed to hiring a full-time compliance manager to work at the facility and report directly to the CCS' corporate office. These compliance reports will also be shared, reviewed, and tracked by GEO. This CCS position will be above and beyond contracted staffing with no financial impact to ICE. We will work with ICE to full this position as

AMERICAN OVERSIGHT

quickly as possible. In addition, both Dr. (b)(6); (b)(7)(C) and Dr. (b)(6); (b)(7)(C) will continue to visit the Adelanto facility quarterly to provide oversight and training to the facility's health care staff.

While we acknowledge there are areas of the AIPC's operations that must and will be improved, AIPC's has successfully conducted more than 3,700 intakes and 3,600 releases since January 2018. Similarly, the AIPC's health services unit conduced over 6,000 health screenings and physicals during that same period. More than 6,000 mental health appointments were completed, and the AIPC's nursing staff dispensed medicine through more than 69,000 encounters.

Please see the corrective action plans attached to this letter. We have carefully reviewed each finding in this CDR and are aggressively working to solve each one with a sustainable corrective action plan that will generate lasting compliance. Further, we have initiated additional training sessions, created logs, verification steps, and used the talent management process to further support these efforts. Please see our response to each of the discrepancies identified detailed below. We will carefully monitor all findings as part of our continuing quality assurance process both at the AIPC and from a headquarters level.

We are committed to providing high-quality care to ICE's detainees housed at the AIPC. We look forward to your feedback on our corrective action plans, and we stand ready to clarify any areas where additional information would be helpful. If I can be of assistance, please contact me directly.

Respectfully,

(b)(6); (b)(7)(C)

James Janecka
Warden

AMERICAN OVERSIGHT

Findings

Finding: Medical Care, Section (V)(EE)(2)(e)(7)

"The HSA shall implement a system of internal review and quality assurance. The system shall include: (e) on-site monitoring of health service outcomes on a regular basis through the following measures: (7) reevaluating problems or concerns, to determine whether the corrective measures have achieved and sustained the desired results."

- An examination of CQI Committee meeting presentations revealed evidence that information being tracked and intervened upon are the results of prior adverse events, external audits, and investigation. Essentially, the medical program is correcting issues on-the-spot, but these issues are not informing the overall practice at the facility – this has led to the same or similar errors taking place overtime.
- Even though the electronic health record is one of the most crucial elements in maximizing the facility's ability to continuously improve quality of health delivery in complex medical settings, standardization for and staff proficiency in the use of the electronic health record has received no attention from the QA program since the electronic health record was introduced at AIPC.
- The above was further evident during interviews with staff members, where the Chief stated, "I would like to track medication errors, but it doesn't end up as a routinely collected measure or study because the Health systems administrator (HSA) is not focused on tracking."
- The overall QA program at the facility is further exacerbated by the poor recordkeeping practices, especially so with the medication administration record (further explained below). For example, the cause for many medication errors is the result of not tracking the cause for such errors and trending them overtime.

Plan of Action:

CCS leadership has given guidance to the AIPC's health services administrator (HSA) to generate and maintain a strong and sustained focus on the quality assurance (QA) program. Further, the HSA has been instructed to emphasize the inclusion of electronic health records (eHR) and administration of medication (MAR) in the facility's quality assurance program. At continuous quality improvement (CQI) meetings, the AIPC's staff continues to review and discuss the corrective action plans results that are effectively catching items that do not meet policy or performance standards. To memorialize these individual actions, the

AMERICAN OVERSIGHT

HSA created local operating procedures (LOPs) for each corrective action plan. The LOPs were discussed by the HSA during the staff meeting on June 26, 2018. In addition, the LOPs were electronically distributed to staff for their review and reference.

Following the IHSC visit, the CQI committee met and reviewed the AIPC's overall quality assurance (QA) plan to identify changes needed to enhance its effectiveness. The following areas were emphasized: emergency room and hospital visits and returns; routine specialty consultations and recommendations; the quality of the sick call procedure based on complaints and patients' medical histories; an overall review of grievances; staff training; a MAR "root cause" analysis review, and the addition of eHR performance in the QA plan.[1]

This comprehensive review of the QA plan resulted in the following actions:

- Effective the week of June 11, 2018, the primary care coordinator is responsible to collect, respond, and track medical grievances.

- Effective June 15, 2018, the HSA conducts a monthly audit of healthcare grievances to verify timely and accurate responses, in addition to evaluating the timeliness of care and access to care. Further, the HSA conducts a "root cause" analysis of each grievance to determine if there is a systemic quality of care issue. The results are reported in the monthly CQI meetings.

- Effective May 21, 2018, on a weekly basis, 20% of the specialty consultation, and emergency room hospital/returns are reviewed by the HSA or designee for quality of care and findings are discussed with the CQI committee to initiate corrective actions.

- Effective June 4, 2018, on a weekly basis, 10% of weekly sick call encounters are reviewed by the director of nursing (DON) or designee. A focused assessment is made on use of protocols, referrals to providers, and quality of care issues. The findings are discussed with CQI committee to initiate corrective actions for any quality of care issues.

As the CDR has specific findings on electronic health records and medication administration records, detailed responses to those findings are below.

---

[1]The GEO Group's response to the U.S. Department of Homeland Security's Office for Civil Rights and Civil Liberties, dated June 13, 2018, and transmitted to ICE on June 14, 2018, provides additional detail on each of these areas.

AMERICAN OVERSIGHT

Attachment 1:

- April 25, 2018 CQI Agenda
- 2018 Hospital Visits and Returns / Routine Specialty Consults Log

Finding: Medical Care, Section (V)(B)

"The Health Systems Administrator (HSA) shall be authorized and responsible for making decisions about the deployment of health resources and the day-to-day operations of the health services program. The CMA together with the HSA establishes the processes and procedures necessary to meet the medical standards outlined herein.

- Management and leadership establish the processes and procedures for the entire medical program. It is clear that these fundamental elements of any facility medical program are either non-existent or not followed at AIPC; therefore, it is reasonable to conclude that the findings contained herein lie at least partially on a lack of leadership oversight at the facility.
- It should be noted that the current administrative and clinical leadership remained at AIPC when health care delivery was subcontracted to CCS in early 2017.

Plan of Action:

To enhance the effectiveness of the AIPC's heath service department, on February 1, 2018, CCS commenced a process to recruit a seasoned physician with stronger leadership and management capabilities. While a physician was identified and we anticipated the candidate to start on June 18, 2018, as the new clinical medical authority, the individual ultimately declined the offer. As a result, CCS quickly restarted the recruitment process. In the interim, CCS leadership is providing additional training, mentoring, and oversight to the current provider.

Additionally, please note, the current HSA was hired in February 2016, and he was not the HSA prior to CCS becoming GEO's subcontractor. Finally, in April 2018, the assistant health services administrator (AHSA) was replaced. The new AHSA possesses strong experience with the QA process.

Finding: Medical Care, Section (V)(G) (12)

"Each detention facility shall have and comply with written policy and procedures for the management of pharmaceuticals, to include: 12.

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002063

documentation of accountability for administering or distributing medications in a timely manner, and according to licensed provider orders."

- The MAR and electronic health record are not communicating with one another. This leads to the provider and nursing staff not obtaining a complete picture of a detainee's care. As an example, the MAR of a detainee with mental health illness contained 4 orders for quetiapine, 3 of which had been discontinued at least 2 months previously, and 3 orders for hydroxyzine, 2 of which had been discontinued the previous month. The interaction for these two medications produces additive sedation; and although a rare side effect, it increases the risk of an irregular heart rhythm that may be serious and potentially life-threatening.
- In a review of 10 psychiatric patient charts, 100% of MARs printed from the pharmacy contained previously discontinued orders that were not recorded as such in the MAR.
- Additionally, in a review of 10 medical care-specific records, 60% of printed MARs contained discontinued orders.

Plan of Action:

A thorough review of this issue lead to the conclusion that the lack of medication reconciliation was tied to a specific psychiatrist. On June 5, 2018, this psychiatrist's user role in eClinicalWorks (eCW) was deleted and reset. Once this was completed, the psychiatrist was able to reconcile medications. Next, training on reconciliation of the medications on eCW was provided to this psychiatrist by the local CCS eCW administrator. As of July 5, 2018, all psychiatric patient medications were reconciled.

As noted above, AIPC includes the MAR process in its CQI efforts. The program features self-reporting of medication errors, review of MARs, identification of trends in medication errors, staff training, and counseling. Because of continued room for improvement in this area, immediately following IHSC's visit, on March 24, 2018, the HSA met with LVNs to discuss and reemphasize QA efforts directed at medication errors, proper documentation of patient records, and medication review on MARs. To ensure continued focus on this area, effective March 2018, and continuing monthly, medication-error vignette training is provided to all nurses. These issues are also discussed monthly at the CQI meetings.

To further increase visibility and oversight in this area, effective on April 2, 2018, on a daily basis, 10% weekly of MARs are reviewed by the AHSA and the QA nurse. The sampling encompasses all areas of the medication administration system. The review uses both a "failure mode and effect analysis" and "root cause

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002064

analysis" to analyze the medication ordering, receipt, storage, and administration processes. In addition, 10% of weekly verbal or telephone orders are sampled and compared to the applicable MARs to determine the accuracy of transcription. Storage of stock medication and the proper documentation of use of stock medication on stock cards are also reviewed. Orders on the MARs are compared to current orders in the eCW to verify discontinued orders are recorded accurately. A trend analysis to determine the cause of medication errors is conducted to determine the root cause. Staff specific problems are addressed with performance improvement plans. As noted above, this study and monitoring are reported to the CQI committee monthly.

Attachment 2:

- Medication Training

Attachment 3:

- Medication Error Reporting Form
- Months 1-6, Medication Error Educational Vignettes

Finding: Medical Care, Section (V)(G)(10)

"Each detention facility shall have and comply with written policy and procedures for the management of pharmaceuticals, to include: (10) supervision by properly licensed personnel."

- The above medication administration errors are compounded by (1) the lack of an onsite pharmacy; and (2) that the procurement and administration of medication at AIPC is directly overseen by a licensed vocational nurse – which is outside of the scope of practice for this position.

Plan of Action:

AIPC has a policy in place to manage pharmaceuticals. This policy is implemented through CorrectRx Pharmacy Services.[2] The prescription process is completed through e-prescription or faxing the order to CorrectRx who fills the medication order, and ships the stock cards to the facility. A licensed CorrectRx pharmacist, who conducts a quarterly visit and audit of the facility pharmacy,

[2] http://correctrxpharmacy.com/

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002065

oversees the pharmacy. The LVN assigned to the pharmacy was solely in a quality assurance role. This LVN does not provide oversight in procurement and management of the pharmacy. GEO and CCS are currently reviewing the concept of having a clinical pharmacist on site at AIPC. While this would increase operating costs, there are potential savings that might offset some of the added expense. GEO plans to discuss this option with ICE soon.

Effective June 8, 2018, GEO and CCS discussed the viability of utilizing an electronic MAR system. GEO's management information systems specialist is in the process of conducting an assessment to determine the implementation requirements and I.T. security protocols. The assessment is anticipated to be completed by August 15, 2018. Any additional resource requests will also be completed for consideration.

Attachment 4:

- Policy on Pharmaceutical Operations
- Policy on Medication Services

Finding: Medical Care, Section (V)(BB)

"The HSA shall maintain a complete health record on each detainee that is: organized uniformly in accordance with appropriate accrediting body standards; available to all practitioners and used by them for health care documentation; and properly maintained and safeguarded in a securely locked area within the medical unit.

- Much like the MAR, the underutilization of the electronic health record and the use of work arounds outside of the system results in a high propensity for errors and loss of information. Essentially, the AIPC medical program is using three parallel systems: (1) the MAR; (2) the electronic health record; and (3) the manual scanning of paper-based documents into the electronic health record.
- The manual scanning of paper-based records into the electronic health record results in the loss of system functions, such as the ability to schedule, search, and find information; and requires the manual extraction of routinely collected data from multiple sources within the electronic health record. For example, currently, the facility conducts intake screening on paper, which consists of 13 pages for males and 15 pages for females; and once

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002066

completed, the paper forms are scanned into the EHR by medical records staff, sometimes days later. Forty intakes per day, therefore, would be expected to produce approximately 600 pages requiring scanning.

- During a record review, the IHSC Team member investigating the use of the EHR (eCW) found that 7 (23%) of 30 records reviewed listed detainees as being in residence, when in fact they had left the facility over 20 days prior. Incorrect data or reports generated by the EHR, which would assist in determining, for example; detainees require mandatory physical exam 14 days into detention, currently requires a manual back up, or work-around process.

Plan of Action:

On March 12, 2018, a comprehensive review of eCW was initiated by information technology professionals and the medical team. All aspects of the eCW were reviewed, particularly as this system relates to MARs and paper-based records. A plan to reduce the use of paper-based records scanned into eCW was developed. In addition, the medical-intake screening template screen was updated. On April 24, 2018, the HSA trained applicable staff on the use of the revised electronic intake template. The electronic intake form went "live" on May 5, 2018. In addition, templates for medical history, physicals, chronic care clinics, and nursing protocols were reviewed. As a result of the reviews, structured data was incorporated into the chronic care templates. Quick reference guides were developed and have been strategically placed in AIPC's West and East intake areas, nursing area, and satellite offices for easy reference. Medical provider reference training videos were also created and saved on the shared drive for easy access by providers.

As of June 5, 2018, all intakes, chronic care encounters, acute visits, mental health visits, history and physicals, nursing protocols, and other encounters are captured electronically using templates or smart forms. In addition, a training lesson plan was developed and is used as a guide for all new and existing staff. A staff refresher training course will be completed by July 15, 2018. Three staff members have also been identified to attend "eCW Superuser" training. On a weekly basis, QA staff, to include the HSA, review a random sampling of 20 medical records to verify compliance. The review verifies the use of templates, and smart forms. The results are collected and analyzed to determine staff training needs, system reporting enhancements, development of smart forms or templates, and opportunities to further expand the conversion of paper documents into electronic form. This review is an on-going process, and is reported by QA staff at the CQI committee meeting monthly.

AMERICAN OVERSIGHT

Finally, as of May 1, 2018, all technological issues preventing the inmate movement database (GEOTrack) from accurately updating the eCW with the detainees' current location have been resolved.

Attachment 5:

- Sample Electronic Intake Template
- Quick Reference Guides

Finding: Medical Care, Section (V)(N)(3)

"Based on intake screening, the comprehensive health assessment, medical documentation, or subsequent observations by detention staff or medical personnel, any detainee referred for mental health treatment shall receive an evaluation by a qualified health care provider no later than 72 hours after the referral, or sooner if necessary. If the practitioner is not a mental health provider and further referral is necessary, the detainee is evaluated by a mental health provider within the next business day. Such evaluation and screenings shall include: (b). history of any mental health treatment or evaluation; (c) history of illicit drug/alcohol use or abuse or treatment for such; and (d) history of suicide attempts."

- Nine (90%) records of 10 reviewed by the IHSC Chief Psychiatrist had any mention that the provider had reviewed medical records for presence of a history of mental health illness prior to the patient encounter. No record reviewed made mention by a mental health provider of drug or alcohol history, despite documentation of "extensive alcohol use, recent DUI and recent detoxification treatment."

Plan of Action:

The medical intake screening is now an electronic format, allowing providers to immediately review a patient's history prior to the encounter. The medical and mental health intake screen forms have questions which can trigger the need for a mental health referral. In addition, any detainee can request to see mental health by submitting a request and being seen through the daily sick call process. The request is submitted to the mental health nurse who schedules an appointment within 72 hours in the eCW. Appointments and follow-up appointments are scheduled and monitored through the eCW.

Effective June 11, 2018, on a daily basis, the mental health nurse reviews 5 daily encounters to verify compliance. The mental health nurse verifies if the detainee reported a history of mental health issues or substance abuse and if there is any

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002068

evidence of a drug or alcohol abuse notated in the file from other sources (e.g., intake screening questionnaire, case notes, DUIs, drug related convictions, etc.). If any of these factors are present, the mental health nurse verifies that the detainee was evaluated within the required timeframe. Any issues identified through this process are reported to the HSA and immediately addressed with the responsible provider. On a weekly basis, the mental health nurse reports the findings to the lead mental health director and the QA coordinator for evaluation of cause. The information is analyzed and trends are identified to determine the reasons for delays or gaps in services. This review will continue on an ongoing basis. The information is tracked and reported to the CQI committee monthly.

Attachment 6:

- eClinical Works - Review Actions Console

Finding: Medical Care, Section (V)(R)

"An initial dental screening shall be performed within 14 days of the detainee's arrival. The initial dental screening may be performed by a dentist or a properly trained qualified health provider."

- Three (33%) of 10 records reviewed were not in compliance with the specified time frame for a dental assessment.

Plan of Action:

Effective May 15, 2018, on a weekly basis the dental assistant runs a roster of newly arrived detainees for scheduling dental screening within 14 days of arrival. In the event that a dentist is on leave, the second dentist covers both facilities to perform dental screenings and emergency care. On a weekly basis, the QA nurse reviews the roster of intakes to determine compliance for medical history and physicals, and dental screening. The data is reviewed by the QA nurse weekly and trended to determine cause of any non-compliance. The above corrective action will be modified depending on the data trending and analysis on an ongoing basis. The information is tracked and reported to the CQI committee monthly. As of June 5, 2018, during May reviews 123 newly arrived detainees were reviewed, and verified to have all screenings provided as required.

Finding: Medical Care, Section (V)(C)(2)

"Screening for TB is initiated at intake and in accordance with Center for Disease Control and Prevention (CDC) guidelines. All new arrivals shall

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002069

receive TB screening within 12 hours of intake and in accordance with CDC guidelines."

- One (5%) of nineteen records reviewed did not have tuberculosis screening completed as per CDC guidelines. The chest x-ray was ordered five days after arrival and not completed until nine days after arrival. Failure to achieve 100% of the requirement of this standard places both detainees and staff at higher risk of tuberculosis infection, particularly given the origins of the detained population.

Plan of Action:

Importantly, CCS identified this issue prior to the IHSC review. On February 28, 2018, the symptom screening and TB screening was addressed with staff. Next, on April 1, 2018, an additional nurse was assigned to augment the current infection control nurse (ICN). On April 5, 2018, a new tracking spreadsheet was initiated to more efficiently track TB screenings. As of April 2, 2018, on a weekly basis the ICN reviews the intake packet for all detainees who arrived the previous day. The ICN inputs all PPD information on a spreadsheet which tracks PPDs conducted at intake and annual TB screenings. On a weekly basis, the ICN sends a copy of the spreadsheet to the QA nurse. The QA nurse performs a random sampling of 10 intake records to verify compliance. The information is trended, and any staff non-compliance is addressed by the DON or AHSA. In addition, on April 24, 2018, during the staff meeting, the HSA reiterated proper TB screening procedures and documentation. The information is reported quarterly to the CQI committee and will continue on an ongoing basis.

Attachment 7:

- February Meeting Minutes

Finding: Medical Care, Section (V)(S)(4)

"[A]n established procedure shall be in place at all facilities to ensure that all sick call requests are received and triaged by appropriate medical personnel within 24 hours after a detainee submits the request. All written sick call requests shall be date and time stamped and filed in the detainee's medical record. Medical personnel shall review the request slips and determine when the detainee shall be seen based on acuity of the problem."

- Two (67%) of three records reviewed for urgent care (sick call) did not have a nursing referral to a provider submitted within 24 hours where appropriate.

Plan of Action:

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002070

On April 24, 2018, during the staff meeting, the HSA reviewed the use of nursing protocol templates in eCW. The triage guidelines and RN sick call referrals were also discussed. The DON or designee train new nursing staff during "on the job" training regarding the sick call triage process and the use of guidelines.

Effective June 11, 2018, the DON or designee reviews the daily schedule to verify all sick call requests scheduled for the day were completed. Any emergent or urgent referrals are sent to the provider immediately or the local emergency room if the doctor in not available. Non-emergent referrals are scheduled for the providers within the required time frame.

Effective June 11, 2018, on a daily basis, the DON or designee reviews a minimum of 5 RN sick calls to verify they are properly triaged, scheduled, and evaluated. On a weekly basis, the results are sent to the QA nurse for the information to be analyzed. On a quarterly basis, the report is presented to the CQI committee, and will continue to be tracked by the QA nurse.

Finding: Medical Care, Section (V)(U)(5)

"Detainees who arrive at a detention facility with prescribed medications or who report being on such medications, shall be evaluated by a qualified health care professional as soon as possible, but not later than 24 hours after arrival, and provisions shall be made to secure medically necessary medications."

- Two (20%) of ten records reviewed indicated that the detainees did not receive their medication within 24-72 hours. For example, one of the detainee's medication was not ordered at intake because the personal supplies were in Russian. The detainee went without several cardiac medications for 2-3 days until seen by a provider.

Plan of Action:

On June 26, 2018, during the staff meeting, medical staff were re-trained on the referral process and applicable deadlines regarding detainees who arrive with medication. To ensure quick access to medication, the facility maintains a stock of the most common chronic care medications. In addition, there is a local back up pharmacy, if medication is not readily available on site. Telephone/verbal orders can also be requested by the medical staff to the on-call physician. In addition, detainees arriving with medications are automatically scheduled for a chronic care evaluation within 48 hours of arrival. If a detainee arrives with medication that is in a different language, it is translated to determine if there is a comparable

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002071

medication, and the on-call physician is utilized to determine a comparable medication.

Since January 19, 2016, training curriculum for all employees includes instruction on language line and interpretation services. This is provided during pre-service and in-service training. Additionally, all staff carry on their person a laminated card with instructions on the use of the language line, that they receive upon hire and before being assigned to duty. The card makes it easy for staff to use the language line at any time and from anywhere in the facility, including in intake. In addition, all phones in health services have a sticker on them identifying the language line phone number. Alternatively, the pharmacy vendor CorrectRx is available to assist in identifying comparable medications. These procedures were again discussed by the HSA during the regularly scheduled staff meeting conducted on June 26, 2018.

Effective June 7, 2018, on a weekly basis, the QA nurse reviews a roster of detainee intakes with chronic medical problems and medication. A 5% sample of weekly intakes is reviewed to determine compliance. The staff not in compliance are retrained by the DON or AHSA. The study is reported to the CQI committee on an on-going basis.

Attachment 8:

- E-mail to staff regarding procedure, dated June 29, 2018

Finding: Medical Care, Section (V)(C)(4)(c)

"Medical personnel shall provide all detainees diagnosed with HIV/AIDS medical care consistent with national recommendations and guidelines disseminated through the U.S. Department of Health and Human Services, The CDC and the Infectious Diseases Society of America."

- One of six (16%) detainee records reviewed indicated the patient was not seen by an HIV or infectious disease specialist within 30 days of HIV infection identification.

Plan of Action:

In February 2018, a physician was hired who has an infectious disease fellowship and extensive experience with infectious diseases. To verify this requirement is met, the ICN tracks all newly arrived or newly diagnosed HIV/AIDs patients. As of April 2, 2018, monthly, the ICN reviews 100% of the records HIV/AIDs cases

AMERICAN OVERSIGHT

to determine if an evaluation by the provider was conducted, a chest x-ray was completed within 72 hours of arrival, and appropriate diagnostic examination and immunizations were completed. The information is provided by the ICN nurse to the QA nurse for every new detainee or newly diagnosed detainee with HIV/AIDs. The QA nurse reports the data to the CQI committee monthly. The review will continue on an on-going basis.

Attachment 9:

- (b)(6); (b)(7)(C) Resume
- HIV Tracking Log

Findings:

Disability Identification, Assessment, and Accommodation; Section (V)(F)(4)(e)

"Where an accommodation is granted, facility policy or procedures will ensure that all relevant facility staff, including facility security staff, receive timely notification and, as needed, instructions for successful implementation of the accommodation. These procedures will also account for any applicable privacy and confidentiality considerations."

Disability Identification, Assessment, and Accommodation; Section (V)(F)(4)(g)

"After the facility has completed its review of a detainee with a disability or of a request for an accommodation, facility staff shall place written documentation of the following in the detainee's medical and/or detention file…"

- Six (33%) of 20 detainee records reviewed were missing appropriate accommodation orders (special needs). Additionally, the facility does not clearly determine in-record-progress-notes if the provider has assessed the detainees for assistance with activities of daily living.

Plan of Action:

As of May 30, 2018, a specific local procedure was developed to address special needs accommodations. The procedure details identification of special needs, tracking of special needs, notification procedures, a special needs committee, denial/notification of denials, and training of staff.

Effective May 2018, monthly, the patient care coordinator (PCC) and Americans with Disabilities Act coordinator make rounds within the units to determine the status of equipment. The special needs committee meets a minimum of once a

AMERICAN OVERSIGHT

month to discuss each detainee on the special needs log. As of May 2018, the PCC audits 100% of detainees added to the special needs log to verify provider progress notes and detainee education regarding use of equipment and daily living activities is documented as required. The PCC provides the report to the QA nurse monthly, and the QA nurse reports to the CQI committee each quarter. As of this writing, all grievances have been timely processed.

Attachment 10:

- Special Needs Local Operating Procedure

Finding: Grievance Systems, Section (V)(C)(4)

"Designated medical staff shall act on the grievance within five working days of receipt and provide the detainee a written response of the decision and the rationale. This record shall be maintained per the following section "D. Record-Keeping and File Maintenance."

- Four (11%) of thirty-six grievances were not addressed within 5 working days of receipt.

Plan of Action:

As of June 11, 2018, in each housing unit, specific boxes were labelled "medical grievance" wherein the detainees can submit their medical grievances. The PCC picks up the grievances from the dorms every business day. The grievances are logged in the medical grievance log book. The PCC addresses the grievance within 3 working days and forwards it to the HSA for review. The HSA reviews the grievance within 24 hours, and verifies the response appropriately addresses the grievance. Once approved, the response is returned to detainee by the applicable deadline.

The HSA performs a careful review on each grievance to determine the overall quality of care and timeliness of response. Based on the review, quality of care issues and/or timeliness of response are addressed and discussed with the responsible staff. The information is provided by the PCC and HSA to the QA nurse for trending. Effective May 2018, on a monthly basis, during the regularly scheduled staff meeting, the HSA discusses grievance trends and the findings of the reviews. The data is reported by the QA nurse to the CQI committee monthly. On a weekly basis, the grievance committee meeting is held to discuss all open and

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002074

resolved grievances. Facility leadership are members of this committee. All open and resolved grievances for the week are discussed during this meeting.

PBNDS 4.3.S.4
Sick Call

Each facility shall have a sick call procedure that allows detainees the unrestricted opportunity to freely request health care services (including mental health and dental services) provided by a physician or other qualified medical staff in a clinical setting.

This procedure shall include:
an established procedure shall be in place at all facilities to ensure that all sick call requests are received and triaged by appropriate medical personnel within 24 hours after a detainee submits the request. All written sick call requests shall be date and time stamped and filed in the detainee's medical record. Medical personnel shall review the request slips and determine when the detainee shall be seen based on acuity of the problem. In an urgent situation, the housing unit officer shall notify medical personnel immediately.

NCCHC J-A-01 Access To Care

Detainees have access to care to meet their serious medical, dental, and mental health needs. Access to care means that, in a timely manner, a patient can be seen by a clinical provider, be given a professional clinical judgment, and receive care that is ordered.

FINDINGS: Two of ten (20%) of the charts reviewed for urgent care (sick call) did not have timely and appropriate nursing evaluations for the different acute conditions. One detainee was rescheduled for nursing sick call 3 times and another 5 times. Refer to Urgent Care (Sick Call) for additional information.

AMERICAN OVERSIGHT

One of ten (10%) detainees seen on nursing sick call did not have vital signs documented with the nursing assessment. Refer to Urgent Care (Sick Call) for additional information.

Previous Site Visit 02/01/2017
No deficiencies were noted from the previous site visit.

Chronic Care *Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.*

Total number with chronic conditions:	Total number with unstable chronic conditions:
438	0

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
PBNDS 4.3.C.4.
Clinical Evaluation and Management

Medical personnel shall provide all detainees diagnosed with HIV/AIDS medical care consistent with national recommendations and guidelines disseminated through the U.S. Department of Health and Human Services, The CDC and the Infectious Diseases Society of America.

NCCHC J-G-01 Chronic Disease Services

Patients with chronic diseases are identified and enrolled in a chronic disease program to decrease the frequency and severity of the symptoms, prevent disease progression and complication, and foster improved function.

For patients enrolled in an HIV program, it is recommended that care be supervised by an HIV specialist who will initiate and change therapeutic regimens as medically indicated.

FINDINGS:
One of six (16%) detainees was not seen by an HIV or ID specialist within 30 days of HIV identification. The detainee was identified as being diagnosed with HIV on September 3, 2016; however, the detainee was not scheduled for ID visit until December 16, 2016.

Two of ten (20%) of detainees with HIV did not have a chest x-ray completed within 72 hours of problem identification. For one detainee, the diagnosis was identified on July 29, 2017; however, the chest x-ray was not ordered until August 16, 2017. The other detainee was identified as being HIV positive HIV on September 3, 2016. The chest x-ray was ordered on February 9, 2017, and it was completed on February 10, 2017. (REPEAT FINDING)

A review of the facility's chronic care detainees with asthma, hypertension, diabetes and seizure disorder were noted to follow NCCHC and PBNDS standards.

Previous Site Visit 2017:
HIV--Review of 9 charts revealed 8 of 9 (89%) of detainees with HIV had a chest x-ray completed within 72 hours of problem identification.

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:
0	10

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
There were 10 hunger strikes in the last 12 months. One detainee went on hunger strike 6 times, and the other 4 were different detainees. A review of the facility hunger strike policy noted to follow NCCHC and PBNDS standards.

Previous Site Visit Findings from 2/1/2017:
There was one reported hunger strike for 2016.

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
2	84

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

No deficiencies were noted regarding this section of the standard. The facility currently has 2 cells available for suicide watch. Detainees who are determined to be suicidal are evaluated by a mental health professional and are either placed on suicide watch at the facility or sent out to the local hospital for further evaluation and treatment.

It is noted that in approximately the past 6 months, the facility has had a high number of suicide watches. Many of these detainees are referred to off-site in-patient mental health facilities for the suicide watch due to the lack of available suicide watch space at APC according to CCS leadership. Per CCS leadership, detainees with a suicide attempt are automatically referred to the in-patient mental health facility. There was at least one instance where a detainee was referred to the in-patient facility for a suicide watch when there were cells available on-site for a suicide watch. This case was for a detainee with suicidal ideations without an attempt.

The in-patient mental health facility, Alvarado Parkway Institute (API) is located in San Diego, CA. The facility does not attempt to use more local in-patient mental health facilities within the Los Angeles Field Office. Security services at API are provided by the San Diego ERO Field Office which has concerns regarding the high costs of services provided to Los Angeles detainees.

Previous Site Visit Findings from 2/1/2017:
No deficiencies were noted from the previous site visit.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	3

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There were 3 reported deaths in the last 12 months.
--32 year old male died March 28, 2017 at the Victor Valley Hospital. He was found hanging in a restrictive housing unit cell on March 22, 2017. He was admitted to the hospital with the following diagnoses: coma, sever hypoxic encephalopathy, status post full cardiopulmonary arrest, respiratory failure and attempted suicide by self-hanging. Detainee had a history of mental health problems and had recently been hospitalized for his mental health disorder. Final mortality reports are still pending.
--55 year old male died April 14, 2017 at Victor Valley Hospital after being admitted on April 1, 2017 for hemoptysis. He was admitted for work up and treatment for GI bleed, anasarca, sepsis, and leukocytosis. Further workup revealed anemia and cirrhosis of the liver. Esophageal banding was performed on April 4, 2017 and the bleeding stopped. On April 13, 2017, he was being prepared for discharge when he felt dizzy and collapsed in bed. A code blue was called. However, he did not recover from this episode, and he was pronounced dead on April 14, 2017. Final mortality reports are pending.
--46 year old male died May 31, 2017 after collapsing while playing soccer. He was transported to the emergency department where he was pronounced dead. Final mortality reports are pending. The detainee arrived to Adelanto on May 22, 2017 with a significantly high blood pressure and was placed in the infirmary and received a dose of clonidine and was prescribed other blood pressure medications. He was discharged from the infirmary the following day with an order for blood pressure checks, routine labs and an EKG with a follow-up in three to four weeks. Final mortality reports are pending.
The FMCs will address any negative findings from the mortality reports once received.

There are no detainees with terminal illness or detainees with advance directives within the last 12 months. The facility's policy was reviewed, and there were no areas of concern related to the policies.

