Current Findings as of 4/24-26/2018: The new Clinical Director (CD), who started on March 5, 2018, evaluated all but five chronic care detainees within the first week of being on duty to establish a baseline. The five remaining chronic care detainees had been evaluated by the previous CD within the previous 30 days. The new CD plans to follow up with these five detainees prior to the required 90-day chronic care follow up. All new arrivals reporting chronic care issues are being evaluated by the

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002487

CD or APP within the required 2 business days of arrival. The CD and APP reviewed all the charts and signed off all the unsigned labs/intakes/physicals/etc. A new lab result reporting process was implemented prior to this site visit which should be an improvement over the previous lab result reporting system. This lab reporting update includes a direct line so the lab company can call medical directly and report a critical lab value to the charge nurse or provider. The nurse then notifies the provider of any critical labs who will provide further instructions if needed.

4. Oral care. (IIU and ODO finding)
NCCHC 2014: J-E-06, *Oral Care.*
• PBNDS 2011: 4.3, *Medical Care*; section V.R, *Dental Treatment.*
Findings:
• Initial oral screening was not completed within 14 days of admission.
Current Findings as of 4/24-26/2018: Oral and dental screenings were completed during the 14 day physicals.

5. Continuity and coordination of care during incarceration. (IIU and ODO finding)
NCCHC 2014: J-E-12, *Continuity and Coordination of Care During Incarceration.*
• PBNDS 2011: 4.3, *Medical Care*; section V.K, *Substance Dependence and Detoxification.*
Findings:
During the detainee's detention, there is no evidence supporting a physician's review of the medical record. In addition, there were no multi-disciplinary (medical, mental health, nursing, or custody) coordination of care to help improve the detainee's clinical outcome**.**
• An APP or physician did not review diagnostic tests in a timely manner. • Treatment plans were not initiated or modified as clinically indicated based on the detainee clinical presentation.
• The detainee was not referred to an appropriate facility qualified to provide treatment and monitoring for opiate withdrawal.
Current Findings as of 4/24-26/2018: The new CD and APP are reviewing, coordinating, referring and providing appropriate follow up care as needed. The CD and APP reviewed all the charts and signed off all the unsigned labs/intakes/physicals/etc. As of this site visit, recent diagnostic tests are being reviewed within a timely manner. Chronic care treatment plans were initiated and placed in the charts. Referrals to outside specialty care are being completed.

6. Medical diet and nutritional caloric intake. (IIU finding)
NCCHC 2014: J-F-02, *Medical Diet.*
• PBNDS 2011: 4.2 *Hunger Strike*; section II.1, *Expected Outcomes.*
• PBNDS 2011: 4.2 *Hunger Strike*; section II.C, *Initial Medical Evaluation and Management.*
• PBNDS 2011: 4.2 *Hunger Strike*; section II.D, *Food and Liquid Intake and Output.*
Findings:
• An APP or physician did not order the detainee a medical diet.
• During the detainee's detention, medical/nursing staff did not initiate monitoring of: laboratory testing, weight checks, intake and output monitoring. The clinical medical authority (CMA) did not consult with the facility administrator to initiate monitoring of food and water intake by assigned custody officers.
• Although the detainee refused meals up to 72 hours or more, there was no documentation of referrals for nutritional counseling and/or an evaluation for a possible hunger strike.
Current Findings as of 4/24-26/2018: During this visit, there were no hunger strike charts for review since the previous FMC site visit in January 2018 available for review. (One declared hunger strike ended the first day after hunger strike protocol was initiated.) Many chronic care detainees had documented medical diet forms in the medical charts. Though current DCDF hunger strike policies and procedures meet the PBNDS and NCCHC, a review to assess

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002488

appropriate care and documentation will need to be deferred until a hunger strike situation occurs and the post hunger strike medical chart can be reviewed.

7. Prescribing continuity medications upon intake into DCDF. (IIU and ODO finding)
NCCHC 2014: J-E-02, *Receiving Screening*.
• PBNDS 2011: 4.3 *Medical Care*; section V.U.5, *Delivery of Medication*.
• The GEO group, Inc.; Clinical Practice Guidelines: *Detoxification of Chemically Dependent Inmates/Detainees/Residents (I/D/R)*, August 2014, page 14, *Opiate Withdrawal*.
• The GEO group, Inc.: Policy 902, *Alcohol and Drug Assessment and Treatment*, September 9, 2016.
Findings:
The DCDF physician's efforts were limited to searching Epic Care link.org (web based application allowing authorized physicians to access their patient's medical records in real time. All local clinics/hospitals who provide indigent care are linked into this system). The physician did not request additional information from the detainee or ICE regarding family member(s)' contact information to clarify his medical history.
• The detainee reported a history of taking prescribed medications (methadone); however, an APP or physician did not evaluate him as soon as possible, but no later than 24 hours after arrival. The physician did not conduct a medication reconciliation with the detainee.
• The DCDF physician's orders were based on management of alcohol withdrawal versus opioid withdrawal (methadone).
Current Findings as of 4/24-26/2018: 100% of charts reviewed had medication ordered within 24 hours of arrival and first dose of medication given within 24 hours of the order. For two charts reviewed, the detainee could not remember the name of the medication he was taking; the nurse called the pharmacy the detainee provided and clarified the medications.

8. Alcohol and other drug problems. (IIU and ODO finding)
NCCHC 2014: J-G-06, *Patient with Alcohol and Other Drug Problems*.
• PBNDS 2011: 4.3, *Medical Care*; section V.K, *Substance Dependence and Detoxification*.
• The GEO group, Inc.; Clinical Practice Guidelines: *Detoxification of Chemically Dependent Inmates/Detainees/Residents (I/D/R)*, August 2014, page 14, *Opiate Withdrawal*. • The GEO group, Inc.: Policy 902, *Alcohol and Drug Assessment and Treatment*, September 9, 2016.
Findings:
• The DCDF physician did not order the correct medication to manage withdrawal symptoms, based on clinical practice guidelines.
DCDF medical staff were not aware of GEO's policies and procedures on alcohol and drug withdrawal management.
• DCDF custody staff did not receive training on recognizing alcohol and other drug problems.
• The CMA did not establish guidelines for evaluation and treatment for detoxification.
Current Findings as of 4/24-26/2018: Though current DCDF Alcohol and Drug Assessment and Treatment policies and procedures meet the PBNDS and NCCHC, a review to assess appropriate care and documentation will need to be deferred until an alcohol and/or drug detoxification situation occurs and the post alcohol/drug treatment medical chart can be reviewed. During this site visit, GEO medical was developing training guidelines to provide to medical and custody staff that included alcohol and other drug withdrawal management training. Alcohol/drug treatment for detoxification guidelines were established by the new CD. On 4/30/2018, a detainee showing symptoms of alcohol withdrawal upon intake was sent to the emergency room and stabilized. On 7/2/2018, the HSA stated training had been conducted, and new guidelines have been initiated. Detaienees suffering from withdrawal from alcohol will be housed in medical and a CIWA score will be completed as indicated. Any detainee who is severely withdrawing will be sent out to the hospital via ambulance for an evaluation and detoxification.

AMERICAN OVERSIGHT

9. Intoxication and withdrawal. (IIU and ODO finding)
NCCHC 2014: J-G-07, *Intoxication and Withdrawal.*
• PBNDS 2011: 4.3, *Medical Care*; section V.K, *Substance Dependence and Detoxification.*
• The GEO group, Inc.; Clinical Practice Guidelines: *Detoxification of Chemically Dependent Inmates/Detainees/Residents (I/D/R)*, August 2014, page 14, *Opiate Withdrawal.*
• The GEO group, Inc.: Policy 902, *Alcohol and Drug Assessment and Treatment*, September 9, 2016.
Findings:
• DCDF did not follow GEO policy 902, stating inmates/detainees/residents (I/D/R) on methadone and or similar substances will immediately be referred to a facility qualified to address such needs.
• The physician did not follow GEO's clinical guidelines or document alternate treatment plans that justifications his deviation from the clinical guidelines.
• The physician did not establish protocols for assessment, monitoring, and management of symptoms of withdrawal.
• DCDF's nursing staff were not provided with training to manage withdrawal symptoms, conduct standard assessments at appropriate intervals, or how to identify and use the appropriate monitoring tools for drug withdrawal.
Current Findings as of 4/24-26/2018: This finding is covered in the Alcohol and other Drug problems section.

10. Access to emergency medical services. (IIU finding)
NCCHC 2014: J-A-07, *Emergency Response Plan.*
• PBNDS 2011: 4.3, *Medical Care*; section T.2, *Emergency Medical Services and First Aid.*
• The GEO group, Inc.: Policy 608-B, *Emergency Services*, April 1, 2017.
Findings:
• The detainee's access to EMS was delayed because nurse/custody staff did not immediately identify and call 911; instead, the physician and HSA were called to obtain prior approval to transfer the detainee to the hospital.
• The detainee's access to EMS was delayed because nurse/custody staff did not assess the detainee's condition or initiate CPR in a timely manner.
• DCDF medical staff are not certified through a CPR- BLS certifying body for health care providers. DCDF medical staff are certified under the American Safety and Health Institute (ASHI) CPR/AED/first aid program. [*Investigator's note: ASHI CPR/AED/first aid intended audience are individuals who are not health care providers or professional rescuers but desire or are required to be certified in basic emergency medical care, including CPR and the use of an AED.*]
• During the site visit, investigators found mass disaster and man-down drills are not critiqued, the results were not shared with all health care staff, and recommendations for health staff were not developed or acted upon.
• The DCDF HSA did not ensure that medical staff were competent in implementing the facility's emergency plan, to include recognizing signs of potential health emergencies and the required responses: administering CPR and securing transfer of detainee to appropriate hospital.
Current Findings as of 4/24-26/2018: Staff have been instructed that during a medical emergency to initiate emergency services without delay and notify the HSA and CD of the situation. All medical staff have received American Heart Association CPR training. The new HSA is developing a training plan that will include implementing the facility's emergency plan, recognizing potential health emergencies and required responses. This was in progress during this site visit but will require further compliance evaluation during the next planned FMC site visit. Mass disaster and man-down drills were not reviewed during this site visit. This will be evaluated during the next planned FMC site visit.

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002490

11. Professional development. (IIU finding)
2014: J-C-03, *Professional Development.*
• PBNDS 2011: 4.3, *Medical Care*; section V.B, *Designation of Authority.*
Findings:
• DCDF medical staff, who have patient contact, are not currently certified through a CPR- BLS certifying body for health care providers. Medical staff are certified under ASHI CPR/AED/first aid program. In 2015, the medical staff changed sponsors from Red Cross CPR/first aid.
Current Findings as of 4/24-26/2018: All medical staff have received American Heart Association CPR training since the last FMC visit in January 2018.

12. Patients with special health needs. (IIU and ODO finding)
NCCHC 2014: J-G-02, *Patients with Special Health Needs.*
• PBNDS 2011: 4.3, *Medical Care*; section V.N, *Medical/Psychiatric Alerts and Holds.*
• PBNDS 2011: 4.3, *Medical Care*; section V.W, *Special Needs and Close Medical Supervision.*
• NDS 2011: 4.3, *Medical Care*; section V. X, *Notification of Detainees with Serious Illnesses and other Specified Conditions.*
Findings:
• An initial assessment was not completed for special needs.
• The detainee was not listed on the special needs log or the SDI logs. The special needs treatment plan was not filed in the detainee's health care record.
• The DCDF medical unit does not maintain a list of special needs patients.
• An individualized treatment plan addressing all of the detainee reported conditions was not developed.
• A medical/psychiatric alert was not initiated; therefore, the facility administrator did not receive notice of the detainee's condition, and did not notify the responsible ICE agent, in a timely manner.
• The facility administrator and CMA did not ensure that the Field Office Director was notified as soon as practical of the serious physical condition [e.g., *any condition that caused repeated loss of consciousness; any chronic deteriorating condition requiring multiple medications*].
Current Findings as of 4/24-26/2018: During this visit, there were no special needs detainees since the previous FMC site visit in January 2018 available for review. The HSA provided a log of special needs detainees. On 5/7/2018, the facility received a special needs detainee (deaf, illiterate, no sign language). A medical/psychiatric alert was initiated and ERO/ICE was notified immediately.

13. Basic mental health services. (IIU finding)
NCCHC 2014: J-G-04, *Basic Mental Health Services.*
• PBNDS 2011: 4.3, *Medical Care*; section V.O, *Mental Health Program.*
Findings:
• DCDF did not provide the detainee appropriate and timely access to mental health services.
• After his initial mental health evaluation by a psychiatrist, the detainee was not seen again until eight days later by a psychologist.
• Throughout the course of the detainee's DCDF detention, he repeatedly informed nursing and mental health staff of his progressively debilitating withdrawal symptoms.
• Although several MHPs saw the detainee there was no coordination of care amongst the MHPs or with the MHPs and the physician.
• The detainee was initially started on the CIWA tool for monitoring the progression of his symptoms versus the COWS tool, which is more applicable for a patient experiencing opiate withdrawal symptoms. On November 29, 2017, the psychiatrist adjusted the detainee's treatment plan to facilitate an improved clinical outcome.

AMERICAN OVERSIGHT

• During the detainee's detention, the MHPs did not consider transferring the detainee to a facility that could appropriately manage his condition.
Current Findings as of 4/24-26/2018: 100% of charts reviewed that identified a mental health illness upon intake were referred and seen by a mental health provider in a timely manner.

14. Sufficient number and appropriately trained medical/nurse staffing. (IIU and ODO finding)
NCCHC 2014: J-C-07, *Staffing*.
• PBNDS 2011: 4.3, *Medical Care*; section V.B, *Designation of Authority*.
• The referenced contract is HSCEDM-11-R-00002 *Contractor-owned/Contractor-operated Detention Facility (Denver area) Final Proposal Revision (FPR) and Additional Final Responses*, dated August 24, 2011.
Findings:

(b)(7)(E)

• While it is not possible to specify exact clinician-to-patient ratios, the amount of prescribing provider time must be sufficient to prevent reasonable delays in patients (i.e., detainees) receiving appropriate, timely, and necessary care. One physician was not sufficient to provide appropriate clinical and administrative services to this population.
• DCDF's administrative and health authorities did not routinely assess the adequacy and sufficiency of the staffing plan necessary to meet the needs of the population. The assessment should have included, but not limited to: full-time equivalent (FTE) staff coverage required; a list of current staff and vacancies, and; a plan to address how full coverage would be accomplished, if not met.
Current Findings as of 4/24-26/2018:

(b)(7)(E)

15. Medical autonomy. (IIU finding)
NCCHC 2014: J-A-03, *Medical Autonomy*.
• PBNDS 2011: 4.3, *Medical Care*; section V.B, *Designation of Authority*,
• HSCEDM-11-R-00002 *Contractor-owned/Contractor-operated Detention Facility (Denver area)* - GEO Job Description – *Physician; Primary Duties and Responsibilities*, March 2011.
Findings:
• DCDF CMA's decisions and implementation of appropriate and timely care were not conducted in an effective and safe manner.

AMERICAN OVERSIGHT

• During the site visit, there were 64 ICE detainees in custody with varying chronic conditions, but due to the limited time constraints, the investigators were unable to determine if the provider followed each detainee's condition in a timely manner and if an individualized treatment plan was established.
• Administrative decisions (such as utilization review, performance improvement) are not coordinated, if necessary, with clinical needs so the patient care is not jeopardized.
• A process for chronic disease utilization review and performance improvement has not been implemented.
• The designated CMA did not exercise his overall responsibility for medical clinical care pursuant to ICE-GEO's written award contract,

- GEO's physician job description states:
  - Performs routine medical examinations on detainees/inmates referred by the nursing/professional staff under established guidelines. Provides medical treatment and orders studies, tests and ancillary services required consistent with the provision of basic health care services.
  - Documents all services provided in the detainee/inmate medical record.
  - Reviews regularly those cases requiring ongoing medical/pharmaceutical attention.

  Initiates and maintains compliance with company policy and reviews all other policies and procedures annually to assure their compliance with the American Correctional Association and/or National Commission Standards for Correctional Health Care.

Current Findings as of 4/24-26/2018: The new CD, who started on March 5, 2018, evaluated all but five chronic care detainees within the first week of being on duty to establish a baseline. The five remaining chronic care detainees had been evaluated by the previous CD within the previous 30 days. The new CD plans to follow up with these five detainees prior to the required 90-day chronic care follow up. All new arrivals reporting chronic care issues are being evaluated by the CD or APP within the required 2 business days of arrival. The CD and APP reviewed all the charts and signed off all the unsigned labs/intakes/physical/etc. Appropriate and timely follow care by the CD and APP were documented.
The HSA was in the process of designing and implementing a CQI program to identify and monitor issues. To ensure compliance, this finding will require follow up during a future FMC site visit.
The CD was in the process of reviewing GEO policy. She has already developed supplemental chronic care forms in addition to the standard GEO chronic care forms.
On 7/2/2018, the HSA stated the CQI program has been established and has conducted meetings for April, May and June.

16. Policies and procedures. (IIU finding)
NCCHC 2014: J-A-05, *Policy and Procedures.*
Findings:
• DCDF medical/nursing staff were not familiar with the three levels of policies: corporate, national, and local.
• DCDF medical/nursing staff did not review all policies on an annual basis.
Current Findings as of 4/24-26/2018: This requires medical/nursing staff documented training and review of the training material. The HSA was in the process of designing and implementing a training plan to incorporate these topics. To ensure compliance, this finding will require follow up during a future FMC site visit (tentively scheduled for October 2018).

17. CQI program. (IIU finding)
NCCHC 2014: J-A-06, *Continuous Quality Improvement Program.*

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002493

• PBNDS 2011: 4.3, *Medical Care*; section V.EE.2, *Health Care Internal Review and Quality Assurance*.
Findings:
• DCDF does not have a CQI program that identifies health care aspects to be monitored; i.e., chronic disease, health assessments, sick call, documentation, etc. DCDF's health authority has not established a quality improvement committee with representatives from the major program areas.
When system and clinical issues (i.e., delay in completing health assessments), delay in chronic disease management, staffing, etc., were identified, the DCDF's HSA or CMA did not develop a process(s) for corrective action, to include, but not limited to development of process and/or outcome studies.
Current Findings as of 4/24-26/2018: The HSA was in the process of designing and implementing a CQI program to identify and monitor issues. To ensure compliance, this finding will require follow up during a future FMC site visit.

18. Communication on patient's health needs. (IIU finding)
NCCHC 2014: J-A-08, *Communication of Patients' Health Needs*.
• PBNDS 2011: 4.3, *Medical Care*; section V.BB.2, *Confidentiality and Release of Medical Records*.
Findings:
• DCDF's custody staff are not advised of special health needs that may affect housing, work, and program assignments; disciplinary measures; and admissions to and transfers from institutions.
• DCDF's clinical health authority does not routinely communicate with the facility administrator, ICE or designated staff regarding the detainee's deteriorating condition.
Current Findings as of 4/24-26/2018: DCDF administration staff is notified via email of any significant illness, mental illness, suicide watch, hunger strike and detainees placed in the medical housing unit. A weekly meeting between ICE and GEO administration takes place and updates are given on these detainees. The new HSA is providing regular updates via email to GEO administration and ICE staff.

19. Health training for correctional officers. (IIU finding)
NCCHC 2014: J-C-04, *Health Training for Correctional Officers*.
• PBNDS 2011: 7.3, Staff Training; section V.A, *Overview of Training*.
• PBNDS 2011: 7.3, Staff Training; section V.B, *Initial Orientation*.
• PBNDS 2011: 7.3, Staff Training; section V.C, *Initial and Annual Training*.
Findings:
• DCDF's custody staff did not receive health-related training at least every two years for recognizing acute manifestations of intoxication and withdrawal and signs and symptoms of mental illness.
• DCDF's facility administrator did not ensure that the facility conducted appropriate orientation, initial and training for all staff and contractors consistent with this standard and with appropriate assessment measures.
• DCDF's professional and support employees, including contractors, who have regular or daily detainee contact, were not provided training related to detainees with disabilities and special needs, to include mental illness, drug or alcohol abuse, and/or withdrawals.
Current Findings as of 4/24-26/2018: This requires custody staff documented training and review of the training material. The HSA is in the process of designing and implementing a training plan to incorporate these topics. To ensure compliance, this finding will require follow up during a future FMC site visit.

20. Training/education for medical staff. (IIU finding)
PBNDS 2011: 7.3, *Staff Training*; section V. A, Overview of Training.
• PBNDS 2011: 7.3, *Staff Training*; section V.C, Initial and Annual Training, and

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002494

• PBNDS 2011: 4.2, *Hunger Strike*; section V.A.B, Initial Referral.
• PBNDS 2011: 4.6, *Significant Self-harm and Suicide Prevention and Intervention*; section V. A, *Staff Training*.
Findings:
• DCDF's HSA did not ensure that all staff and contractors received appropriate orientation, initial and annual training consistent with standards and with appropriate assessment measures.
• DCDF's professional and support employees, including contractors, who have regular or daily detainee contact were not provided training related to detainees with disabilities and special needs, health related emergencies, and hunger strike.
• All staff are not provided with initial and annual training to recognize the signs of a hunger strike and when to implement the referral process for medical assessment and management.
Current Findings as of 4/24-26/2018: This requires medical/nursing staff documented training and review of the training material. The HSA is in the process of designing and implementing a training plan to incorporate these topics. To ensure compliance, this finding will require follow up during a future FMC site visit.

21. Medication Services. (IIU and ODO finding)
NCCHC 2014: J-D-02, *Medication Services*.
• PBNDS 2011: 7.3, *Staff Training*; section V.A, *Overview of Training*.
• PBNDS 2011: 4.3, *Medical Care*; section V.U.4, *Delivery of Medication*.
Findings:
• DCDF's medical staff did not administer the detainee's medications in a timely manner.
• Upon arrival to the facility, the detainee did not receive his prescribed medications, nor was a medical, reconciliation conducted.
Current Findings as of 4/24-26/2018: 100% of the 10 charts reviewed had medication ordered within 24 hours of arrival and first dose of medication given within 24 hours of the order. For two charts reviewed, the detainee could not remember the name of the medication he was taking. The nurse called the pharmacy the detainee provided and clarified the medications. MARs were noted to be documented within standards. No blank dates were noted, and minimal refusals, less than 5% were noted.

22. Nursing assessment and documentation. (IIU finding)
PBNDS 2011: 4.3, *Medical Care*; section V.B, *Designation of Authority*.
• NCCHC 2014: J-C-02, *Clinical Performance Enhancement*.
• Nursing Process (Nursingprocess.org) – Five step process to enhance the quality of patient care. (Assessment, Diagnosing, Planning, Implementing, and Evaluation Phases).
• Colorado *Nurse Practice Act*, section 12-38-111.
Findings:
• DCDF's medical staff have an up-to-date peer review on file; however, DCDF's nursing staff do not have a clinical performance process in place to evaluate the appropriateness of services delivered.
• DCDF's health services authority does not engage in decision making about the deployment of health resources and the day-to-day operations of the health services program.
• DCDF's nurses did not provide appropriate and succinct documentation in the detainee's medical record.
• The "practice of professional nursing" shall include the performance of such services as:
    - Evaluating health status through the collection and assessment of health data
    - Health teaching and health counseling
    - Providing therapy and treatment that is supportive and restorative to life and well-being either directly to the patient or indirectly through consultation with, delegation to, supervision of, or teaching or others

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002495

- Executing delegated medical functions;
- Referring to medical or community agencies those patients who need further evaluation or treatment; and
- Reviewing and monitoring therapy and treatment plans.

Current Findings as of 4/24-26/2018: Overall, in the approximately 30 medical records reviewed, nursing documentation was thorough and appropriate. Medical housing unit nursing documentation was consistent on the medical observation nursing progress record. The HSA was notified about the lack of a nursing clinical performance process or peer review. To ensure that a review process has been implemented, this will require follow up during a future FMC site visit. The new HSA is very involved in the day-to-day operations of the medical clinic.

23. Diagnostic services. (IIU finding)

NCCHC 2014: J-E-02, *Continuity and Coordination of Care During Incarceration.*
• NCCHC 2014: J-D-04, *Diagnostic Services.*
• PBNDS 2011: 4.2, *Hunger Strike*; section V.E, *Refusal to Accept Treatment.*
Findings:
• Diagnostic results were not reviewed by the physician in a timely manner.
• The DCDF physician did not order follow up diagnostic testing, as the detainee's status deteriorated.
• DCDF medical staff did not conduct clinical and laboratory monitoring as necessary to possibly improve the detainee's clinical outcome; i.e., urine dipstick, fingerstick blood sugar, and/or weight check.
Current Findings as of 4/24-26/2018: The new CD and APP reviewed all the charts and signed off all the unsigned labs/intakes/physical/etc. Based on ten chart reviews using the IHSC Quality of Care audit tool, individuals have received timely diagnostic testing as ordered by the medical providers. The medical providers reviewed test results timely, and nursing staff follow orders written as indicated. New arriving detainees reporting diabetes receive fingerstick blood sugar testing during the intake and are scheduled to see the medical provider within 2 business days. The medical staff are completing urine dipsticks, finger stick blood sugars etc., as ordered by the physician.

24. Medical observation/infirmary care. (IIU and ODO finding)

NCCHC 2014: J-G-03, *Infirmary Care.*
• PBNDS 2011: 4.3, *Medical Care*; section V.F. 3, *Medical Housing.*
The GEO group, Inc.: Policy 905-A, Medical Observation
Findings:
• Infirmary care was not appropriate to meet the serious medical needs of a patient.
• DCDF did not provide appropriate staffing to meet the requirements of the standard.
• DCDF medical/nursing staff did not provide the appropriate frequency of rounds.
• DCDF nursing staff are inappropriately assigned to observation/infirmary and other duties, resulting in nurses leaving the observation/infirmary area throughout the shift.
• The physician's orders did not include the admission diagnosis, medication, diet, activity restrictions, diagnostic tests required, and/or follow-up care.
• During a detainee's detention, the physician did not document any care delivery provided.
• DCDF's nursing staff inconsistently documented care delivery and consistency of forms were not utilized.
Current Findings as of 4/24-26/2018: A nurse, usually the charge nurse, was assigned to the medical housing unit. No other duties are assigned to the MHU nurse. The MHU rooms are next to the nursing station and is not a separate unit. Nursing documentation was consistent on the medical observation nursing progress record. The physician or the physician assistant documents daily and include diagnosis, medications, and treatment plan to include activities, diagnostics and

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002496

follow-up care. Diet orders were not consistently documented; the FMC will review this during the next FMC site visit.

25. Shift sharps/narcotic counts. (IIU finding)
NCCHC 2014: J-D-01, *Pharmaceutical Operations*.
• PBNDS 2011: 1.2, *Environmental Health and Safety*; section D, 1, *Needles and Sharp Objects*.
• PBNDS 2011: 2.14, *Tool Control*; section II, 1, *Expected Outcomes*.
• PBNDS 2011: 2.14, *Tool Control*; section H, *Storage in Work Areas*.
Findings:
• DCDF's nursing staff do not perform end-of-shift sharps/narcotic count with the oncoming nurse counting and the outgoing nurse verifying in accordance with safe community practices.
Current Findings as of 4/24-26/2018: Documentation reviewed noted that the sharps/narcotic count was completed together by an oncoming and outgoing nurse to verify in accordance with safe community practices.

26. On-call provider. (ODO finding)
PBNDS 2011: *Medical Care*; section V.T, *Emergency Medical Services and First Aid.*
• RNs reported difficulty reaching the physician after hours.
Current Findings as of 4/24-26/2018: Currently the physician and PA rotate on-call weeks. If staff are unable reach the on-call provider, they contact the other provider. There were no documented or reported issues regarding contacting the on-call providers.

27. Psychotropic medication informed consent. (ODO finding)
PBNDS 2011: *Medical Care*; section V.AA, Informed Consent and Involuntary Treatment.
• An informed consent specific to the anti-depressant/sedative Trazadone was not completed and signed by the detainee.
Current Findings as of 5/23/2018: Ten detainee charts containing psychotropic medications were reviewed. All 10 charts (100%) had consent forms signed by the detainee and provider that explained the risk and side effects specific to the medication.

Description of deficiencies:

Current site visit findings 8/23/2019: No deficiencies noted.
DCDC policies reviewed; 907-C Suicide prevention and intervention.

Previous site visit findings 3/25/2019: No deficiencies noted.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

Current site visit findings 8/23/2019: No deficiencies noted.
DCDC policies reviewed; 604-B Advance Directive, Terminal Illness and End of Life Decision Making, 202-A Death of Inmate/Detainee/Resident, 210-Notification in Emergency or Death.
There have been no deaths since the previous site visit.

Previous site visit findings 3/25/2019: No deficiencies noted.

Other Observations

The FMC conducted this site visit on August 21-23, 2019. A total of 80 charts and 66 Medication Administration Records (MARs) were reviewed for this audit.
- The FMC focused on detainee charts that arrived after the last site visit to present.

--FACILITY DATA:
- DCDC is operated by the GEO Group, Inc., and it houses US Marshals and ICE detainees. The facility has a holding capacity of 976 detainees.
- An adjacent annex was opened on January 21, 2019 on a 90 day contract for an additional 432 beds. Discussions and contract proposals are all pending for possible continuation of use for the annex building.

--ACCREDITATIONS/INSPECTIONS:
- ACA - November 2016.
- PBNDS (Nakamoto Group)- September 2017.
- IHSC Investigative Unit, Mortality review. - January 2018.
- PREA Audit - April 2018, DOJ
- Civil Right and Civil Liberties - August 2018
- PREA Audit - October 2018, DHS
- NCCHC - October 2018
- Nakamoto - November 2018
- OIG - November 2018
- ODO April 16 -18, 2019
- GEO Corporate Audit - June 10 -14, 2019
- ACA Mock audit by Geo Corp August 20 - 22, 2019

--MEDICAL STAFFING:
See QMC toolkit.

(b)(7)(E)

--STAFFING VACANCIES:

(b)(7)(E)

AMERICAN OVERSIGHT

(b)(7)(E)

--MEDICAL CLINIC
- The medical clinic has eight medical housing unit rooms, five negative pressure rooms, and one suicide observation room.(b)(7)(E)
- There is a designated trauma/urgent care room which contains an urgent response cart, three AEDs, two gurneys, an eye wash shower, and other emergency supplies.
- The annex building contains three isolation rooms. The medical records and pill carts for detainees housed in the annex are located in the medical department in the annex.

--STAFF TRAINING:
- DCDC HSA conducts monthly staff meeting and training. Curriculum and training log were reviewed for registered nurse physical exam training, dental training, mental health training including intakes, referrals, and suicide watch, suicide risk assessment requirements. Training topics were reviewed and align with accreditation standards.

