Thanks for informing us about the negative coronavirus result and appreciate you sending the written documentation to us when you receive. Even though the test result came after our conversation below, his condition is not improving. He remains febrile, and yesterday patient had some desats and transient hypotension with worsening R lung infiltrate, not responding to antimicrobials, increasing bands and LFTs as well, although he is a bit more stable now. We've elected to keep him on airborne / contact at this point as we don't know what pathogen he might have. Dr. Levent (the treating peds ID physician) & I discussed last night and we have a few questions:

1. While RT-PCR is clearly very sensitive, there could be some factors that could suggest false negative – the quality of the swabs collected and also the timing of swab collection within the natural course of this disease. For most viral diseases, I would expect positive PCR early during his febrile illness (which he was), but not sure. In other words, clinically he remains ill without a diagnosis. What is the likelihood of a false negative in this setting and would CDC be agreeable to recollecting a sample?
2. Would it still be possible to talk with the coronavirus CDC expert?

We're not doubting CDC's result, but as clinicians we are trained to put the puzzle pieces together and so far not successful. We recognize epidemiologically he neither fit the close contact with nCoV nor was he from Hubei, but despite all our commercial PCR tests / urine antigen, etc everything has come back negative so no alternative diagnoses. We will keep searching & managing him appropriately.

Vincent Hsu

Subject:	IMPORTANT: Telework Guidance and Template Agreement for Consideration for Employees of the State Personnel System (COVID-19)
Date:	Friday, March 13, 2020 3:33:25 PM
Attachments:	image001.png image003.png image005.png image007.png DMS Telework Agreement Template.doc
Importance:	High

Good afternoon,

Telework can be an effective and useful tool for supporting an agency's Continuity of Operations Plan (COOP) during a declared health emergency such as COVID-19.

The purpose of this document is to aid and guide state agencies as telework is being evaluated and considered as part of each agency's response to COVID-19 to ensure required staffing levels are maintained while addressing employee health concerns.

- Telework connected with a declared health emergency must be evaluated on a case by case basis. Not all positions will be eligible for telework nor will all employees be suited for telework due to a variety of reasons. However, telework is a viable option to assist agencies in maintaining continuity of operations during a health emergency.

- If not already determined, agencies should evaluate if the duties of a given position/job or a portion of the work can be effectively performed away from the regular work location.

- If the nature of an employee's work responsibilities can be accomplished away from the regular work location and if any necessary technological/equipment needs can be satisfied, the agency may permit and encourage employees to telework as a way to reduce the face-to-face contacts between employees (social distancing).

- Agencies should identify available equipment (laptops, telephones, etc.) to be assigned to employees for the purpose of teleworking. Consideration should be given to which positions are essential to operations when prioritizing the use of appropriate equipment for telework.

- Agencies should review their telework policies to ensure they are current and consider whether any component of their policies should be modified to allow broader use of telework as appropriate.

AMERICAN OVERSIGHT

If a position is deemed eligible for telework, the manager and employee will need to complete a written agreement that specifies the terms and conditions of the arrangement and provides for the termination of the telework arrangement upon the agency's determination that it is no longer necessary.
    - Agencies may want to prepare a telework agreement that includes the basic components for short-term telework arrangements associated with the current health emergency. (See attached template)

- In evaluating telework eligibility, considerations should include:
    - Is the position essential to the agency's required responsibilities?
    - Although an essential position, can the duties be performed away from the official worksite for a defined, short period of time? If so, how long?
    - Are there significant portions of the job that can be done away from the official worksite?
    - Does the position need continual supervision or input from others that is only available from the official worksite?
    - Is contact with other employees/customers required every day? Can contacts be accomplished through various forms of technology?
    - Are needed reference materials to perform the work available/accessible?
    - Is data security maintained?
    - Is specialized equipment or technology available at the employee's home?
    - Is the home workspace appropriate for telework?

- Although a position or job class may be identified by the agency as telework eligible, an evaluation of whether a given employee is an appropriate candidate for telework should be conducted. Agencies should consider individual employee factors such as the employee's:
    - Ability to work independently;
    - Comfort level with the required technology;
    - Past performance levels;
    - Dependability and trustworthiness; and
    - Level of self-motivation.

- Employees who are unable to work due to illness or who have sick family members under their care will not be good candidates for telework.

- Employees who are caring for well children due to school or day care closures may be able to perform portions of their work from home, depending on individual circumstances (e.g., the age and level of independence of the child).

- For additional guidance on telework, please refer to the DMS-HRM policy guideline titled *Identifying Positions Appropriate for Telework and Determining Employee Eligibility*.

Thank you!

Subject:	IMPORTANT: Use of Sick Leave and Emergency Leave Transfer (COVID-19)
Date:	Monday, March 16, 2020 2:11:03 PM
Attachments:	image001.png image003.png image005.png image007.png 63 DMS Suspension of Rules 3-16-2020.pdf EmergencyLeaveDonationForm.docx COVID-19 Emergency Leave Transfer Program.docx

Good afternoon,

In response to our public health emergency and to help contain the spread of COVID-19, the Governor is allowing state employees the flexibility to donate and transfer available leave (sick, annual, special compensatory, and regular compensatory leave) to other state employees (intra- and inter-agency). This flexibility will also help mitigate the impacts of school closures and observe the Centers for Disease Control and Prevention and the Florida Department of Health's social distancing recommendations.

In order to assist employees who may not have enough leave to cover necessary absences, the Department of Management Services (DMS) is suspending the administrative rule provisions governing the existing sick leave transfer program to expand the opportunities for employees to transfer sick, annual, special compensatory, and regular compensatory leave to fellow employees.

Under this temporary COVID-19 Emergency Leave Transfer program, employees will have the ability to donate sick, annual, special compensatory leave, or regular compensatory leave to employees in need. The following requirements will govern this program:

- Employees who donate must retain at least 80 hours of sick leave.
- Employees who donate must transfer at least eight hours of leave to the recipient.
- Employees eligible for disability leave may not receive donations.
- Intra-agency and inter-agency donations are allowed.
- Unused leave donations will be returned to donating employees once Executive Order 20-52 expires.

Employees in need of leave donations and employees willing to donate leave should work directly with their agency HR offices. DMS has created the attached form that can be used to facilitate the leave donation process.

AMERICAN OVERSIGHT

In addition, DMS has suspended Rule 60L-34.0042(3), Florida Administrative Code for the particular purpose of allowing State Personnel System employees the flexibility to utilize sick leave for childcare or dependent care purposes.

If you have any questions regarding this temporary COVID-19 Emergency Leave Transfer program, please contact Matt Gregory at 850-921-4618, John Apthorp at 850-922-1274, or Mark Helms at 850-487-1508.

This message is being cascaded to Chiefs of Staff, Administration Directors, HR Directors, Communications Directors, and Legislative Directors.

Thank you!!

From:	State and Local Readiness (CDC)
To:	State and Local Readiness (CDC)
Subject:	INVITATION: Briefing Call on COVID-19 TODAY (March 12) at 2:00 p.m. ET
Date:	Thursday, March 12, 2020 12:51:40 PM
Attachments:	image001.png

State and Local Leaders,

On **Thursday, March 12, at 2:00 p.m. Eastern Time**, please join Senior Administration Officials for a briefing call on COVID-19 (coronavirus) regarding President Trump issuing a proclamation under section 212(f) of the Immigration and Nationality Act (INA) to restrict travel to the United States from foreign nationals who have recently been in certain European countries. Additional details can be found below. We will also provide an update on implementing mitigation strategies for communities with local COVID-transmission (A Framework for Mitigation: Implementation of Mitigation Strategies for Communities with Local COVID-19 Transmission).

Briefing Call Registration on 212(f) & Community Mitigation Strategies

- **Date: Today,** Thursday, March 11
- **Time:** 2:00 PM ET (please note time zone)
- **Call-In Registration**: **CLICK HERE**
- **Note:** You must RSVP to join the call. Upon successful registration, you will receive dial-in details to the email address you use to register. Note that multiple people cannot dial-in using the same registration information.

Below, please find additional information. The White House Office of Intergovernmental Affairs (WH IGA) will continue to share pertinent information as it becomes available. Please do not hesitate to reach out to our office directly if we can be of assistance.

Sincerely,
Zach

President Donald J. Trump Has Taken Unprecedented Steps to Respond to The Coronavirus and Protect the Health and Safety Of Americans

"Together we are putting into policy a plan to prevent, detect, treat and create a vaccine against coronavirus to save lives in America and the world. America will get it done!" – President Donald J. Trump

President Donald J. Trump signed a Presidential Proclamation, which suspends the entry of most foreign nationals who have been in certain European countries at any point during the 14 days prior to their scheduled arrival to the United States. These countries, known as the Schengen Area, include: Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and Switzerland. This does not apply to legal permanent residents, (generally) immediate family members of U.S. citizens, and other individuals who are identified in the proclamation.

Statement from DHS Acting Secretary Chad F. Wolf: "Protecting the American people from threats to their safety is the most important job of the President of the United States. The actions President Trump is taking to deny entry to foreign nationals who have been in affected areas will keep Americans safe and save American lives. I applaud the president for making this tough but necessary decision. While these new travel restrictions will be disruptive to some travelers, this decisive action is needed to protect the American public from further exposure to the potentially deadly coronavirus. In January and February, the Administration issued similar travel restrictions on individuals who had been in China and Iran. That action proved to be effective in slowing the spread of the virus to the U.S., while public health officials prepared. In the next 48 hours, in the interest of public health, I intend to issue a supplemental Notice of Arrivals Restriction requiring U.S. passengers that have been in the Schengen Area to travel through select airports where the U.S. Government has implemented enhanced screening procedures."

RESTRICTING TRAVEL FROM IMPACTED AREAS: President Donald J. Trump is taking further action to curb the spread of the coronavirus to the United States from other countries.

- President Trump is issuing a proclamation under section 212(f) of the Immigration and Nationality Act (INA) to restrict travel to the United States from foreign nationals who have recently been in certain European countries.
    - Section 212(f) of the INA only applies to the movement of human beings, not goods or cargo.
- The restriction applies to foreign nationals who have been in the Schengen Area, 26 countries in Europe with open borders agreements, in the last 14 days.

AMERICAN OVERSIGHT

- Those who are exempt from these restrictions, such as American citizens, will be directed to a limited number of airports where screening can take place.
- There is extensive travel back and forth between Europe that heightens the risk here in the United States.

LOOKING OUT FOR AMERICAN BUSINESSES AND WORKERS: President Donald J. Trump is committed to protecting American businesses and workers from the impacts of coronavirus.

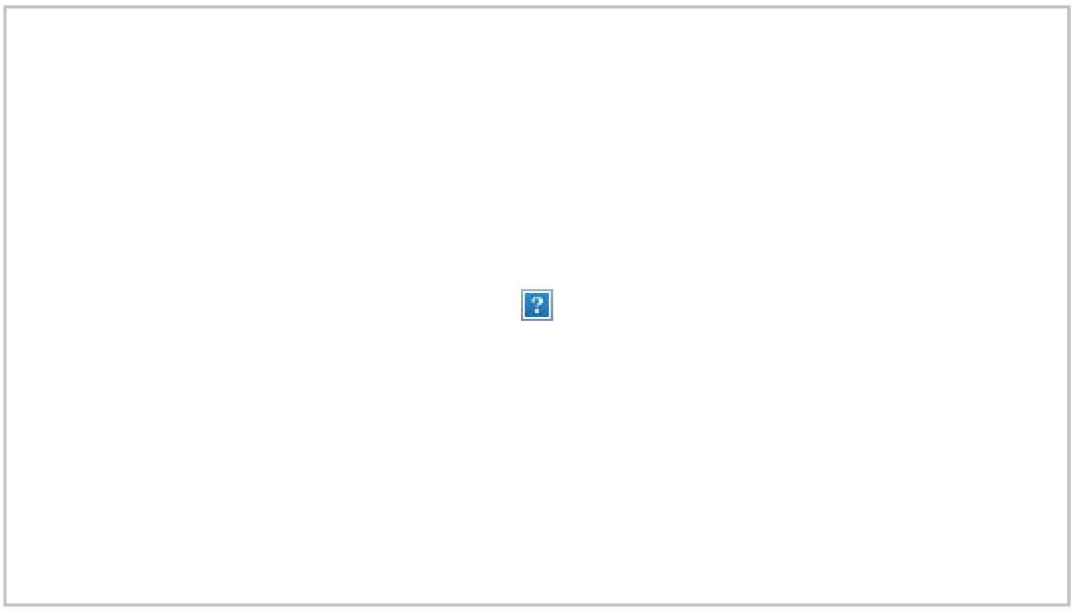
- The President is announcing an economic assistance package to help support businesses and workers who have been harmed by this outbreak.

- President Trump has instructed the Small Business Administration (SBA) to exercise available authority to provide loans to businesses affected by the coronavirus.
    - These loans will help overcome disruptions caused by the coronavirus.
    - The President is calling on Congress to increase funding for this program by an additional $50 billion.
- The President will be instructing the Department of the Treasury to defer tax payments for certain individuals and businesses negatively impacted by the coronavirus.
    - This action will provide more than $200 billion of additional liquidity to the economy.
- President Trump is calling on Congress to immediately pass payroll tax relief.
- The President announced that he will soon be taking emergency action to provide financial relief for workers who are ill, quarantined, or caring for others due to the coronavirus.
    - The President also called on Congress to take action to extend this relief for workers.

LEADING AN AGGRESSIVE, WHOLE-OF-GOVERNMENT APPROACH: President Trump has taken unprecedented steps to protect the health of Americans in response to the coronavirus.

- The President is leveraging all of our resources to respond to the coronavirus, bringing together government and private industry in a collaborative response.
- The Trump Administration declared a public health emergency in January to bolster response efforts.
- President Trump took early action to help curb the spread of the virus from other countries to the United States, providing important time for response and preparations.
    - In January, President Trump acted quickly to restrict travel from foreign nationals traveling from China.
    - In February, the President restricted travel for individuals recently

AMERICAN OVERSIGHT



traveling from Iran.
    - The Administration put into place mandatory screening for all travelers coming into the country from Italy and South Korea.
    - Travel advisories for severely impacted areas like Italy and South Korea have been raised to their highest level.
- Today, the President directed his Administration to make general-use face masks available to our healthcare workers.
    - The Administration's actions will help make millions of general-use respirators available to keep healthcare workers safe and mitigate transmission of the virus.
- President Trump signed into law more than $8 billion to fund response efforts.
- The Administration has taken bold steps to incentivize the development of therapeutics and vaccines to treat and prevent the spread of the coronavirus.
- Working across the public and private sectors, the Trump Administration continues to drastically expand testing capacity.
    - More than 1 million tests have been distributed nationwide, with another 4 million tests being shipped out by the end of the week.
    - Testing is now available in every State lab in the country and commercial labs are now deploying tests, which will help generate a dramatic increase in availability.
- The Trump Administration has released guidance on how to keep businesses, schools, community gathering places, and families safe.
    - From the start, President Trump has made keeping the public informed a top priority.
- The Administration has announced that health plans with health savings accounts will be able to cover coronavirus testing and treatment without co-payments.

ICYMI | Vice President Pence Discusses the Coronavirus Response on the Morning Shows

Earlier this morning, Vice President Pence joined Good Morning America, The Today Show, Fox & Friends, New Day, and CBS This Morning to discuss the steps that this administration is taking to combat the coronavirus.

ON ABC's GOOD MORNING AMERICA

AMERICAN OVERSIGHT

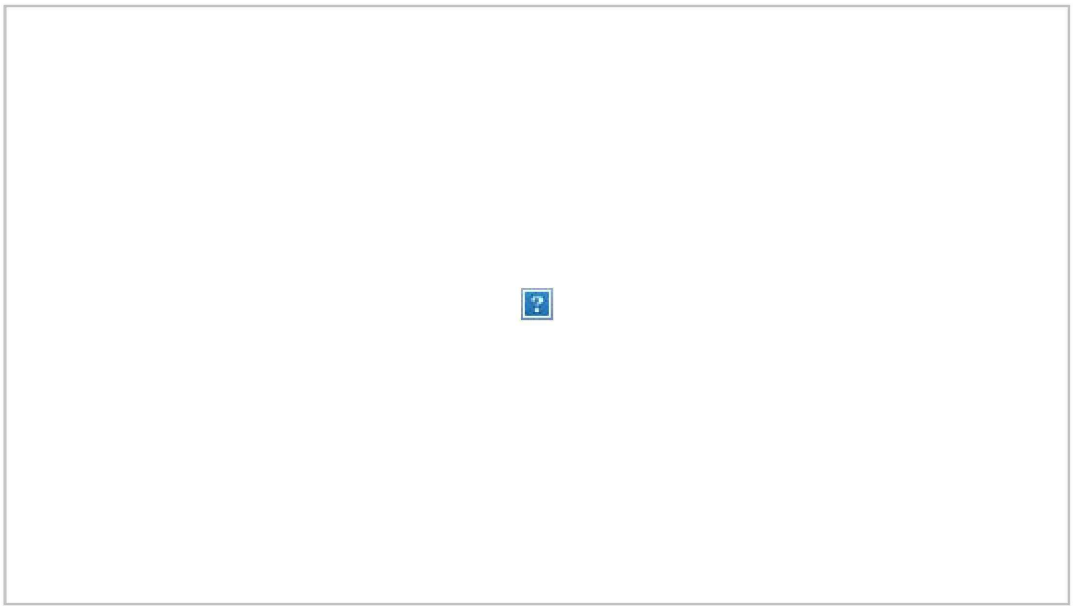
WATCH HERE.

From very early on, President Trump took decisive action to put the health of the American people first.

> "We all have known from the beginning that the coronavirus would continue to spread across this country, and it's one of the reasons why, from very early on, President Trump took decisive action to put the health of the American people first, not only declaring a public health emergency in January, but in that same month he suspended all travel from China -- an unprecedented move -- and quarantined Americans that were returning from the region. Since that time, George, we've -- we've issued travel advisories for areas of South Korea, Italy; screened all persons coming on direct flights. But, frankly, as we watched the epicenter of the coronavirus shift from China and South Korea to Europe, the President thought it was proper for us to impose a 30-day suspension on all travel from continental Europe."

The President, again, made another unprecedented decision in suspending all travel from Europe, because we want to stop the flow of people bringing the coronavirus here.

> "The reality is that, really, just two weeks ago, in Italy, there were less than 500 cases and now there's 12,000 cases in Italy, George. We have tens of thousands of people that travel to the United States from Europe every day. Seventy percent of new cases in the world were in Europe. And when we looked yesterday at the -- what was then the 35 states where we had cases, about 30 of them could be traced to contacts with Europe. And so the President, again, made another unprecedented decision in suspending all travel from Europe, because we essentially want -- we essentially want to stop the flow of people bringing the coronavirus here, but then continuing to surge resources, particularly into California, Washington State, New York, and other communities where we've seen community spread. It's a combination of efforts that's being driven by the top health experts in the world on our task force. But the President -- the President showed again yesterday a willingness to take decisive action on multiple levels to protect the American



AMERICAN OVERSIGHT

people."

We want to send a very clear message to Americans that if for any reason you believe you've been exposed to the coronavirus, you should not be worried about the cost of testing or treatment.

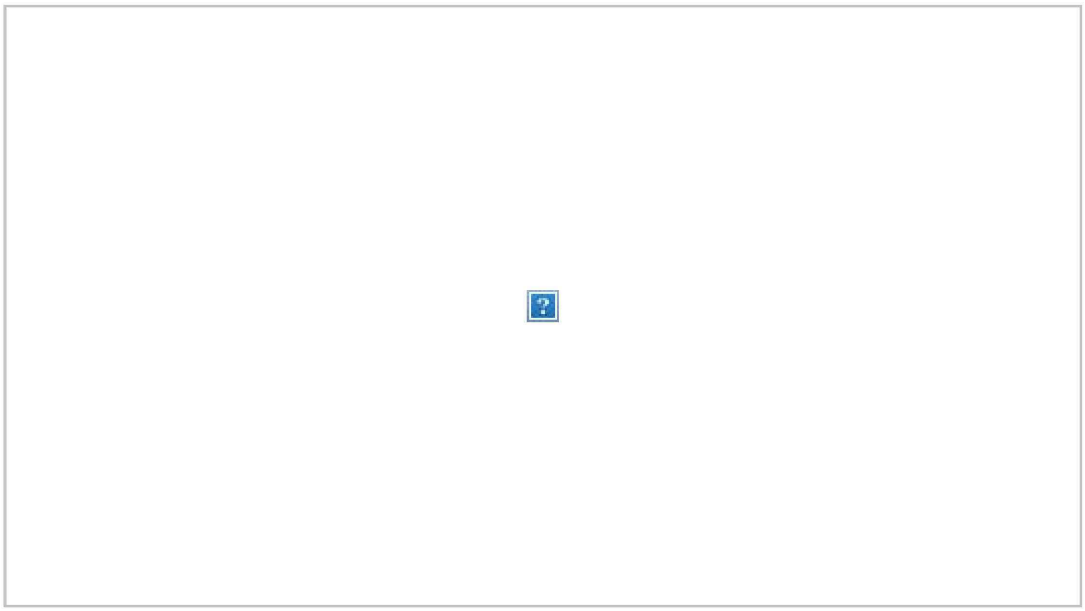
"We're making steady progress. We're going to continue to make a very clear message to Americans that if for any reason you believe you've been exposed to the coronavirus or you have symptoms, we don't want people to be worried about the cost of testing, to be worried about the cost of treatment... As the President made clear last night, we're working with Congress and exploring actions the President can take to make sure that hourly wage earners know that you can stay home without risking losing a paycheck or losing your job if you feel if you feel that you've been exposed to the coronavirus."

ON NBC's TODAY SHOW

WATCH HERE.

From early on in this effort, we have addressed the testing issue. We made changes through the FDA that allowed for state labs and hospitals to engage in testing.

"From early on in this effort we've been addressing the testing issue. We made changes through the FDA that allowed for state labs and university hospitals and hospitals to engage in testing. And I'm pleased to report every state lab in America can do testing now. Many university laboratories are doing it. Washington State – the University of Washington is doing extraordinary work. but we are literally working hour by hour to expand the testing and we think the key Savannah is going to be what we call commercial laboratories like LabCorp and Quest who are already spinning up production at the president's direction last week on tests that can be available on a broad basis in the days ahead for the American people. we're making real progress but rest assured we're going to continue to drive forward."



The American people should know that President Trump has no

AMERICAN OVERSIGHT

higher priority than the health, safety and well-being of the American people.

> "The American people should know that President Trump has no higher priority than the health and safety and wellbeing of the people in this country. You can go to coronavirus.gov right now to find out what every American can do to keep yourself, your family, your workplace and your school safe. But you can rest assured we're going to focus on communities where we've had community spread, and the President's action yesterday suspending travel from Europe is one more example of how he's putting the health of America first."

ON FOX NEWS' FOX & FRIENDS

WATCH HERE AND HERE.

The President has called this a whole-of-government approach, but he has also called this is a whole-of-America approach.

> "The President, you know, he said this was a whole-of-government approach but he also said this is a whole-of-America approach. So he's brought in business leaders from nursing homes; yesterday, banking; hospitals, and the rest. But one of the things we did that's most important on testing was the President brought in the leaders of the top commercial laboratories in the country who, as we speak, have already approved a test that is being spun up. It's being sent out to market. Quest, LabCorp, the largest commercial laboratories in the country, are working very closely with our administration. We're clearing the red tape out of the way. That's going to be the way that, in the days ahead, we're going to -- we're going to have broad-based testing available all across the country."

We are working together to contain the spread of the coronavirus. And we will get through this.

> "Our goal, as the coronavirus spreads in this country -- and the vast majority who would contract it will have flu-like symptoms and recover. Our goal nonetheless is to hold down that overall number as much as

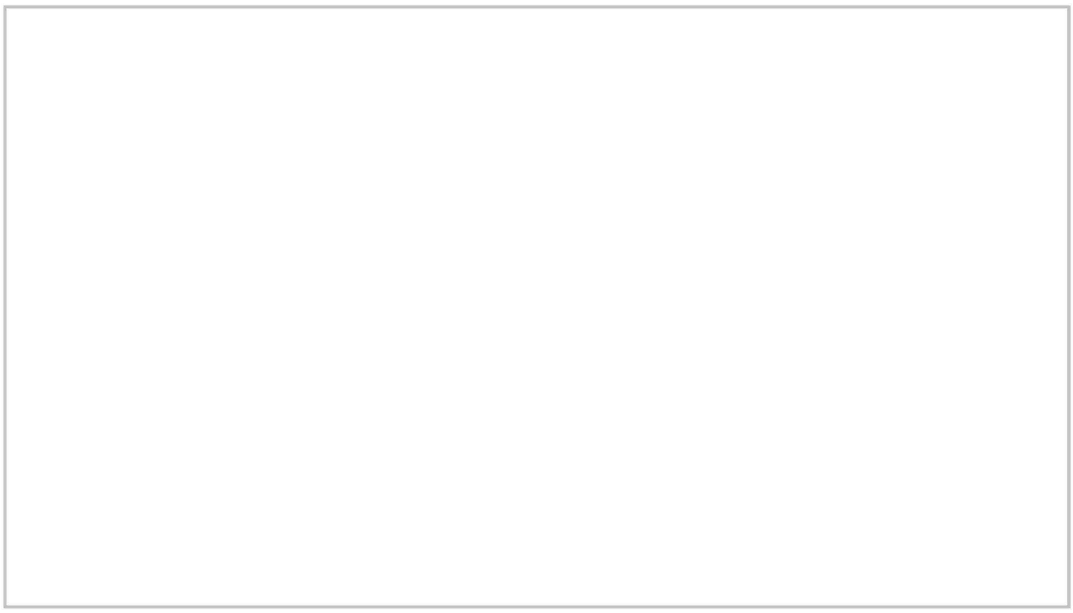
AMERICAN OVERSIGHT

possible. And we will do that with the continuing cooperation of American families, schools, businesses, and states. And that's the vision President Trump has. All of us working together will get through this."

We are focusing on supporting efforts at the state and local level in Washington State, and in California. CDC issued strong guidelines for those communities about public activities, large gatherings and at schools. We will continue simply to follow the data on this.

"Make no mistake about it: We are also focusing on supporting efforts at the state and local level in California, in Washington State, and in California. CDC issued very strong guidelines for those communities about public activities, large gatherings, schools. And we'll continue simply to follow the data on this and make strong recommendations where we have what's known as "community spread. But for every American, right now, as the President said last night, it's a good time to use common sense. Wash your hands often. Clean, you know, often-used surfaces. All that information is available at Coronavirus.gov. So we're going to try and mitigate the spread in this country but also prevent, through the President's decisive action last night, people from bringing the coronavirus into the United States any further from Europe."

We are encouraging best practices for every American. We are focusing on communities where we have community spread.



"I want to say to your viewers, just as the President said last night, the risk to the average American of contracting the coronavirus remains low, but we do know that seniors with serious underlying chronic health conditions are particularly vulnerable to very serious outcomes. And so we're encouraging best practices for every American. We're focusing on communities where we have community spread."

Those with a family member who is a senior citizen should support them in engaging in good hygiene and good health practices.

"For any American that's watching today that has a family member or a loved one who's a senior citizen with a serious underlying health condition, this is a very good time to help and to support them to be able to avoid public places, and everyone around them to engage in good hygiene and good practices to protect those that are most vulnerable."

ON CNN's NEW DAY

AMERICAN OVERSIGHT

WATCH HERE AND HERE.

We have been meeting with industry leaders in one relevant industry after another to ensure that the full resources of America are being brought to bear.

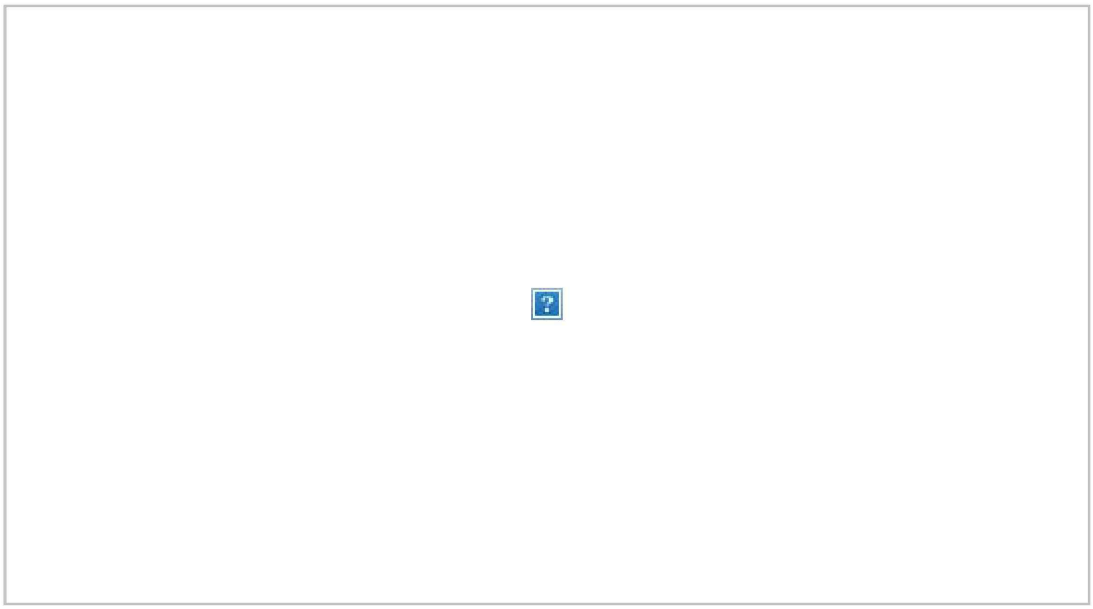
> "We're not doing a travel ban as our strategy. The suspending all travel for 30 days from Europe is a part of the strategy. The other part is an aggressive mitigation strategy. I spoke to the governors of New York, Washington State, and California tomorrow -- or yesterday. CDC issued strong guidance to those areas where we have community spread. We've flowed resources. We've flowed support to those areas. And so it's a combination of strategies that the President has employed here. As he says, it's "all hands on deck," "a whole-of-government approach," but it's also a whole-of-America approach. We've literally been meeting with industry leaders in one relevant industry after another to ensure that the full resources of America are being brought to bear."

Any American who is concerned about being exposed to the coronavirus, should call their doctor and get tested.

> "Anyone who's looking on today who might be concerned that they were exposed to coronavirus or have symptoms should call their doctor. Their doctor, with any question, can call their state laboratory and be able to find out how they can have a test processed."

We are making steady progress. We don't want anybody to avoid having a test because they are concerned financially.

> "But make no mistake about it: We're making steady progress. We've made changes at the FDA in January, at the President's direction. And the American people can be confident we're going to continue to roll out the test. And maybe most significant on that score is that the President brought health insurance companies in last week and they all agreed to waive the co-pays on testing. We expanded testing to Medicare and Medicaid patients. And we also expanded coverage for treatment, and health insurance companies expanded coverage for treatment. We don't



AMERICAN OVERSIGHT

want anybody to avoid having a test because they're concerned financially."

The risk to the average American remains low.

"I want people to know that the risk to contracting the coronavirus, according to all of our experts, for the average American remains low. Most people that contract it, will have flu-like symptoms and recover."

ON CBS This Morning

WATCH HERE.

We are going to continue to put in every effort in place to protect the health and safety of the American people.

"The President took the unprecedented step of suspending all travel from China which was the originating country of this virus. We also established travel advisories, and we've been screening passengers on all direct flights from South Korea and Italy. But with the epicenter of this epidemic now moving from China and South Korea to Europe, yesterday the President again took the unprecedented step of suspending all travel from Europe for the next 30 days, and that in combination with our strong mitigation efforts in communities that are experiencing what our experts call community spread, areas of California, Washington State, and New York, we're going to continue to put every effort at home and with regard to these travel restrictions in place to protect the health and safety of the American people."

In the days ahead, we are going to continue to see the availability of tests at your local doctor and your local pharmacy expand.

"Testing is happening in every state lab in the country. Many university hospitals have taken the FDA test, like the University of Washington, is doing a great job expanding testing capabilities. But the biggest piece on the testing is that our commercial labs that the President brought in last week, companies like Quest and LabCorp, have already had approved a new test that they several days ago had begun to take to market which

AMERICAN OVERSIGHT

they can do in a vast and expansive way across the country. And literally in the days ahead, we're going to continue to see the availability of tests at your local doctor, ultimately at your local pharmacy, continue to expand."

When President Trump learned that 70% of the new cases this week, around the world, were in Europe, he took decisive action to protect the American people.

"Make no mistake about it: All the new cases in the world, this week, 70% of the new cases were in Europe. And the increase has been dramatic. When the President imposed the travel advisory and we began screening all flights, all passengers coming into the United States from Italy two weeks ago, there were roughly 500 coronavirus cases. Now there's 12,000, about 1,000 in Germany, about 1,000 in France. That's the reason why the President essentially said full stop, we're going to suspend all travel, and that American citizens coming home and legal residents will be funneled through 13 different airports. They'll get an initial health screening coming in. But we're going to ask everyone returning to our country to self-quarantine for 14 days."

AMERICAN OVERSIGHT

From: State and Local Readiness (CDC)
To: State and Local Readiness (CDC)
Subject: INVITATION: Briefing Call on COVID-19 TODAY (March 12) at 2:00 p.m. ET
Date: Thursday, March 12, 2020 12:49:34 PM
Attachments: image001.png

State and Local Leaders,

On **Thursday, March 12, at 2:00 p.m. Eastern Time**, please join Senior Administration Officials for a briefing call on COVID-19 (coronavirus) regarding President Trump issuing a proclamation under section 212(f) of the Immigration and Nationality Act (INA) to restrict travel to the United States from foreign nationals who have recently been in certain European countries. Additional details can be found below. We will also provide an update on implementing mitigation strategies for communities with local COVID-transmission (A Framework for Mitigation: Implementation of Mitigation Strategies for Communities with Local COVID-19 Transmission).

Briefing Call Registration on 212(f) & Community Mitigation Strategies

- **Date: Today,** Thursday, March 11
- **Time:** 2:00 PM ET (please note time zone)
- **Call-In Registration**: **CLICK HERE**
- **Note:** You must RSVP to join the call. Upon successful registration, you will receive dial-in details to the email address you use to register. Note that multiple people cannot dial-in using the same registration information.

Below, please find additional information. The White House Office of Intergovernmental Affairs (WH IGA) will continue to share pertinent information as it becomes available. Please do not hesitate to reach out to our office directly if we can be of assistance.

Sincerely,
Zach

The White House Office of Intergovernmental Affairs

AMERICAN OVERSIGHT

President Donald J. Trump Has Taken Unprecedented Steps to Respond to The Coronavirus and Protect the Health and Safety Of Americans

"Together we are putting into policy a plan to prevent, detect, treat and create a vaccine against coronavirus to save lives in America and the world. America will get it done!" – President Donald J. Trump

President Donald J. Trump signed a Presidential Proclamation, which suspends the entry of most foreign nationals who have been in certain European countries at any point during the 14 days prior to their scheduled arrival to the United States. These countries, known as the Schengen Area, include: Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and Switzerland. This does not apply to legal permanent residents, (generally) immediate family members of U.S. citizens, and other individuals who are identified in the proclamation.

Statement from DHS Acting Secretary Chad F. Wolf: "Protecting the American people from threats to their safety is the most important job of the President of the United States. The actions President Trump is taking to deny entry to foreign nationals who have been in affected areas will keep Americans safe and save American lives. I applaud the president for making this tough but necessary decision. While these new travel restrictions will be disruptive to some travelers, this decisive action is needed to protect the American public from further exposure to the potentially deadly coronavirus. In January and February, the Administration issued similar travel restrictions on individuals who had been in China and Iran. That action proved to be effective in slowing the spread of the virus to the U.S., while public health officials prepared. In the next 48 hours, in the interest of public health, I intend to issue a supplemental Notice of Arrivals Restriction requiring U.S. passengers that have been in the Schengen Area to travel through select airports where the U.S. Government has implemented enhanced screening procedures."

RESTRICTING TRAVEL FROM IMPACTED AREAS: President Donald J. Trump is taking further action to curb the spread of the coronavirus to the United States from other countries.

- President Trump is issuing a proclamation under section 212(f) of the Immigration and Nationality Act (INA) to restrict travel to the United States from foreign nationals who have recently been in certain European countries.
    - Section 212(f) of the INA only applies to the movement of human beings, not goods or cargo.
- The restriction applies to foreign nationals who have been in the Schengen Area, 26 countries in Europe with open borders agreements, in the last 14 days.
- Those who are exempt from these restrictions, such as American citizens, will be directed to a limited number of airports where screening can take

AMERICAN OVERSIGHT

place.
- There is extensive travel back and forth between Europe that heightens the risk here in the United States.

LOOKING OUT FOR AMERICAN BUSINESSES AND WORKERS: President Donald J. Trump is committed to protecting American businesses and workers from the impacts of coronavirus.

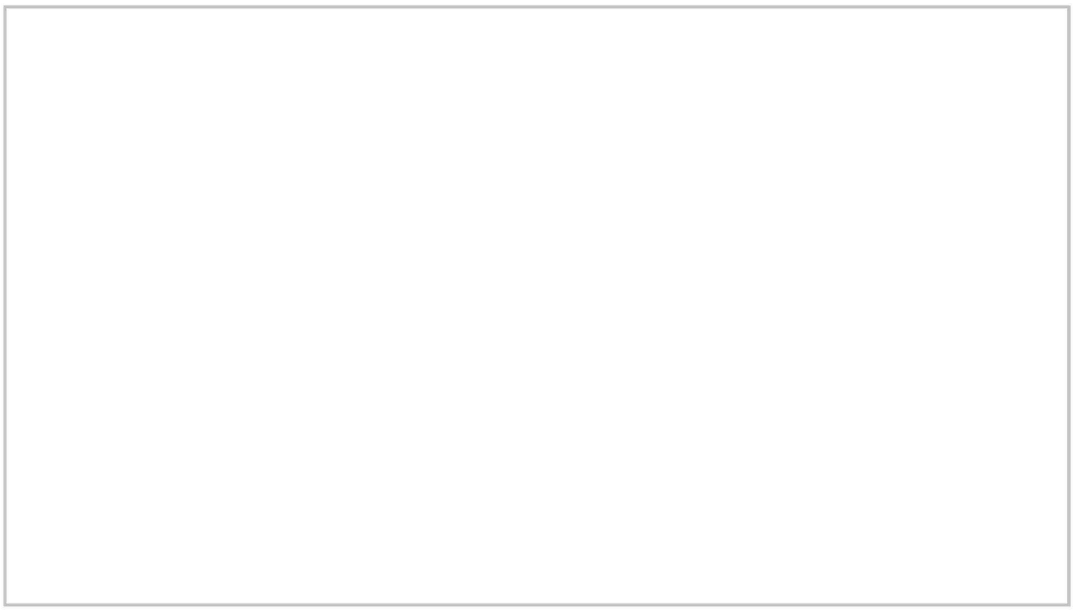
- The President is announcing an economic assistance package to help support businesses and workers who have been harmed by this outbreak.

- President Trump has instructed the Small Business Administration (SBA) to exercise available authority to provide loans to businesses affected by the coronavirus.
    - These loans will help overcome disruptions caused by the coronavirus.
    - The President is calling on Congress to increase funding for this program by an additional $50 billion.
- The President will be instructing the Department of the Treasury to defer tax payments for certain individuals and businesses negatively impacted by the coronavirus.
    - This action will provide more than $200 billion of additional liquidity to the economy.
- President Trump is calling on Congress to immediately pass payroll tax relief.
- The President announced that he will soon be taking emergency action to provide financial relief for workers who are ill, quarantined, or caring for others due to the coronavirus.
    - The President also called on Congress to take action to extend this relief for workers.

LEADING AN AGGRESSIVE, WHOLE-OF-GOVERNMENT APPROACH: President Trump has taken unprecedented steps to protect the health of Americans in response to the coronavirus.

- The President is leveraging all of our resources to respond to the coronavirus, bringing together government and private industry in a collaborative response.
- The Trump Administration declared a public health emergency in January to bolster response efforts.
- President Trump took early action to help curb the spread of the virus from other countries to the United States, providing important time for response and preparations.
    - In January, President Trump acted quickly to restrict travel from foreign nationals traveling from China.
    - In February, the President restricted travel for individuals recently traveling from Iran.
    - The Administration put into place mandatory screening for all

AMERICAN OVERSIGHT



travelers coming into the country from Italy and South Korea.
    - Travel advisories for severely impacted areas like Italy and South Korea have been raised to their highest level.
- Today, the President directed his Administration to make general-use face masks available to our healthcare workers.
    - The Administration's actions will help make millions of general-use respirators available to keep healthcare workers safe and mitigate transmission of the virus.
- President Trump signed into law more than $8 billion to fund response efforts.
- The Administration has taken bold steps to incentivize the development of therapeutics and vaccines to treat and prevent the spread of the coronavirus.
- Working across the public and private sectors, the Trump Administration continues to drastically expand testing capacity.
    - More than 1 million tests have been distributed nationwide, with another 4 million tests being shipped out by the end of the week.
    - Testing is now available in every State lab in the country and commercial labs are now deploying tests, which will help generate a dramatic increase in availability.
- The Trump Administration has released guidance on how to keep businesses, schools, community gathering places, and families safe.
    - From the start, President Trump has made keeping the public informed a top priority.
- The Administration has announced that health plans with health savings accounts will be able to cover coronavirus testing and treatment without co-payments.

ICYMI | Vice President Pence Discusses the Coronavirus Response on the Morning Shows

Earlier this morning, Vice President Pence joined Good Morning America, The Today Show, Fox & Friends, New Day, and CBS This Morning to discuss the steps that this administration is taking to combat the coronavirus.

ON ABC's GOOD MORNING AMERICA

AMERICAN OVERSIGHT

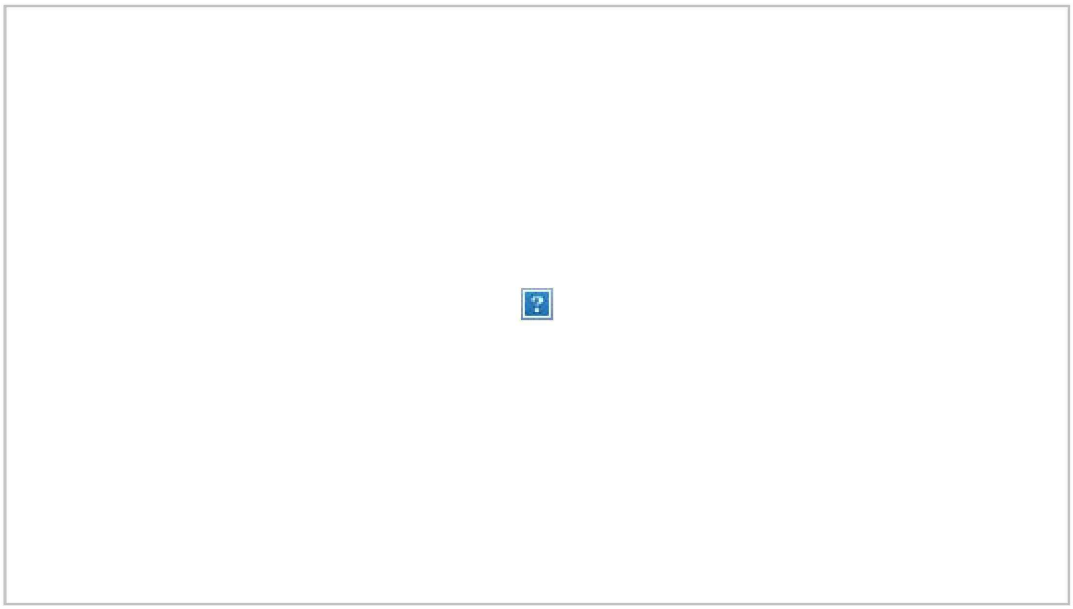
WATCH HERE.

From very early on, President Trump took decisive action to put the health of the American people first.

> "We all have known from the beginning that the coronavirus would continue to spread across this country, and it's one of the reasons why, from very early on, President Trump took decisive action to put the health of the American people first, not only declaring a public health emergency in January, but in that same month he suspended all travel from China -- an unprecedented move -- and quarantined Americans that were returning from the region. Since that time, George, we've -- we've issued travel advisories for areas of South Korea, Italy; screened all persons coming on direct flights. But, frankly, as we watched the epicenter of the coronavirus shift from China and South Korea to Europe, the President thought it was proper for us to impose a 30-day suspension on all travel from continental Europe."

The President, again, made another unprecedented decision in suspending all travel from Europe, because we want to stop the flow of people bringing the coronavirus here.

> "The reality is that, really, just two weeks ago, in Italy, there were less than 500 cases and now there's 12,000 cases in Italy, George. We have tens of thousands of people that travel to the United States from Europe every day. Seventy percent of new cases in the world were in Europe. And when we looked yesterday at the -- what was then the 35 states where we had cases, about 30 of them could be traced to contacts with Europe. And so the President, again, made another unprecedented decision in suspending all travel from Europe, because we essentially want -- we essentially want to stop the flow of people bringing the coronavirus here, but then continuing to surge resources, particularly into California, Washington State, New York, and other communities where we've seen community spread. It's a combination of efforts that's being driven by the top health experts in the world on our task force. But the President -- the President showed again yesterday a willingness to take decisive action on multiple levels to protect the American



AMERICAN OVERSIGHT

people."

We want to send a very clear message to Americans that if for any reason you believe you've been exposed to the coronavirus, you should not be worried about the cost of testing or treatment.