AMERICAN OVERSIGHT

Other Observations

The Los Angeles Field Medical Coordinators conducted the IHSC site visit August 29, 2017 through September 1, 2017.

Adelanto ICE Processing Center (APC) is a dedicated IGSA with only ICE detainees. APC operates under The Geo Group Inc. which contracts with CorrectCare Solutions (CCS) to provide on-site medical care. CCS has provided medical care at the facility since March 1, 2016. The facility operates under the 2011 Performance Based National Detention Standards (PBNDS) and is accredited by the National Commission on Correctional Health Care (NCCHC). The facility currently houses approximately 192 female detainees and 1437 male detainees.

APC currently utilizes both paper and electronic medical records. They began utilizing eClinical Works (eCW) for their electronic health record on August 30, 2016. Medication administration, consents, refusals, and some intake screenings are documented on paper records and then scanned into the electronic record.

CURRENT STAFFING:

(b)(7)(E)

Nakamoto Inspection is scheduled for October 3-5, 2017
CRCL follow-up review of medical and mental health care scheduled for November 13-14, 2017

Deficiencies for Areas Evaluated

AMERICAN OVERSIGHT

The following PBNDS 2011 deficiencies were noted:

PBNDS 4.3.S.4
Sick Call

Each facility shall have a sick call procedure that allows detainees the unrestricted opportunity to freely request health care services (including mental health and dental services) provided by a physician or other qualified medical staff in a clinical setting.

This procedure shall include:
an established procedure shall be in place at all facilities to ensure that all sick call requests are received and triaged by appropriate medical personnel within 24 hours after a detainee submits the request. All written sick call requests shall be date and time stamped and filed in the detainee's medical record. Medical personnel shall review the request slips and determine when the detainee shall be seen based on acuity of the problem. In an urgent situation, the housing unit officer shall notify medical personnel immediately.

FINDINGS: Two of ten (20%) of the charts reviewed for urgent care (sick call) did not have timely and appropriate nursing evaluations for the different acute conditions. One detainee was rescheduled for nursing sick call 3 times and another 5 times, which resulted in delay of evaluation and care for 2 weeks for detainees complaining of eye and back pain.

One of ten (10%) detainees seen on nursing sick call did not have vital signs documented with the nursing assessment.

PPBNDS 4.3.C.4.
Clinical Evaluation and Management
Medical personnel shall provide all detainees diagnosed with HIV/AIDS medical care consistent with national recommendations and guidelines disseminated through the U.S. Department of Health and Human Services, The CDC and the Infectious Diseases Society of America.

FINDINGS:
One of six (16%) detainees was not seen by an HIV or ID specialist within 30 days of HIV identification. The detainee was identified as being diagnosed with HIV on September 3, 2016; however, the detainee was not scheduled for ID visit until December 16, 2016.

Two of ten (20%) of detainees with HIV did not have a chest x-ray completed within 72 hours of problem identification. For one detainee, the diagnosis was identified on July 29, 2017, however chest x-ray was not ordered until August 16, 2017. The other detainee was identified as being HIV positive on September 3, 2016. The chest x-ray was ordered on February 9, 2017, and it was completed on February 10, 2017. (REPEAT FINDING)

Quality of care issues:
Urgent Care (Sick Call):
Eight of ten (80%) of the charts reviewed for urgent care (sick call) had timely and appropriate nursing evaluations for the different acute conditions. The detainee with the complaints of back pain was rescheduled five times before being evaluated. The detainee with the complaints of the eye pain was rescheduled three times before being evaluated. The detainee with the back pain was rescheduled on March 14, March 15, March 16, March 17, March 18 and was eventually evaluated on April 4 during chronic care for the complaint. The detainee with the eye pain was rescheduled on April 16, April 27 and April 28 and was eventually evaluated on April 30. There is no documentation in the medical records regarding why the detainees were rescheduled. According to the HSA, the reschedules could have been due to a variety of factors including provider schedules, medical emergencies, lack of custody to transport the detainee to the clinic, etc. Effective June 2017, the HSA is monitoring the scheduled sick call on a daily basis to review the number scheduled, seen, refused, canceled or rescheduled and the type of complaint for those that were rescheduled if applicable.

Nine of ten (90%) had vital signs documented with the nursing assessment. No vital signs were taken for a detainee complaining of eye pain.

AMERICAN OVERSIGHT

Evaluation of Care Prior to Emergency Department:

One of ten (10%) charts revealed that earlier intervention might have prevented deterioration to the point of need for ED/hospital care.

In one case, there was a delay in obtaining a laboratory test. The test was ordered on March 18, 2017 however, it was not obtained until April 3, 2017.

Diagnostic Services and Specialty Care Access:

Nine of ten (90%) of the specialty charts reviewed had time urgency documented on the order for specialty care, the appointment was accomplished within the ordered time frame, and the provider acknowledged the specialist's report within 7 days from the performed date of service.

One of the detainees was referred to the ENT on December 29, 2016; the MedPAR was submitted to IHSC on February 21, 2017. There is no documentation in the medical record regarding why there was a delay in submitting the MedPAR. The appointment was completed on March 6, 2017; however, there was no follow-up by the provider after the appointment. The consultation was normal, and there were no recommendations from the consultant. There was no adverse effect noted in the medical record from not being evaluated at the facility after the ENT appointment. The detainee was released from detention on March 28, 2017.

Three out of four (75%) were evaluated at least every 30 days until the consult was completed. One of the detainees was referred to the OB/GYN on February 13, 2017, and the appointment was on March 7, 2017; however, there was no follow-up by the provider after the appointment. The consultation was normal, and there were no recommendations from the consultant. There was no adverse effect noted in the medical record from not being evaluated at the facility after the GYN appointment.

Diabetes:
Five of six (90%) of detainees had aspirin prescribed, as clinically indicated. In one instance aspirin was not prescribed as indicated for a 55 year old detainee with hyperlipidemia, hypertension, and positive family history.

Previous Site Visit Deficiencies from 2/1/2017:

HIV--Review of 9 charts revealed 8 of 9 (89%) of detainees with HIV had a chest x-ray completed withing 72 hours of problem identification. Detainee did not disclose his HIV status upon intake or during his physical. Once he did disclose his HIV status, medications, labs and follow-up was ordered; however, the chest x-ray was not completed.

Previous Site Visit Quality of Care Issues identified from 2/1/2017:

9 of 10 (90%) charts reviewed revealed a nursing referral was submitted within 24 hours where appropriate. Detainee was assessed during sick call and found to have a fever (100.4) and heart rate of 107. The nurse treated the detainee using nursing protocols and unable to locate nursing protocol in medical record.

9 of 10 (90%) charts reviewed revealed the assessment reflecting the hospital findings and concurrence or reason for deviation from the hospital recommendations.
Detainee released from the hospital with recommendations for a neurology follow-up in 3-4 weeks. Recommendations were not addressed timely.

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area. Documents were not scanned into the appropriate section of the medical record consistently. For example consult notes were scanned into the consent section.

One chart had medications listed on the MAR but unable to find orders for medications.

Lab was ordered to be drawn on 8/24/16 and were not drawn. A refusal was obtained and placed

AMERICAN OVERSIGHT

in the chart on 8/30/16.

5 of 6 (83%) charts reviewed revealed the detainee was re-assessed by the provider at least every 30 days until the off-site service was completed.

6 of 7 (85%) charts reviewed the clinician acknowledged the specialist's report within seven days after the service was performed.

6 of 7 (86%) of charts reviewed revealed treatment plans were updated every 90 days. Although each detainee chart reviewed did have complete assessment, treatment plan and follow-up plan documented, the formal mental health treatment plan was not completed on each detainee. The formal mental health treatment plan is one which includes identification of strengths, weakness, treatment goals and interventions.

AMERICAN OVERSIGHT

Suicide Screening

Ten charts reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) of detainees had an indication for a mental health referral were referred appropriately and evaluated timely. They were evaluated by a qualified mental health provider daily while on suicide watch with appropriate monitoring and consistent documentation. No issues were identified.

Previous Site Visit Findings from 2/1/2017:
There were no findings from the previous site visit.

Health Assessment

Twenty charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

20 of 20 (100%) of charts reviewed had an initial screen completed within 12 hours of booking.

18 of 18 (100%) had tuberculosis screening completed as per CDC guidelines. Two of the detainees had a chest x-ray completed at the transferring facility.

11 of 11 (100%) of detainees who screened positive for mental health or suicide risk were referred for an evaluation. The other 9 detainees did not have a positive mental health screen.

20 of 20 (100%) of those identified with an acute or chronic condition during intake screening had timely follow-up for their significant findings and a complete health evaluation within 14 days of intake.

Previous Site Visit Findings from 2/1/2017:
There were no findings from the previous site visit.

Urgent Care (Sick Call)

Ten charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Eight of ten (80%) of the charts reviewed for urgent care (sick call) had timely and appropriate nursing evaluations for the different acute conditions. The detainee with the complaints of back pain was rescheduled five times before being evaluated. The detainee with the complaints of the eye pain was rescheduled three times before being evaluated. The detainee with the back pain was rescheduled on March 14, March 15, March 16, March 17, March 18 and was eventually evaluated on April 4 during chronic care for the complaint. The detainee with the eye pain was rescheduled on April 16, April 27 and April 28 and was eventually evaluated on April 30. There is no documentation in the medical records regarding why the detainees were rescheduled. According to the HSA, the reschedules could have been due to a variety of factors including provider schedules, medical emergencies, lack of custody to transport the detainee to the clinic, etc. Effective June 2017, the HSA is monitoring the scheduled sick call on a daily basis to review the number scheduled, seen, refused, canceled or rescheduled and the type of complaint for those that were rescheduled if applicable.

Ten of ten (100%) of care was delivered within the scope of the nurse's license.

Nine of ten (90%) had vital signs documented with the nursing assessment. No vital signs were taken for a detainee complaining of eye pain.

Six of six (100%) had a nursing referral to a nurse practitioner submitted within 24 hours.

Six of six (100%) of the detainees who were referred to a provider had an assessment and treatment plan documented by the nurse practitioner.

Previous Site Visit Findings from 2/1/2017:

AMERICAN OVERSIGHT

10 charts reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.
9 of 10 (90%) reviewed revealed a nursing referral was submitted within 24 hours where appropriate. Detainee was assessed during sick call and found to have a fever (100.4) and heart rate of 107. The nurse treated the detainee using nursing protocols.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

Ten charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Ten out of ten (100%) of detainees had an outbound progress note and an inbound assessment, as well as an assessment that reflected hospital findings and concurrence or reason for deviation from the hospital recommendations. Detainees were also found to have discharge documentation from the hospital or emergency department (ED) in the chart.

Nine out of ten (90%) charts revealed no evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care.

In one case, there was a delay in obtaining initial routine blood work after history and physical which included a complete metabolic panel. Test was ordered on March 18, 2017 and was not collected until April 3, 2017. Detainee was sent to the emergency room for hyperglycemia on April 5, 2017.

Previous Site Visit findings from 2/1/2017:
9 of 10 (90%) charts reviewed revealed the assessment reflect the hospital findings and concurrence or reason for deviation from the hospital recommendations.
Detainee released from the hospital with recommendations for a neurology follow-up in 3-4 weeks. Recommendations were not addressed timely.

Medication Administration Practices

Ten charts reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Two of two (100%) of detainees had documentation in the medical record that the prescribing physician was notified of consecutive refusals. No issues were identified.

Two out of two (100%) detainees had an appropriate response from the clinician (i.e was the patient was interviewed or the prescription was changed or discontinued. No issues were identified.

The facility has a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up.

Approximately 3% of MARs reviewed had either blanks, consecutive refusals, or no shows.

All previous month MARs were filed in the detainee medical records.

Approximately 70% of patients are on self-administered medications.

Over the counter (OTC) medications are provided by medical and the commissary.

Previous Site Visit Findings from 2/1/2017:
No findings were noted from the previous site visit.

AMERICAN OVERSIGHT

Continuity of Medication

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) of detainees had medications ordered less than 24 hours from completion of intake screening, and received their first dose in less than 24 hours from the order. No issues were identified.

Previous Site Visit Findings from 2/1/2017:
No findings were noted from the previous site visit.

Mental Health Screen

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had a positive screen for mental illness or suicide risk and were referred for evaluation by a mental health provider in a timely manner.

Previous Site Visit Findings from 2/1/2017:
No issues were identified.

Medical Recordkeeping Practices

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area. APC utilizes both paper and electronic medical records. They began utilizing eClinical Works (eCW) for their electronic health record on August 30, 2016. Medication administration, consents, refusals, and some intake screenings are documented on paper records and then scanned into the electronic record.

Ten of ten (100%) revealed that the medical recordkeeping practices are in compliance or non-applicable.

Previous Site Visit Findings from 2/1/2017:

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area. Documents were not scanned into the appropriate section of the medical record consistently. For example consult notes were scanned into the consent section.

One chart had medications listed on the MAR but unable to find orders for medications.

Pregnant Women

Two charts were reviewed using the IHSC Quality of Care Audit Tool as there were only two pregnant detainees within the last 6 months at the facility.

APC performs pregnancy tests on all females aged 10-54 during intake screening, prior to x-ray or initiation of medications.

Two of two (100%) had an OB/GYN consult ordered within 7 days of pregnancy confirmation and were seen within 30 days.

Two of two (100%) were screened for HIV, STI, and viral hepatitis and prescribed prenatal vitamins.

Previous Site Visit Findings from 2/1/2017:
There were no findings from the previous site visit.

Dental Care

Ten charts were reviewed using the IHSC Quality of Care audit tools to evaluate this area.

AMERICAN OVERSIGHT

Ten of ten (100%) of charts reviewed found all were screened for symptoms during the intake process, and two were referred to the dental provider and evaluated within 48 hours. The dental clinical notes described findings, diagnosis and treatment plans. No issues were identified.

Previous Site Visit Findings from 2/1/2017:
No findings were noted from the previous site visit.

AMERICAN OVERSIGHT

Acute Laboratory Testing

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area. Ten of ten (100%) of the patients had laboratory testing done within one business day of the ordered date or by the due date.

Ten of ten (100%) of the patients who had labs drawn, routine results were back within 7 days and acute results were back in 24 hours; the results were acknowledged by a clinician with an appropriate response.

Previous Site Visit Findings from 2/1/2017:
Eight charts reviewed with lab orders using the IHSC Quality of Care Audit Tool

7 of 8 (88%) lab orders reviewed were found to have been drawn within 1 business day of the order or within the time frame ordered. The results were back within 24 hours. The lab results were clinically acknowledged with the appropriate response. The results were discussed with the detainee at a follow-up appointment.

Lab was ordered to be drawn on 8/24/16 but was not drawn. A refusal was obtained and placed in the chart on 8/30/16.

Diagnostic Services and Specialty Care Access

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Nine of ten (90%) of the specialty charts reviewed had time urgency documented on the order for specialty care and the appointment was accomplished within the ordered time frame.

Three out of four (75%) were evaluated at least every 30 days until the consult was completed.

One of the detainees was referred to the ENT on December 29, 2016; the MedPAR was submitted to IHSC on February 21, 2017. There was no documentation in the medical record regarding why there was a delay in submitting the MedPAR. The appointment was completed on March 6, 2017; however, the detainee was not re-evaluated every 30 days and there was no follow-up by the provider after the appointment. The consultation was normal and acknowledged by the provider, and there were no recommendations from the consultant. There was no adverse effect noted in the medical record from not being evaluated at the facility after the ENT appointment. The detainee was released from detention on March 28, 2017.

Nine of ten (90%) of the specialty charts reviewed revealed that the provider acknowledged the specialist's report within 7 days from the performed date of service.

One of the detainees was referred to the OB/GYN on February 13, 2017, and the appointment was on March 7, 2017; however, there was no follow-up by the provider after the appointment. The consultation was normal, and there were no recommendations from the consultant. There was no adverse effect noted in the medical record from not being evaluated at the facility after the GYN appointment.

Previous Site Visit Findings from 2/1/2017:
10 charts were reviewed using the IHSC Quality of Care Audit Tool
5 of 6 (83%) charts reviewed revealed the detainee was re-assessed by the provider at least every 30 days until the off-site service was completed.
6 of 7 (85%) charts reviewed showed the clinician acknowledged the specialist's report within seven days after the service was performed.

Mental Health Treatment Planning

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten out of ten (100%) of detainees had a clinical assessment, treatment, and follow-up plan documented. No issues were identified.

Nine out of nine (100%) of detainees had treatment plans updated at a minimum of every 90

AMERICAN OVERSIGHT

days. No issues were identified.

Previous Site Visit Findings from 2/1/2017:

6 of 7 (86%) of charts reviewed revealed treatment plans were updated every 90 days. Although each detainee chart reviewed did have complete assessment, treatment plan and follow-up plan documented, the formal mental health treatment plan was not completed on each detainee. The formal mental health treatment plan is one which includes identification of strengths, weakness, treatment goals and interventions.

Treatment of Disability

Ten charts was reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten out of ten (100%) had the disability noted in the file, the detainees was assessed for assistance with activities of daily living (ADL), and appropriate accommodations were ordered. The detainees did not require assistance with ADL's.

The facility maintains a current list of detainee with disabilities.

Previous Site Visit Findings from 2/1/2017:
There were no findings from the previous site visit.

Complaints and Grievances

Grievance logs were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area. 40 grievances were submitted over the past three months. All were appropriately addressed within five working days. No issues or trends were identified during the current site visit. There were a total of six grievances due to availability of care; twelve due to denial or refusal of specific request for care; nine due to delay of care; one due to competency/ professional skillset of medical staff; two due to attitude, demeanor or conduct or staff, and 10 due to various other issues such as requesting personal property, being exposed to quarantine by sharing the recreation yard, etc.

Previous Site Visit Findings from 2/1/2017:
There were no findings from the previous site visit.

AMERICAN OVERSIGHT

Diabetes

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

The facility uses the BOP Diabetes Clinical Practice Guidelines.

Seven out of seven (100%) of detainees had blood sugar measured and recorded on intake. No issues were identified.

Ten out of ten (100%) of detainees were seen for chronic care within seven days of illness identification, had lipids measured within one year, and were followed at least every 90 days with appropriate vital signs. No issues were found.

Nine of nine (100%) of detainees had a baseline HgbA1c performed within 30 days of intake or within the past 3 months. No issues were found.

Five of six (90%) of detainees had aspirin prescribed, as clinically indicated.

In one instance aspirin was not prescribed as indicated for a 55 year old detainee with hyperlipidemia, hypertension, and positive family history.

Eight out of eight (100%) of detainees had the degree of control (goal HgbA1C <7) documented. No issues were identified.

Four of four (100%) of detainees had a strategy to attain diabetes control documented if HgbA1C was above goal. No issues were identified.

Previous Site Visit Findings from 2/1/2017:
No deficiencies were noted from the previous site visit.

Human Immunodeficiency Virus (HIV)

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Five out of six (83%) of detainees were seen by an HIV or ID specialist within 30 days of HIV identification. In one instance, the detainee was identified as being HIV positive on September 3, 2016 and was not scheduled for a chronic care clinic (CCC) ID visit until December 16, 2016.

Eight out of eight (100%) of detainees had a CD4+ and viral load completed within 14 days of arrival, or within the last 3 months. No issues were found.

Nine out of nine (100%) of detainees had anti-retroviral treatment considered and documented. No issues were found.

Four out of four (100%) of detainees were seen by a mid-level provider or physician for chronic care at least every 90 days. No issues were found.

Eight out of ten (80%) of detainees had a chest x-ray completed within 72 hours of problem identification, if not already done. In one instance, the detainees was identified on July 29, 2017; however, the chest x-ray was not ordered until August 16, 2017. The other detainee was identified as being HIV positive on September 3, 2016. The chest x-ray was ordered on February 9, 2017, and it was completed on February 10, 2017. (REPEAT FINDING)

Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage HIV detainees.

Previous Site Visit Findings from 2/1/2017:
Nine charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
8 of 9 (89%) charts reviewed revealed a chest x-ray was completed within 72 hours of problem identification.

AMERICAN OVERSIGHT

One detainee did not reveal his HIV status upon intake or physical assessment. Once identified, labs were ordered and appropriate follow-up however; a chest x-ray was not ordered.
Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage HIV detainees.

Hypertension

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had documented blood pressure reading at intake and were seen by an MD/PA/NP within 14 days of illness identification.

Five of five (100%) were noted to have blood pressures above 140/90 with a treatment plan initiated within 14 days of identification.

Ten of ten (100%) were followed using the facility's local hypertension guideline that included baseline laboratory testing.

Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage detainees with hypertension.

Previous Site Visit Findings from 2/1/2017:
There were no findings from the previous site visit.

Asthma

Ten charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Nine out of nine (100%) of detainees were seen in CCC by mid-level provider or physician within 14 days of illness identification and had a peak flow completed at the initial physical exam. No issues were identified.

Eight out of nine (89%) of detainees had a peak flow completed at the initial exam. One detainee did not report asthma on intake however the medical transfer summary received by Adelanto noted a history of chronic asthma, therefore a peak flow should have been performed.

Ten out of ten (100%) of detainees had a peak flow completed at the CC visit or within the last 3 months. No issues were identified.

Ten out of ten (100%) of detainees had a chronic disease guideline followed, which addressed disease severity, prescription of medication consistent with severity, and documented degree of control. No issues were identified.

Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage detainees with asthma.

Previous Site Visit Findings from 2/1/2017:
No deficiencies were noted from the previous site visit.

Seizure Disorder

Ten charts reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) detainees had appropriate neurological history completed at the initial physical examination. No issues were identified.

Ten out of ten (100%) detainees were seen in CCC by mid-level provider or physician within 14 days of illness identification. No issues were identified.

Six out of six (100%) detainees had serum drug levels performed and acknowledged in the medical record every three months until stable, then every six months where indicated. No issues were identified.

Eight out of eight (100%) detainees had a treatment plan established. No issues were

AMERICAN OVERSIGHT

identified.

Ten out of ten (100%) detainees had orders for a bottom bunk. No issues were identified.

Adelanto uses no clinical practice guidelines to manage detainees with seizure disorders.

Previous Site Visit Findings from 2/1/2017:
No deficiencies were noted from the previous site visit.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

The Quality Improvement Committee is conducting several studies related to medical complaints and CAPs to ensure compliance. The information is shared with the FMC quarterly.

Effective June 2017, the Health Services Administrator is monitoring sick call daily to ensure detainees are seen as scheduled and not rescheduled.

The Health Services Administrator reports and educates staff regarding the different medical complaints and site visit findings.

The Health Services Administrator provides training and refresher training to clinical staff regarding the management of detainees with chronic and acute conditions.

Additional Comments

The following CAPs were updated during the site visit:

AMERICAN OVERSIGHT

1. FMC Site Visit - February 2017 - Items still open.
2. ODO Preliminary Findings July 17, 2017 - All items completed
3. Medical Complaint (b)(6); (b)(7)(C) - All items completed
4. Medical Complaint (b)(6); (b)(7)(C) - Items still open. After the site visit, the CAP was revised after CRCL reviewed the initial CAP responses and provided additional recommendations. Responses are pending.
5. Medical Complaint (b)(6); (b)(7)(C) - All items completed
6. Medical Complaint - All items completed
7. Medical Complaint All items completed

Update regarding the Corrective Action Plan in response to the CRCL 2015 Site Visit:

1. ERO, IHSC and ADF must audit all Special Management Unit (SMU) cases to identity those detainees housed in the SMU, partially or wholly due to mental health conditions and, develop a housing alternative that includes necessary and consistently delivered mental health services.
-Completed. As recommended by the CRCL Psychiatrist, a review of all detainees in the SMU were completed as of December 31, 2015. The identified detainees were transferred out of the Adelanto Detention Facility (ADF).

2. The Mental Health Director and IHSC must ensure that ADF mental health staff conduct daily face-to-face rounds with all detainees in the SMU and provide appropriate mental health assessments and treatment.
-Current practice. Beginning in April 2016, a dedicated Registered Nurse was assigned to conduct daily Medical and Mental Health rounds to include Sick Call and welfare checks for all detainees in SMU. Beginning August 12, 2016, Mental Health staff began conducting weekly mental health groups with Administrative Segregation detainees. Anger Management was started on August 12, 2016. Positive Coping Skills groups were started on August 10, 2016 and September 15, 2016. On September 7, 2016, psychologists began conducting daily Mental Health visits to all detainees housed in Special Management Units. The previous FMC witnessed these rounds and group sessions being conducted.

3. The Mental Health Director, ERO, and IHSC must ensure that custody staff cease determining or influencing whether or not a detainee requires medical or mental health services.
-Current practice. All staff are reminded during daily briefings that detainees are to be provided access to medical and mental health care staff as requested or needed. Only medical or mental health staff may determine if a detainee will or will not be seen. Custody staff assigned to SMU receive 40 hours of specialized training which includes four hours of medical response and awareness training. As of November 13, 2017, training log sign in sheet received by the FMC.

4. ICE must audit all detainees held in the SMU over 30 days for protective housing reasons, and determine if transfer to another facility is more appropriate.
-Completed. An audit was performed and detainees were transferred out. The previous FMC had first hand knowledge of this being completed. This continues to be current practice.

5. ERO must conduct an external audit of all detainees held in Administrative and Disciplinary Segregation over 30 days to determine if transfer to another facility could improve treatment or resolve use of the SMU for special housing.
-Current practice. All cases in Administrative and Disciplinary Segregation held over 30 days were reviewed at the onset of this request and the process continues on a weekly basis. All Administrative and Disciplinary Segregation cases are reviewed on a weekly basis by a multi-disciplinary panel to determine if continued detention in either Administrative or Disciplinary Segregation is warranted or beneficial. In addition, consideration is given to transfer to another facility or release from custody for long term cases. Documentation of SMU housing reports and weekly SMU minutes received by FMC.

6.GEO and ICE (IHSC) must conduct an audit of all medical files, starting with the detainee Chronic Care List, and take action to ensure all detainees receiving medical/mental health care are current on appointments (on-site and off-site), treatments (including surgeries},

AMERICAN OVERSIGHT

and are receiving the appropriate and timely assessments and treatments for their conditions.
-Completed. The full audits were completed in the East by January 1, 2016 and completed in the West by January 29, 2016. Audits conducted prior to responsibility being assumed February 1, 2016 by Correct Care Solutions. Supporting documentation unavailable from GEO corporate or Regional Managers per the HSA.

7. The paper-based medical record must be changed to include a separate section for medical orders (with a standard order form).
-Completed. GEO policy 303/303-A addresses the chart order and organization. The process of adding a separate section or page for medical orders has been used before and can lead to errors in the duplicate writing. To address the issue of incomplete order notations, a brightly colored sheet to note orders needing attention will enhance the facility's current system. Quality Control nurses will review files before refilling to confirm that all physician notes have been handled properly. An EHR system was implemented August 16, 2016. Detainees housed prior to August 16, 2016 and still remaining at ADF will have a hybrid record (paper record until August 15, 2016 and electronic records from August 16, 2016). The FMC had first hand knowledge of completion.

(b)(6); (b)(7)(C); (b)(7)(E)

9. The medical record must be standardized. Only forms approved by the Clinical Director and the Medical Record Director should be used for charting.
-Completed. On December 21-22, 2015, the Medical Records Supervisor conducted an In-Service Training with the medical records staff to review the policy requirements under the Contents and Format in Health Records, Policy Number 303 and 303-A, dated May 9, 2014. On December 29, 2015, an In-Service Training for all health care providers will be conducted, addressing the use of approved standard GEO Forms. GEO policy Contents and Format in Health Records, Policy Number 303 and 303-A, dated May 9, 2014, addresses the order and organization of the medical records. The health care provider will be using only current approved GEO Forms. Training December 22, 2015 and January 12, 2016. December 22, 2015 sign in sheet was obtained. January 12, 2016 training log unavailable. Correct Care Solutions assumed responsibility February 1, 2016 with different policies and forms. Training log sign in sheet for those policies and forms received by the FMC.

10. GEO must draft a Request for Proposals (RFP) in order to begin the process of selecting, procuring and deploying an Electronic Health Record (EHR) that is appropriate for detention health care. (Deploy the EHR within twelve months.)
-Completed. Electronic Health Record system was implemented August 16, 2016.

11. ICE HQ must immediately require a CAP be developed for all issues identified during the on-site investigation and, within 90 days, all local and headquarters CAP items must be fully corrected, and documented; signed by ICE and GEO headquarters.
-As of October 12, 2017, the CAP is still in progress. All medical and mental health related items on the CAP are addressed here to provide updates.

12. GEO and ICE (IHSC) must audit the medical files of detainees on the Mental Health Chronic Care List, prioritizing detainees who are in Segregation, and take action to ensure that all detainees are receiving appropriate mental health care. In particular, ensuring that

AMERICAN OVERSIGHT

detainees with psychotic disorders are diagnosed as such and are offered adequate antipsychotic medication, including long-acting injectable antipsychotics, especially when medication in-adherence is present.
-Completed January 20, 2016. The FMC had first hand knowledge of this being completed.

13. ACF Mental Health staff must follow GEO Procedure 623-A, which calls for a complete "Written comprehensive Initial Psychiatric Evaluation (Form HS-906) that "will address current and past inpatient and outpatient psychiatric treatment and psychotropic medications." Moreover, Mental Health Staff must demonstrate an attempt to obtain collateral historical information (and not simply indicate that a detainee has refused). If such information is available in a transfer summary, that must be placed in the chart and referenced by the mental health provider. This procedure should be done retrospectively for all detainees on the Mental Health Chronic Care List who are in segregation.
-Completed January 20, 2016. Documentation from previous GEO training unavailable. Correct Care Solutions assumed responsibility February 1, 2016 with different policies and forms. Training log sign in sheet for those policies and forms received by the FMC.

14. Detainees needing emergent transport and admission to outside acute psychiatric inpatient units should wait no more than 72 hours after such a determination/request before transfer is made by a mental health clinician. Relationships with potential accepting institutions must be established and/or strengthened in order to address this need.
-Completed. A contract with Alvarado Parkway Institute for acute needs has resolved this issue. The contract was signed in October 2015. Adelanto currently utilizes API for in-patient mental health services.

15. The paper-based medical record must be changed to include a separate section for medical orders (with a standard order form).
-Completed. To address the issue of incomplete order notations, the facility's current system will be enhanced by a brightly colored sheet to note orders needing attention. Quality Control nurses will review files before refilling to confirm that all physician notes have been handled properly. The FMC had first hand knowledge of this being completed.

(b)(6); (b)(7)(C); (b)(7)(E)

17. The medical record must be standardized. Only forms approved by the Clinical Director and the medical record director should be used for charting.
-Completed. The medical records staff was re-trained to file the records in the proper section and in reverse chronological order as per GEO policy. As of January 8, 2016, the training of staff was being conducted on use of only GEO approved forms. Previous GEO training forms unavailable. Correct Care solutions assumed responsibility February 1, 2016. Electronic health record system has resolved this issue.

18. GEO must draft a Request for Proposals (RFP) in order to begin the process of selecting, procuring and deploying an Electronic Health Record appropriate for detention health care.
-Completed January 20, 2016. The Electronic Health Record system was implemented August 16, 2016.

19. All mental health staff must have access to GEO Track, where they can review and change their own appointments and those of other mental health clinicians. Each clinician should have his/her own schedule.
-Completed. Training was provided by Correctional Health Services Director on December 30, 2015, and December 31, 2015. Training log unavailable as this was conducted by GEO corporate staff prior to responsibility being assumed by Correct Care Solutions on February 1, 2016. However, Adelanto no longer uses GEO track to schedule patient visits as they now have the electronic health records system.

Recommendations:

1. FMC to share approved report with the field office.
2. FMC to request a corrective action plan (CAP) to address the PBNDS 2011 deficiencies and quality of care issues. CAP is due in 30 days.
3. Both Los Angeles FMCs, possible 3rd FMC as well, to conduct another site visit within 30 days of receipt of approved CAP; review additional records for standards compliance and quality of care tools.

PBNDS 4.3.U.5
Delivery of Medication
Detainees who arrive at a detention facility with prescribed medications or who report being on such medications, shall be evaluated by a qualified health care professional as soon as possible, but not later than 24 hours after arrival, and provisions shall be made to secure medically necessary medications.

FINDINGS:

AMERICAN OVERSIGHT

Two of ten (20%) of the charts reviewed indicated that patients did not receive their first dose of medication in less than 24 hours from arrival to the facility. Two received their first dose of medication in 48 hours.