--SUPPLEMENTAL INFO:
- DCDC ICE detainees have access to interpretation services as needed. Language line contact information was noted in intake, dental and various other clinic exam rooms. Consent forms for interpretation was noted in non-English speaking charts.
- DCDC providers use the GEO Group Clinical Practice Guidelines which were adopted from the Bureau of Prisons (BOP) guidelines.

Additional Comments

Continue to monitor for need to increase staff coverage when large trips are coming.
Electronic Health Records are coming to DCDC in September 2019; most of the staff are accustomed to this time of patient record.
Use of sticky notes for some notifications on paper charts can likely lead to that sticky note falling off of chart from lack of strong enough adhesive, please use tape to ensure adhesion.

EVALUATION OF CARE PRIOR TO EMERGENCY DEPARTMENT/HOSPITAL VISIT FOR CONDITIONS SENSITIVE TO AMBULATORY CARE

DATE 4/24/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Denver Contract Detention Center

Purpose: To determine whether earlier intervention might have prevented morbidity and cost of outside care. To measure continuity and coordination of care for inbound patients.

Source: Emergency Department (ED) logs.

Sample: Within the past 6 months, 10 patients sent to ED with ambulatory sensitive conditions, such as seizure, alcohol and/or substance withdrawal, skin or deep tissue infections, DKA, abdominal pain, or chest pain.

Item # Measure

1. Is there an outbound progress note?
2. *Is there evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care? If yes, please describe in the narrative portion of the report.
3. Is there discharge documentation from the hospital or ED in the chart?
4. Is there an inbound assessment?
5. Does the assessment reflect hospital findings and concurrence or deviation from hospital recommendations?

HEALTH ASSESSMENT

DATE 4/24/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Denver Contract Detention Center

Purpose: To determine compliance with detention standards to assure continuity and coordination of care for serious medical needs.

Source: Detainees arriving during recent period, at least 2 weeks prior to review, to allow for evaluation of timely follow-up.

Sample: 20 medical records chosen at random.

Item # Measure

1. Initial screen complete within 12 hours of booking?
2. PPD placed during medical screening and read within 48-72 hours, or chest x-ray is taken, or if PPD is positive by history, chest x-ray is ordered and read?
3. Are detainees who screen positive for mental illness or suicide risk referred for evaluation?
4. Is there timely follow-up for significant findings of acute and chronic conditions?*
5. Is there a complete health evaluation? Vital signs, adequate medical and behavioral health history, physical examination by licensed MD/PA/NP/RN within 14 days of booking? Patients with HIV, diabetes, dialysis, asthma (on daily meds), and other chronic illness will be seen within 48 hours or addressed by phone and seen on the next business day.

CHRONIC DISEASE – DIABETES

DATE 01/24/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Cibola County Correctional Center

Purpose: To assess conformance with nationally-accepted guidelines for chronic disease and to prevent deterioration in function and cost of unnecessary care.
Source: Chronic disease registry or MARs.
Sample: 10 patients with diabetes chosen at random.
What clinical practice guideline does the facility use to manage diabetes? BOP

Item #	Measure
1	Was blood sugar measured and recorded on intake?
2	Was patient seen for chronic care by mid-level provider or physician within 14** days of illness identification?
3	Was a baseline HgbA1c performed within 30 days of intake or within the past 3 months? Were lipids measured
4	within one year?
5	Was patient followed at least every 90 days with appropriate vital signs?
6	Was aspirin prescribed, as clinically indicated? *
7	Was degree of control (goal HgbA1C <8.0) documented?
8	Was a strategy to attain diabetes control documented if HgbA1C was above goal?

DIAGNOSTIC SERVICES AND SPECIALTY CARE ACCESS

DATE 01/24/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Cibola County Correctional Center

Purpose: To assess timeliness of off-site diagnostic services and specialty care.

Source: Referrals log, medical records or MedPars

Sample: 10 specialty patients chosen by acuity or risk of harm if access is delayed, particularly in specialties where timely access has been a problem for detainees in this facility.

Item # Measure

1 Was there a documented time urgency included on the order for specialty care or diagnostic services?
2 Was the appointment accomplished within 45 days of the order or within the ordered timeframe, e.g., "return in 90 days"?
3 Was the patient re-evaluated for deterioration every 30 days until off-site service completed?
4 Did the facility clinician acknowledge the specialist's report in the medical record within 7 days of the date the service was performed?

EVALUATION OF CARE PRIOR TO EMERGENCY DEPARTMENT/HOSPITAL VISIT FOR CONDITIONS SENSITIVE TO AMBULATORY CARE

DATE 01/24/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Cibola County Correctional Center

Purpose: To determine whether earlier intervention might have prevented morbidity and cost of outside care. To measure continuity and coordination of care for inbound patients.

Source: Emergency Department (ED) logs.

Sample: Within the past 6 months, 10 patients sent to ED with ambulatory sensitive conditions, such as seizure, alcohol and/or substance withdrawal, skin or deep tissue infections, DKA, abdominal pain, or chest pain.

Item #	Measure
1	Is there an outbound progress note?
2	*Is there evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care? If yes, please describe in the narrative portion of the report.
3	Is there discharge documentation from the hospital or ED in the chart?
4	Is there an inbound assessment?
5	Does the assessment reflect hospital findings and concurrence or deviation from hospital recommendations?

HEALTH ASSESSMENT

DATE 01/24/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Cibola County Correctional Center

Purpose: To determine compliance with detention standards to assure continuity and coordination of care for serious medical needs.

Source: Detainees arriving during recent period, at least 2 weeks prior to review, to allow for evaluation of timely follow-up.

Sample: 20 medical records chosen at random.

Item # Measure

1 Initial screen complete within 12 hours of booking?

2 PPD placed during medical screening and read within 48-72 hours, or chest x-ray is taken, or if PPD is positive by history, chest x-ray is ordered and read?

3 Are detainees who screen positive for mental illness or suicide risk referred for evaluation?

4 Is there timely follow-up for significant findings of acute and chronic conditions?*

5 Is there a complete health evaluation? Vital signs, adequate medical and behavioral health history, physical examination by licensed MD/PA/NP/RN within 14 days of booking? Patients with HIV, diabetes, dialysis, asthma (on daily meds), and other chronic illness will be seen within 48 hours or addressed by phone and seen on the next business day.

CHRONIC DISEASE – HYPERTENSION

DATE 01/24/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Cibola County Correctional Center

Purpose: To assess conformance with nationally-accepted guidelines for chronic disease and to prevent deterioration in function and cost of unnecessary care.

Source: Chronic disease registry or MARs.

Sample: 10 patients with hypertension chosen at random.

1 Does the facility follow a clinical practice guideline to manage hypertension? YES

2 If yes, what is the guideline? BOP

Item # Measure

1 Was a blood pressure reading noted at intake?

2 Was the patient seen by an MD/PA/NP within 14 days of illness identification?

3 If blood pressure was >140 systolic or >90 diastolic, was a treatment plan initiated within 14 days of identification?

4 Was a chronic disease guideline, including baseline laboratory testing, followed?

Instructions for the Corrective Plan of Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the findings identified in the ICE Health Service Corps Field Medical Coordinator (FMC) review. Please ensure that each stated corrective plan of action addresses the noted health care findings to the fullest extent possible, and that it incorporates the recommendations. In the event a corrective action cannot be implemented within the authorized timeline, please include an explanation in the "Corrective Plan of Action" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date. If an extension is needed, the facility must contact the FMC with this request in advance of the specified timelines for submission.

****Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.***

ICE Uniform Corrective Action Plan (FMC Reviews) Cibola County Correctional Center (El Paso AOR)			
Assessment and Findings	**Corrective Plan of Action**	**Completion Date**	**Date of IHSC Verification of Implementation**
PBNDS 2011 Standard: 4.3 Medical Care, II Expected Outcomes, 4. Detainees shall be able to request health services on a daily basis and shall receive timely follow-up **Findings:** Through detainee interviews and chart reviews, CCCC medical is not providing timely follow-up when requested through the sick call process.	With CoreCivic becoming the health care provider at Cibola as of 9/14/2019, CoreCivic Policy 13-80 Sick Call: Requests are to be triaged within 24 hours and inmate/resident patient seen by Qualified Healthcare Professional at sick call within next 24 hours (a total of 72 hours on weekend) unless emergency exist. Emergent issues are to be seen	9/14/2019	12/12/2019 FMC Site Visit found to be compliant per PBNDS 2011 standards.

MEDICATION ADMINISTRATION PRACTICES

DATE 01/24/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Cibola County Correctional Center

Purpose: To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.

Source: MARS.

Sample: MAR and medical record for 10 patients. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.

1 Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up? NO
2 Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs? 1%
3 In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month?
4 Estimate the percentage of patients on self-administered medication ordered by a provider. 60
5 OTCs provided by medical, commissary or both? Medical

Item # Measure

1 What is the number of refusals and/or no shows during the previous month for each patient?
2 Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?
3 Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

AMERICAN OVERSIGHT

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.

- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody $\geq$ 14 days.
- In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq$ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.

TIPS FOR REVIEWERS

- Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

- Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.

AMERICAN OVERSIGHT

• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

EVALUATION OF CARE PRIOR TO EMERGENCY DEPARTMENT/HOSPITAL VISIT FOR CONDITIONS SENSITIVE TO AMBULATORY CARE								
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	0							
Purpose:	To determine whether earlier intervention might have prevented morbidity and cost of outside care. To measure continuity and coordination of care for inbound patients.							
Source:	Emergency Department (ED) logs.							
Sample:	Within the past 6 months, 10 patients (if available) sent to ED with ambulatory sensitive conditions, such as seizure, alcohol and/or substance withdrawal, skin or deep tissue infections, DKA, abdominal pain, or chest pain.							
Guidelines:	NCCHC 2014 J-E-12.							
Remarks:	No ER referrals for time period reviewed.							
Reviewer:		(b)(6); (b)(7)(C)			**Date Reviewed:**	2/5/2020		
Clinical (c)								
cEED-1	Is there an outbound progress note?							
cEED-2	Is there evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care? If yes, please describe in the remarks portion of the report.*This will require physician review in some cases. If a physician assists with completion of this review, please include his or her name in the report comments.							
cEED-3	Is there discharge documentation from the hospital or ED in the chart?							
cEED-4	Is there an inbound assessment?							
cEED-5	Does the assessment reflect hospital findings and concurrence or justification for deviation from hospital recommendations?

TREATMENT OF DISABILITY

DATE: 01/24/2018 REVIEWER: (b)(6); (b)(7)(C)

FACILITY REVIEWED: Cibola County Correctional Center

Purpose: To assess the care of patients with disabilities who need accommodations to access the facility's programs or activities as a result of their disabilities.

An individual is considered to have a "disability" if s/he has a physical or mental impairment that substantially limits one or more major life activities, or has a record of such impairment.
See also: https://www.dhs.gov/sites/default/files/publications/guide-interacting-with-people-who-have-disabilties_09-26-13.pdf

Sources: Facility logs, tour of facility, list of patients who require DME (to include walkers, canes, wheel chairs, hearing aids, or other items to assist the patients to access the facility's programs and activities), and interviews with patients with disabilities who need accommodations to access the facility's programs and activities.

Sample: 10 patients within the population who have a disability that requires medical involvement. Determine if the patients with disabilities received appropriate treatment and disability accommodations through medical record examination. Mark as "Y" for yes, "N" for no, and "N/A" for not applicable. Do not leave any area blank.

General Question: Does the facility maintain a current list of all patients with disabilities on site? Yes

Item #	Measure
1	Is the disability prominently noted in the file, along with any needed accommodations?
2	Was the patient assessed for assistance with activities of daily living (ADL) upon identification of disability?
3	Were appropriate accommodation orders entered (e.g., lower bunk, mobility device (wheelchair, walker, canes, crutches), hearing aid, assistive listening device, sign language interpreter, meal, etc.)?
4	Was ADL assistance provided, if applicable?

ICE Uniform Corrective Action Plan (FMC Site Visit Follow-up JAN 2017)

Facility Name	***Cibola County Correctional Center***
Address (Street and Name)	**2000 Cibola Loop, P.O. Box 3540**
City, State and Zip Code	**Milan, New Mexico 87021**
County	**Cibola**
Date[s] of FMC Follow-up	***January 24, 2017 to January 27, 2017***
Complete and Return to ICE HQ No Later Than:	**July 21, 2017**

Facility Corrective Action Plan Assigned to	***FIELD OFFICE***
Date of Final Submission:	

AMERICAN OVERSIGHT

Department of Homeland Security
Immigration and Customs Enforcement
Office of Enforcement and Removal Operations

Instructions for the Corrective Plan of Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the findings identified in the ICE Health Service Corps Field Medical Coordinator (FMC) review. Please ensure that each stated corrective plan of action addresses the noted medical findings to the fullest extent possible, and that it incorporates the recommendations. In the event a finding or recommendation cannot be implemented within the authorized timeline, please include an explanation in the "Corrective Plan of Action" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date.

****Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.***

ICE Uniform Corrective Action Plan (FMC Reviews) Cibola (El Paso AOR)			
Assessment and Findings	**Recommendations**	**Corrective Plan of Action**	**Completion Date**
Forms requiring detainee signatures did not have an area for documentation of the use or non-use of a translator. (Patient speaks English, Provider fluent in patient's language, or translator used with translator name/number and language). STANDARD - PBNDS Medical Care 4.3 E. Facilities shall provide appropriate interpretation and language services for LEP (Limited English Proficiency) detainees...	(b)(5)	On January 26, 2017, the medical records staff will begin adding a sticker to all medical forms which require a detainee's signature the following: Detainee Speaks English Y or N; Staff Speaks Detainee's Language: Y or N; Language Spoken:_____ ___Did you use interpreter or language line? Name/Number:_____.	01/25/17: Medical records staff added stickers/verbiage to all forms requiring a detainee signature. Medical records will pull 10 charts per month and audit for stickers and report results to the AHSA

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002605

Scopes of practice for licensed non-independent providers were not documented. STANDARD - PBNDS Medical Care 4.3 I. All health care staff must be verifiably licensed, certified, credentialed, and/or registered in compliance with applicable state and federal requirements. Copies of the documents must be maintained on site and readily available for review.	(b)(5)	*AHSA is working to develop a scope of practice for all NON-LIP providers - specifically LPN's and RN's. Once completed all LPN's and RN's will have their competency in their scope of practice evaluated by the DON and documented in their personnel file. Expected time to completion 3/1/17.*	2/20/17: All medical staff requiring Scopes of Practice now have one filed in their personnel file. The DON has conducted core competencies for all staff. Competencies will be evaluated annually. Current and new staff are placed on a spreadsheet for tracking of competencies.
Medical staff is not familiar with the location of medications or equipment in the crash cart or emergency response bag. (QUALITY OF CARE)		Beginning the week of January 30, 2017, the DON will conduct man down drills and other emergency training with all nursing staff to better prepare them for emergency responses. Drills and training will be documented and the DON will evaluate the competency of nursing staff. Training is on-going and will be conducted on all shifts.	01/30/2017

AMERICAN OVERSIGHT

Medical crash cart is secured with a metal lock and the majority the medical staff do not have access to open the lock (QUALITY OF CARE)	(b)(5)	(b)(7)(E)	1/30/2017
Medical staff N-95 OSHA medical evaluation and fit testing not documented. (QUALITY OF CARE)		Currently working with CoreCivic Safety Manager to accomplish N-95 testing for all staff. If not accomplished through CoreCivic within 30 days, HSA will gather the necessary testing equipment, have medical staff complete health information questions relevant to wearing a mask, and have the DON administer the fit-test to all medical staff. Projected completion 2/28/17. Training is on-going and will be conducted on all	3/1/2017

AMERICAN OVERSIGHT

		shifts.	
No record of staff varicella immunity status which may place them at risk due to the higher than normal incidents of varicella with ICE detainees. (QUALITY OF CARE)	(b)(5)	Beginning 1/30/17, the DON will have all medical staff complete a questionnaire regarding their immunity to varicella. The documentation will be filed in the employees CCS medical file.	1/30/2017
Vital signs are not being completed on all clinical visits; specifically, mental health and dental encounters. (QUALITY OF CARE)		On January 25, 2017, informed (b)(6); (b)(7)(C) (b)(6); (b)(7)(C) (b)(6); (b)(7)(C) Mental Health, of the requirement for vital signs on all clinical visits. Nurses will do vitals for all providers to include dental and mental health appointments - dental can also do their own vitals if time permits. Train Mental Health Staff and Dental Assistant in obtaining vital signs. Beginning 2/6/17 the AHSA will review 10 files from Mental Health clinic visits conducted after 1/26/17 and review for vital signs. Beginning 2/6/17 the DON will review 10 charts every other	01/26/17: Effective 1/26/17 Mental health patients are staged in medical waiting area and nursing staff conducts vitals and records for mental health provider. Dental staff conducts vitals in dental and records on their paperwork.

AMERICAN OVERSIGHT

		week from Dental Clinic Visits conducted after 1/26/17 and review for vital signs. Bi-weekly audits will continue until 100% compliance is achieved.	
Review of intake transfer summaries is not documented. (QUALITY OF CARE)	(b)(5)	On January 30, 2017, the DON will conduct a training session with all Nursing staff on how to properly document the review of the transfer summary. A training log will be maintained. The QA nurse will add the review of the transfer summary to the list of file areas to audit post intake.	1/30/2017
Lab results are not being reviewed with the patients (QUALITY OF CARE)		A form has been generated to provide documentation of compliance. Beginning 1/30/17 Medical Records staff will generate a list of Detainees who have previously been scheduled for labs. These detainees will be scheduled with the provider- the provider will review all labs with the detainee and document the review on the acknowledgement form. The acknowledgement will be maintained in the Laboratory section of the detainee	3/1/2017

AMERICAN OVERSIGHT

		medical file. Detainees on Chronic Clinics will have their labs reviewed with the provider at the next chronic clinic and the provider will note this on the lab results when the labs are signed off by the provider. Detainees not on a chronic clinic who have labs drawn, will be scheduled with provider for follow-up of labs. The detainee will sign an acknowledgement that his labs have been reviewed with him and the acknowledgement filed in the detainee's medical record. Beginning the week of 2/6/17, the ID Nurse will pull 10 charts per week of detainees who have had labs drawn and audit for compliance. Currently Cibola uses IHSC Site Visit Tools for CQI.	
Insulin dependent diabetics are not required to have lower bunks (QUALITY OF CARE)	(b)(5)	On January 27, 2017 providers will now issue lower bunks to all IDDM and seizure patients. QA nurse will review charts of all IDDM and seizure CC's to insure detainee has a lower bunk designation. The QA	1/27/2017

AMERICAN OVERSIGHT

Medical Care

☐ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☒ >3 Standards

Description of deficiencies:

• PBNDS 2011 4.3, V, B - The HSA is a physician or health care professional and shall be identified to detainees.
FINDINGS: The newly hired HSA is not a licensed health care professional.

• PBNDS 2011 4.3, IV, M – Each facility's health care provider shall conduct a comprehensive health assessment, including a physical examination and mental health screening, on each detainee within 14 days of the detainee's arrival unless more immediate attention is required due to an acute or identifiable chronic condition.
FINDINGS: Comprehensive health assessments are not being completed within 14 days of arrival to Cibola. 16 of 20 (80%) had a completed health assessments within 14 days of arrival by a mid-level provider (MLP) or physician (MD), with those with chronic conditions being seen by a MLP or MD in 2 working days. A#s for non-compliant charts: (b)(6); (b)(7)(C) (b)(6); (b)(7)(C)

• PBNDS 2011 4.3, V, C, 2 - …screening for TB is initiated at intake and in accordance with Center for Disease Control and Prevention (CDC) guidelines
FINDINGS: For a two-month period, detainees only received TB symptom screening while at the facility due to a national shortage of PPD. (Note: Chest x-ray or blood testing was not used as an option during the 2 month period.) 12 of 20 (60%) had a PPD placed during medical screen when applicable and read within 48-72. A#s for non-compliant charts: (b)(6); (b)(7)(C) (b)(6); (b)(7)(C)

• PBNDS 2011 4.3, IV, O, 3 & 4 - Any detainee referred for mental health treatment shall receive an evaluation by a qualified health care provider no later than 72 hours after the referral, or sooner if necessary.

AMERICAN OVERSIGHT

FINDINGS: Seven of ten (70%) detainees referred for mental health evaluation were being evaluated by a mental health provider within 72 hours of the referral. A#s for non-compliant charts: (b)(6); (b)(7)(C)

• PBNDS 2011 4.3, V, O, 4 - The provider shall develop an overall treatment/management plan.
FINDINGS: Nine of ten (90%) had a treatment plan documented on detainees evaluated by mental health providers. A# for non-compliant chart: (b)(6); (b)(7)(C)

• PBNDS 2011 4.3, II, 22 - Detention and health care personnel shall be trained initially and annually in the proper use of emergency medical equipment and shall respond to health-related emergency situations.
Findings: Four out of seven (57%) nursing staff interviewed, medical staff are not receiving training in proper use of medical emergency equipment; e.g. equipment in emergency bags -- some nurses have never looked into the bag or know how to use oral airways or the manual pump.

• PBNDS 2011 4.3, II, 23 - Information about each detainee's health status shall be treated as confidential.
FINDINGS: Based on interviews with multiple detainees in three separate dorms, they stated that they place their sick call slips under the security door. Then the security staff deposit them in the medical box.

Findings from May 2019 Site Visit:

• 4.3 Medical Care, II Expected Outcomes, 4. Detainees shall be able to request health services on a daily basis and shall receive timely follow-up
Findings: Through detainee interviews and chart reviews, CCCC medical is not providing timely follow-up when requested through the sick call process.
CURRENT FINDINGS: Compliant

• 4.3 Medical Care, II Expected Outcomes, 21. Health care services shall be provided by a sufficient number of appropriately trained and qualified personnel, whose duties are governed by thorough and detailed job descriptions and who are licensed, certified, credentialed and/or registered in compliance with applicable state and federal requirements.
Findings: There are 11 full time registered nurses, along with 5 as needed nurses doing each an average of 25 hours a week. This is not sufficient in providing consistent care to a population of over 1000 detainees and inmates that includes detainees with high acuity conditions. This is evident in timely sick call follow ups for dental, mental health, and medical. It was also noted that within the prior week's schedule the medical staff put in 136 hours of overtime.
CURRENT FINDINGS: Compliant

Chronic Care *Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.*

Total number with chronic conditions:	Total number with unstable chronic conditions:
32	0

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
• PBNDS 2011 4.3, IV, J - Where there is a clinically significant finding as a result of the initial screening, an immediate referral shall be initiated and the detainee shall receive a health assessment no later than two working days from the initial screening.
FINDINGS: Seven of ten (70%) detainee identified as having chronic medical conditions had having their initial chronic care/health assessment completed in 2 working days by a medical provider. A#'s for non-compliant charts: (b)(6); (b)(7)(C)

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
There have been no reported hunger strikes since medical management transition to CoreCivic. Review of facility hunger strike policy noted to follow PBNDS 2011 standards.

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
0	1

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of 1 suicide watch medical record since transition from WellPath to CoreCivic. Detainee was placed on 1:1 constant watch, 15 minute wellness checks noted in the medical charts. Review of medical staff training records had required suicide prevention and intervention documentation. The review of the security officer's suicide watch form by medical staff is not documented within the medical chart.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of facility terminal illness policy is compliant with PBNDS 2011 standards.

Other Observations

Site Visit from 12/10/2019-12/13/2019. A total number of 100 medical records were reviewed during the site visit. There were a limited number of medical records available for review due to this site visit only reviewing the records since Corecivic began operating the medical department.

Facility Data:
IGSA operated by CoreCivic, with the medical department operated by CoreCivic as of Sept. 14, 2019.
Maximum facility population is 1100, and ICE maximum population is dependent on space available with USM and county prisoners. ICE contract has a guarantee minimum of 150 detainees; current ICE population is 137. The facility houses males in all 3 ICE custody classifications and transgenders in low and medium-low. The facility has a dedicated transgender dorm capable of housing up to 60 detainees who identify themselves as female. Current total custody population with ICE, USM, and county prisoners is at 779.

Type of Medical Records: AllScripts(EHR). Recently transitioned from paper-charts to EHR.

The Medical Housing Unit has 2 beds, both medical/negative pressure rooms that can also be used as suicide watch rooms.

--Reviewed (b)(7)(E) . Licensed personnel had current copies of licensure and up-to-date BLS certification.
--Documentation of required annual training is complete.
--Man-Down drills have been conducted and documented; no issues were identified.
--Pill line observed, process and procedure reviewed; no issues were identified.
--Pharmacy area reviewed and was noted to be secure. Facility has a full time pharmacy tech on staff. Medication refrigerator temperature logs checked and accurate. Quarterly pharmacist inspection and certification was documented.
--Medical housing, suicide watch, and segregation areas were observed. The review of the security officer's suicide watch form by medical staff is not documented
--Lab area refrigerator temperature log verified and accurate. CLIA license was current.
--Medical diets are available and ordered. The diets were renewed at least every 90 days when continuance needed.
--Transgender housing and care is based on the PBNDS 2011 standards; no issues were identified.

Deficiencies for Areas Evaluated

AMERICAN OVERSIGHT

PBNDS 2011:

• PBNDS 2011 4.3, V, B - The HSA is a physician or health care professional and shall be identified to detainees.
FINDINGS: The newly hired HSA is not a licensed health care professional.

• PBNDS 2011 4.3, IV, M - Each facility's health care provider shall conduct a comprehensive health assessment, including a physical examination and mental health screening, on each detainee within 14 days of the detainee's arrival unless more immediate attention is required due to an acute or identifiable chronic condition.
FINDINGS: Comprehensive health assessments are not being completed within 14 days of arrival to Cibola.

• PBNDS 2011 4.3, V, C, 2 - …screening for TB is initiated at intake and in accordance with Center for Disease Control and Prevention (CDC) guidelines.
FINDINGS: For a two-month period, detainees only received TB symptom screening while at the facility due to a national shortage of PPD. (Note: Chest x-ray or blood testing was not used as an option during the 2 month period.)

• PBNDS 2011 4.3, IV, O, 3 & 4 - Any detainee referred for mental health treatment shall receive an evaluation by a qualified health care provider no later than 72 hours after the referral, or sooner if necessary.
FINDINGS: Detainees referred for mental health evaluation are not being evaluated by a mental health provider within 72 hours of the referral.

• PBNDS 2011 4.3, V, O, 4 - The provider shall develop an overall treatment/management plan.
FINDINGS: Treatment Plans were not documented on detainees evaluated by mental health providers.

• PBNDS 2011 4.3, II, 22 - Detention and health care personnel shall be trained initially and annually in the proper use of emergency medical equipment and shall respond to health-related emergency situations.
Findings: Medical staff are not receiving training in proper use of medical emergency equipment; e.g. equipment in emergency bags -- some nurses have never looked in to the bag or know how to use oral airways or the manual pump.

• PBNDS 2011 4.3, II, 23 - Information about each detainee's health status shall be treated as confidential.
FINDINGS: Security staff are handling sick call requests in order to deposit them in the medical box.

QMC Tool:

• Laboratory orders are not being completed as ordered by medical providers.
• Laboratory reports were not received back timely nor was there clinical acknowledgment of the findings.
• No time urgency is documented for specialty care or laboratory orders.
• No Special Needs Forms are completed for detainees that have medical equipment in general population
• SEG rounds medical documentation is not found in the patient medical chart. There is insufficient information on the security SEG monitoring form to clearly know patient medical/ mental health status.
• Refusals are not acquired for significant medications that are not administered (e.g. anticonvulsive, diabetic, hypertension, HIV, etc.).
• Detainees not taking medications consistently or missing 3 consecutive doses are not being referred to a medical provider.
• There are delays in providing HIV travel medications when detainees are released as mandated by immigration courts.
• Medical staff are not familiar with new CoreCivic medical policies and PBNDS 2011.
• Nursing is not documenting review of the security officer's suicide watch form.
• Detainees identified as having HIV are not seen by an infectious disease specialist within

AMERICAN OVERSIGHT

30 days of arrival.
• Detainees identified as having hypertension are not receiving base line laboratory tests as per CoreCivic chronic care guidelines.
• Diabetics did not have a baseline HgbA1C, degree of control documented nor a strategy to attain control.
• HIV patients did not have CD4 and viral loads drawn within 14 days of arrival or last 3 months.
• HIV patient did not have a CXR within 72 hours of arrival/identification; was only symptom screened.
• Vital signs on all medical encounters are not documented (Noted in sick call encounters).
• List of chronic care ICE detainees are not identified or separated from facility USM and County prisoners.
• No outbound or inbound progress note for detainee referred for emergency services.
• Hospital records noting the assessment, evaluation and treatment plan were not present in the medical record; only documents present were the patient discharge instructions.
• Post-hospital assessments do not reflect hospital findings and concurrence or justification for deviation from hospital recommendations.
• Mental health notes did not document assessment, treatment plan and follow-up.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES

Suicide Screening

Refer to the QMC Inspection Worksheet.

Health Assessment

Refer to the QMC Inspection Worksheet.

Eight of 20 (40%) did not have a PPD placed during medical screen when applicable and read within 48-72; or, if PPD was positive, a chest x-ray was ordered and read. A#s: (b)(6); (b)(7)(C) (b)(6); (b)(7)(C)

Four of 19 (21%) did not have timely follow up of a chronic condition. A#s: (b)(6); (b)(7)(C) (b)(6); (b)(7)(C)

Four of 20 (20%) did not have a completed health assessments within 14 days of arrival by a mid-level provider (MLP) or physician (MD), with those with chronic conditions being seen by a MLP or MD in 2 working days. A#s: (b)(6); (b)(7)(C)

Urgent Care (Sick Call)

Refer to the QMC Inspection Worksheet.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

Refer to the QMC Inspection Worksheet.

Zero of one (0%) had notes for each outbound emergency encounter. (b)(6); (b)(7)(C)

Zero of one (0%) had discharge documentation from the hospital/Emergency Department(ED)in the chart. (b)(6); (b)(7)(C)

Zero of one (0%) had an inbound assessment. (b)(6); (b)(7)(C)

Zero of one (0%) had an assessment reflective of hospital finding or justification for deviations from hospital/ED recommendations upon return to the facility. (b)(6); (b)(7)(C)

NOTE: on 2/10/2020 - QMC tool revised for cEED-3 to reflect that patient did not have the actual ED notes in the medical record; only the patient education discharge information was available in the medical record.

Medication Administration Practices

Refer to the QMC Inspection Worksheet.

Five of ten (50%) of charts had three or more refusals. A#s: (b)(6); (b)(7)(C) (b)(6); (b)(7)(C)

Six of seven (86%) of charts had three or more consecutive refusals that did not have required documentation that the prescribing clinician was notified of the consecutive refusals, as per facility policy. A#s: (b)(6); (b)(7)(C) (b)(6); (b)(7)(C)

Six of seven (86%) that needed referral to a provider for 3 or more refusals did not have an appropriate response from the clinician. A#s: (b)(6); (b)(7)(C) (b)(6); (b)(7)(C)

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES (continued)

Continuity of Medication

Refer to the QMC Inspection Worksheet.