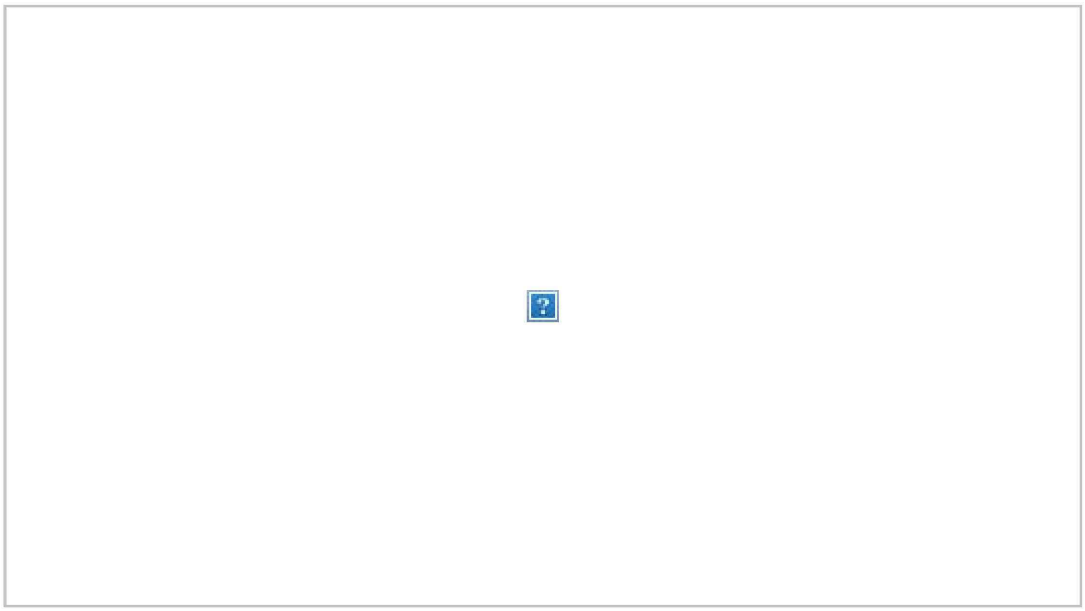
"We're making steady progress. We're going to continue to make a very clear message to Americans that if for any reason you believe you've been exposed to the coronavirus or you have symptoms, we don't want people to be worried about the cost of testing, to be worried about the cost of treatment... As the President made clear last night, we're working with Congress and exploring actions the President can take to make sure that hourly wage earners know that you can stay home without risking losing a paycheck or losing your job if you feel if you feel that you've been exposed to the coronavirus."

ON NBC's TODAY SHOW

WATCH HERE.

From early on in this effort, we have addressed the testing issue. We made changes through the FDA that allowed for state labs and hospitals to engage in testing.

"From early on in this effort we've been addressing the testing issue. We made changes through the FDA that allowed for state labs and university hospitals and hospitals to engage in testing. And I'm pleased to report every state lab in America can do testing now. Many university laboratories are doing it. Washington State – the University of Washington is doing extraordinary work. but we are literally working hour by hour to expand the testing and we think the key Savannah is going to be what we call commercial laboratories like LabCorp and Quest who are already spinning up production at the president's direction last week on tests that can be available on a broad basis in the days ahead for the American people. we're making real progress but rest assured we're going to continue to drive forward."



The American people should know that President Trump has no

AMERICAN OVERSIGHT

higher priority than the health, safety and well-being of the American people.

> "The American people should know that President Trump has no higher priority than the health and safety and wellbeing of the people in this country. You can go to coronavirus.gov right now to find out what every American can do to keep yourself, your family, your workplace and your school safe. But you can rest assured we're going to focus on communities where we've had community spread, and the President's action yesterday suspending travel from Europe is one more example of how he's putting the health of America first."

ON FOX NEWS' FOX & FRIENDS

WATCH HERE AND HERE.

The President has called this a whole-of-government approach, but he has also called this is a whole-of-America approach.

> "The President, you know, he said this was a whole-of-government approach but he also said this is a whole-of-America approach. So he's brought in business leaders from nursing homes; yesterday, banking; hospitals, and the rest. But one of the things we did that's most important on testing was the President brought in the leaders of the top commercial laboratories in the country who, as we speak, have already approved a test that is being spun up. It's being sent out to market. Quest, LabCorp, the largest commercial laboratories in the country, are working very closely with our administration. We're clearing the red tape out of the way. That's going to be the way that, in the days ahead, we're going to -- we're going to have broad-based testing available all across the country."

We are working together to contain the spread of the coronavirus. And we will get through this.

> "Our goal, as the coronavirus spreads in this country -- and the vast majority who would contract it will have flu-like symptoms and recover. Our goal nonetheless is to hold down that overall number as much as

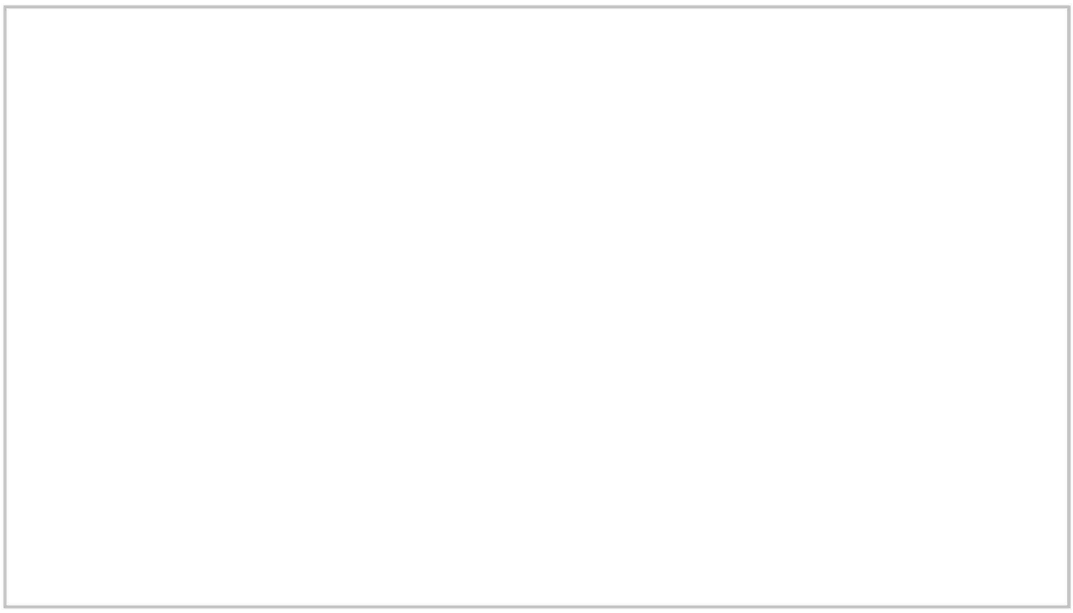
AMERICAN OVERSIGHT

possible. And we will do that with the continuing cooperation of American families, schools, businesses, and states. And that's the vision President Trump has. All of us working together will get through this."

We are focusing on supporting efforts at the state and local level in Washington State, and in California. CDC issued strong guidelines for those communities about public activities, large gatherings and at schools. We will continue simply to follow the data on this.

"Make no mistake about it: We are also focusing on supporting efforts at the state and local level in California, in Washington State, and in California. CDC issued very strong guidelines for those communities about public activities, large gatherings, schools. And we'll continue simply to follow the data on this and make strong recommendations where we have what's known as "community spread. But for every American, right now, as the President said last night, it's a good time to use common sense. Wash your hands often. Clean, you know, often-used surfaces. All that information is available at Coronavirus.gov. So we're going to try and mitigate the spread in this country but also prevent, through the President's decisive action last night, people from bringing the coronavirus into the United States any further from Europe."

We are encouraging best practices for every American. We are focusing on communities where we have community spread.



"I want to say to your viewers, just as the President said last night, the risk to the average American of contracting the coronavirus remains low, but we do know that seniors with serious underlying chronic health conditions are particularly vulnerable to very serious outcomes. And so we're encouraging best practices for every American. We're focusing on communities where we have community spread."

Those with a family member who is a senior citizen should support them in engaging in good hygiene and good health practices.

"For any American that's watching today that has a family member or a loved one who's a senior citizen with a serious underlying health condition, this is a very good time to help and to support them to be able to avoid public places, and everyone around them to engage in good hygiene and good practices to protect those that are most vulnerable."

ON CNN's NEW DAY

AMERICAN OVERSIGHT

WATCH HERE AND HERE.

We have been meeting with industry leaders in one relevant industry after another to ensure that the full resources of America are being brought to bear.

> "We're not doing a travel ban as our strategy. The suspending all travel for 30 days from Europe is a part of the strategy. The other part is an aggressive mitigation strategy. I spoke to the governors of New York, Washington State, and California tomorrow -- or yesterday. CDC issued strong guidance to those areas where we have community spread. We've flowed resources. We've flowed support to those areas. And so it's a combination of strategies that the President has employed here. As he says, it's "all hands on deck," "a whole-of-government approach," but it's also a whole-of-America approach. We've literally been meeting with industry leaders in one relevant industry after another to ensure that the full resources of America are being brought to bear."

Any American who is concerned about being exposed to the coronavirus, should call their doctor and get tested.

> "Anyone who's looking on today who might be concerned that they were exposed to coronavirus or have symptoms should call their doctor. Their doctor, with any question, can call their state laboratory and be able to find out how they can have a test processed."

We are making steady progress. We don't want anybody to avoid having a test because they are concerned financially.

> "But make no mistake about it: We're making steady progress. We've made changes at the FDA in January, at the President's direction. And the American people can be confident we're going to continue to roll out the test. And maybe most significant on that score is that the President brought health insurance companies in last week and they all agreed to waive the co-pays on testing. We expanded testing to Medicare and Medicaid patients. And we also expanded coverage for treatment, and health insurance companies expanded coverage for treatment. We don't

AMERICAN OVERSIGHT

want anybody to avoid having a test because they're concerned financially."

The risk to the average American remains low.

"I want people to know that the risk to contracting the coronavirus, according to all of our experts, for the average American remains low. Most people that contract it, will have flu-like symptoms and recover."

ON CBS This Morning

WATCH HERE.

We are going to continue to put in every effort in place to protect the health and safety of the American people.

"The President took the unprecedented step of suspending all travel from China which was the originating country of this virus. We also established travel advisories, and we've been screening passengers on all direct flights from South Korea and Italy. But with the epicenter of this epidemic now moving from China and South Korea to Europe, yesterday the President again took the unprecedented step of suspending all travel from Europe for the next 30 days, and that in combination with our strong mitigation efforts in communities that are experiencing what our experts call community spread, areas of California, Washington State, and New York, we're going to continue to put every effort at home and with regard to these travel restrictions in place to protect the health and safety of the American people."

In the days ahead, we are going to continue to see the availability of tests at your local doctor and your local pharmacy expand.

"Testing is happening in every state lab in the country. Many university hospitals have taken the FDA test, like the University of Washington, is doing a great job expanding testing capabilities. But the biggest piece on the testing is that our commercial labs that the President brought in last week, companies like Quest and LabCorp, have already had approved a new test that they several days ago had begun to take to market which

AMERICAN OVERSIGHT

they can do in a vast and expansive way across the country. And literally in the days ahead, we're going to continue to see the availability of tests at your local doctor, ultimately at your local pharmacy, continue to expand."

When President Trump learned that 70% of the new cases this week, around the world, were in Europe, he took decisive action to protect the American people.

"Make no mistake about it: All the new cases in the world, this week, 70% of the new cases were in Europe. And the increase has been dramatic. When the President imposed the travel advisory and we began screening all flights, all passengers coming into the United States from Italy two weeks ago, there were roughly 500 coronavirus cases. Now there's 12,000, about 1,000 in Germany, about 1,000 in France. That's the reason why the President essentially said full stop, we're going to suspend all travel, and that American citizens coming home and legal residents will be funneled through 13 different airports. They'll get an initial health screening coming in. But we're going to ask everyone returning to our country to self-quarantine for 14 days."

Date: Monday, March 16, 2020 2:01:32 PM

Dear State and Community Health Media/Communication Contacts,

In the sample social media packet we sent last week, we included posts regarding April 18 physical activity events. See below for an update on those. Please feel free to edit these posts-- and all the posts-- to reflect what is taking place in your location and to be sensitive to what is happening related to COVID-19 locally.

- National Park Week's Junior Ranger Day and Fee Free Day – Some site are temporarily closed; this may impact National Park Week activities. Visit the National Park Service website for more information.

- Rails to Trails Opening Day – Rails-to-Trails Conservancy has postponed the event.

- YMCA Healthy Kids Day® – Visit the web page or contact your local YMCA for updates.

Warm regards,
DNPAO Strategic Communication Team
DNPAOCommTA@cdc.gov

Subject:	Long Term Care Resources for Pandemic Planning
Date:	Thursday, February 20, 2020 3:35:13 PM

Long Term Care Partners,

Hope things are well with you all. As I am sure you are aware, the Department has activated an incident management team for responding to the novel coronavirus COVID-19. While we have no cases in Florida, we are taking this opportunity to review pandemic preparedness plans should this outbreak escalate to a global pandemic.

Older populations and people with underlying health issues appear to be at increased risk for this virus. We believe it is important that long-term care facilities begin planning now and ensuring they have protocols in place for a pandemic scenario. Specific actions include:

- Criteria and protocols for closing units or the entire facility to new admissions when the pandemic virus is in the facility
- Criteria and protocols for enforcing visitor limitations
- A plan for cohorting symptomatic residents or groups
- An occupational health plan for addressing staff absences
- Plans for increased cleaning of common surfaces

The linked checklist is an excellent resource for long-term care and other residential facilities to assist them with pandemic planning. While the document references influenza, coronavirus is a respiratory disease and most of the same activities apply. Link: https://www.cdc.gov/flu/pandemic-resources/pdf/longtermcare.pdf

Can you all share with long term care facilities and/or post this resource on your websites? Thank you.

Subject:	MS MARINA - CDC/FDOH concurrence that this is not a COVID-19 concern
Date:	Saturday, March 21, 2020 2:00:08 PM

Kevin and Ashley:

Please see below the cut line for CDC review and recommendation.

Additionally, Nicole Kimbrel in ESF-8, advised verbally that FDOH concurs with CDC's interpretation/recommendation.

Unless requested, I will advise USCG that there is no need to coordinate a teleconference concerning the MS MARINA. Should the port wish to discuss, I will let you know.

Please let me know if you need further.

v/r,

CDR Fitzgerald
D7 LNO to the FL EOC

Hi Eli,
I have reached out to the ship physician to confirm all the information you sent me, discussed this case with our medical officer, and provided a situational update to Florida Department of Health (FDOH).

It looks like this ship has 3 passengers onboard who have tested positive for Influenza A and do not have known exposure to COVID-19 cases. There is no ILI outbreak onboard. I will follow up with the ship to instruct that these three passengers wear surgical masks while disembarking.

Given the information we have now, we do not have any additional concerns or public health recommendations regarding this vessel. Please let us know if you have any other questions or concerns.

Thank you and all the best,
Emily

Subject:	MS MARINA - CDC/FDOH concurrence that this is not a COVID-19 concern
Date:	Saturday, March 21, 2020 1:59:54 PM

Kevin and Ashley:

Please see below the cut line for CDC review and recommendation.

Additionally, Nicole Kimbrel in ESF-8, advised verbally that FDOH concurs with CDC's interpretation/recommendation.

Unless requested, I will advise USCG that there is no need to coordinate a teleconference concerning the MS MARINA. Should the port wish to discuss, I will let you know.

Please let me know if you need further.

v/r,

Subject: MS Marina (Oceania)

Hi Joe – are you tracking the MS Marina (Oceania)? I'm tracking 653 Amcits on board, COVID(+) cases on ship, headed to Miami but no ports there open. This is going to be a problem soon. We're getting inquiries from the Australians and Andorrans. This is the latest I have:

18MAR: Indications that an Oceania cruise ship will be arriving at Port of Miami sometime next week with various COVID-19 positives on it. Consular Affairs from the Australian Embassy contacted to say they had been notified overnight that the MS Marina (Oceania) is returning to Miami from South America via the Panama Canal after it was denied docking by several countries. The latest advice the Embassy has is that it is passing through the Canal could take 5 or 6 days. Australian Embassy in Mexico and Honorary Consul in Panama are trying to assist at least 49 Australians on board - some of whom are starting to run short of medications etc. - but are having difficulty contacting the crew and Oceania's agents in Panama. CONS provided them with the contact for Norwegian cruise lines which is a parent company of Oceania. OFM indicates Port of Miami is not aware of the ship coming to Miami and questioned where it would even dock as all available ports are occupied. OFM in touch with Norwegian.

CDC Confirms 15th Case of Coronavirus Disease (COVID-19)

CDC today confirmed another infection with Coronavirus Disease (COVID-19) in the United States. The patient is among a group of people under a federal quarantine order at JBSA-Lackland in Texas because of their recent return to the U.S. on a State Department-chartered flight that arrived on February 7, 2020.

All people who lived or travelled in Hubei Province, China, are considered at high risk of having been exposed to this virus and are subject to a temporary 14-day quarantine upon entry into the United States. This is the first person under quarantine at JBSA-Lackland who had symptoms and tested positive for COVID-19. The individual is currently isolated and receiving medical care at a designated hospital nearby.

This brings the total number of COVID-19 cases in the United States to 15. There will likely be additional cases in the coming days and weeks, including among other people recently returned from Wuhan. While 195 people were discharged from quarantine on Tuesday, more than 600 people who returned on chartered flights from Wuhan remain under federal quarantine and are being closely monitored to contain the spread of the virus.

For the latest information on the outbreak, visit CDC's Novel Coronavirus 2019 website.

Hi Tim, The good news is you are coming right at the best time. Expect to be plugged into the Coronavirus response from day one. The bad news is that tomorrow morning will likely be a tad chaotic. We may have our two first cases confirmed tomorrow and we have just declared an emergency. I have a meeting between 830-9 am. It may drag out a little. I will try to meet you at 8 and we will get your badge and computer etc set up started. Then we will all get together as soon as we have a chance. Hopefully shortly after 9. Just wanted to give you a heads up and wish you a warm welcome :). Carina

Subject:	NACDD Chronic Disease Directors Forum First Thursday Webinar

Dear Colleagues,

Update to our 3/5 webinar speaker line up: In addition to the speakers listed below, Dr. Karen Hacker and Dr. Peter Briss will be providing an update on coronavirus on the webinar this Thursday.

For our March 2020 webinar we are looking at leading to address upstream factors. We are excited to have the following speakers join us:

* Carol Hall Walker and Deborah Garneau (Rhode Island Department of Health) to discuss the Rhode Island Health Equity Measures.

* Shamarial Roberson (Florida) as our Chronic Disease Director respondent.

* Karla Sneegas from CDC's Office on Smoking and Health to share information on Tips 2020.

Please join us and bring your questions, comments, and experiences to share.

Register in advance for upcoming webinars with this link: https://chronicdisease.zoom.us/meeting/register/uJYvc-urpjwrOcPx6hOXeJ3eSfuM4yRpSA <https://chronicdisease.zoom.us/meeting/register/uJYvc-urpjwrOcPx6hOXeJ3eSfuM4yRpSA> . After registering, you will receive a confirmation email containing information about joining the meeting. Note that you will need to register each month.

Slides and webinar recordings are available here: https://www.chronicdisease.org/page/CDDF_First_Thursday.

For more information please contact Abby Lowe-Wilson at alwilson@chronicdisease.org <mailto:alwilson@chronicdisease.org> .

Good morning, all:

Please find attached NCHPAD's Inclusive Home Workout Toolkit, and please feel free to share the content with your networks.

Thanks, and please let me know if you have any questions.

Stay happy and healthy!

AMERICAN OVERSIGHT

From: Stevens, Lee (OS/IEA)
To: Johnston, Darcie (HHS/IEA); Stevens, Lee (OS/IEA)
Subject: NEW Ventilator Guidance - COVID-19
Date: Monday, March 23, 2020 2:22:26 PM

Dear Governor and State Health Officials-

Below please find new FDA guidance to expand the availability of ventilators as well as other respiratory devices:

What Types of Ventilators Can be Used to Expand Supply? The FDA issued guidance to expand the availability of ventilators as well as other respiratory devices and their accessories during this pandemic. Wherever possible, health care facilities should use FDA-cleared conventional/standard full featured ventilators when necessary to support patients with respiratory failure. However, to expand availability, FDA will not object to limited modifications to the *indications, claims, functionality, or to the hardware, software, or materials of FDA-cleared devices used* to support patients with respiratory failure or respiratory insufficiency. This policy applies only during the public health emergency.

Examples of changes to the indications could include a significant change or modification in *design, material, chemical composition, energy source, or manufacturing process*. Specific examples of products FDA will allow include:

- The use of powered emergency ventilators and anesthesia gas machines for patients needing mechanical ventilation;
- The use of ventilators outside of their cleared environment for use (use of a ventilators in a health care facility when it is only cleared for use at home or during transport);
- the use of devices indicated for sleep apnea (including CPAP and BiPAP), provided that appropriate design mitigations are in place to minimize aerosolization; or
- The use of oxygen concentrators for primary supply when medically necessary and clinically appropriate.

FDA will also allow for modifications to the FDA-cleared *indications, claims, or functionality* of these devices, without a prior submission of a premarket notification. Examples of circumstances where FDA currently believes a modification would be allowable include:

- Modifications to motors, batteries, or other electrical components;
- Material changes to components in the gas pathway or with other patient tissue contact;
- Introduction of filtration to minimize aerosolization;
- Software modifications intended to modify the ventilation parameters including inspiratory pressure, tidal volumes, flow rates, positive end-expiratory pressure (PEEP) in accordance with any applicable device standard;
- Software modifications implementing physiological closed loop (automated)

AMERICAN OVERSIGHT

algorithms for oxygen titration where the algorithms/devices are the subject of an FDA-approved Investigational Device Exemption (IDE); and

- Hardware and/or software modifications implementing the capability for remote monitoring and remote adjustment of ventilator parameters (i.e., adjustment of parameters by trained health care providers from outside an isolation unit to avoid unnecessary exposures).

FDA is interested in interacting with manufacturers of ventilatory support devices that are not currently legally marketed in the U.S. as well as manufacturers who have not previously been engaged in medical device manufacturing with capabilities to increase supply of these devices. FDA will work interactively with these manufacturers through its Emergency Use Authorization (EUA) process. The guidance includes specific information to send to FDA and all information and questions can be sent to: CDRH-COVID19-Ventilators@fda.hhs.gov.

Division of Vital Statistics Newsletter — February 2020

-

Click here to view the full NVSS newsletter online

This month, we're focused on improvements. To begin, we will be proposing improvements to the next VSCP contract, and will be seeking your input. Please take a moment to read and find out how you can contribute your ideas. This issue also highlights our newest VSCP Special Project, Address Data for Geocoding, which is collecting data from every jurisdiction to improve our ability to calculate life expectancy and mortality at more local levels. You'll also find out how Iowa is improving data quality and timeliness through a new birth registration facility report card. Additionally, we connect you to upcoming NAPHSIS trainings that may be of interest, and to information on how jurisdictions can work with NCHS to test newly implemented data systems.

Whether it's by joining our projects, attending a training, or sharing your own ideas for the future, we encourage you to stay connected with us and be a part of making the National Vital Statistics System better.

Enjoy!

AMERICAN OVERSIGHT

From:	State and Local Readiness (CDC)
To:	State and Local Readiness (CDC)
Subject:	New CDC COVID-19 Check and Record Everyday (CARE) Booklet
Date:	Wednesday, February 26, 2020 8:09:25 AM
Attachments:	2019nCoV_CARE_EngChinese_Feb25.pdf
Importance:	High

Dear Colleagues:

Attached is CDC's new COVID-19 Check and Record Everyday (CARE) booklet. Here is what to know:

- **Who gets a CARE booklet? And when?** Every traveler referred by CBP from mainland China, whenever they get released during the screening process or the completion of secondary screening. This is the same process as the current T-HAN and Temperature and Symptom log. If the traveler is an unaccompanied minor, a booklet will be provided to the person in charge of picking them up at their final destination

- **What language is the booklet in?** English on one side and Simplified Chinese on the other for the print version. A Spanish version will be available online in the coming weeks.

- **When will CDC staff at quarantine stations start handing out the new booklet?** Distribution of the booklets will start by **Friday, February 28th.**

- **What is the role of CDC/QS staff?** The role of CDC/QS staff is to ensure every traveler referred from mainland China by CBP receives a CARE booklet in an envelope. Booklets are shipped pre-assembled in a labeled envelope.

- **What is the role of State and Local Health Departments?**Travelers are advised to connect with the State and Local Health Departments at their destination; these numbers are listed in the booklet.

- **How many CARE booklets will quarantine stations receive?**Each station will receive a different number of booklets every week based on the number of travelers entered in QARS the previous week. Because this is an estimate, we've added an additional 10% of booklets to each shipment.

- **What if the information in the booklet changes?**Information is quickly and frequently changing. If the CARE booklet changes, we will print and ship a new version of the booklet. The new version will have a different color on the outside label of the envelope containing the booklet. If this happens, quarantine stations will receive an email with the new information and outdated materials will be discarded. The first and current shipment contains ayellow outline on the label.

AMERICAN OVERSIGHT

- **Does the shipment contain thermometers and phones?**No, we will not be supplying thermometers or phones at this time.

- **Will the booklet be available online?** Yes, we plan on having an online version of the booklet available in the coming weeks.

Thank you,

State Coordination Task Force

Sent by BCC to State Health Officials, State Epidemiologists, PHEP Directors, and COVID-19 Primary/Secondary Contacts

From:	State and Local Readiness (CDC)
To:	CDC IMS State Coordination Task Force (SCTF) Lead
Subject:	Office for Civil Rights (OCR) Announces Notification: Enforcement Discretion for Telehealth Remote Communications During the COVID-19
Date:	Thursday, March 19, 2020 11:33:59 AM

OCR Announces Notification of Enforcement Discretion for Telehealth Remote Communications During the COVID-19 Nationwide Public Health Emergency

https://www.hhs.gov/about/news/2020/03/17/ocr-announces-notification-of-enforcement-discretion-for-telehealth-remote-communications-during-the-covid-19.html

Today, the Office for Civil Rights (OCR) at the U.S Department of Health and Human Services (HHS) announced, effective immediately, that it will exercise its enforcement discretion and will waive potential penalties for HIPAA violations against health care providers that serve patients through everyday communications technologies during the COVID-19 nationwide public health emergency.

This exercise of discretion applies to widely available communications apps, such as FaceTime or Skype, when used in good faith for any telehealth treatment or diagnostic purpose, regardless of whether the telehealth service is directly related to COVID-19.

In support of this action, OCR will be providing further guidance explaining how covered health care providers can use remote video communication products and offer telehealth to patients responsibly.

"We are empowering medical providers to serve patients wherever they are during this national public health emergency," said Roger Severino, OCR Director. "We are especially concerned about reaching those most at risk, including older persons and persons with disabilities," Severino added.

The Notification of Enforcement Discretion on telehealth remote communications may be found at: https://www.hhs.gov/hipaa/for-professionals/special-topics/emergency-preparedness/notification-enforcement-discretion-telehealth/index.html.

For more information on HIPAA and COVID-19, see OCR's February 2020 Bulletin: https://www.hhs.gov/sites/default/files/february-2020-hipaa-and-novel-coronavirus.pdf - PDF

Subject:	Office of the Secretary in Region IV reaching out for county health directors" contact list
Date:	Tuesday, March 24, 2020 2:15:17 PM
Attachments:	BIO - John McGough HHS Regional Director - Region 1 Boston & Region 4 Atlanta.pdf

Hello Jade.

I work for HHS Region IV Director John McGough, who has oversight of the eight southeastern states. He held a call with SG Rivkees that was coordinated by Courtney back in November to discuss the HHS priorities as they relate to the Florida county health directors. John has asked me to acquire contact information for all of the county health directors, in the event an emergency or fast-developing COVID-19 situation, either involving testing, PPEs, staffing, cruise ship arrivals, etc., requires him to reach someone on the weekends, or in the evening. Believe me, because he also leads the six Region I states, which include Boston, his plate is full and he would not be making a call unless there were no other options.

Courtney returned my call Friday evening and told me she would provide me with the list. Since I see that she is now deployed and out of pocket, I will refer the request to you, per her instructions.

Thanks in advance.

Sincerely,

Deric

To: Baker, Michael (OS/IEA)
Subject: Opportunity for "drive-through" testing site synergy
Date: Tuesday, March 17, 2020 4:41:17 PM

State Health Official –

First, let me thank you for all the work that you are currently doing to respond to COVID-19. We value your dedication to this.

As we continue to monitor and respond to the ongoing COVID-19 outbreak, we are working to drastically increase the number of sites that are testing for coronavirus around the country. As you are aware from the communications from Admiral Brett Giroir, FEMA, and ASPR throughout the past few days, we – in partnership with state and local health authorities – are standing up a number of "drive-through" testing sites across the nation for populations that are most in need of testing. While we are working to operationalize these, we know that there are a number of independent or private sites that are simultaneously opening their own "drive-through" testing operations.

If you are aware of sites in your state that are doing this testing, and are comfortable with sharing those with HHS for publication on the website that we are developing for this response, please share those with the U.S. Health and Human Services team. We want to amplify the availability of these testing operations to connect individuals to testing. You can reply to this email, or call me at the number below.

Please let me know the locations of these operations as soon possible. We are hoping for the location, address, and contact information for those sites. We thank you for your continued partnership and support during this outbreak. The leadership that you provide in your state is invaluable, and we look forward to continuing to work together to protect the health and well-being of the nation.

Thank you,

Michael Baker

ICYMI - Our Coronavirus Response Is Protecting Americans
USA Today
By Secretary of State Mike Pompeo and HHS Secretary Alex Azar
February 11, 2020
Link to op-ed here.

The first duty of the federal government is to keep our citizens safe. Since the United States first became aware on Dec. 30 of what has become known as the novel coronavirus, America's public health officials have closely monitored the situation, worked to understand the virus and taken steps to limit Americans' exposure to it.

Our task force is ensuring that our whole of government, layered, public health plan has the resources necessary to protect Americans. We've treated the sick, and traced back their travel

AMERICAN OVERSIGHT

history and contacts to minimize the spread of the virus. We've worked swiftly to screen and safely receive American travelers returning from China, and bar foreign travelers who have recently visited the epicenter of the outbreak.

Consistent with the World Health Organization International Health Regulations, our travel restrictions were intentionally devised to complement the Chinese government's policy of isolating approximately 50 million of its own citizens in Hubei province. Other nations, such as Italy and South Korea, have taken similar measures.

Our efforts in China

Thus far, the United States has only had 12 confirmed cases of the virus. We were saddened to hear last week that one American, a 60-year-old woman in Wuhan, China, has died. But we're undeterred in our vigilance to protect our people. And we're mobilizing resources around the world to help other nations fight the disease, too. This is American altruism at its finest.

Let's start with our efforts focused on the country where the virus first appeared — China. In the words of President Donald Trump, "We're offering them tremendous help." During the first week of January, the Centers for Disease Control and Prevention made an offer of assistance in order to understand the disease and help bolster response efforts.

The Department of Health and Human Services subsequently provided to the WHO a list of world-class medical professionals ready to deploy their skills in China and learn from China's efforts to combat this new coronavirus. In the last week of January, Secretary Azar personally extended an offer of help to Health Minister Ma Xiaowei; Secretary Pompeo did the same with Chinese State Councilor Yang Jiechi. We hope the mission will commence immediately, whether bilaterally or under the auspices of the WHO.

We've also facilitated the delivery of vast amounts of medical supplies to the Chinese people. Just last week, the State Department helped transport 17.8 tons of relief supplies to Hubei. And more assistance will continue to be offered — the United States is prepared to spend up to $100 million in existing State and U.S. Agency for International Development funds to assist China and other impacted countries to contain and combat the virus.

While State managed the logistics, the donations themselves were provided by Samaritan's Purse, Boeing, Intermountain Healthcare and The Church of Jesus Christ of Latter-day Saints, and coordinated by a nongovernmental organization called Project HOPE. Time and again, when diseases and disasters strike, the American people have stepped up to help citizens of other countries without being asked. Our robust charitable giving and enthusiastic civil society groups are channeling the American people's concern for their fellow man.

Cooperation with other nations

Then there are America's actions to help the citizens of other countries, beyond China. CDC staff based in more than 60 countries are working closely with ministries of health and other health partners, often in conjunction with their colleagues at the State Department and other federal agencies.

AMERICAN OVERSIGHT

For instance, the United States has made coronavirus test kits available to 191 qualified laboratories around the world; so far, labs from 36 countries have put in orders. We've deployed staff to train health professionals in 15 hospitals in Vietnam. In Kenya, health experts at the U.S. Embassy in Nairobi, as part of our Infectious Diseases Task Force, engaged the government early on to recommend best practices in airport screening and public health.

Our quick and effective reaction abroad is facilitated by partnerships that America has carefully nurtured over decades — long before the latest outbreak.

We believe our actions will slow the transmission of the virus to and within the United States and other countries, solidify our ties of friendship with our allies and partners, and help save lives by giving us more time to refine preparedness measures and better understand the virus.

We all hope that our concerted efforts will control the virus and cause it to subside. But the world doesn't need to wait for that day to see how America remains a force for good throughout the globe.

From Eric Hargarten- HHS

Hi all -

We wanted to notify you that the provided supplies will arrive at the shipping locations you provided as early as 8 AM EST and as late as 8 PM EST today (Wednesday March 18th). Upon arrival the driver will contact the shipping point of contact you provided.

A few other important notes about the shipments and what to expect:

- **Shipment details**: Testing kits are coming from Henry Schein and other supplies will come from the following companies: McKesson, Medline (FedEx), Uline (UPS), Grainger (UPS), DuPont (UPS), Taylor Communications (UPS)
    - Some deliveries will be on pallets or skids, smaller shipments will not (for example, bar code labels will not be on skids)
- **Delivery timelines:** all **ESTIMATES** based on latest information:
    - By COB Wednesday: Henry Schein, McKesson, Uline, Grainger, DuPont, Medline
    - By 10:30 am Thurs: Taylor Communications (bar code labels)

Please note that due to the extraordinary circumstances we are trying to provide the most accurate and comprehensive information, but things are subject to change. We will provide updates in the morning and evening on Wednesday.

Thank you

Eric Hargarten

From Eric Hargarten- HHS

Hi all -

We wanted to notify you that the provided supplies will arrive at the shipping locations you provided as early as 8 AM EST and as late as 8 PM EST today (Wednesday March 18th). Upon arrival the driver will contact the shipping point of contact you provided.

A few other important notes about the shipments and what to expect:

- **Shipment details**: Testing kits are coming from Henry Schein and other supplies will come from the following companies: McKesson, Medline (FedEx), Uline (UPS), Grainger (UPS), DuPont (UPS), Taylor Communications (UPS)
    - Some deliveries will be on pallets or skids, smaller shipments will not (for example, bar code labels will not be on skids)
- **Delivery timelines:** all **ESTIMATES** based on latest information:
    - By COB Wednesday: Henry Schein, McKesson, Uline, Grainger, DuPont, Medline
    - By 10:30 am Thurs: Taylor Communications (bar code labels)

Please note that due to the extraordinary circumstances we are trying to provide the most accurate and comprehensive information, but things are subject to change. We will provide updates in the morning and evening on Wednesday.

Thank you

Eric Hargarten

AMERICAN OVERSIGHT

From: State and Local Readiness (CDC)
To: CDC IMS State Coordination Task Force (SCTF) Lead
Subject: President"s Coronavirus Guidelines For America: 15 Days to Slow the Spread
Date: Tuesday, March 17, 2020 12:18:54 PM
Attachments: image001.png

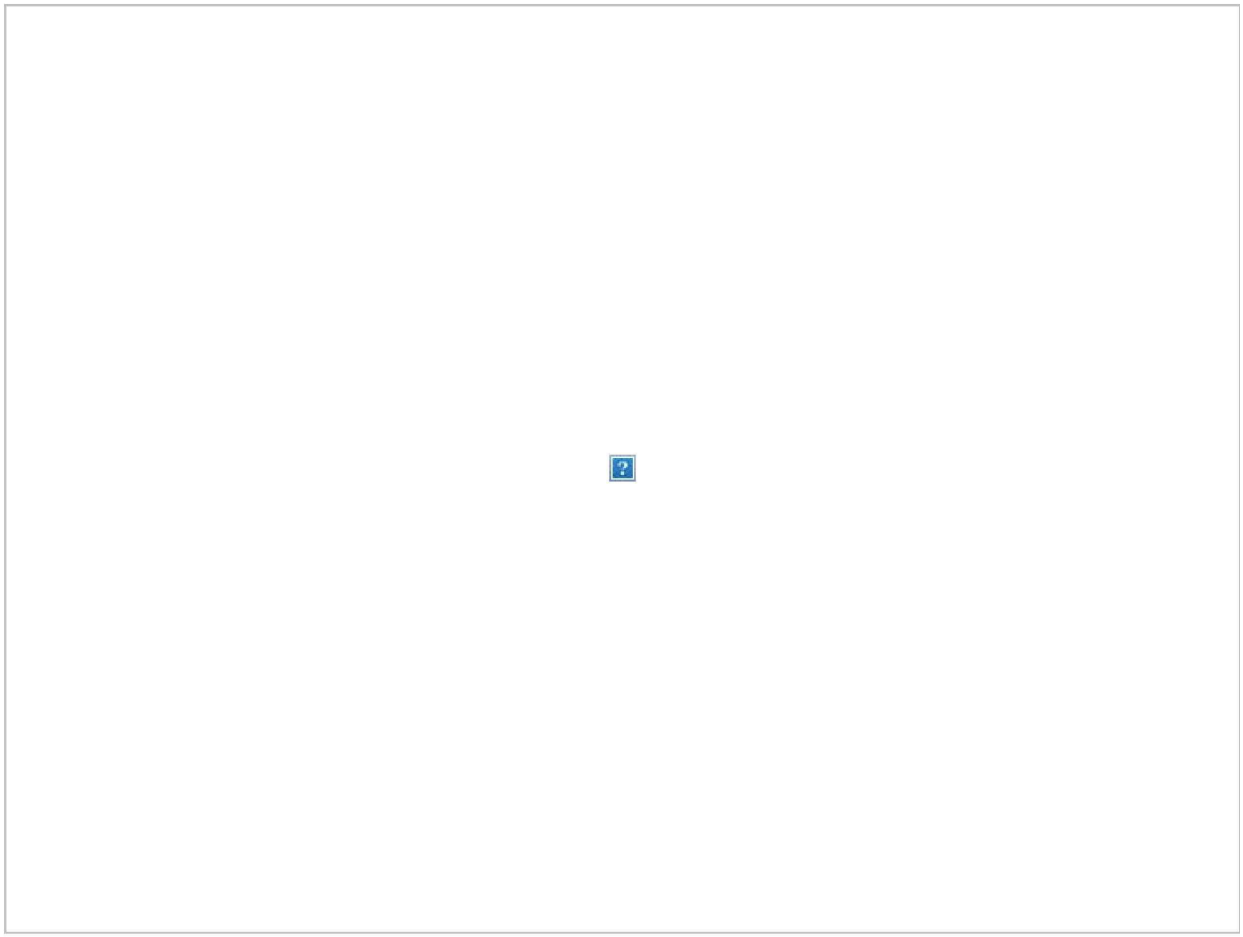
Dear Colleagues:

Yesterday, President Donald. J. Trump announced new guidelines to address COVID-19. Below, please find additional information on ***The President's Coronavirus Guidelines for America: 15 Days to Slow the Spread***. Please feel free to share broadly.

As a reminder, the CDC's official Coronavirus website – **www.coronavirus.gov** – is the best source for up-to-date information and guidance.

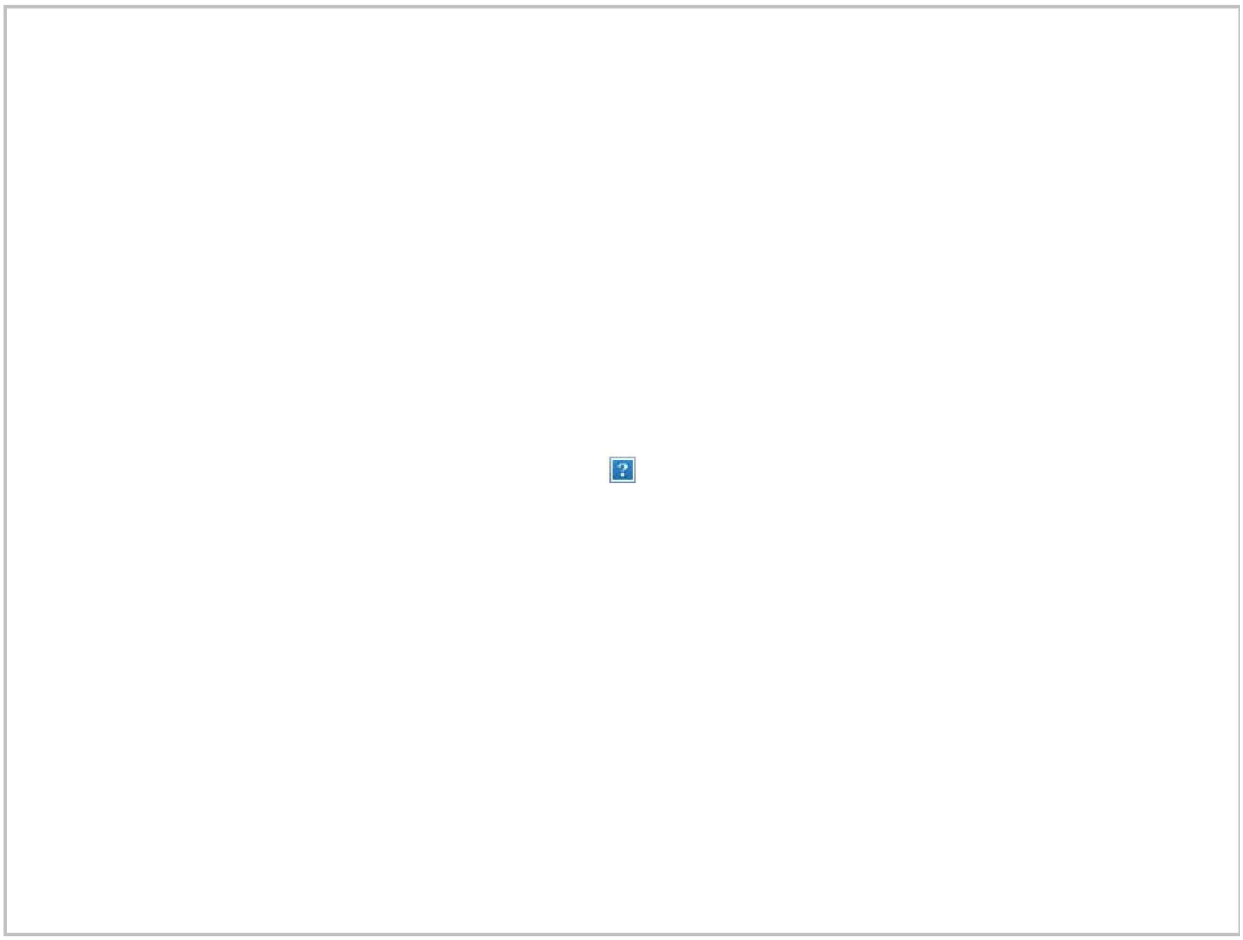
The President's Coronavirus Guidelines for America: 15 Days to Slow the Spread

1. Listen to and follow the directions of your state and local authorities.
2. If you feel sick, stay home. Do not go to work. Contact your medical provider.
3. If your children are sick, keep them at home. Do not send them to school. Contact your medical provider.
4. If someone in your household has tested positive for the coronavirus, keep the entire household at home. Do not go to work. Do not go to school. Contact your medical provider.
5. If you are an older person, stay home and away from other people.
6. If you are a person with a serious underlying health condition that can put you at increased risk (for example, a condition that impairs your lung or heart function or weakens your immune system), stay home and away from other people.
7. Even if you are young, or otherwise healthy, you are at risk and your activities can increase the risk for others. It is critical that you do your part to stop the spread of the coronavirus:
    a. Work or engage in schooling from home whenever possible.
    b. If you work in a critical infrastructure industry, as defined by the Department of Homeland Security, such as healthcare services and pharmaceutical and food supply, you have a special responsibility to maintain your normal work schedule. You and your employers should follow CDC guidance to protect your health at work.
    c. Avoid social gatherings in groups of more than 10 people.
    d. Avoid eating or drinking in bars, restaurants, and food courts – use drive-thru, pickup, or delivery options.
    e. Avoid discretionary travel, shopping trips, and social visits.
    f. Do not visit nursing homes or retirement or long-term care facilities unless to provide critical assistance.



AMERICAN OVERSIGHT

8. Practice good hygiene:
    a. Wash your hands, especially after touching any frequently used item or surface.
    b. Avoid touching your face.
    c. Sneeze or cough into a tissue, or the inside of your elbow.
    d. Disinfect frequently used items and surfaces as much as possible.



* School operations can accelerate the spread of the coronavirus. Governors of states with evidence of community transmission should close schools in affected and surrounding areas. Governors should close schools in communities that are near areas of community transmission, even if those areas are in neighboring states. In addition, state and local officials should close schools where coronavirus has been identified in the population associated with the school. States and localities that close schools need to address childcare needs of critical responders, as well as the nutritional needs of children.

** Older people are particularly at risk from the coronavirus. All states should follow Federal guidance and halt social visits to nursing homes and retirement and long-term care facilities.

*** In states with evidence of community transmission, bars, restaurants, food courts, gyms, and other indoor and outdoor venues where groups of people congregate should be closed.

AMERICAN OVERSIGHT

Kind Regards,

State Coordination Task Force

(Sent by BCC to PHEP directors, state epidemiologists, state health officials, public health laboratory directors, BCHC, and national and federal partners)

Subject: Quarterly Multi-State Collaborative All-State Discussion Call on Cannabis and Public Health

---

Please see the updated call in number and the proposed agenda (below).
Call in: 1-877-680-2010, Participant Code: 23065250. Call is at 11AM PST/2PM EST.