PBNDS 4.8: V.F.4.e
Disability Identification, Assessment, and Accommodation, F4. Multidisciplinary Team, e. Staff Notification- Where an accommodation is granted, facility policy or procedures will ensure that all relevant facility staff, including facility security staff, receive timely notification and, as needed, instructions for successful implementation of the accommodation. These procedures will also account for any applicable privacy and confidentiality considerations.

FINDINGS: Ten detainees were assessed for assistance with activities of daily living (ADL), and appropriate accommodations ordered. The facility does not clearly determine in the progress notes if the provider has assessed the detainees for assistance with activities of daily living.

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
No deficiencies noted.

Previous findings from 05/20/2019 FMC Site Visit
PBNDS 4.3.M
Comprehensive Health Assessment

Each facility's health care provider shall conduct a comprehensive health assessment, including a physical examination and mental health screening, on each detainee within 14 days of the detainee's arrival unless more immediate attention is required due to an acute or identifiable chronic condition. Physical examinations shall be performed by a physician, physician assistant, nurse practitioner, RN (with documented training provided by a physician) or other health care practitioner as permitted by law.

FINDINGS:
Two out of ten (20%) detainees were not seen in Chronic Care Clinic by an advanced practice provider or physician within 14 days of asthma identification. One detainee was seen on the 15th day and another on the 22nd day.

PBNDS 4.3.C.4.
Clinical Evaluation and Management

Medical personnel shall provide all detainees diagnosed with HIV/AIDS medical care consistent with national recommendations and guidelines disseminated through the U.S. Department of Health and Human Services, The CDC and the Infectious Diseases Society of America.

NCCHC J-G-01 Chronic Disease Services

Patients with chronic diseases are identified and enrolled in a chronic disease program to decrease the frequency and severity of the symptoms, prevent disease progression and complication, and foster improved function.

For patients enrolled in an HIV program, it is recommended that care be supervised by an HIV specialist who will initiate and change therapeutic regimens as medically indicated.

FINDINGS:
Two out of nine (22%) of detainees were not seen by an ID specialist within 30 days of HIV identification or arrival at the facility. One of the detainees arrived on March 8, 2019 and was scheduled to see ID. The ID's office rescheduled the appointment. The detainee was seen on May 24, 2019. One detainee arrived to the facility on September 28, 2018 and was seen by

AMERICAN OVERSIGHT

ID on December 5, 2018.

PBNDS 4.3.AA.7
Informed Consent and Involuntary Treatment
If the detainee refuses to consent to treatment, medical staff shall make reasonable efforts to explain to the detainee the necessity for and propriety of the recommended treatment.

FINDINGS:
Two out of eight (25%) detainees with a history of seizures, did not have a serum drug level performed and acknowledged in the medical record every 3 months. Two of the detainees refused labs initially and the labs were rescheduled. One detainee arrived November 12, 2018; the lab was refused on March 7, 2019; lab reordered for June 12, 2019. Another detainee arrived October 31, 2019; refused labs May 14, 2019; labs reordered for June 11, 2019. There was no documentation that reasonable efforts were made to explain the necessity for the recommended labs.

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
1	204

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There was one suicide watch at the time of the site visit. No deficiencies were noted regarding this standard. Detainees who are determined to be suicidal are evaluated by a mental health provider and are either placed on a constant or staggered (15 minute checks) suicide watch at the facility. Detainees on suicide watch are evaluated by a mental health provider daily. The facility has 2 cells available for suicide watch. If the cells are occupied or if a serious suicide attempt is made, the detainee is sent out to the local hospital for further evaluation and treatment.

The facility continues to use Anaheim Global Medical Center (AGMC) as the primary mental health facility. If no beds are available then other local hospitals in the area are utilized.

Previous findings from 05/20/2019 FMC Site Visit

There were no deficiencies noted regarding this section of the standard.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There were no reported deaths, detainees with terminal illness, or detainees with advance directives since the last FMC site visit.

Previous findings from 05/20/2019 FMC Site Visit
There were no reported deaths, detainees with terminal illness, or detainees with advance directives since the last FMC site visit.

Other Observations

The Adelanto ICE Processing Center (AIPC) IHSC Site visit was conducted December 2, 2019 through December 6, 2019. The site visit was completed by (b)(6); (b)(7)(C) the Los Angeles Field Medical Coordinators. A total of 198 records were reviewed during the site visit.

AIPC is a dedicated IGSA with only ICE detainees. The facility currently houses approximately 262 female detainees and 1288 male detainees. AIPC operates under The Geo Group Inc. which contracts with Wellpath, formally known as Correct Care Solutions (CCS) to provide on-site medical care. Wellpath has provided medical care at the facility since March 1, 2016. The facility operates under the 2011 Performance Based National Detention Standards (PBNDS). AIPC has had several audits to include American Correctional Association (ACA) Accreditation in October 2019; Nakamoto Annual Audit November 19-21, 2019; NCCHC February 11-13, 2019; and ODO inspection March 12-14, 2019. Disability Rights California (DRC) visit is scheduled for January 24, 2020

AIPC utilizes both paper and electronic medical records. AIPC began utilizing eClinical Works (eCW) for their electronic health record on August 30, 2016. Documentation prior to August 30, 2016 remains on paper and is scanned into eCW. Consents and refusals are paper records and are scanned into the electronic record. Effective February 19, 2019, AIPC began utilizing an electronic medication administration record, sMARt. However, eCW and sMARt do not interface.

AIPC has had several administrative changes. Since the retiring of the Health Services Administrator (HSA) on August 31, 2018, there have been four succeeding HSA's. The first HSA started on September 4, 2018. On January 15, 2019, the HSA went on Family and Medical Leave and did not return to the facility. The term for the second HSA was April 1, 2019 - May 15,

AMERICAN OVERSIGHT

2019. During the interim periods, the Assistant Health Services Administrator (AHSA) was the Acting HSA. On May 13, 2019, the AHSA resigned. On May 28, 2019, Wellpath's Regional Director of Compliance assumed the Acting HSA position. On August 2019, the fourth HSA assumed the role of acting. Wellpath has selected a new HSA; however, background clearance is pending. The Wellpath staffing is currently at 86.05% with 86.33% supplemental Wellpath funded staff.

Deficiencies for Areas Evaluated

PBNDS 2011:

See Medical Care Deficiency above.

QUALITY OF CARE:

Human Immunodeficiency Virus (HIV):

Medical personnel shall provide all detainees diagnosed with HIV/AIDS medical care consistent with national recommendations and guidelines disseminated through the U.S. Department of Health and Human Services, The CDC and the Infectious Diseases Society of America.

For patients enrolled in an HIV program, it is recommended that care be supervised by an HIV specialist who will initiate and change therapeutic regimens as medically indicated.

FINDINGS:
Seven out of nine (22%) of detainees were not seen by an ID specialist within 30 days of HIV identification or arrival at the facility. Two of the detainees were identified in the previous FMC Site Visit Report. One of the detainees arrived on March 8, 2019 and was seen by the ID on May 24, 2019. One detainee arrived to the facility on September 28, 2018 and was seen by ID on December 5, 2018. One detainee arrived August 28, 2019 and was seen by the ID on October 18, 2019. Another detainee arrived May 13, 2019 and was seen by the ID on June 21, 2019. Another detainee arrived September 28, 2019 and was seen by the ID on December 5, 2018. Three detainees arrived on October 17, 2019, October 28, 2019 and October 30, 2019, all were pending to be seen by the ID.

MEDICATION ADMINISTRATION RECORDS (MAR):
FINDINGS:
MARs are not being scanned into eCW. The facility has advised that the sMARt and eCW are not interfaced. MARs are only available in the sMARt system.

DIABETES:
FINDINGS:
One out of ten (10%) detainees with diabetes did not have a blood sugar measures and recorded at intake.

SEIZURE:
FINDINGS:
One out of ten (10%) detainees with a history of seizures did not have a bottom bunk order in the medical record. The provider mentioned low bunk/low tier in the note however, a chrono was not issued.

HEALTH ASSESSMENT:
FINDINGS:
One out of fifteen (7%) detainees refused a PPD on intake. A chest x-ray was ordered however, never obtained.

LABORATORY TESTING:
FINDINGS:
One out of ten (10%) detainees who had labs performed, was not advised of the results.

SUICIDE SCREENING:
FINDINGS:
One out of ten (10%) detainees who were on monitoring, did not have checks documented consistently. The checks were ordered for every 15 minutes. Some checks were up to every 18

AMERICAN OVERSIGHT

minutes.

TREATMENT OF DISABILITY
One out of ten (10%) detainees did not have the disability prominently noted in the file. The detainee was deaf in the right ear and the problem list was not updated to include the disability.

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There was one reported hunger strike for 2016. Review of facility hunger strike policy noted to follow NCCHC and PBNDS standards.

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
2	

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

Previous deficiency from May 10, 2016 site visit
PBNDS (2011) 4.6 F.4
All detainees discharged from suicide watch should be re-assessed by an appropriately trained and qualified medical staff member at intervals consistent with the level of acuity.
No deficiencies were noted during the current site visit.

10 charts were reviewed using the IHSC Quality of Care Audit tool.
No issues were found.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There have been no reported deaths, detainees with terminal illness, or detainees with advance directives within the last 12 months.

Other Observations

The Los Angeles Field Medical Coordinator conducted the site visit January 30 through February 3, 2017. A total of 196 charts were reviewed.

Adelanto Detention Facility (ADF) is a dedicated IGSA with only ICE detainees. ADF operates under The Geo Group Inc. which contracts with CorrectCare Solutions (CCS) to provide on-site medical care. CCS has provided medical care at the facility since March 1, 2016. The facility operates under the 2011 Performance Based National Detention Standards (PBNDS) and recently received their initial accreditation on April 10, 2016 for 2014 National Commission on Correctional Health Care (NCCHC). The facility currently houses approximately 287 female detainees and 1557 male detainees.

ADF currently utilizes both paper and electronic medical records. ADF began utilizing eClinical Works (eCW) for their electronic health record on August 30, 2016. Documentation prior to August 30, 2016 remains on paper and documentation following August 30, 2016 is electronic. Medication administration, consents, and refusals are paper records and scanned into the electronic record.

CURRENT STAFFING:

(b)(7)(E)

AMERICAN OVERSIGHT

(b)(7)(E)

Deficiencies for Areas Evaluated

Previous findings:
One detainee was released to general population following being placed on suicide watch on March 21, 2016 and not seen by a mental health provider until April 24, 2016. No issues identified for current site visit.

One detainee was seen by a registered nurse for sick call on February 14, 2016 for stress but was not seen by a mental health provider until February 24, 2016. No issues identified for current site visit.

Issues identified from current site visit;

HIV--Review of 9 charts revealed 8 of 9 (89%) of detainees with HIV had a chest x-ray completed withing 72 hours of problem identification. Detainee did not disclose his HIV status upon intake or during his physical. Once he did disclose his HIV status, medications, labs and follow-up was ordered however; chest x-ray was not completed.

Quality of care issues identified
Previous finding:
18 of 19 (95%) of charts reviewed for detainees with diabetes had a blood sugar measured and recorded on intake. No issues noted

14 of 16 (88%) of charts reviewed for detainees with asthma had a peak flow at the initial physical exam. Two detainees did not have a peak flow documented. No issues noted

11 of 12 (92%) of charts reviewed for detainees with a seizure disorder had an order for lower bunk. No issues noted

51 of 52 (98%) charts reviewed had a complete evaluation within 14 days, however one did not have vital signs documented during their physical assessment and two others did not have vital documented during their intake screening. No issues noted

12 of 13 (93%) of charts reviewed had the facility's provider acknowledge reports from outside consultants within seven days of the outside appointment. This was identified as an issue during current site visit. (SEE BELOW)

14 of 15 (93%) of charts reviewed had an inbound assessment when returning from outside hospital. No issues noted

19 of 20 (95%)of charts reviewed from the mental health caseload had a mental health clinical assessment, treatment, and follow-up plan documented. No issues were noted for detainees with

AMERICAN OVERSIGHT

chronic mental health problems. All charts reviewed found appropriate assessment, treatment and follow-up plan documented however; the formal treatment plan was not completed timely.

Quality of care issues identified during current site visit:

9 of 10 (90%) charts reviewed revealed a nursing referral was submitted within 24 hours where appropriate. Detainee was assessed during sick call and found to have a fever (100.4) and heart rate of 107. The nurse treated the detainee using nursing protocols and unable to locate nursing protocol in medical record.

9 of 10 (90%) charts reviewed revealed the assessment reflect the hospital findings and concurrence or deviation from the hospital recommendations.
Detainee released from the hospital with recommendations for a neurology follow-up in 3-4 weeks. Recommendations were not addressed timely.

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area. Documents were not scanned into the appropriate section of the medical record consistently. For example consult notes were scanned into the consent section.

One chart had medications listed on the MAR but unable to find orders for medications.

Lab was ordered to be drawn on 8/24/16 and were not drawn. A refusal was obtained and placed in the chart on 8/30/16

5 of 6 (83%) charts reviewed revealed the detainee was re-assessed by the provider at least every 30 days until the off-site service was completed.

6 of 7 (85%) charts reviewed the clinician acknowledged the specialist's report within seven days after the service was performed.

6 of 7 (86%) of charts reviewed revealed treatment plans were updated every 90 days. Although each detainee chart reviewed did have complete assessment, treatment plan and follow-up plan documented, the formal mental health treatment plan was not completed on each detainee. The formal mental health treatment plan is one which includes identification of strengths, weakness, treatment goals and interventions.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES

Suicide Screening

Ten charts reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

10 of 10 (100%) of detainees had an indication for a mental health referral were referred appropriately and evaluated timely. They were evaluated by a qualified mental health provider daily while on suicide watch with appropriate monitoring and consistent documentation. No issues were identified.

Health Assessment

Previous finding from FMC site visit on May 10, 2016
51 of 52 (98%) charts reviewed had a complete evaluation within 14 days of booking to include vital signs, adequate medical and mental health history.

Twenty charts reviewed with the IHSC Quality of Care Audit Tool to evaluate this area. Initial screenings were completed within 12 hours of booking; TB screening completed within 48-72 hours; detainees who screened positive for mental illness or suicide risk were referred appropriately; there was timely follow up for significant findings of acute or chronic conditions; and a complete health evaluation was done within 14 days.
No issues were identified.

Urgent Care (Sick Call)

Previous finding from May 10, 2016 site visit
18 of 19 (95%) charts reviewed were not seen by a provider timely. No issued noted during this site visit.

10 charts reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.
9 of 10 (90%) reviewed revealed a nursing referral was submitted within 24 hours where appropriate. Detainee was assessed during sick call and found to have a fever (100.4) and heart rate of 107. The nurse treated the detainee using nursing protocols.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

Previous finding from May 10, 2016 site visit
14 of 15 (93%) of charts reviewed had an inbound assessment. No issues noted during current site visit.

10 charts reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

9 of 10 (90%) charts reviewed revealed the assessment reflect the hospital findings and concurrence or deviation from the hospital recommendations.
Detainee released from the hospital with recommendations for a neurology follow-up in 3-4 weeks. Recommendations were not addressed timely.

Medication Administration Practices

Previous finding from May 10, 2016
One MAR had one blank.

10 charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area. No issues were identified.

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

Continuity of Medication

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area. No issues were identified.

Mental Health Screen

Previous deficiency from May 10, 2016 site visit:
19 of 20 (95%)charts reviewed with a positive mental health screen and referred to see a qualified mental health was seen in a timely manner: emergent are seen immediately, urgent are seen within 24 hours and routine are seen within seven days. No issues were identified during current site visit.

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area. No issues were identified.

Medical Recordkeeping Practices

Previous finding from May 10, 2016
Telephone orders were not consistently cosigned by the provider.
The problem list page was not consistently completed on all detainees in particular detainees with mental illness, asthma and seizure disorders. No issues were identified during current site visit.

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area. Documents were not scanned into the appropriate section of the medical record consistently. For example consult notes were scanned into the consent section.

One chart had medications listed on the MAR but unable to find orders for medications.

Pregnant Women

10 charts were reviewed using the IHSC Quality of Care Audit Tool.

10 of 10 (100%) of charts reviewed of pregnant females found they had lower bunk orders, prenatal vitals, and order for restricting the use of restraints. An obstetric consult was ordered within seven days of identification of the pregnant detainees and an appointment was scheduled within 30 days.

In addition to the standards set forth by PBNDS (2011), all were screened for the Zika virus and given long sleeved shirts and mosquito repellent. They were also all screened by a qualified mental health provider upon identification of pregnancy status.

Dental Care

Ten charts were reviewed using the IHSC Quality of Care audit tools

10 of 10 (100%) of charts reviewed found all were screened for symptoms during the intake process and two were referred to the dental provider and evaluated within 48 hours. The dental clinical notes described findings, diagnosis and treatment plans.

AMERICAN OVERSIGHT

Acute Laboratory Testing

Eight charts reviewed with lab orders using the IHSC Quality of Care Audit Tool

7 of 8 (88%) lab orders reviewed were found to have been drawn within 1 business day of the order or within the time frame ordered. The results were back within 24 hours. The lab results were clinically acknowledged with the appropriate response. The results were discussed with the detainee at a follow-up appointment.

Lab was ordered to be drawn on 8/24/16 but was not drawn. A refusal was obtained and placed in the chart on 8/30/16.

Diagnostic Services and Specialty Care Access

Previous finding from May 10, 2016
12 of 13 (93%) of charts reviewed, which had an appointment scheduled and completed, did not have the facility clinician acknowledging the specialist's report in the medical record within seven days of the date the service was performed. This remains an issue during current site visit.

10 charts were reviewed using the IHSC Quality of Care Audit Tool
5 of 6 (83%) charts reviewed revealed the detainee was re-assessed by the provider at least every 30 days until the off-site service was completed.
6 of 7 (85%) charts reviewed showed the clinician acknowledged the specialist's report within seven days after the service was performed.

Mental Health Treatment Planning

Previous finding from May 10, 2016
19 of 20 (95%)of charts reviewed from the mental health caseload had a mental health clinical assessment, treatment, and follow-up plan documented. This remains an issue during current site visit.

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
6 of 7 (86%) of charts reviewed revealed treatment plans were updated every 90 days. Although each detainee chart reviewed did have complete assessment, treatment plan and follow-up plan documented, the formal mental health treatment plan was not completed on each detainee. The formal mental health treatment plan is one which includes identification of strengths, weakness, treatment goals and interventions.

Treatment of Disability

10 charts were reviewed using the IHSC Quality of Care Audit Tool. No issues were identified

Complaints and Grievances

Grievance logs were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
41 grievances were submitted over the past three months. All were appropriately addressed within five working days. No issues or trends were identified during current site visit.

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES
CHRONIC DISEASES

Diabetes

Previous finding from May 10, 2016
18/19 (95%) of charts reviewed has a blood sugar measured and recorded on intake. No issues were identified during current site visit.

10 charts were reviewed using the IHSC Quality of Care Audit Tool. No issues were identified.

Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage diabetic detainees.

Human Immunodeficiency Virus (HIV)

Nine charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
8 of 9 (89%) charts reviewed revealed a chest x-ray was completed within 72 hours of problem identification.

One detainee did not reveal his HIV status upon intake or physical assessment. Once identified, labs were ordered and appropriate follow-up however; a chest x-ray was not ordered.
Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage HIV detainees.

Hypertension

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
No issues were identified.

Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage detainees with hypertension.

Asthma

Previous finding from May 10, 2016 site visit
14 of 16 (88%) of charts reviewed had a peak flow at the initial physical exam. No issues noted during current site visit

10 charts were reviewed using the IHSC Quality of Care Audit tool. No issues were identified.

Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage detainees with asthma.

Seizure Disorder

Previous finding from May 10, 2016
11 of 12 (92%) of charts reviewed have orders for lower bunk. No issues were identified during current site visit

Seven charts were reviewed using the IHSC Quality of Care Audit tool. No issues were identified.

Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage detainees with seizure disorders.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

Adelanto has updated audit tools to include mental health treatment plans are in place.
Adelanto has updated audit tools to include reviewing records of detainees returning from outside hospital visits and outside consultants.
The medical director is reviewing weekly documents requiring co-signature by a provider to ensure education and completion of signatures.

Medical Care

☐ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☒ >3 Standards

Description of deficiencies:

PBNDS 4.3: V.C.2
Tuberculosis Screening Management- Screening for TB is initiated at intake and in accordance with Center for Disease Control and Prevention (CDC) guidelines.
All new arrivals shall receive TB screening within 12 hours of intake and in accordance with CDC guidelines (www.cdc.gov/tb).

FINDINGS: One out of nineteen (5%) did not have tuberculosis screening completed as per CDC guidelines. One of the detainee's chest x-ray was not read within 72 hours due to "housing issues." The chest x-ray was ordered five days after arrival. The chest x-ray was completed nine days after arrival.

PBNDS 4.3: V.S.4
Sick Call- Each facility shall have a sick call procedure that allows detainees the unrestricted opportunity to freely request health care services (including mental health and dental services) provided by a physician or other qualified medical staff in a clinical setting.

This procedure shall include:
an established procedure shall be in place at all facilities to ensure that all sick call requests are received and triaged by appropriate medical personnel within 24 hours after a detainee submits the request. All written sick call requests shall be date and time stamped and filed in the detainee's medical record. Medical personnel shall review the request slips and determine when the detainee shall be seen based on acuity of the problem. In an urgent situation, the housing unit officer shall notify medical personnel immediately.

AMERICAN OVERSIGHT

FINDINGS: Two of three (67%) of the charts reviewed for urgent care (sick call) did not have a nursing referral to an MD/PA/NP/DMD submitted within 24 hours where appropriate.

PBNDS 4.3: V.U.5
Medical Care- Detainees shall receive continuity of care from time of admission to time of transfer, release or removal. Detainees, who have received medical care, released from custody or removed shall receive a discharge plan, a summary of medical records, any medically necessary medication and referrals to community-based providers as medically-appropriate.

FINDINGS: Two of ten (20%) of the charts reviewed indicated that the detainees did not receive their medication within 24-72 hours. One detainee's medication was not ordered at intake because the personal supplies were in Russian, and the nurse could not read them. The detainee went without several cardiac medications for 2-3 days until seen by a provider. In a second detainee, the transfer summary noted a history of asthma, but no medical conditions or medications were documented on the intake screening, and no medications were ordered until the exam 5 days later.

PBNDS 4.8: V.F.4.e
Disability Identification, Assessment, and Accommodation, F4. Multidisciplinary Team, e. Staff Notification- Where an accommodation is granted, facility policy or procedures will ensure that all relevant facility staff, including facility security staff, receive timely notification and, as needed, instructions for successful implementation of the accommodation. These procedures will also account for any applicable privacy and confidentiality considerations.

FINDINGS: Ten detainees were assessed for assistance with activities of daily living (ADL), and appropriate accommodations ordered. Three out of ten (30%) were missing appropriate accommodation orders (Special needs). The facility does not clearly determine in the progress notes if the provider has assessed the detainees for assistance with activities of daily living.

PBNDS 6.2: V.C.4
Medical Grievances- Designated medical staff shall act on the grievance within five working days of receipt and provide the detainee a written response of the decision and the rationale. This record shall be maintained per the following section "D. Record-Keeping and File Maintenance."

FINDINGS: Four out of thirty-six (11%) of the grievances were not addressed within 5 working days of receipt.

Previous Site Visit 08/29/2017
Sick Call
FINDINGS: Two of ten (20%) of the charts reviewed for urgent care (sick call) did not have timely and appropriate nursing evaluations for the different acute conditions. One detainee was rescheduled for nursing sick call 3 times and another 5 times.

One of ten (10%) detainees seen on nursing sick call did not have vital signs documented with the nursing assessment.

Chronic Care *Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.*

Total number with chronic conditions:	Total number with unstable chronic conditions:
547	0

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
PBNDS 4.3: V.C.4.c - Clinical Evaluation and Management
Medical personnel shall provide all detainees diagnosed with HIV/AIDS medical care consistent with national recommendations and guidelines disseminated through the U.S. Department of Health and Human Services, The CDC and the Infectious Diseases Society of America.

FINDINGS: Eight out of ten (80%) of detainees had a chest x-ray completed within 72 hours of

AMERICAN OVERSIGHT

problem identification, if not already done. In one instance, the detainee was identified on July 20, 2017; however, the chest x-ray was not completed until July 28, 2017. The other detainee was identified as being HIV positive on January 31, 2017. The chest x-ray was completed on May 26, 2017.(REPEAT FINDING)

Previous findings from 08/29/2017 FMC Site Visit
PBNDS 4.3: V.C.4.c
Clinical Evaluation and Management

Medical personnel shall provide all detainees diagnosed with HIV/AIDS medical care consistent with national recommendations and guidelines disseminated through the U.S. Department of Health and Human Services, The CDC and the Infectious Diseases Society of America.

NCCHC J-G-01 Chronic Disease Services

Patients with chronic diseases are identified and enrolled in a chronic disease program to decrease the frequency and severity of the symptoms, prevent disease progression and complication, and foster improved function.

For patients enrolled in an HIV program, it is recommended that care be supervised by an HIV specialist who will initiate and change therapeutic regimens as medically indicated.

FINDINGS:
One of six (16%) detainees was not seen by an HIV or ID specialist within 30 days of HIV identification. The detainee was identified as being diagnosed with HIV on September 3, 2016; however, the detainee was not scheduled for ID visit until December 16, 2016.

Two of ten (20%) of detainees with HIV did not have a chest x-ray completed within 72 hours of problem identification. For one detainee, the diagnosis was identified on July 29, 2017; however, the chest x-ray was not ordered until August 16, 2017. The other detainee was identified as being HIV positive HIV on September 3, 2016. The chest x-ray was ordered on February 9, 2017, and it was completed on February 10, 2017. (REPEAT FINDING)

A review of the facility's chronic care detainees with asthma, hypertension, diabetes and seizure disorder were noted to follow NCCHC and PBNDS standards.

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:
0	7

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
There were a total of 7 hunger strikes in the last 12 months. A review of the facility hunger strike policy noted to follow NCCHC and PBNDS standards.

Previous findings from 08/29/2017 FMC Site Visit
There were 10 hunger strikes in the last 12 months. One detainee went on hunger strike 6 times, and the other 4 were different detainees. A review of the facility hunger strike policy noted to follow NCCHC and PBNDS standards.

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
1	250

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There were no deficiencies noted regarding this section of the standard. The facility continues to have 2 cells available for suicide watch. Detainees who are determined to be suicidal are evaluated by a mental health provider and are either placed on a constant or staggered (15 minute checks) suicide watch at the facility. If the cells are occupied or if it a serious suicide attempt, the detainee is sent out to the local hospital for further evaluation and treatment.

The facility continues to utilize the Alvarado Parkway Institute (API) located in San Diego, CA as the preferred inpatient mental health facility.

On February 15, 2018, CCS and the FMC had an on-site meeting with the administration and psychiatrist at API. Treatment planning was discussed with the psychiatrist to include starting detainees on long-acting antipsychotic medications when appropriate. The psychiatrist at API reassured CCS that they will work together to manage the mental health care of detainees who are admitted to API.

Previous findings from 08/29/2017 FMC Site Visit
No deficiencies were noted regarding this section of the standard.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	3

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There were no reported deaths, detainees with terminal illness, or detainees with advance directives since the last FMC site visit on 08/29/2017.

Previous findings from 08/29/2017 FMC Site Visit
There were 3 reported deaths in the last 12 months. As of March 23, 2018, the mortality reports are still pending.
1. A 32 year old male died March 28, 2017 at the Victor Valley Hospital. He was found hanging in a restrictive housing unit cell on March 22, 2017. He was admitted to the hospital with the following diagnoses: coma, sever hypoxic encephalopathy, status post full cardiopulmonary arrest, respiratory failure and attempted suicide by self-hanging. Detainee had a history of mental health problems and had recently been hospitalized for his mental health disorder. Final mortality reports are still pending.
2. A 55 year old male died April 14, 2017 at Victor Valley Hospital after being admitted on April 1, 2017 for hemoptysis. He was admitted for work up and treatment for GI bleed, anasarca, sepsis, and leukocytosis. Further workup revealed anemia and cirrhosis of the liver. Esophageal banding was performed on April 4, 2017 and the bleeding stopped. On April 13, 2017, he was being prepared for discharge when he felt dizzy and collapsed in bed. A code blue was called. However, he did not recover from this episode, and he was pronounced dead on April 14, 2017. Final mortality reports are pending.
3. A 46 year old male died May 31, 2017 after collapsing while playing soccer. He was transported to the emergency department where he was pronounced dead. Final mortality reports are pending. The detainee arrived to Adelanto on May 22, 2017 with a significantly high blood pressure and was placed in the infirmary and received a dose of clonidine and was prescribed other blood pressure medications. He was discharged from the infirmary the following day with an order for blood pressure checks, routine labs and an EKG with a follow-up in three to four weeks. Final mortality reports are pending.
The FMCs will address any negative findings from the mortality reports once received.

There are no detainees with terminal illness or detainees with advance directives within the

AMERICAN OVERSIGHT

last 12 months. The facility's policy was reviewed, and there were no areas of concern related to the policies.

Other Observations

The Adelanto ICE Processing Center (APC) IHSC Site visit was conducted March 6, 2018 through March 8, 2018. The site visit was completed by (b)(6); (b)(7)(C) IHSC Health Care Compliance Unit Deputy Assistant Director; (b)(6); (b)(7)(C) IHSC Medical Case Management Unit Chief; (b)(6); (b)(7)(C) (b)(6); (b)(7)(C) IHSC Health System Support Deputy Assistant Director; (b)(6); (b)(7)(C) IHSC Los Angeles Field Medical Coordinator; (b)(6); (b)(7)(C) Western Regional Pharmacy Consultant; (b)(6); (b)(7)(C) (b)(6); (b)(7)(C) IHSC Field Medical Coordinator; (b)(6); (b)(7)(C) Risk Manager; and (b)(6); (b)(7)(C) Psychiatrist. The IHSC team piloted the new Quality of Medical Care (QMC) audit tools during the review.

APC is an ICE dedicated IGSA with only detainees. APC operates under The Geo Group Inc. which contracts with Correct Care Solutions (CCS) to provide on-site medical care. CCS has provided medical care at the facility since March 1, 2016. The facility operates under the 2011 (Revised 2016) Performance Based National Detention Standards (PBNDS). APC received their National Commission on Correctional Health Care (NCCHC) accreditation on April 10, 2016; American Correctional Association (ACA) Accreditation January 23, 2017; Nakamoto Annual Audit October 3-5, 2017; and a Disability Rights California (DRC) visit February 1, 2018. The facility currently houses approximately 214 female and 1320 male detainees.

APC currently utilizes both paper and electronic medical records. APC began utilizing eClinical Works (eCW) for their electronic health record on August 30, 2016. Documentation prior to August 30, 2016 remains on paper and documentation following August 30, 2016 is electronic. Medication administration, consents, intake screenings, and refusals are paper records and scanned into the electronic record.

CURRENT STAFFING:

(b)(7)(E)

Deficiencies for Areas Evaluated

PBNDS 4.3: V.C.2
Tuberculosis Screening Management- Screening for TB is initiated at intake and in accordance with Center for Disease Control and Prevention (CDC) guidelines.
All new arrivals shall receive TB screening within 12 hours of intake and in accordance with CDC guidelines (www.cdc.gov/tb).

One out of nineteen (5%) did not have tuberculosis screening completed as per CDC guidelines. One of the detainee's chest x-ray was not read within 72 hours due to "housing issues." The chest x-ray was ordered five days after arrival. The chest x-ray was completed nine days after arrival.

PBNDS 4.3: V.S.4
Sick Call

AMERICAN OVERSIGHT

Each facility shall have a sick call procedure that allows detainees the unrestricted opportunity to freely request health care services (including mental health and dental services) provided by a physician or other qualified medical staff in a clinical setting.

This procedure shall include:
an established procedure shall be in place at all facilities to ensure that all sick call requests are received and triaged by appropriate medical personnel within 24 hours after a detainee submits the request. All written sick call requests shall be date and time stamped and filed in the detainee's medical record. Medical personnel shall review the request slips and determine when the detainee shall be seen based on acuity of the problem. In an urgent situation, the housing unit officer shall notify medical personnel immediately.

FINDINGS: Two of three (67%) of the charts reviewed for urgent care (sick call) did not have a nursing referral to an MD/PA/NP/DMD submitted within 24 hours where appropriate.

PBNDS 4.3: V.U.5
Medical Care- Detainees shall receive continuity of care from time of admission to time of transfer, release or removal. Detainees, who have received medical care, released from custody or removed shall receive a discharge plan, a summary of medical records, any medically necessary medication and referrals to community-based providers as medically-appropriate.