One of four (25%) did not have medication ordered in less than 24 hours from time of completed intake screening. (b)(6); (b)(7)(C)
One of four (25%) did not have the first dose of medication administered in less than 24 hours. (b)(6); (b)(7)(C)

Mental Health Screen

Refer to the QMC Inspection Worksheet.

Three of 10 (30%) detainees referred for mental health evaluation were not being evaluated by a mental health provider within 72 hours of the referral. A#s: (b)(6); (b)(7)(C)
(b)(6); (b)(7)(C)

Medical Recordkeeping Practices

Refer to the QMC Inspection Worksheet.

Pregnant Women

N/A

Dental Care

Refer to the QMC Inspection Worksheet.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES (continued)

Acute Laboratory Testing

Refer to the QMC Inspection Worksheet.

One of three (33%) had blood drawn or test done within 1 business day of the ordered date. (b)(6); (b)(7)(C)

One of three (33%) had the report back within 24 hours, as appropriate, for acute labs or within 7 days for routine labs. (b)(6); (b)(7)(C)

One of three (33%) had clinical acknowledgment. (b)(6); (b)(7)(C)

Diagnostic Services and Specialty Care Access

Refer to the QMC Inspection Worksheet.

Mental Health Treatment Planning

Refer to the QMC Inspection Worksheet.

One of ten (10%) did not have a clinical assessment , treatment, and follow-up plan documented.

Treatment of Disability

Refer to the QMC Inspection Worksheet.

Complaints and Grievances

Refer to the QMC Inspection Worksheet.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES
CHRONIC DISEASES

Diabetes

Refer to the QMC Inspection Worksheet.

Zero of one (0%) had baseline HgbA1c performance within 30 days.
Zero of one (0%) had documentation of degree of diabetes control.
Zero of one (0%) had a strategy to attain diabetes control when HgbA1C was above goal.
A#: (b)(6); (b)(7)(C)

Human Immunodeficiency Virus (HIV)

Refer to the QMC Inspection Worksheet.

One of five (20%) did not have a CD4+ and viral load completed within 14 days of arrival or within the last 3 months. A#: (b)(6); (b)(7)(C)
Four of five (80%) were not seen by an HIV/ID specialist within 30 days of identification.
A#s: (b)(6); (b)(7)(C)
One of five (20%) did not have a CXR completed within 72 hours of problem identification.
Patient only had a symptom screening done. A#: (b)(6); (b)(7)(C)

NOTE: 2/10/2020 QMC revision - Detainee (b)(6); (b)(7)(C) was added to the QMC tool; was inadvertently left off the original submission.

Hypertension

Refer to the QMC Inspection Worksheet.

One of three (33%) did not follow chronic disease guideline usage with included baseline laboratory. A# (b)(6); (b)(7)(C)

Asthma

Refer to the QMC Inspection Worksheet.

Seizure Disorder

Refer to the QMC Inspection Worksheet.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

HSA, warden, and several CoreCivic detention and medical representatives had a short meeting with FMC to discuss the facility findings.

Per CoreCivic Medical Director and (a)HSA, all deficiencies will be addressed promptly.

AMERICAN OVERSIGHT

Additional Comments

FMCs are not advised of issues from CoreCivic regarding medical serivces/issues. The FMCs are being notified by other entities of issues or concerns after the fact.
Facility is not tracking transgender detainees even after reeducation by FMCs. When information is requested, receipt is often delayed due to lack of tracking.

CRCL conducted a site visit to Cibola in August 2019; the final report is pending. However, notes from the close out report showed multiple issues concerning the medical care.

Medical Care

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There were no PBNDS 2011 medical care deficiencies noted.

PREVIOUS SITE VISIT FINDINGS:

There were no PBNDS 2011 medical care deficiencies noted.

Chronic Care

Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.

Total number with chronic conditions:	Total number with unstable chronic conditions:
79	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

The chronic care log is updated daily and documents the status and control of chronic conditions. Medical orders for chronic patients were noted to be followed appropriately. The facility uses BOP guidelines for chronic illnesses.

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

AMERICAN OVERSIGHT

Description of deficiencies:

There have been no reported hunger strikes in the last 12 months. Review of facility hunger strike policy noted to follow PBNDS 2011 standards.

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
0	26

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of 10 suicide watch medical records since last site visit noted to comply with NCCHC and PBNDS standards. All were placed on 1:1 constant watch and every 15 minute documentation of patient observation was noted in the medical charts. Review of medical staff training records had required suicide prevention and intervention documentation.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	1

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of facility terminal illness policy is compliant with PBNDS 2011 standards. The review on one medical recorded death in last 12 months showed the facility had treated the detainee with PBNDS 2011 standards. Detainee was identified as needing further medical attention during the intake medical screening, transported to the hospital, and succame to complications from their chronic medical conditions.

Other Observations

Site Visit from 7/31/2018 to 8/2/2018. A total of 126 medical records were reviewed during this site visit.

Facility Data:
IGSA operated by CoreCivic, with the medical department operated by Wellpath.
Maximum facility population is 1100, and ICE maximum population is dependent on space available with USM and county prisoners. ICE contract has a guarantee minimum of 150 detainees; current population 260. The facility houses males and transgenders in all 3 ICE custody classifications. The facility has a dedicated transgender dorm capable of housing up to 60 detainees who identify themselves as female.

Current Staffing:
(b)(7)(E)

Type of Medical Records: Paper charts. Wellpath is currently looking into companies providing software for Electronic Health Records (EHR).

The Medical Housing Unit has 2 beds, both medical/negative pressure rooms that can also be used as suicide watch rooms.

AMERICAN OVERSIGHT

--Reviewed (b)(7)(E) Licensed personnel had current copies of licensure and up-to-date BLS certification.
--Documentation of required annual training is complete.
--Man-Down drills have been conducted and documented; no issues were identified.
--Pill line observed, process and procedure reviewed; no issues were identified.
--Pharmacy area reviewed and was noted to be secure. Facility has a pharmacist on staff who completes quarterly reviews; temperature logs checked and accurate.
--Medical housing, suicide watch, and segregation areas observed; no issues were identified.
--Lab area refrigerator temperature log verified and accurate.
--Over-the-Counter (OTC) medication is provided in medical and in commissary with the clinical director's and health authority's documented approval.
--Medical diets are available and ordered. The diets are renewed as needed.
--Transgender housing and care is based on the PBNDS 2011 standards; no issues were identified.

Deficiencies for Areas Evaluated

PBNDS 2011:

There were no PBNDS 2011 medical care deficiencies noted

Quality of Care:

--Detainees were not timely evaluated after submitting sick call requests or evaluated in a timely matter when referred to a medical providers from the sick call process.
--Blood Glucose levels were not documented on all diabetic detainees during the medical intake screening.
--Chest X-rays to rule out tuberculosis were not completed on all HIV detainees.
--Detainees refusing 3 consecutive prescribed medication or having consistently missed prescribed medication were not referred to the prescribing provider.
--Medication Administration Records (MARs) had several blank spaces for prescribed medications and no documentation regarding why medication was not administered/missed.
--Detainees with identified disabilities did not have documented assessments of needed assistance with activities of daily living (ADL) upon identification of disability.
--Detainees with asthma did not get a peak flow completed during the Chronic Care visits.
--Documentation of medical staff reviewing the suicide watch 1:1 documentation by security staff was not completed.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES

Suicide Screening

Refer to the QMC Tools.

-There have been 20 suicide watches since the last site visit January 2018.

Health Assessment

Refer to the QMC Tools.

Urgent Care (Sick Call)

Refer to the QMC Tools.

Sick call requests were collected and triaged each day, and non-urgent requests were evaluated a given an appointment within 2 - 6 days, dependent on the medical complaint. The urgent care room had appropriate supplies and equipment needed for urgent/emergent care within the capabilities stated in facility policy (BLS).

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

Refer to the QMC Tools.

Medication Administration Practices

Refer to the QMC Tools.

The facility currently uses paper MARs. MARs had several blank spaces for prescribed medications and no documentation on why medication was not administered/missed. There was no evidence that staff was pre-pouring medication. Hand washing with gel hand sanitizer observed. Patient "medication administration rights" were observed, and at least two identifiers were in use, including the detainee identification card. The pharmacy storage area was inspected and was properly secured; refrigerator logs are maintained properly, and quarterly pharmacist inspection and certification documented.

AMERICAN OVERSIGHT

Continuity of Medication

Refer to the QMC Tools.

Mental Health Screen

Refer to the QMC Tools.

Medical Recordkeeping Practices

Refer to the QMC Tools.

The facility uses paper charting and Wellpath is currently looking into companies providing software for Electronic Health Records.

Pregnant Women

ICE Females are not detained at the facility at this time.

Dental Care

Refer to the QMC Tools.

AMERICAN OVERSIGHT

Acute Laboratory Testing

Refer to the QMC Tools.

Diagnostic Services and Specialty Care Access

Refer to the QMC Tools.

Mental Health Treatment Planning

Refer to the QMC Tools.

Treatment of Disability

Refer to the QMC Tools.

All were non-applicable with providing ADL assistance due to all having ability to complete ADL without any assistance.

Complaints and Grievances

Refer to the QMC Tools.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES
CHRONIC DISEASES

Diabetes

Refer to the QMC Tools.

Human Immunodeficiency Virus (HIV)

Refer to the QMC Tools.

Hypertension

Refer to the QMC Tools.

Asthma

Refer to the QMC Tools.

Seizure Disorder

Refer to the QMC Tools.

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

HSA, warden, and facility ICE personnel had a short meeting with FMC to discuss the facility findings.

Per HSA Statement:

Facility CQI program will continue along with the use of IHSC site visit tools. The quality of care issues will be addressed.

Additional Comments

AMERICAN OVERSIGHT

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.

- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody $\geq$ 14 days.
- In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq$ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.

TIPS FOR REVIEWERS

- Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

- Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.

AMERICAN OVERSIGHT

• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

Medical Care

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

• 4.3 Medical Care, II Expected Outcomes, 4. Detainees shall be able to request health services on a daily basis and shall receive timely follow-up
Findings: Through detainee interviews and chart reviews, CCCC medical is not providing timely follow-up when requested through the sick call process.

• 4.3 Medical Care, II Expected Outcomes, 21. Health care services shall be provided by a sufficient number of appropriately trained and qualified personnel, whose duties are governed by thorough and detailed job descriptions and who are licensed, certified, credentialed and/or registered in compliance with applicable state and federal requirements.
Findings: There are (b)(7)(E) doing each an average of 25 hours a week. This is not sufficient in providing consistent care to a population of over 1000 detainees and inmates that includes detainees with high acuity conditions. This is evident in timely sick call follow ups for dental, mental health, and medical. It was also noted that within the prior week's schedule the medical staff put in 136 hours of overtime.

Chronic Care *Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.*

Total number with chronic conditions:	Total number with unstable chronic conditions:
54	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
The chronic care log is updated daily and documents the status and control of chronic conditions. Medical orders for chronic patients were noted to be followed appropriately. The facility uses BOP guidelines for chronic illnesses.

AMERICAN OVERSIGHT

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There have been no reported hunger strikes in the last 12 months. Review of facility hunger strike policy noted to follow PBNDS 2011 standards.

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
0	16

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of 9 suicide watch medical records since the last site visit noted to comply with PBNDS 2011 standards. All were placed on 1:1 constant watch, and every 15 minute documentation of patient observation was noted in the medical charts. Review of medical staff training records had required suicide prevention and intervention documentation. The review of the security officer's suicide watch form by medical staff is not documented.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	1

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of facility terminal illness policy is compliant with PBNDS 2011 standards. The review on one medical recorded death in the last 12 months showed the facility had treated the detainee with PBNDS 2011 standards. Detainee was identified as needing further medical attention during the intake medical screening, transported to the hospital, and succame to complications from their chronic medical conditions.

Other Observations

Site Visit from 5/14/2019 to 5/16/2019. A total of 114 medical records were reviewed during this site visit.

Facility Data:
IGSA operated by CoreCivic, with the medical department operated by Wellpath.
Maximum facility population is 1100, and ICE maximum population is dependent on space available with USM and county prisoners. ICE contract has a guarantee minimum of 150 detainees; current ICE population is 177. The facility houses males and transgenders in all 3 ICE custody classifications. The facility has a dedicated transgender dorm capable of housing up to 60 detainees who identify themselves as female. Current total custody population with ICE, USM, and county prisoners is at 1043.

Current Staffing:
(b)(7)(E)

Type of Medical Records: Paper charts. Wellpath is currently looking into companies providing software for Electronic Health Records (EHR).

AMERICAN OVERSIGHT

The Medical Housing Unit has 2 beds, both medical/negative pressure rooms that can also be used as suicide watch rooms.

--Reviewed (b)(7)(E) Licensed personnel had current copies of licensure and up-to-date BLS certification.
--Documentation of required annual training is complete.
--Man-Down drills have been conducted and documented; no issues were identified.
--Pill line observed, process and procedure reviewed; no issues were identified.
--Pharmacy area reviewed and was noted to be secure. Facility has a full time pharmacy tech on staff. Medication refrigerator temperature logs checked and accurate. Quarterly pharmacist inspection and certification was documented.
--Medical housing, suicide watch, and segregation areas observed. The review of the security officer's suicide watch form by medical staff is not documented
--Lab area refrigerator temperature log verified and accurate. CLIA license was current.
--Over-the-Counter (OTC) medication is provided in medical and in commissary with the clinical director's and health authority's documented approval.
--Medical diets are available and ordered. The diets were renewed at least every 90 days when continuance needed.
--Transgender housing and care is based on the PBNDS 2011 standards; no issues were identified.

Deficiencies for Areas Evaluated

PBNDS 2011:

• 4.3 Medical Care, II Expected Outcomes, 4. Detainees shall be able to request health services on a daily basis and shall receive timely follow-up
Findings: Through detainee interviews and chart reviews, CCCC medical is not providing timely follow-up when requested through the sick call process.

• 4.3 Medical Care, II Expected Outcomes, 21. Health care services shall be provided by a sufficient number of appropriately trained and qualified personnel, whose duties are governed by thorough and detailed job descriptions and who are licensed, certified, credentialed and/or registered in compliance with applicable state and federal requirements.
Findings: There are 11 full time registered nurses, along with 5 as needed nurses doing each an average of 25 hours a week. This is not sufficient in providing consistent care to a population of over 1000 detainees and inmates that includes detainees with high acuity conditions. This is evident in timely sick call follow ups for dental, mental health, and medical. It was also noted that within the prior week's schedule the medical staff put in 136 hours of overtime.

QMC Tools:

• Diabetic detainees are not getting a documented blood sugar during the medical intake screening
• Detainees with asthma are not getting peak flow measurements during the initial health assessment or each chronic care visit
• Detainees with disabilities do not have documentation of being assessed for needed assistance with ADLs (Activities of Daily Living)
• Time urgency is not documented by providers on referrals to outside specialties

Other Finding:

• The review of the security officer's suicide watch form by medical staff is not documented
• Documentation of after-hours sick call requests due to non-urgent issues is not done. documented.

Recommendations

Address PBNDS 2011 Standards and Quality of Care issues below:

PBNDS 2011:

• 4.3 Medical Care, II Expected Outcomes, 4. Detainees shall be able to request health services on a daily basis and shall receive timely follow-up
Findings: Through detainee interviews and chart reviews, CCCC medical is not providing timely follow-up when requested through the sick call process.

• 4.3 Medical Care, II Expected Outcomes, 21. Health care services shall be provided by a sufficient number of appropriately trained and qualified personnel, whose duties are governed by thorough and detailed job descriptions and who are licensed, certified, credentialed and/or registered in compliance with applicable state and federal requirements.
Findings: There are 11 full time registered nurses, along with 5 as needed nurses doing each an average of 25 hours a week . This is not sufficient in providing consistent care to a population of over 1000 detainees and inmates that includes detainees with high acuity conditions. This is evident in timely sick call follow ups for dental, mental health, and medical. It was also noted that within the prior week's schedule the medical staff put in 136 hours of overtime.

QMC Tools:

• Diabetic detainees are not getting a documented blood sugar during the medical intake screening
• Detainees with asthma are not getting peak flow measurements during the initial health assessment or each chronic care visit
• Detainees with disabilities do not have documentation of being assessed for needed assistance with ADLs (Activities of Daily Living).
• Time urgency is not documented by providers on referrals to outside specialties

Other Finding:

• The review of the security officer’s suicide watch form by medical staff is not documented
• Documentation of after-hours sick call requests due to non-urgent issues is not done

Facility Actions

HSA, warden, and facility ICE personnel had a short meeting with FMC to discuss the facility findings.

Per HSA Statement:

Facility CQI program will continue along with the use of IHSC site visit tools. The PBNDS 2011 and quality of care issues will be addressed.

AMERICAN OVERSIGHT

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.

- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody $\geq$ 14 days.
- In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq$ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.

TIPS FOR REVIEWERS

- Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

- Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.

AMERICAN OVERSIGHT

• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

cHA-1	Initial screen complete within 12 hours of booking?
cHA-2	PPD placed during medical screening and read within 48-72 hours, or chest x-ray is taken, or if PPD is positive by history, chest x-ray is ordered and read?
cHA-3	Are detainees who screen positive for mental illness or suicide risk referred for evaluation?
cHA-4	Is there timely follow-up for significant findings of acute and chronic conditions? *A significant finding is a condition that, without timely intervention, could lead to deterioration in function, pain, death, or risk to the public health.
cHA-5	Is there a complete health evaluation? Vital signs, adequate medical and behavioral health history, physical examination by licensed MD/PA/NP/RN within 14 days of booking? Patients with HIV, diabetes, dialysis, asthma (on daily meds), and other chronic illness will be seen within 2 business days or addressed by phone and seen on the next business day.

MEDICATION ADMINISTRATION RECORDS					
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	10				
Purpose:	To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.				
Source:	MARS.				
Sample:	MAR and medical record for 10 patients, if available. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.				
Guidelines:					
Remarks:	The facility currently uses paper MARs. MARs with blank spaces for prescribed medications had documentation on why medication was not administered/missed. There was no evidence that staff was pre-pouring medication. Hand washing with gel hand sanitizer observed. Patient "medication administration rights" were observed, and at least two identifiers were in use, including the detainee identification card. The pharmacy storage area was inspected and was properly secured; refrigerator logs are maintained properly, and quarterly pharmacist inspection and certification documented.				
Reviewer:	(b)(6); (b)(7)(C)		**Date Reviewed:**	5/14/2019	
Facility (f)					
fMAR-1:	Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up?			Y	
fMAR-2:	Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs?			10	
fMAR-3:	In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month?			0	
fMAR-4:	Estimate the percentage of patients on self-administered medication ordered by a provider.			75	
fMAR-5:	OTCs provided by medical, commissary or both?			Both	
Clinical (c)					
cMAR-1	What is the number of refusals and no shows during the previous month for each patient?				
cMAR-2	Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?				
cMAR-3	Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

MEDICAL RECORD-KEEPING PRACTICES

Number of Files Reviewed for Patients Meeting this Criteria:* (please select # of no files/patients reviewed)	10
Purpose:	To assess completeness of the medical record and appropriateness of medical record practices.
Source:	Medical Records, Chronic Care Log, and MARs.
Sample:	10 records of detainees with chronic disease, if available.
Instructions:	For all answers that are "partial compliance" or "non-compliant", the reviewer should insert a comment in the remarks section of the report. For example, if most of the progress notes are legible, but one or two practitioner's notes are barely legible, the appropriate comment would be "Dr. XX's notes are not legible."
Guidelines:	NCCHC 2014 J-H-01, J-H-03.
Remarks:	Wellpath is currently looking into companies providing software for Electronic Health Records
Reviewer:	[redacted] **Date Reviewed:** 5/14/2019

Medical Care

☐ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☒ >3 Standards

Description of deficiencies:

• 4.3 Medical Care, II Expected Outcomes, 21. Health care services shall be provided by a sufficient number of appropriately trained and qualified personnel, whose duties are governed by thorough and detailed job descriptions and who are licensed, certified, credentialed and/or registered in compliance with applicable state and federal requirements.

Findings: There are (b)(7)(E) doing each an average of 25 hours a week. This is not sufficient in providing consistent care to a population of over 1000 detainees and inmates that includes detainees with high acuity conditions. This is evident in timely sick call follow ups for dental, mental health, and medical. It was also noted that within the prior week's schedule the medical staff put in 136 hours of overtime.

FINDINGS: Non-Compliant. Cibola ICE cleared nurses includes (b)(7)(E)

(b)(7)(E)

• PBNDS 2011 4.3, II, 14., Each detainee shall receive a comprehensive medical, dental and mental health intake screening as soon as possible, but no later than 12 hours after arrival at each detention facility.

Findings: Non-Compliant. 16 of 20 (80%) had initial screen completed within 12 hours of booking. A#s: (b)(6); (b)(7)(C)

AMERICAN OVERSIGHT

Findings from December 2019 Site Visit:

• PBNDS 2011 4.3, IV, M - Each facility's health care provider shall conduct a comprehensive health assessment, including a physical examination and mental health screening, on each detainee within 14 days of the detainee's arrival unless more immediate attention is required due to an acute or identifiable chronic condition.
DEC 2019 FINDINGS: Non-Compliant. Comprehensive health assessments are not being completed within 14 days of arrival to Cibola. 16 of 20 (80%) had a completed health assessment within 14 days of arrival by a mid-level provider (MLP) or physician (MD), with those with chronic conditions being seen by a MLP or MD in 2 working days. A#s for non-compliant charts: (b)(6); (b)(7)(C)
CURRENT FINDINGS: Non-Compliant. Comprehensive health assessments continue to not be within 14 days of arrival to Cibola after the medical staff had been educated on the standard and instructed to schedule all routine health assessments on day 10. 12 of 16 (75%) had a completed health assessment within 14 days of arrival by a mid-level provider (MLP) or physician (MD). Four were non-applicable due to being removed/released prior to 14 days at Cibola. A#s: (b)(6); (b)(7)(C)

• PBNDS 2011 4.3, V, C, 2 - …screening for TB is initiated at intake and in accordance with Center for Disease Control and Prevention (CDC) guidelines
DEC 2019 FINDINGS: Non-Compliant. For a two-month period, detainees only received TB symptom screening while at the facility due to a national shortage of PPD. (Note: Chest x-ray or blood testing was not used as an option during the 2 month period.) 12 of 20 (60%) had a PPD placed during medical screen when applicable and read within 48-72. A#s for non-compliant charts: (b)(6); (b)(7)(C) and (b)(6); (b)(7)(C)
CURRENT FINDINGS: Non-Compliant. Cibola has had PPD serum for TB testing in stock since DEC 2019 site visit. 16 of 18 (88%) had a PPD placed during medical screen when applicable and read within 48-72. A#s: (b)(6); (b)(7)(C) Two were non-applicable due to being removed/released in less than 72 hours after arriving at Cibola.

• PBNDS 2011 4.3, IV, O, 3 & 4 - Any detainee referred for mental health treatment shall receive an evaluation by a qualified health care provider no later than 72 hours after the referral, or sooner if necessary.
DEC 2019 FINDINGS: Non-Compliant. Seven of ten (70%) detainees referred for mental health evaluation were being evaluated by a mental health provider within 72 hours of the referral. A#s for non-compliant charts: (b)(6); (b)(7)(C)
CURRENT FINDINGS: Non-Compliant. Medical staff had received training on scheduling mental health referrals within 72 hours since the DEC 2019 site visit. Nine of ten (90%) detainees referred for mental health evaluation were evaluated by a mental health provider within 72 hours of the referral. A#: (b)(6); (b)(7)(C)

• PBNDS 2011 4.3, II, 22 - Detention and health care personnel shall be trained initially and annually in the proper use of emergency medical equipment and shall respond to health-related emergency situations.
DEC 2019 Findings: Medical staff are not receiving training in proper use of medical emergency equipment; e.g. equipment in emergency bags -- some nurses have never looked into the bag or know how to use oral airways or the manual pump.
CURRENT FINDINGS: Since the December 2019 site visit, Cibola had documented staff training on emergency response and the emergency equipment, such as the emergency response bag. However, (b)(7)(E) continued to be unfamiliar with equipment in the response bag.

• PBNDS 2011 4.3, II, 23 - Information about each detainee's health status shall be treated as confidential.
DEC 2019 FINDINGS: Security staff are handling sick call requests in order to deposit them in the medical box.
CURRENT FINDINGS: Security staff had training concerning the handling of sick call request slips, and signs have been placed in the dorms (English and Spanish) instructing detainees in the proper procedure of submitting a sick call request. Compliant.

AMERICAN OVERSIGHT

• PBNDS 2011 4.3, V, B - The HSA is a physician or health care professional and shall be identified to detainees.
FINDINGS: Compliant. HSA has previous history working as an HSA in correction environments.

• PBNDS 2011 4.3, V, O, 4 - The provider shall develop an overall treatment/management plan.
FINDINGS: Compliant

Chronic Care *Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.*

Total number with chronic conditions:	Total number with unstable chronic conditions:
0	0

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Current total number of detainees with chronic conditions is zero, detainee charts reviewed were those that arrived after the DEC 2019 site visit and the portions of medical records of those still at Cibola after the DEC 2019 site visit.
• PBNDS 2011 4.3, IV, J - Where there is a clinically significant finding as a result of the initial screening, an immediate referral shall be initiated and the detainee shall receive a health assessment no later than two working days from the initial screening.
DEC 2019 FINDINGS: Non-Compliant. Seven of ten (70%) detainees identified as having chronic medical conditions had their initial chronic care/health assessment completed in 2 working days by a medical provider. A#'s for non-compliant charts: (b)(6); (b)(7)(C)
(b)(6); (b)(7)(C)
CURRENT FINDINGS: Non-Compliant. There is documentation of provider staff being trained on this standard after the DEC 2019 site visit. Seven of ten (70%) had a health assessment completed in 2 working days. A#s: (b)(6); (b)(7)(C)

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
There have been no reported hunger strikes since DEC 2019 site visit. Review of facility hunger strike policy noted to follow PBNDS 2011 standards.

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
0	1

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
No detainees have been placed on suicide watch since the DEC 2019 site visit. Review of medical staff training records had required suicide prevention and intervention documentation.
DEC 2019 FINDING: The review of the security officer's suicide watch form by medical staff is not documented within the medical chart.
CURRENT FINDING: Corecivic medical are developing a process on who and how often the review of the security officers suicide watch form will occur.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of facility terminal illness policy is compliant with PBNDS 2011 standards.

Other Observations

Site Visit from 2/4/2020-2/6/2020. A total number of 48 medical records were reviewed during the site visit. There were a limited number of medical records available for review due to this site visit only reviewing the records since the December 2019 site visit.

Facility Data:
IGSA operated by CoreCivic, with the medical department operated by CoreCivic as of Sept. 14, 2019.
Maximum facility population is 1100, and ICE maximum population is dependent on space available with USM and county prisoners. ICE contract has a guarantee minimum of 150 detainees; current ICE population is 48. The facility houses males in all 3 ICE custody classifications. The facility also housed transgenders in low and medium-low until January 24, 2020. The facility has a dedicated transgender dorm capable of housing up to 60 detainees who identify themselves as female. Current total custody population with ICE, USM, and county prisoners is at 618.

Type of Medical Records: AllScripts (EHR), including the medication administration records.

The Medical Housing Unit has 2 beds, both medical/negative pressure rooms that can also be used as suicide watch rooms.

--Reviewed (b)(7)(E) Licensed personnel had current copies of licensure and up-to-date BLS certification.
--Documentation of required annual training is complete.
--Man-Down drills have been conducted and documented; no issues were identified but Cibola medial was recommended to complete medical man-down drills initiated by the Medical department rather than having security oversee all man-down drills.
--Pill line observed, process and procedure reviewed.
--Pharmacy area reviewed and was noted to be secure. Facility has a full-time pharmacy tech on staff. Medication refrigerator temperature logs checked and accurate. Quarterly pharmacist inspection and certification was documented.
--Medical housing, suicide watch, and segregation areas were observed.
--Lab area refrigerator temperature log verified and accurate. CLIA license was current.
With the hire of a certified medical assistant, the facility had caught up with December and January orders the week prior to this site visit.

Deficiencies for Areas Evaluated

PBNDS 2011:

AMERICAN OVERSIGHT

• 4.3 Medical Care, II Expected Outcomes, 21. Health care services shall be provided by a sufficient number of appropriately trained and qualified personnel, whose duties are governed by thorough and detailed job descriptions and who are licensed, certified, credentialed and/or registered in compliance with applicable state and federal requirements.
Findings: There are (b)(7)(E) (b)(7)(E) This is not sufficient in providing consistent care to a population of over 1000 detainees and inmates that includes detainees with high acuity conditions. This is evident in timely sick call follow ups for dental, mental health, and medical. It was also noted that within the prior week's schedule the medical staff put in (b)(7)(E)

FINDINGS: Non-Compliant. (b)(7)(E)
(b)(7)(E)

• PBNDS 2011 4.3, II, 14., Each detainee shall receive a comprehensive medical, dental and mental health intake screening as soon as possible, but no later than 12 hours after arrival at each detention facility.
Findings: Non-Compliant. 12 of 16 (80%) had initial screen completed within 12 hours of booking. A#s: (b)(6); (b)(7)(C)

• PBNDS 2011 4.3, IV, M - Each facility's health care provider shall conduct a comprehensive health assessment, including a physical examination and mental health screening, on each detainee within 14 days of the detainee's arrival unless more immediate attention is required due to an acute or identifiable chronic condition.
FINDINGS: Non-Compliant. Comprehensive health assessments continue to not be within 14 days of arrival to Cibola after the medical staff had been educated on the standard and instructed to schedule all routine health assessments on day 10. 12 of 16 (75%) had a completed health assessment within 14 days of arrival by a mid-level provider (MLP) or physician (MD). Four were non-applicable due to being removed/released prior to 14 days at Cibola. A#s: (b)(6); (b)(7)(C)

• PBNDS 2011 4.3, V, C, 2 - …screening for TB is initiated at intake and in accordance with Center for Disease Control and Prevention (CDC) guidelines
FINDINGS: Non-Compliant. Cibola has had PPD serum for TB testing in stock since the DEC 2019 site visit. 16 of 18 (88%) had a PPD placed during medical screen when applicable and read within 48-72. A#s: (b)(6); (b)(7)(C) Two were non-applicable due to being removed/released in less than 72 hours after arriving at Cibola.

• PBNDS 2011 4.3, IV, O, 3 & 4 - Any detainee referred for mental health treatment shall receive an evaluation by a qualified health care provider no later than 72 hours after the referral, or sooner if necessary.
FINDINGS: Non-Compliant. Medical staff had received training on scheduling mental health referrals within 72 hours since the DEC 2019 site visit. Nine of ten (90%) detainees referred for mental health evaluation were being evaluated by a mental health provider within 72 hours of the referral. A#: (b)(6); (b)(7)(C)

• PBNDS 2011 4.3, II, 22 - Detention and health care personnel shall be trained initially and annually in the proper use of emergency medical equipment and shall respond to health-related emergency situations.
FINDINGS: Since the DEC 2019 site visit, Cibola had documented training of staff on emergency response and the emergency equipment, such as the emergency response bag, but staff continue to be unfamiliar with equipment in the response bag.