Thanks to all of you who are working on a covid19 response in your state, and to those of you who are keeping other important public health work going while your colleagues respond. We know not everyone will be able to attend this call, but are still planning to hold it, with a focus on the covid19/marijuana overlap. Marijuana operations (retail stores, processors, grows) have been deemed essential services in states so far, so we want to facilitate time for you all to talk about how you are approaching that, and to put forward any science-based questions that you need responses to for future work in this space.

Proposed agenda:

* Brief roll call
* Call purpose
* Covid19 response tracking
* Facilitated discussion about covid19 response and marijuana licensees
* Vaping updates and/or any other cannabis and public health topics (as time allows)

Let me know if you have any questions.

Respectfully,
Gillian

ORIGINAL MEETING REQUEST MESSAGE

Dear State Colleagues,

Thank you for completing the When2Meet poll. This looked like the best time for all states who responded. As a reminder, these quarterly calls will bring adult use and medical states together to provide updates related to cannabis vaping policy, prevention, and education, and to discuss other relevant cannabis and public health topics. CDC will provide updates about our cannabis related work as part of these calls, as well.

I will send a more detailed agenda closer to the call. In the meantime, please reach out to me if there are specific topics you would like to add to the agenda.

Respectfully,
Gillian

ORIGINAL MESSAGE

Dear State Colleagues,

It's hard to believe February is already upon us. I wanted to send out the notes from our cannabis vaping call earlier in January (see attached). Per our discussions on that call, we'll be moving to hold these multi-state, all state calls on a quarterly basis, and will continue to facilitate discussion on cannabis vaping issues, but will incorporate other cannabis and public health topics that are of interest to both medical and adult use states. If you are interested in continuing to participate in all-state cannabis and public health calls, please complete this When2Meet poll <https://www.when2meet.com/?8693306-VyueN> so we can try to schedule a March call. We'll talk on that call about getting a standing quarterly call on the calendar (e.g., X day of the last week of the second month of the quarter, or something like that). As a reminder, When2Meet automatically saves your entries. Please remember to select your timezone before completing the poll.

We will also pick back up with quarterly topic-based calls for adult use states only (the multi-state collaborative group), since some additional public

AMERICAN OVERSIGHT

health and policy issues exist in the adult use landscape. Adult use states - I will be sending a separate poll to try to schedule one of those calls in February, as I know some of you already have issues you'd like to discuss with each other, with legislative sessions underway.

For both the all-state and adult use state calls, I will continue to develop the agenda in the same manner - reaching out to a variety of states to solicit topics. Please feel free to reach out to me any time with policy questions, TA requests, or topics for these multi-state calls.

Thanks again for all you do in the field!

Respectfully,
Gillian

Subject: 100% of EIS officers and LLS fellows are needed for the COVID-19 response

EIS and LLS supervisors,

I am writing again, asking for your support in having EIS officers and LLS fellows deploy or take on other roles for CDC's response to COVID-19. I want to emphasize that **completing CALs (graduation requirements) should NOT factor into whether an EIS officer or LLS fellow deploys**. Supervisors should not be asking to review deployment roles or objectives before approving a deployment. In the past we wanted to ensure deployments aligned with our training objectives. We no longer have that luxury, the primary responsibility of the EIS and LLS programs needs to be supporting the response until we are informed otherwise.

We will deal with CAL completion and how COVID-19 might impact graduation on a case-by-case basis. I want to assure you we will be very understanding in finding ways to compensate if involvement with the COVID-19 response prevented anyone from fulfilling the requirements to graduate.

We understand that some EISOs or LLS fellows may not be able to deploy to the field because of obligations to care for family members or themselves. There are response roles that can be completed while teleworking and do not require travel. We are available to assist in finding deployment roles – contact us at EpiAid@cdc.gov and we can discuss their particular circumstance. In addition, any fellows who are not currently deployed can volunteer by:

1. Emailing us at EpiAid@cdc.gov
2. Volunteer for a Go Team by submitting name in ReADI
3. Responding directly to any calls for volunteers they receive through other communication

AMERICAN OVERSIGHT

channels

Thank you for your support of the EIS and LLS programs and of your officers or fellows. We know a lot is being asked of you as well and CDC leadership appreciates all you are doing with respect to your individual contributions and your support of the EIS officers and LLS fellows.

Regards,
Eric

Subject: Action Required: COVID-19 impact on your polio TDY

Hi everyone,

Let me first say that we appreciate everyone's effort on the polio surge and your flexibility in these uncertain and rapidly changing times with the COVID-19 response. We in the polio EOC, as well as CDC as whole, have your safety and health as our top priority.

You are receiving this email because you are currently set to return home from your polio TDY between 7-14 days from now. We ask that you work with the EOC to immediately curtail your travel and return to the US.

If you believe that anything may impact your date for return to work at your home office, please let us know and we can reach out to your supervisory chain. New agency guidance regarding post-deployment telework and monitoring policies should be coming out by the end of the week and will be sent to you.

Please continue to monitor all information you receive from the post where you are located which may impact your travel, as well as any guidance you receive from the EOC. Thank you for your contributions to polio eradication, the contributions you may be being asked to make regarding COVID-19 in your TDY location, and your commitments to CDC's mission.

Subject: CDC COVID-19 Case Count Confirmation 03/05/2020

Dear Partners,

As described in an email sent from the CSTE COVID-19 Leadership Team (see attached), CDC is instituting a standard process for confirming publicly reported cases by jurisdiction.

What you need to do/know now:

- We will conduct case confirmation **daily** (Monday – Friday). As the response evolves, the frequency of these requests will likely decrease.
- At the bottom of this email, you will find a table with the current preliminary case counts we have for each jurisdiction **as of 4 pm ET on Thursday, March 5**.
- By **9 am ET Friday, March 6**, please confirm case counts for your jurisdiction (your numbers **as of 4 pm ET Thursday, March 5)** using the CDC Case Confirmation Portal (data are collected via Epi Info and stored on a secure CDC server):

https://go.usa.gov/xdftq

What you need to know about how your information will be presented:

- These data represent cases detected and tested in the United States through U.S. public health surveillance systems since January 21, 2020. They do not include people who returned to the United States via State Department-chartered flights. **We ask that the preliminary information shared in this email not be distributed.**
- What will be shared on the CDC website (updated daily at 12 pm, ET):
    - **The total case count** [presumptive + lab-confirmed], i.e., the actual number of *total* cases (e.g., 0, 6, 35) will be posted. **EXCEPTION**: **Jurisdictions with one to five cases will be depicted as a range: "1–5 cases"**
    - Other information shared will be used for internal awareness and will not be shared publicly at this time.

What you need to do/know later:

- DCIPHER users can update and analyze their own jurisdiction's data at: https://dcipher.cdc.gov/. If your jurisdiction does not currently have DCIPHER users, but you would like to move to Phase 2 reporting as described in the attached guidance, please email eocevent118@cdc.gov to confirm your readiness.

Sincerely,

CDC COVID-19 Epidemiology Task Force

Dear Dr. Blackmore,

A generic email went out tonight (see below) asking states to confirm their COVID-19 case-counts for tomorrow's web update. We wanted to reach out to you personally, though, because we did not receive confirmation of Florida's case counts for Monday's web update, and we realize numbers may have changed over the weekend.

At your earliest, could you please confirm the COVID-19 case counts for Florida as of March 9, and make any corrections as needed to the table below? Please also let us know if you would like us to add any alternate contacts for future case confirmation emails. We greatly appreciate your response.

I submitted the survey for Florida this morning, and I see that the count is updated to what I submitted on the website (https://www.cdc.gov/coronavirus/2019-ncov/cases-updates/cases-in-us.html), but the community transmission is not (I selected "Yes, distinct clusters of cases in a, or a few, defined geographical area(s)"). Did I do something wrong on the survey? I want to be sure our data are appropriately reflected…

Thanks!

Dear Partners,

CDC continues to institute a standard process for confirming publicly reported cases by jurisdiction.

What you need to do/know now:

- We will conduct case confirmation **daily** (for web posting Monday–Friday). As the response evolves, the

AMERICAN OVERSIGHT

frequency of these requests will likely decrease.
- At the bottom of this email, you will find a table with the following:
    - current preliminary case counts we have for each jurisdiction **as of 4 pm ET on Sunday, March 22**.
    - general community level transmission characterization

- By **9 am ET Monday, March 23**, **please use the CDC Case Confirmation Portal via the link below** (data are collected via Epi Info and stored on a secure CDC server) to:
    - confirm case counts for your jurisdiction (your numbers **as of 4 pm ET Sunday, March 22)**
    - if needed, modify your **"community level transmission characterization"**

Please use the link provided below and not a previously saved link in your web browser

https://go.usa.gov/xdtyJ

What you need to know about how your information will be presented:

- These data represent cases detected and tested in the United States through U.S. public health surveillance systems since January 21, 2020. They do not include people who returned to the United States via State Department-chartered flights. **We ask that the preliminary information shared in this email not be distributed.**
- What will be shared on the CDC website (updated daily at 12 pm, ET):
    - **The total case count**, i.e., the actual number of *total* cases (e.g., 0, 6, 35) will be posted. **EXCEPTION**: **Jurisdictions with one to five cases will be depicted as a range: "1–5 cases"**
    - Community level transmission characterization
    - Other information shared will be used for internal awareness and will not be shared publicly at this time.

What you need to do/know later:

- DCIPHER users can update and analyze their own jurisdiction's data at: https://dcipher.cdc.gov/. If your jurisdiction does not currently have DCIPHER users, but you would like to move to Phase 2 reporting as described in the attached guidance, please email eocevent118@cdc.gov to confirm your readiness.

Sincerely,

CDC COVID-19 Epidemiology Task Force

Hi Leah,

Thanks for bringing this to our attention. I don't see FL's response from yesterday in the Epi Info results but I do see your response from today at 6:45am confirming 1141 cases, 17 deaths, and (Yes, distinct clusters of cases in a, or a few, defined geographical area(s)). We will make sure the map is updated today and thank you for confirming case counts and contacting us if it doesn't look correct. We appreciate it.

Thanks,

Colin Schwensohn

Dear Partners,

CDC continues to institute a standard process for confirming publicly reported cases by jurisdiction.

What you need to do/know now:

- We will conduct case confirmation **daily** (for web posting Monday–Friday). As the response evolves, the frequency of these requests will likely decrease.
- At the bottom of this email, you will find a table with the following:
    - current preliminary case counts we have for each jurisdiction **as of 4 pm ET on Sunday, March 22**.
    - general community level transmission characterization
- By **9 am ET Monday, March 23**, **please use the CDC Case Confirmation Portal via the link below** (data are collected via Epi Info and stored on a secure CDC server) to:
    - confirm case counts for your jurisdiction (your numbers **as of 4 pm ET Sunday, March 22)**
    - if needed, modify your **"community level transmission characterization"**

Please use the link provided below and not a previously saved link in your web browser

https://go.usa.gov/xdtyJ

What you need to know about how your information will be presented:

- These data represent cases detected and tested in the United States through U.S. public health surveillance systems since January 21, 2020. They do not include people who returned to the United States via State Department-chartered flights. **We ask that the preliminary information shared in this email not be distributed.**
- What will be shared on the CDC website (updated daily at 12 pm, ET):

AMERICAN OVERSIGHT

- **The total case count**, i.e., the actual number of *total* cases (e.g., 0, 6, 35) will be posted. **EXCEPTION**: **Jurisdictions with one to five cases will be depicted as a range: "1–5 cases"**
- Community level transmission characterization
- Other information shared will be used for internal awareness and will not be shared publicly at this time.

What you need to do/know later:

- DCIPHER users can update and analyze their own jurisdiction's data at: https://dcipher.cdc.gov/. If your jurisdiction does not currently have DCIPHER users, but you would like to move to Phase 2 reporting as described in the attached guidance, please email eocevent118@cdc.gov to confirm your readiness.

Sincerely,

CDC COVID-19 Epidemiology Task Force

Great. We plan to be on site. Let me get back to you on who the POC will be.
What we were also hoping for is a training session with some of our staff who is augmenting the response (e.g. EMS, nurses) to build capacity. Our local epidemiologists have basic infection control expertise but they are very stretched right now. When is Sri able to deploy?

Subject: CDC Infection Prevention and Control Assistance

Hello Dr. Blackmore,

I wanted to introduce you to Srinivas Nanduri who will help with the infection prevention and control aspects of this investigation. As we discussed on the phone today, his deployment will be about 5 days and will largely be focused on the following objectives:

AMERICAN OVERSIGHT

1. To provide targeted infection control assessment and observation of the affected healthcare facility to included hand hygiene, transmission based precaution use, and environmental cleaning.
2. To provide training on essential infection control activities such as hand hygiene and PPE donning and doffing
3. Provide technical support on healthcare worker and patient/resident monitoring during this time
4. To build internal capacity within the health departments for these types of assessments moving forward through mechanisms such as tele-infection control assessments (ICAR) or focused onsite ICARs
5. If times allows, to conduct preparedness assessment at other healthcare facilities

We do ask that local or state PH support be present onsite with him as much as possible. And you will continue to have our support from CDC headquarters 24/7.

Please reach out to Sri directly to arrange further logistics.

Best,
Elizabeth Soda

Hello Dr. Blackmore,

I wanted to introduce you to Srinivas Nanduri who will help with the infection prevention and control aspects of this investigation. As we discussed on the phone today, his deployment will be about 5 days and will largely be focused on the following objectives:

1. To provide targeted infection control assessment and observation of the affected healthcare facility to included hand hygiene, transmission based precaution use, and environmental cleaning.
2. To provide training on essential infection control activities such as hand hygiene and PPE donning and doffing
3. Provide technical support on healthcare worker and patient/resident monitoring during this time
4. To build internal capacity within the health departments for these types of assessments moving forward through mechanisms such as tele-infection control assessments (ICAR) or focused onsite ICARs
5. If times allows, to conduct preparedness assessment at other healthcare facilities

AMERICAN OVERSIGHT

We do ask that local or state PH support be present onsite with him as much as possible. And you will continue to have our support from CDC headquarters 24/7.

Please reach out to Sri directly to arrange further logistics.

Best,
Elizabeth Soda

Hi Dr. Blackmore,
Just wanted to check in with you about my deployment to Broward County so far. Dr. Thaqi likely looped you in already but I supported condensing of existing guidelines for SNFs and ALFs and training on them to public health staff and the IMT staff. Also helped with some site visits to these facilities supplementing existing Broward county infection control assessment protocols. Reaching out to you to let you know that my initial objectives for this mission could be considered complete. Let me know if you think there is anything else that I should be assisting the county or you with.
Thanks,
Srinivas

Marisa
I am including Sherri Berger on this email for SA.

Could you please provide more specifics on your contact with Florida and GA? Who specifically has been contacted by regarding the requested transfers?

There are a number of items that the accepting states have to have and place and agree to for individuals requiring isolation. CDC can provide guidance if home isolation is being considered and happy to address questions.

Thanks Nicki

Hi Satish,
How are you? I'm contacting FL and GA Depts of Health to arrange for transfer home to FL and GA of two COVID-19 + from the Diamond Princess cruise ship who are clinically stable and hospitalized in Spokane, WA.

There are many logistics, first getting the state to accept the patient and then to arrange transportation. Scott Pritchard, Interim Director, Infectious Disease Prevention and Investigations Section of FL DOH was very concerned and wanted to know who the CDC contact is for this decision. He also thought that their state epi and commissioner of health would want to be on a call with CDC before accepting the patient.

Is there a CDC contact? May I pass on a message from you representing CDC saying that you approve of this effort? Thanks and sorry to bug you!
Best,
Marisa

Marisa

AMERICAN OVERSIGHT

I am including Sherri Berger on this email for SA.

Could you please provide more specifics on your contact with Florida and GA? Who specifically has been contacted by regarding the requested transfers?

There are a number of items that the accepting states have to have and place and agree to for individuals requiring isolation. CDC can provide guidance if home isolation is being considered and happy to address questions.

Thanks Nicki

Nicki Pesik MD

Hi Marisa - I don't think I'm the right person but want to make sure I loop in our repatriation and global migration teams. Also our state coordination colleagues. I don't think it is a cdc decision but they may have a suggestion on who at cdc might be able to speak with FL DoH.

AMERICAN OVERSIGHT

Subject: CDC contact for transfer of FL and GA residents COVID-19 + patients in Washington

Hi Satish,
How are you? I'm contacting FL and GA Depts of Health to arrange for transfer home to FL and GA of two COVID-19 + from the Diamond Princess cruise ship who are clinically stable and hospitalized in Spokane, WA.

There are many logistics, first getting the state to accept the patient and then to arrange transportation. Scott Pritchard, Interim Director, Infectious Disease Prevention and Investigations Section of FL DOH was very concerned and wanted to know who the CDC contact is for this decision. He also thought that their state epi and commissioner of health would want to be on a call with CDC before accepting the patient.

Is there a CDC contact? May I pass on a message from you representing CDC saying that you approve of this effort? Thanks and sorry to bug you!
Best,
Marisa

Dear Dr. Abdul

Thank you for contacting the CDC with a novel coronavirus person under investigation (PUI) inquiry. If you suspect you have a patient with possible novel coronavirus infection, please contact your local health department immediately for further guidance. General information on novel coronavirus, including infection control measures can be found online here. CDC is working closely with local and state health authorities. CDC will only be facilitating novel coronavirus referral testing in coordination with public health departments.

Regards,

CDC Novel Coronavirus Response PUI Team

---

I would be happy to collect any of the suggested edits. And if there happens to be a communication specialist available---it would be great to have their input/help.

I don't think an official release date has been announced? Maybe India has updates?

Thanks,
Amy

I believe we have now lost Michelle, Beth and Elizabeth, who were are go-to Promote members for fine tuning our promotional messages.
Do we need any other eyes on the draft messages from Michelle before we start using them? Also, do we have a release date for the 3rd Edition?
Thanks,
Shari

Subject: COVID Priority Services--Animal and Ag Industries

NASPHV,

This morning during the active member call we discussed creating a list of priority services that should be excluded from mandatory shutdowns. The concern is a complete shutdown of these services (or quarantines on large numbers of employees) will lead to disruption of the food supply, increased risk to public health, significant welfare issues to animals, unnecessary euthanasia, and overall ethical dilemmas.

I generated this list based on today's call. Please add to this as needed.

Animal Food Supply Chain Services (specifically employees working in processing plants)
Veterinary Critical and Emergency Care
Initial Rabies Vaccines to animals in high risk areas
Rabies Booster Vaccines to rabies exposed pets and livestock
Other vaccinations in response to specific situations (example: parvo or distemper outbreaks)
Responding to reportable veterinary conditions (specifically foreign animal diseases and others requiring movement restrictions)
Animal Movement Regulations including required veterinary inspections

Hi Julia,
My sincere apologies for the delay in responding to you on this! I've added you to my internal list. These calls are not being coordinated through the ELC so I don't know if the call information will update with each call. It is my understanding that the invites are going to, at minimum, PHEP Directors and State Epidemiologists; we have been sending them to ELC Governance Team members.

Hi Angelica,

I have been asked to host these calls for the Florida Department of Health, but I am not receiving these emails directly. Could you add me to your email distribution list so I receive these emails moving forward? Also, could you clarify if the call-in number and passcode listed here is the one we should use moving forward?

Thank you so much for your help!

Best,
Julia

Julia Munroe, MS

The CDC will be hosting an all-state COVID-19 call on Tuesday, February 18 from 2:00pm-2:45pm EST. The ELC is not coordinating this call; however, we wanted to share this information in the event you had not received it through other channels.

CDC's Coronavirus Disease-2019 (COVID-19) response team will host a national call from 2 p.m. to 2:45 p.m. EST on Tuesday, February 18, to provide state and local partners with the latest information on the novel coronavirus outbreak and U.S. preparedness efforts.

Invited participants include state, local, and territorial preparedness directors, state epidemiologists, state health officials, public health laboratory directors, and nongovernmental partners. Participant information can be found below.

Participant Information

Bridgeline: 1(888)790-1880
Participant Passcode: 8138992

Please note, this update call is being held on a Tuesday, in lieu of President's Day observance. Future calls will be held on Mondays.

Subject:	RE: COVID-19 Public Health Response Operations
Date:	Saturday, February 29, 2020 7:02:26 PM

Good Evening Colleagues,

As a follow-up to yesterday call, please find the "Interim Guidance for Administrators of US Childcare Programs and K-12 Schools to Plan, Prepare, and Respond to Coronavirus Disease 2019 (COVID-19)" here.

Schools should continue to collaborate, share information, and review plans with local health officials to help protect the whole school community, including those with special health needs. School plans should be designed to minimize disruption to teaching and learning and protect students and staff from social stigma and discrimination. Plans can build on everyday practices (e.g., encouraging hand hygiene, monitoring absenteeism, communicating routinely) that include strategies for before, during, and after a possible outbreak.

Thank you!

State Coordination Task Force (SCTF)

PROTECTING AMERICA'S SAFETY, HEALTH, AND SECURITY

-----Original Appointment-----
Subject: COVID-19 Public Health Response Operations
When: Friday, February 28, 2020 3:00 PM-4:00 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Bridgeline: 1(888)455-7719 Passcode: 6905931

COVID-19 Public Health Response Operations
CDC's 2019 Novel Coronavirus (COVID-19) response team will host a recurring call series from 3 p.m. to 4 p.m. EST every Wednesday's and Friday's, to discuss plans for returning travelers, including movement & monitoring, quarantine, data reporting, and status reports or concerns. **Please note, this call is not open to the media**.

Invited participants include all 62 PHEP funded jurisdictions (state, local, and territorial preparedness directors, state epidemiologists, state health officials, public health laboratory directors, and emergency management officials), nongovernmental partner organization leadership (APHL, ASTHO, CSTE, and NACCHO), Big City

AMERICAN OVERSIGHT

Health Coalition (BCHC), and ASPR regional administrators. In order to ensure and maintain the appropriate target audience, please have **ONE** representative from each **CORE** function listed participate from your jurisdiction. Participant information can be found below.

Participant Information
Bridgeline: 1(888)455-7719
Passcode: 6905931

State Coordination Task Force (SCTF)
Center for Preparedness and Response (CPR)

Centers for Disease Control and Prevention (CDC)
1600 Clifton Road, NE, MS H21-5, Atlanta, GA 30349-4027

CDC 24/7
PROTECTING AMERICA'S SAFETY, HEALTH, AND SECURITY

For your situational awareness, the forwarding option for this invite is DISABLED.

Please contact eocsctfops@cdc.gov if you have any questions.

(Sent by BCC to PHEP directors, state epidemiologists, state health officials, public health laboratory directors, and national and federal partners)

AMERICAN OVERSIGHT

From:	CDC IMS State Coordination Task Force (SCTF) Operations
To:	CDC IMS State Coordination Task Force (SCTF) Operations; CDC IMS State Coordination Task Force (SCTF) Policy & Comm
Subject:	RE: COVID-19 Public Health Response Operations
Date:	Saturday, February 29, 2020 7:00:17 PM

Good Evening Colleagues,

As a follow-up to yesterday call, please find the "Interim Guidance for Administrators of US Childcare Programs and K-12 Schools to Plan, Prepare, and Respond to Coronavirus Disease 2019 (COVID-19)" here.

Schools should continue to collaborate, share information, and review plans with local health officials to help protect the whole school community, including those with special health needs. School plans should be designed to minimize disruption to teaching and learning and protect students and staff from social stigma and discrimination. Plans can build on everyday practices (e.g., encouraging hand hygiene, monitoring absenteeism, communicating routinely) that include strategies for before, during, and after a possible outbreak.

Thank you!

State Coordination Task Force (SCTF)
Center for Preparedness and Response (CPR)

Centers for Disease Control and Prevention (CDC)

2019 Novel Coronavirus (2019-nCov)

Coronavirus Disease 2019 (COVID-19) in the U.S.

As of February 24, 2020

In the United States, there have been 14 confirmed cases of COVID-19 detected through U.S. public health surveillance systems. There have also been 39 cases of COVID-19 reported among people repatriated to the United States.

CDC provides updated U.S. case information online on Mondays, Wednesdays, and Fridays.

All

FYI.... I know nothing of what is happening on these ships, just they are due to arrive in the next 48 hours.

From the State Department...

- Tracking **33 cruise ships** that have/are set to debark in the next 48hrs.
- 3 out of 33 are sked to arrive in US ports in next 48 hrs – GRANDEUR OF THE SEAS (Miami, FL), MSC LIRCA (Miami, FL), SEVEN SEAS EXPLORER (Miami, FL) –

Just wanting to know if the Port of Miami remains open. I understand that the cruise lines are to follow normal practices for debarkation of ships as they do every day.

Let me know if you have any questions.
Thanks

Respectfully,
Jeanne

Subject: RE: EIS Supervisor Seminar: EIS Conference and Match Orientation
Date: Tuesday, February 25, 2020 2:44:13 PM

Thanks, I didn't receive this!

-----Original Appointment-----
From: Foster, Monique Aaron (CDC/DDID/NCHHSTP/DVH) <ydg9@cdc.gov> **On Behalf Of** EIS (CDC)
Sent: Tuesday, February 25, 2020 2:20 PM
To: Gupta, Neil (CDC/DDID/NCHHSTP/DVH); Harris, Aaron M. (CDC/DDID/NCHHSTP/DVH)
Subject: FW: EIS Supervisor Seminar: EIS Conference and Match Orientation
When: Wednesday, March 18, 2020 1:00 PM-2:00 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Adobe Connect Webinar
Importance: High

Not sure if you already received this but wanted to pass this along as I'll be deployed for COVID-19 on this day. If it's slow at the quarantine station I'll try to join remotely.

Regards,
Monique

Subject: EIS Supervisor Seminar: EIS Conference and Match Orientation
When: Wednesday, March 18, 2020 1:00 PM-2:00 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Adobe Connect Webinar
Importance: High

*****This seminar is primarily for supervisors who have been approved to match at the 2020 EIS Conference; however, all supervisors are welcome to participate. As a reminder, final dispositions on approvals to participate in the 2020 EIS match will be sent on March 9.*****

EIS Supervisors –

Do you have questions about the 2020 EIS Conference and match?
Would you like to become familiar with the recruitment venue?
Would you like to see an overview on how to schedule interviews, and assign and enter your match scores?

Then please join us for the next EIS Supervisor Seminar, where we will be discussing the EIS Conference and match!

During the seminar, we will review 2020 EIS match process, including the recruitment venue, how to enter your interview slots, and how to enter your scores.

If you already have questions about EIS Conference or match that you would like addressed during the seminar, please send them ahead of time to Larry Cohen at cbu1@cdc.gov. We will compile the submitted questions and answer them during the seminar.

AMERICAN OVERSIGHT

We look forward to your participation at the next EIS Supervisor Seminar!

Thank you,
EIS Program

Cc: Blackmore, Carina (CDC flhealth.gov); Christine Scott-Waldron; Varnado, Wendy (CDC msdh.ms.gov)
Subject: RE: Examples of good state support for IR testing
Date: Tuesday, March 3, 2020 10:22:18 AM

Good morning Bob,

The three states that I recommend are Florida, Mississippi, and Louisiana.

Florida contact is Dr. Carina Blackmore. Blackmore, Carina (CDC flhealth.gov) carina.blackmore@flhealth.gov
In this model, the State DOH received Zika and then Hurricane Funding that supported a contract with the University of Florida, Florida Medical Entomology Laboratory to conduct state-wide testing on Aedes aegypti, Aedes albopictus, and Culex spp.

Mississippi contact is Dr. Wendy Varnado. Varnado, Wendy Wendy.Varnado@msdh.ms.gov

Louisiana contact is Chrissie Waldron-Scott. Christine Scott-Waldron Christine.Scott-Waldron@la.gov
The State DOH has contracted with Louisiana State University to start testing this year.

Let me know if you need additional information.

Subject: RE: Examples of good state support for IR testing

Hi Roxanne,

AMERICAN OVERSIGHT

ASTHO is working on a document to promote state health departments to support Insecticide Resistance testing. I think it would be valuable to include a few brief examples or mini-case studies of different state approaches to IR. Can you suggest 3 states that other states may want to model? Do you have information on who to contact?
Thanks,
Bob Vanderslice

Bob,

Wanted to connect you with Roxanne Connelly, our entomology and ecology team lead, to follow-up on our discussion from yesterday. Roxanne has some good examples of successful models for state support of IR testing.

Best,

Chris

Subject: RE: FL request for CDC assistance

Carina,
In response to your question about assessing risk level of contacts, below is the approach that we have been using. Please let me know if you have additional questions. When you have time, I'd be interested in following up on the questions about port workers.
Stephanie

How contacts are assessed: There is not a precise time-defined criteria for determining what is "prolonged" contact. Low risk is generally considered to be very brief interactions such as a brief greeting conversation, handshake, generally of less than 10 minutes. Medium risk exposures typically include those that include an interaction of 30 minutes or longer within 6 feet such as eating a meal together. Types of exposures that fall between are assessed on a case by case basis and take into consideration careful assessment of all aspects of the interaction including whether the case was symptomatic and how close the contact was to the case.

https://www.cdc.gov/coronavirus/2019-ncov/php/risk-assessment.html

Close contact in the guidance above is defined as 1) being within approximately 6 feet of a COVID-19 case for a prolonged period of time; close contact can occur while caring for, living with, visiting, or sharing a healthcare waiting area or room with a COVID-19 case or 2) having direct contact with infectious secretions of a COVId-19 case (e.g. being coughed on).
Medium risk exposures include "Being on an aircraft, being seated within 6 feet of a traveler with symptomatic lab-confirmed COVID-19 infection…".
Low risk exposures include "Being in the same indoor environment as a person with symptomatic lab-confirmed COVID-19 for a prolonged period of time but not meeting the definition of close contact

This info I got was confusing. It sounded like there were two different chains of communication and I wanted to make sure we hadn't left anything undone. What are your thoughts on the cases among the cruise port workers? Does it seem like a common workplace exposure or community transmission?
Thank you,
Stephanie

Subject:	RE: FL: EOC PUI team Questions
Date:	Saturday, February 1, 2020 12:46:47 PM

Scott –

Runa referred your email to me as we are trying to consolidate our state communication to the extent possible to help expedite responses.

When you say you haven't heard any summaries of private provider calls directly to CDC, I am not sure if you referring to getting testing results from PUIs or knowing that a provider has called to inquire about a patient potentially meeting criteria to be a PUI.

For the former, we have identified that there is an issue with the eLIMS automatic reporting feature. In the interim, until the issue is resolved, we are emailing negative nCoV PCR results to the public health lab submitter email that is included with the specimen. Official reports will follow when the eLIMS issue is resolved. The lab is testing throughout the weekend and we email the negative results out as soon as we get them.

If your question is about providers that might have called about a potential PUI, when that occurs, the provider is being instructed to contact the health department.

If I have not answered your question or if you have additional questions, don't hesitate to reach out.

Thanks,
Alicia Budd

Date:	Tuesday, March 17, 2020 11:45:42 PM
Attachments:	Chile (37.2 KB).msg

Hi Mr. McGough,

I wanted to update you about the situation with Royal Caribbean and the flights from Chile and Brazil

1. There has been no movement on any flights from Brazil
2. AT 6:30 PM EST, Ms. Kalisch from Royal Caribbean emailed us to tell us that the Government of Chile had put a hold on their flights
3. At around 6:44 PM, I received a call from Dr. Rivkees, the Florida Surgeon General who told me that the Governor was not going to allow any flights to land and disembark passengers in Miami until there was a solid plan articulated by the Cruise company.
4. Right after that call we notified the State Department and copied DHS. We also notified Eleni Kalisch and told her to contact the State of Florida to coordinate a plan(we gave her the relevant phone numbers)
5. At approximately 7:30 Eleni Kalisch emailed that the flight from Chile was going to proceed, but she never responded about contacting Florida state or local authorities despite multiple emails from CDC telling her to do so
6. At 10:07 she told us that the flight would be departing Chile at 12:10 AM local time and arriving in Miami at 9:10 AM EST

Attached is the last email chain starting at 10:20 when Eleni told us there is a slight change of plans which states that CDC will be screening her passengers. We have told her multiple times that CDC will not be screening passengers. We asked her to contact us by phone right away (11PM), but she has not done so. We believe that the flight may have already departed and we are concerned that no one has signed off on this from Florida and that a clear and reasonable plan has not been sent any of us.

Date: Friday, February 14, 2020 1:13:28 PM

Hi Marla,

Hope all is well. Thank you for your message. It's clear you have done your due diligence in reviewing LA's vector project needs and are proposing some alternative use of funds.

To be clear, are you clearing the idea of a redirection of funds towards the activities you mentioned below? I know you mentioned the funds are already in the correct budget category, but it is a matter of altering the activities.

In that's the case, it would be helpful to have specifics - a sheet outlining the previous activities and how much funds were involved, and then then where the money is going to (new activities). Please also provide vendor quotes and specific justification, as you laid out below, on official letter head, similar to what is typically done in an amendment/redirection.

In other words, we need to see clearly see what the money was originally approved for, and how much, and where the money is going toward now, how much, justifications, and associated quotes… Based on that, we will review and get the necessary prior approval, and if approved, have the appropriate changes documented in GMM.

Please let me know if this makes sense. Thank you!

Kind regards,

Subject: Florida Hurricane Crisis CoAg Vector Control Project

Sabrina,

Although the funding in the correct category of contractual we have a few question regarding approval of some projects within Vector Control.

A few of the mosquito control districts would like to purchase trailers to use for outreach and education of the public. I have read the guidance and did not see anything that prohibited this.

We would also like to contract again with the University of Florida Institute of Food and Agricultural Sciences Center for Public Issues and Education in Agriculture and Natural Resources (PIE Center) to create materials designed to educate the public about mosquito control in a simplified, understandable format that would increase public understanding of scientific information related to mosquito control. The PIE Center conducted focus groups on the public's and local officials' knowledge and perception of mosquito control, and the findings were used to create messages used in the Prevent & Protect project (https://preventmosquitoes.org/). PIE Center was able to create two toolkits (mosquito control and emergency response), infographics and information sheets, lesson plans, as well as social media plans, and conducted some preliminary evaluations of the materials. As the next step for this project, PIE Center plans to use this funding to conduct more in-depth evaluations of the materials, identify best methods of facilitating education about mosquito control topics, increase training for teachers and other groups, and develop an online mosquito control communication training program to share best practices and developed tools. The previous contract was using ELC Zika funding.

We feel like it would fit under Domain 5: Strengthen Countermeasures and Mitigation. The funding being provided to the mosquito control programs under that domain specifically mentions: These funds would help local jurisdictions in preventing transmission of endemic and exotic arboviruses by using evidence based, best management practices which can also include source reduction, communication, and public education.

Please feel to email or call me if you have any additional questions or concerns.

The PIE Center Project is $90,000 and would come from the Mosquito Control Districts funding of $2,706,643. Which is a little more than 3% of 2.7 million and 1.6% of the total award for Vector Control.

The funding for the trailers is also part of the Mosquito Control Districts funding. This funding has already been allocated to 2 of the districts. They reached out to us see if trailers would be allowable in the grant. We can reach back out to have them submit the quotes and specifications. The activity outreach and education is already an approved activity within the Mosquito Control Districts Project.

Have a nice weekend.

Thank you, Marla. I appreciate the additional details. I believe both activities for **FL** are allowable, trailers and educational material, but because it is equipment, it will have to have prior approval in GMM. That is why I am I requesting the additional information/quotes now rather than later in the review process. Finally, as you are probably aware- FL's budget narrative and workplan will also have to reflect these new activities and should also be submitted accordingly. I hope that helps clarify. Please don't hesitate to reach out with any questions.

Thanks again and hope you have a great weekend.

Hi Marla,

Hope all is well. Thank you for your message. It's clear you have done your due diligence in reviewing **LA**'s vector project needs and are proposing some alternative use of funds. **Do you means FL?**

To be clear, are you clearing the idea of a redirection of funds towards the activities you mentioned below? I know you mentioned the funds are already in the correct budget category, but it is a matter of altering the activities.

In that's the case, it would be helpful to have specifics - a sheet outlining the previous activities and how much funds were involved, and then then where the money is going to (new activities). Please also provide vendor quotes and specific justification, as you laid out below, on official letter head, similar to what is typically done in an amendment/redirection.

In other words, we need to see clearly see what the money was originally approved for, and how much, and where the money is going toward now, how much, justifications, and associated quotes… Based on that, we will review and get the necessary prior approval, and if approved, have the appropriate changes documented in GMM.

Please let me know if this makes sense. Thank you!

Sabrina,

Although the funding in the correct category of contractual we have a few question regarding approval of some projects within Vector Control.

A few of the mosquito control districts would like to purchase trailers to use for outreach and education of the public. I have read the guidance and did not see anything that prohibited this.

We would also like to contract again with the University of Florida Institute of Food and Agricultural Sciences Center for Public Issues and Education in Agriculture and Natural Resources (PIE Center) to create materials designed to educate the public about mosquito control in a simplified, understandable format that would increase public understanding of scientific information related to mosquito control. The PIE Center conducted focus groups on the public's and local officials' knowledge and perception of mosquito control, and the findings were used to create messages used in the Prevent & Protect project (https://preventmosquitoes.org/). PIE Center was able to create two toolkits (mosquito control and emergency response), infographics and information sheets, lesson plans, as well as social media plans, and conducted some preliminary evaluations of the materials. As the next step for this project, PIE Center plans to use this funding to conduct more in-depth evaluations of the materials, identify best methods of facilitating education about mosquito control topics, increase training for teachers and other groups, and develop an online mosquito control communication training program to share best practices and developed tools. The previous contract was using ELC Zika funding.

AMERICAN OVERSIGHT

We feel like it would fit under Domain 5: Strengthen Countermeasures and Mitigation. The funding being provided to the mosquito control programs under that domain specifically mentions: These funds would help local jurisdictions in preventing transmission of endemic and exotic arboviruses by using evidence based, best management practices which can also include source reduction, communication, and public education.

Please feel to email or call me if you have any additional questions or concerns.

Good afternoon All,

The following is a breakdown and information from the two programs requesting to purchase a trailer. I was misinformed on the purpose for one of the trailers as they are not both for outreach/education. One plans to use the trailer to move equipment around the county, increasing their capacity in post storm treatment response. The other is interested in using the trailer to educate their constituents. Please see the information below for cost approximations, size, and use details.

Hernando:
The trailer would be used to transport ATV's equipped with larviciding/adulticiding equipment as the A1 was purchased last year is loaded on their 6 x 12 trailer now. Therefore, they need another transport trailer. They're looking at a 6 x 14 or so, estimated cost from $1300-$1900 without a side gate. If they go for a side gate it could go up to $2500. The cost is certainly within their 10k allotment from year two distribution.

Pasco:
The cost for the trailer alone was $9363. Designing the trailer and customizing it to meet their needs is something they will be working on in the upcoming months. Estimates could be another $4000 in order for them to design the interior (adding shelving, cabinets, flooring, etc.), customize the exterior paint/wrap, add a generator, and finally, purchasing the educational material (microscope, TV, artwork, banners, etc.). So, overall, the total cost of the education trailer is approximately $14000.

The education trailer will be used to showcase how Pasco County Mosquito Control District proactively uses integrated mosquito management strategies to reduce pestiferous mosquito populations and protect residents from mosquito-borne diseases. This educational tool will be fun and interactive, designed to educate children and adult audiences by providing outreach services to area school districts, libraries, civic organizations, and other community groups.

The specs on the trailer;

- 8.5' x 24' V-nose, enclosed trailer
- 2 – 7000lb axels
- 84" interior height
- Rear and side ramps (instead of full doors)
- 4" x 4" concession window

I hope this information helps in obtaining needed approval and amending the current workplan.

Subject: Follow-up from call with facility

Hi Scott,

A quick summary of today's call with Dr. Gordillo (cc'd here)

1. The facility is rapidly running out of AIIR capacity given their high suspicion for COVID-19 in

AMERICAN OVERSIGHT

the community. They have some limited ability to create some negative pressure rooms in their ICU and ER but these rooms will have a shared air space among them which not allow them to mix PUIs with true cases. They also asked about the option of portable isolation units such as a tent. Our CDC NIOSH colleagues would know the most about this option. I have emailed them to request a call with the facility hopefully later today.

2. The other concern the facility had was regarding the speed of testing. Scott-I will defer that question to you. However, they did wonder if CDC lab technical support would be an option to help them build up their own in-house test. Again I defer this totally to FL, and I don't know if this would even be an option from the CDC side. However, I am happy to inquire on our side if you are interested.

Happy to chat.

Best,
Elizabeth

Subject: Follow-up from call with facility

Hi Scott,

A quick summary of today's call with Dr. Gordillo (cc'd here)

AMERICAN OVERSIGHT

1. The facility is rapidly running out of AIIR capacity given their high suspicion for COVID-19 in the community. They have some limited ability to create some negative pressure rooms in their ICU and ER but these rooms will have a shared air space among them which not allow them to mix PUIs with true cases. They also asked about the option of portable isolation units such as a tent. Our CDC NIOSH colleagues would know the most about this option. I have emailed them to request a call with the facility hopefully later today.
2. The other concern the facility had was regarding the speed of testing. Scott-I will defer that question to you. However, they did wonder if CDC lab technical support would be an option to help them build up their own in-house test. Again I defer this totally to FL, and I don't know if this would even be an option from the CDC side. However, I am happy to inquire on our side if you are interested.

Happy to chat.

Best,
Elizabeth

Subject: Time Sensitive Request Due 3/3/2020: Request for Primary and Secondary Point of Contact for any Supply Chain Issues within your State.

Greetings PHEP Directors & State Epidemiologists –

The outbreak of COVID-19 in China has led to a disruption in the global supply chain of personal protective equipment (PPE). CDC recognizes that healthcare facilities may experience temporary shortages even if they do not care for patients with COVID-19. CDC has released guidance for optimizing the use of N95 respirators, which includes some recommendations that may be applicable to other types of PPE, including surgical masks. CDC also has guidance regarding who needs and does not need PPE to help prevent excessive use of PPE.

As you are aware, this is a delicate system with many factors. When CDC receives notifications from healthcare systems about supply chain shortages, we encourage the Healthcare Coalition Partners to work together to problem solve within the coalition and/or wider state system. Further we encourage the healthcare systems to reach out to the state health department to collaborate and problem solve.

We have heard from the healthcare system partners that have contacted us that they are unsure whom to contact in the state health department about supply chain shortages in their facilities. As a way to help mitigate this, **we are asking you to reply to eocsctfmccmlno@cdc.gov no later than March 3, 2020, with an identified primary and secondary point of contact for any supply chain issues within your state.**

Please provide the following information:

Pls take a look at Norwegian Bliss; they were denied entry to Norfolk, VA so are requesting to enter Miami tomorrow, March 20. Supposedly they have a COVID case onboard, a 2 YOM. Can you

AMERICAN OVERSIGHT

confirm? Also, what other reporting do you have on this ship?

I'm aware per the EpiX dtd 13 March that the Bliss had a case from 1 March following debarkation.

Thank you for your time.

V/R,
Kara

Good evening Ms. Coppola,

Dr. Rivkees gave me your name and email to forward these letters sent by Princess Cruise Line to passengers and crew of the Sky Princess voyages on 2/22 and 2/29. Alberto Moscoso (cc'd here) was involved with the crafting of the letters.

Thank you and please acknowledge receipt.

Good Day Paul and Kara,

Thank you kindly for reaching out today.

As per telephonic guidance received the evening of 12 March 2020 from Alberto Moscoso and team at Florida Department of Health, as well as Cindy Friedman and Paul Weidle from US CDC, it was recommended that an email notification to be sent to individuals with travel history aboard Sky Princess voyage A [22-29 February 2020] and voyage B [29 February – 7 March]. Attached are the email notifications sent on 13 March 2020.

Thanks,

To: Lamana, Joseph (OS/ASPR/EMMO) <Joseph.Lamana@hhs.gov>
Subject: MS Marina (Oceania)

Hi Joe – are you tracking the MS Marina (Oceania)? I'm tracking 653 Amcits on board, COVID(+) cases on ship, headed to Miami but no ports there open. This is going to be a problem soon. We're getting inquiries from the Australians and Andorrans. This is the latest I have:

18MAR: Indications that an Oceania cruise ship will be arriving at Port of Miami sometime next week with various COVID-19 positives on it. Consular Affairs from the Australian Embassy contacted to say they had been notified overnight that the MS Marina (Oceania) is returning to Miami from South America via the Panama Canal after it was denied docking by several countries. The latest advice the Embassy has is that it is passing through the Canal could take 5 or 6 days. Australian Embassy in Mexico and Honorary Consul in Panama are trying to assist at least 49 Australians on board - some of whom are starting to run short of medications etc. - but are having difficulty contacting the crew and Oceania's agents in Panama. CONS provided them with the contact for Norwegian cruise lines which is a parent company of Oceania. OFM indicates Port of Miami is not aware of the ship coming to Miami and questioned where it would even dock as all available ports are occupied. OFM in touch with Norwegian.

Date:	Monday, February 24, 2020 11:59:34 AM
Attachments:	image001.png

Dear Subcommittee on Insular Affairs Members & Meeting Participants –

Well, change is a constant!! Given that we have a last minute request from the White House for our members to brief officials on COVID-19 while they are in town, the meeting of the Subcommittee on Insular Affairs held during Washington Week will be cancelled this year. However, in the absence of the full committee meeting, Cendra and I would still appreciate having a working session with our partners and staff not traveling to the White House tomorrow to further our priorities and action steps for the coming year. It is critical that we keep this work moving. I have emailed these individuals separately.

Apologies for multiple emails.