FINDINGS: Two of ten (20%) of the charts reviewed indicated that the detainees did not receive their medication within 24-72 hours.

PBNDS 4.8: V.F.4.e
Disability Identification, Assessment, and Accommodation, F4. Multidisciplinary Team, e. Staff Notification- Where an accommodation is granted, facility policy or procedures will ensure that all relevant facility staff, including facility security staff, receive timely notification and, as needed, instructions for successful implementation of the accommodation. These procedures will also account for any applicable privacy and confidentiality considerations.

FINDINGS: Seven out of ten (70%) were assessed for assistance with activities of daily living (ADL), and appropriate accommodations were ordered. Three were missing appropriate accommodation orders (Special needs). The facility does not clearly determine in the progress notes if the provider assessed the detainees for assistance with activities of daily living.

PBNDS 6.2.4
Medical Grievances- Designated medical staff shall act on the grievance within five working days of receipt and provide the detainee a written response of the decision and the rationale. This record shall be maintained per the following section "D. Record-Keeping and File Maintenance."

FINDINGS: Four out of thirty-six (11%) of the grievances were not addressed within 5 working days of receipt.

PBNDS 4.3: V.C.4.
Clinical Evaluation and Management
Medical personnel shall provide all detainees diagnosed with HIV/AIDS medical care consistent with national recommendations and guidelines disseminated through the U.S. Department of Health and Human Services, The CDC and the Infectious Diseases Society of America.

FINDINGS:
Two out of ten (20%) of detainees with HIV did not have a chest x-ray completed within 72 hours of problem identification, if not already done. In one instance, the detainee was identified on July 20, 2017; however, the chest x-ray was not completed until July 28, 2017. The other detainee was identified as being HIV positive on January 31, 2017. The chest x-ray was completed on May 26, 2017.(REPEAT FINDING)

AMERICAN OVERSIGHT

Quality of Care Issues Identified:

Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care
Two out of nine (22%) of detainees did not have an inbound progress note and an inbound assessment on return from the hospital.

Medication Administration Records
One out of two (50%) did not have an appropriate response by the provider for refusal of medications.

Medical Record Keeping
Two out of ten (20%) charts reviewed were not in compliance with Progress notes. Two of the charts reviewed, the notes were incomplete and not in a SOAP format.

Two of ten (20%) charts reviewed were not in compliance with updating the problem list.

Laboratory Testing
Four out of ten (40%) did not have laboratory testing done within one business day of the ordered date or by the due date. There were marked delays, one to two weeks from date desired, in lab drawing of routine labs due to the list being full.

One out of ten (10%) patients did not have clinical acknowledgment of laboratory tests.

Nine out of ten (90%) patients were not advised of laboratory results. There was a trend in lack of documentation of teaching on lab results.

Diabetes
One out of nine (11%) of detainees did not have a blood sugar measured and recorded on intake.

One of ten (10%) of detainees with diabetes did not have a baseline HgbA1c performed within 30 days of intake or within the past 3 months.

One of ten (10%) of detainees with diabetes was not followed at least every 90 days with appropriate vital signs.

One out of five (20%) of detainees did not have aspirin prescribed, as clinically indicated. A 47 year old female detainee with hypertension, and diabetes, was not prescribed aspirin.

One of ten (10%) of detainees did not have the degree of control (goal HgbA1C <8) documented. His HgbA1C was 8.5. In addition, one detainee showed at least five instances of low blood sugar ranging from 37 mg/dL - 52 mg/dl, symptomatic with no change in his diabetes medications, also demonstrating lack of control in management of diabetes.

Hypertension
One of ten (10%) did not have a documented blood pressure reading at intake. The history and physical was completed 2 days after intake and a normal blood pressure reading was recorded.

Asthma
Two out of ten (20%) did not have a peak flow completed at the initial physical exam. One detainee had an initial exam performed on February 7, 2018, and the peak flow was performed on February 22, 2018. One detainee had an initial exam performed on March 6, 2017, and the peak flow was performed on March 29, 2017. This is a repeat finding.

Seizure
Two out of six (33%) detainees did not have appropriate neurological history completed at the initial physical examination. Two detainees did not receive a thorough neurological history at the initial exam.

Five out of six (83%) detainees were seen in CCC by mid-level provider or physician within 14 days of illness identification. One detainee was seen in CCC by mid-level at five weeks post

AMERICAN OVERSIGHT

illness identification.

Previous findings from 08/29/2017 FMC Site Visit
The following PBNDS 2011 deficiencies were noted:

PBNDS 4.3: V.S.4
Sick Call

Each facility shall have a sick call procedure that allows detainees the unrestricted opportunity to freely request health care services (including mental health and dental services) provided by a physician or other qualified medical staff in a clinical setting.

This procedure shall include:
an established procedure shall be in place at all facilities to ensure that all sick call requests are received and triaged by appropriate medical personnel within 24 hours after a detainee submits the request. All written sick call requests shall be date and time stamped and filed in the detainee's medical record. Medical personnel shall review the request slips and determine when the detainee shall be seen based on acuity of the problem. In an urgent situation, the housing unit officer shall notify medical personnel immediately.

FINDINGS: Two of ten (20%) of the charts reviewed for urgent care (sick call) did not have timely and appropriate nursing evaluations for the different acute conditions. One detainee was rescheduled for nursing sick call 3 times and another 5 times, which resulted in delay of evaluation and care for 2 weeks for detainees complaining of eye and back pain.

One of ten (10%) detainees seen on nursing sick call did not have vital signs documented with the nursing assessment.

PPBNDS 4.3: V.C.4.c
Clinical Evaluation and Management
Medical personnel shall provide all detainees diagnosed with HIV/AIDS medical care consistent with national recommendations and guidelines disseminated through the U.S. Department of Health and Human Services, The CDC and the Infectious Diseases Society of America.

NCCHC J-G-01 Chronic Disease Services

Patients with chronic diseases are identified and enrolled in a chronic disease program to decrease the frequency and severity of the symptoms, prevent disease progression and complication, and foster improved function.

For patients enrolled in an HIV program, it is recommended that care be supervised by an HIV specialist who will initiate and change therapeutic regimens as medically indicated.

FINDINGS:
Two of ten (20%) of detainees with HIV did not have a chest x-ray completed within 72 hours of problem identification. For one detainee, the diagnosis was identified on July 29, 2017, however chest x-ray was not ordered until August 16, 2017. The other detainee was identified as being HIV positive on September 3, 2016. The chest x-ray was ordered on February 9, 2017, and it was completed on February 10, 2017. (REPEAT FINDING)

Quality of care issues:
Urgent Care (Sick Call):
Eight of ten (80%) of the charts reviewed for urgent care (sick call) had timely and appropriate nursing evaluations for the different acute conditions. The detainee with the complaints of back pain was rescheduled five times before being evaluated. The detainee with the complaints of the eye pain was rescheduled three times before being evaluated. The detainee with the back pain was rescheduled on March 14, March 15, March 16, March 17, March 18 and was eventually evaluated on April 4 during chronic care for the complaint. The detainee with the eye pain was rescheduled on April 16, April 27 and April 28 and was eventually evaluated on April 30. There is no documentation in the medical records regarding why the detainees were rescheduled. According to the HSA, the reschedules could have been due

AMERICAN OVERSIGHT

to a variety of factors including provider schedules, medical emergencies, lack of custody to transport the detainee to the clinic, etc. Effective June 2017, the HSA is monitoring the scheduled sick call on a daily basis to review the number scheduled, seen, refused, canceled or rescheduled and the type of complaint for those that were rescheduled if applicable.

Nine of ten (90%) had vital signs documented with the nursing assessment. No vital signs were taken for a detainee complaining of eye pain.

Evaluation of Care Prior to Emergency Department:

One of ten (10%) charts revealed that earlier intervention might have prevented deterioration to the point of need for ED/hospital care.

In one case, there was a delay in obtaining a laboratory test. The test was ordered on March 18, 2017 however, it was not obtained until April 3, 2017.

Diagnostic Services and Specialty Care Access:

Nine of ten (90%) of the specialty charts reviewed had time urgency documented on the order for specialty care, the appointment was accomplished within the ordered time frame, and the provider acknowledged the specialist's report within 7 days from the performed date of service.

One of the detainees was referred to the ENT on December 29, 2016; the MedPAR was submitted to IHSC on February 21, 2017. There is no documentation in the medical record regarding why there was a delay in submitting the MedPAR. The appointment was completed on March 6, 2017; however, there was no follow-up by the provider after the appointment. The consultation was normal, and there were no recommendations from the consultant. There was no adverse effect noted in the medical record from not being evaluated at the facility after the ENT appointment. The detainee was released from detention on March 28, 2017.

Three out of four (75%) were evaluated at least every 30 days until the consult was completed. One of the detainees was referred to the OB/GYN on February 13, 2017, and the appointment was on March 7, 2017; however, there was no follow-up by the provider after the appointment. The consultation was normal, and there were no recommendations from the consultant. There was no adverse effect noted in the medical record from not being evaluated at the facility after the GYN appointment.

Diabetes:
Five of six (90%) of detainees had aspirin prescribed, as clinically indicated. In one instance aspirin was not prescribed as indicated for a 55 year old detainee with hyperlipidemia, hypertension, and positive family history.

AMERICAN OVERSIGHT

Suicide Screening

Ten charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

There were a total of 43 patients placed on suicide watch in the last three months. The facility uses an acceptable suicide risk management screening instrument including at minimum, asking for a history of suicide attempts and for current suicidal ideation. All screeners and all staff in direct contact with detainees are trained to assess suicide risk. Logs were provided by the facility.

Ten out of ten (100%) of detainees had checks documented consistently.

Ten out of ten (100%) detainees were evaluated by a qualified mental health professional within 24 hours of identification.

Nine out of nine (100%) of detainees were evaluated by a qualified mental health professional daily while on suicide watch.

Ten out of ten (100%) of detainees showed no evidence that earlier intervention might have prevented deterioration to the point of need for suicide watch.

Previous findings from 08/29/2017 FMC Site Visit
Ten charts reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) of detainees had an indication for a mental health referral were referred appropriately and evaluated timely. They were evaluated by a qualified mental health provider daily while on suicide watch with appropriate monitoring and consistent documentation. No issues were identified.

Health Assessment

20 charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

20 out of 20 (100%) of charts reviewed had an initial screen completed within 12 hours of booking.

18 out of 19 (95%) had tuberculosis screening completed as per CDC guidelines. One of the detainee's chest x-ray was not read within 72 hours due to "housing issues." The chest x-ray was ordered five days after arrival. The chest x-ray was completed nine days after arrival.

Ten out of ten (100%) of detainees who screened positive for mental health or suicide risk were referred for an evaluation.

Twenty out of twenty (100%) of those identified with an acute or chronic condition during intake screening had timely follow-up for their significant findings and a complete health evaluation within 14 days of intake.

Previous findings from 08/29/2017 FMC Site Visit
Twenty charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

20 of 20 (100%) of charts reviewed had an initial screen completed within 12 hours of booking.

18 of 18 (100%) had tuberculosis screening completed as per CDC guidelines. Two of the detainees had a chest x-ray completed at the transferring facility.

11 of 11 (100%) of detainees who screened positive for mental health or suicide risk were referred for an evaluation. The other 9 detainees did not have a positive mental health screen.

20 of 20 (100%) of those identified with an acute or chronic condition during intake screening had timely follow-up for their significant findings and a complete health evaluation within 14 days of intake.

AMERICAN OVERSIGHT

Urgent Care (Sick Call)

Ten charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) of the charts reviewed for urgent care (sick call) had timely and appropriate nursing evaluations depending on the nature of the complaint.

Ten of ten (100%) of care was delivered within the scope of the nurse's license.

Ten of ten (100%) had vital signs documented with the nursing assessment.

One of three (33%) had a nursing referral to a nurse practitioner submitted within 24 hours.

One of one (100%) detainee who was referred to a provider had an assessment and treatment plan documented by the nurse practitioner.

Previous findings from 08/29/2017 FMC Site Visit
Ten charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) of care was delivered within the scope of the nurse's license.

Nine of ten (90%) had vital signs documented with the nursing assessment. No vital signs were taken for a detainee complaining of eye pain.

Six of six (100%) had a nursing referral to a nurse practitioner submitted within 24 hours.

Six of six (100%) of the detainees who were referred to a provider had an assessment and treatment plan documented by the nurse practitioner.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

Ten charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Ten out of ten (100%) of detainees had an outbound progress note.

Ten out of ten (100%) charts revealed no evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care.

Ten out of ten (100%) of detainees had discharge documentation from the hospital or emergency department (ED) in the chart.

Seven out of nine (78%) of detainees had an inbound progress note and an inbound assessment. Two detainees had no inbound assessment on return from the hospital.

Eight out of eight (100%) of detainees had an assessment that reflected hospital findings and concurrence or reason for deviation from the hospital recommendations.

Previous findings from 08/29/2017 FMC Site Visit
Ten charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

AMERICAN OVERSIGHT

Ten out of ten (100%) of detainees had an outbound progress note and an inbound assessment, as well as an assessment that reflected hospital findings and concurrence or reason for deviation from the hospital recommendations. Detainees were also found to have discharge documentation from the hospital or emergency department (ED) in the chart.

Nine out of ten (90%) charts revealed no evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care.

In one case, there was a delay in obtaining initial routine blood work after history and physical which included a complete metabolic panel. Test was ordered on March 18, 2017 and was not collected until April 3, 2017. Detainee was sent to the emergency room for hyperglycemia on April 5, 2017.

Medication Administration Practices

Ten charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Two out of two (100%) had documentation in the medical record that the prescribing provider was notified of consecutive refusals.

One out of two (50%) had an appropriate clinician response.

In one case, a provider acknowledged in an encounter that the nursing staff had informed the provider that a patient was refusing morning insulin, but continued the patient's sliding scale insulin order as twice daily. The printed MAR from CorrectRx for March shows the provider's order for twice daily insulin, but the nursing staff hand-wrote the order on a separate MAR as every evening. There were no signed refusal forms in the patient's chart for insulin in 2018. The nine other charts reviewed yielded a total of 14 refusals or no-shows on MARs, of which 2 lacked a signed refusal form. All of these charts showed an appropriate clinician response to consecutive refusals.

The facility has a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up.

Approximately 30% of MARs reviewed had either blanks, consecutive refusals, or no shows.

All previous month MARs were filed in the detainee medical records.

Over the counter (OTC) medications are provided by medical and the commissary.
Previous findings from 08/29/2017 FMC Site Visit
Ten charts reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Two of two (100%) of detainees had documentation in the medical record that the prescribing physician was notified of consecutive refusals. No issues were identified.

Two out of two (100%) detainees had an appropriate response from the clinician (i.e., was the patient was interviewed or the prescription was changed or discontinued. No issues were identified.

The facility has a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up.

Approximately 3% of MARs reviewed had either blanks, consecutive refusals, or no shows.

All previous month MARs were filed in the detainee medical records.

Approximately 70% of patients are on self-administered medications.

Over the counter (OTC) medications are provided by medical and the commissary.

AMERICAN OVERSIGHT

Continuity of Medication

Ten charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Eight of ten (80%) of the charts reviewed indicated that detainees are consistently receiving their medication within 24-72 hours. Immediately following the detainee's intake encounter, the nurse sends an electronic notification to the provider to order the patients' chronic medications, and the medication is generally received within one business day. One detainee's medication was not ordered at intake because the personal supplies were in Russian, and the nurse could not read them. The detainee went without several cardiac medications for 2-3 days until seen by a provider. In a second detainee, the transfer summary noted a history of asthma, but no medical conditions or medications were documented on the intake screening, and no medications were ordered until the exam 5 days later.

Ten of ten (100%) of the charts reviewed indicated that detainees are receiving the first dose of their medication less than 24 hours from when it was ordered.

Previous findings from 08/29/2017 FMC Site Visit
10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) of detainees had medications ordered less than 24 hours from completion of intake screening, and received their first dose in less than 24 hours from the order. No issues were identified.

Mental Health Screen

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had a positive screen for mental illness or suicide risk and were referred for evaluation by a mental health provider in a timely manner.

Previous findings from 08/29/2017 FMC Site Visit
Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had a positive screen for mental illness or suicide risk and were referred for evaluation by a mental health provider in a timely manner.

Medical Recordkeeping Practices

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Eight of ten (80%) charts reviewed were in compliance with updating the problem list. Seven of ten (70%) charts reviewed were in compliance with the receiving screen and health assessment forms. Three of the charts reviewed, the health assessments were not found in the record. East side dental provided an the encounter note that stated dental assessment was completed, but no scanned document of the assessment. The West side clearly does this accordingly, but the East side is not standardized in this procedure.

Eight out of ten (80%) charts reviewed were in compliance with Progress notes. Two of the charts reviewed, the notes were incomplete and not in a SOAP format.

The remaining medical record-keeping practices were in compliance or not applicable.

Previous findings from 08/29/2017 FMC Site Visit
Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area. APC utilizes both paper and electronic medical records. They began utilizing eClinical Works (eCW) for their electronic health record on August 30, 2016. Medication administration, consents, refusals, and some intake screenings are documented on paper records and then scanned into the electronic record.

Ten of ten (100%) revealed that the medical record-keeping practices are in compliance or non-applicable.

Pregnant Women

AMERICAN OVERSIGHT

Two charts were reviewed using the IHSC Quality of Care Audit Tool as there were only two pregnant detainees within the last 6 months at the facility.

APC performs pregnancy tests on all females prior to x-ray or initiation of medications.

Two of two (100%) had an OB/GYN consult ordered within 7 days of pregnancy confirmation and were seen within 30 days.

Two of two (100%) were screened for HIV, STI, and viral hepatitis and prescribed prenatal vitamins. No issues were identified.

Previous findings from 08/29/2017 FMC Site Visit
Two charts were reviewed using the IHSC Quality of Care Audit Tool as there were only two pregnant detainees within the last 6 months at the facility.

APC performs pregnancy tests on all females aged 10-54 during intake screening, prior to x-ray or initiation of medications.

Two of two (100%) had an OB/GYN consult ordered within 7 days of pregnancy confirmation and were seen within 30 days.

Two of two (100%) were screened for HIV, STI, and viral hepatitis and prescribed prenatal vitamins.

Dental Care

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) of charts reviewed found all were screened for symptoms during the intake process.

Ten of ten (100%) of those who requested dental services, were referred to the dental provider and evaluated within 48 hours. The dental clinical notes described findings, diagnosis and treatment plans.

Five out of five (100%) were scheduled and seen for a follow-up appointment as recommended. No issues were identified.

Diagnostic Services and Specialty Care Access

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) of the specialty charts reviewed had time urgency documented on the order for specialty care.

Seven of seven (100%) the appointment was accomplished within the ordered time frame. Three of the detainees were released or removed prior to the appointment dates.

Seven out of seven (100%) were re-evaluated after 30 days until their off-site consult was completed.

Eight out of eight (100%) the clinician acknowledged the specialist's report in the medical record within 7 days of the appointment.

Previous findings from 08/29/2017 FMC Site Visit
Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Nine of ten (90%) of the specialty charts reviewed had time urgency documented on the order for specialty care and the appointment was accomplished within the ordered time frame.

Three out of four (75%) were evaluated at least every 30 days until the consult was completed.

One of the detainees was referred to the ENT on December 29, 2016; the MedPAR was submitted to IHSC on February 21, 2017. There was no documentation in the medical record regarding why there was a delay in submitting the MedPAR. The appointment was completed on March 6, 2017; however, the detainee was not re-evaluated every 30 days and there was no follow-up by the provider after the appointment. The consultation was normal and acknowledged by the provider, and there were no recommendations from the consultant. There was no adverse effect noted in the medical record from not being evaluated at the facility after the ENT appointment. The detainee was released from detention on March 28, 2017.

Nine of ten (90%) of the specialty charts reviewed revealed that the provider acknowledged

AMERICAN OVERSIGHT

the specialist's report within 7 days from the performed date of service.

One of the detainees was referred to the OB/GYN on February 13, 2017, and the appointment was on March 7, 2017; however, there was no follow-up by the provider after the appointment. The consultation was normal, and there were no recommendations from the consultant. There was no adverse effect noted in the medical record from not being evaluated at the facility after the GYN appointment.

Mental Health Treatment Planning

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten out of ten (100%) of detainees had a clinical assessment, treatment, and follow-up plan documented. In addition, treatment plans were updated at a minimum of every 90 days.

Previous findings from 08/29/2017 FMC Site Visit
Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten out of ten (100%) of detainees had a clinical assessment, treatment, and follow-up plan documented. No issues were identified.

Nine out of nine (100%) of detainees had treatment plans updated at a minimum of every 90 days. No issues were identified.

Treatment of Disability

Ten charts was reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten out of ten (100%) reviewed had the disability noted in the file.

Seven out of ten (70%) were assessed for assistance with activities of daily living (ADL), and appropriate accommodations were ordered. Three were missing appropriate accommodation orders (Special needs). The facility does not clearly determine in the progress notes if the provider assessed the detainees for assistance with activities of daily living. For example, wheel chair bound detainees.

Previous findings from 08/29/2017 FMC Site Visit
Ten charts was reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten out of ten (100%) had the disability noted in the file, the detainees was assessed for assistance with activities of daily living (ADL), and appropriate accommodations were ordered. The detainees did not require assistance with ADL's.

The facility maintains a current list of detainee with disabilities.

Complaints and Grievances

There were a total of 36 grievances reviewed for December 2017, January 2018 and February 2018. 32 of the 36 (89%) grievances were found in compliance with PBNDS 2011 of appropriately being addressed within 5 working days of receipt.

The grievance trends identified - 80% were due to delay in care complaints, 10% attitude demeanor or conduct and 10% other.

Previous findings from 08/29/2017 FMC Site Visit
Grievance logs were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area. 40 grievances were submitted over the past three months. All were appropriately addressed within five working days. No issues or trends were identified during the current site visit. There were a total of six grievances due to availability of care; twelve due to denial or refusal of specific request for care; nine due to delay of care; one due to competency/ professional skillset of medical staff; two due to attitude, demeanor or conduct or staff, and 10 due to various other issues such as requesting personal property, being exposed to quarantine by sharing the recreation yard, etc.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES
CHRONIC DISEASES

Diabetes

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area. The facility uses the BOP Diabetes Clinical Practice Guidelines.

Eight out of nine (89%) of detainees had blood sugar measured and recorded on intake.

Ten out of ten (100%) of detainees were seen for chronic care within fourteen days of illness identification, and had lipids measured within one year. No issues were found.

Nine out of ten (90%) of detainees had a baseline HgbA1c performed within 30 days of intake or within the past 3 months.

Ten out of ten (100%) of detainees had lipids measured within one year.

Nine out of ten (90%) of detainees were followed at least every 90 days with appropriate vital signs.

Four out of five (80%) of detainees had aspirin prescribed, as clinically indicated.

Nine out of ten (90%) of detainees had the degree of control (goal HgbA1C <8) documented. No issues were identified.

Eight out of eight (100%) of detainees had a strategy to attain diabetes control documented if HgbA1C was above goal.

Previous findings from 08/29/2017 FMC Site Visit
Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

The facility uses the BOP Diabetes Clinical Practice Guidelines.

Seven out of seven (100%) of detainees had blood sugar measured and recorded on intake. No issues were identified.

Ten out of ten (100%) of detainees were seen for chronic care within seven days of illness identification, had lipids measured within one year, and were followed at least every 90 days with appropriate vital signs. No issues were found.

Nine of nine (100%) of detainees had a baseline HgbA1c performed within 30 days of intake or within the past 3 months. No issues were found.

Five of six (90%) of detainees had aspirin prescribed, as clinically indicated.

In one instance aspirin was not prescribed as indicated for a 55 year old detainee with hyperlipidemia, hypertension, and positive family history.

Eight out of eight (100%) of detainees had the degree of control (goal HgbA1C <7) documented. No issues were identified.

Four of four (100%) of detainees had a strategy to attain diabetes control documented if HgbA1C was above goal. No issues were identified.

Human Immunodeficiency Virus (HIV)

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten out of ten (100%) of detainees were seen by an HIV or ID specialist within 30 days of HIV identification.

Nine out of nine (100%) of detainees had a CD4+ and viral load completed within 14 days of arrival, or within the last 3 months.

AMERICAN OVERSIGHT

Ten out of ten (100%) of detainees had anti-retroviral treatment considered and documented. No issues were found.

Nine out of nine (100%) of detainees were seen by a mid-level provider or physician for chronic care at least every 90 days.

Eight out of ten (80%) of detainees had a chest x-ray completed within 72 hours of problem identification, if not already done. In one instance, the detainee was identified on July 20, 2017; however, the chest x-ray was not completed until July 28, 2017. The other detainee was identified as being HIV positive on January 31, 2017. The chest x-ray was completed on May 26, 2017.(REPEAT FINDING)

Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage HIV detainees.

Previous findings from 08/29/2017 FMC Site Visit
Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Five out of six (83%) of detainees were seen by an HIV or ID specialist within 30 days of HIV identification. In one instance, the detainee was identified as being HIV positive on September 3, 2016 and was not scheduled for a chronic care clinic (CCC) ID visit until December 16, 2016.

Eight out of eight (100%) of detainees had a CD4+ and viral load completed within 14 days of arrival, or within the last 3 months. No issues were found.

Nine out of nine (100%) of detainees had anti-retroviral treatment considered and documented. No issues were found.

Four out of four (100%) of detainees were seen by a mid-level provider or physician for chronic care at least every 90 days. No issues were found.

Eight out of ten (80%) of detainees had a chest x-ray completed within 72 hours of problem identification, if not already done. In one instance, the detainees was identified on July 29, 2017; however, the chest x-ray was not ordered until August 16, 2017. The other detainee was identified as being HIV positive on September 3, 2016. The chest x-ray was ordered on February 9, 2017, and it was completed on February 10, 2017. (REPEAT FINDING)

Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage HIV detainees.

Hypertension

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Nine of ten (90%) had documented blood pressure reading at intake. One of the detainees did not have a blood pressure reading at intake. The history and physical was completed 2 days after intake and a normal blood pressure reading was recorded.

Ten of ten (100%) of detainees with hypertension and were seen by an MD/PA/NP within 14 days of illness identification or sooner.

Six of six (100%) were noted to have blood pressures above 140/90 with a treatment plan initiated within 14 days of identification.

Ten of ten (100%) were followed using the facility's hypertension guideline that included baseline laboratory testing.

APC uses the Bureau Of Prisons clinical practice guidelines to manage detainees with hypertension.

Previous findings from 08/29/2017 FMC Site Visit

AMERICAN OVERSIGHT

Ten of ten (100%) had documented blood pressure reading at intake and were seen by an MD/PA/NP within 14 days of illness identification.

Five of five (100%) were noted to have blood pressures above 140/90 with a treatment plan initiated within 14 days of identification.

Ten of ten (100%) were followed using the facility's local hypertension guideline that included baseline laboratory testing.

Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage detainees with hypertension.

Asthma

Ten charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Ten out of ten (100%) of detainees were seen in CCC by mid-level provider or physician within 14 days of illness identification.

Eight out of ten (80%) and had a peak flow completed at the initial physical exam. One detainee had an initial exam performed on February 7, 2018, and the peak flow was performed on February 22, 2018. One detainee had an initial exam performed on March 6, 2017, and the peak flow was performed on March 29, 2017. (REPEAT FINDING)

Eight out of eight (100%) of detainees had a peak flow completed at the CC visit or within the last 3 months. No issues were identified.

Ten out of ten (100%) of detainees had a chronic disease guideline followed, which addressed disease severity, prescription of medication consistent with severity, and documented degree of control. No issues were identified.

Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage detainees with asthma.

Previous findings from 08/29/2017 FMC Site Visit
Ten charts were reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Nine out of nine (100%) of detainees were seen in CCC by mid-level provider or physician within 14 days of illness identification and had a peak flow completed at the initial physical exam. No issues were identified.

Eight out of nine (89%) of detainees had a peak flow completed at the initial exam. One detainee did not report asthma on intake however the medical transfer summary received by Adelanto noted a history of chronic asthma, therefore a peak flow should have been performed.

Ten out of ten (100%) of detainees had a peak flow completed at the CCC visit or within the last 3 months. No issues were identified.

Ten out of ten (100%) of detainees had a chronic disease guideline followed, which addressed disease severity, prescription of medication consistent with severity, and documented degree of control. No issues were identified.

Adelanto uses the Bureau Of Prisons clinical practice guidelines to manage detainees with asthma.

Seizure Disorder

Ten charts reviewed with the IHSC Quality of Care Audit Tool to evaluate this area.

Four out of six (67%) detainees had appropriate neurological history completed at the initial physical examination. Two detainees did not receive a thorough neurological history at the initial exam.

AMERICAN OVERSIGHT

Five out of six (83%) detainees were seen in CCC by mid-level provider or physician within 14 days of illness identification. One detainee was seen in CCC by mid-level at five weeks post illness identification.

Two out of two (100%) detainees had serum drug levels performed and acknowledged in the medical record every three months until stable, then every six months where indicated. No issues were identified.

Five out of five (100%) detainees had a treatment plan established.

Six out of six (100%) detainees had orders for a bottom bunk.

Adelanto reports using no clinical practice guideline for seizure disorder.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

The Quality Improvement Committee is conducting several studies related to medical complaints and CAPs to ensure compliance. The information is shared with the FMC quarterly.

AMERICAN OVERSIGHT

During the week of March 12, 2018, CCS evaluated eCW to determine how to improve efficiency. The Clinical Director created some templates for the providers to ensure continuity of care and proper documentation.

Effective June 2017, the Health Services Administrator began monitoring sick call daily to ensure detainees are seen as scheduled and not rescheduled.

Effective December 11, 2017, a clinical coordinator began to monitor and coordinate daily the appointments in the clinic. The providers no longer manage their individual schedules. The clinical coordinator provides the HSA daily updates regarding the appointments in the clinic. The data from the clinical appointments includes refusals and reschedules is given to the Quality Control team weekly for tracking and trending. The information is being used to identify areas of improvement and to determine the effectiveness of the new process.

Additional Comments

The review provided by the Western Regional Pharmacy Consultant revealed that the Adelanto facility prescribes a significantly higher volume of psychotropic medications when compared to IHSC facilities of similar volume and acuity (Eloy, Jena, Krome, San Diego, and Tacoma) for 2017. Adelanto's total psychotropic medication use comprised 29% of all prescriptions filled; the average for the IHSC facilities was 15% (SD=3%). Adelanto patients received a total of 3,034 prescriptions for antipsychotic medications in 2017, compared to an average of 917 (SD=140) prescriptions for the same time period at the IHSC facilities. Further, the antipsychotics most frequently selected (quetiapine, olanzapine, and chlorpromazine) are generally considered to be the most sedating of all antipsychotics, and these medications comprised 65% of the antipsychotics prescribed at Adelanto, compared to an average of 27% (SD=11.7%) at IHSC facilities. Adelanto used nearly 8 times as much chlorpromazine as all 5 IHSC facilities combined. A highly skewed proportion of sedating antipsychotics may indicate that mental health staff are using antipsychotic medications as a form of chemical restraints instead of a therapeutic regimen. The facility also used tricyclic antidepressants much more frequently than most other IHSC facilities, 482 prescriptions vs an average of 160 (SD=147). This is concerning because tricyclics are one of the most toxic medications in a suicide attempt by overdose, and should be used with extreme caution in patients with a history of suicidal thoughts. One patient who was treated with a cocktail of quetiapine, divalproex, lithium, and haloperidol was charted on as being persistently asleep during attempted encounters; his antipsychotic medication continued to be increased due to suicidality, and an antidepressant was never prescribed.

A series of chart reviews revealed enormous discrepancies between patient MARs and the electronic health record. Adelanto medical providers are regularly failing to send medication discontinuation notices to CorrectRx, which has resulted in MARs that are more often incorrect than correct. As an example, one MAR contained 4 orders for quetiapine, 3 of which had been discontinued at least 2 months previously, and 3 orders for hydroxyzine, 2 of which had been discontinued the previous month. In another case, a patient requested to stop all psychotropic medications; the provider concurred in his review but left one of the patient's orders as active in the EHR. Adelanto also does not have any automated or electronic processes for documenting new medication orders on MARs; all new orders are handwritten by the nursing staff, increasing opportunities for transcription errors. The medication procurement and administration process is currently overseen by a LVN.