• PBNDS 2011 4.3, IV, J - Where there is a clinically significant finding as a result of the initial screening, an immediate referral shall be initiated and the detainee shall receive a

AMERICAN OVERSIGHT

health assessment no later than two working days from the initial screening.
FINDINGS: Non-Compliant. There is documentation of provider staff being trained on this standard after the DEC 2019 site visit. Seven of ten (70%) had a health assessment completed in 2 working days. A#s: (b)(6); (b)(7)(C)

QMC FINDINGS:

--Four medical staff have not completed annual or new hire TB testing per CoreCivic policy
--Medical staff orientation is established, but many staff reported not being appropriately precepted.
--Potential life threating medication error regarding insulin administration was noted and prevented by the El Paso Field Medical Coordinator performing the Cibola site visit. The error was reported to the Cibola acting health service administrator.
--There are times when security staff are not maintaining presence during medication passes.
--Refusals are not acquired for significant medications that are not administered (e.g. anticonvulsive, diabetic, hypertension, HIV, etc.).
--Detainees not taking medications consistently or missing 3 consecutive doses are not being referred to a medical provider per facility policy.
--The review of the security officer's suicide watch form by medical staff is pending a set facility process.
--Medications are not being continued from intake.
--Detainees identified as having HIV are not seen by an infectious disease specialist within 30 days of arrival
--HIV medications are not being started in a timely manner
--Lab orders are not completed timely
--The state of chronic disease as being controlled or uncontrolled is not documented
--Orders in electronic health records are not appropriately inputted, causing delayed or missed orders. Providers are unfamiliar with inputting stat orders in the EMR.
--Transgender detainees are not being tested for STDs. A#: (b)(6); (b)(7)(C)
--Scheduling of medical appointments is unorganized and causing delays in care. All medical clinic appointments and mental health/provider/labs are inputted through medical records, who are over-tasked with other duties or are receiving incorrect requests from medical staff.
--Assessments on medical complaints are not fully investigated; trangenders were noted to have rectal bleeding but no visualization of anus was conducted. A#s: (b)(6); (b)(7)(C)
--Documentation of encounters are occurring 1-2 days after the assessment without being noted as a late entry. (b)(6); (b)(7)(C)
--Consents for psychotropic medications are not being completed when continuing medication from intake.
--Consult note was not scanned into detainee medical record after medical specialty evaluation; in so, there was no clinician acknowledgment of the report.
--Baseline HgbA1C are not being performed on diabetic detainees within 30 days of intake
--Specialty consult notes are not scanned into to medical records where clinicians and acknowledge the reports in 7 days.

ASSESSMENT OF QUALITY OF HEALTH SERVICES

Suicide Screening

Refer to the QMC Inspection Worksheet.

Health Assessment

Refer to the QMC Inspection Worksheet.

Two of 18 (11%) did not have a PPD placed during medical screen when applicable and read within 48-72; or, if PPD was positive, a chest x-ray was ordered and read. A#s: A#s: (b)(6); (b)(7)(C)

Three of ten (30%) did not have timely follow up of a chronic condition. A#s: (b)(6); (b)(7)(C) (b)(6); (b)(7)(C)

Four of 16 (25%) did not have a completed health assessment within 14 days of arrival by a mid-level provider (MLP) or physician (MD). A#s: (b)(6); (b)(7)(C) and (b)(6); (b)(7)(C)

Urgent Care (Sick Call)

Refer to the QMC Inspection Worksheet.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

Refer to the QMC Inspection Worksheet.

Medication Administration Practices

Refer to the QMC Inspection Worksheet.

One of ten (10%) of charts had three or more refusals. A#s: (b)(6); (b)(7)(C)
Zero of one (0%) of charts that had three or more consecutive refusals did not have required documentation that the prescribing clinician was notified of the consecutive refusals, as per facility policy. A#s: (b)(6); (b)(7)(C)
Zero of one (0%) that needed referral to a provider for 3 or more refusals did not have an appropriate response from the clinician. A#: (b)(6); (b)(7)(C)

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES (continued)

Continuity of Medication

Refer to the QMC Inspection Worksheet.

One of four (25%) did not have medication ordered in less than 24 hours from time of completed intake screening. (b)(6); (b)(7)(C)
One of four (25%) did not have the first dose of medication administered in less than 24 hours. (b)(6); (b)(7)(C)

Mental Health Screen

Refer to the QMC Inspection Worksheet.

One of ten (10%) detainees referred for mental health evaluation were not being evaluated by a mental health provider within 72 hours of the referral. A#: (b)(6); (b)(7)(C)

Medical Recordkeeping Practices

Refer to the QMC Inspection Worksheet.

Two of ten (20%) did not have consents for psychotropic continued from intake, but did have medical consents for care. A#s: (b)(6); (b)(7)(C)
One of ten (10%) did not have results of specialty consultations and referrals (acknoledeged and dated) A#: (b)(6); (b)(7)(C)

Pregnant Women

Female ICE detainees are not housed at Cibola

Dental Care

Refer to the QMC Inspection Worksheet.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES (continued)

Acute Laboratory Testing

Refer to the QMC Inspection Worksheet.

Zero of four (0%) had blood drawn or test done within 1 business day of the ordered date.
A#s: (b)(6); (b)(7)(C)

Diagnostic Services and Specialty Care Access

Refer to the QMC Inspection Worksheet.

One of five (20%) did not have clinician acknowledgment of the specialist's report in the medical record within 7 days of the date the service was performed. A#: (b)(6); (b)(7)(C)

Mental Health Treatment Planning

Refer to the QMC Inspection Worksheet.

Treatment of Disability

Refer to the QMC Inspection Worksheet.

Complaints and Grievances

Refer to the QMC Inspection Worksheet.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES
CHRONIC DISEASES

Diabetes

Refer to the QMC Inspection Worksheet.

One of Three (33%) did not have a baseline HgbA1c performance within 30 days. A#: (b)(6); (b)(7)(C)
One of Three (33%) did not have degree of control (goal HgbA1C) documented. A#: (b)(6); (b)(7)(C)

Human Immunodeficiency Virus (HIV)

Refer to the QMC Inspection Worksheet.

One of two (50%) was not seen by an HIV/ID specialist within 30 days of identification. A#s: (b)(6); (b)(7)(C)

Hypertension

Refer to the QMC Inspection Worksheet.

Asthma

Refer to the QMC Inspection Worksheet.

Seizure Disorder

Refer to the QMC Inspection Worksheet.

Medical Care

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

PBNDS Medical Care 4.3 E. Facilities shall provide appropriate interpretation and language services for LEP (Limited English Proficiency) detainees...
FINDINGS: Forms requiring detainee signatures did not have an area for documentation of the use or non-use of a translator.(Patient speaks English, Provider fluent in patient's language, or translator used with translator name/number and language)

PBNDS Medical Care 4.3 I. All health care staff must be verifiably licensed, certified, credentialed, and/or registered in compliance with applicable state and federal requirements. copies of the documents must be maintained on site and readily available for review.
FINDINGS: Scopes of practice for licensed non-independent providers were not documented.

PREVIOUS PRE-OCCUPANCY VISIT FINDINGS 10/26/2016:

Medical Care 4.3 V. All facilities shall provide medical staff and sufficient support personnel to meet these standards (PBNDS).
FINDINGS: Facility plan was to have (b)(7)(E) from other IGSA ICE facilities who were to be temporarily on-site to assist with the initial opening and ramp up of the facility, and (b)(7)(E) that worked at the facility during BOP occupancy were scheduled to return.
CORRECTIVE ACTION & CURRENT STATUS: Staffing levels have increased and ICE is limiting amount of detainees at the facility and adjusting population based on e-QIP clearance of new staff.

Medical Care 4.3 F.1. Adequate space and equipment shall be furnished in all facilities so

AMERICAN OVERSIGHT

that all detainees may be provided basic health examinations and treatment in private while ensuring safety.
FINDINGS: Intake space lacked a designated area for medical to perform intake screenings. The suggested process was to use the medical clinic as overflow, however, due to the size limitations in the medical clinic, this would severely impair the ability of the clinic to perform normal daily operations. Additionally, the mixing of TB cleared and those that are pending clearance would pose infection control challenges. Medical clinic waiting area is only able to accommodate 10 detainees at one time. Historically, the facility utilized the chapel as an overflow medical clinic waiting room. It was undetermined at the time if the chapel would be used for this purpose.
CORRECTIVE ACTION & CURRENT STATUS: Four rooms were made available in intake area for medical screening and use of translator phone lines. The chapel serves as an additional waiting area for daily medical appointments.

Medical Care 4.3 E. Facilities shall provide appropriate interpretation and language services for LEP (Limited English Proficiency) detainees related to medical and mental health care…detainees shall not be used for interpretation services during any medical or mental health service. Interpretation and translation services by other detainees shall only be provided in an emergency medical situation.
FINDINGS: Availability of a private room/area with telephone capabilities, or availability of a cordless phone to use interpretation services to communicate with detainees who have LEP, away from the intake processing desk, is not available.
CORRECTIVE ACTION & CURRENT STATUS: Four rooms were made available in intake area for medical screening and each has have use of a translator phone line.

Medical Care 4.3 Q. Each facility shall have a sick call procedure that allows detainees the unrestricted opportunity to freely request health care services (including mental health and dental services) provided by a physician or other qualified medical staff in a clinical setting.
FINDINGS: Sick call is completed through submitting a kite in a secured medical mail box near the medical clinic. Access to the medical mailbox is not readily available to all sections of the facility to include several dormitories.
CORRECTIVE ACTION & CURRENT STATUS: A medical mailbox was installed near each section of dormitories.

Medical Care 4.3 V.B. The CMA (Clinical Medical Authority) together with the HSA establishes the processes and procedures necessary to meet the medical standards outlined herein (PBNDS).
FINDINGS: Though the facility medical policies have been adapted from other Correct Care Solutions facilities, the actual processes/procedures must be written and communicated to medical staff.
CORRECTIVE ACTION: Staff training has occurred to inform the medical staff of established facility policies and procedures.

Medical Care 4.3 Y.4. c. Transfer of health records. (Requires a copy of the full medical record upon release or transfer of the detainee)
FINDINGS: The facility had no current plan to provide a copy of the complete medical record when a detainee transfers.
CORRECTIVE ACTION & CURRENT STATUS: The facility is no longer required to provide a copy of the full medical record according to the December 2016 revisions to PBNDS 2011.

Chronic Care *Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.*

Total number with chronic conditions:	Total number with unstable chronic conditions:
22	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
The chronic care log is updated daily and documents the status and control of chronic conditions. Medical orders for chronic patients were noted to be followed appropriately.

AMERICAN OVERSIGHT

The facility uses BOP guidelines for chronic illnesses.

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

There have been no reported hunger strikes since the intake of ICE detainees to the facility. Review of facility hunger strike policy noted to follow standards.

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
2	2

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of 2 of 2 medical records noted to comply with standards. All were placed on 1:1 constant watch and every 15 minute documentation of patient observation was noted in the medical charts.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of facility terminal illness policy is compliant with standards.

Other Observations

Site Visit from 1/24/2017 to 1/26/2017. A total of 54 medical records were reviewed during this site visit.

Facility Data:
IGSA operated by by Corrections Corporation of America (CCA), with the medial department operated by Correct Care Solutions (CCS).
Maximum ICE population 500, current population 149, all male facility, to include all three levels of ICE detainees.
The facility had been occupied by the Federal Bureau of Prisons until contract termination in September 2016. Contracted by ICE in October 2016.

Current Staffing:

(b)(7)(E)

Type of Medical Records: Paper charts. CCS is currently researching vendors for Electronic Health Records(EHR).

The Medical Housing Unit has 2 beds, both medical/negative pressure rooms that can also be

AMERICAN OVERSIGHT

used as suicide watch rooms.

--Reviewed (b)(7)(E) Licensed personnel had current copies of licensing, and the staff had up-to-date BLS certification. Scopes of Practice for licensed non-independent providers are not documented.
--Documentation of required annual training was incomplete due the facility currently composing official training folders (review of the items covered in medical staff training appeared to meet required standards, and this FMC will follow up on this item on the next quarterly site visit)
--One Man-Down drill has been conducted and documented since the facility received detainees.
--Sick call observed, process and procedure reviewed; no issues were identified.
--Pill line observed, process and procedure reviewed; no issues were identified.
--Pharmacy area reviewed and was noted to be secure. Facility has a pharmacist on staff who completes quarterly reviews; temperature logs checked and accurate.
--Medical housing, suicide watch, and segregation areas observed; no issues were identified.
--Medical diets are available and ordered. The diets are renewed as needed.
-- Medical crash cart is secured with a metal lock and the majority of the medical staff do not have access to open the lock
-- N-95 OSHA medical evaluation and fit testing not documented (Facility was in the process of completing this item)
-- There is no record of staff varicella immunity status which may place them at risk due to the higher than normal incidents of varicella with ICE detainees.

Deficiencies for Areas Evaluated

PBNDS 2011 Deficiencies:

Medical Care 4.3 E. Facilities shall provide appropriate interpretation and language services for LEP (Limited English Proficiency) detainees...
FINDINGS: Forms requiring detainee signatures do not have an area for documentation of the use or non-use of a translator.(Patient speaks English, Provider fluent in patient's language —with stated language, or translator used with translator name/number and language)

Medical Care 4.3 I. all health care staff must be verifiably licensed, certified, credentialed, and/or registered in compliance with applicable state and federal requirements. copies of the documents must be maintained on site and readily available for review.
FINDINGS: Scopes of Practice for licensed non-independent providers are not documented in credential files.

Quality of Care Findings:

-- Vital signs are not documented on clinical visits involving mental health or dental.
-- Lab results are not being reviewed with the patients.
-- There is no documentation of the review of incoming transfer summaries
-- Insulin dependent diabetic patients are not required to be on lower bunks.
-- Medical crash cart is secured with a metal lock and the majority of the medical staff do not have access to open the lock.
-- Medical staff is not familiar with the location of medication and equipment within the crash cart and emergency bag.
-- N-95 OSHA medical evaluation and fit testing not documented (Facility currently in the process of completing this item)
-- There is no record of staff varicella immunity status

AMERICAN OVERSIGHT

Suicide Screening

2 Charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

-There have been 2 suicide watches since the facility opened.

-The facility mental health professional uses a suicide risk management screening instrument that does include the asking for a history of suicide attempts and for current suicidal ideation.

-All medical staff in direct contact with detainees are trained to assess suicide risk.

Two of two (100%) were evaluated by a mental heal professional within 24 hours of identification, and daily while on suicide watch.

Two of two (100%) were on constant 1:1 watch by a security officer with checks documented consistently.

Two of two (100%) had no evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch.

Health Assessment

10 Charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

Ten of ten (100%) had initial screenings that were completed within 12 hours of arrival.

Ten of ten (100%) had PPD placed during medical screen when applicable and read within 48-72. If PPD was positive, a chest x-ray was ordered and read.

Two of two (100%) charts with positive screening for mental illness or suicide risk were referred for evaluation.

Ten of ten (100%) had timely follow up of a chronic condition.

Ten of ten (100%) had completed health assessments within 14 days of arrival by a mid-level provider (MLP) or physician (MD), with those with chronic conditions being seen by a MLP or MD in 2 working days.

Subsequent finding: There is no documentation of the review of incoming transfer summaries during intake medical screening, either on the summary itself or on the medical screening form.

Urgent Care (Sick Call)

10 charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

Ten of ten (100%) had timely and appropriate evaluations by nursing staff, care delivered within the scope of the nurse's license, and documented vital signs.

Four of four (100%) had referrals submitted to the MD/MLP/DMD within 24 hours where appropriate.

Four of four (100%) that had been referred, had MD/MLP/DMD documented assessment and plan.

Sick call requests were collected and triaged at night, and non-urgent requests were evaluated the next day. The urgent care room had appropriate supplies and equipment needed for urgent/emergent care within the capabilities stated in facility policy (BLS), but staff were not familiar with the location of medication and equipment within the crash cart and emergency bag.

Subsequent finding: Vital signs are not documented on clinical visits involving mental health or dental.

AMERICAN OVERSIGHT

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

2 charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

Two of two (100%) had notes for each outbound emergency encounter and had no evidence that earlier intervention may have prevented the need for ED referral or admission.

Two of two(100%) had discharge documentation from the hospital/Emergency Department(ED), and an inbound assessments with no deviations from hospital/ED recommendations upon return to the facility.

Medication Administration Practices

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Zero of ten charts had three or more refusals, or consecutive refusals that would have required documentation that the prescribing clinician was notified of the consecutive refusals.

Zero of ten required referral to a provider for 3 or more refusals.

The facility currently uses paper MARs which showed no missed doses other than those that were as needed (PRN). There was no evidence that staff was pre-pouring medication. Hand washing with gel hand sanitizer observed. Patient "medication administration rights" were observed, and at least two identifiers were in use, including the detainee identification card. The pharmacy storage area was inspected and was properly secured; refrigerator logs are maintained properly, and quarterly pharmacist inspection and certification documented.

Lab area refrigerator temperature log verified and accurate.

Non-prescription medication is only provided in medical and not the commissary

AMERICAN OVERSIGHT

Continuity of Medication

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had medication ordered in less than 24 hours from time of completed intake screening.

Ten of ten (100%) had the first dose of medication administered in less than 24 hours.

Mental Health Screen

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Nine of nine (100%) that had a positive screen for mental illness or suicide risk were referred for evaluation and were evaluated by the LPC in a timely manner (emergent = immediately; urgent = within 24 hours; routine = within 7 days).

One chart was non-applicable due to having a negative screening for mental illness.

Medical Recordkeeping Practices

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

The facility uses paper charting and CCS is currently looking into companies providing software for Electronic Health Records.

Facility medical records was found to be complaint in identifying information, current problem list, receiving screen and health assessment forms, encounters with significant findings/diagnosis/treatments/and dispositions, signed clinician orders for medications, placement of Medication Administration Records within 2 weeks of previous month, acknowledgment and dating of lab and diagnostic reports, flowsheets, consents for medial care and treatment, signing of refusals of care, documented date and time on each encounter, integrating medical/dental/mental health records, and timely filing within 72 hours.

Pregnant Women

Females are not detained at this facility at this time.

Dental Care

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) were screened for dental symptoms during the intake process.

Eight of eight (100%)were evaluated by a qualified health professional within 48 hours of request, and dental clinical notes described findings, diagnosis,treatment and plan. Two charts did not need evaluation by a qualified health professional.

AMERICAN OVERSIGHT

Eight of eight (100%)that were evaluated had a follow-up treatment as recommended.

AMERICAN OVERSIGHT

Acute Laboratory Testing

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had blood drawn or test done within 1 business day of the ordered date.

Ten of ten (100%) with non acute routine lab orders had a report of results within 7 days, clinical acknowledgment, and an appropriate clinical response.

Three of ten (30%) had documentation that the lab results were reviewed with the detainee.

Subsequent finding: Noted lab results are being acknowledged by the ordering provider, but there is no documentation that the results were reviewed with the patients.

Diagnostic Services and Specialty Care Access

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had a documented time of urgency included on the order for specialty care or diagnostic services.

Ten of ten (100%) had the appointment accomplished within 45 days of the order or within the ordered time-frame, e.g. "return in 90 days."

Ten of ten (100%) specialist reports had documentation of acknowledgment by the facility clinician within 7 days of the date the service was performed.

None of the charts required re-evaluation for deterioration every 30 days until off-site service completed due to all having service completed within 30 days.

Mental Health Treatment Planning

9 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Nine of nine (100%) had a clinical assessment , treatment, and follow-up plan documented.

Nine or nine (100%) had a treatment plan updated at a minimum of every 90 days.

Treatment of Disability

0 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

The facility has had no detainees identified with a disability since receiving ICE detainees; however, there were no areas of concern noted during review of medical records, facility processes, procedures, and policy.

Complaints and Grievances

0 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

The facility has had no detainee grievances since receiving ICE detainees; however, there were no areas of concern noted during review of medical records, facility processes,

AMERICAN OVERSIGHT

procedures, and policy.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES
CHRONIC DISEASES

Diabetes

3 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Three of three (100%) had blood sugar measured and recorded on intake.

Three of three (100%) were seen for chronic care by MLP/MD within fourteen days of illness identification.

Three of three (100%) had HgbA1c performance within 30 days

Three of three (100%) had lipids measured within one year.

Three of three (100%) had documentation of degree of diabetes control and a strategy to attain diabetes control when HgbA1C was above goal.

Three of three (100%) were non-applicable for being followed at least every 90 days with appropriate vital signs due to being at the facility less than 30 days.

Insulin dependent diabetic patients are not required to be on lower bunks which may place them at a higher risk for injury

Human Immunodeficiency Virus (HIV)

0 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

The facility has had no detainees identified with a HIV since receiving ICE detainees; however, there were no areas of concern noted during review of medical records, facility processes, procedures, and policy.

Hypertension

6 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Six of six (100%) had documented blood pressure reading at intake and were seen by an MD/NP within 14 days of illness identification.

Two of two (100%)whose blood pressure was >140 systolic or >90 diastolic had a treatment plan initiated within 14 days of identification.

Five of five (100%) had chronic disease guideline usage with included baseline laboratory. One was non-applicable due to removal/release prior to having ordered laboratory testing.

Asthma

3 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Three of three (100%) were seen by a provider with in 14 days of illness identification.

Three of three (100%)had peak flow completed on initial physical exam.

Three of three (100%) had peak flow completed at the Chronic Care visit.

Three of three (100%) followed chronic disease guidelines, which addressed disease severity, prescription of medication consistent with severity, and documented degree of control.

Seizure Disorder

1 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

AMERICAN OVERSIGHT

One of one (100%) had an appropriate neurological history completed at the initial physical examination.

One of one (100%) were seen by a provider within 14 days of illness identification.

One of one (100%) had serum drug levels performed and acknowledged in the medical record at least every 3 months until stable.

One of one (100%) had a treatment plan established.

One of one (100%) had orders for a bottom bunk

AMERICAN OVERSIGHT

Recommendations

(b)(5)

Facility Actions

HSA, AHSA and facility ICE personnel had a short meeting with FMC to discuss issues identified.

Per HSA statements:

--Forms will be revised noting use or non-use of translator services
--Scopes of practice will be added to personnel records
--Vital signs will now be documented with all mental health and dental clinical visits
--Providers will be educated in documenting review of labs with patients and a process will be established where RNs can review normal labs with patients.
--Intake staff will be educated on documentation of reviewing transfer summaries
--Insulin dependent diabetic patients will all be assigned lower bunks
--The lock on the crash cart has been removed and a breakable locking tab is now used
--Staff will be educated on items in the emergency bags and crash chart
--N-95 OSHA medical evaluation and fit testing is now in the process of completion
--Varicela immunity status will be added to staff health records.

Medical Care

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
There were no medical care deficiencies

Chronic Care

Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.

Total number with chronic conditions:	Total number with unstable chronic conditions:
33	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
The chronic care log is updated daily and documents the status and control of chronic conditions. Medical orders for chronic patients were noted to be followed appropriately. The facility uses BOP guidelines for chronic illnesses.

Hunger Strike

Total number on active hunger strike:	Total number of hunger strikes in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
There have been no reported hunger strikes since the intake of ICE detainees to the facility. Review of facility hunger strike policy noted to follow NCCHC and PBNDS standards.

AMERICAN OVERSIGHT

Suicide Prevention and Intervention

Total number on suicide watch:	Total number of suicide watches in last 12 months:
0	11

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of 6 suicide watch medical records since last site visit noted to comply with PBNDS standards. All were placed on 1:1 constant watch and every 15 minute documentation of patient observation was noted in the medial charts. Review of medical staff training records had required suicide prevention and intervention documentation.

Terminal Illness, Advance Directives, and Death

Total number of active DNR cases:	Total number of deaths in last 12 months:
0	0

☒ Compliant Non-Compliant with: ☐ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:
Review of facility terminal illness policy is compliant with PBNDS standards.

Other Observations

Site Visit from 6/7/2017 to 6/9/2017. A total of 96 medical records were reviewed during this site visit.

Facility Data:
IGSA operated by by Corrections Corporation of America (CCA), with the medial department operated by Correct Care Solutions (CCS).
Maximum ICE population 884, current population 186. The 3 levels of ICE detainees are males and transgenders.
The facility had been occupied by the Federal Bureau of Prisons until contract termination in September 2016. Contracted by ICE in October 2016.
The facility has a dedicated transgender dorm.

ACA certification: Not completed since ICE has contracted the facility.
Nakamoto Group: March 2017, no deficiencies.

Current Staffing:

(b)(7)(E)

These vacancies were based on facility maximum population 884, but current population is 186

AMERICAN OVERSIGHT

so current staffing levels are appropriate.

Type of Medical Records: Paper charts. CCS is currently looking into companies providing software for Electronic Health Records(EHR).

The Medical Housing Unit has 2 beds, both medical/negative pressure rooms that can also be used as suicide watch rooms.

--Reviewed (b)(7)(E) Licensed personnel had current copies of licensing, and the staff had up-to-date BLS certification.
--Documentation of required annual training is complete.
--Man-Down drills have been conducted and documented, no issues were identified.
--Sick call observed, process and procedure reviewed; no issues were identified.
--Pill line observed, process and procedure reviewed; no issues were identified.
--Intake observed, process and procedure reviewed; n9o issues were identified.
--Pharmacy area reviewed and was noted to be secure. Facility has a pharmacist on staff who completes quarterly reviews; temperature logs checked and accurate.
--Medical housing, suicide watch, and segregation areas observed; no issues were identified.
--Lab area refrigerator temperature log verified and accurate.
--Non-prescription medication is only provided in medical and not the commissary
--Medical diets are available and ordered. The diets are renewed as needed.
--Transgender housing and care is based on the PBNDS 2011 standards, no issues were identified.

Deficiencies for Areas Evaluated

There were no deficiencies noted in the areas evaluated.

PREVIOUS SITE VISIT FINDINGS:

PBNDS Medical Care 4.3 E. Facilities shall provide appropriate interpretation and language services for LEP (Limited English Proficiency)
FINDINGS: Forms requiring detainee signatures did not have an area for documentation of the use or non-use of a translator.(Patient speaks English, Provider fluent in patient's language with stated language, or translator used with translator name/number and language)
CORRECTIVE ACTION and CURRENT STATUS: Forms requiring detainee signature have an area for documentation of use or non-use of a translator.

PBNDS Medical Care 4.3 I. All health care staff must be verifiably licensed, certified, credentialed, and/or registered in compliance with applicable state and federal requirements. copies of the documents must be maintained on site and readily available for review.
FINDINGS: Scopes of Practice for licensed non-independent providers were not documented.
CORRECTIVE ACTION and CURRENT STATUS: Scopes of Practice for licensed non-independent providers are being documented and filed in medical personnel files.

Previous Quality of Care Findings:

-- Vital signs are not documented on clinical visits involving mental health or dental.
CURRENT STATUS: Vital Signs are being documented on all mental health and dental visits
-- Lab results are not being reviewed with the patients.
CURRENT STATUS: Labs are being reviewed with patients.
-- There is no documentation of the review of incoming transfer summaries.
CURRENT STATUS: Transfer summary are being signed off as being reviewed by the intake nurse.
-- Insulin dependent diabetic (IDDM) patients are not required to be on lower bunks.
CURRENT STATUS: All IDDM patients are being assigned lower bunks
-- Medical crash cart is secured with a metal lock and the majority of the medical staff do not have access to open the lock.
CURRENT STATUS: The lock on the crash cart has been removed and replaced with a breakable seal.
-- Medical staff is not familiar with the location of medication and equipment within the

AMERICAN OVERSIGHT

crash cart and emergency bag.
CURRENT STATUS: Staff have documented training on emergency equipment use and are familiar with medication and supplies in the crash cart and emergency bag.
-- N-95 OSHA medical evaluation and fit testing not documented (Facility was in the process of completing this item)
CURRENT STATUS: All medial staff have documented N-95 fit testing and evaluation.
-- There is no record of staff varicella immunity status
CURRENT STATUS: All staff have varicella immunity status documented in their personell health files.

AMERICAN OVERSIGHT

Suicide Screening

3 Charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

-There have been 6 suicide watches the since last site visit January 2017.
-The facility mental health professional uses a suicide risk management screening instrument that does include the asking for a history of suicide attempts and for current suicidal ideation.
-All medical staff in direct contact with detainees are trained to assess suicide risk.

Six of six (100%) were evaluated by a mental heal professional within 24 hours of identification, and daily while on suicide watch.
Six of six (100%) were on constant 1:1 watch by a security officer with checks documented consistently.
Six of six (100%) had no evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch.

Health Assessment

20 Charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

Twenty of twenty (100%) had initial screenings that were completed within 12 hours of arrival.
Twenty of twenty (100%) had PPD placed during medical screen when applicable and read within 48-72. If PPD was positive, a chest x-ray was ordered and read.
Seven of seven (100%) of charts with positive screening for mental illness or suicide risk were referred for evaluation. The other thirteen charts has negative screenings.
Twenty of twenty (100%) had timely follow up of a chronic condition.
Twenty of twenty (100%) had completed health assessments within 14 days of arrival by a mid-level provider (MLP) or physician (MD), with those with chronic conditions being seen by a MLP or MD in 2 working days.

Urgent Care (Sick Call)

10 charts were reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

Ten of ten (100%) had timely and appropriate evaluations by nursing staff, care delivered within the scope of the nurse's license, and documented vital signs.
Five of five (100%) had referrals submitted to the MD/MLP/DMD within 24 hours where appropriate.
Five of five (100%) that had been referred, had MD/MLP/DMD documented assessment and plan.

Sick call requests were collected and triaged at night, and non-urgent requests were evaluated the next day. The urgent care room had appropriate supplies and equipment needed for urgent/emergent care within the capabilities stated in facility policy (BLS).

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

10 charts reviewed with the IHSC Quality of Care Audit tool to evaluate this area.

Ten of ten (100%) had notes for each outbound emergency encounter and had no evidence that earlier intervention may have prevented the need for ED referral or admission.
Ten of ten(100%) had discharge documentation from the hospital/Emergency Department(ED), and an inbound assessments with no deviations from hospital/ED recommendations upon return to the facility.

Medication Administration Practices

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

-The facility currently has a policy for any prescribed medication that is not ordered as needed and is refused 3 or more times, shall be reported to a provider.
-Approximately 1% of the charts from the current month and previous month had consecutive refusals, no shows or blank spaces.
-Facility is currently up-to-date on filing of Medication Administration Records (MARs) in

AMERICAN OVERSIGHT

patient charts.
-Approximately 75% of patients prescribed medication are ordered by the provider as self-administered.
-Over-the-Counter (OTC) medication is only provided by the medical department.