Thanks,
Karl

Subject: Materials & Time Change for Subcommittee on IA During ASTHO WA Week

Dear Subcommittee on Insular Affairs Members & Meeting Participants,

On behalf of Subcommittee Chair Esther Muna, CNMI and ASTHO CEO Mike Fraser, we welcome you to Washington Week and thank you for your active engagement and participation! Please note our meeting has been changed to the following date and time:

Tuesday, February 25th, 2020
4:00 – 5:30 pm ET
Madison Hotel – Adams B
1177 15th Street, NW
Washington, DC 20005

A calendar invite will follow.

Attached and below please find materials for our meeting. During our time together, we will re-visit the priorities established during last year's meeting, hear about progress made on these, and define action steps and priorities for the coming year. Also, please note that during or after the Tuesday dinner, those of us visiting on the Hill Wednesday and engaging in meetings with the Administration on Thursday will huddle to hone talking points.

https://naturalresources.house.gov/imo/media/doc/Insular%20Fact%20Sheet_ks.pdf
https://scholarlycommons.pacific.edu/pjh/vol2/iss1/1/

The Insular Affairs Subcommittee to the ASTHO Government Affairs Policy Committee was formed in 2018 to identify the unique policy needs and priorities of the Pacific and Atlantic jurisdictions. The subcommittee provides a forum for ASTHO's members to exchange information on policy challenges and solutions within the insular areas. Additionally, the subcommittee provides recommendations to the full committee on policy priorities.

See you soon!
Karl

Virginia, Gabriella

We made some great progress on the OHHABS data dictionary descriptions and identifying ways to facilitate uploads to OHHABS. Please see attachment for the latest revisions. Elke has done a great job updating the spreadsheet since the last discussion including adding a couple of columns: CDC Follow-up questions and remaining DOH Action Items.

We would like to have another conference call to finish the review. I will send out a Doodle poll soon for us to pick a day and time that work.

Thanks.

Dr. Chapman,

We will need the entire FFPE block. The block will be returned to the submitter after the case is finalized but please note, the block may be depleted during testing. For evaluation of Leishmania, the infectious diseases pathology branch (IDPB) performs immunohistochemistry. The DNA is extracted here (at IDPB) and then sent to the Div. of Parasitic Diseases (DPD) for PCR analysis.

Thank you for your understanding.

Regards,
Eddy

AMERICAN OVERSIGHT

Dear all,

We plan to cut tissue scrolls from a FFPE block of bone marrow aspirate that has not been decaled.

I will send the scrolls to the Florida Department of Public Health with the CDC requisition.

I assume that the Florida Dept of Health will then send them to the infectious disease pathology branch within the CDC.

Please confirm that this is appropriate.

Thank you.

Good morning Dr. Cohen

The FL Department of Public Health prefers that specimens for leishmaniasis are routed through their state Public Health Laboratory for shipment to CDC. I'm connecting you with Drs. Danielle Stanek (Danielle.Stanek@flhealth.gov) and Carina Blackmore (carina.blackmore@flhealth.gov) from the FL Department of Health who will provide additional guidance on how to submit the specimen to their state public health lab.

This email serves as approval to submit fixed tissue to IDPB (***through your state health department***) for testing. Please enclose with your submission:

- A copy of the path report
- Recent ID consult note or other similar clinical note on the patient that might include information on presentation, course, testing performed, treatment provided and any medical history
- Information on travel history and/or country of birth
- History of insect bites

Hi Dr. Cohen,

The pathologist on service this week (Dr. Eduard Matkovic) and epidemiologist (Tina Benoit) have been cc'd on your query and should be responding to you.

Note: this email and it's attachments are specific only to paraffin block(s) or wet formalin-fixed tissues intended for testing by our branch (IDPB) and do not apply to any unfixed tissues or other specimens being submitted to Dr. Yvonne Qvarnstrom's Leishmania lab.

AMERICAN OVERSIGHT

WARNING (per CDC's Mail Services): After September 30th, 2019, mail received with an incorrect or outdated mailstop will be returned to the sender with no exceptions. For our branch (IDPB), the new mailstop is "**MS: H18-SB**" as shown in section D of the attached guidelines.
If approved, please see the attached IDPB General Guidelines for Specimen Submission PDF and submit one hardcopy (per case) of the attached required electronically completed pre-populated CDC 50.34 form with the formalin-fixed wet tissues and/or formalin-fixed paraffin-embedded tissue blocks at ambient temperature. Paraffin-embedded tissue blocks are preferred if formalin-fixation of the wet tissues has exceeded 2 weeks; and, tissue scrolls or unstained slides are not accepted for PCR testing per IDPB's protocols. Select Test Order Code CDC-10365. Enter any test specifics in the Comments section on page 2.
Note, for human cases from the USA, the attached CDC 50.34 form has been pre-populated for your convenience with the correct Test Order Code and Public Health Lab contact information. Do not change or delete this information. Receipt of incorrect information in these sections can lead to a delay in testing.

Testing subject to CLIA regulations requires two primary patient identifiers (i.e., patient first and last name, date of birth, unique patient identifier from time of collection, such as medical record number) on the specimen container and on the test requisition

The course of testing will be determined by the clinical history, the histopathology observed, and the availability of specimens. Scant tissue is subject to depletion during the course of testing.
Please first inform/consult your City/State Health Department about this case, as specimens are normally required to be routed through them http://www.cdc.gov/laboratory/specimen-submission/who-may-submit-specimens.html. Dr. Danielle Stanek has been cc'd.
Thank you,
Pathology Team

Subject: RE: Possible Leishmaniasis Patient

Ok, if we are going to proceed with fixed tissue, that will actually have to be submitted through our Infectious Diseases Pathology Branch, because they have the protocol for extracting DNA from tissue blocks. I've cc'ed our colleagues over there, they can provide guidance for their submission process, which differs from ours.

If you are able to get fresh tissue, that specimen can be sent to us. If so, let me know and I'll ship you some vials of our transport/culture medium prior to the procedure.

Sorry for the complexity, this is one of our most complicated diseases to test, particularly because it can arise in so many tissue types.

Best,
DPDx

Subject: RE: Possible Leishmaniasis Patient

Ok thanks! We can do PCR from fixed tissue, though that's not optimal because the time in formalin reduces our chance of success. If we can get fresh tissue, that lets us attempt culture, PCR and microscopy as described below.

Hello Dr. Cohen,

If possible, please send an aliquot of the bone marrow (0.5mL or more would be ideal). We can prepare a stained smear for microscopic analysis, perform PCR for Leishmania detection and species identification, and attempt to culture the parasites if they are present. The bone marrow should be sent chilled but not frozen, for weekday delivery, to the address below. Please also complete and print the attached specimen submission form, and send it with the patient sample.

CDC STAT Lab

Hi Scott,

That's great to know you learn about C. gattii meningitis cases through your reportable disease system. I know Shawn Lockhart would be glad to receive any isolates (he may get them already?).

I'd be happy to set up a conference call on C. gattii… would tomorrow, Friday, or the week of the 24th work for you? I'm sure you're busy with COVID work these days. Please let us know if any particular dates/times work well for you.

Danielle, to answer your question, our information on these cases is so anecdotal at this point, but Pete Pappas at UAB says he sees quite a bit of pulmonary disease from the southern part of the state. Hard to know at this point.

Thanks,
Brendan

Cc: Stanek, Danielle (CDC flhealth.gov) <Danielle.Stanek@flhealth.gov>; Tomson, Kelly F <Kelly.Tomson@flhealth.gov>; Rowlinson, Marie-Claire <Marie-Claire.Rowlinson@flhealth.gov>
Subject: RE: Potential Donor Derived Infection Investigation

Thank you!
Please proceed as is routine for your BOOTS investigation and keep us in the loop.
As for *C. gattii* in FL, we primarily detect cases through our mycotic and bacterial meningitis reportable disease category. Therefore we are missing the other clinical manifestations, which are likely more common. The numbers of reported *C. gattii* meningitis are small, single digits per year, but we too have detected a small increase over the past 5 years or so. We do have all of our available *C. gattii* isolates send to your lab for reference.
Perhaps we should have a discussion about how best we could contribute to understanding this potentially emerging fungal disease in Florida.

Sincerely,

Scott Pritchard, MPH

Subject: RE: Potential Donor Derived Infection Investigation

Thanks Scott.

I wanted to mention a few quick follow-up items to David's email.

You all might know already, but our experience varies by state, so I thought I'd say that CDC's Blood, Organ, and Other Tissue Safety (BOOTS) office asks us to investigate potential donor-derived investigations caused by fungi under an agreement with the United Network for Organ Sharing. They ask us to contact transplant centers directly, which is not something we'd do for any other type of investigation. If you all would prefer we proceed differently, please let us know.

I also wanted to mention that we've been hearing from ID docs in the South that they seem to be seeing a recent increase in *Cryptococcus gattii* infections, including in people without severe immunocompromise. Most Cryptococcus infections in the South are typically caused by *C. neoformans*, although *C. gattii* is known to be endemic at low levels. We're lacking hard data on the subject, but their impressions are that most recent cases have occurred in people from the coastal plain, specifically south Alabama, south Georgia, and Florida. We're not sure why that would be, but this fungus lives in the environment, so there could be something new going on. For example, a specific strain of C. gattii emerged in the Pacific Northwest about 10-20 years ago. I know this disease isn't reportable in your state but I thought I'd give you a heads up in case you hear of anything. We'll certainly do the same.

Please don't hesitate to reach out if we can provide further info.

Best,
Brendan

Hi Dr. Blackmore,

I hope you are well.

I wanted to get in touch with you with a follow-up of this case. We will be requesting the hospital that took care of the deceased recipient to send us a sample of the cultured isolate of the cryptococcus species. Different states have different regulations for how samples such as this can be sent to the CDC, and I wanted to touch base with you before I ask the hospital to send the sample. Would it be okay for the hospital to send the sample to CDC directly, or would it be better for the sample to be routed through the FL state laboratory?

Thank you.

Hi Scott,

That's great to know you learn about C. gattii meningitis cases through your reportable disease system. I know Shawn Lockhart would be glad to receive any isolates (he may get them already?).

I'd be happy to set up a conference call on C. gattii… would tomorrow, Friday, or the week of the 24th work for you? I'm sure you're busy with COVID work these days. Please let us know if any particular dates/times work well for you.

Danielle, to answer your question, our information on these cases is so anecdotal at this point, but Pete Pappas at UAB says he sees quite a bit of pulmonary disease from the southern part of the state. Hard to know at this point.

Thanks,
Brendan

Subject: RE: Potential Donor Derived Infection Investigation
Date: Friday, February 14, 2020 7:53:26 AM
Attachments: form-50-34.pdf

Hi Marie-Claire,

Thanks again for all your help with this potential DDI investigation! As we discussed, here are the instructions for sending the sample to CDC once you receive the sample from the hospital.

--Please complete one 50.34 form (attached), as completely as possible, and include in the shipment. We use this form's barcode to accession isolates into our LIMS system.

--Under Lab examination Requested, please fill in:
Test order code: CDC-10179
Suspected agent: Cryptococcus Gattii
At CDC, bring to the attention of: Elizabeth Berkow

--Please mention MLST and WGS in the comments

--As for the actual isolate, we require 2 identifiers on the isolate. These can be things like patient information (DOB, patient last name), medical record number, or a unique number that you've created to distinguish between isolates. These 2 identifiers must also be present on the 50.34 form. Failure to meet our 2 identifier requirement may result in testing delays or rejection of submission.

--Shipments should be addressed to the following:
Centers for Disease Control and Prevention
1600 Clifton Road
DASH Unit 37
Attn: ELIZABETH BERKOW -- MDB Fungal Diseases Laboratory
Atlanta, GA 30329

Again, thanks so much for your help and please feel free to reach out to me with any questions (650 669 7292).

David

Subject: RE: Potential Donor Derived Infection Investigation

Thanks Scott.

I wanted to mention a few quick follow-up items to David's email.

You all might know already, but our experience varies by state, so I thought I'd say that CDC's Blood, Organ, and Other Tissue Safety (BOOTS) office asks us to investigate potential donor-derived investigations caused by fungi under an agreement with the United Network for Organ Sharing. They ask us to contact transplant centers directly, which is not something we'd do for any other type of investigation. If you all would prefer we proceed differently, please let us know.

I also wanted to mention that we've been hearing from ID docs in the South that they seem to be seeing a recent increase in *Cryptococcus gattii* infections, including in people without severe immunocompromise. Most Cryptococcus infections in the South are typically caused by *C. neoformans*, although *C. gattii* is known to be endemic at low levels. We're lacking hard data on the subject, but their impressions are that most recent cases have occurred in people from the coastal plain, specifically south Alabama, south Georgia, and Florida. We're not sure why that would be, but this fungus lives in the environment, so there could be something new going on. For example, a specific strain of C. gattii emerged in the Pacific Northwest about 10-20 years ago. I know this disease isn't reportable in your state but I thought I'd give you a heads up in case you hear of anything. We'll certainly do the same.

Please don't hesitate to reach out if we can provide further info.

Best,
Brendan

Hi David, Our process is to submit the isolate the our Bureau of Public Health Laboratories to be forwarded to CDC. Our Jacksonville location has experience receiving *C. gattii* isolates to CDCs mycotics lab.
The submitter will need to complete our lab form. http://www.floridahealth.gov/programs-and-services/public-health-laboratories/forms-publications/_documents/DH1847--rev-5-13.pdf

The submitter can reach out to Kelly Tomson or Marie-Claire Rowlinson at 904-791-1500 for more information.

Sincerely,

Scott Pritchard, MPH

Hi Dr. Blackmore,

I hope you are well.

I wanted to get in touch with you with a follow-up of this case. We will be requesting the hospital that took care of the deceased recipient to send us a sample of the cultured isolate of the cryptococcus species. Different states have different regulations for how samples such as this can be sent to the CDC, and I wanted to touch base with you before I ask the hospital to send the sample. Would it be okay for the hospital to send the sample to CDC directly, or would it be better for the sample to be routed through the FL state laboratory?

Thank you.

Hello Dr. Blackmore,

This is David Oh from CDC Mycotics Branch. I wanted to send you a brief email to let you know that we were made aware of a kidney transplant recipient in Florida who suddenly expired about 3 months post-transplant, with Cryptococcus Gattii identified. I wanted to make sure to keep you in the loop. I do not know much about this case yet, but we work with DTAC and will help investigate this case and put together a report. I will update you as I learn more.

Please do not hesitate to let me know if you have any questions.

Thank you.

Hi Kristen, Conne, and Erin,

Scott Pritchard at the DOH in Florida will be coordinating the press for their two presumptive positive COVID-19 cases. Can you please coordinate with Scott regarding press? They will likely wait until CDC confirmation, but want to plan ahead in case they need to go public earlier as contacts and HCWs will be notified before CDC confirmation. Can you connect with Scott about this?

Quick summaries are:
NCoVID: FL 2785091
63 year old male with unknown exposure who is in the ICU.

NCoVID: FL 2785125
29 year old female with travel to Europe who is at home in isolation.

Hi Alberto,

AMERICAN OVERSIGHT

Happy to chat anytime. Illinois announced a community case today and as I mentioned, we expect at least one other than you guys this week.

Thanks,
Kristen

Hi Scott,

Sorry if others have reached out, but wanted to make sure we followed up. CDC and other states have put out a lot of communication in the last few days about both travel and unknown exposure related COVID-19 cases that I'm happy to share.

I can also let you know that other states will be putting out communication this weekend about cases they've identified through testing.

Thanks,
Kristen

Subject: Press release planning for Florida

Hi Kristen, Conne, and Erin,

Scott Pritchard at the DOH in Florida will be coordinating the press for their two presumptive positive COVID-19 cases. Can you please coordinate with Scott regarding press? They will likely wait until CDC confirmation, but want to plan ahead in case they need to go public earlier as contacts and HCWs will be notified before CDC confirmation. Can you connect with Scott about this?

Quick summaries are:
NCoVID: FL 2785091
63 year old male with unknown exposure who is in the ICU.

NCoVID: FL 2785125
29 year old female with travel to Europe who is at home in isolation.

Best,
Katherine

When: Tuesday, January 28, 2020 11:00 AM-12:00 PM.
Where: Skype line 855-348-8390 / 2855050

FL DOH has funding in the following buckets:

1. ELC BP1 (19-20) PMS: $40,233.07
    a. ELC Yellow Fever PMS: _____
2. ELC Zika NCE PMS: $105,790.75
3. Hurricane PMS: $921,483.93 REDCap: $1,750,512

Let's focus the conversation on…

- Progress of spenddown
- Key challenges in spenddown
- At-risk activities or projects
- Priorities for any redirection

Blocked off an hour in case we need the full time.

To: Vuong, Nga (CDC/DDID/NCEZID/DVBD); Stanek, Danielle R; Wallace, Marla D.; Morrison, Andrea
Subject: RE: Request for reschedule : FL DOH - ELC/Hurricane
Date: Friday, February 7, 2020 4:45:23 PM

I am sorry but I am not sure any of these times will work great for me. I am traveling and have several extra CoV calls. The best time is probably Friday at 2. I could reschedule the meeting I have then. Marah is the lead for the hurricane vector funds so if we are to talk about that funding she should be on the line.

Subject: RE: Request for reschedule : FL DOH - ELC/Hurricane

Good morning,
Looks like the CDC team would like to have a brief call prior to vector week, and then follow it up with a brief 30 min 1:1 meeting during vector week later. Would you all be available during one of the following dates/times? I'll block it off for a full hour, but we may not use all of it.

- Monday, Feb 10 2 pm – 3 pm ET
- Tuesday, Feb 11 11 am – 1 pm ET*
- Tuesday, Feb 11 2 pm – 3 pm ET*
- Wednesday, Feb 12 4 pm – 5 pm ET
- Thursday, Feb 13 2 pm – 3 pm ET
- Friday, Feb 14 2 pm – 3 pm ET

*There is a standing monthly FL hurricane call on Feb 11th between 1 pm – 2 pm. We just want to go over the funding streams in depth with the FL DOH team without FDACS on the line and to give us adequate room to talk about funding strategy for FL DOH within the ELC for BP2.

Let us know what will work best for you all. Thanks!

Subject:	RE: Second Quarter PMS Report
Date:	Tuesday, February 25, 2020 4:00:36 PM

De'Lisa

Thanks we will review. We do have a few vacancies at this time in the Lab, Surveillance Systems, Epi Food & Water and Vector Borne. On added note I am preparing out budget request from Project E to help assist with our COVID-19 response. Ad indicated we are applying for the 874K that was approved but unfunded.

To clarify we just need a cover letter signed by Dr. Blackmore and the detailed budget. These documents will be emailed to the ELC Mailbox and a courtesy copy to you. Should the letter be addressed to you, Angelica or the Grants Management (OGS) Official.

Thanks

Marla

Subject: Second Quarter PMS Report
Importance: High

Good afternoon,

AMERICAN OVERSIGHT

I am sending you the attached PDF file, which is your jurisdiction's Payment Management System (PMS) Quarter 2 (Q2) Report. This Q2 report covers transactions reported from August 1 through October 31 (Q1), and expenditures from November 1 through January 31, 2020 (Q2). The intent of sharing these quarterly reports is to increase your awareness and provide you with resources to have informed conversations with your financial office.

A few things to point out when reviewing the attached PMS report:

1. PMS does track charges and spending but is only as accurate as the data being entered, as well as the frequency.

2. The attached report shows base funding as well as special funding (Ebola & Hurricane). If you received special funding, you will see suffixes in the document number.
    a. '-19EBLA' is the designation for Ebola funds.
    b. '-19HURR' is the designation for Hurricane funds.

3. Columns to focus on when reviewing:
    a. 'Percentage of Total Charged Against Account' column shows the percentage of funds charged against what was awarded.
    b. 'Percentage of Total Paid Out' column shows the percentage of funds paid out against what was awarded.
    c. Given that we are 50% into Budget Period 1, the charged &/or disbursement should be showing relative spending progress.
        i. On average, ELC awards are comprised of over 70% personnel costs so, if all positions are filled, then a good portion of Q2 funding should be charged &/or disbursed.
        ii. Things like contracts may not be invoiced until work is completed which could result in an artificially lower amount being expended.

Again, the intent of sharing this information is to help with the monitoring and managing of ELC funds.

Feel free to contact me with any questions or concerns.

Subject: RE: Sentinel Chicken Program Important Update

Date: Thursday, March 12, 2020 1:05:07 PM

Good afternoon Mosquito Control Arboviral Surveillance Coordinators and Directors,

After speaking with Dr. Stanek, the following is suggested for mosquito control programs currently and planning to start their sentinel chicken surveillance programs for the year based on the email from the FDOH Tampa Laboratory:

1. If you have already started your program, do not continue bleeding chickens, but maintain your flocks. Once the FDOH lab is able to start testing samples, they will contact you to start back up again. At that point, the chickens will be considered NEW birds and tested as such.
2. If you are only in the planning stages and preparing to launch the program in the upcoming months, hold off until you receive the go ahead from the lab or FDOH arbovirus coordinators to implement your program for the year.

Having been responsible for arboviral surveillance previously, I truly understand the significance of the data this testing provides and the impacts this can have on your program's proactive response.

AMERICAN OVERSIGHT

The FDOH laboratories understands the importance of sentinel sera testing for endemic mosquito borne viruses and this was not an easy decision for them to make. ***Please trust that they are doing everything possible to increase lab capacity and will be providing more guidance as they move forward. Your support of this decision is appreciated.***

Subject: Sentinel Chicken Program Important Update

Good Morning Sentinel Chicken Program Participants,

Our laboratory and epidemiology leadership have decided to suspend Sentinel Chicken Testing effective immediately. At this time, all personnel are need to help perform COVID-19 testing. For the next seven weeks or until further notice, we will not be performing HAI, ELISA, PRNT, and mosquito pool testing. Specimens received today or tomorrow will not be processed. Please send me an e-mail so that I know what you would like us to do with those specimens. We will notify you when we are able to resume testing.

Reports:

1. This Friday, March 13, 2020 the regular HAI report will be e-mailed.
2. Tuesday, March 17, 2020 the IgM ELISA report will be e-mailed.
3. Wednesday, March 18, 2020 the PRNT report (for February specimens) will be e-mailed.

Please understand that we are doing what is best to promote, protect, and improve the health of all people in the state. Please contact me, if you have any questions or concerns.

Thank you,

Maribel

Dr. Stephen White,
This is to notify you that IDPB received 1 block and 1 stained slide on A.F. (MRF20000021, UB20-97) on 02/12/20.
If you have any questions, refer to IDPB case **2020-0171** when contacting the case pathologist, **Dr. Eduard Matkovic**.

Eduard Matkovic, M.D. | Pathology Fellow | Tel 404-639-0549 | Fax 404-639-3043 | Eduard.Matkovic@cdc.hhs.gov |
Centers for Disease Control and Prevention | Infectious Diseases Pathology Branch (IDPB) | 1600 Clifton Rd NE, MS H18-SB | Atlanta, GA 30329-4027 |

Report Password: the password to open the password protected Pathology Report PDF (Preliminary/Final/Addendum) for this case will be provided in a separate email after you receive the Final Pathology Report Email and will be a unique 12 digit number. If additional specimens are subsequently received on the same case by IDPB, the password will remain unchanged. Animal case reports will not have password protection.

Specimen Receipt Notice: the official contact(s) at the Health Departments (if known) will be cc'd on IDPB's Specimen Receipt Notice emails, in addition to cc'ing other case specific relevant parties. The same official contact(s) at the Health Departments (if known) will continue to receive IDPB's Final Pathology Reports once finalized.

ePathology Service: IDPB now offers telepathology consultation through our ePathology service. This is not a substitute for diagnostic testing by our laboratory, but facilitates rapid initial evaluation of images or scanned slides prior to submission of case materials for testing. Please visit the ePathology website at http://www.cdc.gov/ncezid/dhcpp/idpb/epathology/index.html for more information.

From:	CDC IMS State Coordination Task Force (SCTF) Operations
To:	CDC IMS State Coordination Task Force (SCTF) Lead
Subject:	RE: State Health Official & State Epi Touchbase
Date:	Thursday, February 27, 2020 7:29:40 PM
Attachments:	DRAFT - Home Q or Iso Considerations v5.4_2.27.20.pdf

Good Evening Colleagues,

As a follow-up to today's state health official and state epidemiologist touchbase, please find the **DRAFT** "Home Containment for Persons Exposed to (Quarantine) or Infected with (Isolation) COVID-19 Coronavirus" guidance attached to this email. In addition, please be mindful this is a working document. As we learn more through science and the duration of the COVID-19 response, we anticipate adjusting the guidance accordingly.

Lastly, please take a moment to review the guidance and provide feedback to preparedness@cdc.gov. We are aware many jurisdictions are currently doing home containment planning. Subject matter experts at CDC wanted to provide draft guidance to assist you with your planning efforts. At this time, we are only sharing this guidance with the participants of state health official and state epidemiologist touchbase. Please let us know if you have any questions. Thank you.

3rd edition CIFOR Guidelines Final Draft.docx.pdf

Dear NASPHV Colleagues,

I would like to follow up on the status of your leadership review and approval of the 3rd edition *CIFOR Guidelines*. If your leadership has not yet completed their review, Craig and I welcome any comments or edits that you may have compiled up to this point. As CDC is very keen on obtaining our printing goal below, we ask that you provide these comments or edits as soon as possible and to keep us informed of your internal approval status.

Once more, I have provided you with a copy for review. Please let me know if you have any questions or need any assistance!

Sincerely,

India

Subject: Third Edition CIFOR Guidelines for Foodborne Outbreak Response Final Draft for Association Approval
Importance: High

Sent to Members of the CIFOR Council

Dear CIFOR Colleagues,

We are happy to announce the final draft of *The CIFOR Guidelines for Foodborne Outbreak Response* (3rd. Edition) is now available for CIFOR member association approvals!

As an update, the Guidelines were available on the CIFOR website for public commenting from November 6th through December 1st, 2019. In total, we received comments from five individuals. These comments primarily consisted of format changes, graphics requests and minor technical edits. Currently, we are working with a graphic design firm to produce a cover and modify the visual aspects of the Guidelines. The firm estimates that the design work will take 3-4 weeks to complete and our publishing timeline is as follows:

- We expect to have cover designs produced by **mid to late January** and will ask CIFOR Council members to vote. If you have any suggestions for design ideas, we welcome your input.
    - In **early January**, we will be reaching out to obtain high-resolution versions of your agency's graphics placed throughout the Guidelines.
- This design firm also has printing capabilities and estimates that printing will take approximately 3 weeks to complete. Depending on how quickly approvals are obtained, this has our final printing taking place in **late February.**

AMERICAN OVERSIGHT

- Our overall goal is to have books in hand at InFORM in **Early March** or shortly thereafter.

In the interim, we are asking that members provide their organizations with a copy of the draft (attached) to obtain appropriate leadership approvals prior to publication. Once obtained, please provide CSTE with a confirmation of approval. We are asking that approvals be obtained no later than **Friday, February 7th, 2020**. *Please note: This draft does not contain the foreword nor any appendices.*

To better assist with organizational approvals, we have listed below the most significant, high-level changes to the Guidelines:

- Content:
  - WGS and CIDT issues are discussed.
  - Integration of consumer complaint systems with pathogen-specific surveillance are discussed.
  - Importance of sub-cluster investigations and epidemiologic tracebacks are emphasized.
  - Importance of environmental assessments are emphasized.
  - Importance of after-action reviews are emphasized.
  - More coordinated inclusion of communications sections.
  - Elimination of CIFOR metrics, better referencing of existing program metrics.
- Format:
  - More functional, easier-to-use format.
  - Reorganization of chapters into foundational (1-3) and operational (4-8).
  - Streamlined organization of chapters and less redundancy between chapters.
  - Chapter summary points to highlight content of each chapter.

As always, please let us know if you have any questions. Thank you all for your hard work! Please have a safe and happy New Year!

Sincerely,
India

Hi Carina
Just coming back from leave. My understanding is that Tim is starting a few transition weeks with our FSB team getting oriented to the CEFO program and also supporting the corona virus state coordination task force. When I departed on Feb 10, He was still slated to start with you on March 1- but will hopefully have a good understanding of State issues and priorities related to recent corona virus events.

Subject: Time Sensitive Request – Verification for DCIPHER User Access for 2019-nCoV (Florida)

Good Morning,

In preparation for data entry regarding 2019-nCoV Movement and Monitoring for EpiX notification of travelers, we are providing you a list of people currently credentialed for DCIPHER in your jurisdiction.

Please review the names below and indicate in the column labeled **Grant access to 2019-nCoV** those people you want to access the 2019 nCoV database. Please respond as soon as possible, your information is necessary to grant access. We will use your response to **turn on access** for the designated staff.

If you would like to add additional designees to access 2019-nCoV data, we need to know **ASAP**. At present, staff who are not currently credentialed would have to go through the verification process, in order to be granted access to the system. **Provide the names and emails (in the table below) that you would like to add, and we will initiate the process with our IT team**. Correspondence will follow providing a timeline for the verification process for all new designees.

Staff that need to be added to DCIPHER		
First Name	**Last Name**	**Email Address**

More information will be shared on today's 1:00 p.m. EST call, to discuss "Data Reporting to CDC & Supply Conservation Strategies for PHEP Directors & State Epidemiologists".

For additional questions, please email the State Coordination Task Force (SCTF) regional desk at eocsctftfcoord@cdc.gov.

Thank you for expeditiously fulfilling this time-sensitive request.

Greetings PHEP Directors and State Epidemiologists,

We are following up with the request below. Once we have received your submission access will be granted for 2019-nCoV database. Please respond as soon as possible, your information is necessary to grant access. We will use your response to **turn on access** for the designated staff.

As a reminder, please consult with your state Epi and state Lab counterparts to ensure we provide access to all staff in your jurisdiction that might need to enter data for various aspects of the response.

If you have any questions please contact eocsctftfcoord@cdc.gov.

Thank you,

Subject: Time Sensitive Request: DCIPHER Rights for the two 2019-nCoV modules (Florida)

Greetings PHEP Directors and State Epidemiologists,

As we prepare to use DCIPHER for the 2019-nCoV response (e.g., data collection, transmission, and data sharing), we are seeking additional information about the type of access for the users you previously identified for the nCoV 2019 DCIPHER platform.

The "access group" options are described here:

1. **Access to DCIPHER to VIEW (only) data**. Role allows individual to see a view of different reports and analyses for their jurisdiction's information and any aggregate national report that may be created.
2. **Access to DCIPHER for DATA ENTRY and EDITING**. Role allows individual to directly enter information into DCIPHER, edit data, see all data associated with the jurisdiction, in addition to viewing/creating different reports and analyses.

In the attachment, please complete information in the last two columns (epi and monitoring), select either **view** or **data entry/editing** for each user.

Please return your response to eocsctftfcoord@cdc.gov as soon as possible so we can configure the platform to support your jurisdictions' access requests.

Warm Regards,

State Coordination Task Force (SCTF)

Subject: Updated IPC Guidance

Hi Scott,

The new **Interim Infection Prevention and Control Recommendations for Patients with Suspected or Confirmed Coronavirus Disease 2019 (COVID-19) in Healthcare Settings** has been released and can be found at this link: https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html

Biggest changes to highlight:

1. **PPE recommendations:**
    a. Based upon local and regional supplies, facemasks are an acceptable alternative when the supply chain of respirators cannot meet the demand. During this time, available respirators should be prioritized for procedures that are likely to generate respiratory aerosols, which would pose the highest exposure risk to healthcare personnel (HCP). When the supply chain has been restored, facilities should return to the use of respirators.
    b. Eye protection, gloves, and gowns continue to be recommended. If gown shortages are experienced, they should be for aerosol-generating procedures, care activities where splashes and sprays are anticipated, and high-contact patient care activities that provide opportunities for transfer of pathogens to the hands and clothing of HCP. Additional guidance is given regarding how to extend the use of respirators, facemasks, and eye protection as well on PPE shortages.
    c. Increased emphasis on the implementation of early source control measures such as putting a facemask on patients presenting with symptoms of respiratory infection.
2. **Rooming:**

AMERICAN OVERSIGHT

a. Airborne Infection Isolation Rooms (AIIRs) should be reserved for patients undergoing aerosol-generating procedures.
b. Patients with known or suspected COVID-19 can be cared for in a single-person room with the door closed.
c. Facilities could consider designating entire units with dedicated HCP to care for those with known or suspected HCP which will also help facilitate the extended use of respirators, facemasks, and eye protection.

3. **Additional consideration during times of wide spread community transmission:** Additional language regarding this has been added under the minimizing exposure and visitor sections.

Always happy to chat.

Best,
Elizabeth

Subject: Urgent Request for Information: Top State/Territorial Health Official (example, Secretary, Minister or Commissioner of Health)

Good Morning,

CDC Incident Management has asked the State Coordination Task Force for contact information of the **top health official** in each jurisdiction to expedite outreach in the event of an emergencies and to provide COVID-19 updates as expeditiously as possible. To accomplish this task, I am reaching out to the SHO/THO Assistant with a cc to the SHO/THO. This information will be used in tandem with the information we have for the SHO/THO maintained by ASTHO. You all are in a great position to assist us!

We know that in many cases the top health official is the SHO/THO. If that case is , just **reply** to this email that they are the **same**.

For those where there is a person who is more senior to the SHO/THO (as a reminder, we are looking for the most senior health official), please complete the following information:

State/Territory	Highest Health Official (I.e. Commissioner/ Minister/Secretary) Name (including degrees as appropriate)	Title	Phone Number (Please provide a **number or** numbers where we can reach out ***after hour*** should the need arise for COVID-19)	Email	Executive Assistant Name	Phone Number	Email
Republic of Palau	Emais Roberts, MD, FACS Ministry of Health Degrees: BS-Visual Science MD-Medicine Medical Training: General Surgery Residency Integrated Surgical Residency Trauma-Burns Resident Surgeon	Minister of Health	680 488-2552/3 680 775-4321	emais.roberts@palauhealth.org	Lalie Ikluk Omengkar D. Wally	680 775-5257 680 775-0000	lalie.ikluk@palauhealth.org omengkar.wally@palauhealth.org

Due to the nature of this **urgent request**, respond by **COB today**.

Thank you so much for your assistance.

If you have questions or concerns, please contact me.

Hi Carina
I hope you're doing well.

Just a friendly reminder if you could at your earliest convenience send the slides for your presentation for Vector Week's Tuesday afternoon's session on dengue to cjohnstone@alakaina.com (so she can load them ahead of time) with a copy to me along with a short bio, we'd much appreciate it.

See you next week.

Best regards,
Steve

AMERICAN OVERSIGHT

Hello Speakers for the Dengue Prevention and Control Session on Tuesday afternoon, February 25, 2020–

I want to thank you all again for agreeing to participate in this session. I think the audience will be excited about and learn a lot from what you all have to say!

Below is what we currently have you planning to talk about --- if your content is significantly different, please let us know as soon as possible!

1. *World Mosquito Program, Wolbachia replacement intervention trials (Steven Kern) ~20 min*

2. *Communities Organized to Prevent Arboviruses, Wolbachia Suppression Randomized Clinical Trial in Puerto Rico (Gabriela Paz-Bailey) ~20 min*

3. *Florida 2019 Dengue Outbreak Epidemiology and Response (Carina Blackmore) ~20 min*

Finally, if you all could send this information as well, it would be very helpful as we introduce each of you. A very short bio would also be helpful but not required – please don't make anything for this – if you have something already prepared, that is great!

a. Full name
b. Job title
c. Credentials
d. Name of organization

As noted below, if you can send your slides ahead of time to cjohnstone@alakaina.com, it would facilitate the logistics of loading of the presentations.

Looking forward to seeing you all in a couple of weeks.

Thanks again ~
Steve

VECTOR WEEK 2020: SPEAKER GUIDANCE

-
-

Thank you for participating in Vector Week 2020 as a conference speaker!

Your presentation is included in **Session #8, Emerging Issues in Mosquito Borne Diseases**. The session is scheduled for Wednesday February 26, 2020, 10:00-11:15am in Salon II & III at the University Hilton in Fort Collins, CO.

Presentation time: 20 minutes
Speakers in session: 3
Moderator(s) (cc'd here): Ann Powers, Steve Waterman

Please send your presentation slides to cjohnstone@alakaina.com by **February 14, 2020.** This will enable the conference staff to pre-load your presentation onto the computer in your session room. Additionally, your session moderator(s) will likely be contacting you with additional information. Please contact them for questions relating to this session.

If you haven't yet registered for Vector Week, please email cdcvectorweek@cdc.gov.

Thanks again for participating in Vector Week 2020 and we look forward to seeing you at the conference!

Sincerely,
The Vector Week Steering Committee

CAUTION: This email originated from outside of the Alakaina FOC organization. DO NOT click links or open attachments unless you recognize the sender.

I am giving two different presentations. I didn't mean to send the emergency preparedness slides to you… I sent the dengue presentation to Steve. I sent a different presentation (the emergency preparedness presentation) to Nga. Didn't understand you needed to upload these so first sent a pdf, then sent the ppt to her but had to divide into a and b. Together they should be the same file as the emergency preparedness pdf. Does that make more sense. You can remove the draft watermark.

Hi Carina
I hope you're doing well.

AMERICAN OVERSIGHT

Just a friendly reminder if you could at your earliest convenience send the slides for your presentation for Vector Week's Tuesday afternoon's session on dengue to cjohnstone@alakaina.com (so she can load them ahead of time) with a copy to me along with a short bio, we'd much appreciate it.

See you next week.

Best regards,
Steve

Hello Speakers for the Dengue Prevention and Control Session on Tuesday afternoon, February 25, 2020–

I want to thank you all again for agreeing to participate in this session. I think the audience will be excited about and learn a lot from what you all have to say!

Below is what we currently have you planning to talk about --- if your content is significantly different, please let us know as soon as possible!

1. *World Mosquito Program, Wolbachia replacement intervention trials (Steven Kern) ~20 min*

2. *Communities Organized to Prevent Arboviruses, Wolbachia Suppression Randomized Clinical Trial in Puerto Rico (Gabriela*

AMERICAN OVERSIGHT

Paz-Bailey) ~20 min

3. Florida 2019 Dengue Outbreak Epidemiology and Response (Carina Blackmore) ~20 min

Finally, if you all could send this information as well, it would be very helpful as we introduce each of you. A very short bio would also be helpful but not required – please don't make anything for this – if you have something already prepared, that is great!

a. Full name
b. Job title
c. Credentials
d. Name of organization

As noted below, if you can send your slides ahead of time to cjohnstone@alakaina.com, it would facilitate the logistics of loading of the presentations.

Looking forward to seeing you all in a couple of weeks.

Thanks again ~
Steve

VECTOR WEEK 2020: SPEAKER GUIDANCE

AMERICAN OVERSIGHT

-
-

Thank you for participating in Vector Week 2020 as a conference speaker!

Your presentation is included in **Session #8, Emerging Issues in Mosquito Borne Diseases**. The session is scheduled for Wednesday February 26, 2020, 10:00-11:15am in Salon II & III at the University Hilton in Fort Collins, CO.

Presentation time: 20 minutes
Speakers in session: 3
Moderator(s) (cc'd here): Ann Powers, Steve Waterman

Please send your presentation slides to cjohnstone@alakaina.com by **February 14, 2020.** This will enable the conference staff to pre-load your presentation onto the computer in your session room. Additionally, your session moderator(s) will likely be contacting you with additional information. Please contact them for questions relating to this session.

If you haven't yet registered for Vector Week, please email cdcvectorweek@cdc.gov.

Thanks again for participating in Vector Week 2020 and we look forward to seeing you at the conference!

Sincerely,
The Vector Week Steering Committee

Morning, team –
Thanks again for joining Angi and I on the speakers call yesterday. Here's the outline/flow of presentations for Session 16:

Name	Presentation
Erin Staples	Title: CDC-developed Arboviral Response Plans Focus: Overview of the CDC response plans – possible review of future plans in development too.
Carina Blackmore	Title: Emergency Mosquito Control in FL Focus: Structure of FL for emergency response to mosq disaster and outbreak.
Laura Robinson	Title: Hurricane and Flooding Mosquito Response in Texas Focus: Structure of TX for emergency response focused on hurricane and flooding events.
Kathy Dolan	Title: Resources and Tools to Enhance State Capacity for Vector-Borne Disease Response Focus: Overview of tools and resources for SHDs – Highlight of ASTHO developed tools incl. PH Confronts the Mosquito.
Jennifer Li	Title: Vector-Borne Diseases Preparedness for Locals Focus: Resources and tools to vector programs – being more prepared to detect VBD threats/respond to outbreaks. Recommendations to integrate overall prep structure. NACCHO toolbox.

Notes:

- Please send your presentation slides to cjohnstone@alakaina.com by **February 14, 2020.**
- Send your name, occupation title, organization to Molly, Angi, and I as soon as possible. We'll use this to assist Molly in introducing the speakers.
- Arrive 10 minutes before the presentation. Sit at the front of the room.

Please reach out to Molly, Angi, and I if you have any further questions. See you all in Fort Collins in 2 weeks!

Thanks,
Nga

VECTOR WEEK 2020: SPEAKER GUIDANCE

-
-

Thank you for participating in Vector Week 2020 as a conference speaker!

Your presentation is included in **Session #16, Emergency Response Plans**. The session is scheduled

AMERICAN OVERSIGHT

for Thursday February 27, 2020, 8:30-9:45am in Breakout Room A (Salon III, IV & VI) at the University Hilton in Fort Collins, CO.

Presentation time: 12 minutes
Speakers in session: 5
Moderator(s) (cc'd here): Angela Harris, Nga Vuong, Molly Baker

Please send your presentation slides to cjohnstone@alakaina.com by **February 14, 2020.** This will enable the conference staff to pre-load your presentation onto the computer in your session room. Additionally, your session moderator(s) will likely be contacting you with additional information. Please contact them for questions relating to this session.

If you haven't yet registered for Vector Week, please email cdcvectorweek@cdc.gov.

Thanks again for participating in Vector Week 2020 and we look forward to seeing you at the conference!

Sincerely,
The Vector Week Steering Committee

Subject:	RE: WHO/CDC ZIKV IPD Consortium Presentation
Date:	Friday, February 28, 2020 6:14:30 AM
Attachments:	ZIKV IPD-MA Protocol_BMJ Open.pdf LOA_ZIKV IPD Consortium_IPD-MA_UPDATED March 2019_CDC SPECIFIC.docx

Dear USZPIR partners,

Many thanks to everyone who was able to attend the presentation on the ZIKV IPD Consortium-led individual participant data meta-analysis (IPD-MA) of cohorts of pregnant women and their infants and children.

Please find the protocol for the ZIKV IPD-MA and the Letter of Agreement (LoA) for data sharing and authorship, which includes the amendments that were requested by US-CDC and DHHS.

Please let us know if there are any follow-up questions. We would also be happy to host a presentation with your specific team if that would be useful.

AMERICAN OVERSIGHT

Because the ZIKV IPD-MA will use de-identified data for the same objectives for which that data was collected, the IPD-MA was deemed exempt from ethical review by the WHO Ethics Review Committee. As mentioned on the call, USZPIR sites that wish to participate in the IPD-MA would need to review and sign the LoA for data sharing and authorship, but the de-identified data for that specific site would be uploaded to the WHO e-Archive system from the existing USZPIR dataset rather than the participating site.

Thank you again!

Lauren Maxwell

Subject: WHO/CDC ZIKV IPD Consortium Presentation
When: Wednesday, February 26, 2020 2:00 PM-2:30 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Skype Meeting

***Updated to include presentation slides (attached).**

Dear USZPIR partners,

We invite you to attend a presentation by Lauren Maxwell, Project Manager for the ZIKV IPD Consortium with WHO. Dr. Maxwell will be discussing the current and future efforts of the Individual Participant Data Meta-Analysis (IPD-MA) lead by WHO. This project involves plans to pool data on various cohorts to do a series of analyses related to Zika and pregnancy and could be of interest to jurisdictions who participated in the USZPIR at any time.

Subject: RE: Y2Q2 Submission Reminder, Request
Date: Friday, February 7, 2020 8:04:25 AM
Attachments: image001.png

Vector Week Update:

SIT: Florida has two programs implementing Sterile Insect Technique targeting the *Aedes aegypti* mosquito with assistance from the CDC grant funding. Despite the delay in receiving funding, both programs have made progress to start releasing sterile males in cities in both the northeast and southwest regions of the state.

Insecticide Resistance: In the past few years, insecticide resistance testing for disease vectoring mosquitoes has become an important part of Florida's mosquito control programs. Funding has allowed the Florida Medical Entomology Laboratory to not only continue testing Aedes aegypti and Aedes albopictus mosquitoes, but to expand testing to a Culex species mosquito. Since July 2019, mosquito control programs have been submitted eggs and testing for both pyrethroid and organophosphate mosquito adulticides.

I am working on the spreadsheet and hope to have it in by COB. I have been in training this week and several programs have been slow in providing requested info.

Thanks!

Marah

Hi Marah,

Just a note to check on your Y2Q2 submission and success story highlight. Do you anticipate sending to us by tomorrow?

I am going to be out of the office Feb. 10-19, so I just wanted to see where things are and finalize what I can before being out.

Thanks!
Danielle

Hey Marah,

Great to hear that! Feel free to send separate ones and we'll try to fit them both in.

Thank you! Let me know if you need anything from me!

Good afternoon!

I am working to get the information assembled. I am hoping to have everything together by the end of the week, but some of my programs are slow in sending me the requested information.

As for highlights, I will try to send you a quick blurb on the SIT and possibly mosquito resistance testing. Would these be separate or should they be in the same blurb? (We finally have some forward action on our Novel MC project!)

Subject: Y2Q2 Submission Reminder, Request

Hi Marah & Carina!

This is a friendly reminder to submit your completed Y2Q2 quarterly performance measure data collection tool by Friday January 31, 2020. If you need additional time, please submit no later than Friday February 7, 2020. Please email your completed Excel template as well as any relevant attachments to me and cc KCZ2@cdc.gov and Jeff Borchert gqx1@cdc.gov when submitting.