The following CAPs were updated during the site visit:

1. FMC Site Visit - February 2017 - Items still open. FMC will continue to monitor until twelve consecutive weeks of demonstrated compliance with signing off of telephone verbal orders.
2. Medical Complaint (b)(6); (b)(7)(C) - Items still open. After the site visit, the CAP was revised after CRCL reviewed the initial CAP responses and provided additional recommendations. Responses are pending.
3. (b)(6); (b)(7)(C) - Item remains open. Study to ensure detainees who return from consultation services or hospital discharges are evaluated upon return. If referred to provider, ensure that detainee is seen. FMC will continue to monitor.

AMERICAN OVERSIGHT

4. (b)(6); (b)(7)(C) - Item remains open. FMC will continue to monitor until 100% compliance for 12 consecutive weeks to ensure detainees are appropriately evaluated when referred to a provider.
5 (b)(6); (b)(7)(C) All items complete.
6. MQM Mortality Review - (b)(6); (b)(7)(C) Items still open. Fourteen day physical examinations not at 100% compliance for 12 consecutive weeks. FMC will continue to monitor.
7. Medical Complaint (b)(6); (b)(7)(C) - Item remains open. Study to observe timeliness of sick call response times and notification to patient of the management plan commenced February 1, 2018. Ongoing. FMC will continue to monitor until 12 consecutive weeks of compliance is achieved.

Medical Care

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

PBNDS 4.3.U.5
Delivery of Medication
Detainees who arrive at a detention facility with prescribed medications or who report being on such medications, shall be evaluated by a qualified health care professional as soon as possible, but not later than 24 hours after arrival, and provisions shall be made to secure medically necessary medications.

FINDINGS:
Two of ten (20%) of the charts reviewed indicated that patients did not receive their first dose of medication in less than 24 hours from arrival to the facility. Two received their first dose of medication in 48 hours.

PBNDS 4.8: V.F.4.e
Disability Identification, Assessment, and Accommodation, F4. Multidisciplinary Team, e. Staff Notification- Where an accommodation is granted, facility policy or procedures will ensure that all relevant facility staff, including facility security staff, receive timely notification and, as needed, instructions for successful implementation of the accommodation. These procedures will also account for any applicable privacy and confidentiality considerations.

FINDINGS: Ten detainees were assessed for assistance with activities of daily living (ADL), and appropriate accommodations ordered. The facility does not clearly determine in the progress notes if the provider has assessed the detainees for assistance with activities of daily living.

Chronic Care *Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.*

Total number with chronic conditions:	Total number with unstable chronic conditions:
255	0

☐ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☒ 3 Standards ☐ >3 Standards

Description of deficiencies:

PBNDS 4.3.M
Comprehensive Health Assessment

Each facility's health care provider shall conduct a comprehensive health assessment, including a physical examination and mental health screening, on each detainee within 14 days of the detainee's arrival unless more immediate attention is required due to an acute or identifiable chronic condition. Physical examinations shall be performed by a physician, physician assistant, nurse practitioner, RN (with documented training provided by a physician) or other health care practitioner as permitted by law.

FINDINGS:
Two out of ten (20%) detainees were not seen in Chronic Care Clinic by an advanced practice provider or physician within 14 days of asthma identification. One detainee was seen on the 15th day and another on the 22nd day.

PBNDS 4.3.C.4.
Clinical Evaluation and Management

Medical personnel shall provide all detainees diagnosed with HIV/AIDS medical care consistent with national recommendations and guidelines disseminated through the U.S. Department of Health and Human Services, the CDC and the Infectious Diseases Society of America.

NCCHC J-G-01 Chronic Disease Services

Patients with chronic diseases are identified and enrolled in a chronic disease program to decrease the frequency and severity of the symptoms, prevent disease progression and complication, and foster improved function.

For patients enrolled in an HIV program, it is recommended that care be supervised by an HIV specialist who will initiate and change therapeutic regimens as medically indicated.

FINDINGS:
Two out of nine (22%) of detainees were not seen by an ID specialist within 30 days of HIV identification or arrival at the facility. One of the detainees arrived on March 8, 2019 and was scheduled to see ID. The ID's office rescheduled the appointment. The detainee was seen on May 24, 2019. One detainee arrived to the facility on September 28, 2018 and was seen by ID on December 5, 2018.

PBNDS 4.3.AA.7
Informed Consent and Involuntary Treatment
If the detainee refuses to consent to treatment, medical staff shall make reasonable efforts to explain to the detainee the necessity for and propriety of the recommended treatment.

FINDINGS:
Two out of eight (25%) detainees with a history of seizures did not have a serum drug level performed and acknowledged in the medical record every 3 months. Two of the detainees refused labs initially and the labs were rescheduled. One detainee arrived November 12, 2018; the lab was refused on March 7, 2019; lab reordered for June 12, 2019. Another detainee arrived October 31, 2019; refused labs May 14, 2019; labs reordered for June 11, 2019. There was no documentation that reasonable efforts were made to explain the necessity for the recommended labs.

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
1	271

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There was one suicide watch at the time of the site visit. No deficiencies were noted regarding this standard. Detainees who are determined to be suicidal are evaluated by a mental health provider and are either placed on a constant or staggered (15 minute checks) suicide watch at the facility. Detainees on suicide watch are evaluated by a mental health provider daily. The facility has 2 cells available for suicide watch. If the cells are occupied or if a serious suicide attempt is made, the detainee is sent out to the local hospital for further evaluation and treatment.

The facility continues to use Anaheim Global Medical Center (AGMC) as the primary mental health facility. If no beds are available then, Alvarado Parkway Institute (API) is utilized.

Previous findings from 09/24/2018 FMC Site Visit

There were no deficiencies noted regarding this section of the standard.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There were no reported deaths, detainees with terminal illness, or detainees with advance directives since the last FMC site visit.

Previous findings from 09/24/2018 FMC Site Visit
There were no reported deaths, detainees with terminal illness, or detainees with advance directives since the last FMC site visit.

Other Observations

The Adelanto ICE Processing Center (AIPC) IHSC Site visit was conducted May 20, 2019 through May 24, 2019. The site visit was completed by (b)(6); (b)(7)(C) the Los Angeles Field Medical Coordinators.

AIPC is a dedicated IGSA with only ICE detainees. The facility currently houses approximately 254 female detainees and 1556 male detainees. AIPC operates under The Geo Group Inc. which contracts with Wellpath, formally known as Correct Care Solutions (CCS) to provide on-site medical care. Wellpath has provided medical care at the facility since March 1, 2016. The facility operates under the 2011 Performance Based National Detention Standards (PBNDS). AIPC has had several audits to include American Correctional Association (ACA) Accreditation January 23, 2017 (upcoming audit in October 2019); Nakamoto Annual Audit October 9-11, 2018; Disability Rights California (DRC) visit August 13-14, 2018; NCCHC February 11-13, 2019; and ODO inspection March 12-14, 2019.

AIPC utilizes both paper and electronic medical records. AIPC began utilizing eClinical Works (eCW) for their electronic health record on August 30, 2016. Documentation prior to August 30, 2016 remains on paper and is scanned into eCW. Consents and refusals are paper records and are scanned into the electronic record. Effective February 19, 2019, AIPC began utilizing an electronic medication administration record, sMARt.

Deficiencies for Areas Evaluated

PBNDS 2011:

See Medical Care and Chronic Care Deficiencies above.

QUALITY OF CARE

Diabetes:
One of three (33%) of detainees did not have aspirin prescribed, as clinically indicated. In one instance aspirin was not prescribed for a 54 year old detainee with hypertension and elevated lipids.

Medical Recordkeeping Practices:
Two of ten (20%) charts did not have the problem list updated.

One out of three (33%) charts reviewed did not have the MAR in the record within 2 weeks of previous month.

Diagnostic Services and Specialty Care Access:
Two out of ten (20%) charts reviewed did not have the appointment accomplished within 45 days of the order or within the ordered time frame.

Two out of ten (20%) charts reviewed did not have clinician acknowledgment of the specialist's report in the medical record within 7 days of the date the service was performed.

Treatment of Disability:
Disability Accommodations Notification (DAN) Forms are not being scanned into the medical record.

Recommendations

(b)(5)

Facility Actions

(b)(7)(E)

3) The facility implemented an eMAR system, sMARt in February 2019. The facility contacted their IT to determine how eCW and sMARt can communicate so that the MARs can be uploaded into eCW. The facility will continue to review sMARt for improvements.
4) The Medical Grievance Coordinator will begin ensuring that the Disability Accommodations Notification (DAN) Form is scanned into the detainee's medical record.

Additional Comments

The facility is scheduled for ACA audit in October 2019

AMERICAN OVERSIGHT

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.

- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody $\geq$ 14 days.
- In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq$ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.

TIPS FOR REVIEWERS

- Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

- Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.

AMERICAN OVERSIGHT

• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

EVALUATION OF CARE PRIOR TO EMERGENCY DEPARTMENT/HOSPITAL VISIT FOR CONDITIONS SENSITIVE TO AMBULATORY CARE								
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	10							
Purpose:	To determine whether earlier intervention might have prevented morbidity and cost of outside care. To measure continuity and coordination of care for inbound patients.							
Source:	Emergency Department (ED) logs.							
Sample:	Within the past 6 months, 10 patients (if available) sent to ED with ambulatory sensitive conditions, such as seizure, alcohol and/or substance withdrawal, skin or deep tissue infections, DKA, abdominal pain, or chest pain.							
Guidelines:	NCCHC 2014 J-E-12.							
Remarks:	The tool calculated cEED-2 as 0% however, the findings were 100% that an earlier intervention would not have prevented deterioration to the point of need for ED care.							
Reviewer:	(b)(6); (b)(7)(C)				**Date Reviewed:**	9/27/2018		
Clinical (c)								
cEED-1	Is there an outbound progress note?							
cEED-2	Is there evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care? If yes, please describe in the remarks portion of the report.*This will require physician review in some cases. If a physician assists with completion of this review, please include his or her name in the report comments.							
cEED-3	Is there discharge documentation from the hospital or ED in the chart?							
cEED-4	Is there an inbound assessment?							
cEED-5	Does the assessment reflect hospital findings and concurrence or justification for deviation from hospital recommendations?

Medical Care

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

Review of the facility's medical care were noted to follow NCCHC, ACA, and PBNDS standards.

Previous Site Visit 03/06/2018
PBNDS 4.3: V.C.2
Tuberculosis Screening Management- Screening for TB is initiated at intake and in accordance with Center for Disease Control and Prevention (CDC) guidelines.
All new arrivals shall receive TB screening within 12 hours of intake and in accordance with CDC guidelines (www.cdc.gov/tb).

FINDINGS: One out of nineteen (5%) did not have tuberculosis screening completed as per CDC guidelines. One of the detainee's chest x-ray was not read within 72 hours due to "housing issues." The chest x-ray was ordered five days after arrival. The chest x-ray was completed nine days after arrival.

PBNDS 4.3: V.S.4
Sick Call- Each facility shall have a sick call procedure that allows detainees the unrestricted opportunity to freely request health care services (including mental health and dental services) provided by a physician or other qualified medical staff in a clinical setting.

This procedure shall include:
an established procedure shall be in place at all facilities to ensure that all sick call requests are received and triaged by appropriate medical personnel within 24 hours after a detainee submits the request. All written sick call requests shall be date and time stamped and filed in the detainee's medical record. Medical personnel shall review the request slips

AMERICAN OVERSIGHT

and determine when the detainee shall be seen based on acuity of the problem. In an urgent situation, the housing unit officer shall notify medical personnel immediately.

FINDINGS: Two of three (67%) of the charts reviewed for urgent care (sick call) did not have a nursing referral to an MD/PA/NP/DMD submitted within 24 hours where appropriate.

PBNDS 4.3: V.U.5
Medical Care- Detainees shall receive continuity of care from time of admission to time of transfer, release or removal. Detainees, who have received medical care, released from custody or removed shall receive a discharge plan, a summary of medical records, any medically necessary medication and referrals to community-based providers as medically-appropriate.

FINDINGS: Two of ten (20%) of the charts reviewed indicated that the detainees did not receive their medication within 24-72 hours. One detainee's medication was not ordered at intake because the personal supplies were in Russian, and the nurse could not read them. The detainee went without several cardiac medications for 2-3 days until seen by a provider. In a second detainee, the transfer summary noted a history of asthma, but no medical conditions or medications were documented on the intake screening, and no medications were ordered until the exam 5 days later.

PBNDS 4.8: V.F.4.e
Disability Identification, Assessment, and Accommodation, F4. Multidisciplinary Team, e. Staff Notification- Where an accommodation is granted, facility policy or procedures will ensure that all relevant facility staff, including facility security staff, receive timely notification and, as needed, instructions for successful implementation of the accommodation. These procedures will also account for any applicable privacy and confidentiality considerations.

FINDINGS: Ten detainees were assessed for assistance with activities of daily living (ADL), and appropriate accommodations ordered. Three out of ten (30%) were missing appropriate accommodation orders (Special needs). The facility does not clearly determine in the progress notes if the provider has assessed the detainees for assistance with activities of daily living.

PBNDS 6.2: V.C.4
Medical Grievances- Designated medical staff shall act on the grievance within five working days of receipt and provide the detainee a written response of the decision and the rationale. This record shall be maintained per the following section "D. Record-Keeping and File Maintenance."

FINDINGS: Four out of thirty-six (11%) of the grievances were not addressed within 5 working days of receipt.

Chronic Care *Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.*

Total number with chronic conditions:	Total number with unstable chronic conditions:
231	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of the facility's medical care were noted to follow NCCHC, ACA, and PBNDS standards.

Previous findings from 03/6/2018 FMC Site Visit

PBNDS 4.3: V.C.4.c - Clinical Evaluation and Management
Medical personnel shall provide all detainees diagnosed with HIV/AIDS medical care consistent with national recommendations and guidelines disseminated through the U.S. Department of Health and Human Services, The CDC and the Infectious Diseases Society of America.

FINDINGS: Eight out of ten (80%) of detainees had a chest x-ray completed within 72 hours of problem identification, if not already done. In one instance, the detainee was identified on July 20, 2017; however, the chest x-ray was not completed until July 28, 2017. The other

AMERICAN OVERSIGHT

detainee was identified as being HIV positive on January 31, 2017. The chest x-ray was completed on May 26, 2017.(REPEAT FINDING)

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:
0	3

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There were a total of 3 hunger strikes in the last 12 months. A review of the facility hunger strike policy noted to follow NCCHC and PBNDS standards.

Previous findings from 08/29/2017 FMC Site Visit
There were a total of 7 hunger strikes in the last 12 months. A review of the facility hunger strike policy noted to follow NCCHC and PBNDS standards.

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
0	207

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There were no deficiencies noted regarding this section of the standard. The facility continues to have 2 cells available for suicide watch. Detainees who are determined to be suicidal are evaluated by a mental health provider and are either placed on a constant or staggered (15 minute checks) suicide watch at the facility. If the cells are occupied or if it a serious suicide attempt, the detainee is sent out to the local hospital for further evaluation and treatment.

The facility is now utilizing Anaheim Global Medical Center (AGMC) as the preferred mental health facility. If no beds are available then, Alvarado Parkway Institute (API) is used.

Previous findings from 03/6/2018 FMC Site Visit
There were no deficiencies noted regarding this section of the standard. The facility continues to have 2 cells available for suicide watch. Detainees who are determined to be suicidal are evaluated by a mental health provider and are either placed on a constant or staggered (15 minute checks) suicide watch at the facility. If the cells are occupied or if it a serious suicide attempt, the detainee is sent out to the local hospital for further evaluation and treatment.

The facility continues to utilize the Alvarado Parkway Institute (API) located in San Diego, CA as the preferred inpatient mental health facility.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There were no reported deaths, detainees with terminal illness, or detainees with advance directives since the last FMC site visit.

Previous findings from 03/06/2018 FMC Site Visit
There were no reported deaths, detainees with terminal illness, or detainees with advance directives since the last FMC site visit.

Other Observations

The Adelanto ICE Processing Center (AIPC) IHSC Site visit was conducted September 24, 2018 through October 1, 2018. The site visit was completed by the Los Angeles Field Medical Coordinator. The new Quality of Medical Care (QMC) audit tools were used during the review.

AIPC is a dedicated IGSA with only ICE detainees. AIPC operates under The Geo Group Inc. which contracts with Correct Care Solutions (CCS) to provide on-site medical care. CCS has provided medical care at the facility since March 1, 2016. The facility operates under the 2011 Performance Based National Detention Standards (PBNDS). AIPC received their National Commission on Correctional Health Care (NCCHC) accreditation on April 10, 2016; American Correctional Association (ACA) Accreditation January 23, 2017; Nakamoto Annual Audit scheduled for October 9-11, 2018; and a Disability Rights California (DRC) visit August 13-14, 2018. The facility currently houses approximately 246 female detainees and 1517 male detainees.

AIPC currently utilizes both paper and electronic medical records. AIPC began utilizing eClinical Works (eCW) for their electronic health record on August 30, 2016. Documentation prior to August 30, 2016 remains on paper and documentation following August 30, 2016 is electronic. Medication administration, consents, and refusals are paper records and scanned into the electronic record.

The previous Health Services Administration (HSA) medically retired August 31, 2018. The new

AMERICAN OVERSIGHT

HSA is a registered nurse and started September 4, 2018. The CCS staffing is currently at 89.5% with 87% supplemental CCS funded staff.

Deficiencies for Areas Evaluated

PBNDS 2011:

No deficiencies were noted.

QUALITY OF CARE

Diabetes:
Six of ten (56%) of detainees did not have aspirin prescribed, as clinically indicated.

Laboratory:
Two of ten (20%) patients who had blood drawn, were not advised of their normal laboratory results.

Sick Call:
Three of ten (30%) charts reviewed for urgent care (sick call) did not have an assessment performed by the registered nurse.

One of the ten (10%) charts reviewed for urgent care (sick call) did not have vital signs documented with the nurse's assessment.

AMERICAN OVERSIGHT

Suicide Screening

See QCM Tool for current findings

The tool calculated cSS-5 as 0% however, the findings were 100% that an earlier intervention would not have prevented deterioration to the point of the need for a suicide watch.

Previous findings from 03/6/2018 FMC Site Visit
There were no areas of concern noted.

Health Assessment

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
There were no areas of concern noted.

Urgent Care (Sick Call)

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
One of three (33%) had a nursing referral to a nurse practitioner submitted within 24 hours.

There were no other areas of concern noted.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

See QCM Tool for current findings

The tool calculated cEED-2 as 0% however, the findings were 100% that an earlier intervention would not have prevented deterioration to the point of need for ED care.

Previous findings from 03/6/2018 FMC Site Visit
Seven out of nine (78%) of detainees had an inbound progress note and an inbound assessment. Two detainees had no inbound assessment on return from the hospital.

There were no additional areas of concern noted.

Medication Administration Practices

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
One out of two (50%) had an appropriate clinician response.

In one case, a provider acknowledged in an encounter that the nursing staff had informed the provider that a patient was refusing morning insulin, but continued the patient's sliding scale insulin order as twice daily. The printed MAR from CorrectRx for March shows the provider's order for twice daily insulin, but the nursing staff hand-wrote the order on a separate MAR as every evening. There were no signed refusal forms in the patient's chart for insulin in 2018. The nine other charts reviewed yielded a total of 14 refusals or no-shows on

AMERICAN OVERSIGHT

MARs, of which 2 lacked a signed refusal form. All of these charts showed an appropriate clinician response to consecutive refusals.

Approximately 30% of MARs reviewed had either blanks, consecutive refusals, or no shows. There were no additional areas of concern noted.

AMERICAN OVERSIGHT

Continuity of Medication

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
Eight of ten (80%) of the charts reviewed indicated that patients are consistently receiving their medication within 24-72hrs. Immediately following the patient's intake encounter, the nurse sends an electronic notification to the provider to order the patients' chronic medications, and the medication is generally received within one business day. One patient's medication was not ordered at intake because his personal supplies were in Russian, and the nurse could not read them. That patient went without several cardiac medications for 2-3 days until he was seen by a provider. In a second patient, the transfer summary noted a history of asthma, but no medical conditions or medications were documented on the intake screening, and no medications were ordered until her exam 5 days later.

There were no additional areas of concern noted.

Mental Health Screen

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
There were no areas of concern noted.

Medical Recordkeeping Practices

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
Eight of ten (80%) charts reviewed were in compliance with updating the problem list.

Seven of ten (70%) charts reviewed were in compliance with the receiving screen and health assessment forms. Three of the charts reviewed, the health assessments were not found in the record. East side dental provided an the encounter note that stated dental assessment was completed, but no scanned document of the assessment. The West side clearly does this accordingly, but the East side is not standardized in this procedure.

Eight out of ten (80%) charts reviewed were in compliance with Progress notes. Two of the charts reviewed, the notes were incomplete and not in a SOAP format.

The remaining medical record-keeping practices were in compliance or not applicable.

Pregnant Women

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
There were no areas of concern noted.

Dental Care

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit

AMERICAN OVERSIGHT

There were no areas of concern noted.

AMERICAN OVERSIGHT

Acute Laboratory Testing

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
Six out of ten (60%) patients had laboratory testing done within one business day of the ordered date or by the due date. There were marked delays, one to two weeks from date desired, in lab drawing of routine labs due to the list being full.

Nine out of ten (90%)patients had clinical acknowledgment of laboratory tests.

One out of ten (10%) patients were advised of laboratory results. There was a trend in lack of documentation of teaching on lab results.

There were no additional areas of concern noted.

Diagnostic Services and Specialty Care Access

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
There were no areas of concern noted.

Mental Health Treatment Planning

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
There were no areas of concern noted.

Treatment of Disability

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
Seven out of ten (70%) were assessed for assistance with activities of daily living (ADL), and appropriate accommodations were ordered. Three were missing appropriate accommodation orders (Special needs). The facility does not clearly determine in the progress notes if the provider has assessed if the detainees have been assessed for assistance with activities of daily living. For example, wheel chair bound detainees.

There were no additional areas of concern noted.

Complaints and Grievances

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
32 of the 36 (89%) grievances were found in compliance with PBNDS 2011 of appropriately being addressed within 5 working days of receipt.

The grievance trends identified - 80% were due to delay in care complaints, 10% attitude demeanor or conduct and 10% other.

AMERICAN OVERSIGHT

There were no additional areas of concern noted.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES
CHRONIC DISEASES

Diabetes

See QCM Tool for current findings

Previous findings from 03/6/2018 FMC Site Visit
Eight out of nine (89%) of detainees had blood sugar measured and recorded on intake.

Nine out of ten (90%) of detainees had a baseline HgbA1c performed within 30 days of intake or within the past 3 months.

Nine out of ten (90%) of detainees were followed at least every 90 days with appropriate vital signs.

Four out of five (80%) of detainees had aspirin prescribed, as clinically indicated.

Nine out of ten (90%) of detainees had the degree of control (goal HgbA1C <8) documented. No issues were identified.

There were no additional areas of concern noted.

Human Immunodeficiency Virus (HIV)

See QCM Tool for current findings

Previous findings from 03/06/2018 FMC Site Visit
Eight out of ten (80%) of detainees had a chest x-ray completed within 72 hours of problem identification, if not already done. In one instance, the detainee was identified on July 20, 2017; however, the chest x-ray was not completed until July 28, 2017. The other detainee was identified as being HIV positive on January 31, 2017. The chest x-ray was completed on May 26, 2017.(REPEAT FINDING)

There were no additional areas of concern noted.

Hypertension

See QCM Tool for current findings

Previous findings form 03/06/2018 FMC Site Visit
Nine of ten (90%) had documented blood pressure reading at intake. One of the detainees did not have a blood pressure reading at intake. The history and physical was completed 2 days after intake and a normal blood pressure reading was recorded.

There were no additional areas of concern noted.

Asthma

See QCM Tool for current findings

Previous findings from 03/06/2018 FMC Site Visit
Eight out of ten (80%) and had a peak flow completed at the initial physical exam. One detainee had an initial exam performed on February 7, 2018, and the peak flow was performed on February 22, 2018. One detainee had an initial exam performed on March 6, 2017, and the peak flow was performed on March 29, 2017. (REPEAT FINDING)

There were no additional areas of concern noted.

Seizure Disorder

See QCM Tool for current findings

Previous findings from 03/06/2018 FMC Site Visit
Four out of six (67%) detainees had appropriate neurological history completed at the initial

AMERICAN OVERSIGHT

physical examination. Two detainees did not receive a thorough neurological history at the initial exam.

Five out of six (83%) detainees were seen in CCC by mid-level provider or physician within 14 days of illness identification. One detainee was seen in CCC by mid-level at five weeks post illness identification.

There were no additional areas of concern noted.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

The Quality Improvement Committee will be adding additional studies to monitor for compliance. The FMC is being invited to attend the quarterly meetings.

CCS implemented new templates for the providers to use to ensure continuity of care and proper documentation.

The facility will be implementing an eMAR system in 2019

Additional Comments

The facility is scheduled for NCCHC audit in February 2019
The facility is scheduled for ACA audit in October 2019

Instructions for the Corrective Plan of Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the findings identified in the ICE Health Service Corps Field Medical Coordinator (FMC) review. Please ensure that each stated corrective plan of action addresses the noted medical findings to the fullest extent possible, and that it incorporates the recommendations. In the event a finding or recommendation cannot be implemented within the authorized timeline, please include an explanation in the "Corrective Plan of Action" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date.

Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.

ICE Uniform Corrective Action Plan (FMC Site Visit Reviews) Adelanto Detention Facility (LOS AOR)			
Assessment and Findings	**Recommendations**	**Corrective Plan of Action**	**Completion Date**
Deficiency: PBNDS 4.3.S.4 Each facility shall have a sick call procedure that allows detainees the unrestricted opportunity to freely request health care services (including mental health and dental services) provided by a physician or other qualified medical staff in a clinical setting. Two of ten (20%) of the charts reviewed for urgent care (sick call) did not have timely and appropriate nursing evaluations for the different acute conditions. One detainee was rescheduled for nursing sick call 3 times and	(b)(5)	The findings date back to March and April 2017. Starting on June 1, 2017, on a weekly basis, the HSA has been providing a report of sick call/sick call reschedules to the ICE AFOD. The 2016 PBNDS revisions were discussed during the staff meeting on February 28, 2017. An e-mail to medical staff was sent by the HSA on March 11, 2017 with a copy	Monitoring Reports: On-going Training: Completed on May 15, 2017 CQI Study: Initiated on June 18, 2017 **FMC Update February 2019:**

AMERICAN OVERSIGHT

another 5 times, which resulted in delay of evaluation and care for 2 weeks for detainees complaining of eye and back pain. The detainee with the complaints of back pain was rescheduled five times before being evaluated. The detainee with the complaints of the eye pain was rescheduled three times before being evaluated. The detainee with the back pain was rescheduled on March 14, March 15, March 16, March 17, March 18 and was eventually evaluated on April 4 during chronic care for the complaint. The detainee with the eye pain was rescheduled on April 16, April 27 and April 28 and was eventually evaluated on April 30. There is no documentation in the medical records regarding why the detainees were rescheduled. One of ten (10%) detainees seen on nursing sick call did not have vital signs documented with the nursing assessment.	(b)(5)	of the revisions to the PBNDS. RN Sick Call 1. The DON scheduled training for all RN's with the eCW Trainer on use of RNSC Nursing Protcols on eCW. The training was completed on May 15, 2017 and reiterated during the staff meeting on June 28, 2017. 2. The DON provided training for all RN's on individualized focused nursing assessment using the established RNSC protocols. This will included taking vital signs at each encounter. The training was completed on May 15, 2017. 3. The DON provided training for all RN's on triage utilizing established guidelines. The training was completed on May 15, 2017. 4. The DON provided training for all RN's on proper scheduling of triaged sick call requests	March 2018 FMC Site Visit compliant for timely evaluation. However, sick call deficiencies related to lack of referral to provider. 		to ensure compliance with NCCHC and PBNDS. The training was completed May 15, 2017. Procedure 1. Nurses assigned to the 3rd watch (NOC shift) will collect the sick call requests from the sick call request drop boxes in the units. 2. All sick call requests will be triaged upon receipt. The sick call will be date/time stamped upon receipt. 3. The sick call requests will be scheduled based on urgency. 4. Effective June 1, 2017, all scheduled sick calls are evaluated on the day they are scheduled. The DON reviews the schedule to ensure all sick call request scheduled for the day are completed. In the absence of the DON, the DON will designate a staff to ensure the above is completed.	Deficiency Report Update and APIC Response for continued monitoring.

AMERICAN OVERSIGHT

		5. Effective June 1, 2017, on a weekly basis, the HSA provides a report of sick call/sick call reschedules to the ICE AFOD. QA and Follow-up 1. On a daily basis, the DON reviews a minimum of 5 RN sick calls to ensure they are properly triaged, scheduled, and evaluated following the established nursing protocols. In the absence of the DON, the DON will designate a reviewer. 2. On a weekly basis, the report of the reviews is forwarded to the HSA and QA for the information to be collated, analyzed, and trended for compliance. The corrective actions will be reviewed if it does not correct the problem. 3. On a quarterly basis, the report of the reviews is presented in the CQI meeting. 4. The study will be conducted until there is a

		for a continuous 12 weeks. Attachments: 6 – Lab Reporting Form 9 – Clinical Practice Guidelines Distribution	
Quality of Care Issue: One of ten (10%) of the specialty charts reviewed did not have time urgency documented on the order for specialty care therefore, it could not be verified if the appointment was accomplished within the ordered time frame. One of four (25%) of the specialty charts reviewed did not reveal that the detainee was re-evaluated for deterioration every 30 days until the off-site visit was completed.,. One of the detainees was referred to the ENT on December 29, 2016; the MedPAR was submitted to IHSC on February 21, 2017. There was no documentation in the medical record regarding why there was a delay in submitting the MedPAR. The appointment was completed on March 6, 2017; however, there was no follow-up by the provider after the appointment. The consultation was normal, and there were no recommendations from the consultant. There was no adverse effect noted in the medical record from not being	(b)(5)	The medical director distributed the clinical practice guidelines, for the re-evaluation of patients a minimum of every 30 days until the off-site diagnostic services and/or specialty care is completed, on January 22, 2018. On December 15, 2017, the medical director and providers were advised by the HSA to follow-up with patients within 72 hours upon return of patients from hospital or off-site specialty visits. Procedure: On December 15, 2017, a new process of re-evaluation of off-site visits was implemented. A form was developed for the nursing staff to complete upon return	Guideline Review: Completed on January 22, 2018 CQI Study: Initiated on January 15, 2018 **FMC February 2019 Update:** FMC March 2018 Site Visit compliant.

AMERICAN OVERSIGHT

evaluated at the facility after the ENT appointment. The detainee was released from detention on March 28, 2017. One of ten (10%) specialty charts that was reviewed did not reveal that the clinician acknowledged the specialist's report in the medical record within 7 days of the date the service was performed. One of the detainees was referred to the OB/GYN on February 13, 2017, and the appointment was on March 7, 2017.However, there was no follow-up by the provider after the appointment. The consultation was normal, and there were no recommendations from the consultant. There was no adverse effect noted in the medical record from not being evaluated at the facility after the GYN appointment. Quality of Care Issue: Five of six diabetic charts reviewed showed (90%) of detainees had aspirin prescribed, as clinically indicated. In one instance aspirin was not prescribed as indicated for a 55 year old detainee with hyperlipidemia, hypertension,	(b)(5)	of patients from off-site visits. The nursing staff were advised to schedule the patients for a follow-up visit within 72 hour upon the patients return. QA Monitoring: 1. On a weekly basis, a random review of 5 treatment authorization requests (TAR) will be reviewed by QA nurse to determine the patient has been scheduled and re-evaluated for any condition deterioration. 2. The QA nurse will collect data, aggregate and analyze data and report to the medical director, HSA and CQI committee on a weekly basis. 3. The study will be continued until there is demonstrated continuous compliance for 12 consecutive weeks. 4. Chart reviews of detainees recommended for an off-site consultation/ hospital visit in the past 6 months will be reviewed to verify	

AMERICAN OVERSIGHT

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.

- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody $\geq$ 14 days.
- In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq$ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.

TIPS FOR REVIEWERS

- Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

- Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.