Zero of ten charts had three or more refusals.
Zero of ten charts had three or more consecutive refusals that would have required documentation that the prescribing clinician was notified of the consecutive refusals, as per facility policy.
Zero of ten needed referral to a provider for 3 or more refusals.

The facility currently uses paper MARs. There was no evidence that staff was pre-pouring medication. Hand washing with gel hand sanitizer observed. Patient "medication administration rights" were observed, and at least two identifiers were in use, including the detainee identification card. The pharmacy storage area was inspected and was properly secured; refrigerator logs are maintained properly, and quarterly pharmacist inspection and certification documented.

AMERICAN OVERSIGHT

Continuity of Medication

10 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had medication ordered in less than 24 hours from time of completed intake screening.
Ten of ten (100%) had the first dose of medication administered in less than 24 hours.

Mental Health Screen

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten(100%) that had a positive screen for mental illness or suicide risk were referred for evaluation and were evaluated by the mental health professional in a timely manner (emergent = immediately; urgent = within 24 hours; routine = within 7 days).

Medical Recordkeeping Practices

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

The facility uses paper charting and CCS is currently looking into companies providing software for Electronic Health Records.

Facility medical records was found to be complaint in identifying information, current problem list, receiving screen and health assessment forms, encounters with significant findings/diagnosis/treatments/and dispositions, signed clinician orders for medications, placement of Medication Administration Records within 2 weeks of previous month, acknowledgment and dating of lab and diagnostic reports, flowsheets, consents for medial care and treatment, signing of refusals of care, documented date and time on each encounter, integrating medical/dental/mental health records, and timely filing within 72 hours.

Pregnant Women

Females are not detained at this facility at this time.

Dental Care

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) were screened for dental symptoms during the intake process.
Ten of ten (100%)were evaluated by a qualified health professional within 48 hours of request, and dental clinical notes described findings, diagnosis,treatment and plan.
Ten of ten (100%)that were evaluated had a follow-up treatment as recommended.

AMERICAN OVERSIGHT

Acute Laboratory Testing

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had blood drawn or test done within 1 business day of the ordered date.
Ten of ten (100%) had the report back within 24 hours, as appropriate, for acute labs or within 7 days for routine labs, clinical acknowledgment, and appropriate clinical response.
Ten of ten (100%) had documentation that the lab results were reviewed with the detainee.

Diagnostic Services and Specialty Care Access

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had a documented time of urgency included on the order for specialty care or diagnostic services.
Ten of ten (100%) had the appointment accomplished within 45 days of the order or within the ordered time-frame, e.g. "return in 90 days."
Ten of ten (100%) specialist reports had documentation of acknowledgment by the facility clinician within 7 days of the date the service was performed.
None of the charts needed re-evaluation for deterioration every 30 days until off-site service completed due to all having service completed within 30 days.

Mental Health Treatment Planning

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had a clinical assessment , treatment, and follow-up plan documented.
Ten of ten (100%) had a treatment plan updated at a minimum of every 90 days.

Treatment of Disability

5 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Five of five (100%) had the disability prominently noted in the file, along with any needed accommodations.
Five of five (100%) had been assessed for assistance with activities of daily living (ADL) upon identification of disability.
Five of five (100%) had appropriate accommodation ordered and entered

All were non-applicable with providing ADL assistance due to all having the ability to complete ADLs without any assistance.

Complaints and Grievances

0 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.

The facility has had no detainee grievances since receiving ICE detainees; however, there were no areas of concern noted during review of medical records, facility processes, procedures, and policy.

AMERICAN OVERSIGHT

ASSESSMENT OF QUALITY OF HEALTH SERVICES
CHRONIC DISEASES

Diabetes

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had blood sugar measured and recorded on intake.
Ten of ten (100%) were seen for chronic care by MLP/MD within fourteen days of illness identification.
Ten of ten (100%) had HgbA1c performance within 30 days
Ten of ten (100%) had lipids measured within one year.
Ten of ten (100%) were followed at least every 90 days with appropriate vital signs.
Four of four(100%) had aspirin prescribed as clinically indicated.
Ten of ten (100%) had documentation of degree of diabetes control
Six of six (100%) had a strategy to attain diabetes control when HgbA1C was above goal. The other four were non-applicable due to HgbA1C being below the goal.

Human Immunodeficiency Virus (HIV)

4 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Four of four (100%) had HIV status identified by prior medical records and had antiretroviral treatment considered and documented, and seen by an HIV or Infectious Disease specialist within 30 days of HIV identification.
Four of four(100%) had CD4+ and viral load completed within 14 days of arrival or within the last 3 months.
Four of four (100%) were seen by a mid-level provider or physician for chronic care at least every 90 days.
Four of four (100%) had a chest x-ray completed within 72 hours of problem identification, if not already done.

Hypertension

10 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

Ten of ten (100%) had documented blood pressure reading at intake and were seen by an MD/NP within 14 days of illness identification.
Eight of eight (100%) whose blood pressure was >140 systolic or >90 diastolic had a treatment plan initiated within 14 days of identification. The other two had normal blood pressures.
Ten of ten (100%) had chronic disease guideline usage with included baseline laboratory.

Asthma

1 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

One of one (100%) were seen by a provider with in 14 days of illness identification.
One of one (100%)had peak flow completed on initial physical exam.
One of one (100%) had peak flow completed at the Chronic Care visit.
One of one (100%) followed chronic disease guidelines, which addressed disease severity, prescription of medication consistent with severity, and documented degree of control.

Seizure Disorder

1 charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.

One of one (100%) had an appropriate neurological history completed at the initial physical examination.
One of one (100%) were seen by a provider within 14 days of illness identification.
One of one (100%) had serum drug levels performed and acknowledged in the medical record at

AMERICAN OVERSIGHT

least every 3 months until stable.
One of one (100%) had a treatment plan established.
One of one (100%) had orders for a bottom bunk

Facility Actions

HSA, warden, and facility ICE personnel had a short meeting with FMC to discuss the facility findings.

Per HSA Statement:

Facility CQI program will continue along with the use of IHSC site visit tools.

COMPLAINTS AND GRIEVANCES

DATE 01/24/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Cibola County Correctional Center

Purpose: To assess use of medical complaint and grievance data as part of the quality management program.

Source: Facility grievance logs.

Sample: Facility's periodic grievance analyses, with underlying data (grievances and responses).

Does your review of the facility's grievances reveal any possible barriers to care or repetitive concerns that could affect clinical care? Please answer yes or no no If yes, please address in the comments section whether and how the facility uses this information to implement change.

How many medical grievances were submitted over the past 3 months? _____

What percentage of this number were appropriately addressed within 5 working days of receipt? _____%

Item: 1 Of the grievances submitted over the past 3 months, enter the number of grievances in each category, i.e., availability of care, denial of request for care, etc.

2 Enter the A# for each grievance included in this category.

Grievance Type	1	2
Availability of care (sick call hours, etc.)	0	
Denial or refusal of specific request(s) for care	0	
Delay(s) in care	0	
Competency/professional skillset of medical staff	0	
Attitude, demeanor or conduct of staff	0

AMERICAN OVERSIGHT

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.

- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody $\geq$ 14 days.
- In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq$ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.

TIPS FOR REVIEWERS

- Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

- Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.

AMERICAN OVERSIGHT

• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

EVALUATION OF CARE PRIOR TO EMERGENCY DEPARTMENT/HOSPITAL VISIT FOR CONDITIONS SENSITIVE TO AMBULATORY CARE			
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	1		
Purpose:	To determine whether earlier intervention might have prevented morbidity and cost of outside care. To measure continuity and coordination of care for inbound patients.		
Source:	Emergency Department (ED) logs.		
Sample:	Within the past 6 months, 10 patients (if available) sent to ED with ambulatory sensitive conditions, such as seizure, alcohol and/or substance withdrawal, skin or deep tissue infections, DKA, abdominal pain, or chest pain.		
Guidelines:	NCCHC 2014 J-E-12.		
Remarks:			
Reviewer:	(b)(6); (b)(7)(C)	**Date Reviewed:**	12/10/2019

Clinical (c)	
cEED-1	Is there an outbound progress note?
cEED-2	Is there evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care? If yes, please describe in the remarks portion of the report.*This will require physician review in some cases. If a physician assists with completion of this review, please include his or her name in the report comments.
cEED-3	Is there discharge documentation from the hospital or ED in the chart?
cEED-4	Is there an inbound assessment?
cEED-5	Does the assessment reflect hospital findings and concurrence or justification for deviation from hospital recommendations?

MEDICATION ADMINISTRATION RECORDS									
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	10								
Purpose:	To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.								
Source:	MARS.								
Sample:	MAR and medical record for 10 patients, if available. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.								
Guidelines:									
Remarks:									
Reviewer:	(b)(6); (b)(7)(C)			**Date Reviewed:**	12/10/2019				
Facility (f)									
fMAR-1:	Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up?				Y				
fMAR-2:	Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs?				30				
fMAR-3:	In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month?				0				
fMAR-4:	Estimate the percentage of patients on self-administered medication ordered by a provider.				70				
fMAR-5:	OTCs provided by medical, commissary or both?				Both				
Clinical (c)									
cMAR-1	What is the number of refusals and no shows during the previous month for each patient?								
cMAR-2	Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?								
cMAR-3	Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

CHRONIC DISEASE – ASTHMA (MODERATE AND SEVERE)

DATE 10/17/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To assess conformance with nationally-accepted guidelines for chronic disease and to prevent deterioration in function and cost of unnecessary care.

Source: Chronic disease registry or MARs.

Sample: 10 patients with moderate or severe asthma (for example, those on inhaled or oral steroids), chosen at random.

1 Does the facility follow a particular clinical practice guideline to manage asthma? YES
If so, what is the guideline? NCCHC/Uptodate

Item # Measure

1 Was patient seen in CCC by mid-level provider or physician within 14** days of illness identification?
2 Was a peak flow completed at the initial physical exam?
3 Was a peak flow completed at the CC visit or within the last 3 months?
4 *Was a chronic disease guideline followed, which addressed disease severity, prescription of medication consistent with severity, and documented degree of control?

COMPLAINTS AND GRIEVANCES

DATE 05/02/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To assess use of medical complaint and grievance data as part of the quality management program.

Source: Facility grievance logs.

Sample: Facility's periodic grievance analyses, with underlying data (grievances and responses).

Does your review of the facility's grievances reveal any possible barriers to care or repetitive concerns that could affect clinical care? Please answer yes or no No If yes, please address in the comments section whether and how the facility uses this information to implement change.

How many medical grievances were submitted over the past 3 months? 43

What percentage of this number were appropriately addressed within 5 working days of receipt? 100 %

Item: 1 Of the grievances submitted over the past 3 months, enter the number of grievances in each category, i.e., availability of care, denial of request for care, etc.

2 Enter the A# for each grievance included in this category.

Grievance Type	1	2
Availability of care (sick call hours, etc.)	0	
Denial or refusal of specific request(s) for care	2	(b)(6); (b)(7)(C)
Delay(s) in care	11

Sample: 10 specialty patients chosen by acuity or risk of harm if access is delayed, particularly in specialties where timely access has been a problem for detainees in this facility.

Item # Measure

1. Was there a documented time urgency included on the order for specialty care or diagnostic services?
2. Was the appointment accomplished within 45 days of the order or within the ordered timeframe, e.g., "return in 90 days"?
3. Was the patient re-evaluated for deterioration every 30 days until off-site service completed?
4. Did the facility clinician acknowledge the specialist's report in the medical record within 7 days of the date the service was performed?

EVALUATION OF CARE PRIOR TO EMERGENCY DEPARTMENT/HOSPITAL VISIT FOR CONDITIONS SENSITIVE TO AMBULATORY CARE

DATE 05/01/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To determine whether earlier intervention might have prevented morbidity and cost of outside care. To measure continuity and coordination of care for inbound patients.

Source: Emergency Department (ED) logs.

Sample: Within the past 6 months, 10 patients sent to ED with ambulatory sensitive conditions, such as seizure, alcohol and/or substance withdrawal, skin or deep tissue infections, DKA, abdominal pain, or chest pain.

Item # Measure

1. Is there an outbound progress note?
2. *Is there evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care? If yes, please describe in the narrative portion of the report.
3. Is there discharge documentation from the hospital or ED in the chart?
4. Is there an inbound assessment?
5. Does the assessment reflect hospital findings and concurrence or deviation from hospital recommendations?

HEALTH ASSESSMENT

DATE 10/18/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To determine compliance with detention standards to assure continuity and coordination of care for serious medical needs.

Source: Detainees arriving during recent period, at least 2 weeks prior to review, to allow for evaluation of timely follow-up.

Sample: 20 medical records chosen at random.

Item # Measure

1 Initial screen complete within 12 hours of booking?
2 PPD placed during medical screening and read within 48-72 hours, or chest x-ray is taken, or if PPD is positive by history, chest x-ray is ordered and read?
3 Are detainees who screen positive for mental illness or suicide risk referred for evaluation?
4 Is there timely follow-up for significant findings of acute and chronic conditions?*
5 Is there a complete health evaluation? Vital signs, adequate medical and behavioral health history, physical examination by licensed MD/PA/NP/RN within 14 days of booking? Patients with HIV, diabetes, dialysis, asthma (on daily meds), and other chronic illness will be seen within 48 hours or addressed by phone and seen on the next business day.

MEDICATION ADMINISTRATION PRACTICES

DATE 05/03/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.

Source: MARS.

Sample: MAR and medical record for 10 patients. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.

1 Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up? YES

2 Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs? 10%

3 In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month? None

4 Estimate the percentage of patients on self-administered medication ordered by a provider. 40%

5 OTCs provided by medical, commissary or both? Both

Item # Measure

1 What is the number of refusals and/or no shows during the previous month for each patient?

2 Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?

3 Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

CHRONIC DISEASE – SEIZURE DISORDER

DATE 10/17/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To prevent deterioration in function and cost of unnecessary care.

Source: Chronic disease registry or MARs.

Sample: 10 patients with seizure disorder chosen at random.
What clinical practice guideline does the facility use to manage seizures? NCCHC/Uptodate

Item # Measure

1. Was an appropriate neurological history completed at the initial physical examination?
2. Was the patient seen in CCC by mid-level provider or physician within 14 days of illness identification*?
3. Were serum drug levels performed and acknowledged in the medical record every 3 months until stable, then every 6 months, where indicated?
4. Was a treatment plan established?
5. Are there orders for a bottom bunk?

SUICIDE SCREENING

DATE 05/02/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To assess conformance with nationally-accepted guidelines for suicide risk assessment and prevention.

Source: Patients on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review.

Sample: Medical records for 10 patients placed on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review.

1 What is the total number of patients placed on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review? 26

2 Does the facility use an acceptable suicide risk management screening instrument, including at a minimum, asking for a history of suicide attempts and for current suicidal ideation? ■ Yes ☐ No

3 Are all screeners and all staff in direct contact with detainees trained to assess suicide risk (see training logs)? ■ Yes ☐ No

Item # Measure

1 Was the suicidal patient evaluated by a mental health professional within 24 hours of identification (unless the situation was emergent in which case the evaluation should be immediate)?

2 Was the patient evaluated by a qualified mental health professional daily while on suicide watch?

3 What type of monitoring was practiced while the patient was on suicide watch?

4 Were checks documented consistently?

5 Is there evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch? If yes, please describe.

TREATMENT OF DISABILITY

DATE: 05/01/2018 REVIEWER: (b)(6); (b)(7)(C)

FACILITY REVIEWED: Central Arizona Florence Correctional Complex-East

Purpose: To assess the care of patients with disabilities who need accommodations to access the facility's programs or activities as a result of their disabilities.

An individual is considered to have a "disability" if s/he has a physical or mental impairment that substantially limits one or more major life activities, or has a record of such impairment.
See also: https://www.dhs.gov/sites/default/files/publications/guide-interacting-with-people-who-have-disabilties_09-26-13.pdf

Sources: Facility logs, tour of facility, list of patients who require DME (to include walkers, canes, wheel chairs, hearing aids, or other items to assist the patients to access the facility's programs and activities), and interviews with patients with disabilities who need accommodations to access the facility's programs and activities.

Sample: 10 patients within the population who have a disability that requires medical involvement. Determine if the patients with disabilities received appropriate treatment and disability accommodations through medical record examination. Mark as "Y" for yes, "N" for no, and "N/A" for not applicable. Do not leave any area blank.

General Question: Does the facility maintain a current list of all patients with disabilities on site? Yes

Item # Measure

1 Is the disability prominently noted in the file, along with any needed accommodations?

2 Was the patient assessed for assistance with activities of daily living (ADL) upon identification of disability?

3 Were appropriate accommodation orders entered (e.g., lower bunk, mobility device (wheelchair, walker, canes, crutches), hearing aid, assistive listening device, sign language interpreter, meal, etc.)?

4 Was ADL assistance provided, if applicable?

URGENT CARE (SICK CALL)

DATE 05/01/2018 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To assess for timely and appropriate nursing care for acute conditions.

Source: Urgent care log, sick call request list, or sick call visit list, preferably with reason for visit noted on log.

Sample: 10 urgent care visits by detainees with potentially serious complaints that occurred 1 to 3 weeks prior to review. Common potentially serious complaints include chest pain, abdominal pain, seizure, vomiting, skin infection, diabetic complications, etc.

Item # Measure

1 Was there timely and appropriate evaluation by nursing staff, depending on the nature of the complaint?
2 Was care delivered within the scope of the nurse's license?
3 Were vital signs documented during the nurse's assessment?
4 If necessary, was a nursing referral to a MD/PA/NP/DMD submitted within 24 hour where appropriate?
5 If referred, was an MD/PA/NP/DMD assessment and plan documented?

Other Observations

This FMC site visit was conducted on May 1-3, 2018. The audit consisted of a review of 51 medical charts, sick call log, staff training binder, staff credential folders, the policy and procedure manual, and facility clinical protocols. The vast majority of medical charts reviewed were either active charts or charts of recently released detainees.

FACILITY DATA:
Central Arizona Florence Correctional Complex-East (CAFCC-East) is a non-dedicated contracted detention facility located in Florence, AZ. It is owned and operated by CoreCivic. The facility houses a combination of US Marshal (USM) inmates, ICE detainees (ICE), Material Witnesses (MWIT), Mesa inmates (MESA), and Bureau of Prison (BOP) inmates.

POPULATION CHARACTERISTICS:
Maximum Population- 5003 (606 ICE, 4037 USM, 160 MWIT, 160 MESA, and 40 BOP).
Current Population- 4192 (574 ICE, 3381 USM, 122 MWIT, 107 MESA, and 8 BOP).

ACCREDITATIONS/INSPECTIONS:
-National Commission on Correctional Health Care (NCCHC) completed an audit on March 8, 2018 and found no deficiencies.
-ICE Office of Detention Oversite (ODO) completed an audit on Sept 12, 2017 and found one deficiency. The Clinical Medical Authority was not signing off on intakes within 12 hours of intake. CAFCC-East completed a corrective action plan (CAP) to address the deficiency. All intakes were reviewed and signed off within 24 hours or next business day by the Clinical Medical Authority on this FMC site visit as per PBNDS 2008 standards.
-The Nakamoto Group completed an audit of the facility on August 22, 2017 and found two deficiencies. TB screening was not being done within 12 hours of arrival, and the Clinical Medical Authority was not signing off on intakes within 12 hours of intake. CAFCC-East completed a corrective action plan (CAP) to address the deficiencies. TB screening was completed within 12 hours on all charts reviewed on this site visit. All intakes were reviewed and signed off within 24 hours or next business day by the Clinical Medical Authority on this FMC site visit as per PBNDS 2008 standards.
-The American Correctional Association (ACA) completed an audit on April 6, 2016 and found no deficiencies.

MEDICAL CLINIC/INFIRMARY:

AMERICAN OVERSIGHT

The main medical unit has three exam rooms, a dental clinic, nurses station, and a laboratory room for specimen collection. A locked pharmacy and locked medical records/supply room are located in main medical (facility utilizes electronic medical records). There are two negative pressure isolation rooms. There are three observation rooms, one of which is designated as a suicide observation room. Emergency equipment is located in the main medical department to include an emergency response bag, gurney, AED, portable suction, oxygen tank, and two electrocardiogram machines. Emergency equipment is checked twice a day by the nursing staff.

CREDENTIALS:
Reviewed (b)(7)(E) There were no issues with the 11 files reviewed. Licensed personnel had current copies of licensing, and the staff had up-to-date BLS certification.

CURRENT MEDICAL STAFFING:
(b)(7)(E)

Deficiencies for Areas Evaluated

PBNDS 2008 DEFICIENCIES: - None

Quality of care findings:
-Continuity of Medication: In 2 of 10 (20%) cases, the period of time from order to first dose exceeded 24 hours.
-Diabetes: Two of nine (22%) did not have a blood sugar measured at intake.
-HIV: One of one (100%) was not seen by an HIV or ID specialist within 30 days of identification. One of one (100%) did not have a CD4 and viral load completed within 14 days of arrival to the facility.
-Hypertension: One of nine (11%) did not have a documented blood pressure on the medical intake.
-Asthma: One of six (17%) did not have a peak flow measurement completed during the physical exam.

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

Suicide Screening

POLICIES REVIEWED: Policy 13-84 "Suicide Management" is compliant with PBNDS 2008.

CAFCC-East performs suicide screening on all detainees that enter the facility. During the medical intake, all detainees are asked about current suicidal ideation and past suicide attempts.
CAFCC-East also performs a comprehensive mental health evaluation on all new detainees by a mental health provider within 7 days of booking into the facility.

In the past 12 months there have been 41 detainees on suicide watch. Ten charts were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) suicidal patients were evaluated by the physician within 24 hours of identification.
-10 of 10 (100%) were evaluated by a qualified mental health professional every day.
-10 of 10 (100%) were monitored by a detention officer who documented every 15 minutes.

-In the ten charts reviewed, there was no evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Health Assessment

POLICIES REVIEWED: Policy 13-40 "Health Appraisals" is compliant with ICE PBNDS 2008.

20 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-20 of 20 (100%) had an initial intake screening within 12 hours of booking.
-20 of 20 (100%) had a transfer summary with a chest x-ray report.
-2 of 2 (100%) were referred for evaluation after having a positive screen for mental illness or suicide risk.
-20 of 20 (100%) received timely follow-up for significant findings of acute or chronic conditions.
-20 of 20 (100%) had a complete health evaluation completed within the first 14 days.

-At the time of this audit, all health appraisals are completed by either the NP or the physician.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Urgent Care (Sick Call)

POLICIES REVIEWED: Policy 13-80 "Sick Call" is compliant with PBNDS 2008.

According to the HSA, the sick call process is initiated by a detainee filling out a paper sick call request. Sick call is done seven days a week. A nurse picks up sick call requests daily, and they are addressed within 24 hours.

Ten urgent/sick call encounters were reviewed using the IHSC Quality of Care Audit Tool used to evaluate this area.
-10 of 10 (100%) charts reviewed had timely and appropriate evaluations by nursing staff, care delivered within the scope of the nurse's license, and vital signs were documented. Three detainees required a referral to MD/MLP with in 24 hours and had an MD/NP/DMD documented assessment and plan.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

AMERICAN OVERSIGHT

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

POLICIES REVIEWED: Policy 13-34 "Medical Emergency Response" is compliant with PBNDS 2008.

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-10 of 10 (100%) had an outbound progress note.
-10 of 10 (100%) showed no evidence that earlier intervention might have prevented deterioration to the point of needing ED/hospital care.
-10 of 10 (100%) had discharge documentation from the hospital and an inbound assessment. There was no evidence to suggest that earlier intervention could have prevented deterioration to the point of needing outside emergency care.

PREVIOUS FINDING (October 2017): No findings noted.

CURRENT FINDING: No findings noted.

Medication Administration Practices

POLICIES REVIEWED: Policy 13-70 "Pharmaceuticals" is compliant with PBNDS 2008.

-CAFCC-East currently uses electronic medication administration records. During direct observation, there was no evidence that staff was pre-pouring medication. Patient "medication administration rights" were observed, and at least two identifiers were in use, including the detainee armband scanner. The pharmacy storage area was inspected and was properly secured; refrigerator logs are maintained properly.

Ten medication administration records (MARs) were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-Approximately 10% of the MARs reviewed contained blanks, consecutive refusals, or no shows. In every case a refusal form was completed.
-No MARs were found pending to be filed. CAFCC-East uses electronic medication administration records (Allscripts).
-Approximately 40% of patients are on self-administered medication ordered by a provider.
-Over the Counter (OTC) medications are provided by both medical and can be purchased at the commissary.
-0 of 10 MARs reviewed had three consecutive days of refusals or 3 consecutive doses and or 4 or more doses in a week documented.

PREVIOUS FINDING (October 2017): One detainee refused 30 consecutive days of medication and the prescribing clinician was not notified.

CURRENT FINDING: No findings noted.

AMERICAN OVERSIGHT

Continuity of Medication

POLICIES REVIEWED: Policy 13-70 "Pharmaceuticals" is compliant with PBNDS 2008.

When a detainee arrives to the facility with chronic medications, the intake nurse calls the on-call provider for orders/instructions. After reviewing the medication, the provider will provide a telephone order to continue the medication, if indicated. The medication is continued until the physical exam, at which time it is reordered as necessary.

Ten charts were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) charts showed that medications were ordered in less than 24 hours from completion of the intake.
-In 8 of 10 (80%) cases, the period of time from order to first dose was less than 24 hours. In the other two cases, both detainees received their first dose two days after ordered.

PREVIOUS FINDINGS (October 2017): In 3 of 10 (30%) cases, the period of time from order to first dose exceeded 24 hours.

CURRENT FINDINGS: In 2 of 10 (20%) cases, the period of time from order to first dose exceeded 24 hours. According to the HSA, the medications on these two detainees are not kept in stock and had to be shipped to the facility from their pharmacy in Indiana. Both detainees received their first dose two days after ordered. The two medications were Accyclovir and Atripla.

Mental Health Screen

POLICIES REVIEWED: Policy 13-61 "Mental Health Services" is compliant with PBNDS 2008.

All detainees are screened for mental illness as part of the medical intake. There are several questions that address mental illness including questions that specifically refer to suicide. CAFCC-East mental health providers also perform a comprehensive mental health evaluation on all new detainees within 7 days of booking into the facility.

Ten charts selected from the mental health caseload were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) with positive screens for mental illness were evaluated by a mental health professional in a timely manner. In the majority of cases, the evaluation occurred on the following clinic day.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Medical Recordkeeping Practices

POLICIES REVIEWED: Policy 13-58 "Medical Records" is compliant with PBNDS 2008.

CAFCC-East uses an electronic medical record system (Allscripts).

Ten charts were reviewed using the IHSC Quality of Care Audit Tool. No areas of concern were noted during reviews of medical records, facility processes, procedures and policy.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Pregnant Women

N/A. Females are not housed at the facility.

AMERICAN OVERSIGHT

Dental Care

POLICIES REVIEWED: Policy 13-13 "Dental Care" is compliant with PBNDS 2008.

CAFCC-East has a full-time dentist and a full-time dental assistant. All detainees receive a dental screening by the dentist within the first 14 days of detention. Other dental services are normally requested through a sick call request. The dentist evaluates the patient the following working day and decides if treatment is appropriate. The treatment is then scheduled.

Ten charts selected from the sick call log were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) were screened for symptoms during the intake process.
-10 of 10 (100%) were evaluated by a qualified health professional within 48 hours of the request.
-10 of 10 (100%) dental notes reviewed described findings, diagnosis, treatment, and plans.
-4 of 4 (100%) were scheduled for follow-up treatment as recommended.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

AMERICAN OVERSIGHT

Acute Laboratory Testing

POLICIES REVIEWED: Policy 13-31 "Diagnostic Services" is compliant with PBNDS 2008.

None of the charts reviewed contained STAT or acute lab work orders; however, ten contained completed routine lab work. The IHSC Quality of Care Tool was used to evaluate these records.
-10 of 10 (100%) had lab work collected within one business day of the ordered date. All lab orders reviewed were considered routine, and all were ordered during the initial chronic care appointment.
-10 of 10 (100%) were routine labs and had a report back and acknowledged within seven days.
-10 of 10 (100%) had clinical acknowledgment and an appropriate clinical response.
-9 of 9 (100%) patient charts reviewed had documentation that the patient was advised of the lab results.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Diagnostic Services and Specialty Care Access

POLICIES REVIEWED: Policy 13-31 "Diagnostic Services" and Policy 13-64 "Off Site Care and Consultations" is compliant with PBNDS 2008.

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-10 of 10 (100%) had a documented time urgency included on the order for specialty care or diagnostic services. Eight of the ten had the appointment accomplished within 30 days of the order.
-10 of 10 (100%) had the appointment accomplished within 45 days of the order.
-2 of 2 (100%) were re-evaluated for deterioration every 30 days until off-site service was completed.
-10 of 10 (100%) had clinician acknowledgment for the specialist's report in the medical record within 7 days of the date the service was performed.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Mental Health Treatment Planning

POLICIES REVIEWED: Policy 13-61 "Mental Health Services" is compliant with PBNDS 2008.

Detainees are screened for potential mental health problems to include suicide risk and sexual/physical abuse history during the intake screening. Detainees who screen positive are referred to a mental health provider and are generally seen the next day. CAFCC-East mental health staff also perform a comprehensive mental health evaluation on all new detainees within 7 days of booking into the facility.

Ten records out of the active mental health case load were reviewed using the IHSC Quality of Care tool.
-10 of 10 (100%) had a clinical assessment, treatment, and follow-up plan documented.
-10 of 10 (100%) patient reviewed had a treatment plan updated at a minimum of every 90 days.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Treatment of Disability

POLICIES REVIEWED: Policy 13-82 "Special needs Treatment Plans" is compliant with PBNDS 2008.

At the time of this audit, there were four detainees documented to have a disability. The records were reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.
-The facility maintains a list of all patients with disabilities.
-4 of 4 (100%) had the disability prominently displayed in the medical file.

AMERICAN OVERSIGHT

-4 of 4 (100%) were assessed for assistance of activities of daily living (ADL) upon identification of disability and had appropriate accommodation orders entered.
-1 of 1 (100%) had ADL assistance provided.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Complaints and Grievances

POLICIES REVIEWED: Policy 13-08 "Complaint Resolution" and Policy 14-05 "Inmate-Resident Grievance Procedures"

According to the Health Service Administrator at CAFCC-East, all dorms have access to grievance forms and a locked drop box labeled for this purpose. The sick call nurse picks them up daily. All medical grievances are then given to the Clinical Supervisor, who is an RN, and reviewed. The Clinical Supervisor is then responsible for answering all medical grievances within 5 business days. After they are appropriately addressed, they are scanned into the electronic health records. A grievance log is maintained to evaluate for trends in grievances.