In addition, ICF will be developing a poster for Vector Week highlighting the accomplishments of the Hurricane Supplemental Funding thus far. We will be presenting data at the aggregate level with the exception of success stories that we would like to highlight from each state/territory. If there is a specific accomplishment you would like to highlight, we are asking that you develop a 3-4 sentence blurb summarizing the accomplishment along with the specific activity in your workplan to which it aligns. If you are unable to develop a blurb, we can pull from your progress submissions and develop a summary

AMERICAN OVERSIGHT

and share with you for approval. Feel free to provide this information when sending in your Y2Q2 data submission. If you would like us to develop a summary for you, please let us know by COB this Friday January 31, 2020.

If you have any questions or need any assistance completing your data collection tool, please don't hesitate to contact me.

Thank you,
Danielle

Hi Michelle –

Apologies for the delay. Here is the information on the 6 guests and 2 crew members who are experiencing mild flu-like symptoms and will be traveling via air ambulance to Miami:

Mrs Meredith Bess Amon (GUEST)
1700 Southwest Broadway Drive, Portland, Oregon, 97201 (wheelchair)

Mr. Harvey Norman Levitt (GUESTS)
Mrs. Mara Ellen Levitt
58 Sheridan Drive #22, Atlanta, Georgia 30305

Mr. Bruce Vincent Rodgers (GUESTS)
Mrs. Jeanne Alice Farley Rodgers
4356 2nd Street, Pleasanton, California, 904566

Mrs. Patricia Petrich (GUEST)
33 Shady Bend, Fort Myers, Florida

Ms. Amanda Charland (CREW):
1510 Pine Street, Apartment 3r, Philadelphia, Pennsylvania, USA 19102

Mr. Daniel Leflore (CREW):
1937 Hauser Boulevard, Los Angeles, California, 90016

AMERICAN OVERSIGHT

EXTERNAL EMAIL CAUTION: Use caution opening attachments or clicking links.

Dear Eleni,
2 questions and 2 points:

Among the 8 persons who will come on air ambulance,

1. Are any moderately or severe ill, or are they all with mild influenza-like illness?
2. What is their final destination/state of residence?

We are working on specific guidance for you – coming after we clear some items with Florida Health authorities, including Yesenia.

A couple of things for your awareness:

1. We strongly advise that the charter flights have clinicians (doctor/nurse) on board for safe travel and to assist with the arrival process in Miami in case anyone is ill.
2. We request that you distribute this infographic to the American passengers who will be traveling by charter (attached).

Best,
Michelle

Good morning, Rachel –

Is CDC able to provide the list of recommended quarantine locations in Miami?

Thanks,

Eleni

Good Morning, Doug –

I will provide an update on Silver Shadow later this morning but, as of late last night, she was prepared to debark guests for charter flights home later today. I will provide an updated timeline after our internal calls this morning.

Thanks,

AMERICAN OVERSIGHT

All - good morning. I have broken the Brazil and Chile ships into separate threads, for ease of tracking.

When able, if someone could provide a short status update on the Silver Shadow and any pending asks (for USG or Brazil) that would be very helpful, thanks. Doug

Hello Abdias –

I had reached out earlier today to your colleague, Chris Ashe. As mentioned in my earlier email, Azamara Pursuit has decided to abandon its efforts to dock and debark in South America and is instead en route to Miami.

Similarly, Celebrity Eclipse continues to have issues docking in Chile and is now considering a 10+ day trip to San Diego. If that is the course chosen, can you please provide guidance as to visa issues that will arise with the South American and Mexican guests onboard? I will send you a manifest by nationality shortly.

Thanks,

Eleni

Subject: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

Sorry - now with Eleni from RC. Again, due-outs are:

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make

AMERICAN OVERSIGHT

determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

Hi Dr. Rosenfarb –

In light of the guidance below and my earlier discussions with ConGen in Brazil, I understand that the US Government does not anticipate conducting any screening of our guests upon their arrival in the US and that we would need to comply with State of Florida screening requirements.

AMERICAN OVERSIGHT

I am adding to this email Dr. Yesenia Villalta, Administrator of the Department of Health in Florida, who advises us that CBP is responsible for conducting the necessary screenings of our guests upon arrival at MIA. Rather than try to negotiate these details, I thought it would be helpful to link the Federal group up with Dr. Yesenia to resolve this matter.

Thanks,

Eleni

Subject: [EXTERNAL] CDC guidance for Silver Shadow

Leah,
Thanks for speaking just now. To reiterate CDC's recommendation:

- The cruise line charter flight should transport the AMCITs to one of the designated funneling airports in the US (Miami), where they would disembark away from the main passenger terminal and be transferred to onward charter flights (also arranged by the cruise line) to their home of record. (Our info is that the passengers reside in 22 different states)
- Health screening of passengers would be done by the cruise line company prior to boarding in Recife, with no additional screening performed at the funneling airport (unless the individual

AMERICAN OVERSIGHT

has become obviously ill on the initial flight).

- 14 day home monitoring at the passenger's final destination is the recommended guidance.
- Individual state public health authorities at the final destinations should be contacted by the cruise line in advance of arrival at each of the final destinations in the event monitored quarantine is necessary.

From our side, our ConGen in Recife has already explained to the company what they need to do to arrange the charter (including their responsibility to clear with FL authorities—company has already told us that they are working on it with FL). The CBP attache at post is already tracking the plan for charter (and has alerted Miami airport as heads up).

Please let me know if the final CDC guidance differs from anything stated above.

Regards,
Dr. Rosenfarb

Hi Dr. Rosenfarb –

In light of the guidance below and my earlier discussions with ConGen in Brazil, I understand that the US Government does not anticipate conducting any screening of our guests upon their arrival in the US and that we would need to comply with State of Florida screening requirements.

I am adding to this email Dr. Yesenia Villalta, Administrator of the Department of Health in Florida, who advises us that CBP is responsible for conducting the necessary screenings of our guests upon arrival at MIA. Rather than try to negotiate these details, I thought it would be helpful to link the Federal group up with Dr. Yesenia to resolve this matter.

Thanks,

Eleni

AMERICAN OVERSIGHT

Daucher, Kevin G <DaucherKG@state.gov>; Chung, Julie J <ChungJJ@state.gov>; CGRCU-Internal <CGRCU-Internal@state.gov>
Subject: [EXTERNAL] CDC guidance for Silver Shadow

Leah,
Thanks for speaking just now. To reiterate CDC's recommendation:

- The cruise line charter flight should transport the AMCITs to one of the designated funneling airports in the US (Miami), where they would disembark away from the main passenger terminal and be transferred to onward charter flights (also arranged by the cruise line) to their home of record. (Our info is that the passengers reside in 22 different states)
- Health screening of passengers would be done by the cruise line company prior to boarding in Recife, with no additional screening performed at the funneling airport (unless the individual has become obviously ill on the initial flight).
- 14 day home monitoring at the passenger's final destination is the recommended guidance.
- Individual state public health authorities at the final destinations should be contacted by the cruise line in advance of arrival at each of the final destinations in the event monitored quarantine is necessary.

From our side, our ConGen in Recife has already explained to the company what they need to do to arrange the charter (including their responsibility to clear with FL authorities—company has already told us that they are working on it with FL). The CBP attache at post is already tracking the plan for charter (and has alerted Miami airport as heads up).

Please let me know if the final CDC guidance differs from anything stated above.

Regards,
Dr. Rosenfarb

Subject: [EXTERNAL] CDC guidance for Silver Shadow

Leah,
Thanks for speaking just now. To reiterate CDC's recommendation:

- The cruise line charter flight should transport the AMCITs to one of the designated funneling airports in the US (Miami), where they would disembark away from the main passenger terminal and be transferred to onward charter flights (also arranged by the cruise line) to their home of record. (Our info is that the passengers reside in 22 different states)
- Health screening of passengers would be done by the cruise line company prior to boarding in Recife, with no additional screening performed at the funneling airport (unless the individual has become obviously ill on the initial flight).
- 14 day home monitoring at the passenger's final destination is the recommended guidance.
- Individual state public health authorities at the final destinations should be contacted by the cruise line in advance of arrival at each of the final destinations in the event monitored quarantine is necessary.

From our side, our ConGen in Recife has already explained to the company what they need to do to arrange the charter (including their responsibility to clear with FL authorities—company has already told us that they are working on it with FL). The CBP attache at post is already tracking the plan for charter (and has alerted Miami airport as heads up).

Please let me know if the final CDC guidance differs from anything stated above.

Regards,
Dr. Rosenfarb

Hi Dr. Rosenfarb –

In light of the guidance below and my earlier discussions with ConGen in Brazil, I understand that the US Government does not anticipate conducting any screening of our guests upon their arrival in the US and that we would need to comply with State of Florida screening requirements.

I am adding to this email Dr. Yesenia Villalta, Administrator of the Department of Health in Florida, who advises us that CBP is responsible for conducting the necessary screenings of our guests upon arrival at MIA. Rather than try to negotiate these details, I thought it would be helpful to link the Federal group up with Dr. Yesenia to resolve this matter.

Thanks,

Eleni

Subject:	RE: [EXTERNAL] FW: MOA for CST testing lab (UNCLASSIFIED)
Date:	Wednesday, March 25, 2020 5:42:26 PM

I'll have someone look at it.

AHCA certified CLIA, so to the extent there are certification requirements, then we would need to be at least part of that process. Not sure if that warrants being part of the agreement though.

Subject: [External] FW: [EXTERNAL] FW: MOA for CST testing lab (UNCLASSIFIED)

Louise & Stefan,
Attached is the FLNG MOA for the testing machine between DOH and FLNG. Col. Bradford's team drafted it. Are these the right state parties to the MOA? The Colonel said the lab comes with some NG personnel, but they are not currently CLIA certified. Also, supplies and wrap-around services will need to be procured. Do you have any edits? If you have any questions, please let me know.

All,
Some logistics items to be addressed/questions to be answered about the lab, but don't necessarily need to be addressed in the MOA. These are logs/finc/management questions but worth noting and sharing internally.

1. Staffing the lab
    a. How many lab techs are needed to operate the lab at full capacity.
    b. The Colonel says the lab can test 500 samples per day, but is that in an 8, 12, or 24 hour period?
    c. Currently the NG personnel are not CLIA certified; so lab techs will need to be procured – who pays for the lab techs (DOH, AHCA, DEM)
2. Testing materials
    a. What materials are included with the lab (what not included)
    b. What materials are needed to operate the lab at full capacity
    c. Procuring those material that help the lab operate – who procures/pays for these material
3. Wrap-around services
    a. What services are needed (ie, 24-hr security, food for staff, maintenance of lab, etc.)
    b. Who pays for the wrap-around services (DOH, AHCA, DEM)?
4. Timing – It will take at least a week to get the lab.
5. Location – where to stage the lab – that's a logs/mgt decision

Erik

Attached is the draft MOA we discussed. Please let me know if you have any suggestions. I contacted LTC Eastman and asked what we would need and what we may receive to run this machine. The National Guard Bureau is still working those details as far as what PPE, pipets, kits, etc. may come with the machine. He will get back with me. NGB is sending 2 to NY, so we will have a good idea of what to expect based on what they receive. He did say this would not get to us for about a week even if we do get one.

AMERICAN OVERSIGHT

Hi Eli,
I have reached out to the ship physician to confirm all the information you sent me, discussed this case with our medical officer, and provided a situational update to Florida Department of Health (FDOH).

It looks like this ship has 3 passengers onboard who have tested positive for Influenza A and do not have known exposure to COVID-19 cases. There is no ILI outbreak onboard. I will follow up with the ship to instruct that these three passengers wear surgical masks while disembarking.

Given the information we have now, we do not have any additional concerns or public health recommendations regarding this vessel. Please let us know if you have any other questions or concerns.

Thank you and all the best,
Emily

Good news here for the MS Marina

Here are the next two ship that I just got info in (good timing here)

Costa Magica and Costa Favolosa:

- The Costa Magica is currently close to the Martinique with 930 crew members, 50 of which may have symptoms of Covid-19 (one crew member have been brought inland by helicopter to get urgent care).

- The Costa Favolosa is currently close to Guadeloupe with 1030 crew members, among which 50 may also present symptoms of Covid-19

Perhaps USCG can track these vessels? I have no idea where home port is but in the thread of email sent me they are talking Miami as a landing place.
Sorry for the good news. ☺

Regards,
Jeanne

Subject: [EXTERNAL] MS MARINA - CDC/FDOH concurrence that this is not a COVID-19 concern

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Kevin and Ashley:

Please see below the cut line for CDC review and recommendation.

Additionally, Nicole Kimbrel in ESF-8, advised verbally that FDOH concurs with CDC's interpretation/recommendation.

Unless requested, I will advise USCG that there is no need to coordinate a teleconference concerning the MS MARINA. Should the port wish to discuss, I will let you know.

Please let me know if you need further.

v/r,

CDR Fitzgerald
D7 LNO to the FL EOC

AMERICAN OVERSIGHT

Hi Eli,
I have reached out to the ship physician to confirm all the information you sent me, discussed this case with our medical officer, and provided a situational update to Florida Department of Health (FDOH).

It looks like this ship has 3 passengers onboard who have tested positive for Influenza A and do not have known exposure to COVID-19 cases. There is no ILI outbreak onboard. I will follow up with the ship to instruct that these three passengers wear surgical masks while disembarking.

Given the information we have now, we do not have any additional concerns or public health recommendations regarding this vessel. Please let us know if you have any other questions or concerns.

Thank you and all the best,
Emily

Subject: MS Marina (Oceania)

Hi Joe – are you tracking the MS Marina (Oceania)? I'm tracking 653 Amcits on board, COVID(+) cases on ship, headed to Miami but no ports there open. This is going to be a problem soon. We're getting inquiries from the Australians and Andorrans. This is the latest I have:

18MAR: Indications that an Oceania cruise ship will be arriving at Port of Miami sometime next week with various COVID-19 positives on it. Consular Affairs from the Australian Embassy contacted to say they had been notified overnight that the MS Marina (Oceania) is returning to Miami from South America via the Panama Canal after it was denied docking by several countries. The latest advice the Embassy has is that it is passing through the Canal could take 5 or 6 days. Australian Embassy in Mexico and Honorary Consul in Panama are trying to assist at least 49 Australians on board - some of whom are starting to run short of medications etc. - but are having difficulty contacting the crew and Oceania's agents in Panama. CONS provided them with the contact for Norwegian cruise lines which is a parent company of Oceania. OFM indicates Port of Miami is not aware of the ship coming to Miami and questioned where it would even dock as all available ports are occupied. OFM in touch with Norwegian.

Under Florida law, correspondence with the Florida Division of Emergency Management, which is neither confidential nor exempt pursuant to Florida Statutes Chapter 119, is a public record made available upon request.

Subject: MS Marina (Oceania)

Hi Joe – are you tracking the MS Marina (Oceania)? I'm tracking 653 Amcits on board, COVID(+) cases on ship, headed to Miami but no ports there open. This is going to be a problem soon. We're getting inquiries from the Australians and Andorrans. This is the latest I have:

18MAR: Indications that an Oceania cruise ship will be arriving at Port of Miami sometime next week with various COVID-19 positives on it. Consular Affairs from the Australian Embassy contacted to say they had been notified overnight that the MS Marina (Oceania) is returning to Miami from South America via the Panama Canal after it was denied docking by several countries. The latest advice the Embassy has is that it is passing through the Canal could take 5 or 6 days. Australian Embassy in Mexico and Honorary Consul in Panama are trying to assist at least 49 Australians on board - some of whom are starting to run short of medications etc. - but are having difficulty contacting the crew and Oceania's agents in Panama. CONS provided them with the contact for Norwegian cruise lines which is a parent company of Oceania. OFM indicates Port of Miami is not aware of the ship coming to Miami and questioned where it would even dock as all available ports are occupied. OFM in touch with Norwegian.

Subject: RE: [EXTERNAL] RE: National Guard Civil Support Team Mobile COVID-19 testing lab
Date: Wednesday, March 25, 2020 3:38:18 PM

Major DeLeon,
Do you have an ETA on the MOU for the CST mobile testing lab? Do you need anything from legal?

Erik L. Sayler
Deputy General Counsel
Florida Division of Emergency Management
Direct: (850) 815-4154 | Mobile: (850) 694-6620 | Erik.Sayler@em.myflorida.com

Florida has a very broad public records law. Written communications to or from state officials regarding state business constitute public records. Public records are available to the public and media upon request, unless the information is subject to a specific statutory exemption. Therefore, any information that you send to this address, including your contact information, may be subject to public disclosure.

Erik,

Correct, AHCA certifies CLIA, so we would need to be part of the MOU. I sent the CMS 116 attachment to our field supervisor to begin approval and to make sure there are no hiccups with getting this expedited. They are working on it now.

Thanks,

From: Sayler, Erik <Erik.Sayler@em.myflorida.com>

Subject: [External] National Guard Civil Support Team Mobile COVID-19 testing lab

Louise and Stefan,

AMERICAN OVERSIGHT

Our national guard liaison officer Maj. DeLeon is working to help secure a mobile testing lab resource from the National Guard Bureau (NGB) from the Civil Support Team (CST). The Major says there are 10 such mobile labs in the NGB. To secure it, we need an MOU for the equipment (the Guard is drafting that) and the DOH will need to authorize the CST members to work under their Clinical Laboratory Improvement Amendments (CLIA) certification.

Kevin Guthrie asked me to help facilitate this. I believe this touches on both DOH and AHCA jurisdiction. The attached emails include background information and the CLIA application. I'll let you know when I receive the NGB MOU for the equipment.

Sincerely,

Erik L. Sayler
Deputy General Counsel
Florida Division of Emergency Management

Date:	Tuesday, March 17, 2020 2:16:49 PM
Attachments:	SOP for disembarking international cruise ships with passengers arriving in charter flights (ver 3_17_2020).docx

Here is interim guidance from CDC for these two ships/flights (also attached)

1. Pre-departure
    a. Send ship and flight manifests to CDC.
    b. Send information about possible COVID illness among any passengers (not just American Citizens and including reports of # of persons with confirmed or suspected COVID) to CDC
    c. Distribute general CDC COVID info-graphic and instructions for cruise ship passengers.
    d. In advance, cruise line should make arrangements for land-based management, including for persons with symptoms/illness (as described below) and communicate and clear those plans to appropriate local/state health authorities.
2. At disembarkation from boat and before boarding charter flight, screening questionnaire completed
    a. General screening questionnaire provided by CDC, or other questionnaire as per local/national authorities at port administered to passengers/crew disembarking
    b. Persons who are ill must be evaluated at local health facility – not allowed to board charter unless cleared by local clinician and deemed fit-to-fly.
3. Passengers without any symptoms can board charter flights.
4. During flight, have clinicians (physician and nurse) on board charter to assist/evaluate any passengers who become ill during travel and to assist at arrival in US
5. Upon arrival at airport in US
    a. CBP/CWMD will perform screening as if passengers were arriving from level 3 countries, as per their protocols.
    b. CDC Quarantine Station staff are available for illness response, as per protocol.
    c. Any ill persons are evaluated and referred for evaluation locally as per Quarantine Station protocol.
    d. Passengers who are not ill will be allowed to continue their travel on commercial flights.
6. After arrival
    a. CDC will provide EpiX notification to receiving states, if meet criteria from our protocol.
    b. Passengers should understand that all must self-quarantine and practice social distancing for 14 days.
7. For an air ambulance/medical evacuation flight, passengers should go to pre-determined clinical facility as arranged by cruise line/air ambulance company. This plan must be in place and cleared with local and state health authorities before departure of the charter flight.

AMERICAN OVERSIGHT

a. Persons who do not require hospitalization but are not fit-to-travel to home destination, should remain in hotel (as cleared with local/state health authorities) until fit-to travel.

    i. Alternative transportation arranges such as private vehicle or charter flights to home destination made be possible based on individual assessment.

    ii. Additional guidance is available at https://www.cdc.gov/coronavirus/2019-ncov/downloads/sick-with-2019-nCoV-fact-sheet.pdf

b. These persons must follow all CDC guidance for persons who have been on cruise ships in the last 14 days. They must stay home for 14 days from the time they disembark, practice social distancing, and monitor their health. Social distancing means staying out of crowded places, avoiding group gatherings, and maintaining distance (approximately 6 feet or 2 meters) from others when possible.

Sorry - now with Eleni from RC. Again, due-outs are:

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

AMERICAN OVERSIGHT

Thank you for joining the call today. Leah - I don't believe I have everyone from CDC who was on the call, including Rachel - please add if that's the case.

I've listed the do-outs that I'm tracking below, and this chain can serve as the new, smaller group of folks working on the Brazil/Chile RC ships.

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

Michelle –

Slight change of plans. Upon arrival at MIA, Royal Caribbean will now be arranging individual charter flights for the passengers who are cleared by CDC to return to their home cities/states.

Our team has asked that CDC provide something in writing tomorrow that we can provide to the charter companies indicating that the passenger(s) boarding the charter flights have been cleared to fly commercially. We do not want the charters to deny boarding to these passengers simply because they have arrived in MIA from a cruise ship.

Thanks,

Eleni

Dear Eleni,
Please clarify your request and the plan – which passengers are you referring to? The air ambulance passengers or the ones who are not ill and are coming in the larger charter?

As I wrote earlier, CDC will not be conducting any health screening. For the passengers who are not arriving by air ambulance, CBP/CWMD would screen the passengers based on their own protocol. CDC Quarantine Station staff will be available to respond to any illness events, as requested by CBP.

For the air ambulance, they need assessment – I understood that you have made arrangements with Dr. Barth Green/University of Miami, who is not affiliated with CDC. He/his team would make an assessment of those 6 individuals.

Michelle –

Slight change of plans. Upon arrival at MIA, Royal Caribbean will now be arranging individual charter flights for the passengers who are cleared by CDC to return to their home cities/states.

Our team has asked that CDC provide something in writing tomorrow that we can provide to the charter companies indicating that the passenger(s) boarding the charter flights have been cleared to

AMERICAN OVERSIGHT

fly commercially. We do not want the charters to deny boarding to these passengers simply because they have arrived in MIA from a cruise ship.

Thanks,

Eleni

At long last, we have confirmation of the first charter flight to Miami:

The American guests from Silver Explorer will be departing Puerto Montt to Miami confirmed to depart at 12AM local time arriving in MIA at 910AM. Tail is CCBGD.

More details to follow!

Sorry - now with Eleni from RC. Again, due-outs are:

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

Also – forgot to add that the Florida Surgeon General, Dr Scott Rivkees, who is now included on the emails, has asked CDC to pass on his request that passengers wear surgical masks, if available, on the charter flight, arriving in Miami.

Subject: RE: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

Here is interim guidance from CDC for these two ships/flights (also attached)

1. Pre-departure
    a. Send ship and flight manifests to CDC.
    b. Send information about possible COVID illness among any passengers (not just American Citizens and including reports of # of persons with confirmed or suspected COVID) to CDC
    c. Distribute general CDC COVID info-graphic and instructions for cruise ship passengers.
    d. In advance, cruise line should make arrangements for land-based management, including for persons with symptoms/illness (as described below) and communicate and clear those plans to appropriate local/state health authorities.
2. At disembarkation from boat and before boarding charter flight, screening questionnaire completed
    a. General screening questionnaire provided by CDC, or other questionnaire as per local/national authorities at port administered to passengers/crew disembarking
    b. Persons who are ill must be evaluated at local health facility – not allowed to board charter unless cleared by local clinician and deemed fit-to-fly.
3. Passengers without any symptoms can board charter flights.

AMERICAN OVERSIGHT

4. During flight, have clinicians (physician and nurse) on board charter to assist/evaluate any passengers who become ill during travel and to assist at arrival in US
5. Upon arrival at airport in US
    a. CBP/CWMD will perform screening as if passengers were arriving from level 3 countries, as per their protocols.
    b. CDC Quarantine Station staff are available for illness response, as per protocol.
    c. Any ill persons are evaluated and referred for evaluation locally as per Quarantine Station protocol.
    d. Passengers who are not ill will be allowed to continue their travel on commercial flights.
6. After arrival
    a. CDC will provide EpiX notification to receiving states, if meet criteria from our protocol.
    b. Passengers should understand that all must self-quarantine and practice social distancing for 14 days.
7. For an air ambulance/medical evacuation flight, passengers should go to pre-determined clinical facility as arranged by cruise line/air ambulance company. This plan must be in place and cleared with local and state health authorities before departure of the charter flight.
    a. Persons who do not require hospitalization but are not fit-to-travel to home destination, should remain in hotel (as cleared with local/state health authorities) until fit-to travel.
        i. Alternative transportation arranges such as private vehicle or charter flights to home destination made be possible based on individual assessment.
        ii. Additional guidance is available at https://www.cdc.gov/coronavirus/2019-ncov/downloads/sick-with-2019-nCoV-fact-sheet.pdf
    b. These persons must follow all CDC guidance for persons who have been on cruise ships in the last 14 days. They must stay home for 14 days from the time they disembark, practice social distancing, and monitor their health. Social distancing means staying out of crowded places, avoiding group gatherings, and maintaining distance (approximately 6 feet or 2 meters) from others when possible.

4. During flight, have clinicians (physician and nurse) on board charter to assist/evaluate any passengers who become ill during travel and to assist at arrival in US

5. Upon arrival at airport in US
   a. CBP/CWMD will perform screening as if passengers were arriving from level 3 countries, as per their protocols.

   b. CDC Quarantine Station staff are available for illness response, as per protocol.

   c. Any ill persons are evaluated and referred for evaluation locally as per Quarantine Station protocol.

   d. Passengers who are not ill will be allowed to continue their travel on commercial flights.

6. After arrival
   a. CDC will provide EpiX notification to receiving states, if meet criteria from our protocol.

   b. Passengers should understand that all must self-quarantine and practice social distancing for 14 days.

7. For an air ambulance/medical evacuation flight, passengers should go to pre-determined clinical facility as arranged by cruise line/air ambulance company. This plan must be in place and cleared with local and state health authorities before departure of the charter flight.
   a. Persons who do not require hospitalization but are not fit-to-travel to home destination, should remain in hotel (as cleared with local/state health authorities) until fit-to travel.

      i. Alternative transportation arranges such as private vehicle or charter flights to home destination made be possible based on individual assessment.

      ii. Additional guidance is available at https://www.cdc.gov/coronavirus/2019-ncov/downloads/sick-with-2019-nCoV-fact-sheet.pdf

   b. These persons must follow all CDC guidance for persons who have been on cruise ships in the last 14 days. They must stay home for 14 days from the time they disembark, practice social distancing, and monitor their health. Social distancing means staying out of crowded places, avoiding group gatherings, and maintaining distance (approximately 6 feet or 2 meters) from others when possible.

Thanks Michelle.

Can I share this with ANVISA, for their awareness?

Is there anything else you need from ANVISA at this point? Is RC in contact with them for the ground logistics?

Just making sure all the loops are closed.

Subject: RE: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

EXTERNAL EMAIL CAUTION: Use caution opening attachments or clicking links.

Here is interim guidance from CDC for these two ships/flights (also attached)

1. Pre-departure
    a. Send ship and flight manifests to CDC.
    b. Send information about possible COVID illness among any passengers (not just American Citizens and including reports of # of persons with confirmed or suspected COVID) to CDC
    c. Distribute general CDC COVID info-graphic and instructions for cruise ship passengers.
    d. In advance, cruise line should make arrangements for land-based management, including for persons with symptoms/illness (as described below) and communicate and clear those plans to appropriate local/state health authorities.
2. At disembarkation from boat and before boarding charter flight, screening questionnaire completed
    a. General screening questionnaire provided by CDC, or other questionnaire as per

AMERICAN OVERSIGHT

local/national authorities at port administered to passengers/crew disembarking

b. Persons who are ill must be evaluated at local health facility – not allowed to board charter unless cleared by local clinician and deemed fit-to-fly.

3. Passengers without any symptoms can board charter flights.
4. During flight, have clinicians (physician and nurse) on board charter to assist/evaluate any passengers who become ill during travel and to assist at arrival in US
5. Upon arrival at airport in US
   a. CBP/CWMD will perform screening as if passengers were arriving from level 3 countries, as per their protocols.
   b. CDC Quarantine Station staff are available for illness response, as per protocol.
   c. Any ill persons are evaluated and referred for evaluation locally as per Quarantine Station protocol.
   d. Passengers who are not ill will be allowed to continue their travel on commercial flights.
6. After arrival
   a. CDC will provide EpiX notification to receiving states, if meet criteria from our protocol.
   b. Passengers should understand that all must self-quarantine and practice social distancing for 14 days.
7. For an air ambulance/medical evacuation flight, passengers should go to pre-determined clinical facility as arranged by cruise line/air ambulance company. This plan must be in place and cleared with local and state health authorities before departure of the charter flight.
   a. Persons who do not require hospitalization but are not fit-to-travel to home destination, should remain in hotel (as cleared with local/state health authorities) until fit-to travel.
      i. Alternative transportation arranges such as private vehicle or charter flights to home destination made be possible based on individual assessment.
      ii. Additional guidance is available at https://www.cdc.gov/coronavirus/2019-ncov/downloads/sick-with-2019-nCoV-fact-sheet.pdf
   b. These persons must follow all CDC guidance for persons who have been on cruise ships in the last 14 days. They must stay home for 14 days from the time they disembark, practice social distancing, and monitor their health. Social distancing means staying out of crowded places, avoiding group gatherings, and maintaining distance (approximately 6 feet or 2 meters) from others when possible.

Thanks Michelle.

Can I share this with ANVISA, for their awareness?

Is there anything else you need from ANVISA at this point? Is RC in contact with them for the ground logistics?

Just making sure all the loops are closed.

Hi Michelle –

Thank you for the guidance … very helpful! I think we are prepared to be in full compliance with perhaps a few items remaining to be addressed. I will forward to our operations team to make sure we are good to go.

Thanks for your help!

Eleni

EXTERNAL EMAIL CAUTION: Use caution opening attachments or clicking links.

Here is interim guidance from CDC for these two ships/flights (also attached)

1. Pre-departure
    a. Send ship and flight manifests to CDC.
    b. Send information about possible COVID illness among any passengers (not just American Citizens and including reports of # of persons with confirmed or suspected COVID) to CDC
    c. Distribute general CDC COVID info-graphic and instructions for cruise ship passengers.
    d. In advance, cruise line should make arrangements for land-based management, including for persons with symptoms/illness (as described below) and communicate and clear those plans to appropriate local/state health authorities.
2. At disembarkation from boat and before boarding charter flight, screening questionnaire

AMERICAN OVERSIGHT

completed

a. General screening questionnaire provided by CDC, or other questionnaire as per local/national authorities at port administered to passengers/crew disembarking

b. Persons who are ill must be evaluated at local health facility – not allowed to board charter unless cleared by local clinician and deemed fit-to-fly.

3. Passengers without any symptoms can board charter flights.
4. During flight, have clinicians (physician and nurse) on board charter to assist/evaluate any passengers who become ill during travel and to assist at arrival in US
5. Upon arrival at airport in US
    a. CBP/CWMD will perform screening as if passengers were arriving from level 3 countries, as per their protocols.
    b. CDC Quarantine Station staff are available for illness response, as per protocol.
    c. Any ill persons are evaluated and referred for evaluation locally as per Quarantine Station protocol.
    d. Passengers who are not ill will be allowed to continue their travel on commercial flights.
6. After arrival
    a. CDC will provide EpiX notification to receiving states, if meet criteria from our protocol.
    b. Passengers should understand that all must self-quarantine and practice social distancing for 14 days.
7. For an air ambulance/medical evacuation flight, passengers should go to pre-determined clinical facility as arranged by cruise line/air ambulance company. This plan must be in place and cleared with local and state health authorities before departure of the charter flight.
    a. Persons who do not require hospitalization but are not fit-to-travel to home destination, should remain in hotel (as cleared with local/state health authorities) until fit-to travel.
        i. Alternative transportation arranges such as private vehicle or charter flights to home destination made be possible based on individual assessment.
        ii. Additional guidance is available at https://www.cdc.gov/coronavirus/2019-ncov/downloads/sick-with-2019-nCoV-fact-sheet.pdf
    b. These persons must follow all CDC guidance for persons who have been on cruise ships in the last 14 days. They must stay home for 14 days from the time they disembark, practice social distancing, and monitor their health. Social distancing means staying out of crowded places, avoiding group gatherings, and maintaining distance (approximately 6 feet or 2 meters) from others when possible.

Subject: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

Sorry - now with Eleni from RC. Again, due-outs are:

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

All -

Thank you for joining the call today. Leah - I don't believe I have everyone from CDC who was on the call, including Rachel - please add if that's the case.

I've listed the do-outs that I'm tracking below, and this chain can serve as the new, smaller group of folks working on the Brazil/Chile RC ships.

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

Hi Michelle –

Below please see an update on care for guests upon arrival at MIA.

Dr. Barth Green, the Global Coordinator for CDC, will accept all 45 US nationals from the Silver Explorer, providing that Bec Ware, R.N. can provide him details about these people. Minutes ago, I spoke with Bec, and she will provide Dr. Green with the information that he needs, including their marital status, their physical condition, where they are landing and what time they are to arrive at Miami International Airport. He will have a Medical team waiting to greet these folks, to screen them, and to triage them accordingly.

Until then, I will arrange for Dr. Green to receive 60 Quest Novel Coronavirus (2019-nCoV)/COVID-19 test kits from my office, so that he can make final determinations on those who are ill. Ms. Stephanie Buchler will follow Quest collection instructions and will ensure courier specimen pickup, if necessary.

Dr. Green will direct his Medical staff to triage the arrival of these patients to either Jackson Memorial Hospital or Hotel St. Michel in Coral Gables, depending on their physical condition.

Subject: Royal Caribbean Ships off Brazil/Chile

All -

Thank you for joining the call today. Leah - I don't believe I have everyone from CDC who was on the call, including Rachel - please add if that's the case.

I've listed the do-outs that I'm tracking below, and this chain can serve as the new, smaller group of folks working on the Brazil/Chile RC ships.

AMERICAN OVERSIGHT

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

At long last, we have confirmation of the first charter flight to Miami:

The American guests from Silver Explorer will be departing Puerto Montt to Miami confirmed to depart at 12AM local time arriving in MIA at 910AM. Tail is CCBGD.

More details to follow!

Hi Michelle –

Below please see an update on care for guests upon arrival at MIA.

Dr. Barth Green, the Global Coordinator for CDC, will accept all 45 US nationals from the Silver Explorer, providing that Bec Ware, R.N. can provide him details about these people. Minutes ago, I spoke with Bec, and she will provide Dr. Green with the information that he needs, including their marital status, their physical condition, where they are landing and what time they are to arrive at Miami International Airport. He will have a Medical team waiting to greet these folks, to screen them, and to triage them accordingly.

Until then, I will arrange for Dr. Green to receive 60 Quest Novel Coronavirus (2019-nCoV)/COVID-19 test kits from my office, so that he can make final determinations on those who are ill. Ms. Stephanie Buchler will follow Quest collection instructions and will ensure courier specimen pickup, if necessary.

AMERICAN OVERSIGHT

Dr. Green will direct his Medical staff to triage the arrival of these patients to either Jackson Memorial Hospital or Hotel St. Michel in Coral Gables, depending on their physical condition.

Subject: RE: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

EXTERNAL EMAIL CAUTION: Use caution opening attachments or clicking links.

Here is interim guidance from CDC for these two ships/flights (also attached)

1. Pre-departure
    a. Send ship and flight manifests to CDC.
    b. Send information about possible COVID illness among any passengers (not just American Citizens and including reports of # of persons with confirmed or suspected COVID) to CDC
    c. Distribute general CDC COVID info-graphic and instructions for cruise ship passengers.
    d. In advance, cruise line should make arrangements for land-based management, including for persons with symptoms/illness (as described below) and communicate and clear those plans to appropriate local/state health authorities.
2. At disembarkation from boat and before boarding charter flight, screening questionnaire completed
    a. General screening questionnaire provided by CDC, or other questionnaire as per local/national authorities at port administered to passengers/crew disembarking
    b. Persons who are ill must be evaluated at local health facility – not allowed to board charter unless cleared by local clinician and deemed fit-to-fly.
3. Passengers without any symptoms can board charter flights.
4. During flight, have clinicians (physician and nurse) on board charter to assist/evaluate

AMERICAN OVERSIGHT

any passengers who become ill during travel and to assist at arrival in US

5. Upon arrival at airport in US
    a. CBP/CWMD will perform screening as if passengers were arriving from level 3 countries, as per their protocols.
    b. CDC Quarantine Station staff are available for illness response, as per protocol.
    c. Any ill persons are evaluated and referred for evaluation locally as per Quarantine Station protocol.
    d. Passengers who are not ill will be allowed to continue their travel on commercial flights.
6. After arrival
    a. CDC will provide EpiX notification to receiving states, if meet criteria from our protocol.
    b. Passengers should understand that all must self-quarantine and practice social distancing for 14 days.
7. For an air ambulance/medical evacuation flight, passengers should go to pre-determined clinical facility as arranged by cruise line/air ambulance company. This plan must be in place and cleared with local and state health authorities before departure of the charter flight.
    a. Persons who do not require hospitalization but are not fit-to-travel to home destination, should remain in hotel (as cleared with local/state health authorities) until fit-to travel.
        i. Alternative transportation arranges such as private vehicle or charter flights to home destination made be possible based on individual assessment.
        ii. Additional guidance is available at https://www.cdc.gov/coronavirus/2019-ncov/downloads/sick-with-2019-nCoV-fact-sheet.pdf
    b. These persons must follow all CDC guidance for persons who have been on cruise ships in the last 14 days. They must stay home for 14 days from the time they disembark, practice social distancing, and monitor their health. Social distancing means staying out of crowded places, avoiding group gatherings, and maintaining distance (approximately 6 feet or 2 meters) from others when possible.

Subject: RE: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

AMERICAN OVERSIGHT

EXTERNAL EMAIL CAUTION: Use caution opening attachments or clicking links.

Here is interim guidance from CDC for these two ships/flights (also attached)

1. Pre-departure
    a. Send ship and flight manifests to CDC.
    b. Send information about possible COVID illness among any passengers (not just American Citizens and including reports of # of persons with confirmed or suspected COVID) to CDC
    c. Distribute general CDC COVID info-graphic and instructions for cruise ship passengers.
    d. In advance, cruise line should make arrangements for land-based management, including for persons with symptoms/illness (as described below) and communicate and clear those plans to appropriate local/state health authorities.
2. At disembarkation from boat and before boarding charter flight, screening questionnaire completed
    a. General screening questionnaire provided by CDC, or other questionnaire as per local/national authorities at port administered to passengers/crew disembarking
    b. Persons who are ill must be evaluated at local health facility – not allowed to board charter unless cleared by local clinician and deemed fit-to-fly.
3. Passengers without any symptoms can board charter flights.
4. During flight, have clinicians (physician and nurse) on board charter to assist/evaluate any passengers who become ill during travel and to assist at arrival in US
5. Upon arrival at airport in US
    a. CBP/CWMD will perform screening as if passengers were arriving from level 3 countries, as per their protocols.
    b. CDC Quarantine Station staff are available for illness response, as per protocol.
    c. Any ill persons are evaluated and referred for evaluation locally as per Quarantine Station protocol.
    d. Passengers who are not ill will be allowed to continue their travel on commercial flights.
6. After arrival
    a. CDC will provide EpiX notification to receiving states, if meet criteria from our protocol.
    b. Passengers should understand that all must self-quarantine and practice social distancing for 14 days.
7. For an air ambulance/medical evacuation flight, passengers should go to pre-determined clinical facility as arranged by cruise line/air ambulance company. This plan must be in place and cleared with local and state health authorities before departure of the charter flight.
    a. Persons who do not require hospitalization but are not fit-to-travel to home destination, should remain in hotel (as cleared with local/state health authorities) until fit-to travel.
        i. Alternative transportation arranges such as private vehicle or charter flights to home destination made be possible based on individual assessment.

AMERICAN OVERSIGHT

ii. Additional guidance is available at https://www.cdc.gov/coronavirus/2019-ncov/downloads/sick-with-2019-nCoV-fact-sheet.pdf

b. These persons must follow all CDC guidance for persons who have been on cruise ships in the last 14 days. They must stay home for 14 days from the time they disembark, practice social distancing, and monitor their health. Social distancing means staying out of crowded places, avoiding group gatherings, and maintaining distance (approximately 6 feet or 2 meters) from others when possible.

Sorry - now with Eleni from RC. Again, due-outs are:

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

Subject: communications test

Emerald Coast Healthcare Coalition is conducting our quarterly communications test which seems very timely with everything going on due to coronavirus - this test ensures that we maintain communication with our partners
Please respond to me only - do not copy all
Please send email answering YES that you received my communication for this test
Thank you

--

Ann Hill, Executive Director
Emerald Coast Healthcare Coalition
850-585-1679

Subject:	RE: [Non-DoD Source] Port Everglades Vessel Arrivals for March 20
Date:	Tuesday, March 24, 2020 12:06:37 PM

This is a developing situation. Here is what Holland America posted on their website yesteday.

ZAANDAM: This morning aboard Zaandam, 13 guests and 29 crew reported to the ship's medical center with influenza-like symptoms. Out of an abundance of caution, we have now asked all guests to remain in their staterooms until we have more information. There are 1,243 guests and 586 crew on board.

Zaandam is following the response protocols that have been developed in coordination with the U.S. Centers for Disease Control and Prevention (CDC). Since it is flu season, and COVID-19 testing is not available on board, it is difficult to determine the cause of these elevated cases at this time.

The safety and well-being of our guests and crew is one of our highest priorities. The ship has activated these precautionary measures out of an abundance of caution:

As is our standard practice, all ill persons have been isolated and their close contacts placed in quarantine.
Guests have been asked to remain in their staterooms and monitor their health. If they become symptomatic, they are asked to call the medical center for an evaluation and care from the ship's medical professionals (at no charge).
Effective today, meal service will be provided by room service until further notice. All public areas are closed.
The entire ship is operating at maximum sanitation levels, including rigorous cleaning and disinfecting of public and crew areas.
Crew who are not required for the safe operation of the ship are being quarantined. Those that are needed to maintain the ship's operation are being asked to self-isolate when not performing essential functions, practice social distancing, self-monitor and report any illness to the Medical Center.
Both internet and guest stateroom telephone services remain complimentary so that guests may stay in touch with their families.
Zaandam was sailing a South America voyage that departed Buenos Aires, Argentina, on March 7 and was originally scheduled to end in San Antonio, Chile, on March 21. However, due to global health concerns, Holland America Line made the decision to suspend its global cruise operations for 30 days and end its current cruises in progress as quickly as possible and return guests home. Despite previous confirmations that guests could disembark in Punta Arenas, Chile, for flights, we were not permitted to do so. No one has been off the ship since March 14 in Punta Arenas.

AMERICAN OVERSIGHT

Zaandam then sailed to Valparaiso, Chile, where it remained at anchor March 20-21 while taking on provisions and fuel, including regular medications for those that needed them. Zaandam departed Valparaiso on March 21 and is currently sailing north. Our intention is to proceed to Fort Lauderdale, Florida, for arrival on March 30, however we are still working on securing a reservation to transit the Panama Canal. Alternative options are also being developed.

Subject: [Non-DoD Source] Port Everglades Vessel Arrivals for March 20

As discussed briefly during Wednesday morning's Unified Command meeting, attached is the Port Everglades Harbormaster report of vessels currently in Port Everglades and those that have

AMERICAN OVERSIGHT

submitted berth applications to enter the port on March 20th. Would appreciate a review against any USCG, CDC, CBP, and FDOH data to verify that all of the ships currently in port or scheduled to arrive tomorrow have no open health issues.

Regards,

Glenn

Subject: **Extended**State Health Official & State Epi Touchbase

When: Thursday, March 19, 2020 4:30 PM-5:30 PM (UTC-05:00) Eastern Time (US & Canada).

Where: Building 21, 5th Fl. 5116 OR Bridgeline: 1(888)455-7719 Participant Passcode: 1232930

****Please note – During today's touchbase we will cover the following, via webinar (link provided below):**

AMERICAN OVERSIGHT

Crisis Standards of Care in Response to COVID-19: Background and tools - Satish Pillai
- Legal Considerations for Crisis Standards of Care- Gregory Sunshine
- Washington State Experience with Crisis Standards of Care to COVID-19 - Kathy Lofy

CDC's 2019 Novel Coronavirus (2019-nCoV) IM leadership team will host a recurring weekly call series, twice a week (Tuesday's and Thursday's), from 4:30 p.m. to 5:00 p.m., to provide a platform to discuss relevant response matters with state health officials and state epidemiologists. Please extend this invite to other core members of your team.

Bridgeline: 1(888)455-7719
Participant Passcode: 1232930

For Participants:
URL: https://www.mymeetings.com/nc/join/
Conference number: PWXW1022793
Audience passcode: 1232930

Participants can join the event directly at:
https://www.mymeetings.com/nc/join.php?i=PWXW1022793&p=1232930&t=c

AMERICAN OVERSIGHT

From: Oliver, Sara Elizabeth (CDC/DDID/NCIRD/DBD)
To: Blackmore, Carina (CDC flhealth.gov)
Cc: Schrodt, Caroline (CDC/DDID/NCEZID/DHCPP)
Subject: RE: cdc consult
Date: Wednesday, March 11, 2020 9:17:47 PM

Dr. Blackmore:

Caroline is not working tonight, but I'm happy to work with you and discuss any questions. I think our cruise ship team is likely the best group to involve with this. I can see if they are able to discuss tonight, but it might be tomorrow AM before we are able to pull everyone together. Would that be OK? I'm also happy to have a call with you to clarify the questions as well before we set up the larger conference call. Let me know what would be best-

Thanks-

Sara Oliver, MD, MSPH
LCDR, U.S. Public Health Service
Medical Director, CDC COVID Clinical Call Unit
email: yxo4@cdc.gov

Subject: Re: cdc consult

Hi Caroline. We would be interested in a consult to discuss the port situation and your recommendations to minimize exposure to employees and passengers. Are u still willing to set this up? Thanks Carina

Subject: RE: cdc consult

Dr. Blackmore:

I communicated to our morning team that there was follow up needed with you all.