AMERICAN OVERSIGHT

• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

EVALUATION OF CARE PRIOR TO EMERGENCY DEPARTMENT/HOSPITAL VISIT FOR CONDITIONS SENSITIVE TO AMBULATORY CARE

Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	10		
Purpose:	To determine whether earlier intervention might have prevented morbidity and cost of outside care. To measure continuity and coordination of care for inbound patients.		
Source:	Emergency Department (ED) logs.		
Sample:	Within the past 6 months, 10 patients (if available) sent to ED with ambulatory sensitive conditions, such as seizure, alcohol and/or substance withdrawal, skin or deep tissue infections, DKA, abdominal pain, or chest pain.		
Guidelines:	NCCHC 2014 J-E-12.		
Remarks:	Type Text Here		
Reviewer:	(b)(6); (b)(7)(C)	**Date Reviewed:**	12/6/2019

Clinical (c)	
cEED-1	Is there an outbound progress note?
cEED-2	Is there evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care? If yes, please describe in the remarks portion of the report.*This will require physician review in some cases. If a physician assists with completion of this review, please include his or her name in the report comments.
cEED-3	Is there discharge documentation from the hospital or ED in the chart?
cEED-4	Is there an inbound assessment?
cEED-5	Does the assessment reflect hospital findings and concurrence or justification for deviation from hospital recommendations?

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.

- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody $\geq$ 14 days.
- In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq$ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.

TIPS FOR REVIEWERS

- Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

- Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.

AMERICAN OVERSIGHT

• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

DIABETES

Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	10	
Purpose:	To assess conformance with nationally-accepted guidelines for chronic disease and to prevent deterioration in function and cost of unnecessary care.	
Source:	Chronic disease registry or MARs.	
Sample:	10 patients with diabetes chosen at random, if available.	
Guidelines:	NCCHC Federal Clinical Guidelines https://www.ncchc.org/federal-clinical-guidelines	
Remarks:	(b)(6); (b)(7)(C) arrival date 12/20/2018, blood sugar not measured at intake. (b)(6); (b)(7)(C) arrival date 1/24/2019, HgbA1C performed on 5/15/2019. Previous findings from 09/24/2018 FMC Site Visit: There were no areas of concern noted.	
Reviewer:	(b)(6); (b)(7)(C)	**Date Reviewed:** 5/21/2019

Facility (f)		
fDM-1:	What clinical practice guideline does the facility use to manage diabetes?	BOP Clinical Practice Guidelines

Clinical (c)	
cDM-1	Was blood sugar measured and recorded on intake?
cDM-2	Was patient seen for chronic care by mid-level provider or physician within 14* days of illness identification? (14 days for stable patients. Unstable patients or those on multiple medications (4 or more) should be seen sooner.)
cDM-3	Was a baseline HgbA1C performed within 30 days of intake or within the past 3 months?
cDM-4	Were lipids measured within one year?
cDM-5	Was patient followed at least every 90 days with appropriate vital signs?
cDM-6	Was aspirin prescribed, as clinically indicated? *Refer to User Guide for clinical indications.
cDM-7	Was degree of control (goal HgbA1C <8.0) documented?
cDM-8	Was a strategy to attain diabetes control documented if HgbA1C was above goal?

MEDICATION ADMINISTRATION RECORDS								
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	10							
Purpose:	To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.							
Source:	MARS.							
Sample:	MAR and medical record for 10 patients, if available. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.							
Guidelines:								
Remarks:	Effective February 2019, the facility started using eSMARt Wellpath's policy is that a provider is notified after three consecutive refusals. A review of this tool revealed that MARs are not available in eCW. The MARs are kept in the sMARt system and not eCW. Only providers and nurses who have access to the sMARt system are able to view the MARs. Previous findings from 09/24/2018 FMC Site Visit: There were no areas of concern noted.							
Reviewer:	(b)(6); (b)(7)(C)			**Date Reviewed:**	5/24/2019			
Facility (f)								
fMAR-1:	Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up?				Y			
fMAR-2:	Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs?				1			
fMAR-3:	In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month?				0			
fMAR-4:	Estimate the percentage of patients on self-administered medication ordered by a provider.				70			
fMAR-5:	OTCs provided by medical, commissary or both?				Both			
Clinical (c)								
cMAR-1	What is the number of refusals and no shows during the previous month for each patient?							
cMAR-2	Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?							
cMAR-3	Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

MEDICAL RECORD-KEEPING PRACTICES

Number of Files Reviewed for Patients Meeting this Criteria:* (please select # of no files/patients reviewed)	10
Purpose:	To assess completeness of the medical record and appropriateness of medical record practices.
Source:	Medical Records, Chronic Care Log, and MARs.
Sample:	10 records of detainees with chronic disease, if available.
Instructions:	For all answers that are "partial compliance" or "non-compliant", the reviewer should insert a comment in the remarks section of the report. For example, if most of the progress notes are legible, but one or two practitioner's notes are barely legible, the appropriate comment would be "Dr. XX's notes are not legible."
Guidelines:	NCCHC 2014 J-H-01, J-H-03.
Remarks:	MH RHU Rounds Logs not placed in eCW. MH infirmary observation logs not placed in eCW. [redacted] migraines not listed. [redacted] psoriasis not listed. H&P not locked or not performed. Previous findings from 09/24/2018 FMC Site Visit: There were no areas of concern noted.

COMPLAINTS AND GRIEVANCES

DATE 08/31/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto ICE Processing Center

Purpose: To assess use of medical complaint and grievance data as part of the quality management program.

Source: Facility grievance logs.

Sample: Facility's periodic grievance analyses, with underlying data (grievances and responses).

Does your review of the facility's grievances reveal any possible barriers to care or repetitive concerns that could affect clinical care? Please answer yes or no no If yes, please address in the comments section whether and how the facility uses this information to implement change.

How many medical grievances were submitted over the past 3 months? 40

What percentage of this number were appropriately addressed within 5 working days of receipt? 100 %

Item: 1 Of the grievances submitted over the past 3 months, enter the number of grievances in each category, i.e., availability of care, denial of request for care, etc.

2 Enter the A# for each grievance included in this category.

Grievance Type	1	2
Availability of care (sick call hours, etc.)	6	(b)(6); (b)(7)(C)

DIAGNOSTIC SERVICES AND SPECIALTY CARE ACCESS

DATE 08/29/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto ICE Processing Center

Purpose: To assess timeliness of off-site diagnostic services and specialty care.

Source: Referrals log, medical records or MedPars

Sample: 10 specialty patients chosen by acuity or risk of harm if access is delayed, particularly in specialties where timely access has been a problem for detainees in this facility.

Item # Measure

1. Was there a documented time urgency included on the order for specialty care or diagnostic services?
2. Was the appointment accomplished within 45 days of the order or within the ordered timeframe, e.g., "return in 90 days"?
3. Was the patient re-evaluated for deterioration every 30 days until off-site service completed?
4. Did the facility clinician acknowledge the specialist's report in the medical record within 7 days of the date the service was performed?

HEALTH ASSESSMENT

DATE 08/29/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto ICE Processing Center

Purpose: To determine compliance with detention standards to assure continuity and coordination of care for serious medical needs.

Source: Detainees arriving during recent period, at least 2 weeks prior to review, to allow for evaluation of timely follow-up.

Sample: 20 medical records chosen at random.

Item # Measure

1. Initial screen complete within 12 hours of booking?
2. PPD placed during medical screening and read within 48-72 hours, or chest x-ray is taken, or if PPD is positive by history, chest x-ray is ordered and read?
3. Are detainees who screen positive for mental illness or suicide risk referred for evaluation?
4. Is there timely follow-up for significant findings of acute and chronic conditions?*
5. Is there a complete health evaluation? Vital signs, adequate medical and behavioral health history, physical examination by licensed MD/PA/NP/RN within 14 days of booking? Patients with HIV, diabetes, dialysis, asthma (on daily meds), and other chronic illness will be seen within 48 hours or addressed by phone and seen on the next business day.

CHRONIC DISEASE – HYPERTENSION

DATE 08/29/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto ICE Processing Center

Purpose: To assess conformance with nationally-accepted guidelines for chronic disease and to prevent deterioration in function and cost of unnecessary care.

Source: Chronic disease registry or MARs.

Sample: 10 patients with hypertension chosen at random.

1 Does the facility follow a clinical practice guideline to manage hypertension? YES
2 If yes, what is the guideline? BOP hypertension chronic care guideline

Item # Measure

1 Was a blood pressure reading noted at intake?
2 Was the patient seen by an MD/PA/NP within 14 days of illness identification*?
3 If blood pressure was >140 systolic or >90 diastolic, was a treatment plan initiated within 14 days of identification*?
4 Was a chronic disease guideline, including baseline laboratory testing, followed?

TREATMENT OF DISABILITY

DATE: 08/31/2017 REVIEWER: (b)(6); (b)(7)(C)

FACILITY REVIEWED: Adelanto ICE Processing Center

Purpose: To assess the care of patients with disabilities who need accommodations to access the facility's programs or activities as a result of their disabilities.

An individual is considered to have a "disability" if s/he has a physical or mental impairment that substantially limits one or more major life activities, or has a record of such impairment.
See also: https://www.dhs.gov/sites/default/files/publications/guide-interacting-with-people-who-have-disabilties_09-26-13.pdf

Sources: Facility logs, tour of facility, list of patients who require DME (to include walkers, canes, wheel chairs, hearing aids, or other items to assist the patients to access the facility's programs and activities), and interviews with patients with disabilities who need accommodations to access the facility's programs and activities.

Sample: 10 patients within the population who have a disability that requires medical involvement. Determine if the patients with disabilities received appropriate treatment and disability accommodations through medical record examination. Mark as "Y" for yes, "N" for no, and "N/A" for not applicable. Do not leave any area blank.

General Question: Does the facility maintain a current list of all patients with disabilities on site? Yes

Item #	Measure
1	Is the disability prominently noted in the file, along with any needed accommodations?
2	Was the patient assessed for assistance with activities of daily living (ADL) upon identification of disability?
3	Were appropriate accommodation orders entered (e.g., lower bunk, mobility device (wheelchair, walker, canes, crutches), hearing aid, assistive listening device, sign language interpreter, meal, etc.)?
4	Was ADL assistance provided, if applicable?

URGENT CARE (SICK CALL)

DATE 08/30/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Adelanto ICE Processing Center

Purpose: To assess for timely and appropriate nursing care for acute conditions.

Source: Urgent care log, sick call request list, or sick call visit list, preferably with reason for visit noted on log.

Sample: 10 urgent care visits for detainees with potentially serious complaints that occurred 1 to 3 weeks prior to review. Common potentially serious complaints include chest pain, abdominal pain, seizure, vomiting, skin infection, diabetic complications, etc.

Item # Measure

1 Was there timely and appropriate evaluation by nursing staff, depending on the nature of the complaint?
2 Was care delivered within the scope of the nurse's license?
3 Were vital signs documented during the nurse's assessment?
4 If necessary, was a nursing referral to an MD/PA/NP/DMD submitted within 24 hours where appropriate?
5 If referred, was an MD/PA/NP/DMD assessment and plan documented?

MEDICATION ADMINISTRATION PRACTICES

DATE 4/24/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Denver Contract Detention Center

Purpose: To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.

Source: MARS.

Sample: MAR and medical record for 10 patients. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.

1 Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up? YES

2 Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs? <5%

3 In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month? 0

4 Estimate the percentage of patients on self-administered medication ordered by a provider. 25

5 OTCs provided by medical, commissary or both? Both

Item #	Measure
1	What is the number of refusals and/or no shows during the previous month for each patient?
2	Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?
3	Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene,

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.
- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in
- In most cases, the recommended sample size will provide a reliable picture of care that can be
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq 90\%$. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide

TIPS FOR REVIEWERS

AMERICAN OVERSIGHT

• Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.
• Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.
• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a

HEALTH ASSESSMENT						
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	20					
Purpose:	To determine compliance with detention standards to assure continuity and coordination of care for serious medical needs.					
Source:	Detainees arriving during recent period, at least 2 weeks prior to review, to allow for evaluation of timely follow-up.					
Sample:	20 medical records chosen at random.					
Guidelines:	NCCHC 2014 J-E-04; ACA 2004 4-ALDF-4C-24, 4-ALDF-4C-25					
Remarks:	#1 - seen by PA on day 4. #9-seen on day 4.					
Reviewer:	(b)(6); (b)(7)(C)			**Date Reviewed:**	3/25/2019	

Clinical (c)	
cHA-1	Initial screen complete within 12 hours of booking?
cHA-2	PPD placed during medical screening and read within 48-72 hours, or chest x-ray is taken, or if PPD is positive by history, chest x-ray is ordered and read?
cHA-3	Are detainees who screen positive for mental illness or suicide risk referred for evaluation?
cHA-4	Is there timely follow-up for significant findings of acute and chronic conditions? *A significant finding is a condition that, without timely intervention, could lead to deterioration in function, pain, death, or risk to the public health.
cHA-5	Is there a complete health evaluation? Vital signs, adequate medical and behavioral health history, physical examination by licensed MD/PA/NP/RN within 14 days of booking? Patients with HIV, diabetes, dialysis, asthma (on daily meds), and other chronic illness will be seen within 2 business days or addressed by phone and seen on the next business day.

MEDICATION ADMINISTRATION RECORDS								
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	65							
Purpose:	To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.							
Source:	MARS.							
Sample:	MAR and medical record for 10 patients, if available. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.							
Guidelines:								
Remarks:	The medical department has a wide variety of medications in stock to treat acute and chronic conditions, and it has a contract with Correct Rx pharmacy to supply necessary medications and refills. Correct Rx has a 24-72 hour turnaround on ordered medications. Over the counter (OTC) medications are provided the medical staff and available for purchase at the commissary. fMAR-3: Per the MRT, MARs since the last site visit have been filed in the records on a timely basis. There are still several months from last year that have not been filed.							
Reviewer:	(b)(6); (b)(7)(C)			**Date Reviewed:**	3/25/2019			
Facility (f)								
fMAR-1:	Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up?				Y			
fMAR-2:	Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs?				0			
fMAR-3:	In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month?				4			
fMAR-4:	Estimate the percentage of patients on self-administered medication ordered by a provider.				50			
fMAR-5:	OTCs provided by medical, commissary or both?				Both			
Clinical (c)								
cMAR-1	What is the number of refusals and no shows during the previous month for each patient?							
cMAR-2	Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?							
cMAR-3	Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

MEDICAL RECORD-KEEPING PRACTICES

Number of Files Reviewed for Patients Meeting this Criteria:* (please select # of no files/patients reviewed): 10

Purpose: To assess completeness of the medical record and appropriateness of medical record practices.
Source: Medical Records, Chronic Care Log, and MARs.
Sample: 10 records of detainees with chronic disease, if available.
Instructions: For all answers that are "partial compliance" or "non-compliant", the reviewer should insert a comment in the remarks section of the report. For example, if most of the progress notes are legible, but one or two practitioner's notes are barely legible, the appropriate comment would be "Dr. XX's notes are not legible."
Guidelines: NCCHC 2014 J-H-01, J-H-03.

Remarks: MARs were all filed in the charts that were reviewed. However, according to the MRT, there are still several months of unfiled MAR from last year. They have been keeping up with the past few months but have not had a chance to file MARs from last summer/fall. The annex charts had several loose papers in each chart. An additional MRT is being hired for the annex. GEO has selected EMR vendor Spectrum. Spectrum is expected to be coming in April 2019 to install and train staff on the new EMR.

URGENT CARE (SICK CALL)							
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	10						
Purpose:	To assess for timely and appropriate nursing care for acute conditions.						
Source:	Urgent care log, sick call request list, or sick call visit list, preferably with reason for visit noted on log.						
Sample:	10 urgent care visits for detainees with potentially serious complaints that occurred 1 to 3 weeks prior to review, if available. Common potentially serious complaints include chest pain, abdominal pain, seizure, vomiting, skin infection, diabetic complications, etc.						
Guidelines:	NCCHC 2014 J-A-01, J-E-07; ACA 2004 4-ALDF-4C-03, 4-ALDF-4D-03.						
Remarks:							
Reviewer:	(b)(6); (b)(7)(C)				**Date Reviewed:**	3/25/2019	
Clinical (c)							
cUC-1	Was there timely and appropriate evaluation by nursing staff, depending on the nature of the complaint?						
cUC-2	Was care delivered within the scope of the nurse's license?						
cUC-3	Were vital signs documented during the nurse's assessment?						
cUC-4	If necessary, was a nursing referral to an MD/PA/NP/DMD submitted within 24 hours where appropriate?						
cUC-5	If referred, was an MD/PA/NP/DMD assessment and plan documented?

Please find our responses to the areas of concern that you expressed during your site visit in March 2019. Although you did not include these concerns in your Uniform Corrective Action Plan request. We felt a need to address your concerns and assure you that they are being address. The issues from your email are listed below with the action being taken by the medical department to resolve each issue.

1. MARs since the last site visit in Nov. 2018 have been filed; However, MARs from 3 - 4 months in 2018 are still pending to be filed. Mental Health Screen:
   - Medical records personnel are actively sorting the MARs for those detainees that are still in custody and those that are no longer in custody. The MARs will then be added to all active detainee charts. Those out of custody will be properly archived.

2. Eight of ten (80%) detainees were seen by mental health within 14 days of arrival.
   - An approval for another psychologist at the GEO Aurora facility has been approved to help with the increase in patient volume. Interviews are under way to source another psychologist to resolve the deficiency.

3. Dental Care: nine of 10 (90%) detainees were evaluated within 48 hours of request.
   - The electronic Sick Call request is helping the healthcare staff to evaluate detainees face-to-face within a 24-hour time frame.

4. HIV: Two detainees were not seen by an ID specialist within 30 days. Both were established HIV patients, 10+yrs of HIV on medications.
   - A change will be made to the TAR submission for those detainees needing to been seen by Infectious Disease. The request will be submitted as urgent within 2 weeks to ensure that detainees needing to be evaluated by Infectious Disease occur within the 30 days.

If you have any further concerns or question please feel free to contact my staff or myself at any time.

Sincerely,

Warden Johnny Choate

SUICIDE SCREENING

DATE 4/24/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Denver Contract Detention Center

Purpose: To assess conformance with nationally-accepted guidelines for suicide risk assessment and prevention.

Source: Patients on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review.

Sample: Medical records for 10 patients placed on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review.

1 What is the total number of patients placed on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review? 7

2 Does the facility use an acceptable suicide risk management screening instrument, including at a minimum, asking for a history of suicide attempts and for current suicidal ideation? ■ Yes ☐ No

3 Are all screeners and all staff in direct contact with detainees trained to assess suicide risk (see training logs)? ■ Yes ☐ No

Item # Measure

1 Was the suicidal patient evaluated by a mental health professional within 24 hours of identification (unless the situation was emergent in which case the evaluation should be immediate)?

2 Was the patient evaluated by a qualified mental health professional daily while on suicide watch?

3 What type of monitoring was practiced while the patient was on suicide watch?

4 Were checks documented consistently?

5 Is there evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch? If yes, please describe.

TREATMENT OF DISABILITY

DATE: 4/24/2018 REVIEWER: (b)(6); (b)(7)(C)

FACILITY REVIEWED: Denver Contract Detention Center

Purpose: To assess the care of patients with disabilities who need accommodations to access the facility's programs or activities as a result of their disabilities.

An individual is considered to have a "disability" if s/he has a physical or mental impairment that substantially limits one or more major life activities, or has a record of such impairment.
See also: https://www.dhs.gov/sites/default/files/publications/guide-interacting-with-people-who-have-disabilties_09-26-13.pdf

Sources: Facility logs, tour of facility, list of patients who require DME (to include walkers, canes, wheel chairs, hearing aids, or other items to assist the patients to access the facility's programs and activities), and interviews with patients with disabilities who need accommodations to access the facility's programs and activities.

Sample: 10 patients within the population who have a disability that requires medical involvement. Determine if the patients with disabilities received appropriate treatment and disability accommodations through medical record examination. Mark as "Y" for yes, "N" for no, and "N/A" for not applicable. Do not leave any area blank.

General Question: Does the facility maintain a current list of all patients with disabilities on site? yes

Item #	Measure
1	Is the disability prominently noted in the file, along with any needed accommodations?
2	Was the patient assessed for assistance with activities of daily living (ADL) upon identification of disability?
3	Were appropriate accommodation orders entered (e.g., lower bunk, mobility device (wheelchair, walker, canes, crutches), hearing aid, assistive listening device, sign language interpreter, meal, etc.)?
4	Was ADL assistance provided, if applicable?

Instructions for the Corrective Plan of Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the findings identified in the ICE Health Service Corps Field Medical Coordinator (FMC) review. Please ensure that each stated corrective plan of action addresses the noted health care findings to the fullest extent possible, and that it incorporates the recommendations. In the event a corrective action cannot be implemented within the authorized timeline, please include an explanation in the "Corrective Plan of Action" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date. If an extension is needed, the facility must contact the FMC with this request in advance of the specified timelines for submission.

****Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.***

ICE Uniform Corrective Action Plan (FMC Site Visit March 2019) Denver Contract Detention Center (Denver AOR)			
Assessment and Findings	**Corrective Plan of Action**	**Completion Date**	**Date of IHSC Verification of Implementation**
(PBNDS deficiency) Grievances were not consistently answered within five working days. PBNDS Standard Grievance System 6.2 V.4 ensure a procedure in which all medical grievances are received by the administrative health authority within 24 hours or the next business day, with a response from medical staff within five working days, where practicable. Repeat Deficiency	On or before April 30, 2019, the HSA or designee will provide refresher training to all clinical staff regarding the PBNDS 6.2 Grievance System and grievance response timeframes. The shift lead nurses are responsible for responding to the grievances. The Acting H.S.A and the Western Regional Director, Medical Compliance are reviewing the grievance responses. All medical grievances are handled through the Telmate Tablet electronic tracking system which records all aspects of the grievance process.	July 1, 2019	During the August 23, 2019 FMC Site Visit, there were no deficiencies found in the audit of greivances.

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002355

	All ICE medical grievances are now handled through the Telmate tablet electronic system. The system tracks all asspects of the grievance process. Effective May 1, 2019, the HSA or designee will conduct weekly reviews of all healthcare grievances to verify grievances were addressed within five working days. Any discrepancies will be immediate corrected and addressed with the responsible staff member. The results of monitoring activities will be reported in monthly CQI meetings, and the monitoring will continue until sustained compliance is achieved for 60 consecutive days.		
(PBNDS and NCCHC deficiency) Detainees with chronic medical conditions were not consistently seen by a provider within two working days of arrival. - PBNDS 2011 4.3.J, Where there is a significant finding as a result of the initial screening, an immediate referral shall be initiated and the detainee shall receive a health assessment no later than two working days from the initial screening. - NCCHC Standard; J-E-04, Initial Health Assessment. Inmates identified with	On or before April 30, 2019, the HSA or designee will provide refresher training to all clinical staff regarding the PBNDS 2011 4.3.J, NCCHC Standard J-E-04, and new arrivals with chronic conditions being seen by a provider within two working days of arrival. Beginning May 1, 2019, the HSA or designee will review all intake chronic care charts to verify detainees with chronic medical conditions are seen by a provider within two working days of arrival. Any discrepancies will be immediately corrected and addressed with the responsible staff member. Instructions for the Corrective Plan of Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the findings identified in the ICE Health Service Corps Field Medical Coordinator (FMC) review. Please ensure that each stated corrective plan of action addresses the noted health care findings to the fullest extent possible, and that it incorporates the recommendations. In the event a corrective action cannot be implemented within the authorized timeline, please include an explanation in the "Corrective Plan of Action" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date. If an extension is needed, the facility must contact the FMC with this request in advance of the specified timelines for submission.

****Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.***

Assessment and Findings	**Corrective Plan of Action**	**Completion Date**	**Date of IHSC Verification of Implementation**
(PBNDS deficiency) Grievances were not consistently answered within five working days. PBNDS Standard Grievance System 6.2 V.4 ensure a procedure in which all medical grievances are received by the administrative health authority within 24 hours or the next business day, with a response from medical staff within five working days, where practicable.	Effective January 1, 2019, all grievances are submitted and processed electronically via the Telmate electronic tablet system. Medical grievances submitted by detainees are sent directly to the medical unit electronically. The health services administrator (HSA) and the on-duty charge nurse are responsible to review and address medical grievances on a daily basis. Effective January 1, 2019, on a weekly basis the	August 23, 2019	FMC Audit and Site Visit completed August 23, 2019 15 of 15 grievances were auditted from April til present and all were 100% compliant with standard.

Medical Care

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

Site visit findings 11/13/2018. 23 of 27 (85%) grievances were answered within 5 working days. - PBNDS Standard Grievance System 6.2 V.4 ensure a procedure in which all medical grievances are received by the administrative health authority within 24 hours or the next business day, with a response from medical staff within five working days, where practicable. Repeat finding.

Chronic Care

Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.

Total number with chronic conditions:	Total number with unstable chronic conditions:
68	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

DCDC policy reviewed; 605-A Continuity of Care, 603-A Access to Care, 607-Therapuetic Diets

The Clinical Director (CD) developed a new chronic care tracking system which identifies initial appointment dates, last CCC appointment dates, next CCC appointment date, as well as other pertinent information.
All chronic care patients were noted to be identified and screened appropriately during intake. All were referred to the providers appropriately. GEO group chronic care guidelines are based on the Bureau Of Prisons guidelines.
Last site visit: no deficiencies noted

AMERICAN OVERSIGHT

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:
0	2

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

DCDC policy reviewed; 614-A Hunger Strike

Previous site visit findings 4/24/2018: No deficiencies noted.

Current site visit findings 11/13/2018: No deficiencies noted.

Review of the facility's hunger strike policy noted to follow NCCHC and PBNDS standards. A review of both medical records showed appropriate care and documentation.

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
0	14

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

DCDC policy reviewed; 907-C Suicide prevention and intervention.

Previous site visit findings 4/24/2018: No deficiencies noted.

Current site visit findings 11/13/2018: No deficiencies noted.

Review of 10 suicide watch medical records since last site visit noted to comply with PBNDS standards. All were placed on 1:1 constant watch and every 15 minute documentation of patient observation was noted in the medial charts. Review of medical staff training records had required suicide prevention and intervention documentation. DCDC does not currently have mental health coverage on Sundays.
**Best practice. A Behavior Management Plan (BMP) program was initiated in May 2018. Once a detainee is released from suicide watch, they are followed up daily or weekly based on their mental health needs. The suicide prevention committee meets weekly to discuss patients on the BMP and on active watch.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	1

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

DCDC policies reviewed; 604-B Advance Directive, Terminal Illness and End of Life Decision Making, 202-A Death of a Inmate/Detainee/Resident, 210-Notification in Emergency or Death.

Previous site visit findings 4/24/2018: No deficiencies noted.

Current site visit findings 11/13/2018: No deficiencies noted.

There has not been any detainee deaths since the previous site visit.

Other Observations

The FMC conducted this site visit on November 13-16, 2018. A total of 67 charts and 105 Medication Administration Records (MARs) were reviewed for this audit.

--FACILITY DATA:
- DCDC is operated by the GEO Group, Inc., and it houses US Marshals and ICE detainees. The facility has a holding capacity of 1,100 detainees. The current ICE contract allows 928 ICE detainees.

--ACCREDITATIONS/INSPECTIONS:
- ACA - November 2016.
- PBNDS (Nakamoto Group)- September 2017.
- Office of Detention Oversight (ODO) - January 2018.
- IHSC Investigative Unit, Mortality review. - January 2018.
- PREA Audit - April 2018, DOJ
- GEO Corporate Audit - June 2018
- Civil Right and Civil Liberties - August 2018
- PREA Audit - October 2018, DHS
- NCCHC - October 2018
- OIG - November 2018

--MEDICAL STAFFING:
See QMC toolkit

AMERICAN OVERSIGHT

--STAFFING VACANCIES:
(b)(7)(E)

--MEDICAL CLINIC
- The medical clinic has eight medical housing unit rooms, five negative pressure rooms, and one suicide observation room. (b)(7)(E)
- There is a designated trauma/urgent care room which contains a urgent response cart, three AEDs, two gurneys, an eye wash shower, and other emergency supplies.

--STAFF TRAINING:
- DCDC HSA conducts monthly staff meeting and training. Curriculum and training log were reviewed for registered nurse physical exam training, dental training, mental health training including intakes, referrals, and suicide watch, suicide risk assessment requirements. Training topics were reviewed and align with accreditation standards.

--SUPPLEMENTAL INFO:
- DCDC ICE detainees have access to interpretation services as needed. Language line contact information was noted in intake, dental and various other clinic exam rooms. Consent forms for interpretation was noted in non-English speaking charts.
- DCDC providers use the GEO Group Clinical Practice Guidelines which were adopted from the Bureau of Prisons (BOP) guidelines. The HSA stated that the state of Colorado has the Corporate Practice of Medicine Law which says the physician's clinical judgment is to be followed. Meaning the physician may deviate from the guidelines if, in their clinical judgment, it is best for the patient.

Deficiencies for Areas Evaluated

Site visit findings 11/13/2018. 23 of 27 (85%) grievances were answered within 5 working days.
- PBNDS Standard Grievance System 6.2 V.4 ensure a procedure in which all medical grievances are received by the administrative health authority within 24 hours or the next business day, with a response from medical staff within five working days, where practicable.
Repeat finding.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES

Suicide Screening

See QMC toolkit.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Health Assessment

See QMC toolkit.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Urgent Care (Sick Call)

See QMC toolkit

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

See QMC toolkit.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Medication Administration Practices

See QMC toolkit.

The medical department has a wide variety of medications in stock to treat acute and chronic conditions, and it has a contract with Correct Rx pharmacy to supply necessary medications and refills. Correct Rx has a 24-72 hour turnaround on ordered medications. Over the counter (OTC) medications are provided the medical staff and available for purchase at the commissary.

The FMC found <5% of the MARs to have blanks. The HSA was notified, the MARs were corrected and the offending nurse was educated.
There were three months of MARs waiting to be filed in charts of detainees who have left the facility. Active charts were up to date.

AMERICAN OVERSIGHT

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

AMERICAN OVERSIGHT

Continuity of Medication

See QMC toolkit.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Mental Health Screen

See QMC toolkit.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Medical Recordkeeping Practices

See QMC toolkit.

Medical records are located in a secured medical records room in filing cabinets. Medical record files are organized in specific sections within the chart that allows for easy navigation of the file. Detainees with chronic illnesses are in a red chart and separate from other medical records.
DCDC has a target date of April 2019 for an electronic health record.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Pregnant Women

See QMC toolkit.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: (Quality of care finding) One pregnant detainee was not seen by OB/GYN within 30 days. The detainee was seen on day 60. The MedPAR/referral was placed within 2 days of arrival; however, the consulting office rescheduled the appointment.

Dental Care

See QMC toolkit.

A dentist and dental assistant provide routine dental services at the facility. The dental room has two exam chairs, autoclave instruments and other dental supplies available. The room is kept locked at all times.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

AMERICAN OVERSIGHT

Acute Laboratory Testing

See QMC toolkit.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Diagnostic Services and Specialty Care Access

See QMC toolkit.

DCDC has a contract with Denver Health which has its own designated correctional health care unit. DCDC has access to a full range of specialty services.
DCDC has an full time on-site x-ray technician.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Mental Health Treatment Planning

See QMC toolkit.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Treatment of Disability

See QMC toolkit.

DCDC has special needs equipment available, i.e. handicap cells, wheelchairs, canes, walkers. Detainees with vision and hearing disabilities have access to special services i.e. blind man cane. The facility maintains a list of detainees with disabilities.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Complaints and Grievances

See QMC toolkit.

Previous site visit findings 4/22/18: 22 of 24 grievances were answered within five working days.
Current site visit findings 11/13/18: 24 of 27 grievances were answered within five working days.

CHRONIC DISEASES

Diabetes

See QMC toolkit.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Human Immunodeficiency Virus (HIV)

See QMC toolkit.

The providers follow Centers for Disease Control and Prevention (CDC), National Institutes of Health (NIH), GEO group clinical practice guidelines and the HIV Medicine Association of the Infectious Disease Society of America to manage HIV detainees.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: One detainee was not seen by an ID specialist within 30 days.

Hypertension

See QMC toolkit.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

Asthma

See QMC toolkit.

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: Peak flows were not done consistently during the physical exam. Peak flows that were not done at the initial physical exam were completed at the initial CCC appointment, done within 30 days of admission.

Seizure Disorder

See QMC toolkit

Previous site visit findings 4/24/2018: No findings noted.

Current site visit findings 11/13/2018: No findings noted.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

1) Staffing: (b)(7)(E)

(b)(7)(E)

3) MARs: The HSA stated multiple trainings have been conducted on this issue. The HSA had the offending nurse correct the MAR and was reeducated on the matter the same day.
4) HIV: The CD stated he will ensure ID consults are done for all ID patients.

Additional Comments

1) Many positives were noted during the site visit, they include; CCC tracker, addition of QA/QI nurse, Behavior management plans, peer review program and overall documentation.