The IHSC Quality of Care Audit Tool was used to evaluate this area.
-A total of 43 grievances were submitted over the past 3 months.
-43 of 43 (100%) grievances were addressed within 5 working days of receipt.
-2 of 43 were related to denial or refusal of specific request for care.
-11 of 43 were related to delays in care.
-2 of 43 were related to competency/professional skillset of medical staff.
-28 of 43 were related to receiving or making changes to medications.

PREVIOUS FINDINGS (October 2017): One medical grievance was not addressed within five working days of receipt. It was appropriately addressed on the sixth working day.

CURRENT FINDINGS: No findings noted.

AMERICAN OVERSIGHT

Diabetes

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management"

Nine diabetic medical records were reviewed using the IHSC Quality of Care Tool designed for this purpose. CAFCC-East follows NCCHC clinical practice guidelines to manage diabetes.
-7 of 9 (77%) had a blood sugar measured at intake.
-9 of 9 (100%) were seen for chronic care by a medical provider within 14 days.
-7 of 7 (100%) had a baseline HgbA1C performed within the first 30 days.
-7 of 7 (100%) had lipids measured within one year.
-7 of 7 (100%) were followed at least every 90 days with appropriate vital signs.
-1 of 1 (100%) had aspirin prescribed when indicated.
-7 of 7 (100%) had a degree of control (goal HgbA1C<8.0) documented.
-4 of 4 (100%) had a strategy to attain diabetes control documented when HgbA1C was above goal.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: Two of nine (22%) did not have a blood sugar measured at intake.

Human Immunodeficiency Virus (HIV)

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management"

At the time of this audit, CAFCC-East had only one ICE detainee documented as having HIV. He was released from ICE custody 41 days after arrival to the facility. The record was reviewed using the IHSC Quality of Care Tool designed for this purpose. CAFCC-East follows NCCHC clinical practice guidelines to manage HIV.
-HIV was identified by patient interview during the medical intake.
-Detainee was scheduled to see an HIV specialist, but was released from the facility five days before the appointment.
-A CD4 and viral load were ordered but was not drawn before the detainee was released from the facility.
-Antiretroviral treatment was considered and documented.
-A chest x-ray was completed the same day that he was identified with HIV.

PREVIOUS FINDINGS (October 2017): One detainee was not seen by an HIV or ID specialist within 30 days of identification.

CURRENT FINDING: One detainee was not seen by an HIV or ID specialist within 30 days of identification. He was scheduled for the appointment, but was released from the facility five days before the appointment. A CD4 and viral load were ordered but not completed within 14 days of arrival to the facility.

Hypertension

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management"

Nine charts of hypertensive patients were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose. CAFCC-East follows NCCHC clinical practice guidelines to manage hypertension.
-8 of 9 (88%) had a documented blood pressure on the medical intake.
-9 of 9 (100%) patients were seen by a medical provider within the first 14 days of arrival at the facility.
-8 of 8 (100%) revealed intake blood pressures that had systolic blood pressure greater than 140 or a diastolic pressure greater than 90. In all eight (100%) medical records there was documentation that the nurse called and received a treatment plan from the provider which included medication and blood pressure monitoring.
-In 8 of 8 (100%) cases, it appeared that a chronic disease guideline for HTN, which included obtaining baseline lab work, was followed.

PREVIOUS FINDINGS (October 2017): No findings noted.

AMERICAN OVERSIGHT

CURRENT FINDINGS: One of nine (11%) did not have a documented blood pressure on the medical intake.

Asthma

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management"

Six charts of asthma patients were reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area. CAFCC-East follows NCCHC clinical practice guidelines to manage asthma.
-6 of 6 (100%) were seen for chronic care by a medical provider within 14 days of illness identification.
-5 of 6 (83%) had a peak flow measurement completed during the physical exam.
-6 of 6 (100%) had a peak flow measurement completed at the chronic care visit.
-6 of 6 (100%) followed a chronic disease guideline which addressed disease severity, prescription of medication consistent with severity, and documented degree of control.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: One of six (17%) did not have a peak flow measurement completed during the physical exam.

Seizure Disorder

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management"

Only one chart of a seizure patient was reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area. He was released from the facility after 10 days.
-1 of 1 (100%) had an appropriate neurological assessment completed at the initial physical exam.
-1 of 1 (100%) was seen by a medical provider within 14 days of illness identification.
-1 of 1 (100%) had an established treatment plan.
-1 of 1 (100%) had orders for a bottom bunk.

PREVIOUS FINDINGS (October 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Other Observations

This FMC site visit was conducted on October 17-20, 2017. The audit consisted of a review of 61 medical charts, sick call log, staff training binder, staff credential folders, the policy and procedure manual, and facility clinical protocols. The vast majority of medical charts reviewed were either active charts or charts of recently released detainees.

FACILITY DATA:
Central Arizona Florence Correctional Complex-East (CAFCC-East) is a non-dedicated contracted detention facility located in Florence, AZ. It is owned and operated by CoreCivic. The facility houses a combination of US Marshal (USM) inmates, ICE detainees (ICE), Material Witnesses (MWIT), Mesa inmates (MESA), and Bureau of Prison (BOP) inmates.

POPULATION CHARACTERISTICS:
Maximum Population- 1966 (686 ICE, 960 USM, 80 MWIT, 160 MESA, and 80 BOP).
Current Population- 1599 (589 ICE, 812 USM, 43 MWIT, 111 MESA, and 44 BOP).

ACCREDITATIONS/INSPECTIONS:
-ICE Office of Detention Oversite (ODO) completed an audit on Sept 12, 2017 and found one deficiency. The Clinical Medical Authority was not signing off on intakes within 12 hours of intake. CAFCC-East completed a corrective action plan (CAP) to address the deficiency. All intakes were reviewed and signed off within 24 hours or next business day by the Clinical Medical Authority on this FMC site visit as per PBNDS 2008 standards.
-The Nakamoto Group completed an audit of the facility on August 22, 2017 and found two deficiencies. TB screening was not being done within 12 hours of arrival, and the Clinical Medical Authority was not signing off on intakes within 12 hours of intake. CAFCC-East completed a corrective action plan (CAP) to address the deficiencies. TB screening was completed within 12 hours on all charts reviewed on this site visit. All intakes were reviewed and signed off within 24 hours or next business day by the Clinical Medical Authority on this FMC site visit as per PBNDS 2008 standards.
-The American Correctional Association (ACA) completed an audit on April 6, 2016 and found no deficiencies.
-National Commission on Correctional Health Care (NCCHC) completed an audit on February 23, 2016 and found no deficiencies.

MEDICAL CLINIC/INFIRMARY:
The main medical unit has three exam rooms, a dental clinic, nurses station, and a laboratory

AMERICAN OVERSIGHT

room for specimen collection. A locked pharmacy and a locked medical records/supply room are located in main medical (facility utilizes electronic medical records). There are two negative pressure isolation rooms. There are three observation rooms, one of which is designated as a suicide observation room. Emergency equipment is located in the main medical department to include an emergency response bag, gurney, AED, portable suction, oxygen tank, and two eloctrocardiogram machines. Emergency equipment is checked twice a day by the nursing staff.

Deficiencies for Areas Evaluated

PBNDS 2008 DEFICIENCIES: -One detainee's medical grievance was not addressed within five working days of receipt. It was appropriately addressed on the sixth working day.

Quality of care findings:
-Medication Administration Practices: One detainee refused 30 consecutive days of medication and the prescribing clinician was not notified.
-Continuity of Medication: In 3 of 10 (30%) cases, the period of time from order to first dose exceeded 24 hours.
-HIV: One detainee was not seen by an HIV or ID specialist within 30 days of identification.

AMERICAN OVERSIGHT

Suicide Screening

POLICIES REVIEWED: Policy 13-84 "Suicide Management"

CAFCC-East performs suicide screening on all detainees that enter the facility. During the medical intake, all detainees are asked about current suicidal ideation and past suicide attempts.
CAFCC-East also performs a comprehensive mental health evaluation by a mental health provider within 7 days of booking into the facility for all new detainees.

In the past 12 months there have been 55 detainees on suicide watch. Ten charts were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) suicidal patients were evaluated by the physician within 24 hours of identification.
-10 of 10 (100%) were evaluated by a qualified mental health professional every day.
-10 of 10 (100%) were monitored by a detention officer who documented every 15 minutes.

-In the ten charts reviewed, there was no evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Health Assessment

POLICIES REVIEWED: Policy 13-40 "Health Appraisals"

20 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-20 of 20 (100%) had an initial intake screening within 12 hours of booking.
-20 of 20 (100%) had a transfer summary with a chest x-ray report.
-2 of 2 (100%) were referred for evaluation after having a positive screen for mental illness or suicide risk.
-11 of 11 (100%) received timely follow-up for significant findings of acute or chronic conditions.
-20 of 20 (100%) had a complete health evaluation completed within the first 14 days.

-At the time of this audit, all health appraisals are completed by either the NP or the physician.

PREVIOUS FINDINGS (April 2017): 2 of 20 (10%) health appraisals reviewed were done greater than 14 days from arrival.

CURRENT FINDINGS: No findings noted.

Urgent Care (Sick Call)

POLICIES REVIEWED: Policy 13-80 "Sick Call"

According to the HSA, the sick call process is initiated by a detainee filling out a paper sick call request. Sick call is done seven days a week. A nurse picks up sick call requests daily, and they are addressed within 24 hours.

Ten urgent/sick call encounters were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-10 of 10 (100%) charts reviewed had timely and appropriate evaluations by nursing staff, care delivered within the scope of the nurse's license, and vital signs were documented. Five detainees required a referral to MD/MLP with in 24 hours and had an MD/NP/DMD documented assessment and plan.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

AMERICAN OVERSIGHT

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

POLICIES REVIEWED: Policy 13-34 "Medical Emergency Response"

In the past six months, eight detainees have been sent to an emergency department. All eight charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-8 of 8 (100%) had an outbound progress note.
-8 of 8 (100%) showed no evidence that earlier intervention might have prevented deterioration to the point of needing ED/hospital care.
-8 of 8 (100%) had discharge documentation from the hospital and an inbound assessment.

PREVIOUS FINDING (April 2017): No findings noted.

CURRENT FINDING: No findings noted.

Medication Administration Practices

POLICIES REVIEWED: Policy 13-70 "Pharmaceuticals"

-CAFCC-East currently uses electronic medication administration records. During direct observation, there was no evidence that staff was pre-pouring medication. Patient "medication administration rights" were observed, and at least two identifiers were in use, including the detainee armband scanner. The pharmacy storage area was inspected and was properly secured; refrigerator logs are maintained properly.

Ten medication administration records (MARs) were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-10% of the MARs reviewed contained blanks, consecutive refusals, or no shows. In every case a refusal form was completed.
-No MARs were found pending to be filed. FCC uses electronic medication administration records (Allscripts).
-Approximately 45% of patients are on self-administered medication ordered by a provider.
-Over the Counter (OTC) medications are provided by medical and can be purchased in the commissary.
-1 of 10 MARs reviewed had three consecutive days of refusals or 3 consecutive doses and or 4 or more doses in a week documented. There was no documentation in the medical record that the prescribing clinician was notified of consecutive refusals; therefore, there was no response from the clinician.

PREVIOUS FINDING (April 2017): No findings noted.

CURRENT FINDING: One detainee refused 30 consecutive days of medication, and the prescribing clinician was not notified. The medication missed was Metformin. According to the HSA, CAFCC-East policy on notifying the prescribing clinician of consecutive refusals does not include this particular type of medication. CAFCC-East policy on missed doses states, "The following will be monitored for compliance: anticonvulsants, antipsychotics, antidepressants, Isoniazid or other anti-tuberculosis medications, anticoagulants, Lanoxin, HIV and HCV medications, and any medications specifically prescribed by the LIP for compliance monitoring. If an inmate/resident patient does not pick up the above medications for three consecutive medication doses or a pattern of missed doses, it is identified and documented in the medical record. Once identified, the inmate/resident patient should be referred to a licensed nurse or LIP for discussion on non-compliance to address urgent incidents of missing medications."

AMERICAN OVERSIGHT

Continuity of Medication

POLICIES REVIEWED: Policy 13-70 "Pharmaceuticals"

When a detainee arrives to the facility with chronic medications, the intake nurse calls the on-call provider for orders/instructions. After reviewing the medication, the provider will provide a telephone order to continue the medication, if indicated. The medication is continued until the physical exam, at which time it is reordered as necessary.

Ten charts were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) charts showed that medications were ordered in less than 24 hours from completion of the intake.
-In 7 of 10 (70%) cases, the period of time from order to first dose was less than 24 hours.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: In 3 of 10 (30%) cases, the period of time from order to first dose exceeded 24 hours. According to the HSA, the intake nurses failed to properly document that the medications that arrived with the detainee were given as KOP after being ordered by the clinician.

Mental Health Screen

POLICIES REVIEWED: Policy 13-61 "Mental Health Services"

All detainees are screened for mental illness as part of the medical intake. There are several questions that address mental illness including questions that specifically refer to suicide. CAFCC-East also performs a comprehensive mental health evaluation on all new detainees by a mental health provider within 7 days of booking into the facility.

Ten charts selected from the mental health caseload were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) with positive screens for mental illness were evaluated by a mental health professional in a timely manner. In the majority of cases, the evaluation occurred on the following clinic day.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Medical Recordkeeping Practices

POLICIES REVIEWED: Policy 13-58 "Medical Records" is compliant with PBNDS 2008.

CAFCC-East uses an electronic medical record system (Allscripts).

Ten charts were reviewed using the IHSC Quality of Care Audit Tool. No areas of concern noted during reviews of medical records, facility processes, procedures and policy.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Pregnant Women

N/A. Females are not housed at the facility.

AMERICAN OVERSIGHT

Dental Care

POLICIES REVIEWED: Policy 13-13 "Dental Care"

CAFCC-East has a full-time dentist and a full-time dental assistant. All detainees receive a dental screening by the dentist within the first 14 days of detention. Other dental services are normally requested through a sick call request. The dentist evaluates the patient the following working day and decides if treatment is appropriate. The treatment is then scheduled.

Ten charts selected from the sick call log were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) were screened for symptoms during the intake process.
-10 of 10 (100%) were evaluated by a qualified health professional within 48 hours of the request.
-10 of 10 (100%) dental notes reviewed described findings, diagnosis, treatment, and plans.
-10 of 10 (100%) were scheduled for follow-up treatment as recommended.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

AMERICAN OVERSIGHT

Acute Laboratory Testing

POLICIES REVIEWED: Policy 13-31 "Diagnostic Services"

None of the charts reviewed contained STAT or acute lab work orders; however, ten contained completed routine lab work. The IHSC Quality of Care Tool was used to evaluate these records.
-10 of 10 (100%) had lab work collected within one business day of the ordered date. All lab orders reviewed were considered routine and all were ordered during the initial chronic care appointment.
-10 of 10 (100%) were routine labs and had a report back and acknowledged within seven days.
-10 of 10 (100%) had clinical acknowledgment and an appropriate clinical response.
-10 of 10 (100%) patient charts reviewed had documentation that the patient was advised of the lab results.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Diagnostic Services and Specialty Care Access

POLICIES REVIEWED: Policy 13-31 "Diagnostic Services" and Policy 13-64 "Off Site Care and Consultations"

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-10 of 10 (100%) had a documented time urgency included on the order for specialty care or diagnostic services. All ten had the appointment accomplished within 30 days of the order.
-10 of 10 (100%) had the appointment accomplished within 45 days of the order.
-10 of 10 (100%) had clinician acknowledgment for the specialist's report in the medical record within 7 days of the date the service was performed.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Mental Health Treatment Planning

POLICIES REVIEWED: Policy 13-61 "Mental Health Services"

Detainees are screened for potential mental health problems to include suicide risk and sexual/physical abuse history during the intake screening. Detainees who screen positive are referred to a mental health provider and are generally seen on the next day. CAFCC-East also performs a comprehensive mental health evaluation on all new detainees by a mental health provider within 7 days of booking into the facility.

Ten records out of the active mental health case load were reviewed using the IHSC Quality of Care tool.
-10 of 10 (100%) had a clinical assessment, treatment, and follow-up plan documented.
-3 of 3 (100%) patient reviewed had a treatment plan updated at a minimum of every 90 days.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Treatment of Disability

POLICIES REVIEWED: Policy 13-82 "Special needs Treatment Plans"

At the time of this audit, there were three detainees documented to have a disability. The records were reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.
-The facility maintains a list of all patients with disabilities.
-3 of 3 (100%) had the disability prominently displayed in the medical file.
-3 of 3 (100%) was assessed for assistance of activities of daily living (ADL) upon identification of disability and appropriate accommodation orders were entered.
PREVIOUS FINDINGS (April 2017): No findings noted.

AMERICAN OVERSIGHT

CURRENT FINDINGS: No findings noted.

Complaints and Grievances

POLICIES REVIEWED: Policy 13-08 "Complaint Resolution" and Policy 14-05 "Inmate-Resident Grievance Procedures"

According to the Health Service Administrator at CAFCC-East, all dorms have access to grievance forms and a locked drop box labeled for this purpose. The sick call nurse picks them up daily. All medical grievances are then given to the Provider Coordinator, who is an LPN, and reviewed. The Provider Coordinator is then responsible for answering all medical grievances within 5 business days. After they are appropriately addressed, they are scanned into the electronic health records. A grievance log is maintained to evaluate for trends in grievances.

The IHSC Quality of Care Audit Tool was used to evaluate this area.
-A total of 19 grievances were submitted over the past 3 months.
-18 of 19 (95%) grievances were addressed within 5 working days of receipt.
-2 of 19 were related to availability of care.
-3 of 19 were related to denial or refusal of specific request for care.
-5 of 19 were related to delays in care.
-1 of 19 was related to attitude, demeanor or conduct of staff.
-8 of 19 were related to receiving or making changes to medications.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: One detainee's medical grievance was not addressed within five working days of receipt. It was appropriately addressed on the sixth working day.

AMERICAN OVERSIGHT

Diabetes

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management"

Nine diabetic medical records were reviewed using the IHSC Quality of Care Tool designed for this purpose. CAFCC-East follows NCCHC clinical practice guidelines to manage diabetes.
-9 of 9 (100%) had a blood sugar measured at intake.
-9 of 9 (100%) were seen for chronic care by a medical provider within 14 days.
-9 of 9 (100%) had a baseline HgbA1C performed within the first 30 days.
-4 of 4 (100%) had lipids measured within one year.
-3 of 3 (100%) had aspirin prescribed when indicated.
-9 of 9 (100%) had a degree of control (goal HgbA1C<8.0) documented.
-6 of 6 (100%) had a strategy to attain diabetes control documented when HgbA1C was above goal.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Human Immunodeficiency Virus (HIV)

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management"

At the time of this audit, CAFCC-East had only one ICE detainee documented as having HIV. He was transferred to USM custody 49 days after arrival to the facility. The record was reviewed using the IHSC Quality of Care Tool designed for this purpose. CAFCC-East follows NCCHC clinical practice guidelines to manage HIV.
-HIV was identified by the available medical records upon transfer to the facility.
-Detainee was not seen by an HIV or ID specialist within 30 days of identification.
-Antiretroviral treatment was considered and documented.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDING: One detainee was not seen by an HIV or ID specialist within 30 days of identification.

Hypertension

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management"

Nine charts of hypertensive patients were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose. CAFCC-East follows NCCHC clinical practice guidelines to manage hypertension.
-9 of 9 (100%) had a documented blood pressure on the medical intake.
-9 of 9 (100%) patients were seen by a medical provider within the first 14 days of arrival at the facility.
-6 of 6 (100%) revealed intake blood pressures that had systolic blood pressure greater than 140 or a diastolic pressure greater than 90. In all six (100%) medical records there was documentation that the nurse called and received a treatment plan from the provider which included medication and blood pressure monitoring.
-In 9 of 9 (100%) cases, it appeared that a chronic disease guideline for HTN, which included obtaining baseline lab work, was followed.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Asthma

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management"

Eight charts of asthma patients were reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area. CAFCC-East follows NCCHC clinical practice guidelines to manage asthma.

AMERICAN OVERSIGHT

-6 of 6 (100%) were seen for chronic care by a medical provider within 14 days of illness identification.
-8 of 8 (100%) had a peak flow measurement completed during the physical exam.
-6 of 6 (100%) had a peak flow measurement completed at the chronic care visit.
-6 of 6 (100%) followed a chronic disease guideline which addressed disease severity, prescription of medication consistent with severity, and documented degree of control.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Seizure Disorder

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management"

Three charts of seizure patients were reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.
-3 of 3 (100%) had an appropriate neurological assessment completed at the initial physical exam.
-3 of 3 (100%) were seen by a medical provider within 14 days of illness identification.
-1 of 1 (100%) had serum drug levels performed and acknowledged at least every 3 months until stable.
-3 of 3 (100%) had an established treatment plan.
-3 of 3 (100%) had orders for a bottom bunk.

PREVIOUS FINDINGS (April 2017): No findings noted.

CURRENT FINDINGS: No findings noted.

Other Observations

This FMC site visit was conducted on May 7-10, 2019. The audit consisted of a review of 48 medical charts, sick call log, staff training binder, staff credential folders, the policy and procedure manual, and facility clinical protocols. The vast majority of medical charts reviewed were either active charts or charts of recently released detainees.

FACILITY DATA:
Central Arizona Florence Correctional Complex-East (CAFCC-East) is a non-dedicated contracted detention facility located in Florence, AZ. It is owned and operated by CoreCivic. The facility houses a combination of US Marshal (USM) inmates, ICE detainees (ICE), Mesa inmates (MESA), and Bureau of Prison (BOP) inmates.

POPULATION CHARACTERISTICS:
Maximum Population- 5013 (500 ICE, 4378 USM, 120 MESA, and 15 BOP).
Current Population- 4454 (467 ICE, 3896 USM, 80 MESA, and 11 BOP).

ACCREDITATIONS/INSPECTIONS:
-The American Correctional Association (ACA) completed an audit on March 25, 2019 and found no deficiencies.
-The Nakamoto Group completed an audit of the facility on August 27, 2018 and found no deficiencies.
-National Commission on Correctional Health Care (NCCHC) completed an audit on April 24, 2018 and found no deficiencies. CAFCC-East received Facility of the Year Award from NCCHC for 2018.

MEDICAL CLINIC/INFIRMARY:
The main medical unit has three exam rooms, a dental clinic, nurses station, and a laboratory room for specimen collection. A locked pharmacy and a locked medical records/supply room are located in main medical (facility utilizes electronic medical records). There are two negative pressure isolation rooms. There are three observation rooms, one of which is designated as a suicide observation room. Emergency equipment is located in the main medical department to include an emergency response bag, gurney, AED, portable suction, oxygen tank, and two electrocardiogram machines. Emergency equipment is checked twice a day by the nursing staff.

CREDENTIALS:
Reviewed all of the staff licensing credentials. There were no issues with the files

AMERICAN OVERSIGHT

reviewed. Licensed personnel had current copies of licensing, and the staff had up-to-date BLS certification.

Deficiencies for Areas Evaluated

PBNDS 2008 DEFICIENCIES: 3 of 20 (15%) detainees did not have a completed intake screening within 12 hours of booking into the facility. Per PBNDS 2008, "Initial medical, dental, and mental health screening shall be done within 12 hours of arrival by a health care provider or a detention officer specially trained to perform this function." (Medical Care) (V) (I) (1)

Quality of care findings:
-Asthma: Five of five (100%) did not have a peak flow measurement completed during the physical exam.
-Diabetes: One of nine (11%) did not have a blood sugar measured at intake.
-HIV: Two of two (100%) were not seen by an HIV or ID specialist within 30 days of identification.
-Continuity of Medication: In 1 of 10 (10%) cases, the period of time from order to first dose exceeded 24 hours.

DATE 04/26/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To prevent deterioration in function and cost of unnecessary care.

Source: Chronic disease registry or MARs.

Sample: 10 patients with seizure disorder chosen at random.
What clinical practice guideline does the facility use to manage seizures? NCCHC

Item #	Measure
1	Was an appropriate neurological history completed at the initial physical examination?
2	Was the patient seen in CCC by mid-level provider or physician within 14 days of illness identification*?
3	Were serum drug levels performed and acknowledged in the medical record every 3 months until stable, then every 6 months, where indicated?
4	Was a treatment plan established?
5	Are there orders for a bottom bunk?

COMPLAINTS AND GRIEVANCES

DATE 04/26/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To assess use of medical complaint and grievance data as part of the quality management program.

Source: Facility grievance logs.

Sample: Facility's periodic grievance analyses, with underlying data (grievances and responses).

Does your review of the facility's grievances reveal any possible barriers to care or repetitive concerns that could affect clinical care? Please answer yes or no NO If yes, please address in the comments section whether and how the facility uses this information to implement change.

How many medical grievances were submitted over the past 3 months? 7

What percentage of this number were appropriately addressed within 5 working days of receipt? 100 %

Item: 1 Of the grievances submitted over the past 3 months, enter the number of grievances in each category, i.e., availability of care, denial of request for care, etc.

2 Enter the A# for each grievance included in this category.

Grievance Type	1	2
Availability of care (sick call hours, etc.)		
Denial or refusal of specific request(s) for care	1	(b)(6); (b)(7)(C)
Delay(s) in care	4	
Competency/professional skillset of medical staff		
Attitude, demeanor or conduct of staff	2

EVALUATION OF CARE PRIOR TO EMERGENCY DEPARTMENT/HOSPITAL VISIT FOR CONDITIONS SENSITIVE TO AMBULATORY CARE

DATE 04/28/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To determine whether earlier intervention might have prevented morbidity and cost of outside care. To measure continuity and coordination of care for inbound patients.

Source: Emergency Department (ED) logs.

Sample: Within the past 6 months, 10 patients sent to ED with ambulatory sensitive conditions, such as seizure, alcohol and/or substance withdrawal, skin or deep tissue infections, DKA, abdominal pain, or chest pain.

Item # Measure

1. Is there an outbound progress note?
2. *Is there evidence that earlier intervention might have prevented deterioration to the point of need for ED/hospital care? If yes, please describe in the narrative portion of the report.
3. Is there discharge documentation from the hospital or ED in the chart?
4. Is there an inbound assessment?
5. Does the assessment reflect hospital findings and concurrence or deviation from hospital recommendations?

Office of Enforcement and Removal Operations

Instructions for the Corrective Plan of Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the findings identified in the ICE Health Service Corps Field Medical Coordinator (FMC) review. Please ensure that each stated corrective plan of action addresses the noted medical findings to the fullest extent possible, and that it incorporates the recommendations. In the event a finding or recommendation cannot be implemented within the authorized timeline, please include an explanation in the "Corrective Plan of Action" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date.

Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.

ICE Uniform Corrective Action Plan (FMC October 2017 Review) Central Arizona Florence Correctional Complex-East (PHO AOR)			
Assessment and Findings	**Recommendations**	**Corrective Plan of Action**	**Completion Date**
One detainee's medical grievance was not addressed within five working days of receipt. It was appropriately addressed on the sixth working day. "Designated medical staff shall act on the grievance within five working days of receipt and provide the detainee a written response of the decision and the rationale." (PBNDS 2008, Grievance System/V/C/3/2c)	(b)(5)	On August 24, 2017, procedures were implemented allowing detainees to submit medical grievances directly to medical department personnel designated to receive and response to medical grievances. Prior to implementing this change, grievances were required to be submitted to the Grievance Coordinator first and then submitted to medical. By putting a medical staff member in charge of ICE grievances it lessens the	8/24/17

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002875

		amount of time before the grievance gets to a medical supervisor. The medical grievance coordinator also works in medical and has more access to the staff members who are doing the grievances to oversee the due date. It also keeps us HIPPA Compliant	
Quality of Care Finding: Medication Administration Practices: One detainee refused 30 consecutive days of medication, and the prescribing clinician was not notified.	(b)(5)	The HSA reiterated the requirements of CoreCivic Policy 13-70, *Pharmaceuticals* to nursing staff during the monthly medical meeting on December 20, 2017, which states that each time an inmate/detainee misses 3 consecutive doses or a pattern of missed doses is identified for the following types of medications: Anticonvulsants; Antipsychotics; Antidepressants, Isoniazid or other anti-tuberculosis medications; Anticoagulants; Lanoxin; HIV and HCV Medications; and any medications specifically prescribed by the licensed independent practitioner (LIP) for compliance monitoring,	1/5/18

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002876

		that the inmate/detainee should be referred to a licensed nurse or LIP for discussion on non-compliance. Staff will sign a 4-2A Training Activity/Attendance Roster to acknowledge understanding of this requirement. Pending the meeting, the HSA will send a mass email to all shifts on the need to look at MARs more closely to identify any missed medications meeting the criteria for referral. Effective December 1, 2017, every Wednesday the Health Information Specialist (HIS) will generate a 3 consecutive missed medication report and submit it to the Pharmacy Nurse and Clinical Supervisor for review. The Pharmacy Nurse will create a log that will be maintained in the share drive to identify inmates/detainees who need medication education based on the requirements of CoreCivic Policy 13-70, Pharmaceuticals. Once the	

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002877

		inmates are identified as needing education, the Pharmacy Nurse will call the inmate/detainee to medical to facilitate education and ensure the education is documented using the SOAPE format. Effective January 5, 2018, the HSA or Clinical Supervisor will review the log and the inmates/detainees chart to ensure that education is being completed as directed, which will be documented by signing the log. This review will continue until 95% compliance is achieved for 3 consecutive months.	
Quality of Care Finding: Continuity of Medication: In 3 of 10 (30%) cases during the intake screening, the period of time from order to first dose of medication exceeded 24 hours.	(b)(5)	The Clinical Supervisor (CS) will meet with the intake nurses to review the process for properly documenting KOP medications at intake, by December 20, 2017. In addition, the HSA will email all nursing staff to educate them on properly documenting in the MAR that the medications the inmate/detainee arrived	1/5/18

AMERICAN OVERSIGHT

		with were returned to the inmate/detainee as a KOP until it is time for the medication to be refilled. Follow-up training on these processes will occur during the monthly medical meeting on December 20, 2017, which will be documented on a 4-2A Training Activity/Attendance Roster. Effective January 1, 2018, the Pharmacy Nurse and QA Nurse will each review 5 charts that were received with medications (10 different charts total) from the night before to monitor compliance. Both the QA Nurse and the Pharmacy Nurse will maintain a log of the charts that were reviewed. Any incorrect MARs will be reported to the CS for immediate correction. Effective January 5, 2018, the Clinical Supervisor will conduct a review of 10 charts on a weekly basis, using the reviews logs created by the	

AMERICAN OVERSIGHT

		QA Nurse and Pharmacy Nurse, to verify the inmates/detainees medications are charted correctly when issued as a KOP at intake. The CS will maintain an overall/combined log of all charts reviewed. All discrepancies will be reported to the HSA. Continuous non-compliance may result in disciplinary action or re-assignment.	
Quality of Care Finding: HIV: One detainee was not seen by an HIV or ID specialist within 30 days of identification.	(b)(5)	The HSA will reiterate to nursing staff during the monthly medical meeting on December 20, 2017, that each time an inmate/detainee is identified at intake as being HIV positive, it must be documented on the inmates/detainees with medical conditions form and turned into the scheduler, Clinical Supervisor, and HSA so that the inmate/detainee can be scheduled to see an HIV Specialist. Staff will acknowledge understanding of this process by signing a 4-2A Training	1/1/18

AMERICAN OVERSIGHT

		Activity/Attendance Roster. Pending the meeting, the HSA will send a mass email to all shifts on the requirement to notify the Clinical Supervisor, Heath Services Administrator, and Medical Records and scheduler of any HIV positive detainees. Effective December 20, 2017, once the detainee is identified as being HIV positive, the Medical Records Clerk will send a request to PHS/ICE for authorization to see an outside HIV Specialist. Once the authorization has been received, the Medical Records Clerk will contact the local HIV Specialist to schedule an appointment. The appointment and reason for the appointment will be documented in the EMR, however the date will not be documented prior to the appointment for security reasons. Snap shot of the log is	

AMERICAN OVERSIGHT

		attached. Only 1 detainee since the audit has been HIV positive and needed to be scheduled but he left before his appointment date Effective January 1, 2018, the CID Nurse will review the inmates with medical conditions form daily to identify any HIV positive inmates/detainees. The CID Nurse will maintain a log of all HIV positive inmate/detainees in the facility. Once a week, the CID Nurse will cross reference the list with the authorizations for HIV appointments that the Medical Records Clerk maintains. All charts that are missing the ICE/PHS authorization or progress note by the Medical Records Clerk will be identified during the cross reference of the lists and the Clinical Supervisor or H.S.A will be notified immediately for correction. Continuous non-compliance for any stage of the process will be reported	

AMERICAN OVERSIGHT

DHS-ICE-20-0618-A-002882

		to the HSA for further action which may result in disciplinary action.