AMERICAN OVERSIGHT

Separately, FL health leadership (FL Surgeon General I think?) reached out to Jay Butler here at CDC separately to discuss issues, involving our cruise ship task force. Chris Jones, the lead for our call unit, followed up and was told that local leadership was connected with staff at the Miami Quarantine station and that there were no additional questions.

Are there remaining issues you would like to discuss? We can have a call tonight or set up additional calls in the AM. Apologize for the miscommunication: we were told all was taken care of. Happy to help in any way we can!

Sara

Subject: communications test

Emerald Coast Healthcare Coalition is conducting our quarterly communications test which seems very timely with everything going on due to coronavirus - this test ensures that we maintain communication with our partners

Please respond to me only - do not copy all

Please send email answering YES that you received my communication for this test

Thank you

--

Ann Hill, Executive Director
Emerald Coast Healthcare Coalition
850-585-1679

Subject: communications test

Emerald Coast Healthcare Coalition is conducting our quarterly communications test which seems very timely with everything going on due to coronavirus - this test ensures that we maintain communication with our partners
Please respond to me only - do not copy all
Please send email answering YES that you received my communication for this test
Thank you

Subject: remote TA call from CDC - COVID-19

Hi Dr. Blackmore,

I am working to set up a follow up TA call to assist with your questions related to the cruise ship port.

AMERICAN OVERSIGHT

Can you let me know some times that work for you today?

Thanks,

Chris

Hello Norma.

You may recall, your office and I held a call with Dr. Yesinia and her staff late last year to discuss secretarial priorities.
Please accept this cell # for regional director John McGough, (202) 774-7692, in the event she may need to reach him on a pressing matter regarding the coronavirus. Also, I am requesting her cell, in the event we need to do the same, for the spreadsheet we are developing. We will not bother her, otherwise.

Hi everyone,

Let me first say that we appreciate everyone's effort on the polio surge and your flexibility in these uncertain and rapidly changing times with the COVID-19 response. We in the polio EOC, as well as CDC as whole, have your safety and health as our top priority.

You are receiving this email because you are currently set to return home from your polio TDY between 7-14 days from now. We ask that you work with the EOC to immediately curtail your travel and return to the US.

If you believe that anything may impact your date for return to work at your home office, please let us know and we can reach out to your supervisory chain. New agency guidance regarding post-

AMERICAN OVERSIGHT

deployment telework and monitoring policies should be coming out by the end of the week and will be sent to you.

Please continue to monitor all information you receive from the post where you are located which may impact your travel, as well as any guidance you receive from the EOC. Thank you for your contributions to polio eradication, the contributions you may be being asked to make regarding COVID-19 in your TDY location, and your commitments to CDC's mission.

Great. We plan to be on site. Let me get back to you on who the POC will be.
What we were also hoping for is a training session with some of our staff who is augmenting the response (e.g. EMS, nurses) to build capacity. Our local epidemiologists have basic infection control expertise but they are very stretched right now. When is Sri able to deploy?

Subject: CDC Infection Prevention and Control Assistance

Hello Dr. Blackmore,

I wanted to introduce you to Srinivas Nanduri who will help with the infection prevention and control aspects of this investigation. As we discussed on the phone today, his deployment will be about 5 days and will largely be focused on the following objectives:

1. To provide targeted infection control assessment and observation of the affected healthcare facility to included hand hygiene, transmission based precaution use, and environmental cleaning.
2. To provide training on essential infection control activities such as hand hygiene and PPE donning and doffing
3. Provide technical support on healthcare worker and patient/resident monitoring during this time
4. To build internal capacity within the health departments for these types of assessments moving forward through mechanisms such as tele-infection control assessments (ICAR) or focused onsite ICARs
5. If times allows, to conduct preparedness assessment at other healthcare facilities

We do ask that local or state PH support be present onsite with him as much as possible. And you will continue to have our support from CDC headquarters 24/7.

AMERICAN OVERSIGHT

Please reach out to Sri directly to arrange further logistics.

Best,
Elizabeth Soda

Hi Dr. Blackmore,
Glad to be supporting the response. Just wanted to know which city/location for making my accommodation request. Slated to arrive late tonight to Miami. Look forward to supporting your team in whichever manner possible.
Thanks,
Srinivas

Great. We plan to be on site. Let me get back to you on who the POC will be.
What we were also hoping for is a training session with some of our staff who is augmenting the response (e.g. EMS, nurses) to build capacity. Our local epidemiologists have basic infection control expertise but they are very stretched right now. When is Sri able to deploy?

Hello Dr. Blackmore,

I wanted to introduce you to Srinivas Nanduri who will help with the infection prevention and control aspects of this investigation. As we discussed on the phone today, his deployment will be about 5 days and will largely be focused on the following objectives:

1. To provide targeted infection control assessment and observation of the affected healthcare

AMERICAN OVERSIGHT

facility to included hand hygiene, transmission based precaution use, and environmental cleaning.

2. To provide training on essential infection control activities such as hand hygiene and PPE donning and doffing
3. Provide technical support on healthcare worker and patient/resident monitoring during this time
4. To build internal capacity within the health departments for these types of assessments moving forward through mechanisms such as tele-infection control assessments (ICAR) or focused onsite ICARs
5. If times allows, to conduct preparedness assessment at other healthcare facilities

We do ask that local or state PH support be present onsite with him as much as possible. And you will continue to have our support from CDC headquarters 24/7.

Please reach out to Sri directly to arrange further logistics.

Best,
Elizabeth Soda

1. To provide targeted infection control assessment and observation of the affected healthcare facility to included hand hygiene, transmission based precaution use, and environmental cleaning.
2. To provide training on essential infection control activities such as hand hygiene and PPE donning and doffing
3. Provide technical support on healthcare worker and patient/resident monitoring during this time
4. To build internal capacity within the health departments for these types of assessments moving forward through mechanisms such as tele-infection control assessments (ICAR) or focused onsite ICARs
5. If times allows, to conduct preparedness assessment at other healthcare facilities

We do ask that local or state PH support be present onsite with him as much as possible. And you will continue to have our support from CDC headquarters 24/7.

Please reach out to Sri directly to arrange further logistics.

Best,
Elizabeth Soda

Change Orlando report - they have one opening.
Add critical need statement: need test kits otherwise testing becomes nonexistent

Hi and I'm sure you are inundated with calls. First, thanks for all of your help in the past and appreciate your help on the coronavirus. I have been in contact with the Maricopa and Pima County health departments regarding our teams that are training in Arizona. Florida is much more complicated as our teams are spread out throughout the state. I was wondering if you have a contact at the Florida Public Health for me to reach out to regarding our teams training in Florida? Thanks so much,

Subject: Coronavirus Guidance

Hello Francisco and CDC colleagues – I hope all is well with you. As you can imagine, we have received a number of inquiries from MLB Clubs and Players with respect to the coronavirus and we are planning to disseminate guidance that is based on CDC recommendations. Prior to dissemination of this guidance, is there someone at CDC that you could recommend that we could briefly coordinate with to ensure that our guidance is 100% accurate and consistent with current CDC guidelines? CDC was incredibly helpful to us on the Zika situation a few years ago and it would be very much appreciated if CDC could provide similar guidance and support to our industry on this current public health topic as well.

Thank you in advance and I look forward to hearing back from you.

Sincerely,
Jon Coyles

Attachments:	Memo re Coronavirus.pdf

Scott and Carina,
Francisco kindly forwarded me your contact information. I'm the medical director for Major League Baseball and just wanted to establish contact with the Florida public health in case the need arises for increased measure with our 15 teams currently doing spring training in Florida. I have distributed the enclosed memo to all of our teams and in close contact with them regarding any potential exposures. I have made similar contacts in Arizona with our teams training there and is much easier because they are all in one county. Florida is a bit more challenging with our team all spread out. Our teams are being very cautious with respect to screening people with potential travel risks. If you have any recommendations for MLB over the next month, please reach out to me and we will implement them. Also, I wanted to ensure that there are testing facilities throughout Florida that have the capability to test for coronavirus if needed and how to refer patients for testing.
Thank you in advance and let me know if there is anything we can do to assist Florida public health.

Received the following from our LNO with DoS for your awareness
I am thinking they may be medivac'd to FL?

Costa Magica and Costa Favolosa are north of Cuba heading north toward the U.S. Costa Magica has a crew member in critical condition (male, 32, Philippines, bilateral pneumonia)and in is need of urgent medical evacuation. The Company is coordinating with USCG to perform a medivac (details being worked). Magica has an additional 3 crew members who need medical support ashore and Favolosa has 5 crew members who need medical support ashore. The Company is also working a plan to repatriate ~300 EU, ~600 Philippine and ~250 Indonesia asymptomatic crew members later this week.

Regards,
Jeanne

Subject: FL Call Follow-up

Hello Everyone,

Thank you for chatting with us today.

As I mentioned the CDC Healthcare Infection Control can be reached for further TA via eocevent141@cdc.gov or via phone at 404-414-8385

I think your biggest challenge is going to be figuring out the contracted staff and how they have interacted with other facilities. It would be reasonable to apply many of the below listed concepts to other at risk facilities based upon how these staff moved to detect cases earlier among residents and staff. If helpful someone from our team developed a rapid facility phone assessment which could be deployed (attached).

Here are some good links:
LTC guidance which can apply to AL: https://www.cdc.gov/coronavirus/2019-ncov/healthcare-facilities/prevent-spread-in-long-term-care-facilities.html
General IPC guidance: https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html
Criteria for return to work for HCP (healthcare personnel): https://www.cdc.gov/coronavirus/2019-ncov/healthcare-facilities/hcp-return-work.html

Please remember many of the docs I have attached are not CDC cleared. Some were created as tools by our field team or by other jurisdictions so feel free to modify to your own needs.

A couple important points and lessons learned from other states:

1. Ensure a good active monitoring system for residents (at least once a day although more often if possible). They should be mindful (as you know) the elderly may present in other and

AMERICAN OVERSIGHT

potentially less dramatic fashion especially if they have baseline lung disease. I have attached a symptom/temp checking that we created for HCP but could be modified for use with residents.

2. Likewise a good monitoring system for all HCP is key. They should be self-monitoring with delegation (i.e., they know who to call with symptoms) when at home and then have a symptom/temp check before starting their shift. This pre-shift check could happen upon facility arrival or via something like facetime before leaving for work. Just make sure they take their temp and show while on facetime.
3. Implement universal masking for HCP while in the facility. Attached is a PPE strategy for LTC which accounts for shortages in gowns and extend use of masks and eye protection. In addition, I have attached some docs about general PPE for all HCF which we do expect to be posted to the web soon.
4. Ideally gowns, gloves, mask/respirator, eye should be used for all cases, PUIs, and anyone with unknown respiratory illness. Again may need to refer to the PPE strategy doc if not doable. NTEC has a good video that helps with donning and doffing: https://repository.netecweb.org/items/show/688
5. Restrict visitors. Any visitor that must enter should have symptom/temp check, masked, and controlled movement in and out of resident rooms. I have attached an example letter to families that can be modified.
6. Restrict resident movements, no congregate settings.
7. I have attached some cleaning consideration as well to include the use of nursing/CNAs to wipe high touch surfaces for cases or PUIs instead of EVS.
8. I have also attached a line list if you want it.
9. Contact tracing and risk assessment is not practical in this setting and ideally time should be spent in the above activities plus IPC. We understand that work restricting staff may shutter the entire facility and thus the emphasis of the good monitoring of HCP. We discuss this in the new risk assessment at the very bottom of the page: https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html
10. You and other PH staff should be wearing a facemask when you enter the facility and institute self-monitoring as well.

Please feel free to reach out with questions.

Best,
Elizabeth and Nicola

This info I got was confusing. It sounded like there were two different chains of communication and I wanted to make sure we hadn't left anything undone. What are your thoughts on the cases among the cruise port workers? Does it seem like a common workplace exposure or community transmission?
Thank you,
Stephanie

Subject: RE: FL: EOC PUI team Questions

Scott –

Runa referred your email to me as we are trying to consolidate our state communication to the extent possible to help expedite responses.

When you say you haven't heard any summaries of private provider calls directly to CDC, I am not sure if you referring to getting testing results from PUIs or knowing that a provider has called to inquire about a patient potentially meeting criteria to be a PUI.

For the former, we have identified that there is an issue with the eLIMS automatic reporting feature. In the interim, until the issue is resolved, we are emailing negative nCoV PCR results to the public health lab submitter email that is included with the specimen. Official reports will follow when the eLIMS issue is resolved. The lab is testing throughout the weekend and we email the negative results out as soon as we get them.

If your question is about providers that might have called about a potential PUI, when that occurs, the provider is being instructed to contact the health department.

If I have not answered your question or if you have additional questions, don't hesitate to reach out.

Thanks,
Alicia Budd

Subject: RE: Florida Cruise Ship Summary 3.17.20 4 pm

Hi Mr. McGough,
I wanted to update you about the situation with Royal Caribbean and the flights from Chile and Brazil

1. There has been no movement on any flights from Brazil
2. AT 6:30 PM EST, Ms. Kalisch from Royal Caribbean emailed us to tell us that the Government of Chile had put a hold on their flights
3. At around 6:44 PM, I received a call from Dr. Rivkees, the Florida Surgeon General who told me that the Governor was not going to allow any flights to land and disembark passengers in Miami until there was a solid plan articulated by the Cruise company.
4. Right after that call we notified the State Department and copied DHS. We also notified Eleni Kalisch and told her to contact the State of Florida to coordinate a plan(we gave her the relevant phone numbers)
5. At approximately 7:30 Eleni Kalisch emailed that the flight from Chile was going to proceed, but she never responded about contacting Florida state or local authorities despite multiple emails from CDC telling her to do so
6. At 10:07 she told us that the flight would be departing Chile at 12:10 AM local time and arriving in Miami at 9:10 AM EST

Attached is the last email chain starting at 10:20 when Eleni told us there is a slight change of plans which states that CDC will be screening her passengers. We have told her multiple times that CDC will not be screening passengers. We asked her to contact us by phone right away (11PM), but she has not done so. We believe that the flight may have already departed and we are concerned that

AMERICAN OVERSIGHT

no one has signed off on this from Florida and that a clear and reasonable plan has not been sent any of us.

Subject: Follow up to Illness in Passenger

Good morning,

Based on the travel history and a lack of epidemiological risk for the passenger who was transported to the hospital this morning, and per a consultation with our Quarantine Medical Officer, this is NOT considered a patient under investigation for COVID-19.

AMERICAN OVERSIGHT

Our current guidelines require both symptoms AND either travel to China in the past 14 days OR close contact with a laboratory-confirmed COVID-19 patient. Additionally, the passenger has only been to Argentina, which currently does not have known community spread of COVID-19. (https://www.cdc.gov/coronavirus/2019-ncov/hcp/clinical-criteria.html)

To ensure that this does not need additional public health intervention, and because there are other illnesses of public health concern, such as influenza, the passenger is being assessed at the hospital, and we will follow up in coordination with the Florida Department of Health.

If there are any changes to the above information, we will communicate this to you as soon as possible.

Thank you,

Michelle

Date:	Friday, February 7, 2020 3:25:05 PM

Closed, not PUI.

Summary of call:

Concentra clinician call (Tampa airport, Jorge Trujillo) about a flight attendant who had contact with an ill passenger on 2/2/20. The passenger had arrived from China on 12/21. Not ill. On 2/2 they shared a flight during which the traveler (with history of December travel from China) developed some dizziness and almost lost consciousness, and was attended to by the flight attendant. Upon arrival she was better. The flight attendant developed chills, cough, with mucous on 2/3 with hot feeling (no temp taken). On 2/5 he also developed dizziness, continued cough. On 2/6 had some nausea, with continued cough. On 2/7 no further cough; was recommended to see contractor health clinic in the Tampa airport (Concentra).

Dr Trujillo contacted the FL HD.

Discussed PUI definition and current unknowns of possible asymptomatic carriage., FL

Subject: Follow-up from call with facility

Hi Scott,

A quick summary of today's call with Dr. Gordillo (cc'd here)

1. The facility is rapidly running out of AIIR capacity given their high suspicion for COVID-19 in the community. They have some limited ability to create some negative pressure rooms in their ICU and ER but these rooms will have a shared air space among them which not allow them to mix PUIs with true cases. They also asked about the option of portable isolation units such as a tent. Our CDC NIOSH colleagues would know the most about this option. I have emailed them to request a call with the facility hopefully later today.
2. The other concern the facility had was regarding the speed of testing. Scott-I will defer that question to you. However, they did wonder if CDC lab technical support would be an option to help them build up their own in-house test. Again I defer this totally to FL, and I don't know if this would even be an option from the CDC side. However, I am happy to inquire on our side if you are interested.

Happy to chat.

Best,
Elizabeth

Dear Joe

Many thanks for your note and your time.

Can you also pass along Martin's contact information?

All the best,

Scott

Thanks, Henry and nice to talk with you Scott. As promised, I want to introduce you to Dr, Martin Meltzer.

Martin – Scott is the State Surgeon General of Florida and interested in planning for medical surge needs, I talked about your current plans to create tools for supporting this work. Wonder if you might have time to talk with him, as you are much more eloquent on your work than me!

Thanks
Joe

Scott,

Jay said you have a couple of questions.

- I am connecting you to Joe Bresee, 404 421 5648, who has wide visibility on the modeling activities at CDC and can help answer your questions.

- The evidence base for social distancing is best found in the 2017 Community Mitigation Guidelines to Prevent Pandemic Influenza.

> We're working through the details, but this is a scenario we have been preparing for, and is not unexpected. If we were able to activate them under 502(f) authority, they would be eligible for federal benefits instead of the state's Workman's Comp, which would be a better scenario for the Soldier and the State of Florida. If they get ill from the virus and require extensive treatment, the federal benefits afforded by a 502(f) activation could be substantial. The attached info paper discusses the issue in greater detail.
>
> Every TAG in the nation is pushing to get the Feds to authorize 502(f) since this situation is only going to get worse with time. I encourage Governor DeSantis to continue to support this initiative and will be presenting him with a letter tomorrow requesting his endorsement for this as well.

Subject: ITF NCOV Daily Update - 02-12-2020

Greetings colleagues: This is the nCoV ITF Daily Update for February 12, 2020.

If you have questions that you would like to have answered in these Daily Updates, please send them to the International Task Force at eocevent223@cdc.gov.

> ***PLEASE NOTE:*** *The nCoV outbreak is a rapidly evolving situation. We are sharing information with you as we receive it, but remain mindful that known information may*

AMERICAN OVERSIGHT

change quickly.

Information shared on these updates will come from a variety of sources. We will endeavor to ensure that the source and 'sharability' of each document is noted. Any document that is located on a public website (i.e. it is a link in this email) can be shared freely as long as properly attributed. Any document cleared for distribution by the CDC JIC will be so labeled and can be shared as official CDC guidance. There will, however, be some documents that are for internal CDC use only. Please be mindful not to disseminate uncleared and internal-use materials. ***Please do not forward this entire email to non-CDC recipients.***

We are maintaining a repository of all materials disseminated through the Daily Update on a **ITF SharePoint site**, found **here**. The **COVID-19 Communications SharePoint Site** with CDC Response Key Messages/Key Points is available **here**.

Talking Points

- No updates today

News & Updates

- The WHO has issued an official name of the 2019 novel coronavirus, COVID-19, which CDC has adopted and will implement on all guidance and websites.
- The Lancet has published a retrospective review of nine pregnant women with COVID-19 pneumonia; in his small group, there was no evidence of vertical transmission of COVID-19 , attached (PDF document, **Public**)
- The following social media links have gone live, and will be maintained in real-time with the most up-to-date information
    - Facebook: https://www.facebook.com/CDC/videos/794433791055151/
    - Twitter handle: @CDCgov: https://twitter.com/CDCgov/status/1227615594163449856
    - Instagram: https://www.instagram.com/p/B8eMt2uHZod/
- WHO's SitRep for February 12, 2020 is attached (PDF document, **Public**)
- Today's communication surveillance report is attached (PDF document, **CDC-Internal**)

Guidance Documents

Response Planning

- State Department guidance on foreign engagement for COVID-19 was sent out earlier today for your situational awareness.

Surveillance and Case/Contact Investigation

- No updates today

Traveler Screening & Travel Notices

AMERICAN OVERSIGHT

- WHO published today "Key considerations for repatriation and quarantine of travelers in relation to the outbreak of novel coronavirus 2019-nCoV" at: https://www.who.int/ith/Repatriation_Quarantine_nCoV-key-considerations_HQ-final11Feb.pdf?ua=1

PPE & Infection Control

- The CDC has released a **DRAFT** version of the "Interim guidance for public health personnel evaluating persons under investigation (PUIs) and asymptomatic close contacts of confirmed cases at their home". This document lays out the precautions that public health professionals must take when evaluating PUIs in their own homes (PDF document, **CDC-Internal**)
- The CDC has centralized all information pertaining to the PPE recommended for healthcare workers, including "Strategies for Optimizing Supply of N95 Respirators", at: https://www.cdc.gov/coronavirus/2019-ncov/hcp/healthcare-supply-ppe.html

Laboratory Support

- Update on the status of the CDC 2019-nCoV Real-Time RT-PCR test kit:
  - We have learned that one of the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel reagents, N3, is not performing as expected.
  - All CDC reagent kit orders are now on a quality hold until the new N3 reagent can be manufactured, validated, and distributed to the IRR. We appreciate your patience during this time.
  - If you have urgent need, we encourage you to consider other diagnostic options until this issue is resolved and your order is received. Please contact us if you have further questions or concerns.

Risk Communications

- No updates today

Communication to your Country Office Staff

Subject: MS Marina (Oceania)

Hi Joe – are you tracking the MS Marina (Oceania)? I'm tracking 653 Amcits on board, COVID(+) cases on ship, headed to Miami but no ports there open. This is going to be a problem soon. We're getting inquiries from the Australians and Andorrans. This is the latest I have:

18MAR: Indications that an Oceania cruise ship will be arriving at Port of Miami sometime next week with various COVID-19 positives on it. Consular Affairs from the Australian Embassy contacted to say they had been notified overnight that the MS Marina (Oceania) is returning to Miami from South America via the Panama Canal after it was denied docking by several countries. The latest advice the Embassy has is that it is passing through the Canal could take 5 or 6 days. Australian Embassy in Mexico and Honorary Consul in Panama are trying to assist at least 49 Australians on board - some of whom are starting to run short of medications etc. - but are having difficulty contacting the crew and Oceania's agents in Panama. CONS provided them with the contact for Norwegian cruise lines which is a parent company of Oceania. OFM indicates Port of Miami is not aware of the ship coming to Miami and questioned where it would even dock as all available ports are occupied. OFM in touch with Norwegian.

Sam/Ashley

This is the string I got below and why I asked if you had this ship on the radar. Let me know if you find something out. HHS has no ask….we just want to make sure you are aware this may be headed to Miami.

Respectfully,
Jeanne

Subject: MS Marina (Oceania)

Hi Joe – are you tracking the MS Marina (Oceania)? I'm tracking 653 Amcits on board, COVID(+) cases on ship, headed to Miami but no ports there open. This is going to be a problem soon. We're getting inquiries from the Australians and Andorrans. This is the latest I have:

18MAR: Indications that an Oceania cruise ship will be arriving at Port of Miami sometime next week with various COVID-19 positives on it. Consular Affairs from the Australian Embassy contacted to say they had been notified overnight that the MS Marina (Oceania) is returning to Miami from South America via the Panama Canal after it was denied docking by several countries. The latest advice the Embassy has is that it is passing through the Canal could take 5 or 6 days. Australian Embassy in Mexico and Honorary Consul in Panama are trying to assist at least 49 Australians on board - some of whom are starting to run short of medications etc. - but are having difficulty contacting the crew and Oceania's agents in Panama. CONS provided them with the contact for Norwegian cruise lines which is a parent company of Oceania. OFM indicates Port of Miami is not aware of the ship coming to Miami and questioned where it would even dock as all available ports are occupied. OFM in touch with Norwegian.

Dear Subcommittee on Insular Affairs Members & Meeting Participants –

AMERICAN OVERSIGHT

Well, change is a constant!! Given that we have a last minute request from the White House for our members to brief officials on COVID-19 while they are in town, the meeting of the Subcommittee on Insular Affairs held during Washington Week will be cancelled this year. However, in the absence of the full committee meeting, Cendra and I would still appreciate having a working session with our partners and staff not traveling to the White House tomorrow to further our priorities and action steps for the coming year. It is critical that we keep this work moving. I have emailed these individuals separately.

Apologies for multiple emails.

Thanks,
Karl

Subject: Materials & Time Change for Subcommittee on IA During ASTHO WA Week

Dear Subcommittee on Insular Affairs Members & Meeting Participants,

On behalf of Subcommittee Chair Esther Muna, CNMI and ASTHO CEO Mike Fraser, we welcome you

AMERICAN OVERSIGHT

to Washington Week and thank you for your active engagement and participation! Please note our meeting has been changed to the following date and time:

Tuesday, February 25th, 2020
4:00 – 5:30 pm ET
Madison Hotel – Adams B
1177 15th Street, NW
Washington, DC 20005

A calendar invite will follow.

Attached and below please find materials for our meeting. During our time together, we will re-visit the priorities established during last year's meeting, hear about progress made on these, and define action steps and priorities for the coming year. Also, please note that during or after the Tuesday dinner, those of us visiting on the Hill Wednesday and engaging in meetings with the Administration on Thursday will huddle to hone talking points.

https://naturalresources.house.gov/imo/media/doc/Insular%20Fact%20Sheet_ks.pdf
https://scholarlycommons.pacific.edu/pjh/vol2/iss1/1/

The Insular Affairs Subcommittee to the ASTHO Government Affairs Policy Committee was formed in 2018 to identify the unique policy needs and priorities of the Pacific and Atlantic jurisdictions. The subcommittee provides a forum for ASTHO's members to exchange information on policy challenges and solutions within the insular areas. Additionally, the subcommittee provides recommendations to the full committee on policy priorities.

See you soon!

Thanks to all who attended the BAC meeting/ conference call today. It was important to maintain continuity even in these difficult times! Glad we were able to debrief about the Super Bowl LIV and learn or review basics about COVID-19. Also, it's great to know that BioWatch has offered its assets to assist with COVID-19 testing. We are very thankful about that offer!

Hi Tim, The good news is you are coming right at the best time. Expect to be plugged into the Coronavirus response from day one. The bad news is that tomorrow morning will likely be a tad chaotic. We may have our two first cases confirmed tomorrow and we have just declared an emergency. I have a meeting between 830-9 am. It may drag out a little. I will try to meet you at 8 and we will get your badge and computer etc set up started. Then we will all get together as soon as we have a chance. Hopefully shortly after 9. Just wanted to give you a heads up and wish you a warm welcome :). Carina

To: Rivkees, Scott A <Scott.Rivkees@flhealth.gov>
Subject: FW: Outreach: COVID-19 Collaborative Syndromic Surveillance

Scott

I know you are buried under a lot of COVID 19 related work, but I wanted to bring back to your attention our request for your participation on syndromic surveillance.
We raised this topic at SHP call a few weeks back and I highlighted again when I had the chance to address the SHO in DC.
I know ASTHO sent you a couple of weeks an email with a specific request on this topic. Hopefully you will be able to join the other 30 that already agreed

I would be happy to connect you to NSSP team doing the work if you need more detail

Here are a few bullets describing the work to date:

1. **Community Outreach**: Twenty-nine jurisdictions are currently sharing syndromic data with CDC for COVID-19 surveillance. NSSP staff are actively engaged with staff from other states who are interested but have questions, concerns, or need a new DUA.

2. **Developing queries** to identify potentially relevant visits from the emergency department data: NSSP staff are developing two COVID-19 queries, one focused on chief complaint narratives and one focused on discharge diagnosis codes. Queries are shared with the community of practice via Slack and discussed on calls among community partners. The discharge-diagnosis based query has been developed and incorporated into ESSENCE. The chief-complaint query is being refined using site specific data shared with NSSP and the team is exploring the utility of including triage notes as part of this effort.

3. **Methods for tracking trends** of persons exhibiting symptoms consistent with COVID-19:

AMERICAN OVERSIGHT

Development effort is focused on reducing the effect of influenza and other non-coronavirus etiologies. The influenza query using discharge diagnosis has been developed to help negate confirmed influenza in the COVID-19 query using site-specific data that has been shared with NSSP.

4. **Developing approaches for querying emergency department data** to analyze records for persons under isolation and with infectious disease. A query was shared with the Community of Practice via Slack and was revised. The community is using the query. Some noted a large increase in patients under isolation, and others noted a small increase. The community said this is helpful for identifying severe illness.

5. **Developing reports and dashboards** that can be shared in ESSENCE to aid state and local users in tracking trends and active case finding. The dashboard will update in real-time with the level of data accessible to each user. Development is dependent on completion of queries/syndromes identified above. The addition of newly shared data will accelerate development of this ESSENCE dashboard by enabling NSSP staff to test functionality that will be accessible to state and local jurisdictions.

6. **Developing reports for the CDC EOC** on national and HHS-region-level syndromic summaries. Also working on state-level summaries for sites sharing data. The report will be shared with participating states for approval before sharing with the CDC EOC.

Thanks

Dr. Chapman,

AMERICAN OVERSIGHT

We will need the entire FFPE block. The block will be returned to the submitter after the case is finalized but please note, the block may be depleted during testing. For evaluation of Leishmania, the infectious diseases pathology branch (IDPB) performs immunohistochemistry. The DNA is extracted here (at IDPB) and then sent to the Div. of Parasitic Diseases (DPD) for PCR analysis.

Thank you for your understanding.

Regards,
Eddy

AMERICAN OVERSIGHT

Hi Kristen, Conne, and Erin,

Scott Pritchard at the DOH in Florida will be coordinating the press for their two presumptive positive COVID-19 cases. Can you please coordinate with Scott regarding press? They will likely wait until CDC confirmation, but want to plan ahead in case they need to go public earlier as contacts and HCWs will be notified before CDC confirmation. Can you connect with Scott about this?

Quick summaries are:
NCoVID: FL 2785091
63 year old male with unknown exposure who is in the ICU.

NCoVID: FL 2785125
29 year old female with travel to Europe who is at home in isolation.

Best,
Katherine

Thanks, Scott.

Kristen,

I really appreciate your reaching out. We have updated our website to reflect Florida test results and PUIs: www.FloridaHealth.gov/COVID-19

I would certainly be grateful for whatever information you are able to share. Situational awareness is always a priority.

Is there anything else I can provide on my end to support your mission?

Thanks,

AMERICAN OVERSIGHT

Subject: RE: Press release planning for Florida

Hi Scott,

Sorry if others have reached out, but wanted to make sure we followed up. CDC and other states have put out a lot of communication in the last few days about both travel and unknown exposure related COVID-19 cases that I'm happy to share.

I can also let you know that other states will be putting out communication this weekend about cases they've identified through testing.

Thanks,
Kristen

Subject: Press release planning for Florida

Hi Kristen, Conne, and Erin,

Scott Pritchard at the DOH in Florida will be coordinating the press for their two presumptive positive COVID-19 cases. Can you please coordinate with Scott regarding press? They will likely wait until CDC confirmation, but want to plan ahead in case they need to go public earlier as contacts and HCWs will be notified before CDC confirmation. Can you connect with Scott about this?

Quick summaries are:
NCoVID: FL 2785091
63 year old male with unknown exposure who is in the ICU.

NCoVID: FL 2785125
29 year old female with travel to Europe who is at home in isolation.

Best,
Katherine

Eduard Matkovic, M.D. | Pathology Fellow | Tel: 404-639-0549 | Fax: 404-639-3043 | Eduard.Matkovic@cdc.hhs.gov |
Centers for Disease Control and Prevention | Infectious Diseases Pathology Branch (IDPB) | 1600 Clifton Rd NE, MS: H18-SB | Atlanta, GA 30329-4027 |

****

Report Password: the password to open the password protected Pathology Report PDF (Preliminary/Final/Addendum) for this case will be provided in a separate email after you receive the Final Pathology Report Email and will be a unique 12 digit number. If additional specimens are subsequently received on the same case by IDPB, the password will remain unchanged. Animal case reports will not have password protection.

Specimen Receipt Notice: the official contact(s) at the Health Departments (if known) will be cc'd on IDPB's Specimen Receipt Notice emails, in addition to cc'ing other case specific relevant parties. The same official contact(s) at the Health Departments (if known) will continue to receive IDPB's Final Pathology Reports once finalized.

ePathology Service: IDPB now offers telepathology consultation through our ePathology service. This is not a substitute for diagnostic testing by our laboratory, but facilitates rapid initial evaluation of images or scanned slides prior to submission of case materials for testing. Please visit the ePathology website at http://www.cdc.gov/ncezid/dhcpp/idpb/epathology/index.html for more information.

(CDC/DDPHSIS/CPR/DEO) <fnb4@cdc.gov>; Schneider, Eileen (CDC/DDID/NCIRD/DVD) <ees2@cdc.gov>; CDC IMS 2019 NCOV Response PUI <eocevent185@cdc.gov>
Subject: PUI ID# 0001287

Hello Scott:

Thank you for contacting CDC about the patient under investigation (PUI) for novel coronavirus (COVID-19). Please find summary information below to help assist in the PUI evaluation and specimen referral.

Summary

38 yo male who resides in China (Guangzhou City) came to US on 2/3. on 2/15 he developed cough, congestion, rash and subjective fever. Patient presented to ED for evaluation. Decision made to admit patient but patient signed himself out AMA. Specimen x 3 were collected prior to his signing himself out. Denied other risk factors (travel to Wuhan or Hubei province; contacts to a known case).

CDC COVID-19 ID #0001287

POC Details

Name: Scott Pritchard

Location: Florida

Phone: 850-251-5558

Email: scott.pritchard@flhealth.gov

Additional information

Guidance for health departments to submit PUI information to CDC can be found here.

AMERICAN OVERSIGHT

Include the CDC COVID-19 ID issued to you by CDC in the top right box and on all specimen forms. The PUI form should be submitted as soon as able and need not wait for specimen shipping. Instructions on how to submit the PUI form are located at the top of the form.

Laboratory testing: At this time, CDC requests referral of NP swab (VTM) and OP swab (VTM) specimens. A sputum (sterile container) specimen should also be sent if a productive cough is present. The NP and OP swabs should be placed in separate VTM vials. Serum specimens are not needed at this time for PUI testing.

Specimens should be packed according to International Air Transport Association (IATA) regulations. Shipments from outside of the United States may require an importation permit that can be obtained from the CDC. For specific instructions, see the "Packing, Shipping, and Transport" section from this CDC website.

Please see the attached *2019 Novel Coronavirus (nCoV) Specimen Submission Guidelines* for detailed guidance on specimen shipment, packaging, and documentation. Please ensure that the patient information on the specimen tube exactly matches the 50.34 DASH Form, or the CDC may have to reject the specimen or testing may be delayed.

For questions about specimen collection or completing the 50.34 Form, please see https://www.cdc.gov/laboratory/specimen-submission/help-faqs.html.

Precautions: For healthcare personnel, we recommend the following guidance: https://www.cdc.gov/coronavirus/2019-nCoV/infection-control.html If the PUI seeks healthcare, CDC recommends they alert providers in advance for adequate infection control preparations.

If the PUI is under home care, please consider the following CDC guidance: https://www.cdc.gov/coronavirus/2019-ncov/guidance-home-care.html

Please let us know if you have any additional questions or concerns. For urgent inquiries, please contact the CDC Emergency Operations Center at 770-488-7100.

Thank you,

CDC IMS 2019 NCOV Response PUI Team

Date:	Wednesday, March 18, 2020 9:13:17 AM

From Eleni:

The Latam charter from Chile is scheduled to arrive MIA at 11:30AM. We are arranging charters for this afternoon for non-Floridians to return them to airports closer to their homes. I have reached out to DOT to see if we can continue the Latam charter aircraft on to another airport and am awaiting guidance.

Subject: Status of Chile charter (Silver Express pax)

I am slimming the chain to take our overseas colleagues off for right now. Please add DHS and others in the US as needed. Adding the State Department COVID coordination unit and consular reps.

Eleni - we understand the charter from Chile is scheduled to land in MIA between 1200-1300 EDT, and that FL state authorities have said non FL residents will not be allowed to continue onward to home unless moved to another charter.

Can you give us the latest? We are concerned both about Amcits on this flight as well as future charters by RC or other charters seeking to land in FL.

Thanks - Doug

Subject: RE: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

Dear Eleni,
Please clarify your request and the plan – which passengers are you referring to? The air ambulance passengers or the ones who are not ill and are coming in the larger charter?

As I wrote earlier, CDC will not be conducting any health screening. For the passengers who are not arriving by air ambulance, CBP/CWMD would screen the passengers based on their own protocol. CDC Quarantine Station staff will be available to respond to any illness events, as requested by CBP.

For the air ambulance, they need assessment – I understood that you have made arrangements with Dr. Barth Green/University of Miami, who is not affiliated with CDC. He/his team would make an assessment of those 6 individuals.

Subject: RE: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

Michelle –

Slight change of plans. Upon arrival at MIA, Royal Caribbean will now be arranging individual charter flights for the passengers who are cleared by CDC to return to their home cities/states.

AMERICAN OVERSIGHT

Our team has asked that CDC provide something in writing tomorrow that we can provide to the charter companies indicating that the passenger(s) boarding the charter flights have been cleared to fly commercially. We do not want the charters to deny boarding to these passengers simply because they have arrived in MIA from a cruise ship.

Thanks,

Eleni

Sorry - now with Eleni from RC. Again, due-outs are:

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

AMERICAN OVERSIGHT

Thank you for joining the call today. Leah - I don't believe I have everyone from CDC who was on the call, including Rachel - please add if that's the case.

I've listed the do-outs that I'm tracking below, and this chain can serve as the new, smaller group of folks working on the Brazil/Chile RC ships.

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

Subject: Tim Doyle will be on Board with CPR/DSLR effective Sunday and should be reporting to FL next week

Hi Carina-
Tim is on his way to you.
On the information exchange side and not related to COVID 19- we just received the following note from Dr Redfield….
With the addition of Dr Philip, there are an increasing number of former senior state health officials joining CDC at executive ranks. This now includes Dr Butler from Alaska, Dr Dreyzhner from Tennessee, Dr Montero from New Hampshire. This may mark a new trend toward increased responsiveness to the public health issues and priorities of SLTT jurisdictions.
Cheers

Hugh

I am pleased to announce that **Celeste Philip, MD, MPH**, has been selected as CDC's Deputy Director for Non-Infectious Diseases.

Dr. Philip brings a wealth of public health management, knowledge, and experience as a physician to the agency. She most recently served as Health Officer for the Sonoma County Department of Health Services in Santa Rosa, California, where she oversaw the public health division during a period of unprecedented response efforts, including the Kincade Fire, numerous public safety power shut-offs, and health service provisions for a large number of people experiencing homelessness. Previously, she was appointed by the Governor of Florida to serve as Florida's Surgeon General and Secretary of Health from 2016-2018. In this role, she managed a $3 billion budget and more than 13,000 full-time employees. She led the state-wide response to the Zika virus; directed the state's Emergency Support Function—Public Health and Medical Services (ESF8)—during five hurricanes, including Irma (2017) and Michael (2018); and guided the redesign of the state's HIV program to provide pre-exposure prophylaxis (PrEP) in all 67 counties. From 2013-2016, Dr. Philip served as Florida's Deputy Secretary for Health and Deputy State Health Officer for Children's Medical Services. During her tenure, she brokered the negotiation of settlement terms to end 10 years of litigation

AMERICAN OVERSIGHT

against the State of Florida over Title XIX; the settlement helped to build bridges and led to statewide collaborations on immunizations, mental health, adverse childhood experiences, and opioid policy with clinician groups.

Her professional training includes serving as an EIS Officer from 2006-2008, with the Division of Nutrition, Physical Activity, and Obesity, National Center for Chronic Disease Prevention and Health Promotion; and completing CDC's Preventive Medicine Residency as a Lieutenant Commander in the US Public Health Service with the Florida Department of Health in Polk County (Bartow, Florida).

Dr. Philip received a bachelor's degree from Howard University (magna cum laude), and both a Master of Public Health degree in maternal and child health and a Doctor of Medicine degree from Loma Linda University in California. She is certified by the American Board of Preventive Medicine and the American Board of Family Medicine and holds medical licenses in both Florida and California.

Dr. Philip has been recognized as the Loma Linda University School of Public Health Alumnus of the Year, the Florida Outstanding Woman in Public Health by the University of South Florida, and as a Trustee Scholar by Howard University. She has also received the American Cancer Society's Southeast Region Impact Award, an Outstanding Unit Citation for CDC's H1N1 response, the MacKenzie Foundation Award, the Selma Andrews Award in Public Health, and both the Special Act or Service Award and the On the Spot Award from the National Library of Medicine.

She has also given numerous public health presentations, published medical journal articles, and served on many boards, advisory councils, and volunteer positions over the course of her career.

Please join me in welcoming Dr. Philip as she returns to CDC in her new role, starting March 30, 2020, as Deputy Director for Non-Infectious Diseases.

I would also like to express my gratitude to both Anne Schuchat, MD (RADM, USPHS, RET) and Ileana Arias, PhD for serving as Acting Deputy Director for Non-Infectious Diseases. Thank you both for supporting our mission to see the possible in public health.

Sincerely,

Robert R. Redfield, MD
Director, CDC, and
Administrator, ATSDR

Thanks. We are still gathering information from each state, and will reach out to you soon to discuss how you could send the data in an aggregate form.

Thanks again!

Per previous conversations, we will not be using DCIPHER. Case data will be sent through NNDSS. We can discuss how to send monitoring data in an aggregate form.

Carina

Greetings PHEP Directors and State Epidemiologists,

We are following up with the request below. Once we have received your submission access will be granted for 2019-nCoV database. Please respond as soon as possible, your information is necessary to grant access. We will use your response to **turn on access** for the designated staff.

AMERICAN OVERSIGHT

As a reminder, please consult with your state Epi and state Lab counterparts to ensure we provide access to all staff in your jurisdiction that might need to enter data for various aspects of the response.

If you have any questions please contact eocsctftfcoord@cdc.gov.

Thank you,

State Coordination Task Force (SCTF)

Subject: Time Sensitive Request: DCIPHER Rights for the two 2019-nCoV modules (Florida)

Greetings PHEP Directors and State Epidemiologists,

As we prepare to use DCIPHER for the 2019-nCoV response (e.g., data collection, transmission, and data sharing), we are seeking additional information about the type of access for the users you previously identified for the nCoV 2019 DCIPHER platform.

The "access group" options are described here:

1. **Access to DCIPHER to VIEW (only) data**. Role allows individual to see a view of different reports and analyses for their jurisdiction's information and any aggregate national report that may be created.
2. **Access to DCIPHER for DATA ENTRY and EDITING**. Role allows individual to directly enter information into DCIPHER, edit data, see all data associated with the jurisdiction, in addition to viewing/creating different reports and analyses.

In the attachment, please complete information in the last two columns (epi and monitoring), select either **view** or **data entry/editing** for each user.

Please return your response to eocsctftfcoord@cdc.gov as soon as possible so we can configure the platform to support your jurisdictions' access requests.

Warm Regards,
State Coordination Task Force (SCTF)
Regional Coordination Team - eocsctftfcoord@cdc.gov

On Mon, Mar 2, 2020 at 9:39 AM CDC IMS State Coordination Task Force (SCTF) TF Coordinations TM <eocsctftfcoord@cdc.gov> wrote:

Good Morning,

CDC Incident Management has asked the State Coordination Task Force for contact information of the **top health official** in each jurisdiction to expedite outreach in the event of an emergencies and to provide COVID-19 updates as expeditiously as possible. To accomplish this task, I am reaching out to the SHO/THO Assistant with a cc to the SHO/THO. This information will be used in tandem with the information we have for the SHO/THO maintained by ASTHO. You all are in a great position to assist us!

We know that in many cases the top health official is the SHO/THO. If that case is , just **reply** to this email that they are the **same**.

For those where there is a person who is more senior to the SHO/THO (as a reminder, we are looking for the most senior health official), please complete the following information:

State/Territory	Highest Health Official (i.e. Commissioner/ Minister/Secretary) Name (including degrees as appropriate)	Title	Phone Number (Please provide a **number or** numbers where we can reach out ***after hour*** should the need arise for COVID-19)	Email	Executive Assistant Name	Phone Number	Email

Due to the nature of this **urgent request**, respond by **COB today**.

Thank you so much for your assistance.

If you have questions or concerns, please contact me.

Subject: Urgent Time Sensitive: Requesting 24/7 Phone Contact Information for COVID-19 Returning Travelers

Good Morning,

We need your help, please.

CDC is finalizing the COVID-19 Check and Report (CARE) booklets that will be given to passengers entering the United States who have traveled from China and will be self-monitoring.

We will be providing China travelers with a phone number to contact their state health department if they have questions or develop symptoms.

Please provide the **telephone number** travelers should contact for your state that is staffed 24/7 by COB today.

Thank you

Subject: Urgent Time Sensitive: Requesting 24/7 Phone Contact Information for COVID-19 Returning Travelers

Good Morning,

We need your help, please.

CDC is finalizing the COVID-19 Check and Report (CARE) booklets that will be given to passengers entering the United States who have traveled from China and will be self-monitoring.

We will be providing China travelers with a phone number to contact their state health department if they have questions or develop symptoms.

Please provide the **telephone number** travelers should contact for your state that is staffed 24/7 by COB today.

Thank you

Hi All – I was made aware of this article by Tom Scott and others. It contains a nice history of vector control and a call for renewed political will and investment in VBDs and VBD control as a public health priority. Just wanted to throw this out there in case you think this topic may be of interest to the workshop participants.