0	1

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

DCDC policies reviewed; 604-B Advance Directive, Terminal Illness and End of Life Decision Making, 202-A Death of a Inmate/Detainee/Resident, 210-Notification in Emergency or Death.

Previous site visit findings 1/22/2018: No deficiencies noted.

Current site visit findings 4/24/2018: No deficiencies not

There have been no detainee deaths since the previous site visit.

Other Observations

The FMC conducted this site visit on April 24-26, 2018. This site visit was in response to the findings of the previous site visit from January 24-26, 2018. The FMC was accompanied by another FMC, CDR (b)(6); (b)(7)(C) A total of 56 charts were reviewed for this audit. DCDC uses paper medical records.

--FACILITY DATA:
- DCDC is operated by the GEO Group, Inc., and it houses US Marshals and ICE detainees. The facility has a holding capacity of 1,100 detainees. The current ICE contract allows 928 ICE detainees. The facility has 64 U.S. Marshals detainees at the present time.

--ACCREDITATIONS/INSPECTIONS:
- PBNDS (Nakamoto Group) September 26-28, 2017. All standards were met, no deficiencies.
- ACA November 14-16, 2016. All ACA standards were met, and no deficiencies were noted.
- IHSC January 18-19, 2018. Mortality review.
- Office of Detention Oversight (ODO) inspection - January 8-12, 2018.

--MEDICAL STAFFING:

(b)(7)(E)

AMERICAN OVERSIGHT

(b)(7)(E)

--VACANCIES:
(b)(7)(E)

--VACANCY UPDATE (6/6/2018)
(b)(7)(E)

--MEDICAL CLINIC
- The medical clinic has eight medical housing unit rooms, five negative pressure rooms, and one suicide observation room. (b)(7)(E)
- There is a designated trauma/urgent care room which contains a urgent response cart, three AEDs, two gurneys, an eye wash shower, and other emergency supplies.

--STAFF TRAINING:
- DCDC HSA conducts monthly staff meeting and training. Curriculum and training log were reviewed for registered nurse physical exam training, dental training, mental health training including intakes, referrals, and suicide watch, suicide risk assessment requirements. GEO policy only mandates that the medical staff conducts emergency response training annually. The new HSA stated she plans to revamp staff training. Training topics were reviewed and align with accreditation standards.

--SUPPLEMENTAL INFO:
- DCDC ICE detainees have access to interpretation services as needed. Language line contact information was noted in intake, dental and various other clinic exam rooms. Consent forms for interpretation was noted in non-English speaking charts.
- DCDC providers use the GEO Group Clinical Practice Guidelines which were adopted from the Bureau of Prisons (BOP) guidelines. The HSA stated that the state of Colorado has the Corporate Practice of Medicine Law which says the physician's clinical judgment is to be followed. This means the physician may deviate from the guidelines if, in their clinical judgment, it is best for the patient.

Deficiencies for Areas Evaluated

-Previous site visit findings 1/22/2018:
GRIEVANCES. PBNDS Standard Grievance System 6.2 V.4 ensure a procedure in which all medical grievances are received by the administrative health authority within 24 hours or the next business day, with a response from medical staff within five working days, where practicable.
CURRENT FINDINGS: 22 of 24 grievances were answered within five working days. However, 100% of grievances filed since the new HSA was hired were addressed within five working days. The two that were not were prior to the HSA being hired and were answered on day 7 and 8. (REPEAT)

STAFFING. PBNDS Standard Medical Care 4.3 V. B. Designation of Authority. All facilities shall provide medical staff and sufficient support personnel to meet these standards.
CURRENT FINDINGS: (b)(7)(E)

(b)(7)(E)

PHYSICAL EXAMS. PBNDS Standard Medical Care 4.3 L. Each facility's health care provider shall conduct a comprehensive health assessment, including a physical examination and mental health screening on each detainee within 14 days of the detainee's arrival unless more immediate attention is required due to an acute or identifiable chronic condition.
CURRENT FINDINGS: Physical examinations were done performed within 14 days on 100% of charts reviewed. (RESOLVED)

AMERICAN OVERSIGHT

PHYSICAL EXAMS. NCCHC J-E-04 Initial Health Assessment and PBNDS 2011 Medical Care Medical and Mental Health Screening of New Arrivals. Inmates identified with clinically significant findings as the result of a comprehensive receiving screening receive an initial health assessment as soon as possible, but no later than 2 working days after admission.
CURRENT FINDINGS: Physical examinations were done within 14 days of the detainee's arrival. Detainee's with chronic illnesses were done with two working days. (RESOLVED)

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES

Suicide Screening

Seven charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area. DCDC policy reviewed; 907-C Suicide prevention and intervention. 616-B Mental Health Screening, Evaluation and Services.

1. Seven of seven (100%) suicidal patients were evaluated by a mental health professional within 24 hours.
2. Seven of seven (100%) evaluated daily by a qualified mental health professional.
3&4. Seven of seven (100%) were on continuous watch monitoring and/or every 15 minute watch with checks documented.
5. Seven of seven (100%) did not have evidence that earlier intervention would have prevented the suicide watches.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

Health Assessment

20 detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policies reviewed; 601-A Physicals and Health Assessments, 615-B Intake Screening.

1. 20 of 20 (100%) had initial screenings that were completed within 12 hours of arrival.
2. 20 of 20 (100%) received tuberculosis (TB) screening in accordance with requirements.
3. Three of three (100%) were referred for evaluation who screened positive for mental illness or suicide risk.
4. Three of three (100%) had timely follow up of a chronic condition.
5. 20 of 20 (100%) received a complete health evaluation within 14 days of booking.

Previous site visit findings 1/22/2018: Physical examinations were not routinely done within 14 days of the detainee's arrival.

Current site visit findings 4/24/2018: No findings noted.

Two charts reviewed for chronic care showed detainees had intakes done 13 hours after arrival. These appear to be isolated incidents from the previous Friday night in which the facility received 104 intakes.

Urgent Care (Sick Call)

Ten detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 625-Sick Call and Triaging of Non-Emergent Request for Health Services; GEO Request for Health Services Form HS-154.

1. Ten of ten (100%) had timely and appropriate evaluation by nursing staff.
2. Ten of ten (100%) received care within the scope of the nurse's license.
3. Ten of ten (100%) had vital signs documented during the nurse's assessment.
4. Five of five (100%) patients were appropriately referred within 24 hours of initial sick call assessment to an MD/PA/NP/DMD.
5. Five of five (100%) patients referred had an MD/PA/NP/DMD assessment and plan documented.

Detainees submit sick call request through a kiosk located in each dorm. Sick call requests are reviewed and triaged by the nurse within 24 hours.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

Six detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

AMERICAN OVERSIGHT

DCDC policies reviewed; 608-B Emergency Services Patient Transport, 613-A Hospitalizations.

1. Six of six (100%) had an outbound progress note.
2. Six of six (100%) did not have evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care.
3. Six of six (100%) had discharge documentation from the hospital or ED in the chart.
4. Six of six (100%) had an inbound assessment documented.
5. Six of six (100%) had an inbound assessment reflecting hospital findings and concurrence or deviation from hospital recommendations.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

Medication Administration Practices

Ten detainee charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area. 45 Medication Administration Record (MAR) were reviewed from the April MAR binder.

DCDC policies reviewed; 710-Medication Administration, 405-A Medication Administration Training.

No MARs were found to have 3 or more missed doses or refusals.

The medical department has a wide variety of medications in stock to treat acute and chronic conditions, and it has a contract with Correct Rx pharmacy to supply necessary medications and refills. Correct Rx has a 24-72 hour turnaround on ordered medications. Over the counter (OTC) medications are provided the medical staff and available for purchase in the commissary.

The MARs from the previous month have already been filed in the charts; the FMC did not find any unfiled MARs in the medical records filing area. An estimated 25% of detainees are currently on self-administered medications that have been ordered by a physician.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

AMERICAN OVERSIGHT

Continuity of Medication

Ten charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed; 710-Medication Administration, 615-B Intake Screening.

1. Ten of ten (100%) had medications ordered in less than 24 hours from intake screening.
2. Ten of ten (100%) had the first dose of medication within 24 hours of order.

During the intake screening process, the nurses contact the provider to initiate chronic care (CC) medications.

**Good practice. A review of one chart showed the detainee could not remember the names of his medication but could remember his pharmacy. The nurse called the pharmacy and verified the medications.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

Mental Health Screen

Ten detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed: 616-A Mental Health Screening, Evaluation and Services.

1. Seven of seven (100%) detainees that had a positive screen for mental illness were referred for evaluation and were seen within a timely manner.

Current processes in place indicated no mental health referral issues during this review.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

Medical Recordkeeping Practices

Ten charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed: 301- Access to Storage and Confidentiality of Health Records.302-Charting in Health Records.

Medical records are located in a secured medical records room in filing cabinets. Medical record files are organized in specific sections within the chart that allows for easy navigation of the file. Detainees with chronic illnesses are in a red chart and separate from other medical records.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

Pregnant Women

Two charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policy reviewed; 621-A Pregnancy Management.

1. Two of two (100%) had pregnancy test performed during intake screening.
2. Two of two (100%) demonstrated proper care of pregnancy test prior to x-ray or before initiation of medications.
3. Two of two (100%) had an OB doctor consult within 7 days of confirmation.
4. Zero of one (0%) were seen by OB within 30 days of confirmation. One detainee left after two days. The other detainee was seen by OB on day #33.
5. Two of two (100%) had screening for HIV, STI, and hepatitis. One had the test ordered, but not completed due to only being the facility for a couple days.

AMERICAN OVERSIGHT

6. Two of two (100%) had prenatal vitamins prescribed. Health assessments included female specific items as per standards.

Per GEO policy, all female detainees receive a urine pregnancy test during intake assessment. The intake assessment includes an additional page for females that include questions about number of pregnancies, last menstrual period, last sexual intercourse.

Previous FMC site visit from 6/12/2017: Zero of two pregnant detainee had OB/GYN consult initiated. No new pregnant detainees during 1/22/2018 site visit.

Current site visit findings: Both charts had an OB consult initiated within 7 days.

Dental Care

Ten charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed; 101-Dental Treatment Priorities, 102-Oral Care

1. Ten of ten (100%) were screened for symptoms during intake process.
2. Ten of ten (100%) were evaluated by a qualified health professional within 48 hours of request.
3. Ten of ten (100%) had dental clinical notes describing findings, diagnosis, treatment and plans.
4. Five of five (100%) had follow-up treatment as recommended.

A dentist and dental assistant provide routine dental services on Monday through Thursday of each week at the facility. The dental room has two exam chairs, autoclave instruments and other dental supplies available. The room is kept locked at all times.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

AMERICAN OVERSIGHT

Acute Laboratory Testing

Five charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policy reviewed; 1003-A Diagnostic Services
1. Five of five (100%) had blood drawn or test done within one business day of ordered date.
2. Five of five (100%) had report back within 24 hours.
3. Five of five (100%) had clinical acknowledgment.
4. Five of five (100%) had appropriate clinical response.
5. Five of five (100%) patients were advised of lab results.

DCDC uses Labcorp for all laboratory services. They were having problems with labs being sent and printed multiple times, but the HSA stated the issues have been resolved.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

Diagnostic Services and Specialty Care Access

Four charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed; 1003-Diagnostic Services, 211-Off site hospital and specialty care, 214-A referrals, outside medical care.

1. Four of four (100%) had a documented time urgency included in the order.
2. Four of four (100%) were completed within the time specified or 45 days, and the majority were completed within 14 days.
3. One of one (100%) was re-evaluated for deterioration at least every 30 days until off-site service provided.
4. Four of four (100%) were reviewed by the clinician within seven days.

DCDC has a contract with Denver Health which has its own designated correctional health care unit in the hospital. When specialty care is needed, the CD contacts the Denver Health care coordinator to schedule the appointment. DCDC has access to a full range of specialty services.
DCDC has an full time on-site x-ray technician.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

Mental Health Treatment Planning

Seven detainee charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 623-Psychiatric Evaluation

1. Seven of seven (100%) had a clinical assessment, treatment and follow-up plan documented.
2. Four of four (100%) had treatment plans which were updated at least every 90 days. The other three patients have been at the facility less than 90 days.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

Treatment of Disability

There were no new disability charts for review since the last site visit

DCDC policies reviewed; 901-B Aids to Impairment (Special Needs and Services), 906-Special Needs Inmate/Detainee.

DCDC has special needs equipment available, i.e. handicap cells, wheelchairs, canes, walkers.

AMERICAN OVERSIGHT

Detainees with vision and hearing disabilities have access to special services i.e. blind man cane. The facility maintains a list of detainees with disabilities.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

Complaints and Grievances

24 charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 205-Grievances

There was a total of 24 medical grievances in the past three months.
Two for availability of care.
Six for denial/refusal of specific request for care.
Ten for delays in care.
Three for competency/professional mindset of medical staff.
One for attitude, demeanor or conduct of staff.
Two classified as other.
22 of 24 charts (92%) were addressed in writing by the HSA within five working days. However, 100% of grievances filed since the new HSA was hired were addressed within five working days. The two that were not were addressed by the previous HSA and were answered on day 7 and 8.

Previous site visit findings 1/22/18: 27 of 28 grievances were answered within five working days. One was answered on day 7.
Current site visit findings 4/22/18: 22 of 24 grievances were answered within five working days. (REPEAT)

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES
CHRONIC DISEASES

Diabetes

One charts was reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 606-A Diabetes Mellitus Management

1. One of one (100%) had blood sugar measured and recorded on intake.
2. One of one (100%) were seen for chronic care within fourteen days of illness identification.
3. One of one (100%) had a baseline HgbA1c performed within 30 days of intake or within the past 3 months.
4. One of one (100%) had lipids measured within one year.
5. One of one (100%) were followed at least every 90 days with appropriate vital signs. Five diabetic charts that arrived prior to the January 2018 site visit were also reviewed, and all five were seen for chronic care.
6. One of one (100%) had aspirin prescribed as clinically indicated.
7. One of one (100%) had degree of control documented.
8. One of one (100%) had a documented strategy to attain diabetes control.

The facility uses GEO and the Bureau of Prisons (BOP) clinical guidelines.

Previous FMC site visit from 1/22/2018: Physical exam/chronic care was not routinely done within 14 days.
Current site visit findings 4/24/2018: Initial physical exam was performed within 2 working days of arrival.

Human Immunodeficiency Virus (HIV)

There were no new HIV records for review since the last site visit.

DCDC policy review; 511-A HIV Prevention and Management

The providers follow Centers for Disease Control and Prevention (CDC), National Institutes of Health (NIH), GEO group clinical practice guidelines and the HIV Medicine Association of the Infectious Disease Society of America to manage HIV detainees.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

Hypertension

Four charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; Geo Group- Clinical Practice Guidelines (adopted from Fed BOP Guidelines), Chronic Care form-Hypertension.

1. Four of four (100%) had blood pressure reading documented during intake.
2. Four of four (100%) were evaluated by an MD/PA/NP within 14 days of illness identification.
3. One of one (100%) was noted to have blood pressures above 140/90 with a treatment plan initiated within 14 days of identification.
4. Four of four (100%) were treated under a chronic disease guideline which included baseline laboratory testing.

Previous FMC site visit from 1/22/2018: Physical exam/chronic care was not routinely done within 14 days.
Current site visit findings 4/24/2018: Initial physical exams were performed within 2 working days of arrival.

Asthma

Three charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

AMERICAN OVERSIGHT

DCDC policy reviewed; Geo Group- Clinical Practice Guidelines (adopted from Fed BOP Guidelines), Chronic Care form-Asthma.

1. Three of three (100%) were seen in the chronic care clinic within 14 days of illness identification.
2. One of three (33%) had documented peak flow measurements during the initial physical exam.
3. Two of two (100%) had documented peak flow measurements during the last chronic care visit or within the last 3 months.
4. Two of two (100%) were treated under a chronic disease guideline which addressed disease severity, prescription of medications consistent with severity and documented degree of control.

The CD stated she was aware that the PA was not doing peak flows at the initial physical exam and stated she has already corrected the problem. The latest arrival did have a peak flow done at the initial physical exam.

Previous FMC site visit from 1/22/2018: Physical exam/chronic care was not routinely done within 14 days.
Current site visit findings 4/24/2018: Initial physical exams were performed within 2 working days of arrival.

Seizure Disorder

There were no new seizure charts for review since the last site visit.

DCDC policy reviewed; Geo Group- Clinical Practice Guidelines (adopted from Fed BOP Guidelines), Chronic Care form-Seizures.

Previous FMC site visit from 1/22/2018: No findings noted.

Current site visit findings 4/24/2018: No findings noted.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

(b)(7)(E)

2) Eleven new computers were installed in medical clinic and intake areas. This currently allows easier access to GEOtrack and will facilitate electronic medical records in the future.
3) The HSA stated a process will be developed to document the pre-screens.
4) During the site visit, the HSA was drafting an inventory list for the emergency bag.
5) Based on the CAP response from the January 2018 site visit, the compliance administrator will conduct weekly reviews of the medical grievance log to monitor approaching deadlines and compliance with established protocols. This had an estimated completion date of June 30, 2018.

Additional Comments

1) GEO Corporate had a team on-site conducting a 100% chart review to ensure signatures, documentation and filing were up to date.
2) Please see the Supplemental Criteria Site Visit Review attachment that addressed findings from the IHSC mortality review.

Chronic Care *Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.*

Total number with chronic conditions:	Total number with unstable chronic conditions:
52	0

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

DCDC policy reviewed; 605-A Continuity of Care, 603-A Access to Care, 607-Therapuetic Diets

Previous site visit findings 6/12/2017: No deficiencies noted.

Current site visit findings 1/22/2018:
NCCHC J-E-04 Initial Health Assessment and PBNDS 2011 Medical Care Medical and Mental Health Screening of New Arrivals. Inmates identified with clinically significant findings as the result of a comprehensive receiving screening receive an initial health assessment as soon as possible, but no later than 2 working days after admission.
CURRENT FINDINS: Physical examinations were not routinely done within two days of the detianee's arrival for those with chronic care or other medical conditions. Medications and lab work were ordered; however, physical exams for the chronic care patients were delayed by several weeks.

The medical clinic has a designated chronic care registered nurse (RN) who oversees scheduling of chronic care clinic appointments, off site referrals, updating physician orders and working along side the physician. All chronic care patients were noted to be identified and screened appropriately during intake. All were referred to the providers appropriately. GEO group chronic care guidelines are based on the Bureau Of Prisons guidelines.

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
0	5

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
DCDC policy reviewed; 907-C Suicide prevention and intervention.

Previous FMC site visit from 6/12/2017:
PBNDS 2011 Medical Care 4.6.D Detainees placed on suicide watch shall be re-evaluated by appropriately trained and qualified medical staff on a daily basis, with this re-evaluation documented in the detainee's medical record.
CURRENT FINDINGS: Review of medical records revealed evaluation and assessments were documented on a daily basis.

Current site visit findings 1/22/2018: No deficiencies noted.

Review of 4 suicide watch medical records since last site visit noted to comply with PBNDS standards. All were placed on 1:1 constant watch and every 15 minute documentation of patient observation was noted in the medial charts. Review of medical staff training records had required suicide prevention and intervention documentation.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	1

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
DCDC policies reviewed; 604-B Advance Directive, Terminal Illness and End of Life Decision Making, 202-A Death of a Inmate/Detainee/Resident, 210-Notification in Emergency or Death.

Previous site visit findings 6/12/2017: No deficiencies noted.

Current site visit findings 1/22/2018: No deficiencies noted.

There has been one detainee death in the past 12 months. The detainee was a 64 year old male with a long history of heroin and methadone abuse. He was at DCDC for 15 days and was being treated for methadone withdrawal. The official autopsy report is still pending.
IHSC performed a mortality review on January 18-19, 2018. Office of Detention Oversight (ODO) also conducted an investigation in Jan. 2018. The ODO and IHSC investigative reports are pending.
The local policies are in compliance with the PBNDS 2011 standard.

Other Observations

The FMC conducted this site visit on January 22-25, 2018. A total of 63 charts were reviewed for this audit. DCDC uses paper medical records.

--FACILITY DATA:
- DCDC is operated by the GEO Group, Inc., and it houses US Marshals and ICE detainees. The facility has a holding capacity of 1,100 detainees. The current ICE contract allows 928 ICE detainees. The facility has 71 U.S. Marshall detainees at the present time.

--ACCREDITATIONS/INSPECTIONS:
- PBNDS (Nakamoto Group)September 26-28, 2017. All standards were met, no deficiencies.
- ACA November 14-16, 2016. All ACA standards were met, and no deficiencies were noted.
- IHSC January 18-19, 2018. Mortality review. Report is pending.
- ODO January 2018. Mortality review. Report is pending.
- NCCHC due in May 2018

--MEDICAL STAFFING:

(b)(7)(E)

AMERICAN OVERSIGHT

(b)(7)(E)

--VACANCIES:
(b)(7)(E)

--MEDICAL CLINIC
- The medical clinic has eight medical housing unit rooms, five negative pressure rooms, and one suicide observation room. (b)(7)(E)
- There is a designated trauma/urgent care room which contains an urgent response cart, three AEDs, two gurneys, an eye wash shower, and other emergency supplies.

--STAFF TRAINING:
- DCDC HSA conducts monthly staff meeting and training. Meeting minutes were reviewed. Curriculum and training log were reviewed for registered nurse physical exam training, dental training, mental health training including intakes, referrals, and suicide watch, suicide risk assessment requirements. GEO policy only mandates that the medical staff conducts emergency response training annually. The HSA reported quarterly man down drills for every shift. Recent man down drill with after actions report provided to FMC for review.
- (b)(7)(E) staff personnel files reviewed. All licensed personnel files had current up to date licenses to practice in the state of Colorado. All had up to date BLS certification.
- DCDC Emergency Medical Services and First Aid policies reviewed; 1004-Emergency Medications and First Aid Kits, 608-A Emergency Services. Correctional staff receives appropriate training. DCDC policy reviewed; 409-A Training, Correctional officers.

--SUPPLEMENTAL INFO:
- DCDC ICE detainees have access to interpretation services as needed. Language line contact information was noted in intake, dental and various other clinic exam rooms. Consent forms for interpretation was noted in non-English speaking charts.
- DCDC providers use the GEO Group Clinical Practice Guidelines which were adopted from the Bureau of Prisons (BOP) guidelines. The HSA stated that the state of Colorado has the Corporate Practice of Medicine Law which says the physician's clinical judgment is to be followed. Meaning the physician may deviate from the guidelines if, in their clinical judgment, it is best for the patient.

Deficiencies for Areas Evaluated

-Previous site visit findings 6/12/2017:
PBNDS Standard Grievance System 6.2 V.4 ensure a procedure in which all medical grievances are received by the administrative health authority within 24 hours or the next business day, with a response from medical staff within five working days, where practicable.
CURRENT FINDINGS: 27 of 28 grievances were answered within 5 working days. One grievance was answered on day seven.

-Current site visit findings 1/22/2018:
PBNDS Standard Medical Care 4.3 L. Each facility's health care provider shall conduct a

AMERICAN OVERSIGHT

comprehensive health assessment, including a physical examination and mental health screening on each detainee within 14 days of the detainee's arrival unless more immediate attention is required due to an acute or identifiable chronic condition.
CURRENT FINDINGS: Physical examinations were not routinely done within 14 days of the detainees' arrival.

-PBNDS Standard Medical Care 4.3 V. B. Designation of Authority. All facilities shall provide medical staff and sufficient support personnel to meet these standards.

(b)(7)(E)

NCCHC J-E-04 Initial Health Assessment and PBNDS 2011 Medical Care Medical and Mental Health Screening of New Arrivals. Inmates identified with clinically significant findings as the result of a comprehensive receiving screening receive an initial health assessment as soon as possible, but no later than 2 working days after admission.
CURRENT FINDINGS: Physical examinations were not routinely done within two days of the detainees' arrival for those with chronic care or other medical conditions. Medications and lab work were ordered; however, physical exams for the chronic care patients were delayed by several weeks.

AMERICAN OVERSIGHT

Suicide Screening

Four charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area. DCDC policy reviewed; 907-C Suicide prevention and intervention. 616-B Mental Health Screening, Evaluation and Services.

1. Four of four (100%) suicidal patients were evaluated by a mental health professional within 24 hours.
2. Four of four (100%) evaluated daily by a qualified mental health professional.
3. Four of four (100%) were on continuous watch monitoring and/or every 15 minute watch with checks documented.
4. Zero of four (0%) had evidence that earlier intervention would have prevented the suicide watches.

Previous FMC site visit from 06/12/2017: PBNDS 2011 Medical Care 4.6.D Detainees placed on suicide watch shall be re-evaluated by appropriately trained and qualified medical staff on a daily basis, with this re-evaluation documented in the detainee's medical record. CURRENT FINDINGS: Review of medical records revealed evaluation and assessments were documented on a daily basis.

There have been five suicide watches since the last audit. Documentation of continuous patient observation and/or every 15 minute observation was noted in the medical charts. The intake assessment includes the asking of suicide attempts and for current suicidal ideation.

Health Assessment

20 detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policies reviewed; 601-A Physicals and Health Assessments, 615-B Intake Screening.

1. 20 of 20 (100%) had initial screenings that were completed within 12 hours of arrival.
2. 20 of 20 (100%) received tuberculosis (TB) screening in accordance with requirements.
3. Three of three (100%) were referred for evaluation who screened positive for mental illness or suicide risk.
4. Seven of nine (78%) had timely follow up of a chronic condition.
5. 13 of 20 (65%) received a complete health evaluation within 14 days of booking.

RNs are trained and signed off by the CD to conduct physical exams. All detainees noted to have chronic care diagnosis will be referred to the mid level provider or CD for further evaluation.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: Physical examinations were not routinely done within 14 days of the detainee's arrival. Detainees with a chronic condition did not have timely follow-up.

Urgent Care (Sick Call)

Ten detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 625-Sick Call and Triaging of Non-Emergent Request for Health Services; GEO Request for Health Services Form HS-154.

1. Ten of ten (100%) had timely and appropriate evaluation by nursing staff.
2. Ten of ten (100%) received care within the scope of the nurse's license.
3. Ten of ten (100%) had vital signs documented during the nurse's assessment.
4. Four of four (100%) patients were appropriately referred within 24 hours of initial sick call assessment to an MD/PA/NP/DMD.
5. Four of four (100%) patients referred had an MD/PA/NP/DMD assessment and plan documented.

Detainees submit sick call request through a kiosk located in each dorm. Sick call request are reviewed and triaged by the nurse within 24 hours.

AMERICAN OVERSIGHT

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: No findings noted.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

Five detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policies reviewed; 608-B Emergency Services Patient Transport, 613-A Hospitalizations.

1. Five of five (100%) had an outbound progress note.
2. Five of five (100%) did not have evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care.
3. Five of five (100%) had discharge documentation from the hospital or ED in the chart.
4. Five of five (100%) had an inbound assessment documented.
5. Five of five (100%) had an inbound assessment reflecting hospital findings and concurrence or deviation from hospital recommendations.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: No findings noted.

Medication Administration Practices

Ten detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area. 40 Medication Administration Record (MAR) were reviewed from the January MAR binder.

DCDC policies reviewed; 710-Medication Administration, 405-A Medication Administration Training.

1. One of one (100%) had documentation that the prescribing clinician was notified of consecutive refusals.
2. One of one (100%) had an appropriate response from the clinician.

One medical record noted that the detainee refused the medication four times; however, the medication refusals did not meet the tool's threshold. The medical department has a wide variety of medications in stock to treat acute and chronic conditions, and it has a contract with Correct Rx pharmacy to supply necessary medications and refills. Correct Rx has a 24-72 hour turnaround on ordered medications. Over the counter (OTC) medications are provided the medical staff and available for purchase at the commissary.

The MARs from the previous month have already been filed in the charts; the FMC did not find any unfiled MARs in the medical records filing area. An estimated 30% of detainees are currently on self-administered medications that have been ordered by a physician.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: No findings noted.

AMERICAN OVERSIGHT

Continuity of Medication

Ten charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed; 710-Medication Administration, 615-B Intake Screening.

1. Ten of ten (100%) had medications ordered in less than 24 hours from intake screening.
2. Ten of ten (100%) had first dose of medication within 24 hours of order.

During the intake screening process, the nurses contact the provider to initiate chronic care (CC) medications.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: No findings noted.

Mental Health Screen

Ten detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed: 616-A Mental Health Screening, Evaluation and Services.

1. Ten of ten (100%) detainees that had a positive screen for mental illness were referred for evaluation and were seen within a timely manner.

Current processes in place indicated no mental health referral issues during this review.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: No findings noted.

Medical Recordkeeping Practices

Ten charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed: 301- Access to Storage and Confidentiality of Health Records.302-Charting in Health Records.

Medical records are located in a secured medical records room in filing cabinets. Medical record files are organized in specific sections within the chart that allows for easy navigation of the file. Medical records staff were noted to be very efficient in the retrieval of records and organization of the medical records area.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: No findings noted.

Pregnant Women

There have been zero pregnant women since the last site visit.

DCDC policy reviewed; 621-A Pregnancy Management.

Per GEO policy, all female detainees receive a urine pregnancy test during intake assessment. The intake assessment includes an additional page for females that include questions about number of pregnancies, last menstrual period, last sexual intercourse

Previous FMC site visit from 6/12/2016: Zero of two pregnant detainee had OB/GYN consult initiated.
Current site visit findings: No charts to review. GEO did change their policy to state that all pregnant females must be referred to OB/GYN.

**Since the site visit was conducted, the facility received one pregnant female, and an OB/GYN referral was placed the following day.

Dental Care

AMERICAN OVERSIGHT

Ten charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed; 101-Dental Treatment Priorities, 102-Oral Care

1. Ten of ten (100%) were screened for symptoms during intake process.
2. Ten of ten (100%) were evaluated by a qualified health professional within 48 hours of request.
3. Ten of ten (100%) had dental clinical notes describing findings, diagnosis, treatment and plans.
4. Ten of ten (100%) had follow-up treatment as recommended.

A dentist and dental assistant provide routine dental services on Monday through Thursday each week at the facility. The dental room has two exam chairs, autoclave instruments and other dental supplies available. The room is kept locked at all times.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: No findings noted.

AMERICAN OVERSIGHT

Acute Laboratory Testing

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policy reviewed; 1003-A Diagnostic Services
1. Ten of ten (100%) had blood drawn or test done within one business day of ordered date.
2. Ten of ten (100%) had report back within 24 hours.
3. Ten of ten (100%) had clinical acknowledgment.
4. Ten of ten (100%) had appropriate clinical response.
5. Nine of nine (100%) patients were advised of lab results. One lab was just received by the facility the day prior to the chart review.

DCDC uses Labcorp for all laboratory services.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: No findings noted.

Diagnostic Services and Specialty Care Access

Nine charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed; 1003-Diagnostic Services, 211-Off site hospital and specialty care, 214-A referrals, outside medical care.

1. Nine of nine (100%) had a documented time urgency included in the order.
2. Seven of seven (100%) were completed within the time specified or 45 days, and the majority were completed within 14 days.
3. None required a re-evaluation for deterioration at least every 30 days until off-site service provided.
4. Seven of seven (100%) were reviewed by the clinician within seven days.

DCDC has a contract with Denver Health which has its own designated correctional health care unit. When specialty care is needed, the CD contacts the Denver Health care coordinator to schedule the appointment. DCDC has access to a full range of specialty services.
DCDC has a full time on-site x-ray technician.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: No findings noted.

Mental Health Treatment Planning

Ten detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 623-Psychiatric Evaluation

1. Ten of ten (100%) had a clinical assessment, treatment and follow-up plan documented.
2. Nine of nine (100%) had treatment plans which were updated at least every 90 days.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: No findings noted.

Treatment of Disability

One chart was reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed; 901-B Aids to Impairment (Special Needs and Services), 906-Special Needs Inmate/Detainee.

1. One of one (100%) had the disability noted in the file.
2. One of one (100%) was assessed for assistance with activities of daily living. ADL assistance was not needed for this detainee.
3. One of one (100%) had appropriate accommodation orders.

AMERICAN OVERSIGHT

DCDC has special needs equipment available, i.e. handicap cells, wheelchairs, canes, walkers. Detainees with vision and hearing disabilities have access to special services i.e. blind man cane. The facility maintains a list of detainees with disabilities.
The HSA provided ERO staff and FMC with a copy of the detainee disability accommodation notification form.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: No findings noted.