Office of Enforcement and Removal Operations

Instructions for the Corrective Plan of Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the findings identified in the ICE Health Service Corps Field Medical Coordinator (FMC) review. Please ensure that each stated corrective plan of action addresses the noted medical findings to the fullest extent possible, and that it incorporates the recommendations. In the event a finding or recommendation cannot be implemented within the authorized timeline, please include an explanation in the "Corrective Plan of Action" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date.

Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.

ICE Uniform Corrective Action Plan (FMC Reviews) Central Arizona Florence Correctional Complex-East (Phoenix AOR)			
Assessment and Findings	**Recommendations**	**Corrective Plan of Action**	**Completion Date**
Detainee health appraisal not completed within a 14 day period. "Each facility's health care provider shall conduct a health appraisal including a physical examination on each detainee within 14 days of the detainee's arrival unless more immediate attention is required due to an acute or identifiable chronic condition." (PBNDS 2008, 22/Medical Care/J./Health Appraisal)	(b)(5)	Effective May 16, 2017, the assigned CMA prints a daily list of inmate's out to court and the Provider Scheduler prints a daily list of scheduled health appraisals. The Provider Scheduler will compare the two lists and reschedule those inmates who are out to court to be seen within the next 24 hours. Following each clinic, the Provider Scheduler will verify	7/1/17

AMERICAN OVERSIGHT

		that all inmates scheduled for the clinic received their health appraisal according to the schedule. Inmates who missed their health appraisal will be scheduled to be seen within the next 24 hours. Effective July 1, 2017, the HSA or designee will review 20 charts monthly, for 3 months, to monitor compliance. Documentation of the charts reviewed and the status of compliance will be submitted to/maintained by the HSA.	
Quality of Care Finding: Time urgency was not included on orders for diagnostic services or specialty care.	(b)(5)	During the next weekly provider meeting, the HSA or designee will re-train the providers regarding the routine and stat timelines, as required by Policy 13-31. The training will be documented on a 4-2A Training Activity/Attendance Roster. Effective July 1, 2017, the HSA or designee will review 20 charts monthly, for 3 months, to monitor compliance. Documentation of the charts reviewed and the status of compliance will be submitted to/maintained by the HSA.	7/5/15

Instructions for the Corrective Plan of Action Response

Provide a detailed description of the corrective action taken by the facility to address each of the findings identified in the ICE Health Service Corps Field Medical Coordinator (FMC) review. Please ensure that each stated corrective plan of action addresses the noted health care findings to the fullest extent possible, and that it incorporates the recommendations. In the event a corrective action cannot be implemented within the authorized timeline, please include an explanation in the "Corrective Plan of Action" column. The explanation should include a work around solution while pending final resolution, and an approximate completion date. If an extension is needed, the facility must contact the FMC with this request in advance of the specified timelines for submission.

****Exceptions to this timeline may be granted for necessary construction and staffing requirements, but will require an estimated completion date and temporary "work around" as part of the approved UCAP. Serious life and safety issues must be corrected immediately.***

ICE Uniform Corrective Action Plan (FMC Reviews) Central Arizona Florence Correctional Complex-East (Phoenix AOR)			
Assessment and Findings	**Corrective Plan of Action**	**Completion Date**	**Date of IHSC Verification of Implementation**
(b)(6); (b)(7)(C) Three of 20 (15%) detainees did not have a completed intake screening within 12 hours of booking into the facility. Per PBNDS 2008, "Initial medical, dental, and mental health screening shall be done within 12 hours of arrival by a health care provider or a detention officer specially trained to perform this function." (Medical Care) (V) (I) (1)	1). On 5/22/2019 H.S.A (b)(6); (b)(7)(C) to devise a plan on meeting the 12 hour requirement for ICE intakes. See 4-2A (Training roster). 2). On 5/22/2019 the discussed plan was typed on a memo and sent to staff. See attached memo from Assistant Chief (b)(6); (b)(7)(C) dated 5/22/2019.	6/14/2019	2/25/2020

AMERICAN OVERSIGHT

	3). On May 30th 2019 CS (b)(6); (b)(7)(C) conducted a monthly meeting with staff to go over the ICE intake plan and 12 hour requirement. See attached meeting minutes. 4). Effective June 17, 2019 the medical QA department will monitor up to 20 charts a month for the next three months to ensure the process is being effective. A log will be kept for three months with a goal of 90% compliance for the total of a three-month time frame. See attached email as a directive for monitoring.

MEDICATION ADMINISTRATION PRACTICES

DATE 04/28/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.

Source: MARS.

Sample: MAR and medical record for 10 patients. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.

1 Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up? YES
2 Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs? 5%
3 In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month? 0
4 Estimate the percentage of patients on self-administered medication ordered by a provider. 40%
5 OTCs provided by medical, commissary or both? Both

Item # Measure

1 What is the number of refusals and/or no shows during the previous month for each patient?
2 Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?
3 Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

INTRODUCTION TO THE QMC

These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc.

Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.

- These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
- The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
- The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.

- The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody $\geq$ 14 days.
- In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
- While the goal is 100% compliance, the performance objective for most of the audit tools is $\geq$ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
- The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
- In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.

AUDIT TOOL COMPLETION

Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer.

Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.

TIPS FOR REVIEWERS

- Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

- Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.

AMERICAN OVERSIGHT

• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

CONTINUITY OF MEDICATIONS			
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	10		
Purpose:	To assess timeliness of medication, as ordered.		
Source:	Patients with initial intake orders for chronic medications with time urgency, such as HIV medications, Coumadin, psychotropic medication, diabetes medication, or new prescriptions for antibiotics (psychotropic medication must be part of the sample).		
Sample:	Initially identify 10 patients (if available) from MARs, cross check date of first dose with order date in the medical record.		
Guidelines:			
Remarks:	(b)(6); (b)(7)(C) was noted to have a history of HIV on intake. The HIV meds were not in stock at the facility and had to be ordered. He received his first dose 2 days after ordered. POLICIES REVIEWED: Policy 13-70 "Pharmaceuticals" is compliant with PBNDS 2008. When a detainee arrives to the facility with chronic medications, the intake nurse calls the on-call provider for orders/instructions. After reviewing the medication, the provider will provide a telephone order to continue the medication, if indicated, until the physical exam, at which time it is reordered as necessary. PREVIOUS FINDINGS (May 2018): In 2 of 10 (20%) cases, the period of time from order to first dose exceeded 24 hours.

COMPLAINTS AND GRIEVANCES							
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	21						
Purpose:	To assess use of medical grievance data as part of the quality management program.						
Source:	Facility grievance logs.						
Sample:	Facility's periodic grievance analyses, with underlying data (grievances and responses). Include no greater than 30 A#'s per grievance category.						
Guidelines:	NCCHC 2014 J-A-06, J-A-11.						
Remarks:	Most complaints in the other category are for medication or mental health requests. POLICIES REVIEWED: Policy 13-08 "Complaint Resolution" and Policy 14-05 "Inmate-Resident Grievance Procedures." According to the Health Service Administrator, all dorms have access to grievance forms and a locked drop box labeled for this purpose. The sick call nurse picks them up daily. All medical grievances are then given to the Clinical Supervisor, an RN, and reviewed. The CS is responsible for answering all medical grievances within 5 business days. After they are addressed, they are scanned into the health record. A grievance log is maintained to evaluate for trends in grievances PREVIOUS FINDINGS (May 2018): No findings noted.						
Reviewer:	(b)(6); (b)(7)(C)			**Date Reviewed:**	5/7/2019		
Facility (f)							
fCG-1:	Does your review of the facility's grievances reveal any possible barriers to care or repetitive concerns that could affect clinical care? If yes, please address in the remarks section whether and how the facility uses this information to implement change.				N		
fCG-2:	How many medical grievances were submitted over the past 3 months?			36			
fCG-3:	Of medical grievances submitted over the past three months, how many were appropriately addressed within 5 working days of receipt?			36

MEDICATION ADMINISTRATION RECORDS									
Number of Files Reviewed for Patients Meeting this Criteria:* (please select 0 if no files/patients reviewed)	10								
Purpose:	To assess continuity of ordered care and notification to clinician of poor adherence to medication orders.								
Source:	MARS.								
Sample:	MAR and medical record for 10 patients, if available. Medication refusals and/or no shows are defined as those instances in which a patient refuses medications on 3 consecutive days or for 3 consecutive doses and /or 4 or more doses in a week.								
Guidelines:									
Remarks:	POLICIES REVIEWED: Policy 13-70 "Pharmaceuticals" is compliant with PBNDS 2008. -CAFCC-East currently uses electronic medication administration records. During direct observation, there was no evidence that staff was pre-pouring medication. Patient "medication administration rights" were observed, and at least two identifiers were in use, including the detainee armband scanner. The pharmacy storage area was inspected and was properly secured; refrigerator logs are maintained properly. PREVIOUS FINDINGS (May 2018): No findings noted.								
Reviewer:	(b)(6); (b)(7)(C)			**Date Reviewed:**	5/9/2019				
Facility (f)									
fMAR-1:	Does facility have a policy in place stating which medications, if missed a certain number of consecutive doses, require provider notification and/or follow-up?				Y				
fMAR-2:	Based on review of current month MARs or previous month's MARs, if available, what percentage of MARs that have either blanks, consecutive refusals, or no shows on the MARs?				10				
fMAR-3:	In the medical record filing area, how many months of MARs are unfiled, not counting unfiled MARs within 14 days of the end of the previous month?				0				
fMAR-4:	Estimate the percentage of patients on self-administered medication ordered by a provider.				35				
fMAR-5:	OTCs provided by medical, commissary or both?				Both				
Clinical (c)									
cMAR-1	What is the number of refusals and no shows during the previous month for each patient?								
cMAR-2	Is there documentation in the medical record that the prescribing clinician was notified of consecutive refusals?								
cMAR-3	Was there an appropriate response from the clinician (i.e., was the patient interviewed or was the prescription changed or discontinued?)

MEDICAL RECORD-KEEPING PRACTICES

Number of Files Reviewed for Patients Meeting this Criteria:* (please select # of no files/patients reviewed)	10
Purpose:	To assess completeness of the medical record and appropriateness of medical record practices.
Source:	Medical Records, Chronic Care Log, and MARs.
Sample:	10 records of detainees with chronic disease, if available.
Instructions:	For all answers that are "partial compliance" or "non-compliant", the reviewer should insert a comment in the remarks section of the report. For example, if most of the progress notes are legible, but one or two practitioner's notes are barely legible, the appropriate comment would be "Dr. XX's notes are not legible."
Guidelines:	NCCHC 2014 J-H-01, J-H-03.
Remarks:	POLICIES REVIEWED: Policy 13-58 "Medical Records" is compliant with PBNDS 2008. PREVIOUS FINDINGS (May 2018): No findings noted.

SUICIDE SCREENING

DATE 04/28/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To assess conformance with nationally-accepted guidelines for suicide risk assessment and prevention.

Source: Patients on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review.

Sample: Medical records for 10 patients placed on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review.

1 What is the total number of patients placed on suicide watch or hospitalized for suicidality within the last 3 months or since the most recent review? 12

2 Does the facility use an acceptable suicide risk management screening instrument, including at a minimum, asking for a history of suicide attempts and for current suicidal ideation? ■ Yes ☐ No

3 Are all screeners and all staff in direct contact with detainees trained to assess suicide risk (see training logs)? ■ Yes ☐ No

Item # Measure

1 Was the suicidal patient evaluated by a mental health professional within 24 hours of identification (unless the situation was emergent in which case the evaluation should be immediate)?

2 Was the patient evaluated by a qualified mental health professional daily while on suicide watch?

3 What type of monitoring was practiced while the patient was on suicide watch?

4 Were checks documented consistently?

5 Is there evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch? If yes, please describe.

TREATMENT OF DISABILITY

DATE: 04/26/2017 REVIEWER: (b)(6); (b)(7)(C)

FACILITY REVIEWED: Central Arizona Florence Correctional Complex-East

Purpose: To assess the care of patients with disabilities who need accommodations to access the facility's programs or activities as a result of their disabilities.

An individual is considered to have a "disability" if s/he has a physical or mental impairment that substantially limits one or more major life activities, or has a record of such impairment.
See also: https://www.dhs.gov/sites/default/files/publications/guide-interacting-with-people-who-have-disabilties_09-26-13.pdf

Sources: Facility logs, tour of facility, list of patients who require DME (to include walkers, canes, wheel chairs, hearing aids, or other items to assist the patients to access the facility's programs and activities), and interviews with patients with disabilities who need accommodations to access the facility's programs and activities.

Sample: 10 patients within the population who have a disability that requires medical involvement. Determine if the patients with disabilities received appropriate treatment and disability accommodations through medical record examination. Mark as "Y" for yes, "N" for no, and "N/A" for not applicable. Do not leave any area blank.

General Question: Does the facility maintain a current list of all patients with disabilities on site? YES

Item #	Measure
1	Is the disability prominently noted in the file, along with any needed accommodations?
2	Was the patient assessed for assistance with activities of daily living (ADL) upon identification of disability?
3	Were appropriate accommodation orders entered (e.g., lower bunk, mobility device (wheelchair, walker, canes, crutches), hearing aid, assistive listening device, sign language interpreter, meal, etc.)?
4	Was ADL assistance provided, if applicable?

URGENT CARE (SICK CALL)

DATE 04/26/2017 REVIEWER (b)(6); (b)(7)(C)

FACILITY REVIEWED Central Arizona Florence Correctional Complex-East

Purpose: To assess for timely and appropriate nursing care for acute conditions.

Source: Urgent care log, sick call request list, or sick call visit list, preferably with reason for visit noted on log.

Sample: 10 urgent care visits by detainees with potentially serious complaints that occurred 1 to 3 weeks prior to review. Common potentially serious complaints include chest pain, abdominal pain, seizure, vomiting, skin infection, diabetic complications, etc.

Item #	Measure
1	Was there timely and appropriate evaluation by nursing staff, depending on the nature of the complaint?
2	Was care delivered within the scope of the nurse's license?
3	Were vital signs documented during the nurse's assessment?
4	If necessary, was a nursing referral to a MD/PA/NP/DMD submitted within 24 hour where appropriate?
5	If referred, was an MD/PA/NP/DMD assessment and plan documented?

	A #	Chief Complaint	1	2	3	4	5

Medical Care

☐ Compliant Non-Compliant with: ☒ 1 – 2 Standards ☐ 3 Standards ☐ >3 Standards

Description of deficiencies:

CURRENT FINDINGS: One 2008 PBNDS deficiency
-Two detainees health assessments were not completed within 14 days of their arrival to the facility. One was completed 20 days after booking into the facility, and the other was completed 25 days after booking into the facility. Per PBNDS 2008, "Each facility's health care provider shall conduct a health appraisal including a physical examination on each detainee within 14 days of the detainee's arrival unless more immediate attention is required due to an acute or identifiable chronic condition" (Medical Care) (V) (J).

PREVIOUS FINDINGS (October 2016): One 2008 PBNDS deficiency
-One detainee was at court on the day his health assessment was initially scheduled. The provider did not reschedule the health assessment; the health assessment was completed 22 days after booking (Medical Care) (V) (J).

Chronic Care *Enter all detainees with chronic conditions on the IGSA/CDF chronic care tracking sheet and submit with report.*

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted. There have been no reported deaths, detainees with terminal illness, or detainees with advance directives within the last 12 months.

Other Observations

This FMC site visit was conducted on April 26-28, 2017. The audit consisted of a review of 130 medical charts, sick call log, staff training binder, staff credential folders, the policy and procedure manual, and facility clinical protocols. The vast majority of medical charts reviewed were either active charts or charts of recently released detainees.

FACILITY DATA:
Central Arizona Florence Correctional Complex-East (CAFCC-East) is a non-dedicated contracted detention facility located in Florence, AZ. It is owned and operated by CoreCivic. The facility houses a combination of US Marshal (USM) inmates, ICE detainees, Material Witnesses (MWIT), and Bureau of Prison (BOP) inmates.

POPULATION CHARACTERISTICS:
Maximum Population- 1966 (886 ICE, 960 USM, 80 MWIT, and 40 BOP).
Current Population- 1239 (505 ICE, 689 USM, 24 MWIT, and 21 BOP).

ACCREDITATIONS/INSPECTIONS:
-The Nakamoto Group completed an audit of the facility on August 23, 2016 and found no deficiencies.
-ICE Office of Detention Oversite (ODO) completed an audit on June 30, 2016 and found no deficiencies.
-The American Correctional Association (ACA) completed an audit on April 6, 2016 and found no deficiencies.
-National Commission on Correctional Health Care (NCCHC) completed an audit on February 23, 2016 and found no deficiencies.

MEDICAL CLINIC/INFIRMARY:
The main medical unit has three exam rooms, a dental clinic, nurses station, and a laboratory room for specimen collection. A locked pharmacy and a locked medical records/supply room are located in main medical (facility utilizes electronic medical records). There are two negative pressure isolation rooms. There are three observation rooms, one of which is designated as a suicide observation room. Emergency equipment is located in the main medical department to include an emergency response bag, gurney, AED, portable suction, oxygen tank, and two eloctrocardiogram machines. Emergency equipment is checked twice a day by the nursing staff.

AMERICAN OVERSIGHT

CREDENTIALS:
Reviewed (b)(7)(E) There were no issues with the (b)(7)(E) files reviewed. Licensed personnel had current copies of licensing, and the staff had up-to-date BLS certification.

CURRENT MEDICAL STAFFING:

(b)(7)(E)

Deficiencies for Areas Evaluated

PBNDS 2008 DEFICIENCIES:
10% of health appraisals reviewed were completed greater than 14 days after arrival.

AMERICAN OVERSIGHT

Suicide Screening

POLICIES REVIEWED: Policy 13-84 "Suicide Management" is compliant with PBNDS 2008.

CAFCC-East performs suicide screening on all detainees that enter the facility. During the medical intake, all detainees are asked about current suicidal ideation and past suicide attempts.
CAFCC-East also performs a comprehensive mental health evaluation on all new detainees by a mental health provider within 7 days of booking into the facility.

In the past twelve months there have been 63 detainees on suicide watch. Ten charts were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) suicidal patients were evaluated by the physician within 24 hours of identification.
-10 of 10 (100%) were evaluated by a qualified mental health professional every day.
-10 of 10 (100%) were monitored by a detention officer who documented every 15 minutes.

-In the ten charts reviewed, there is no evidence that earlier intervention might have prevented deterioration to the point of need for a suicide watch.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

Health Assessment

POLICIES REVIEWED: Policy 13-40 "Health Appraisals" is compliant with ICE PBNDS 2008.

Twenty charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-20 of 20 (100%) had an initial intake screening within 12 hours of booking.
-20 of 20 (100%) had a transfer summary with a chest x-ray report.
-4 of 4 (100%) received timely follow-up for significant findings of acute or chronic conditions.
-18 of 20 (90%) had a complete health evaluation completed within the first 14 days.

-At the time of this audit, all health appraisals are completed by either the NP or the physician.

PREVIOUS FINDINGS (October 2016): 1 of 10 (10%) health appraisals reviewed were done greater than 14 days from arrival.

CURRENT FINDINGS: 2 of 20 (10%) of health appraisals reviewed were done greater than 14 days from arrival.

Urgent Care (Sick Call)

POLICIES REVIEWED: Policy 13-80 "Sick Call" is compliant with PBNDS 2008.

According to the HSA, the sick call process is initiated by a detainee filling out a paper sick call request. Sick call is done seven days a week. A nurse picks up sick call requests daily, and they are addressed within 24 hours.

Ten urgent/sick call encounters were reviewed using the IHSC Quality of Care Audit Tool used to evaluate this area.
-10 of 10 (100%) charts reviewed had timely and appropriate evaluations by nursing staff, care delivered within the scope of the nurse's license, and vital signs were documented. Three detainees required a referral to MD/MLP with in 24 hours and had an MD/MLP/DMD documented assessment and plan.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

Evaluation of Care Provider to ED/Hospital Visit for Conditions Sensitive to Ambulatory Care

AMERICAN OVERSIGHT

POLICIES REVIEWED: Policy 13-34 "Medical Emergency Response" is compliant with PBNDS 2008.

In the past six months, 6 detainees have been sent to an emergency department. All 6 charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-6 of 6 (100%) had an outbound progress note.
-0 of 6 (0%) showed evidence that earlier intervention might have prevented deterioration to the point of needing ED/hospital care.
-6 of 6 (100%) had discharge documentation from the hospital and an inbound assessment.

PREVIOUS FINDING (October 2016): No findings noted.

CURRENT FINDING: No findings noted.

Medication Administration Practices

POLICIES REVIEWED: Policy 13-70 "Pharmaceuticals" is compliant with PBNDS 2008.

-CAFCC-East currently uses electronic medication administration records. During direct observation, there was no evidence that staff was pre-pouring medication. Patient "medication administration rights" were observed, and at least two identifiers were in use, including the detainee armband scanner. The pharmacy storage area was inspected and was properly secured; refrigerator logs are maintained properly.

Ten medication administration records (MARs) were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-5% of the MARs reviewed contained blanks, consecutive refusals, or no shows. In every case a refusal form was completed.
-No MARs were found pending to be filed. FCC uses electronic medication administration records (Allscripts).
-Approximately 40% of patients are on self-administered medication ordered by a provider.
-Over the Counter (OTC) medications are provided by both medical and can be purchased at the commissary.
-None of the MARs reviewed had three consecutive days of refusals or 3 consecutive doses and or 4 or more doses in a week documented. A refusal form was completed on all refusals.

PREVIOUS FINDING (October 2016): No findings noted.

CURRENT FINDING: No findings noted.

AMERICAN OVERSIGHT

Continuity of Medication

POLICIES REVIEWED: Policy 13-70 "Pharmaceuticals" is compliant with PBNDS 2008.

When a detainee arrives to the facility with chronic medications, the intake nurse calls the on-call provider for orders/instructions. After reviewing the medication, the provider will provide a telephone order to continue the medication, if indicated. The medication is continued until the physical exam, at which time it is reordered as necessary.

Eight charts were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-8 of 8 (100%) charts showed that medications were ordered in less than 24 hours from completion of the intake.
-In 8 of 8 (100%) cases, the period of time from order to first dose was less than 24 hours.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

Mental Health Screen

POLICIES REVIEWED: Policy 13-61 "Mental Health Services" is compliant with PBNDS 2008.

All detainees are screened for mental illness as part of the medical intake. There are several questions that address mental illness including questions that specifically refer to suicide. CAFCC-East also performs a comprehensive mental health evaluation on all new detainees by a mental health provider within 7 days of booking into the facility.

Ten charts selected from the mental health caseload were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) with positive screens for mental illness were evaluated by a mental health professional in a timely manner. In the majority of cases, the evaluation occurred on the following clinic day.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

Medical Recordkeeping Practices

POLICIES REVIEWED: Policy 13-58 "Medical Records" is compliant with PBNDS 2008.

CAFCC-East uses an electronic medical record system (Allscripts).

Ten charts were reviewed using the IHSC Quality of Care Audit Tool. No areas of concern were noted during reviews of medical records, facility processes, procedures and policy.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

Pregnant Women

N/A. Females are not housed at the facility.

Dental Care

AMERICAN OVERSIGHT

POLICIES REVIEWED: Policy 13-13 "Dental Care" is compliant with PBNDS 2008.

CAFCC-East has a full-time dentist and a full-time dental assistant. All detainees receive a dental screening by the dentist within the first 14 days of detention. Other dental services are normally requested through a sick call request. The dentist evaluates the patient the following working day and decides if treatment is appropriate. The treatment is then scheduled.

Ten charts selected from the sick call log were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) were screened for symptoms during the intake process.
-10 of 10 (100%) were evaluated by a qualified health professional within 48 hours of the request.
-10 of 10 (100%) dental notes reviewed described findings, diagnosis, treatment, and plans.
-5 of 5 (100%) were scheduled for follow-up treatment as recommended.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

AMERICAN OVERSIGHT

Acute Laboratory Testing

POLICIES REVIEWED: Policy 13-31 "Diagnostic Services" is compliant with PBNDS 2008.

None of the charts reviewed contained STAT or acute lab work orders; however, ten contained completed routine lab work. The IHSC Quality of Care Tool was used to evaluate these records.
-0 of 10 (0%) had lab work collected within one day of the ordered date. All lab orders reviewed were considered routine and all were ordered during the initial chronic care appointment.
-10 of 10 (100%) were routine labs and had a report back and acknowledged within seven days.
-10 of 10 (100%) had an appropriate clinical response.
-10 of 10 (100%) patient charts reviewed had documentation that the patient was advised of the lab results.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

Diagnostic Services and Specialty Care Access

POLICIES REVIEWED: Policy 13-31 "Diagnostic Services" and Policy 13-64 "Off Site Care and Consultations" is compliant with PBNDS 2008.

Ten charts were reviewed using the IHSC Quality of Care Audit Tool to evaluate this area.
-0 of 10 (0%) had a documented time urgency included on the order for specialty care although all ten had the appointment accomplished within 30 days of the order.
-10 of 10 (100%) had the appointment accomplished within 45 days of the order.
-10 of 10 (100%) had clinician acknowledgment for the specialist's report in the medical record within 7 days of the date the service was performed.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

Mental Health Treatment Planning

POLICIES REVIEWED: Policy 13-61 "Mental Health Services" is compliant with PBNDS 2008.

Detainees are screened for potential mental health problems to include suicide risk and sexual/physical abuse history during the intake screening. Detainees who screen positive are referred to a mental health provider and are generally seen on the next day. CAFCC-East also performs a comprehensive mental health evaluation on all new detainees by a mental health provider within 7 days of booking into the facility.

Eight records out of the active mental health case load were reviewed using the IHSC Quality of Care tool.
-8 of 8 (100%) had a clinical assessment, treatment, and follow-up plan documented.
-8 of 8 (100%) patient reviewed had a treatment plan updated at a minimum of every 90 days.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

Treatment of Disability

POLICIES REVIEWED: Policy 13-82 "Special needs Treatment Plans" is compliant with PBNDS 2008.

At the time of this audit, there was only one detainee documented to have a disability. This record was reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.
-The facility maintains a list of all patients with disabilities.
-1 of 1 (100%) had the disability prominently displayed in the medical file.
-1 of 1 (100%) was assessed for assistance of activities of daily living (ADL) upon identification of disability and appropriate accommodation orders were entered.

PREVIOUS FINDINGS (October 2016): No findings noted.

AMERICAN OVERSIGHT

CURRENT FINDINGS: No findings noted.

Complaints and Grievances

POLICIES REVIEWED: Policy 13-08 "Complaint Resolution" and Policy 14-05 "Inmate-Resident Grievance Procedures" is compliant with PBNDS 2008.

According to the CoreCivic grievance officer, all dorms have access to grievance forms and a drop box labeled for this purpose. The grievance officer picks them up and reviews them daily. All medical grievances are then given to the Provider Coordinator in medical and reviewed. The Provider Coordinator is then responsible for answering all medical grievances within 5 business days.

Five charts were reviewed using IHSC Quality of Care Audit Tool to evaluate this area.
-A total of 7 grievances were submitted over the past 3 months.
-All seven grievances were addressed within 5 working days of receipt.
-4 of the 7 requests were related to delays in care, 2 were related to attitude, demeanor or conduct of staff and one was related to denial or refusal of specific request for care.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

AMERICAN OVERSIGHT

Diabetes

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management" is compliant with PBNDS 2008.

Ten diabetic medical records were reviewed using the IHSC Quality of Care Tool designed for this purpose.
-10 of 10 (100%) had a blood sugar measured at intake.
-10 of 10 (100%) were seen for chronic care by a medical provider within 14 days.
-10 of 10 (100%) had a baseline HgbA1C performed within the first 30 days.
-9 of 9 (100%) had lipids measured within one year.
-9 of 9 (100%) were followed at least every 90 days with appropriate vital signs.
-3 of 3 (100%) had aspirin prescribed when indicated.
-10 of 10 (100%) had a degree of control (goal HgbA1C<8.0) documented.
-6 of 6 (100%) had a strategy to attain diabetes control documented when HgbA1C was above goal.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

Human Immunodeficiency Virus (HIV)

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management" is compliant with PBNDS 2008.

At the time of this audit, CAFCC-East had only one ICE detainee documented as having HIV, and he was transferred to USM custody 7 days after arrival to the facility. This chart was reviewed using IHSC Quality of Care Audit Tool to evaluate this area.
-HIV was identified by the available medical records upon transfer to the facility.
-Detainee was only in ICE custody for 7 days; therefore, the other measures were N/A.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDING: No findings noted.

Hypertension

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management" is compliant with PBNDS 2008.