Talk to you soon,
Abelardo

Good morning all,

Some materials that may be helpful for our workshop planning call this afternoon:

Workshop description:

Title: Improving Public Health Practice for Vector-Borne Diseases

This workshop will highlight a range of vectors and vector-borne diseases. There will be a series of presentations on vector ecology, surveillance, and emerging VBD issues. The final list of

AMERICAN OVERSIGHT

speakers/topics will be made when we have the draft agenda for the CSTE conference to ensure the workshop complements presentations and roundtables happening later in the week. The workshop will provide ample time for discussion and sharing of best practices.

Notes from last call:

- Discuss a breadth of VBD topics
- Texas suggested flea-borne and Chagas
- TBRF—Job Lopez from TX as potential speaker
- Vector ecology—similar to tick ecology last year
- Sociopolitical drivers of VBDs/Climate change etc. (article linked below)
- Mosquitoes!
- Note: include more interactive time based on comments from last year's evaluation
- Kiersten suggested a couple titles: "Improving Public Health Practice for Vector-Borne Diseases" and "Improving Knowledge of the Bugs We're Fighting"

This is the article Liz referenced about dengue and the various things impacting its resurgence in Honduras.
https://www.nytimes.com/2019/12/29/world/americas/honduras-dengue-epidemic.html

Thanks and looking forward to chatting soon!
Ashley

Thanks Michelle.

Can I share this with ANVISA, for their awareness?

Is there anything else you need from ANVISA at this point? Is RC in contact with them for the ground logistics?

Just making sure all the loops are closed.

Amy

Subject: RE: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

EXTERNAL EMAIL CAUTION: Use caution opening attachments or clicking links.

Here is interim guidance from CDC for these two ships/flights (also attached)

1. Pre-departure
    a. Send ship and flight manifests to CDC.
    b. Send information about possible COVID illness among any passengers (not just American Citizens and including reports of # of persons with confirmed or suspected COVID) to CDC
    c. Distribute general CDC COVID info-graphic and instructions for cruise ship passengers.
    d. In advance, cruise line should make arrangements for land-based management, including for persons with symptoms/illness (as described below) and communicate and clear those plans to appropriate local/state health authorities.
2. At disembarkation from boat and before boarding charter flight, screening questionnaire completed
    a. General screening questionnaire provided by CDC, or other questionnaire as per local/national authorities at port administered to passengers/crew disembarking
    b. Persons who are ill must be evaluated at local health facility – not allowed to board charter unless cleared by local clinician and deemed fit-to-fly.
3. Passengers without any symptoms can board charter flights.
4. During flight, have clinicians (physician and nurse) on board charter to assist/evaluate any passengers who become ill during travel and to assist at arrival in US
5. Upon arrival at airport in US
    a. CBP/CWMD will perform screening as if passengers were arriving from level 3 countries, as per their protocols.
    b. CDC Quarantine Station staff are available for illness response, as per protocol.
    c. Any ill persons are evaluated and referred for evaluation locally as per Quarantine Station protocol.
    d. Passengers who are not ill will be allowed to continue their travel on commercial flights.
6. After arrival
    a. CDC will provide EpiX notification to receiving states, if meet criteria from our protocol.
    b. Passengers should understand that all must self-quarantine and practice social distancing for 14 days.
7. For an air ambulance/medical evacuation flight, passengers should go to pre-determined clinical facility as arranged by cruise line/air ambulance company. This plan must be in place and cleared with local and state health authorities before departure of the charter flight.

AMERICAN OVERSIGHT

a. Persons who do not require hospitalization but are not fit-to-travel to home destination, should remain in hotel (as cleared with local/state health authorities) until fit-to travel.

    i. Alternative transportation arranges such as private vehicle or charter flights to home destination made be possible based on individual assessment.

    ii. Additional guidance is available at https://www.cdc.gov/coronavirus/2019-ncov/downloads/sick-with-2019-nCoV-fact-sheet.pdf

b. These persons must follow all CDC guidance for persons who have been on cruise ships in the last 14 days. They must stay home for 14 days from the time they disembark, practice social distancing, and monitor their health. Social distancing means staying out of crowded places, avoiding group gatherings, and maintaining distance (approximately 6 feet or 2 meters) from others when possible.

Subject: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

Sorry - now with Eleni from RC. Again, due-outs are:

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

AMERICAN OVERSIGHT

Thank you for joining the call today. Leah - I don't believe I have everyone from CDC who was on the call, including Rachel - please add if that's the case.

I've listed the do-outs that I'm tracking below, and this chain can serve as the new, smaller group of folks working on the Brazil/Chile RC ships.

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

Subject: communications test

Emerald Coast Healthcare Coalition is conducting our quarterly communications test which seems very timely with everything going on due to coronavirus - this test ensures that we maintain communication with our partners
Please respond to me only - do not copy all
Please send email answering YES that you received my communication for this test
Thank you

--

Subject: communications test

Emerald Coast Healthcare Coalition is conducting our quarterly communications test which seems very timely with everything going on due to coronavirus - this test ensures that we maintain communication with our partners
Please respond to me only - do not copy all
Please send email answering YES that you received my communication for this test
Thank you

Yes I believe we do need to circle back. What you describe didn't address the issues at the port itself. Let me check with the health officer first thing

Dr. Blackmore:

I communicated to our morning team that there was follow up needed with you all. Separately, FL health leadership (FL Surgeon General I think?) reached out to Jay Butler here at CDC separately to discuss issues, involving our cruise ship task force. Chris Jones, the lead for our call unit, followed up and was told that local leadership was connected with staff at the Miami Quarantine station and that there were no additional questions.

Are there remaining issues you would like to discuss? We can have a call tonight or set up additional calls in the AM. Apologize for the miscommunication: we were told all was taken care of. Happy to help in any way we can!

Sara

Hi Caroline. We would be interested in a consult to discuss the port situation and your recommendations to minimize exposure to employees and passengers. Are u still willing to set this up? Thanks Carina

Dr. Blackmore:

Caroline is not working tonight, but I'm happy to work with you and discuss any questions. I think our cruise ship team is likely the best group to involve with this. I can see if they are able to discuss tonight, but it might be tomorrow AM before we are able to pull everyone together. Would that be OK? I'm also happy to have a call with you to clarify the questions as well before we set up the larger conference call. Let me know what would be best-

Thanks-

Subject: communications test

Emerald Coast Healthcare Coalition is conducting our quarterly communications test which seems very timely with everything going on due to coronavirus - this test ensures that we maintain communication with our partners
Please respond to me only - do not copy all
Please send email answering YES that you received my communication for this test
Thank you

--

Ann Hill, Executive Director

Subject: Re: disinfection of PPE

Hi Carina,

I know everyone is swamped these days! I don't know the answer but will send to NIOSH EOC desk. I am sure they get this question a lot.

Hope you are doing as well as you can.

Take care,

Renée

Subject: disinfection of PPE

Howdy,
I am assuming you, like me, are knee deep in the COVID response.
Do you by any chance know who I could talk to about using UV light to disinfect PPE? I am guessing that hard surfaces (plastic) might work but what about cloth ? (masks/ gowns)
Any intel on this would be helpful

Thanks a lot. Thankful to have wise friends
Carina

Subject: RE: fee waiver

Good Evening Scott,

Thank you for reporting this CoVID-19 contact *and* for your patience with all the calls. After discussing the case with our medical officer and Travel Restriction officer, the "Fee Waiver" letter would not be applicable for this contact case.

Hope you have quiet evening.

Best,
Andrew

To:	DNPAO Comm TA (CDC)
Subject:	Reminder -- Register for Feb 13 Comm Networking Call: Using Audience Research to Inform Communication Activities
Date:	Tuesday, February 11, 2020 2:49:01 PM

Dear State and Community Health Media/Communication Contacts,

This is a reminder of our next communication networking call on **Thursday, February 13 at 2:00pm ET**. We will share new audience research and discuss how you can use in your communication activities.

You must register using the link provided below to get the webinar log-on details. Details on how to join will come in a separate email.

Warm regards,
DNPAO Strategic Communication Team
DNPAOCommTA@cdc.gov

Please join CDC's Division of Nutrition, Physical Activity, and Obesity for the following Networking Call:

"Using Audience Research to Inform Communication Activities"

Thursday, February 13, 2020
2:00-3:30 pm EDT

Who should participate?

Principal Investigators, Program Managers, communication staff, and other interested staff
**Principal Investigators – please forward this invitation to other staff working on communication activities.*

How do I connect?

Participants must register for this event.

Let us know if you have any accessibility accommodations (e.g., captioning) by February 11.

What will the networking call cover?

AMERICAN OVERSIGHT

The networking call will cover:

- Audience research findings conducted by CDC's Division of Nutrition, Physical Activity, and Obesity
- Ways state and local public health programs can apply the audience research to their work

Who are the presenters and panelists?

Presenters and panelists will include recipients along with staff and contractors from CDC/DNPAO's Strategic Communication Team.

- Suzi Gates, DNPAO Strategic Communication Team
- Shea Van Horn, FHI 360 Contractor, DNPAO Strategic Communication Team
- Rebecca Ledsky, FHI 360 Contractor, DNPAO Strategic Communication Team
- Thomas Lehman, FHI 360 Contractor, DNPAO Strategic Communication Team
- Maureen Spence, New York State Department of Health
- Jasmine Deskins, Marion County Public Health Department
- Emily DeWitt, University of Kentucky

Hints and reminders for the event

1. Register to get event login details.
2. Check your connection and Adobe Connect access the day before the session.
3. Contact your organization's IT staff if you have trouble accessing Adobe Connect.
4. Visit Adobe Connect Support if you need help.
5. Log onto **Adobe Connect (website)** and **phone** line 10 minutes before the start time.

Subject: Reminder: COVID-19 Call Today, 1:45 PM EST
Date: Friday, February 14, 2020 12:37:47 PM

Just a reminder if you haven't registered for today's COVID-19 federal update call:

Please join us for a national briefing call **TODAY, Friday, February 14 at 1:45 p.m. Eastern Time** on the President's Coronavirus Task Force **(Please register, see link below).** The national briefing call will include updates from the U.S. Department of Health & Human Services and Centers for Disease Control & Prevention (CDC) along with our Federal partners at U.S. Department of Homeland Security, U.S. Department of Transportation, and the State Department. This national briefing call will provide an update from the Federal government and our ongoing partnership with State and local jurisdictions.

Additional Information

- You can find more information and resources at the CDC website here: https://www.cdc.gov/coronavirus/.
- **NEW: Excerpts from Secretary Azar's interviews with CNN and CNBC**

Briefing Call Details
Date: Friday, February 14
Time: 1:45 p.m. Eastern Time
Call-In Information: LINK *(Participants will receive instructions on accessing the conference after RSVPing to the link)*

What The Admin Is Saying | HHS Secretary Alex Azar Discusses the Coronavirus on CNN and CNBC

Secretary Azar provided an update on the coronavirus and the administration's aggressive efforts to protect the health and safety of Americans.

PROTECTING THE HEALTH AND SAFETY OF THE AMERICAN PEOPLE

AZAR: "We're working aggressively across the whole of government to protect the health and safety of the American people and using the time that we have bought through our very aggressive, multilayered approaches of public health to prepare."

AZAR: "This is about protecting America's borders and allowing us the time to continue our proactive preparations."

AZAR: "People who are not U.S. citizens or permanent residents of the United States may not enter the United States if they have been in China in the previous 14 days.

AMERICAN OVERSIGHT

Once they've been out of China for that 14-day incubation period, they are welcome as always into the United States."

AZAR: "Americans coming back who have been in China in the previous 14 days, we ask them to both funnel to 11 airport ports of entry where they can be inspected, surveilled, and we ask them voluntarily to isolate themselves at home for 14 days. If they've been in the hot zone, which is an increasingly diminishing number of people who've been in Hubei province in the previous 14 days, we will actually quarantine them for that 14-day period."

IDENTIFYING AND MONITORING CASES

AZAR: "We are proactively planning now to prevent further spread in the U.S., but also to conduct aggressive surveillance, to have an early warning system. Our public health system's the best in the world, and it's working. That system is what identified the 15 cases that we have."

AZAR: "The 15 cases that we have were identified by our public health system. We immediately alerted our hospitals, our doctors, our public health departments, of the symptoms and of the connection to China. And so we have been scanning and surveilling from day one on this."

AZAR: "One of the things that we did – the CDC – within a week of getting the genetic sequencing, developed a test, we had a diagnostic there at CDC. We've now deployed that around the country in over 170 public health labs."

AZAR: "We're taking an important measure that we announced yesterday, which is we are using our flu surveillance network in Seattle, San Francisco, L.A., Chicago and New York, where individuals who present with flu-like, or China coronavirus-like symptoms will be tested not just for flu, but also tested for China coronavirus. That way we have an early warning system."

IMPACT WITHIN THE UNITED STATES

AZAR: "The risk to the average American is very low right now. Let's remember, we have 15 confirmed cases here in the United States – all of whom were either traveling in Hubei province, where Wuhan is, or had a direct intimate personal contact with an individual who was there."

AZAR: "They should be more worried about flu and regular cold season, in terms of taking precautions like washing their hands, coughing into their arms, and not touching their face."

AZAR: "So far, we're seeing very limited impact here in the United States, but that could change at any time. We're working to prevent that from happening, to keep that risk low, and we're working to proactively prepare with states, local governments, and the private sector."

AMERICAN OVERSIGHT

COOPERATION WITH CHINA

AZAR: "The World Health Organization must insist that China be transparent and fully cooperative, as they would insist on the United States or any other country."

AZAR: "It is very important that the World Health Organization hold China to account for transparency and cooperation, as they would any other country, including the United States."

AZAR: "The World Health Organization, we believe, has secured agreement to deploy a W.H.O. team with our U.S. public health experts as part of that team. We are ready to go. And we are waiting for final clearance from the Chinese government to make that happen."

AZAR: "We need to get this team that I have offered now for 39 days of CDC experts. We've got to get them into China and they've got to be given access to data, genetic sequences, run the studies to get answers to the key questions."

AZAR: "They have got to be able to work shoulder to shoulder with their Chinese scientific colleagues – looking at raw data, running the studies, looking at genetic sequences, doing the virology and epidemiology that is their mission – or it won't be a useful mission."

Cc:	Reynolds, Steven L. (CDC/DDPHSIS/CSTLTS/OD); Research and Evaluation
Subject:	Reminder: Help CDC Improve its Project Officer Support
Date:	Wednesday, February 5, 2020 10:26:35 AM
Attachments:	Survey Distribution Instructions.pdf

Dear Senior Deputies,

This email is another request for action and a follow-up to the survey launched on Tuesday, January 14th (announcement email is attached). For those of you who have already distributed this evaluation to the appropriate points of contact within your agency, we appreciate your support. At this time we ask that you remind your staff about this survey by simply forwarding the survey invitation to the primary staff working on the select cooperative agreements or grants within your health department.

As a reminder, ASTHO is partnering with the Centers for Disease Control and Prevention (CDC) to evaluate satisfaction with the services and support provided by CDC project officers on select cooperative agreements and grants. CDC management will use the results to identify and implement strategies for improving CDC project officer support to state health departments.

This survey should be completed by health agency staff who work on and serve as the primary point of contact for the CDC project officer for select CDC-funded cooperative agreements or grants (full list of selected cooperative agreements/grants is attached).

Our ask of you: Please remind your staff about this survey by forwarding the survey invitation to the primary staff working on the select cooperative agreements or grants within your health department for their response. The invitation content to request participation is provided below the signature on this email. Feel free to directly forward this email to the intended recipients or create a new outreach message using the content below.

Thank you for your assistance.

EMAIL FOR SURVEY RESPONDENT:

Instructions for survey respondent: The Association of State and Territorial Health Officials

AMERICAN OVERSIGHT

(ASTHO), in partnership with the Centers for Disease Control and Prevention (CDC), Center for State, Tribal, Local, and Territorial Support is administering an assessment to health departments in all 50 states and the District of Columbia related to satisfaction with the services and support provided by CDC project officers.

Results from the assessment will be used by CDC to improve project officer support to state health agencies. Participation is voluntary, and your feedback will inform continued project officer development and training.

In order to participate in this voluntary assessment, please click the hyperlink provided in this email to be redirected to the web-based assessment. The assessment should take no longer than 25 minutes to complete. All responses are immediately saved and can be changed at any time. However, once the assessment is submitted, you will be unable to modify any responses. Also, you are not required to complete the assessment in one sitting. When finished responding to all relevant questions, click the **SUBMIT** button at the end of the assessment to submit your responses.

Information collected will be kept on secure, password protected servers accessible only to ASTHO project team members. All information you provided will be analyzed and reported in the aggregate with no identifying information attached.

Follow this link to the Assessment: Take the Assessment

Please submit responses to this assessment no later than February 27, 2020.

Note: The survey is designed for respondents to consider only one project officer within each selected cooperative agreement and grant. If your agency has more than one project officer for the Cancer Prevention and Control Programs for State, Territorial, and Tribal Organizations (DP17-1701), we invite your agency's appropriate point of contact to complete separate survey entries for each project officer.

Additionally, a few of the HIV, Viral Hepatitis, TB, and STD cooperative agreements have been updated with the current cooperative agreement numbers. The updated names and numbers are in the attached survey distribution instructions. If you already submitted responses under a prior cooperative agreement number you do not need to re-submit.

If you experience problems with the web-based assessment or have any questions, please contact Allen Rakotoniaina at researchandevaluation@astho.org for technical assistance.

Thank you in advance for your participation.

Attachments:	20200208 Enviro Cleaning Recs Final.docx SCTF Talking Points from GMTF 02142020.docx public-health-management-decision-making.pdf

Good Afternoon Dr. Rivkees,

I am following up on a message you recently sent Dr. Montero.

Attached are two documents to address your request. The Global Migration Task Force provided the cleaning guidance. They also provided quarantine-related talking points. Please feel free to use the talking points in conjunction with the hotel cleaning guidance as appropriate.

I have also included a document that was recently added to the CDC guidance documents that helps in the assessment of a travelers risk for developing infection. The newest guidance documents are highlighted in the "What's New" section at the following CDC website https://www.cdc.gov/coronavirus/2019-ncov/index.html .

Please let me know if we can be of further assistance.

Subject: Revised Agenda: ECHCC General Coalition Meeting

AMERICAN OVERSIGHT

Date:	Wednesday, February 12, 2020 9:47:26 AM
Attachments:	AGENDA 2 13 2020.docx
Importance:	High

On behalf of Ann Hill, please see the revised agenda for the ECHCC General Coalition Meeting.

From: Ann Hill <ann.echcc@gmail.com>
Sent: Wednesday, February 12, 2020 8:28 AM
Subject: ECHCC General Coalition Meeting

Good morning
this will serve as a reminder that there is NO general coalition meeting today in Washington County
The meeting is scheduled for tomorrow THURSDAY FEBRUARY 13 at the coalition offices located at 755 Lovejoy Road, Ft Walton Beach, FL atm 10:00 am CST

We will have items on display to view, a board to suggest requested trainings, an inventory list that the coalition has on hand for distribution during disasters or affiliated events, speakers on Cyber Security, Lean on Me Project, Training and Exercises, report on Influenza and coronavirus, and more

Please make every attempt to appear in person or send someone from your agency if you are busy. Come see the new training room improvements and learn how to use this facility for your meetings.

Agenda is attached for the meeting - at the top, there is the call-in information
Also, remember that this Friday is the deadline for submitting your project ideas to the coalition

Thank you

--

Subject: Revised Agenda: ECHCC General Coalition Meeting

AMERICAN OVERSIGHT

Date:	Wednesday, February 12, 2020 9:47:21 AM
Attachments:	AGENDA 2 13 2020.docx
Importance:	High

On behalf of Ann Hill, please see the revised agenda for the ECHCC General Coalition Meeting.

From: Ann Hill <ann.echcc@gmail.com>
Sent: Wednesday, February 12, 2020 8:28 AM
Subject: ECHCC General Coalition Meeting

Good morning
this will serve as a reminder that there is NO general coalition meeting today in Washington County
The meeting is scheduled for tomorrow THURSDAY FEBRUARY 13 at the coalition offices located at 755 Lovejoy Road, Ft Walton Beach, FL atm 10:00 am CST

We will have items on display to view, a board to suggest requested trainings, an inventory list that the coalition has on hand for distribution during disasters or affiliated events, speakers on Cyber Security, Lean on Me Project, Training and Exercises, report on Influenza and coronavirus, and more

Please make every attempt to appear in person or send someone from your agency if you are busy. Come see the new training room improvements and learn how to use this facility for your meetings.

Agenda is attached for the meeting - at the top, there is the call-in information
Also, remember that this Friday is the deadline for submitting your project ideas to the coalition

Thank you

--

Ann Hill, Executive Director
Emerald Coast Healthcare Coalition
850-585-1679

Subject:	Save-The-Date: PHHSBG Advisory Committee Meeting / Webinar

Greetings Preventive Health and Health Services Block Grant Advisory Committee Members,

Please Save-The-Date on your calendars for the next Advisory Committee Meeting to be held Friday, April 24, 2020 from 10:00 A.M – 11:30 A.M. Agenda forthcoming.

The purpose of this meeting is to:

- Discuss the FY 2019-2020 workplan (Public Health Dental Program, Violence and Injury Prevention Program and Chronic Disease Prevention).
- Share updates from the Centers for Disease Control and Prevention

The Florida Department of Health is required to keep record of external membership annually.

For external partners, if you have not done so, please complete the application for membership at this link:
https://apps.floridahealth.gov/bcquestionnaire/

Please do not hesitate to contact our office if you have any questions.

Please be advised, meeting date and time are subject to change based on Covid-19 response efforts. We will keep you updated should any changes occur.

Please join my meeting from your computer, tablet or smartphone.

Subject:	Senior Administration Officials Briefing Call on COVID-19 // Regarding President Trump issuing proclamation under section 212(f) of the Immigration and Nationality Act (INA), restricting travel
Attachments:	image001.png image002.png image003.png image004.png image005.png image006.png

State and Local Leaders,

On Thursday, March 12, at 2:00 p.m. Eastern Time, please join Senior Administration Officials for a briefing call on COVID-19 (coronavirus) regarding President Trump issuing a proclamation under section 212(f) of the Immigration and Nationality Act (INA) to restrict travel to the United States from foreign nationals who have recently been in certain European countries. Additional details can be found below. We will also provide an update on implementing mitigation strategies for communities with local COVID-transmission (A Framework for Mitigation: Implementation of Mitigation Strategies for Communities with Local COVID-19 Transmission <https://www.cdc.gov/coronavirus/2019-ncov/downloads/community-mitigation-strategy.pdf>).

Briefing Call Registration on 212(f) & Community Mitigation Strategies

* Date: Today, Thursday, March 12
* Time: 2:00 PM ET (please note time zone)
* Call-In Registration: CLICK HERE <https://ems9.intellor.com/?do=register&t=1&p=901287>
* Note: You must RSVP to join the call. Upon successful registration, you will receive dial-in details to the email address you use to register. Note that multiple people cannot dial-in using the same registration information.

Below, please find additional information. The White House Office of Intergovernmental Affairs (WH IGA) will continue to share pertinent information as it becomes available. Please do not hesitate to reach out to our office directly if we can be of assistance.

Sincerely,

Zach

The White House Office of Intergovernmental Affairs

Zach Swint

Office of Intergovernmental Affairs

President Donald J. Trump Has Taken Unprecedented Steps to Respond to The Coronavirus and Protect the Health and Safety Of Americans

AMERICAN OVERSIGHT

"Together we are putting into policy a plan to prevent, detect, treat and create a vaccine against coronavirus to save lives in America and the world. America will get it done!" – President Donald J. Trump

President Donald J. Trump signed a Presidential Proclamation, which suspends the entry of most foreign nationals who have been in certain European countries at any point during the 14 days prior to their scheduled arrival to the United States. These countries, known as the Schengen Area, include: Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and Switzerland. This does not apply to legal permanent residents, (generally) immediate family members of U.S. citizens, and other individuals who are identified in the proclamation.

Statement from DHS Acting Secretary Chad F. Wolf: "Protecting the American people from threats to their safety is the most important job of the President of the United States. The actions President Trump is taking to deny entry to foreign nationals who have been in affected areas will keep Americans safe and save American lives. I applaud the president for making this tough but necessary decision. While these new travel restrictions will be disruptive to some travelers, this decisive action is needed to protect the American public from further exposure to the potentially deadly coronavirus. In January and February, the Administration issued similar travel restrictions on individuals who had been in China and Iran. That action proved to be effective in slowing the spread of the virus to the U.S., while public health officials prepared. In the next 48 hours, in the interest of public health, I intend to issue a supplemental Notice of Arrivals Restriction requiring U.S. passengers that have been in the Schengen Area to travel through select airports where the U.S. Government has implemented enhanced screening procedures."

RESTRICTING TRAVEL FROM IMPACTED AREAS: President Donald J. Trump is taking further action to curb the spread of the coronavirus to the United States from other countries.

* President Trump is issuing a proclamation under section 212(f) of the Immigration and Nationality Act (INA) to restrict travel to the United States from foreign nationals who have recently been in certain European countries.

* Section 212(f) of the INA only applies to the movement of human beings, not goods or cargo.

* The restriction applies to foreign nationals who have been in the Schengen Area, 26 countries in Europe with open borders agreements, in the last 14 days.
* Those who are exempt from these restrictions, such as American citizens, will be directed to a limited number of airports where screening can take place.
* There is extensive travel back and forth between Europe that heightens the risk here in the United States.

LOOKING OUT FOR AMERICAN BUSINESSES AND WORKERS: President Donald J. Trump is committed to protecting American businesses and workers from the impacts of coronavirus.

* The President is announcing an economic assistance package to help support businesses and workers who have been harmed by this outbreak.
* President Trump has instructed the Small Business Administration (SBA) to exercise available authority to provide loans to businesses affected by the coronavirus.

* These loans will help overcome disruptions caused by the coronavirus.
* The President is calling on Congress to increase funding for this program by an additional $50 billion.

* The President will be instructing the Department of the Treasury to defer tax payments for certain individuals and businesses negatively impacted by the coronavirus.

* This action will provide more than $200 billion of additional liquidity to the economy.

* President Trump is calling on Congress to immediately pass payroll tax relief.
* The President announced that he will soon be taking emergency action to provide financial relief for workers who are ill, quarantined, or caring for others due to the coronavirus.

* The President also called on Congress to take action to extend this relief for workers.

LEADING AN AGGRESSIVE, WHOLE-OF-GOVERNMENT APPROACH: President Trump has taken unprecedented steps to protect the health of Americans in response to the coronavirus.

* The President is leveraging all of our resources to respond to the coronavirus, bringing together government and private industry in a collaborative response.
* The Trump Administration declared a public health emergency in January to bolster response efforts.
* President Trump took early action to help curb the spread of the virus from other countries to the United States, providing important time for response and preparations.

* In January, President Trump acted quickly to restrict travel from foreign nationals traveling from China.
* In February, the President restricted travel for individuals recently traveling from Iran.
* The Administration put into place mandatory screening for all travelers coming into the country from Italy and South Korea.
* Travel advisories for severely impacted areas like Italy and South Korea have been raised to their highest level.

* Today, the President directed his Administration to make general-use face masks available to our healthcare workers.

* The Administration's actions will help make millions of general-use respirators available to keep healthcare workers safe and mitigate transmission of the virus.

AMERICAN OVERSIGHT

* President Trump signed into law more than $8 billion to fund response efforts.
* The Administration has taken bold steps to incentivize the development of therapeutics and vaccines to treat and prevent the spread of the coronavirus.
* Working across the public and private sectors, the Trump Administration continues to drastically expand testing capacity.

* More than 1 million tests have been distributed nationwide, with another 4 million tests being shipped out by the end of the week.
* Testing is now available in every State lab in the country and commercial labs are now deploying tests, which will help generate a dramatic increase in availability.

* The Trump Administration has released guidance on how to keep businesses, schools, community gathering places, and families safe.

* From the start, President Trump has made keeping the public informed a top priority.

* The Administration has announced that health plans with health savings accounts will be able to cover coronavirus testing and treatment without co-payments.

ICYMI | Vice President Pence Discusses the Coronavirus Response on the Morning Shows

---

Earlier this morning, Vice President Pence joined Good Morning America, The Today Show, Fox & Friends, New Day, and CBS This Morning to discuss the steps that this administration is taking to combat the coronavirus.

ON ABC's GOOD MORNING AMERICA

WATCH HERE. <https://grabien.com/getmedia.php?id=856365&key=8a068e0e7ba2ceda6bd6ed7452ddb3de>

From very early on, President Trump took decisive action to put the health of the American people first.

"We all have known from the beginning that the coronavirus would continue to spread across this country, and it's one of the reasons why, from very early on, President Trump took decisive action to put the health of the American people first, not only declaring a public health emergency in January, but in that same month he suspended all travel from China -- an unprecedented move -- and quarantined Americans that were returning from the region. Since that time, George, we've -- we've issued travel advisories for areas of South Korea, Italy; screened all persons coming on direct flights. But, frankly, as we watched the epicenter of the coronavirus shift from China and South Korea to Europe, the President thought it was proper for us to impose a 30-day suspension on all travel from continental Europe."

The President, again, made another unprecedented decision in suspending all travel from Europe, because we want to stop the flow of people bringing the coronavirus here.

"The reality is that, really, just two weeks ago, in Italy, there were less than 500 cases and now there's 12,000 cases in Italy, George. We have tens of thousands of people that travel to the United States from Europe every day. Seventy percent of new cases in the world were in Europe. And when we looked yesterday at the -- what was then the 35 states where we had cases, about 30 of them could be traced to contacts with Europe. And so the President, again, made another unprecedented decision in suspending all travel from Europe, because we essentially want -- we essentially want to stop the flow of people bringing the coronavirus here, but then continuing to surge resources, particularly into California, Washington State, New York, and other communities where we've seen community spread. It's a combination of efforts that's being driven by the top health experts in the world on our task force. But the President -- the President showed again yesterday a willingness to take decisive action on multiple levels to protect the American people."

We want to send a very clear message to Americans that if for any reason you believe you've been exposed to the coronavirus, you should not be worried about the cost of testing or treatment.

"We're making steady progress. We're going to continue to make a very clear message to Americans that if for any reason you believe you've been exposed to the coronavirus or you have symptoms, we don't want people to be worried about the cost of testing, to be worried about the cost of treatment… As the President made clear last night, we're working with Congress and exploring actions the President can take to make sure that hourly wage earners know that you can stay home without risking losing a paycheck or losing your job if you feel if you feel that you've been exposed to the coronavirus."

ON NBC's TODAY SHOW

WATCH HERE <https://grabien.com/getmedia.php?id=856357&key=57d8648a9738379794d8d7cc05271db7> .

From early on in this effort, we have addressed the testing issue. We made changes through the FDA that allowed for state labs and hospitals to engage in testing.

"From early on in this effort we've been addressing the testing issue. We made changes through the FDA that allowed for state labs and university hospitals and hospitals to engage in testing. And I'm pleased to report every state lab in America can do testing now. Many university laboratories are doing it. Washington State – the University of Washington is doing extraordinary work. but we are literally working hour by hour to expand the testing and we think the key Savannah is going to be what we call commercial laboratories like LabCorp and Quest who are already spinning up production at the president's direction last week on tests that can be available on a broad basis in the days ahead for the American people. we're making real progress but rest assured we're going to continue to drive forward."

The American people should know that President Trump has no higher priority than the health, safety and well-being of the American people.

"The American people should know that President Trump has no higher priority than the health and safety and wellbeing of the people in this country.

AMERICAN OVERSIGHT

You can go to coronavirus.gov right now to find out what every American can do to keep yourself, your family, your workplace and your school safe. But you can rest assured we're going to focus on communities where we've had community spread, and the President's action yesterday suspending travel from Europe is one more example of how he's putting the health of America first."

ON FOX NEWS' FOX & FRIENDS

WATCH HERE <https://grabien.com/getmedia.php?id=856379&key=cb1ba3743718e73a552d06d4ad66a617> AND HERE <https://grabien.com/getmedia.php?id=856383&key=9e8d30fd728e132040b652f01534deb4> .

The President has called this a whole-of-government approach, but he has also called this is a whole-of-America approach.

"The President, you know, he said this was a whole-of-government approach but he also said this is a whole-of-America approach. So he's brought in business leaders from nursing homes; yesterday, banking; hospitals, and the rest. But one of the things we did that's most important on testing was the President brought in the leaders of the top commercial laboratories in the country who, as we speak, have already approved a test that is being spun up. It's being sent out to market. Quest, LabCorp, the largest commercial laboratories in the country, are working very closely with our administration. We're clearing the red tape out of the way. That's going to be the way that, in the days ahead, we're going to -- we're going to have broad-based testing available all across the country."

We are working together to contain the spread of the coronavirus. And we will get through this.

"Our goal, as the coronavirus spreads in this country -- and the vast majority who would contract it will have flu-like symptoms and recover. Our goal nonetheless is to hold down that overall number as much as possible. And we will do that with the continuing cooperation of American families, schools, businesses, and states. And that's the vision President Trump has. All of us working together will get through this."

We are focusing on supporting efforts at the state and local level in Washington State, and in California. CDC issued strong guidelines for those communities about public activities, large gatherings and at schools. We will continue simply to follow the data on this.

"Make no mistake about it: We are also focusing on supporting efforts at the state and local level in California, in Washington State, and in California. CDC issued very strong guidelines for those communities about public activities, large gatherings, schools. And we'll continue simply to follow the data on this and make strong recommendations where we have what's known as "community spread. But for every American, right now, as the President said last night, it's a good time to use common sense. Wash your hands often. Clean, you know, often-used surfaces. All that information is available at Coronavirus.gov. So we're going to try and mitigate the spread in this country but also prevent, through the President's decisive action last night, people from bringing the coronavirus into the United States any further from Europe."

We are encouraging best practices for every American. We are focusing on communities where we have community spread.

"I want to say to your viewers, just as the President said last night, the risk to the average American of contracting the coronavirus remains low, but we do know that seniors with serious underlying chronic health conditions are particularly vulnerable to very serious outcomes. And so we're encouraging best practices for every American. We're focusing on communities where we have community spread."

Those with a family member who is a senior citizen should support them in engaging in good hygiene and good health practices.

"For any American that's watching today that has a family member or a loved one who's a senior citizen with a serious underlying health condition, this is a very good time to help and to support them to be able to avoid public places, and everyone around them to engage in good hygiene and good practices to protect those that are most vulnerable."

ON CNN's NEW DAY

WATCH HERE <https://grabien.com/getmedia.php?id=856387&key=11a16cd41a35ed71b5740a5915232784> AND HERE <https://grabien.com/getmedia.php?id=856391&key=8c259b68ce8df48e55ad39eaae2c0b4a> .

We have been meeting with industry leaders in one relevant industry after another to ensure that the full resources of America are being brought to bear.

"We're not doing a travel ban as our strategy. The suspending all travel for 30 days from Europe is a part of the strategy. The other part is an aggressive mitigation strategy. I spoke to the governors of New York, Washington State, and California tomorrow -- or yesterday. CDC issued strong guidance to those areas where we have community spread. We've flowed resources. We've flowed support to those areas. And so it's a combination of strategies that the President has employed here. As he says, it's "all hands on deck," "a whole-of-government approach," but it's also a whole-of-America approach. We've literally been meeting with industry leaders in one relevant industry after another to ensure that the full resources of America are being brought to bear."

Any American who is concerned about being exposed to the coronavirus, should call their doctor and get tested.

"Anyone who's looking on today who might be concerned that they were exposed to coronavirus or have symptoms should call their doctor. Their doctor, with any question, can call their state laboratory and be able to find out how they can have a test processed."

We are making steady progress. We don't want anybody to avoid having a test because they are concerned financially.

"But make no mistake about it: We're making steady progress. We've made changes at the FDA in January, at the President's direction. And the American people can be confident we're going to continue to roll out the test. And maybe most significant on that score is that the President brought health insurance companies in last week and they all agreed to waive the co-pays on testing. We expanded testing to Medicare and Medicaid patients. And we also expanded coverage for treatment, and health insurance companies expanded coverage for treatment. We don't want anybody to avoid having a test because they're concerned financially."

The risk to the average American remains low.

"I want people to know that the risk to contracting the coronavirus, according to all of our experts, for the average American remains low. Most people that contract it, will have flu-like symptoms and recover."

AMERICAN OVERSIGHT

ON CBS This Morning

WATCH HERE <https://grabien.com/getmedia.php?id=856403&key=076e051c5bee0accd97969ffc61e1e8a> .

We are going to continue to put in every effort in place to protect the health and safety of the American people.

"The President took the unprecedented step of suspending all travel from China which was the originating country of this virus. We also established travel advisories, and we've been screening passengers on all direct flights from South Korea and Italy. But with the epicenter of this epidemic now moving from China and South Korea to Europe, yesterday the President again took the unprecedented step of suspending all travel from Europe for the next 30 days, and that in combination with our strong mitigation efforts in communities that are experiencing what our experts call community spread, areas of California, Washington State, and New York, we're going to continue to put every effort at home and with regard to these travel restrictions in place to protect the health and safety of the American people."

In the days ahead, we are going to continue to see the availability of tests at your local doctor and your local pharmacy expand.

"Testing is happening in every state lab in the country. Many university hospitals have taken the FDA test, like the University of Washington, is doing a great job expanding testing capabilities. But the biggest piece on the testing is that our commercial labs that the President brought in last week, companies like Quest and LabCorp, have already had approved a new test that they several days ago had begun to take to market which they can do in a vast and expansive way across the country. And literally in the days ahead, we're going to continue to see the availability of tests at your local doctor, ultimately at your local pharmacy, continue to expand."

When President Trump learned that 70% of the new cases this week, around the world, were in Europe, he took decisive action to protect the American people.

"Make no mistake about it: All the new cases in the world, this week, 70% of the new cases were in Europe. And the increase has been dramatic. When the President imposed the travel advisory and we began screening all flights, all passengers coming into the United States from Italy two weeks ago, there were roughly 500 coronavirus cases. Now there's 12,000, about 1,000 in Germany, about 1,000 in France. That's the reason why the President essentially said full stop, we're going to suspend all travel, and that American citizens coming home and legal residents will be funneled through 13 different airports. They'll get an initial health screening coming in. But we're going to ask everyone returning to our country to self-quarantine for 14 days."

Subject:	Senior Administration Officials Briefing Call on COVID-19 // Regarding President Trump issuing proclamation under section 212(f) of the Immigration and Nationality Act (INA), restricting travel
Attachments:	image001.png image002.png image003.png image004.png image005.png image006.png

State and Local Leaders,

On Thursday, March 12, at 2:00 p.m. Eastern Time, please join Senior Administration Officials for a briefing call on COVID-19 (coronavirus) regarding President Trump issuing a proclamation under section 212(f) of the Immigration and Nationality Act (INA) to restrict travel to the United States from foreign nationals who have recently been in certain European countries. Additional details can be found below. We will also provide an update on implementing mitigation strategies for communities with local COVID-transmission (A Framework for Mitigation: Implementation of Mitigation Strategies for Communities with Local COVID-19 Transmission <https://www.cdc.gov/coronavirus/2019-ncov/downloads/community-mitigation-strategy.pdf>).

Briefing Call Registration on 212(f) & Community Mitigation Strategies

* Date: Today, Thursday, March 12
* Time: 2:00 PM ET (please note time zone)
* Call-In Registration: CLICK HERE <https://ems9.intellor.com/?do=register&t=1&p=901287>
* Note: You must RSVP to join the call. Upon successful registration, you will receive dial-in details to the email address you use to register. Note that multiple people cannot dial-in using the same registration information.

Below, please find additional information. The White House Office of Intergovernmental Affairs (WH IGA) will continue to share pertinent information as it becomes available. Please do not hesitate to reach out to our office directly if we can be of assistance.

Sincerely,

Zach

The White House Office of Intergovernmental Affairs

Zach Swint

Office of Intergovernmental Affairs

President Donald J. Trump Has Taken Unprecedented Steps to Respond to The Coronavirus and Protect the Health and Safety Of Americans

AMERICAN OVERSIGHT

"Together we are putting into policy a plan to prevent, detect, treat and create a vaccine against coronavirus to save lives in America and the world. America will get it done!" – President Donald J. Trump

President Donald J. Trump signed a Presidential Proclamation, which suspends the entry of most foreign nationals who have been in certain European countries at any point during the 14 days prior to their scheduled arrival to the United States. These countries, known as the Schengen Area, include: Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and Switzerland. This does not apply to legal permanent residents, (generally) immediate family members of U.S. citizens, and other individuals who are identified in the proclamation.

Statement from DHS Acting Secretary Chad F. Wolf: "Protecting the American people from threats to their safety is the most important job of the President of the United States. The actions President Trump is taking to deny entry to foreign nationals who have been in affected areas will keep Americans safe and save American lives. I applaud the president for making this tough but necessary decision. While these new travel restrictions will be disruptive to some travelers, this decisive action is needed to protect the American public from further exposure to the potentially deadly coronavirus. In January and February, the Administration issued similar travel restrictions on individuals who had been in China and Iran. That action proved to be effective in slowing the spread of the virus to the U.S., while public health officials prepared. In the next 48 hours, in the interest of public health, I intend to issue a supplemental Notice of Arrivals Restriction requiring U.S. passengers that have been in the Schengen Area to travel through select airports where the U.S. Government has implemented enhanced screening procedures."

RESTRICTING TRAVEL FROM IMPACTED AREAS: President Donald J. Trump is taking further action to curb the spread of the coronavirus to the United States from other countries.

* President Trump is issuing a proclamation under section 212(f) of the Immigration and Nationality Act (INA) to restrict travel to the United States from foreign nationals who have recently been in certain European countries.

* Section 212(f) of the INA only applies to the movement of human beings, not goods or cargo.

* The restriction applies to foreign nationals who have been in the Schengen Area, 26 countries in Europe with open borders agreements, in the last 14 days.
* Those who are exempt from these restrictions, such as American citizens, will be directed to a limited number of airports where screening can take place.
* There is extensive travel back and forth between Europe that heightens the risk here in the United States.

LOOKING OUT FOR AMERICAN BUSINESSES AND WORKERS: President Donald J. Trump is committed to protecting American businesses and workers from the impacts of coronavirus.

* The President is announcing an economic assistance package to help support businesses and workers who have been harmed by this outbreak.
* President Trump has instructed the Small Business Administration (SBA) to exercise available authority to provide loans to businesses affected by the coronavirus.

* These loans will help overcome disruptions caused by the coronavirus.
* The President is calling on Congress to increase funding for this program by an additional $50 billion.

* The President will be instructing the Department of the Treasury to defer tax payments for certain individuals and businesses negatively impacted by the coronavirus.

* This action will provide more than $200 billion of additional liquidity to the economy.

* President Trump is calling on Congress to immediately pass payroll tax relief.
* The President announced that he will soon be taking emergency action to provide financial relief for workers who are ill, quarantined, or caring for others due to the coronavirus.

* The President also called on Congress to take action to extend this relief for workers.

LEADING AN AGGRESSIVE, WHOLE-OF-GOVERNMENT APPROACH: President Trump has taken unprecedented steps to protect the health of Americans in response to the coronavirus.

* The President is leveraging all of our resources to respond to the coronavirus, bringing together government and private industry in a collaborative response.
* The Trump Administration declared a public health emergency in January to bolster response efforts.
* President Trump took early action to help curb the spread of the virus from other countries to the United States, providing important time for response and preparations.

* In January, President Trump acted quickly to restrict travel from foreign nationals traveling from China.
* In February, the President restricted travel for individuals recently traveling from Iran.
* The Administration put into place mandatory screening for all travelers coming into the country from Italy and South Korea.
* Travel advisories for severely impacted areas like Italy and South Korea have been raised to their highest level.

* Today, the President directed his Administration to make general-use face masks available to our healthcare workers.

* The Administration's actions will help make millions of general-use respirators available to keep healthcare workers safe and mitigate transmission of the virus.

AMERICAN OVERSIGHT

* President Trump signed into law more than $8 billion to fund response efforts.
* The Administration has taken bold steps to incentivize the development of therapeutics and vaccines to treat and prevent the spread of the coronavirus.
* Working across the public and private sectors, the Trump Administration continues to drastically expand testing capacity.

* More than 1 million tests have been distributed nationwide, with another 4 million tests being shipped out by the end of the week.
* Testing is now available in every State lab in the country and commercial labs are now deploying tests, which will help generate a dramatic increase in availability.

* The Trump Administration has released guidance on how to keep businesses, schools, community gathering places, and families safe.

* From the start, President Trump has made keeping the public informed a top priority.

* The Administration has announced that health plans with health savings accounts will be able to cover coronavirus testing and treatment without co-payments.

ICYMI | Vice President Pence Discusses the Coronavirus Response on the Morning Shows

---

Earlier this morning, Vice President Pence joined Good Morning America, The Today Show, Fox & Friends, New Day, and CBS This Morning to discuss the steps that this administration is taking to combat the coronavirus.

ON ABC's GOOD MORNING AMERICA

WATCH HERE. <https://grabien.com/getmedia.php?id=856365&key=8a068e0e7ba2ceda6bd6ed7452ddb3de>

From very early on, President Trump took decisive action to put the health of the American people first.

"We all have known from the beginning that the coronavirus would continue to spread across this country, and it's one of the reasons why, from very early on, President Trump took decisive action to put the health of the American people first, not only declaring a public health emergency in January, but in that same month he suspended all travel from China -- an unprecedented move -- and quarantined Americans that were returning from the region. Since that time, George, we've -- we've issued travel advisories for areas of South Korea, Italy; screened all persons coming on direct flights. But, frankly, as we watched the epicenter of the coronavirus shift from China and South Korea to Europe, the President thought it was proper for us to impose a 30-day suspension on all travel from continental Europe."