Complaints and Grievances

Seventeen charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 205-Grievances

There was a total of 28 medical grievances in the past three months.
One for denial/refusal of specific request for care.
Sixteen for delays in care.
One for competency/professional mindset of medical staff.
Three for attitude, demeanor or conduct of staff.
Seven classified as other.
27 of 28 charts (96%) were addressed in writing by the HSA within five working days. There was evidence that the majority of complaints were due to delayed appointments.

Previous FMC site visit from 06/12/2017: There were three grievances not answered within the five day period stated in the standard.
Current site visit findings 1/22/18: Repeat deficiency. 27 of 28 grievances were answered within five days. One was answered on day 7.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES
CHRONIC DISEASES

Diabetes

Six charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 606-A Diabetes Mellitus Management

1. Five of five (100%) had blood sugar measured and recorded on intake. One refused.
2. One of six (17%) were seen for chronic care within fourteen days of illness identification.
3. Five of five (100%) had a baseline HgbA1c performed within 30 days of intake or within the past 3 months. One refused lab draw.
4. Five of five (100%) had lipids measured within one year. One refused lab draw.
5. Two of three (67%) were followed at least every 90 days with appropriate vital signs.
6. Three of three (100%) had aspirin prescribed as clinically indicated.
7. Five of five (100%) had degree of control documented.
8. Six of Six (100%) had a documented strategy to attain diabetes control.

The facility uses GEO and the Bureau of Prisons (BOP) clinical guidelines.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: Physical exam/chronic care was not routinely done within 14 days.

Human Immunodeficiency Virus (HIV)

One inactive chart was reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy review; 511-A HIV Prevention and Management

1. One of one (100%) was identified by patient interview.
2. One of one (100%) had CD4 and viral load completed within 14 days of arrival.
3. Detainee bonded out prior to chronic care appointment.
4. One of one (100%) had antiretroviral treatment documented.
5. The detainee bonded out prior to the 90 day chronic care appointment.
6. One of one (100%) had a chest x-ray completed within 72hours of problem identification.

The providers follow Centers for Disease Control and Prevention (CDC), National Institutes of Health (NIH), GEO group clinical practice guidelines and the HIV Medicine Association of the Infectious Disease Society of America to manage HIV detainees.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: Best practice. A referral for an Infectious Disease provider or HIV specialist had not been made.

Hypertension

Ten charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; Geo Group- Clinical Practice Guidelines (adopted from Fed BOP Guidelines), Chronic Care form-Hypertension.

1. Ten of ten (100%) had blood pressure reading documented during intake.
2. Five of ten (50%) were evaluated by an MD/PA/NP within 14 days of illness identification. One was a new arrival, had appointment scheduled.
3. Three or three (100%) were noted to have blood pressures above 140/90 with a treatment plan initiated within 14 days of identification.
4. Ten of ten (100%) were treated under a chronic disease guideline which included baseline laboratory testing.

Previous FMC site visit from 6/12/2017: No findings noted.

AMERICAN OVERSIGHT

Current site visit findings 1/22/2018: Physical exam/chronic care was not routinely done within 14 days.

Asthma

Six charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; Geo Group- Clinical Practice Guidelines (adopted from Fed BOP Guidelines), Chronic Care form-Asthma.

1. One of six (17%) were seen in the chronic care clinic within 14 days of illness identification.
2. Six of six (100%) had documented peak flow measurements during the initial physical exam.
3. Four of four (100%) had documented peak flow measurements during the last chronic care visit or within the last 3 months.
4. Six of six (100%) were treated under a chronic disease guideline which addressed disease severity, prescription of medications consistent with severity and documented degree of control.

Previous FMC site visit from 6/12/2017: No findings noted.

Current site visit findings 1/22/2018: Physical exam/chronic care was not routinely done within 14 days.

Seizure Disorder

One charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; Geo Group- Clinical Practice Guidelines (adopted from Fed BOP Guidelines), Chronic Care form-Seizures.

1. One of one (100%) had an appropriate neurological history completed at the initial physical examination.
2. One of one (100%) was seen by a provider within 14 days of illness identification
3. One of one (100%) had serum drug levels performed and acknowledged in the medical record every three months until stable.
4. One of one (100%) had a treatment plan established.
5. one of one (100%) were given bottom bunk.

Previous FMC site visit from 06/12/2017: No findings noted.

Current site visit findings 1/22/2018: No findings noted.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

The HSA and GEO regional program manager were notified of all findings/recommendations during the close-out.
1) The facility was without a PA from July 2017-January 2018 due to an unexpected death.
(b)(7)(E)

(b)(5); (b)(7)(E)

Additional Comments

The GEO Group chronic care flow sheets do an excellent job of covering all of IHSC Quality of Care Audit tools for chronic diseases. They cover degree of control, treatment, labs, follow-up appointments, etc. for the specified chronic disease.
The facility was behind on physical exams, chronic care and provider sick call appointments at the time of the FMC site visit. The FMC did see evidence of progress being made towards the exams being caught up to date once the PA was hired in January.

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

-Previous site visit findings 12/12/2016: No deficiencies noted.

-Current site visit findings 6/12/2017:
PBNDS Standard Grievance System 6.2 V.4 ensure a procedure in which all medical grievances are received by the administrative health authority within 24 hours or the next business day, with a response from medical staff within five working days, where practicable.
CURRENT FINDINGS: Three grievances were not answered within 5 working days.

GEO Corporate conducted an annual audit and review June 5-9, 2017.

The Nakamoto Group conducted an annual inspection on September 27-29, 2016. All standards were met, and no deficiencies were noted.

The Commission on Accreditation for Corrections (ACA) conducted a review on November 14-16, 2016. All ACA standards were met, and no deficiencies were noted.

Chronic Care *Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.*

Total number with chronic conditions:	Total number with unstable chronic conditions:
57	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
DCDC policy reviewed; 605-A Continuity of Care, 603-A Access to Care, 607-Therapeutic Diets

AMERICAN OVERSIGHT

Previous site visit findings 12/12/2016: No deficiencies noted.

Current site visit findings 6/12/2017: No deficiencies noted.

The medical clinic has a designated chronic care registered nurse (RN) who oversees scheduling of chronic care clinic appointments, off site referrals, updating physician orders and working along side the physician. All chronic care patients were noted to be identified and screened appropriately during intake. All were referred to the providers, and initial chronic care visits were completed within fourteen days. Chronic care guidelines are based on the Bureau Of Prisons guidelines.

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:
0	1

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

DCDC policy reviewed; 614-A Hunger Strike

Previous FMC site visit from 12/12/2016: No deficiencies noted.

Review of the facility's hunger strike policy noted to follow NCCHC and PBNDS standards. A review of the medical record showed appropriate care and documentation.

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
0	5

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

DCDC policy reviewed; 907-C Suicide prevention and intervention.

Previous FMC site visit from 12/12/2016: No deficiencies noted.

Current site visit findings 6/12/2017: PBNDS 2011 Medical Care 4.6.D Detainees placed on suicide watch shall be re-evaluated by appropriately trained and qualified medical staff on a daily basis, with this re-evaluation documented in the detainee's medical record.
CURRENT FINDINGS: Review of medical records revealed evaluation and assessments were not documented on a daily basis.

There have been five suicide watches since the last audit. Documentation of continuous patient observation and/or every 15 minute observation was noted in the medical charts. Nursing assessments were not documented on a daily basis. Nursing would initial the monitoring flow sheet that rounds were done, but documentation of assessments were inconsistent.
Mental health evaluations were not documented consistently on a daily basis in two medical records.
The corporate audit preformed by GEO on June 5-9, 2017 revealed the same deficiency. The HSA completed a corrective action plan for this deficiency that includes a change of policy stating nursing assessments will be performed and documented every eight hours.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

DCDC policies reviewed; 604-B Advance Directive, Terminal Illness and End of Life Decision Making, 202-A Death of a Inmate/Detainee/Resident, 210-Notification in Emergency or Death.

Previous FMC site visit from 12/12/2016: No deficiencies noted.

Current site visit findings 6/12/2017: No deficiencies noted.

There have been no reported deaths, detainees with terminal illness, or detainees with advance directives within the last 12 months. The local policies are in compliance with the PBNDS 2011 standard.

Other Observations

The FMC conducted this site visit on June 12-14, 2017. A total of approximately 57 charts were reviewed for this audit. DCDC uses paper medical records.

Facility Data:
DCDC is operated by the GEO Group, Inc., and it houses US Marshals and ICE detainees. The facility has a holding capacity of 1,100 detainees. The current ICE contract allows 928 ICE detainees. The facility has 78 U.S. Marshall detainees at the present time. On October 1, 2016, the ICE contract was increased from 525 beds to 928 beds; however, according to the Assistant Field Office Director (AFOD) assigned to DCDC, the number of beds may decrease due to a smaller population.
An adjacent building was renovated in preparation for another increase of bed space in February 2017; however, that bed space is not needed at this time. Medical equipment had already been purchased and received in preparation for the expansion. Medical staffing had also already been approved by GEO prior to the contract being obtained.

DCDC current medical staff includes:

(b)(7)(E)

AMERICAN OVERSIGHT

(b)(7)(E)

The medical clinic has eight medical housing unit rooms, five negative pressure rooms, and one suicide observation room.

There is a designated trauma/urgent care room which contains a urgent response cart, three AEDs, two gurneys, an eye wash shower, and other emergency supplies.

DCDC providers use the GEO Group Clinical Practice Guidelines which were adopted from the Bureau of Prisons (BOP) guidelines. The HSA stated that the state of Colorado has the Corporate Practice of Medicine Law which says the physician's clinical judgment is to be followed. Meaning the physician may deviate from the guidelines if, in their clinical judgment, it is best for the patient.

DCDC Emergency Medical Services and First Aid policies reviewed; 1004-Emergency Medications and First Aid Kits, 608-A Emergency Services. Correctional staff receives appropriate training. DCDC policy reviewed; 409-A Training, Correctional officers.

Staff Training:
DCDC HSA conducts monthly staff meeting and training. Meeting minutes were reviewed. Curriculum and training log were reviewed for registered nurse physical exam training, dental training, mental health training including intakes, referrals, and suicide watch, suicide risk assessment requirements. GEO policy only mandates that the medical staff conducts emergency response training annually. The HSA reported quarterly man down drills for every shift. Recent man down drill with after actions report was provided to FMC for review.

DCDC ICE detainees have access to interpretation services as needed. Language line contact information was noted in intake, dental and various other clinic exam rooms. Consent forms for interpretation was noted in non-English speaking charts.

(b)(7)(E) staff personnel files reviewed. All licensed personnel files had current up to date licenses to practice in the state of Colorado. All had up to date BLS certification.

Deficiencies for Areas Evaluated

-Previous site visit findings 12/12/2016: No deficiencies noted.

-Current site visit findings 6/12/2017:
PBNDS 2011 Medical Care 4.6.D Detainees placed on suicide watch shall be re-evaluated by appropriately trained and qualified medical staff on a daily basis, with this re-evaluation documented in the detainee's medical record.
CURRENT FINDINGS: Review of medical records revealed evaluation and assessments were not documented on a daily basis.

AMERICAN OVERSIGHT

Current site visit findings 06/12/2017:
PBNDS Standard Grievance System 6.2 V.4 ensure a procedure in which all medical grievances are received by the administrative health authority within 24 hours or the next business day, with a response from medical staff within five working days, where practicable.
CURRENT FINDINGS: Three grievances were not answered within 5 working days.

Quality of Care findings:
- Suicide watch nursing assessments were not documented on a daily basis. Nursing would initial the monitoring flow sheet that rounds were done, but documentation of assessments were inconsistent.

AMERICAN OVERSIGHT

Suicide Screening

Five charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.
DCDC policy reviewed; 907-C Suicide prevention and intervention. 616-B Mental Health Screening, Evaluation and Services.

1. Five of five (100%) suicidal patients were evaluated by a mental health professional within 24 hours.
2. Three of five (60%) evaluated daily by a qualified mental health professional. Two did not have daily documentation.
3&4. Five of five (100%) were on continuous watch monitoring and/or every 15 minute watch with checks documented.
5. Zero of five (0%) had evidence that earlier intervention would have prevented the suicide watches.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 05/12/2017: PBNDS 2011 Medical Care 4.6.D Detainees placed on suicide watch shall be re-evaluated by appropriately trained and qualified medical staff on a daily basis, with this re-evaluation documented in the detainee's medical record.
CURRENT FINDINGS: Review of medical records revealed evaluation and assessments were not documented on a daily basis.

There have been five suicide watches since the last audit. Documentation of continuous patient observation and/or every 15 minute observation was noted in the medical charts. Nursing assessments were not documented on a daily basis. Nursing would initial the monitoring flow sheet that rounds were done, but documentation of assessments were inconsistent.
Mental health evaluations were not documented consistently on a daily basis in two medical records.
The corporate audit preformed by GEO on June 5-9, 2017 revealed the same deficiency. The HSA completed a Corrective Action Plan for this deficiency that includes a change of policy stating nursing assessments will be performed and documented every eight hours.

Health Assessment

20 detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policies reviewed; 601-A Physicals and Health Assessments, 615-B Intake Screening.

1. 20 of 20 (100%) had initial screenings that were completed within 12 hours of arrival.
2. 20 of 20 (100%) received tuberculosis (TB) screening in accordance with requirements. .
3. One of one (100%) were referred for evaluation who screened positive for mental illness or suicide risk.
4. 20 of 20 (100%) had timely follow up of a chronic condition and had a completed health evaluation within 14 days.
5. 20 of 20 (100%) received a complete health evaluation in accordance with requirements.

RNs are trained and signed off by the CD to conduct physical exams. All detainees noted to have chronic care diagnosis will be referred to the mid level provider or CD for further evaluation.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 6/12/2017: No findings noted.

Urgent Care (Sick Call)

Ten detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 625-Sick Call and Triaging of Non-Emergent Request for Health Services; GEO Request for Health Services Form HS-154.

AMERICAN OVERSIGHT

1. Ten of ten (100%) had timely and appropriate evaluation by nursing staff.
2. Ten of ten (100%) received care within the scope of the nurse's license.
3. Ten of ten (100%) had vital signs documented during the nurse's assessment.
4. Six of six (100%) patients were appropriately referred within 24 hours of initial sick call assessment to an MD/PA/NP/DMD.
5. Six of six (100%) patients referred had an MD/PA/NP/DMD assessment and plan documented.

Sick call slips can be turned in through a secure lock box in each pod or passed directly to the pill line nurse. Sick call request slips are picked up daily, reviewed and triaged by the nurse the same day. All urgent requests were noted to be seen the same day and all others within 48 hours.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 6/12/2017: No findings noted.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

Three detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policies reviewed; 608-B Emergency Services Patient Transport, 613-A Hospitalizations.

1. Three of three (100%) had an outbound progress note.
2. Three of three (100%) did not have evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care.
3. Three of three (100%) had discharge documentation from the hospital or ED in the chart.
4. Three of three (100%) had an inbound assessment documented.
5. Three of three (100%) had an inbound assessment reflecting hospital findings and concurrence or deviation from hospital recommendations.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 6/12/2017: No findings noted.

Medication Administration Practices

Ten detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area. 40 Medication Administration Record (MAR) were reviewed from the June MAR binder.

DCDC policies reviewed; 710-Medication Administration, 405-A Medication Administration Training.

FMC did not find any MARs with three consecutive missed or refused doses. The facility currently uses paper MARs which showed no missed doses except for refusals which were documented on the back of the MARs.

Per GEO policy and IHSC tool kit, an appropriate response from the prescribing clinician should be documented after three consecutive refusals.

The medical department has a wide variety of medications in stock to treat acute and chronic conditions, and it has a contract with Correct Rx pharmacy to supply necessary medications and refills. Correct Rx has a 24-72 hour turnaround on ordered medications. Over the counter (OTC) medications are provided the medical staff and available for purchase at the commissary.

The MARs from the previous month have already been filed in the charts; the FMC did not find any unfiled MARs in the medical records filing area. An estimated 30% of detainees are currently on self-administered medications that have been ordered by a physician.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 6/12/2017: No findings noted.

AMERICAN OVERSIGHT

Continuity of Medication

Ten charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed; 710-Medication Administration, 615-B Intake Screening.

1. Ten of ten (100%) had medications ordered in less than 24 hours from intake screening.
2. Ten of ten (100%) had first dose of medication within 24 hours of order.

During the intake screening process, the nurses contact the provider to initiate chronic care (CC) medications. A review of 20 charts of detainees with various chronic conditions indicated that routine medications were initiated within 48 hours.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 06/12/2017: No findings noted.

Mental Health Screen

Ten detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed: 616-A Mental Health Screening, Evaluation and Services.

1. Ten of ten (100%) detainees that had a positive screen for mental illness were referred for evaluation and were seen within a timely manner.

Current processes in place indicated no mental health referral issues during this review.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 6/12/2017: No findings noted.

Medical Recordkeeping Practices

Ten charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed: 301- Access to Storage and Confidentiality of Health Records.302-Charting in Health Records.

Medical records are located in a secured medical records room in filing cabinets. Medical record files are organized in specific sections within the chart that allows for easy navigation of the file. Medical records staff were noted to be very efficient in the retrieval of records and organization of the medical records area.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 6/12/2017: No findings noted.

Pregnant Women

Two detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 621-A Pregnancy Management.

1. Two of two (100%) had pregnancy test performed during intake screening.
2. Two of two (100%) demonstrated proper care of pregnancy test prior to x-ray or before initiation of medications.
3. Zero of two (0%) had an OB doctor consult ordered within 7 days of confirmation. Records were obtained from the OB provider of the detainee who stayed longer than seven days.
4. Zero of one (0%) were seen by OB within 30 days of confirmation. One detainee left the facility after 7 days.
5. Two of two (100%) had screening for HIV, STI, and hepatitis.
6. One of one (100%) had prenatal vitamins prescribed. Health assessments included female specific items as per standards.

AMERICAN OVERSIGHT

The CD completed a full pregnancy work up and evaluation during the chronic care clinic visit. Required laboratory tests were ordered and obtained, including HIV, STI and viral hepatitis. The detainee is seen monthly at the chronic care clinic for routine follow up appointments.

Per GEO policy, all female detainees receive a urine pregnancy test during intake assessment. Pregnant detainees are to be seen at least monthly by an obstetrician or facility providers per GEO policy. The clinical director reports experience in obstetrics.

Previous FMC site visit from 12/12/2016: Zero of one pregnant detainees had OB/GYN consults initiated.

Current site visit findings 6/12/2017: Zero of two pregnant detainee had OB/GYN consult initiated. The clinical director obtained records from the provider the detainee was seeing prior to being detained.

Dental Care

Ten charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed; 101-Dental Treatment Priorities, 102-Oral Care

1. Ten of ten (100%) were screened for symptoms during intake process.
2. Ten of ten (100%) were evaluated by a qualified health professional within 48 hours of request.
3. Ten of ten (100%) had dental clinical notes describing findings, diagnosis, treatment and plans.
4. Six of six (100%) had follow-up treatment as recommended.

A dentist and dental assistant provide routine dental services on Monday through Friday of each week at the facility. The dental room has two exam chairs, autoclave instruments and other dental supplies available. The room is kept locked at all times.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 06/12/2017: No findings noted.

AMERICAN OVERSIGHT

Acute Laboratory Testing

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policy reviewed; 1003-A Diagnostic Services
1. Ten of ten (100%) had blood drawn or test done within one business day of ordered date.
2. Ten of ten (100%) had report back within 24 hours.
3. Ten of ten (100%) had clinical acknowledgment.
4. Ten of ten (100%) had appropriate clinical response.
5. Nine of nine (100%) patients were advised of lab results. One left prior to results being returned.

DCDC uses Labcorp for all laboratory services.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 06/12/2017: No findings noted.

Diagnostic Services and Specialty Care Access

Seven charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed; 1003-Diagnostic Services, 211-Off site hospital and specialty care, 214-A referrals, outside medical care.

1. Seven of seven (100%) had a documented time urgency included in the order. The other four orders written were for radiology which is done in house. All 4 were done same day.
2. Seven of seven (100%) were completed within the time specified or 45 days, and the majority were completed within 14 days.
3. One of one (100%) were re-evaluated for deterioration at least every 30 days until off-site service provided. The other six were completed before 30 days.
4. Seven of seven (100%) were reviewed by the clinician within seven days.

DCDC has a contract with Denver Health which has its own designated correctional health care unit. When specialty care is needed, the CD contacts the Denver Health care coordinator to schedule the appointment. DCDC has access to a full range of specialty services.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 06/12/2017: No findings noted.

Mental Health Treatment Planning

Ten detainee charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 623-Psychiatric Evaluation

1. Ten of ten (100%) had a clinical assessment, treatment and follow-up plan documented.
2. Four of four (100%) had treatment plans which were updated at least every 90 days. The other five patients were transferred prior to the 90 day follow-up.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 06/12/2017: No findings noted.

Treatment of Disability

Three chart was reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

DCDC policies reviewed; 901-B Aids to Impairment (Special Needs and Services), 906-Special Needs Inmate/Detainee.

1. Three of three (100%) had the disability noted in the file.
2. Three of three (100%) was assessed for assistance with activities of daily living.
3. Three of three (100%) had appropriate accommodation orders.

AMERICAN OVERSIGHT

4. NA

DCDC has special needs equipment available, i.e. handicap cells, wheelchairs, canes, walkers. Detainees with vision and hearing disabilities have access to special services i.e. blind man cane. The facility maintains a list of detainees with disabilities.
The HSA provided ERO staff and FMC with a copy of the detainee disability accommodation notification form. The form was found at the front of all three charts.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 06/12/2017: No findings noted.

Complaints and Grievances

Seventeen charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 205-Grievances

There was a total of seventeen medical grievances in the past three months.
Five for availability of care.
Eight for denial/refusal of specific request for care.
Zero for delays in care.
Two for competency/professional mindset of medical staff.
One for attitude, demeanor or conduct of staff.
One classified as other.
14 of 17 charts (82%) were addressed in writing by the HSA within five working days. The other three were answered within a timely manner. There was no evidence of any possible barriers to care or repetitive concerns that could affect clinical care.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 06/12/2017: PBNDS Standard Grievance System 6.2 V.4 ensure a procedure in which all medical grievances are received by the administrative health authority within 24 hours or the next business day, with a response from medical staff within five working days, where practicable.
There were three grievances not answered within the five day period stated in the standard.
The HSA is currently the only staff member that responds to complaints and grievances.

AMERICAN OVERSIGHT

Diabetes

Five charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; 606-A Diabetes Mellitus Management

1. Five of five (100%) had blood sugar measured and recorded on intake.
2. Five of five (100%) were seen for chronic care within 14 days of illness identification.
3. Five of five (100%) had a baseline HgbA1c performed within 30 days of intake or within the past 3 months.
4. Five of five (100%) had lipids measured within one year.
5. Two of two (100%) were followed at least every 90 days with appropriate vital signs.
6. Three of three (100%) had aspirin prescribed as clinically indicated.
7. Five of five (100%) had degree of control documented.
8. Five of five (100%) had a documented strategy to attain diabetes control.

The facility uses GEO and the Bureau of Prisons (BOP) clinical guidelines.

Previous FMC site visit from 12/12/2016: One medical record did not have a blood sugar recorded on intake.

Current site visit findings 6/12/2017: No findings noted.

Human Immunodeficiency Virus (HIV)

One chart was reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy review; 511-A HIV Prevention and Management

1. One of one (100%) was identified by patient interview.
2. One of one (100%) had CD4 and viral load completed within 14 days of arrival.
3. One of one (100%) was seen by a HIV or ID specialist within 30 days of arrival. **
4. One of one (100%) had antiretroviral treatment documented.
5. The detainee was released prior to the 90 day chronic care appointment.
6. 1 of 1 (100%) had a chest x-ray completed within 72hours of problem identification.

** The detainee was being followed by an ID specialist at Denver Health prior to arriving at the facility. Consult notes from the specialist were obtained and reviewed by the clinical director.

The providers follow Centers for Disease Control and Prevention (CDC), National Institutes of Health (NIH), GEO group clinical practice guidelines and the HIV Medicine Association of the Infectious Disease Society of America to manage HIV detainees.

The Chronic Care nurse organized a training through the Colorado Department of Health and Environment which allows for pre and post HIV test counseling to be done by the RN. Four RNs and the CD have completed the training. However, if the test is positive, it has to be done by the physician.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 06/12/2017: No findings noted.

Hypertension

Ten charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; Geo Group- Clinical Practice Guidelines (adopted from Fed BOP Guidelines), Chronic Care form-Hypertension.

1. Ten of ten (100%) had blood pressure reading documented during intake.
2. Nine of nine (100%) were evaluated by an MD/PA/NP within 14 days of illness

AMERICAN OVERSIGHT

identification. One was a new arrival and had an appointment scheduled.
3. Eight of eight (100%) were noted to have blood pressures above 140/90 with a treatment plan initiated within 14 days of identification.
4. Ten of ten (100%) were treated under a chronic disease guideline which included baseline laboratory testing.

Hypertension blood pressure flow sheets and chronic care documents were noted in ten of ten charts.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 06/12/2017: No findings noted.

Asthma

Four charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

DCDC policy reviewed; Geo Group- Clinical Practice Guidelines (adopted from Fed BOP Guidelines), Chronic Care form-Asthma.
1. Four of four (100%) were seen in the chronic care clinic within 14 days of illness identification.
2. Four of four (100%) had documented peak flow measurements during the initial physical exam.
3. Four of four (100%) had documented peak flow measurements during the last chronic care visit or within the last 3 months.
4. Four of four (100%) were treated under a chronic disease guideline which addressed disease severity, prescription of medications consistent with severity and documented degree of control.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 06/12/2017: No findings noted.

Seizure Disorder

Zero charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area. DCDC has not had any seizure patients since the last site visit.

DCDC policy reviewed; Geo Group- Clinical Practice Guidelines (adopted from Fed BOP Guidelines), Chronic Care form-Seizures.

Guidelines and chronic care form outlines an appropriate plan of care including labs, lower bunk and treatment plan.

Previous FMC site visit from 12/12/2016: No findings noted.

Current site visit findings 06/12/2017: No findings noted.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

1) Suicide watch documentation; the HSA stated a corrective action plan has already been completed after the corporate audit and will be implemented immediately.

Additional Comments

The GEO Group chronic care flow sheets do an excellent job of covering all of IHSC Quality of Care Audit tools for chronic diseases. They cover degree of control, treatment, labs, follow-up appointments, etc. for the specified chronic disease.

Current site visit findings 3/25/2019: No deficiencies noted.

There have no detainee deaths since the previous site visit.

Other Observations

The FMC conducted this site visit on March 25-28, 2019. A total of 62 charts and 65 Medication Administration Records (MARs) were reviewed for this audit.
- The FMC focused on detainee charts that arrived after the last site visit to present.

--FACILITY DATA:
- DCDC is operated by the GEO Group, Inc., and it houses US Marshals and ICE detainees. The facility has a holding capacity of 976 detainees.
- An adjacent annex was opened on January 21, 2019 on a 90 day contract for an additional 432 beds. Discussions and contract proposals are all pending for possible continuation of use for the annex building.

--ACCREDITATIONS/INSPECTIONS:
- ACA - November 2016.
- PBNDS (Nakamoto Group)- September 2017.

(b)(7)(E)

--STAFF TRAINING:
- DCDC HSA conducts monthly staff meeting and training. Curriculum and training log were reviewed for registered nurse physical exam training, dental training, mental health training including intakes, referrals, and suicide watch, suicide risk assessment requirements. Training topics were reviewed and align with accreditation standards.

--SUPPLEMENTAL INFO:
- DCDC ICE detainees have access to interpretation services as needed. Language line contact information was noted in intake, dental and various other clinic exam rooms. Consent forms for interpretation were noted in non-English speaking charts.
- DCDC providers use the GEO Group Clinical Practice Guidelines which were adopted from the Bureau of Prisons (BOP) guidelines.

Deficiencies for Areas Evaluated

Site visit findings 11/13/2018. 19 of 23 (83%) grievances were answered within 5 working days.
- PBNDS Standard Grievance System 6.2 V.4 ensure a procedure in which all medical grievances are received by the administrative health authority within 24 hours or the next business day, with a response from medical staff within five working days, where practicable.
Repeat finding.

Site visit findings 3/25/2019
16 of 18 (89%) Detainees with a chronic condition were seen by a provider within two working days.
- PBNDS 2011 4.3.J, Where there is a significant finding as a result of the initial screening, an immediate referral shall be initiated and the detainee shall receive a health assessment no later than two working days from the initial screening.
- NCCHC Standard; J-E-04, Initial Health Assessment. Inmates identified with clinically significant findings as the result f a comprehensive receiving screening receive an initial health assessment as soon as possible, but no later than 2 working days after admission.

AMERICAN OVERSIGHT

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene,

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.
- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in
- In most cases, the recommended sample size will provide a reliable picture of care that can be
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq 90\%$. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide

TIPS FOR REVIEWERS

AMERICAN OVERSIGHT

• Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.
• Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.
• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a

SUBJECT: Denver Contract Detention Facility (DCDF) Supplemental Criteria Site Visit Review April 24 – 26, 2018

Purpose

On April 24 – 26, 2018 (b)(6); (b)(7)(C) conducted a Field Medical Coordinator (FMC) site visit to DCDF to determine compliance with the ICE 2011 Performance Based National Detention Standards (PBNDS) and to review the IHSC Quality of Care (QOC) tools. The FMCs also reviewed the findings from the Office of Detention Oversight (ODO) and IHSC Investigative Unit (IIU) mortality reviews for detainee (b)(6); (b)(7)(C) (b)(6); (b)(7)(C) These reviews were conducted in January 2018 and reviewed current DCDF practice related to the findings. The purpose of this memo is to provide an update regarding DCDF's progression made to address the ODO and IIU mortality review findings.

1. Receiving screening. (IIU finding)

AMERICAN OVERSIGHT

National Commission on Correctional Health Care (NCCHC): Standards for Health Services in Jails, 2014: J-E-02, *Receiving Screening*.
• PBNDS 2011: 4.3, *Medical Care;* section V.J, *Medical and Mental Health Screening of New Arrivals*.
• PBNDS 2011: 4.3, *Medical Care;* section V.A.2, *General*
Findings:
• Receiving screening did not take place as soon as possible upon arrival to the facility.
• Receiving screening was completed five (5) hours and 28 minutes after arrival to the facility.
Current Findings as of 4/24-26/2018: The medical staff and GEO Intake Officers reported completing a Receiving Screening on all new arrivals but Receiving Screening documentation was not available. During this site visit, GEO medical/intake staff reported that they will immediately document on the I-213/I-216 accompanying new arrivals the time, date and sign reporting when new intake Receiving Screenings are completed. At this time, this process will serve as documentation that a Receiving Screening was completed on new arrivals. GEO reported that they separate arriving detainees into two groups: 1) to be seen first due to medical problems and 2) no medical problems. However, there is no evidence provided or demonstrated during the site visit that this is being completed. The FMC will continue to follow-up on these issues at the next FMC site visit.

2. Initial health assessment. (IIU and ODO finding)
NCCHC 2014: J-E-04, *Initial Health Assessment*.
• Performance-Based National Detention Standards (PBNDS), 2011: 4.3, *Medical Care;* section V.J, *Medical and Mental Health Screening of New Arrivals*.
• PBNDS 2011: 4.3, *Medical Care;* section V.M., *Comprehensive Health Assessment*.
Findings:
The detainee's initial health assessment was not completed within two working days or 14 days.
• In review of the ICE detainee health assessment log, a total of 180 initial health assessments were past due.
Current Findings as of 4/24-26/2018: All initial Health Assessments reviewed were in compliance with PBNDS Standards.

3. Chronic disease services. (IIU finding)
NCCHC 2014: J-E-04, *Initial Health Assessment*.
• PBNDS 2011: 4.3, *Medical Care*; section V.J, *Medical and Mental Health Screening of New Arrivals*.
Findings:
• Although the DCDF physician ordered baseline laboratory tests during intake, there is no documentation of an initial assessment, follow-up evaluation, or treatment plan established.
• An APP or physician did not review the detainee's serial blood pressure results.
• An APP or physician did not review the detainee's laboratory results in a timely manner.
• The DCDF physician did not evaluate or adjust the detainee's treatment plan. [*Investigator's note: On November 27, the physician reviewed and signed off on the detainee's laboratory results.*]
• During the site visit [January 18-19, 2018], there were 64 ICE detainees in custody with varying chronic conditions. Due to the limited time constraints, the investigators were unable to determine if an APP or physician followed each detainee's condition in a timely manner and if an individualized treatment plan was established.