10 charts of hypertensive patients were reviewed using the IHSC Quality of Care Audit Tool designed for this purpose.
-10 of 10 (100%) had a documented blood pressure on the medical intake.
-10 of 10 (100%) patients were seen by a medical provider within the first 14 days of arrival at the facility.
-5 of 5 (100%) revealed intake blood pressures that had systolic blood pressure greater than 140 or a diastolic pressure greater than 90. In all five (100%) medical records there was documentation that the nurse called and received a treatment plan from the provider which included medication and blood pressure monitoring.
-In 9 of 9 (100%) cases, it appeared that a chronic disease guideline for HTN, which included obtaining baseline lab work, was followed.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

Asthma

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management" is compliant with PBNDS 2008.

Six charts of asthma patients were reviewed using the IHSC Quality of Care Audit Tool

AMERICAN OVERSIGHT

prescribed for use in this area.
-6 of 6 (100%) were seen for chronic care by a medical provider within 14 days of illness identification.
-6 of 6 (100%) had a peak flow measurement completed both during the physical exam and when seen for chronic care.
-6 of 6 (100%) followed a chronic disease guideline which addressed disease severity, prescription of medication consistent with severity, and documented degree of control.

PREVIOUS FINDINGS (October 2016): Peak flow measurements were not recorded within the physical exams of asthmatic detainees. The peak flows were being completed at the chronic care appointment.

CURRENT FINDINGS: No findings noted.

Seizure Disorder

POLICIES REVIEWED: Policy 13-06 "Chronic Care Disease Management" is compliant with PBNDS 2008.

At the time of this audit, FCC had only one ICE detainee documented as having Seizure Disorder. This chart was reviewed using the IHSC Quality of Care Audit Tool prescribed for use in this area.
-1 of 1 (100%) had an appropriate neurological assessment completed at the initial physical exam.
-1 of 1 (100%) was seen by a medical provider within 14 days of illness identification.
-1 of 1 (100%) had serum drug levels performed and acknowledged at least every 3 months until stable.
-1 of 1 (100%) had an established treatment plan.
-1 of 1 (100%) had orders for a bottom bunk.

PREVIOUS FINDINGS (October 2016): No findings noted.

CURRENT FINDINGS: No findings noted.

Accreditation - Review Complete

Last ACA Accreditation	2015-03-09
Last ACA Findings	None
Last NCCHC Accreditation	2015-03-23
Last NCCHC Findings	On their initial report from their last NCCHC survey, Eloy was found non-compliant in the following: There are 40 essential standards; 39 are applicable to this facility and 37 (95%) were found to be in compliance. One hundred percent of the applicable essential standards must be met. Our findings include: Essential Standards Not in Compliance J-A-06 Continuous Quality Improvement Program J-A-07 Emergency Response Plan Essential Standard Not Applicable J-G-03 Infirmary Care There are 27 important standards; 26 are applicable to this facility and 25 (96%) were found to be in compliance. Eighty-five percent or more of the applicable important standards must be met. Our findings include: Important Standard Not in Compliance J-A-10 Procedure in the Event of ari Inmate Death Important Standard Not Applicable J-C-08 Health Care Liaison J-A-06 Continuous Quality Improvement Program (E). The CQI program identifies health care aspects to be monitored, implements and monitors corrective action when necessary, and studies the effectiveness of the corrective action plan. The quality improvement committee, which meets quarterly, includes the participation of the responsible physician or mid-level providers as his designee, HSA, physician assistants, nurse practitioners, mental health representatives, and CQI nurse. The committee identifies problems, establishes thresholds, designs monitoring activities, analyzes the results and remonitors performance after implementing improvement strategies. Several studies have been completed since the last survey. Recent studies examined the effectiveness of suicide identification which were started in February 2015 and were not yet completed at the time of the survey. Studies for 2014 focused on chronic care charting, evaluation of HIV care and treatment, general chronic care, and urgent care review. Process studies include ongoing tracking and monitoring of screenings, evaluations and response to requests and triage. Physician participation in CQI efforts was evident. However, there was no evidence of annual reviews of the CQI

AMERICAN OVERSIGHT

program. The standard is not met 4 Corrective action is required for Compliance Indicator #5. The committee should complete an annual review of the effectiveness of the CQI program as required by the standard. Documentation is required to demonstrate that a plan is in place to correct all aspects of this standard. Acceptable documentation includes a copy of written policy and defined procedures for the CQI program, including provisions for annual reviews of its effectiveness. In order to receive accreditation, verification that this standard has been met is required. In order to receive accreditation, verification that this standard has been met is required. J-A-07 Emergency Response Plan (E). The RHA and facility administrator have approved the health aspects of the emergency response plan, which includes all the required elements. The mass disaster drill scenarios included a detainee fight in a pod, a power outage, and a hostage situation. The drills have been critiqued and the results were shared with the health staff, both verbally and in writing. Man-down drills have been held so that health staff on each shift has been able to participate annually. At this facility, three man-down drills per month have been well documented. The man-down drills/events have also been critiqued and the results shared with all health staff. However, over the course of three years, not all staff has had an opportunity to participate in a mass disaster drill. Drills have been held annually, but have combined two shifts either in the morning or in the afternoon. We emphasized that the drill for 2015 should include staff on the night shift. The standard is not met. Corrective action is required for Compliance Indicator# 2. At least one mass disaster drill should be conducted annually so that over a three-year period, each shift has participated. Practicing the emergency response plan makes health staff better able to respond to disasters when they occur in order to protect the health, safety, and welfare of inmates, staff, and visitors. Acceptable documentation includes 1) a copy of the critique of a mass disaster drill for night shift, with evidence that the results have been shared with all health staff; and 2) a copy of a plan by the RHA that addresses how mass disaster drills will be conducted annually in the future. In order to receive accreditation, verification that this standard has been met is required. The facility was re-accredited after

AMERICAN OVERSIGHT

	submitting the requested verification of compliance with the standards.
Last PBNDS Accreditation	2017-01-31
Last PBNDS Findings	No medical findings on last PBNDS visit
Comments	NO DATA

Grievances - Review Complete

Number of medical grievances reported through QI/JIC/CRCL/DRIL	1.00
Is there a local SOP for managing grievances?	No - See findings below.
Is there an identified grievance officer?	Yes
Is there a log book and is it up to date?	Yes
Number of medical grievances that were not addressed in a timely manner.	0.00
Number of formal grievances.	31.00
Number of informal grievances.	4.00
Findings	-Facility follows IHSC National Policy and PBNDS standards -Current practice: AHSA is G.O. and addresses initial grievances directly. Appeal is referred to HSA to address.
Deliverables	(b)(5)

AMERICAN OVERSIGHT

Risk Management - Review Complete

Trends	(1) RCA involving medical care management of detainee with alcohol and opioid withdrawal. (1) RCA involving care management of detainee with medical issues not addressed.
Number of active RCAs/SOEs	2.00
Number of RCAs or SOEs completed during the last six (6) months.	0.00
Number of corrective actions generated from RCAs or SOEs during the last six (6) months.	0.00
List all corrective actions identified in the preceding field and note their status and due dates.	NO DATA
Findings	NO DATA
Deliverables	NO DATA

AMERICAN OVERSIGHT

Medication Administration - Review Complete

Is pre-pouring occuring?	No - See findings below.
Are nurses adhering to the six rights of medication administration (right patient, right drug, right route, right dose, right time, and right documentation)?	Yes
Are nurses using two forms of identification prior to administration?	No - See findings below.
Are mouth checks being conducted with every administration?	Yes
Are nurses administering only medications that they prepare?	Yes
Are all entries in the MAR complete (allergies, staff initials, etc)?	Yes
Number of all medication refusals documented on the MAR.	10.00
Of the identified medication refusals from the MAR, how many refusals did not have accompanying eCW documentation?	0.00
Number of high risk medication refusals.	0.00
Of the identified high risk medication refusals, how many times were providers NOT notified of the refusal?	0.00
Are nurses documenting the medication administration immediately after the medication is administered?	Yes
Findings	-CCA only issues an ID, no wrist bands. Nurses were only using ID and not a second source of ID. Recommended asking detainee to confirm their name as second source. Staff implemented immediately. -Sampled MARs for refusals: Found 10 - Documentation complete -Staff reported for every refusal they send the provider a TE -The structural set up for pill line forces the need for two nurses to conduct pill line even though the number of medications to be passed could be accomplished by one. -CCA process for getting detainees to pill line is to have them go to eat first, then as they finish eating and depart the cafeteria, they come to the pill line window. This results in a inefficient use of resources as the nurses have significant down time waiting for detainees to report to the pill line. Additionally, the CCA officers working the pill line do

AMERICAN OVERSIGHT

	not prevent other detainees from coming to the window regardless if they are on the list provided for that pill pass. -The staff shared that due to the current process there are times they go over the two hour zone for administering medications.
Deliverables	-Suggest Medical inform detainees of need to confirm their ID with two forms of ID in order to help facilitate compliance and inform CCA staff that work pill line for the same reasons. -Suggest working with CCA to develop a more efficient process for getting detainees to and through pill line.

AMERICAN OVERSIGHT

Emergency Preparedness and Response- Review Complete

Is there documentation of the man-down drills on each shift (once per month), mass casualty drills, and fire drills that have been conducted?	Yes
Do emergency scenarios vary?	Yes
Is the difference between a drill and an actual event evident in the write-up?	Yes
Do all staff participate in the drills?	No - See findings below.
Are all staff trained on emergency equipment?	Yes
Is emergency equipment checked daily and documented?	Yes
Is there documentation to support the training?	Yes
Did all staff receive an "after-action" debriefing?	No - See findings below.
If mortality related response, did staff involved submit a sequence of events statement of occurrence within 24 hours of incident and offered any adjustment support?	No - See findings below.
Is the contact information for all staff up to date for notification, accountability, or recall purposes prior to, during, or after an emergency event?	No - See findings below.
Findings	-Staff who are on the shift participate in the drill but not all staff who work in medical are able to participate as some are off that day. There was no mechanism to disseminate the drill findings with staff who were not participating in the drill. Additionally a drill is different from a training evolution. A drill should replicate how you actually respond to an event in order to identify issues with the response. Training evolutions are to train staff, drills are to identify issues in the response that should subsequently be covered in training. This is not to say that training cannot be done during drills but at the same time, a drill should only include those resources used to normally respond to a drill. - Staff present participated in after action. - Had documentation on debriefing but no memo's from staff who were involved in detainee's death. IHSC does not have a policy on what actions are necessary following the death of a detainee. - Contact information is included in all charts but does not have a date indicating when it was last updated. - Staff on evening and night shifts were not assigned on a ERT.

AMERICAN OVERSIGHT

Deliverables	(b)(5)

Environmental Health - Review Complete

Are clinic Safety Data Sheets (SDS) files complete, current, and accessible?	Yes
Are hazardous chemicals (including cleaning supplies) labeled and securely stored?	Yes
The Public Health, Safety, and Preparedness Toolkit daily, weekly, monthly, and annual checklists are completed, signed by the HSA or designee, and maintained locally.	Yes
Items not in compliance with the Public Health, Safety, and Preparedness Toolkit daily, weekly, monthly, quarterly and annual checklists are documented to show corrective action with the completion date.	Yes
Are all airborne infection isolation (AII) room doors labeled "restricted area" and include requirements for entry?	Yes
Is documentation of daily checks on AII rooms' negative pressures complete?	Yes
Is the OSHA Form 300A summary completed and posted in clinic from Feb 1st through April 30th each year?	Yes
Findings	No Findings - System is well organized and well maintained.
Deliverables	NO DATA

Consent Forms - Review Complete

Number of consent forms reviewed.	25.00
Number of consent forms that were complete (not missing detainee signature, witness, or date).	25.00
Number of dental consent forms among the identified consent forms.	3.00
Number of dental consent forms that were complete (missing detainee signature, witness, or date).	3.00
Number of psychotropic consent forms among the identified consent forms.	2.00
Number of psychotropic consent forms that were complete (not missing detainee signature, witness or date).	2.00
Number of consent forms completed by a staff member other than the one completing the intake encounter.	0.00
Among the consent forms completed by a staff member other than the one completing the intake encounter, how many addressed the use of translation?	0.00
Findings	NO DATA
Deliverables	NO DATA

AMERICAN OVERSIGHT

Transfers - Review Complete

Number of transfers reviewed.	25.00
Number of transfers authenticated appropriately (signed, stamped, and dated).	25.00
Number of transfers initiated in eCW.	25.00
Number of transfers completed by LVN or above.	25.00
Number of transfers with TB clearance annotated correctly.	22.00
Out of the transfers reviewed, how many had a positive chest X-ray?	1.00
Out of the transfers with positive chest X-ray, how many had lab results documented to verify non-infectiousness?	1.00
Out of the transfers reviewed, how many have active TB?	0.00
Out of the transfers with active TB, how many are not being treated for TB?	0.00
Number of transfers with chronic medical conditions or lack thereof annotated.	7.00
Number of transfers with medication instructions clearly provided.	7.00
Number of transfers signed by a proper level provider.	25.00
Findings	(b)(6); (b)(7)(C) Transfer summary missing prior CXR results conducted on 01/24/16 with negative results. (b)(6); (b)(7)(C) Transfer summary "TB Screening Modality" is documented "Symptom Screening" Should document modality of CXR from 03/15/17 with negative results (b)(6); (b)(7)(C) TB suspect: Transfer summary question "Is the detainee/resident being teated for active TB Disease? Transfer summary indicates "No Patient started on RiPE Therapy on 04/27/2017. Smear negative X3, cultures pending X3". Should state "Yes".
Deliverables	NO DATA

AMERICAN OVERSIGHT

Prescreening Review - Review Complete

Number of prescreens reviewed.	25.00
Number of prescreens with detainee identified with at least two detainee identifiers.	22.00
Number of prescreens triaged according to prescreen policy.	25.00
Number of prescreens that used a translator.	4.00
Of the prescreen records that used a translator, how many listed a translator name or ID number?	4.00
Of the prescreen records that did not use a translator, how many listed a reason for not using a translator?	15.00
Number of prescreens with documentation completed in eCW prior to intake screening.	0.00
Findings	Documentation for nine (9) pre-screenings completed in e-CW, after the intake screenings For three (3) pre-screenings reviewed, only one source for properly identifying the detainee was listed, and that was verbally. No second source for identifying detainee was listed. For six (6) pre-screening charts reviewed, no reason was listed for why an interpreter was not utilized. Only the fact that one was not utilized.
Deliverables	NO DATA

AMERICAN OVERSIGHT

Prescreening Observations - Review Complete

Number of prescreen encounters observed.	15.00
Number of prescreen encounters observed that allowed for patient privacy.	15.00
If privacy was not provided, where was the prescreen performed?	NO DATA
Number of prescreen encounters that used language services.	2.00
Number of prescreen encounters completed within two hours of arrival.	15.00
Number of prescreen encounters documented in eCW prior to initiation of intake screening.	15.00
Number of prescreen encounters prioritized.	4.00
Of the prescreen encounters prioritized, how many were referred to intake in a timely manner?	4.00
Findings	In the anteroom entering the facility where the prescreening are conducted, there is no phone, which requires prioritizing all who need an interpreter. This results in the prescreening process taking longer and prioritizes them equal to those with medical issues. Current intakes are approximately 30 per day and are manageable using this process.
Deliverables	(b)(5)

Intake Screening Review - Review Complete

Number of intake screenings reviewed.	25.00
Number of intake screenings with detainee identified with at least two detainee identifiers.	25.00
Of the intake records reviewed, how many used a translator?	8.00
Of the intake screening records that used a translator, how many listed a translator name or ID number?	8.00
Of the intake screening records that did not use a translator, how many listed a reason for not using a translator?	17.00
Number of notes with TB clearance noted (PPD, CXR, current CXR from other facility).	25.00
Of the intake screening records, how many were TB negative?	25.00
Of the intake screening records that are TB negative, how many were signed, dated, and stamped by an RN or above?	18.00
Of the intake screening records, how many were TB positive?	0.00
Of the intake screening records that are TB positive, how many were signed, dated, and stamped by an RN or above?	0.00
Number of intake screenings with a complete pain assessment using the pain scale indicator.	25.00
Number of intake screenings with pain scale greater than 0.	2.00
Of the intake screenings with a pain scale greater than 0, how many were addressed?	1.00
Number of intake screenings with mental health screening completed.	25.00
Number of intake screenings that used the eCW Intake Screening template.	25.00
Of the intake screenings that used the eCW Intake Screening template, how many were completed appropriately (i.e., default answers changed to reflect the patient's response)?	25.00
Number of intake screenings with clinically significant findings.	7.00

AMERICAN OVERSIGHT

Of the intake screenings with clinically significant findings, how many were referred appropriately?	6.00
Number of intake screenings reviewed by an RN or above within 24 hours.	3.00
Findings	Detainee not referred appropriately for findings discovered during Intake. Detainee expressed they were in pain 5/10. "I feel bad. I have a stomahache." The detainee indicated they had their gallbladder removed 3 months prior. Since that time, they have had pain, vomitting, and epigastric pain.Was hospitalized for UTI 6 months ago. The detainee's Intake was still coded as Normal and they were scheduled for a PE-S. The detainee was listed as being in 0/10 pain under vital signs section despite detainee stating they were in 5/10 pain. Detainee's blood pressure at Intake listed as 140/88. Intake screening coded as normal and there is no mention of the elevated BP reading within the Intake documentation. Detainee scheduled for PE-S. Detainee's BP further elevated at 154/93 during the PE-S, and a telephone encounter was done then, for the detainee to have BP checks. Evidence of TB clearance is in chart; however, negative TB screening not signed, dated, stamped by RN or higher (Note: Please refer to Eloy's Excel Tracker Sheet for the Alien numbers associated with above.)
Deliverables	NO DATA

AMERICAN OVERSIGHT

Intake Screening Observations - Review Complete

Number of intake screenings observed.	6.00
Number of intake screening observations where the nurse reviewed the prescreen and transfer paperwork prior to initating the intake screening.	6.00
Number of intake screening observations where a full set of vital signs were taken.	6.00
Number of intake screening observations that used language services.	2.00
Of the intake screening observations that used language services, how many were appropriately conducted?	2.00
Number of intake screenings observations documented in eCW within one hour of the evaluation.	6.00
Number of intake screening observations where the patient was educated on access to care, upcoming PE appointment, and the grievance process.	6.00
Number of intake screening observations with security advice of special needs and housing disposition.	0.00
Of the intake screening observations with security advice, how many contained clear communications?	0.00
Findings	Nursing staff conducting intake screenings were polite and professional with each detainee. The system is efficient and conducted in collaboration with ICE and CCA, ensuring all stakeholders meet their mission in a timely manner.
Deliverables	(b)(5)

AMERICAN OVERSIGHT

Chronic Care Review - Review Complete

Number of chronic care encounters reviewed.	25.00
Number of chronic care encounters with appropriate referrals based on category and severity.	25.00
Number of chronic care encounters with a PE-C completed within 48 hours.	21.00
Number of chronic care encounters with chronic condictions properly document in eCW Problem List (e.g., asthma, hypertension, etc).	25.00
Number of chronic care encounters with medications.	24.00
Of the chronic care encounters with medications, how many were provided or continued appropriately?	22.00
Number of chronic care encounters with psychiatric medications.	5.00
Of the chronic care encounters with psychiatric medication, how many encounters indicated that the detainee was seen by an MD or MLP every 30 days for medication assessment or review?	5.00
Of the chronic care encounters with psychiatric medication, how many encounters indicated that the detainee was seen by an MD or psychiatrist every 90 days?	5.00
Number of chronic care patients identified as stable.	25.00
Of the stable chronic care patients, how many encounters indicated that the detainee was seen within 90 days?	25.00
Number of chronic care patients identified as unstable.	0.00
Of the unstable chronic care patients, how many encounters indicated that follow-up appointments were scheduled earlier than 90 days?	0.00
Number of chronic care encounters where a global alert (IHSC 834 or electronic equivalent) was completed.	24.00
Number of chronic care encounters where baseline medical data was document on form IHSC 847 or electronic equivalent.	0.00

Findings

Physical Examinations Review - Review Complete

Number of physical examinations reviewed.	25.00
Number of physical examinations reviewed that used language services.	12.00
Of the physical examinations that used language services, how many contained identification of the translator/interpretter (name, ID, etc)?	12.00
Number of physical examinations reviewed for juveniles.	0.00
Of the physical examinations for juveniles, how many were completed within 7 days of arrival to the facility?	0.00
Number of physical examinations reviewed for adults.	25.00
Of the physicial examinations for adults, how many were completed within 14 days of arrival to the facility?	25.00
Number of physical examinations with pain assessment.	25.00
Of the physical examinations with pain assessment, how many were addressed?	25.00
Number of physical examinations with clinically significant findings.	20.00
Of the physical examinations with clinically significant findings, how many had a plan to address them?	20.00
Number of physical examinations reviewed by an MD (PE-C within 7 days; PE-S within 14 days).	25.00
Number of physical examinations for females.	7.00
FEMALE ONLY - Number of physical examinations with a record of the last menstrual cycle.	7.00
FEMALE ONLY - Number of physical examinations with a last menstrual cycle greater than 45 days prior to the encounter.	3.00
FEMALE ONLY - Number of physical examinations with a last menstrual cycle greater than 45 days prior to the encounter with appropriate documentation.	3.00
FEMALE ONLY - Number of physical examinations with a pap test offered.	0.00

AMERICAN OVERSIGHT

FEMALE ONLY - Number of physical examinations where a pap test was not indicated.	5.00
FEMALE ONLY - Number of physical examinations where a pap test was not indicated with appropriate documentation.	1.00
Findings	1) Best practice finding/recommendations: GYN section not documented for for female patients which would shed light as to if pap test would be clinically inidicated 2) Best practice finding/recommendation: In one chart intake note was merged into the PE-C note instead using the PE Smart form 3) Incidental/Best practice finding: One Chart Pt was started on Antipsychotic medication on 5/14/17 and no notification noted to alert MLPs that this pt now needs monthly Chronic f/u with a MLP per policy (b)(5) (b)(5) Also no baseline AIMS test noted on file as required by policy.
Deliverages	NO DATA

AMERICAN OVERSIGHT

Physical Examinations Observations - Review Complete

Number of physical examination encounters observed.	7.00
Number of physical examination encounters with a full set of vital signs taken.	7.00
Number of physical examination encounters observed that were completed within 14 days.	7.00
Number of physical examinations that offered a chaperone.	
Of the physical examinations that offered a chaperone, how many accepted?	0.00
Of the physical examinations with a chaperone, how many contained documentation of the chaperone's name?	0.00
Of the physical examinations that offered a chaperone, how many refused?	0.00
Of the physical examinations that refused a chaperone, how many contained appropriate documentation of refusal?	0.00
Findings	PE's were all completed within the 10 day time frame. Detainees were educated about the process, interpreters were used with 4 of the PEs, as these were the only times it was required. Detainees were also educated on preventive health issues. Additionally, detainees were appropriately referred when a medical issue was noted during the PE-S for a PE-C. - Nurses are using paper to perform PEs and then going back and documenting them after the completion of PEs.
Deliverables	(b)(5)

AMERICAN OVERSIGHT

	A
1	
2	
3	**INTRODUCTION TO THE QMC**
4	These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc. Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.
5	• These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
6	• The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
7	• The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.
8	• The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody ≥ 14 days.
9	• In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
10	• While the goal is 100% compliance, the performance objective for most of the audit tools is ≥ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
11	• The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
12	• In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.
13	
14	**AUDIT TOOL COMPLETION**
15	Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer. Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.
16	
17	**TIPS FOR REVIEWERS**
18	• Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

AMERICAN OVERSIGHT

	A
19	• Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.
20	• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
21	• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
22	• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
23	• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
24	• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
25	• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
26	• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
27	• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

1			**TREATMENT OF DISABILITY**					
2	**Number of Files Reviewed for Patients Meeting this Criteria:*** **(please select 0 if no files/patients reviewed)**		7					
3				10				
4	**Purpose:**	To assess the care of patients with disabilities who need accommodations to access the facility's programs or activities as a result of their disabilities. An individual is considered to have a "disability" if s/he has a physical or mental impairment that substantially limits one or more major life activities, or has a record of such impairment. See also: https://www.dhs.gov/sites/default/files/publications/guide-interacting-with-people-who-have-disabilties_09-26-13.pdf						
5	**Source:**	Facility logs, tour of facility, list of patients who require DME (to include walkers, canes, wheel chairs, hearing aids, or other items to assist the patients to access the facility's programs and activities), and interviews with patients with disabilities who need accommodations to access the facility's programs and activities.						
6	**Sample:**	10 patients (if available) within the population who have a disability that requires medical involvement. Determine if the patients with disabilities received appropriate treatment and disability accommodations through medical record examination.						
7	**Guidelines:**	NCCHC J-G-02.

3	**INTRODUCTION TO THE QMC**
4	These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc. Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.
5	• These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
6	• The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
7	• The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.
8	• The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody ≥ 14 days.
9	• In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
10	• While the goal is 100% compliance, the performance objective for most of the audit tools is ≥ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
11	• The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
12	• In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.
13	
14	**AUDIT TOOL COMPLETION**
15	Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer. Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.
16	
17	**TIPS FOR REVIEWERS**
18	• Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

AMERICAN OVERSIGHT

	A
19	• Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.
20	• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
21	• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
22	• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
23	• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
24	• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
25	• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
26	• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
27	• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.

1			**TREATMENT OF DISABILITY**					
2	**Number of Files Reviewed for Patients Meeting this Criteria:*** **(please select 0 if no files/patients reviewed)**		3					
3				10				
4	**Purpose:**	To assess the care of patients with disabilities who need accommodations to access the facility's programs or activities as a result of their disabilities. An individual is considered to have a "disability" if s/he has a physical or mental impairment that substantially limits one or more major life activities, or has a record of such impairment. See also: https://www.dhs.gov/sites/default/files/publications/guide-interacting-with-people-who-have-disabilties_09-26-13.pdf						
5	**Source:**	Facility logs, tour of facility, list of patients who require DME (to include walkers, canes, wheel chairs, hearing aids, or other items to assist the patients to access the facility's programs and activities), and interviews with patients with disabilities who need accommodations to access the facility's programs and activities.						
6	**Sample:**	10 patients (if available) within the population who have a disability that requires medical involvement. Determine if the patients with disabilities received appropriate treatment and disability accommodations through medical record examination.						
7	**Guidelines:**	NCCHC J-G-02.						
8								
9	**Remarks:**	b(6), b(7)(c)-detainee was on crutches. Sticker notification on chart, but not on problem list.

3	**INTRODUCTION TO THE QMC**
4	These Quality of Medical Care (QMC) audit tools focus on the assessment of clinical performance using a set of standardized measures. The measures are based on either nationally-accepted clinical guidelines or industry best practices regarding healthcare services for chronic diseases, such as National Commission for Correctional Healthcare, National Institutes of Health, American Diabetes Association, etc. Measurement of clinical performance is only one aspect of a facility quality assessment. It is an adjunct, not a substitute, for assessment of the effectiveness of policies and procedures, sanitation and hygiene, space and equipment, etc.
5	• These tools are designed to provide a snapshot of care for current or recent detainees, focused on areas of high risk.
6	• The data collected can be used to analyze opportunities for improvement, for tracking and trending performance over a period of time, and for cross-comparisons with other facilities.
7	• The measures on each audit tool are "proxy" measures which can be used to generalize about the health care for a specific situation or condition based on the answers to each question. For example, there are eight measures on the diabetes audit tool. If performance on these measures is acceptable, it is assumed that the overall care for diabetics is acceptable.
8	• The recommended sampling design is intended to measure recent care provided in the facility, generally on patients who have been in custody for enough time to provide expected care, follow-through and measurable outcomes. For example, the health assessment sample is taken from a list of detainees in custody ≥ 14 days.
9	• In most cases, the recommended sample size will provide a reliable picture of care that can be generalized.
10	• While the goal is 100% compliance, the performance objective for most of the audit tools is ≥ 90%. That is, a facility is meeting expectations when performance on each measure meets or exceeds 90%.
11	• The performance objective for the audit tool on ambulatory sensitive conditions is 100%.
12	• In general, the answers are either "yes," "no," or "not applicable due to length of stay" (N/A - LOS) or "not applicable – not due to length of stay" (N/A - NLOS). In general, a 'yes' response indicates that the measure has been met and a 'no' response indicates the measure has not been met. Two exceptions to this are noted in the section below.
13	
14	**AUDIT TOOL COMPLETION**
15	Reviewers are required to complete each audit tool. If there are no detainees who meet the criteria for a particular audit tool, this should be noted on the worksheet by clicking the appropriate box. If there are no detainees who meet the criteria, but there are general questions to answer on the tool, the answers to these questions should still be filled out. If the number of detainees who meet the audit tool criteria is less than the recommended sample size, the reviewer should answer the measures for the number of detainees available and add a note in the overall remarks section about why the full sample size was not reviewed. If certain measures are not applicable to a particular detainee, the reviewer will select the 'NA – LOS' answer, if the reason it was not applicable is related to the shortened stay of the detainee in the facility. If the reason is not applicable due to other reasons, the reviewer will select 'NA – Not LOS' as the answer. Reviewers should note that in item #2 in the Evaluation of Care Prior to Emergency Department/Hospital Visit for Conditions Sensitive to Ambulatory Care audit tool a 'no' response is the desired answer that would indicate that the criteria was met. Thus if all responses are 'no' for this item, this reflects 100% compliance with this measure. The same should be noted by reviewers for item #5 in the Suicide Screening audit tool. A 'no' response is the desired answer that would indicate the criteria was met.
16	
17	**TIPS FOR REVIEWERS**
18	• Keep control of the medical record sample selection. Select the records to review from the primary or secondary source identified on each audit tool. Ask the medical records staff to return the list of selected records with the corresponding stack of records to know why those records were requested and what proportion of the requests were not available.

AMERICAN OVERSIGHT

	A
19	• Take note of the proportion of the requested medical records that were not available and the proportion of laboratory and diagnostic reports that were not filed and acknowledged within the medical record. These are indicators of medical record system problems.
20	• Try to maintain the sample size. If several records requested are not available, select the same number of additional records to maintain the expected sample size.
21	• If a question asks for clinical judgment as to timeliness or appropriateness and the reviewer is unsure of the answer, make a simple note of the circumstances and discuss with a physician before finalizing the data. This may be done "back in the office."
22	• Don't neglect to ask for any paper records in facilities that use electronic health records. Many facilities maintain a paper record for certain documents.
23	• Don't hesitate to use a detainee's record for more than one audit tool. If the name shows up on two lists, and it was selected multiple times, use that record again.
24	• Don't make any assumptions about the reason for the absence of medical record documentation for any measure in the audit tools. Inquire with the facility health authority to obtain a clear understanding of the absence of information.
25	• Don't let facility staff select the records for review. This introduces bias, even if not intentional.
26	• Don't confuse the policy governing a certain practice with what was actually done in specific instance. Actual practice should be well-documented in the medical record.
27	• Don't think about calculating a composite score for an audit tool. Composite scores are misleading. Failure to achieve ≥ 90% on any single measure is an opportunity for improvement that can reduce a potential risk to detainees.