The President, again, made another unprecedented decision in suspending all travel from Europe, because we want to stop the flow of people bringing the coronavirus here.

"The reality is that, really, just two weeks ago, in Italy, there were less than 500 cases and now there's 12,000 cases in Italy, George. We have tens of thousands of people that travel to the United States from Europe every day. Seventy percent of new cases in the world were in Europe. And when we looked yesterday at the -- what was then the 35 states where we had cases, about 30 of them could be traced to contacts with Europe. And so the President, again, made another unprecedented decision in suspending all travel from Europe, because we essentially want -- we essentially want to stop the flow of people bringing the coronavirus here, but then continuing to surge resources, particularly into California, Washington State, New York, and other communities where we've seen community spread. It's a combination of efforts that's being driven by the top health experts in the world on our task force. But the President -- the President showed again yesterday a willingness to take decisive action on multiple levels to protect the American people."

We want to send a very clear message to Americans that if for any reason you believe you've been exposed to the coronavirus, you should not be worried about the cost of testing or treatment.

"We're making steady progress. We're going to continue to make a very clear message to Americans that if for any reason you believe you've been exposed to the coronavirus or you have symptoms, we don't want people to be worried about the cost of testing, to be worried about the cost of treatment… As the President made clear last night, we're working with Congress and exploring actions the President can take to make sure that hourly wage earners know that you can stay home without risking losing a paycheck or losing your job if you feel if you feel that you've been exposed to the coronavirus."

ON NBC's TODAY SHOW

WATCH HERE <https://grabien.com/getmedia.php?id=856357&key=57d8648a9738379794d8d7cc05271db7> .

From early on in this effort, we have addressed the testing issue. We made changes through the FDA that allowed for state labs and hospitals to engage in testing.

"From early on in this effort we've been addressing the testing issue. We made changes through the FDA that allowed for state labs and university hospitals and hospitals to engage in testing. And I'm pleased to report every state lab in America can do testing now. Many university laboratories are doing it. Washington State – the University of Washington is doing extraordinary work. but we are literally working hour by hour to expand the testing and we think the key Savannah is going to be what we call commercial laboratories like LabCorp and Quest who are already spinning up production at the president's direction last week on tests that can be available on a broad basis in the days ahead for the American people. we're making real progress but rest assured we're going to continue to drive forward."

The American people should know that President Trump has no higher priority than the health, safety and well-being of the American people.

"The American people should know that President Trump has no higher priority than the health and safety and wellbeing of the people in this country.

AMERICAN OVERSIGHT

You can go to coronavirus.gov right now to find out what every American can do to keep yourself, your family, your workplace and your school safe. But you can rest assured we're going to focus on communities where we've had community spread, and the President's action yesterday suspending travel from Europe is one more example of how he's putting the health of America first."

ON FOX NEWS' FOX & FRIENDS

WATCH HERE <https://grabien.com/getmedia.php?id=856379&key=cb1ba3743718e73a552d06d4ad66a617> AND HERE <https://grabien.com/getmedia.php?id=856383&key=9e8d30fd728e132040b652f01534deb4> .

The President has called this a whole-of-government approach, but he has also called this is a whole-of-America approach.

"The President, you know, he said this was a whole-of-government approach but he also said this is a whole-of-America approach. So he's brought in business leaders from nursing homes; yesterday, banking; hospitals, and the rest. But one of the things we did that's most important on testing was the President brought in the leaders of the top commercial laboratories in the country who, as we speak, have already approved a test that is being spun up. It's being sent out to market. Quest, LabCorp, the largest commercial laboratories in the country, are working very closely with our administration. We're clearing the red tape out of the way. That's going to be the way that, in the days ahead, we're going to -- we're going to have broad-based testing available all across the country."

We are working together to contain the spread of the coronavirus. And we will get through this.

"Our goal, as the coronavirus spreads in this country -- and the vast majority who would contract it will have flu-like symptoms and recover. Our goal nonetheless is to hold down that overall number as much as possible. And we will do that with the continuing cooperation of American families, schools, businesses, and states. And that's the vision President Trump has. All of us working together will get through this."

We are focusing on supporting efforts at the state and local level in Washington State, and in California. CDC issued strong guidelines for those communities about public activities, large gatherings and at schools. We will continue simply to follow the data on this.

"Make no mistake about it: We are also focusing on supporting efforts at the state and local level in California, in Washington State, and in California. CDC issued very strong guidelines for those communities about public activities, large gatherings, schools. And we'll continue simply to follow the data on this and make strong recommendations where we have what's known as "community spread. But for every American, right now, as the President said last night, it's a good time to use common sense. Wash your hands often. Clean, you know, often-used surfaces. All that information is available at Coronavirus.gov. So we're going to try and mitigate the spread in this country but also prevent, through the President's decisive action last night, people from bringing the coronavirus into the United States any further from Europe."

We are encouraging best practices for every American. We are focusing on communities where we have community spread.

"I want to say to your viewers, just as the President said last night, the risk to the average American of contracting the coronavirus remains low, but we do know that seniors with serious underlying chronic health conditions are particularly vulnerable to very serious outcomes. And so we're encouraging best practices for every American. We're focusing on communities where we have community spread."

Those with a family member who is a senior citizen should support them in engaging in good hygiene and good health practices.

"For any American that's watching today that has a family member or a loved one who's a senior citizen with a serious underlying health condition, this is a very good time to help and to support them to be able to avoid public places, and everyone around them to engage in good hygiene and good practices to protect those that are most vulnerable."

ON CNN's NEW DAY

WATCH HERE <https://grabien.com/getmedia.php?id=856387&key=11a16cd41a35ed71b5740a5915232784> AND HERE <https://grabien.com/getmedia.php?id=856391&key=8c259b68ce8df48e55ad39eaae2c0b4a> .

We have been meeting with industry leaders in one relevant industry after another to ensure that the full resources of America are being brought to bear.

"We're not doing a travel ban as our strategy. The suspending all travel for 30 days from Europe is a part of the strategy. The other part is an aggressive mitigation strategy. I spoke to the governors of New York, Washington State, and California tomorrow -- or yesterday. CDC issued strong guidance to those areas where we have community spread. We've flowed resources. We've flowed support to those areas. And so it's a combination of strategies that the President has employed here. As he says, it's "all hands on deck," "a whole-of-government approach," but it's also a whole-of-America approach. We've literally been meeting with industry leaders in one relevant industry after another to ensure that the full resources of America are being brought to bear."

Any American who is concerned about being exposed to the coronavirus, should call their doctor and get tested.

"Anyone who's looking on today who might be concerned that they were exposed to coronavirus or have symptoms should call their doctor. Their doctor, with any question, can call their state laboratory and be able to find out how they can have a test processed."

We are making steady progress. We don't want anybody to avoid having a test because they are concerned financially.

"But make no mistake about it: We're making steady progress. We've made changes at the FDA in January, at the President's direction. And the American people can be confident we're going to continue to roll out the test. And maybe most significant on that score is that the President brought health insurance companies in last week and they all agreed to waive the co-pays on testing. We expanded testing to Medicare and Medicaid patients. And we also expanded coverage for treatment, and health insurance companies expanded coverage for treatment. We don't want anybody to avoid having a test because they're concerned financially."

The risk to the average American remains low.

"I want people to know that the risk to contracting the coronavirus, according to all of our experts, for the average American remains low. Most people that contract it, will have flu-like symptoms and recover."

AMERICAN OVERSIGHT

ON CBS This Morning

WATCH HERE <https://grabien.com/getmedia.php?id=856403&key=076e051c5bee0accd97969ffc61e1e8a> .

We are going to continue to put in every effort in place to protect the health and safety of the American people.

"The President took the unprecedented step of suspending all travel from China which was the originating country of this virus. We also established travel advisories, and we've been screening passengers on all direct flights from South Korea and Italy. But with the epicenter of this epidemic now moving from China and South Korea to Europe, yesterday the President again took the unprecedented step of suspending all travel from Europe for the next 30 days, and that in combination with our strong mitigation efforts in communities that are experiencing what our experts call community spread, areas of California, Washington State, and New York, we're going to continue to put every effort at home and with regard to these travel restrictions in place to protect the health and safety of the American people."

In the days ahead, we are going to continue to see the availability of tests at your local doctor and your local pharmacy expand.

"Testing is happening in every state lab in the country. Many university hospitals have taken the FDA test, like the University of Washington, is doing a great job expanding testing capabilities. But the biggest piece on the testing is that our commercial labs that the President brought in last week, companies like Quest and LabCorp, have already had approved a new test that they several days ago had begun to take to market which they can do in a vast and expansive way across the country. And literally in the days ahead, we're going to continue to see the availability of tests at your local doctor, ultimately at your local pharmacy, continue to expand."

When President Trump learned that 70% of the new cases this week, around the world, were in Europe, he took decisive action to protect the American people.

"Make no mistake about it: All the new cases in the world, this week, 70% of the new cases were in Europe. And the increase has been dramatic. When the President imposed the travel advisory and we began screening all flights, all passengers coming into the United States from Italy two weeks ago, there were roughly 500 coronavirus cases. Now there's 12,000, about 1,000 in Germany, about 1,000 in France. That's the reason why the President essentially said full stop, we're going to suspend all travel, and that American citizens coming home and legal residents will be funneled through 13 different airports. They'll get an initial health screening coming in. But we're going to ask everyone returning to our country to self-quarantine for 14 days."

Subject: Sentinel Chicken Program Important Update

Date: Thursday, March 12, 2020 12:05:45 PM

Good Morning Sentinel Chicken Program Participants,

Our laboratory and epidemiology leadership have decided to suspend Sentinel Chicken Testing effective immediately. At this time, all personnel are need to help perform COVID-19 testing. For the next seven weeks or until further notice, we will not be performing HAI, ELISA, PRNT, and mosquito pool testing. Specimens received today or tomorrow will not be processed. Please send me an e-mail so that I know what you would like us to do with those specimens. We will notify you when we are able to resume testing.

Reports:

1. This Friday, March 13, 2020 the regular HAI report will be e-mailed.
2. Tuesday, March 17, 2020 the IgM ELISA report will be e-mailed.
3. Wednesday, March 18, 2020 the PRNT report (for February specimens) will be e-mailed.

AMERICAN OVERSIGHT

Please understand that we are doing what is best to promote, protect, and improve the health of all people in the state. Please contact me, if you have any questions or concerns.

Thank you,

Maribel

AMERICAN OVERSIGHT

From:	Pritchard, Scott
To:	Rico, Edhelene; Mejia-Echeverry, Alvaro; Jean, Reynald
Cc:	Schmitz, Ann; Villalta, Yesenia D; Blackmore, Carina; Moran, Susan O Col USAF SOUTHCOM SC-CC (USA)
Subject:	SouthCom COVID Exposures
Date:	Thursday, March 12, 2020 5:46:24 PM

Good Afternoon,
Dr. Susan Moran (305-437-1327 and copied) from Southcom reached out to me. She is leading a contact investigation of a reportedly positive COVID-19 case that visited the facility on Sunday. She is currently stratifying risk for around 97 persons. Est 10-20 may be medium risk. During our discussion we developed a plan that I think meets all of our needs.

- Southcom will plan to monitor all medium risk enlisted persons and only reach out if they have persons that need testing.
- They will also, develop a list of medium risk civilians with contact information, and provide to Miami-Dade CHD and you can notify other counties as needed by residence to monitor those folks.
- They will educate all low risk and ask that they call them if they develop illness they will triage and report as needed.

Her colleague Dr. Alexis Bowers(sp?) is also involved and can be reached at 305-437-3916.

Thank you!

Scott Pritchard, MPH

AMERICAN OVERSIGHT

From: Pathology (CDC)
To: BPHL13FL@flhealth.gov
Cc: jchapman@med.miami.edu; Elesi.Quave@flhealth.gov; Stanek, Danielle (CDC/flhealth.gov); Blackmore, Carina (CDC/flhealth.gov); Edhelene.Rico@flhealth.gov; Alvaro.Mejia-Echeverry@flhealth.gov; pedro.nova-chaveco@flhealth.gov; Schmitz, Ann (CDC/flhealth.gov); Qvarnstrom, Yvonne (CDC/DDPHSIS/CGH/DPDM); Leishmania (CDC); Shieh, Wun-Ju (CDC/DDID/NCEZID/DHCPP); Zaki, Sherif (CDC/DDID/NCEZID/DHCPP); Reagan-Steiner, Sarah (CDC/DDID/NCEZID/DHCPP); Matkovic, Eduard (CDC/DDID/NCEZID/DHCPP); Benpit, Tina (CDC/DDID/NCEZID/DHCPP)
Subject: Specimen Receipt Notice: IDPB 2020-0171
Date: Wednesday, February 12, 2020 2:07:00 PM
Sensitivity: Confidential

IMPORTANT: It is imperative that you save, print, or archive this email for future reference/correspondence.

Dr. Stephen White,

This is to notify you that IDPB received 1 block and 1 stained slide on A.F. (MRF20000021, UB20-97) on 02/12/20.

If you have any questions, refer to IDPB case **2020-0171** when contacting the case pathologist, **Dr. Eduard Matkovic**.

****

Eduard Matkovic, M.D. | Pathology Fellow | Tel: 404-639-0549 | Fax: 404-639-3043 | Eduard.Matkovic@cdc.hhs.gov |
Centers for Disease Control and Prevention | Infectious Diseases Pathology Branch (IDPB) | 1600 Clifton Rd NE, MS: H18-SB | Atlanta, GA 30329-4027 |

****

Report Password: the password to open the password protected Pathology Report PDF (Preliminary/Final/Addendum) for this case will be provided in a separate email after you receive the Final Pathology Report Email and will be a unique 12 digit number. If additional specimens are subsequently received on the same case by IDPB, the password will remain unchanged. Animal case reports will not have password protection.

Specimen Receipt Notice: the official contact(s) at the Health Departments (if known) will be cc'd on IDPB's Specimen Receipt Notice emails, in addition to cc'ing other case specific relevant parties. The same official contact(s) at the Health Departments (if known) will continue to receive IDPB's Final Pathology Reports once finalized.

ePathology Service: IDPB now offers telepathology consultation through our ePathology service. This is not a substitute for diagnostic testing by our laboratory, but facilitates rapid initial evaluation of images or scanned slides prior to submission of case materials for testing. Please visit the ePathology website at http://www.cdc.gov/ncezid/dhcpp/idpb/epathology/index.html for more information.

Hello Scott:

Thank you for contacting CDC about the patient under investigation (PUI) for novel coronavirus (COVID-19). Please find summary information below to help assist in the PUI evaluation and specimen referral.

AMERICAN OVERSIGHT

Summary

38 yo male who resides in China (Guangzhou City) came to US on 2/3. on 2/15 he developed cough, congestion, rash and subjective fever. Patient presented to ED for evaluation. Decision made to admit patient but patient signed himself out AMA. Specimen x 3 were collected prior to his signing himself out. Denied other risk factors (travel to Wuhan or Hubei province; contacts to a known case).

CDC COVID-19 ID #0001287

POC Details

Name: Scott Pritchard

Location: Florida

Phone: 850-251-5558

Email: scott.pritchard@flhealth.gov

Additional information

Guidance for health departments to submit PUI information to CDC can be found here. Include the CDC COVID-19 ID issued to you by CDC in the top right box and on all specimen forms. The PUI form should be submitted as soon as able and need not wait for specimen shipping. Instructions on how to submit the PUI form are located at the top of the form.

Laboratory testing: At this time, CDC requests referral of NP swab (VTM) and OP swab (VTM) specimens. A sputum (sterile container) specimen should also be sent if a productive cough is present. The NP and OP swabs should be placed in separate VTM vials. Serum specimens are not needed at this time for PUI testing.

Specimens should be packed according to International Air Transport Association (IATA) regulations. Shipments from outside of the United States may require an importation permit that can be obtained from the CDC. For specific instructions, see the "Packing, Shipping, and Transport" section from this CDC website.

Please see the attached *2019 Novel Coronavirus (nCoV) Specimen Submission Guidelines* for detailed guidance on specimen shipment, packaging, and documentation. Please ensure that the patient information on the specimen tube exactly matches the 50.34 DASH Form, or the

AMERICAN OVERSIGHT

CDC may have to reject the specimen or testing may be delayed.

For questions about specimen collection or completing the 50.34 Form, please see https://www.cdc.gov/laboratory/specimen-submission/help-faqs.html.

Precautions: For healthcare personnel, we recommend the following guidance: https://www.cdc.gov/coronavirus/2019-nCoV/infection-control.html If the PUI seeks healthcare, CDC recommends they alert providers in advance for adequate infection control preparations.

If the PUI is under home care, please consider the following CDC guidance: https://www.cdc.gov/coronavirus/2019-ncov/guidance-home-care.html

Please let us know if you have any additional questions or concerns. For urgent inquiries, please contact the CDC Emergency Operations Center at 770-488-7100.

Thank you,

CDC IMS 2019 NCOV Response PUI Team

Subject:	Status of Chile charter (Silver Express pax)
Date:	Wednesday, March 18, 2020 8:59:14 AM

I am slimming the chain to take our overseas colleagues off for right now. Please add DHS and others in the US as needed. Adding the State Department COVID coordination unit and consular reps.

Eleni - we understand the charter from Chile is scheduled to land in MIA between 1200-1300 EDT, and that FL state authorities have said non FL residents will not be allowed to continue onward to home unless moved to another charter.

Can you give us the latest? We are concerned both about Amcits on this flight as well as future charters by RC or other charters seeking to land in FL.

Thanks - Doug

Subject: RE: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

Dear Eleni,
Please clarify your request and the plan – which passengers are you referring to? The air ambulance passengers or the ones who are not ill and are coming in the larger charter?

As I wrote earlier, CDC will not be conducting any health screening. For the passengers who are not arriving by air ambulance, CBP/CWMD would screen the passengers based on their own protocol. CDC Quarantine Station staff will be available to respond to any illness events, as requested by CBP.

For the air ambulance, they need assessment – I understood that you have made arrangements with Dr. Barth Green/University of Miami, who is not affiliated with CDC. He/his team would make an assessment of those 6 individuals.

Subject: RE: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

Michelle –

Slight change of plans. Upon arrival at MIA, Royal Caribbean will now be arranging individual charter flights for the passengers who are cleared by CDC to return to their home cities/states.

Our team has asked that CDC provide something in writing tomorrow that we can provide to the charter companies indicating that the passenger(s) boarding the charter flights have been cleared to fly commercially. We do not want the charters to deny boarding to these passengers simply because they have arrived in MIA from a cruise ship.

Thanks,

Eleni

Sorry - now with Eleni from RC. Again, due-outs are:

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship

AMERICAN OVERSIGHT

Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

Subject: Royal Caribbean Ships off Brazil/Chile

All -

Thank you for joining the call today. Leah - I don't believe I have everyone from CDC who was on the call, including Rachel - please add if that's the case.

I've listed the do-outs that I'm tracking below, and this chain can serve as the new, smaller group of folks working on the Brazil/Chile RC ships.

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

Subject: Survey Extension until March 3rd: Help CDC Improve its Project Officer Support
Date: Monday, February 24, 2020 3:17:24 PM
Attachments: Survey Distribution Instructions.pdf

Dear Colleagues,

I wanted to personally thank you for your participation in this process.

I recognize that many of you are involved with the COVID-19 response and your time is very valuable. Please take this last opportunity to forward this survey on to the appropriate program contacts and encourage your colleagues to provide their honest feedback.

- The assessment should take no longer than 25 minutes to complete.
- Information collected will be kept on secure, password protected servers accessible only to ASTHO project team members. All information you provided will be analyzed and reported in the aggregate with no identifying information attached. So CDC will NOT know the individual State source.

With your programs' input we will better understand which project officer services are successful and those that need improvement. We will use the aggregate data to create best practices and provide training to support CDC efforts to provide outstanding technical assistance to our funding recipients in the future.

Assessment Link: Take the Assessment

I look forward to seeing you in Colorado in July!

Sincerely,

Steve

Subject: Survey Extension until March 3rd: Help CDC Improve its Project Officer Support

Dear Senior Deputies,

This email is another request for action and a follow-up to the CDC Project Officer survey launched in January (announcement email is attached). **Please note the survey has been extended until Tuesday, March 3rd.**

For those of you who have already distributed this evaluation to the appropriate points of contact within your agency, we appreciate your support. At this time we ask that you remind your staff about this survey by simply forwarding the survey invitation to the primary staff working on the select cooperative agreements or grants within your health department.

As a reminder, ASTHO is partnering with the Centers for Disease Control and Prevention (CDC) to evaluate satisfaction with the services and support provided by CDC project officers on select cooperative agreements and grants. CDC management will use the results to identify and implement strategies for improving CDC project officer support to state health departments.

This survey should be completed by health agency staff who work on and serve as the primary point of contact for the CDC project officer for select CDC-funded cooperative agreements or grants (full list of selected cooperative agreements/grants is attached).

Our ask of you: Please remind your staff about this survey by forwarding the survey invitation to the primary staff working on the select cooperative agreements or grants within your health department for their response. The invitation content to request participation is provided below the signature on this email. Feel free to directly forward this email to the intended recipients or create a new outreach message using the content below.

Thank you for your assistance.

EMAIL FOR SURVEY RESPONDENT:

Instructions for survey respondent: The Association of State and Territorial Health Officials

AMERICAN OVERSIGHT

(ASTHO), in partnership with the Centers for Disease Control and Prevention (CDC), Center for State, Tribal, Local, and Territorial Support is administering an assessment to health departments in all 50 states and the District of Columbia related to satisfaction with the services and support provided by CDC project officers.

Results from the assessment will be used by CDC to improve project officer support to state health agencies. Participation is voluntary, and your feedback will inform continued project officer development and training.

In order to participate in this voluntary assessment, please click the hyperlink provided in this email to be redirected to the web-based assessment. The assessment should take no longer than 25 minutes to complete. All responses are immediately saved and can be changed at any time. However, once the assessment is submitted, you will be unable to modify any responses. Also, you are not required to complete the assessment in one sitting. When finished responding to all relevant questions, click the **SUBMIT** button at the end of the assessment to submit your responses.

Information collected will be kept on secure, password protected servers accessible only to ASTHO project team members. All information you provided will be analyzed and reported in the aggregate with no identifying information attached.

Follow this link to the Assessment: Take the Assessment

Please submit responses to this assessment no later than March 3, 2020.

Note: The survey is designed for respondents to consider only one project officer within each selected cooperative agreement and grant. If your agency has more than one project officer for the Cancer Prevention and Control Programs for State, Territorial, and Tribal Organizations (DP17-1701), we invite your agency's appropriate point of contact to complete separate survey entries for each project officer.

Additionally, a few of the HIV, Viral Hepatitis, TB, and STD cooperative agreements have been updated with the current cooperative agreement numbers. The updated names and numbers are in the attached survey distribution instructions. If you already submitted responses under a prior cooperative agreement number you do not need to re-submit.

If you experience problems with the web-based assessment or have any questions, please contact Allen Rakotoniaina at researchandevaluation@astho.org for technical assistance.

Thank you in advance for your participation.

From: Baker, Michael (OS/IEA)
To: Baker, Michael (OS/IEA)
Subject: TELE-TOWN HALL TONIGHT WITH SEC. AZAR
Date: Sunday, March 15, 2020 4:06:54 PM

The HHS Office of Intergovernmental and External Affairs would like to invite you to join a tele-town hall with Secretary Alex Azar **TODAY** at **7:00 PM ET** regarding the testing for COVID-19 in the United States. The call will provide information to state public health officials, clinical laboratories, and healthcare systems to best serve the public health interests of the American public during the COVID-19 emergency. The Secretary will be joined by additional officials who are leading the Administration's efforts to combat COVID-19's spread in the United States.

THIS INVITE SHOULD NOT BE FORWARDED OUTSIDE OF YOUR ORGANIZATION. But, to provide for a robust call, please ensure that the appropriate person from your organization is on the call. Ideally this person will have a grasp of the technical and operational issues of testing for the organization or jurisdiction. If there is an organization that you work with that you believe should receive this invite, please reply directly with that suggestion.

CLICK HERE to register for the call.

Sincerely,
Darcie

Subject:	TP18-1802 Crisis CoAg: Hurricane Recovery Update
Date:	Monday, March 23, 2020 4:31:52 PM

Dear Colleagues,

CDC is aware that the public health system response to COVID-19 has resulted in many changes that impact hurricane-related projects funded under the TP18-1802 Crisis Cooperative Agreement.

Provided below is additional guidance to ensure maximum flexibility as you navigate necessary modifications to project activities:

1. **Canceling Convenings:** CDC, in accordance with the President's Coronavirus Guidelines for America -- 15 Days to Slow the Spread of Coronavirus (COVID-19), recommends that individuals and organizations cancel or postpone in-person events that consist of 10 people or more throughout the United States for the next 15 days. When feasible, organizers may modify events to be virtual. Please note that this interim guidance is based on what is currently known about the Coronavirus Disease 2019 (COVID-19). CDC will update this interim guidance as needed and as additional information becomes available.
    a. **Costs Incurred for Canceled or Postponed Convenings:** Recipients will be permitted to drawdown funds to cover nonrefundable costs incurred for previously approved Hurricane recovery related activities now canceled or postponed due to COVID-19. Recipients should make every effort to minimize costs associated with activities (i.e., seek reimbursement for flights, negotiate postponing meetings vs canceling, etc.).
    b. **Redirection of Funds:** To accommodate alterations to project activities, recipients may submit a request to redirect funds as needed. Please follow the steps outlined in the attachment *"Redirection of Funds Guidance"* to submit your request and receive prior written approval from CDC. As a reminder:
        i. Redirections that *exceed* 25% or $250,000 (or whichever is less) of the total approved budget should be submitted through GrantSolutions as a ***Budget Redirection Amendment*** which is a formal prior approval action completed by the Grants Management Specialist (GMS).
        ii. Redirections that are *less than* 25% or $250,000 (or whichever is less) of the total approved budget should be submitted in GrantSolutions as

AMERICAN OVERSIGHT

a ***Grant Note*** which should include written prior approval received from relevant Technical Monitor(s).

It is important to note that you <u>may not</u> redirect 1802 Hurricane Crisis funds to COVID-19 response activities. Funds may only be redirected to support other Hurricane recovery related activities and projects that are within scope of the award.

2. **No Cost Extension (NCE) Requests:** Per OMB's memorandum *"Administrative Relief for Recipients and Applicants of Federal Financial Assistance Directly Impacted by the Novel Coronavirus (COVID-19) due to Loss of Operations"* released on March 19th, TP18-1802 Hurricane recipients are eligible for a 'No Cost Extension' *up to* twelve (12) months for activities scheduled to end by or before December 31, 2020. Financial and performance reports will be due 90 days following the *end date of the extension*. For guidance on how to submit your request through GrantSolutions, please refer to the attached job aid.

   Along with the required components of NCE request(s), we ask that you also include a statement of how COVID-19 response has impacted the Hurricane-related projects for which extension is being sought. This will serve as formal documentation of the need for an NCE.

Thank you for your continued partnership and all that your organization does to protect our nation's public health. We encourage you to monitor this dynamic situation by visiting www.cdc.gov/COVID19 for the latest information and guidance. Please do not hesitate to reach out to your respective Project Officers with any questions or concerns.

Kind Regards,
Hurricane Crisis Cooperative Agreement Team

Subject:	Thank you - and follow-up email
Date:	Tuesday, March 17, 2020 6:58:19 PM

Dear State Health Officials –

Thank you so much for listening to HHS on the ASTHO call earlier this evening. As we mentioned, our goal is to increase the synergy between the testing operations that have stood up and the rollout of the HHS testing sites across the country. We hope to highlight locations for testing for COVID-19 everywhere in the nation. If you are willing and able to share the information from testing sites in your states, we would greatly appreciate it. Please find below some of the key pieces of information that we are seeking.

- Facility Name
- Facility Address
    - Street Address
    - City
    - County
    - State
    - Zip code
- Phone Number (if applicable)
- Days/Hours of Operation
- Requirements for Testing, *if any* (i.e. note from physician, age, symptoms, travel)
- Drive-thru, walk-in, or other? (If other, please specify.)

We thank you for your continued partnership and support. ASTHO and its members have always been a key partner of HHS, and we appreciate everything that you do. Please don't hesitate to reach out to me if there are any questions. I can be reached via email or my phone number below.

Thank you!
Michael

Cc:	CDC IMS State Coordination Task Force (SCTF) TF Coordinations TM
Subject:	Time Sensitive Request Due 3/3/2020: Request for Primary and Secondary Point of Contact for any Supply Chain Issues within your State.
Date:	Friday, February 28, 2020 1:30:41 PM

Greetings PHEP Directors & State Epidemiologists –

The outbreak of COVID-19 in China has led to a disruption in the global supply chain of personal protective equipment (PPE). CDC recognizes that healthcare facilities may experience temporary shortages even if they do not care for patients with COVID-19. CDC has released guidance for optimizing the use of N95 respirators, which includes some recommendations that may be applicable to other types of PPE, including surgical masks. CDC also has guidance regarding who needs and does not need PPE to help prevent excessive use of PPE.

As you are aware, this is a delicate system with many factors. When CDC receives notifications from healthcare systems about supply chain shortages, we encourage the Healthcare Coalition Partners to work together to problem solve within the coalition and/or wider state system. Further we encourage the healthcare systems to reach out to the state health department to collaborate and problem solve.

We have heard from the healthcare system partners that have contacted us that they are unsure whom to contact in the state health department about supply chain shortages in their facilities. As a way to help mitigate this, **we are asking you to reply to eocsctfmccmlno@cdc.gov no later than March 3, 2020, with an identified primary and secondary point of contact for any supply chain issues within your state.**

Please provide the following information:

- **Name/Agency**
- **Title**
- **Email Address**
- **24/7 phone number**

If you have any questions, you may contact Jaime Jones-Wormley, CDC State Coordination Task Force Liaison to the Medical Care and Countermeasures Task Force at eocsctfmccmlno@cdc.gov.

Thank you for your efforts to support the COVID-19 response.

Kimberly Cantrell

Date:	Wednesday, February 12, 2020 4:41:31 PM
Attachments:	Florida.xlsx

Greetings PHEP Directors and State Epidemiologists,

As we prepare to use DCIPHER for the 2019-nCoV response (e.g., data collection, transmission, and data sharing), we are seeking additional information about the type of access for the users you previously identified for the nCoV 2019 DCIPHER platform.

The "access group" options are described here:

1. **Access to DCIPHER to VIEW (only) data**. Role allows individual to see a view of different reports and analyses for their jurisdiction's information and any aggregate national report that may be created.
2. **Access to DCIPHER for DATA ENTRY and EDITING**. Role allows individual to directly enter information into DCIPHER, edit data, see all data associated with the jurisdiction, in addition to viewing/creating different reports and analyses.

In the attachment, please complete information in the last two columns (epi and monitoring), select either **view** or **data entry/editing** for each user.

Please return your response to eocsctftfcoord@cdc.gov as soon as possible so we can configure the platform to support your jurisdictions' access requests.

Warm Regards,

State Coordination Task Force (SCTF)
Regional Coordination Team - eocsctftfcoord@cdc.gov

Importance:	High

Greetings,
We were just made aware of an all-state call that will be held today at 2pm EST and the topic is the Novel Coronavirus (2019-nCoV). The call is hosted by the CDC State Coordination Task Force (SCTF) and not the ELC; however, the content may be of interest.

The ELC role in our agency's response to this effort is still evolving but we will keep you posted with any information that is relevant to your program and ELC activities.

CDC's 2019 Novel Coronavirus (2019-nCoV) response team will continue a series of national calls from 2 p.m. to 3 p.m. EST on Monday, January 27, to provide state and local partners with the latest information on the novel coronavirus outbreak and U.S. preparedness efforts.

Invited participants include state, local, and territorial preparedness directors, state epidemiologists, state health officials, public health laboratory directors, and nongovernmental partners. Participant information can be found below.

Subject: Tools to Support Medicaid and CHIP - COVID-19
Date: Monday, March 23, 2020 1:18:46 PM

Dear Governors and State Health Officials:

The Trump Administration has released new tools to strip away regulatory red tape and unleash new resources to support state Medicaid and Children's Health Insurance Programs (CHIP) during the 2019 Novel Coronavirus (COVID-19) outbreak. Because of the President's bold action in declaring COVID-19 a national emergency, CMS now has a full suite of tools available to maximize responsiveness to state needs. The agency has created four checklists that together will make up a comprehensive Medicaid COVID-19 federal authority checklist to make it easier for states to receive federal waivers and implement flexibilities in their program.

The tools include:

- **1115 Waiver Opportunity and Application Checklist**
- **1135 Waiver Opportunity and Application Checklist**
- **1915(c) Appendix K Template**
- **Medicaid Disaster State Plan Amendment Template**

You can find a copy of the press release here: **https://www.cms.gov/newsroom/press-releases/trump-administration-releases-covid-19-checklists-and-tools-accelerate-relief-state-medicaid-chip**

These tools, and earlier CMS actions in response to the COVID-19 emergency, are all part of ongoing White House Coronavirus Task Force efforts. To keep up with the important work the Task Force is doing in response to COVID-19, please visit **www.coronavirus.gov.** For a complete and updated list of CMS actions, guidance, and other information in response to COVID-19, please visit the, please visit the **Current Emergencies Website.**

Sincerely,

Darcie Johnston, Director

Dear Colleagues,

Please see the attached CDC COVID-19 daily key points from Tuesday, March 10.

We would also like to draw your attention to the **"Interim Infection Prevention and Control Recommendations for Patients with Suspected or Confirmed Coronavirus Disease 2019 (COVID-19) in Healthcare Settings"**. You can reference the guidance here. For your convenience, a summary of the changes are provided below:

- Updated PPE recommendations for the care of patients with known or suspected COVID-19
- Considerations for designating entire units within the facility, with dedicated healthcare personnel (HCP), to care for known or suspected COVID-19 patients and options for extended use of respirators, facemasks, and eye protection on such units.
- Updated recommendations regarding need for an airborne infection isolation room (AIIR).

From: State and Local Readiness (CDC)
To: CDC IMS State Coordination Task Force (SCTF) Lead
Subject: UPDATE: Grand Princess Quarantine Orders Lifted
Date: Wednesday, March 25, 2020 9:09:43 PM

Dear Colleagues:

This week, CDC will lift quarantine orders for more than 1,300 people who have been quarantined from the Grand Princess cruise ship. As a top priority, CDC's COVID-19 response team will begin transmitting data to states of individuals who tested positive, including the following: contact information, date of test, date of result, and date of release. Many were asymptomatic and chose to be tested voluntarily. In addition, most were released from isolation based on the release of new clinical criteria. However, due to delayed test results from various laboratories processing the samples, some individuals had test results returned after they were released from quarantine. Lastly, following this notification you will begin to receive data on individuals with pending tests or extended quarantine periods. We are working with HHS/ASPR to transmit the results of pending tests to all departed passengers and any additional positive tests to the states.

Feel free to send any questions to preparedness@cdc.gov. Thank you!

Subject: URGENT State Health Official Message
Date: Tuesday, March 17, 2020 9:10:23 AM

Dear Colleagues:

As we continue to explore avenues to increase state access to COVID-19 testing, we would like for each state to provide the name of one institution in your jurisdiction that could perform high through-put testing if adequate reagents produced by Roche could be made available. In most instances, this will likely be an academic institution or a large medical center with advance diagnostic testing capacity. Please provide this information to Jay Butler (jcb3@cdc.gov) and Hilary Eiring (vte0@cdc.gov) in the CDC EOC as soon as possible. Thank you!

AMERICAN OVERSIGHT

From: State and Local Readiness (CDC)
To: CDC IMS State Coordination Task Force (SCTF) Lead
Subject: URGENT WEB UPDATE: CDC Mass Gathering Statement
Date: Sunday, March 15, 2020 9:05:46 PM
Importance: High

Dear Colleagues:

Large events and mass gatherings can contribute to the spread of COVID-19 in the United States via travelers who attend these events and introduce the virus to new communities. Examples of large events and mass gatherings include conferences, festivals, parades, concerts, sporting events, weddings, and other types of assemblies. These events can be planned not only by organizations and communities but also by individuals.

Therefore, CDC, in accordance with its guidance for large events and mass gatherings, recommends that for the next 8 weeks, organizers (whether groups or individuals) cancel or postpone in-person events that consist of 50 people or more throughout the United States.

Events of any size should only be continued if they can be carried out with adherence to guidelines for protecting vulnerable populations, hand hygiene, and social distancing. When feasible, organizers could modify events to be virtual.

This recommendation does not apply to the day to day operation of organizations such as schools, institutes of higher learning, or businesses. This recommendation is made in an attempt to reduce introduction of the virus into new communities and to slow the spread of infection in communities already affected by the virus. This recommendation is not intended to supersede the advice of local public health officials.

Please let us know if you have any questions. Thank you.

Good morning, all:

I hope this message finds each of you doing well.

Please see the below message:

Information for partners

Updated website content now available:

- Are you at higher risk for severe illness: This is an updated landing page.
- People who are at higher risk for severe illness. Based on the data we are seeing, this is the updated list of risk factors for severe illness.

COCA call tomorrow:

COCA Call - CDC Clinician Outreach and Communication Activity

Underlying Medical Conditions and People at Higher Risk for Coronavirus Disease 2019 (COVID-19)

AMERICAN OVERSIGHT

Overview

During this COCA call, presenters will focus on current information about people who are higher risk for COVID-19 complications because of their age or underlying medical conditions, particularly those that are not well-controlled.

Due to the high demand we anticipate for this COCA Call, we encourage participants to consider viewing on Facebook. To see the call live, please click on COCA's Facebook Page.

There will only be a few slides for this COCA Call. Slides will not advance during the presentation portion of this webinar. You can find the slides under the "Call Materials" tab here.

Advanced registration is not required.

If you are unable to attend the live COCA Call, it will be available for viewing on the COCA website a few hours after the live event ends. It will be available for viewing **immediately after** the live event ends at 3:00 P.M. ET on COCA's Facebook page.

Continuing Education will not be offered for this COCA Call.

Date: Tuesday, March 24, 2020
Time: 2:00pm–3:00pm (ET)

You may participate in this COCA Call via the Zoom platform or via Facebook Live.

Please note, the Zoom access links and dial-in information for this COCA Call have been changed. The corrected information is below:

Subject:	Updated Guidance for Returning CDC Staff from 2019-nCoV Domestic Field Deployments
Date:	Friday, February 7, 2020 2:44:49 PM

Hello EIS/LLS,

OSSAM, after consulting with infection prevention and control subject matter experts, has updated the February 1, 2020, Guidance for Returning CDC Staff from 2019-nCoV Domestic Field Deployments with more detailed instructions based on new public guidance released by CDC this week.

Please use the new Guidance for Returning CDC Staff from 2019-nCoV Domestic Field Deployments to better understand requirements of CDC staff returning from 2019-nCoV domestic deployments. CDC is currently developing guidance for those returning from overseas deployments.

For all employees returning from China (e.g., on leave), supervisors should follow published CDC guidance found in the new public guidance. This provides important information regarding returning to work for employees who recently arrived in the U.S. from China (e.g., employees categorized as Medium or High risk).

Please contact your Management Officer if you have questions regarding telework or other workplace flexibilities.

Please direct health and safety questions to OSSAM at EOCevent300@cdc.gov.

Subject:	Updated: Community Based Testing Site (CBTS) Concept of Operations and Operating Criteria
Date:	Wednesday, March 25, 2020 6:20:01 PM
Attachments:	COVID-19 Community-Based Testing Sites CONOP 2020.03.24 v5.pptx FEMA CBTS Flyer_2_Web.pdf FEMA CBTS Flyer_2_Print.pdf

May be dupe to some.....apologies

*****The CBTS Task Force updated its guidance for community-based testing sites. Please review and disseminate the attached guidance and fact sheet to help support questions from your state/local health partners.*****

Please see included the criteria and ConOps for operating a Community Based Testing Site. The Criteria outlines simple requirements for remaining in compliance with the program. This step was necessary due to a number of State modifications to the program that introduced compliances issues causing sites to be put on pause or taking off line. The updated ConOp streamlines the CBTS process and reduces potential exposure to the operators.

Subject: Urgent Request for Information: Top State/Territorial Health Official (example, Secretary, Minister or Commissioner of Health)

Date: Monday, March 2, 2020 11:39:34 AM

Good Morning,

CDC Incident Management has asked the State Coordination Task Force for contact information of the **top health official** in each jurisdiction to expedite outreach in the event of an emergencies and to provide COVID-19 updates as expeditiously as possible. To accomplish this task, I am reaching out to the SHO/THO Assistant with a cc to the SHO/THO. This information will be used in tandem with the information we have for the SHO/THO maintained by ASTHO. You all are in a great position to assist us!

We know that in many cases the top health official is the SHO/THO. If that case is , just **reply** to this email that they are the **same**.

For those where there is a person who is more senior to the SHO/THO (as a reminder, we are looking for the most senior health official), please complete the following information:

State/Territory	Highest Health Official (i.e. Commissioner/ Minister/Secretary) Name (including degrees as appropriate)	Title	Phone Number (Please provide a **number or** numbers where we can reach out ***after hour*** should the need arise for COVID-19)	Email	Executive Assistant Name	Phone Number	Email

Due to the nature of this **urgent request**, respond by **COB today**.

Thank you so much for your assistance.

If you have questions or concerns, please contact me.

Kimberly

Subject:	Viral swabs request
Date:	Saturday, March 14, 2020 5:07:53 PM

Hi Dr. Rivkees, thank you for reaching out about viral swabs. CDC is aware of the low inventory and is working quickly to increase supplies and support to the States and Locals. With a limited supply everywhere, we'll be in contact soon on submitted orders. We apologize for the delay but will contact you soon. Please don't hesitate to contact us with any other questions or needs.

Thanks, Wendy

Date:	Wednesday, March 11, 2020 4:18:04 PM
Attachments:	Week 10, 2020 Florida Flu Review.pdf

Good afternoon!

Attached is the week 10, Florida Flu Review.

Week 10 influenza & influenza-like illness (ILI) activity summary:

Activity increased in week 10 and was above peak levels observed in the 2016-17 and 2018-19 seasons. Increases were observed in all regions of the state.

Ten outbreaks were reported, up from nine outbreaks in the previous week. Of the ten outbreaks reported, four were influenza-associated and six were ILI.

Two new influenza-associated pediatric deaths were reported, both in vaccinated individuals with known underlying medical conditions. Twelve influenza-associated pediatric deaths have been reported so far this season; only three children were vaccinated for the 2019-20 season.

Influenza A 2009 (H1N1) remained the predominant strain.

The Centers for Disease Control and Prevention (CDC) continues to recommend that people who have not yet been vaccinated do so as soon as possible. It is especially important for people at higher risk for complications (children, adults =65 years, pregnant women, and people with underlying medical conditions).

On January 10, 2020, CDC issued a health advisory reminding clinicians to reiterate vaccination and antiviral treatment recommendations (emergency.cdc.gov/han/HAN00425.asp).

In addition to getting vaccinated, the Florida Department of Health recommends you take everyday precautions to prevent the spread of influenza and other respiratory viruses:

- Wash your hands often with soap and water (if soap is not available, use an alcohol-based sanitizer).
- Avoid touching your eyes, nose, and mouth.
- If you do get sick, stay home until fever-free for at least 24 hours (without the use of fever-reducing medication).

Thank you!

Good afternoon!

Please find attached the week 11 Florida Flu Review.

Statewide, the percentage of respiratory specimens testing positive for influenza in sentinel laboratories decreased steadily over the last three weeks. Despite this decrease in laboratory-confirmed influenza activity, the percentage of visits for ILI increased notably during those same three weeks.

Recent trends in ILI activity may be a data artifact driven by an increase in the number of people seeking care for respiratory illness in response to concerns about coronavirus disease 2019 (COVID-19). It is also possible that these data represent a true increase in ILI activity statewide. The data displayed in this report are intended to track influenza activity in Florida. For information about COVID-19 in Florida, please visit: FloridaHealth.gov/diseases-and-conditions/COVID-19/.

For questions regarding COVID-19 in Florida please email COVID-19@FLHealth.gov or call 1-866-779-6121.

Eleven outbreaks were reported, up from ten outbreaks in the previous week. Of the eleven outbreaks reported, one was influenza-associated and ten were ILI.

No new influenza-associated pediatric deaths were reported. Twelve influenza-associated pediatric deaths have been reported so far this season; 75% of children were not vaccinated for the 2019-20 season.

Influenza A 2009 (H1N1) remained the predominant strain.

The Centers for Disease Control and Prevention (CDC) continues to recommend that people who have not yet been vaccinated do so as soon as possible. It is especially important for people at higher risk for complications (children, adults =65 years, pregnant women, and people with underlying medical conditions).

In addition to getting vaccinated, the Florida Department of Health recommends you take

AMERICAN OVERSIGHT

everyday precautions to prevent the spread of influenza:

- Wash your hands often with soap and water (if soap is not available, use an alcohol-based sanitizer).
- Avoid touching your eyes, nose, and mouth.
- If you do get sick, stay home until fever-free for at least 24 hours (without the use of fever-reducing medication).

Best,

Good Afternoon!

Attached is the Week 12, 2020 Florida Flu Review.

Week 12 influenza & influenza-like illness (ILI) activity summary:

Statewide, the percentage of respiratory specimens testing positive for influenza continued to decrease.

Likewise, the percent of emergency department and urgent care center visits with discharge diagnoses that include influenza or flu decreased in recent weeks. Activity in week 12 was similar to an average of the past three influenza seasons for this time.

Of note, some of the figures in this report that previously displayed chief complaints of ILI were updated to display discharge diagnoses of influenza or flu to better reflect influenza activity trends in Florida.

Eight outbreaks were reported, down from eleven outbreaks in the previous week. Of the eight outbreaks reported, two were influenza-associated and six were ILI.

One new influenza-associated pediatric death was reported. Thirteen influenza-associated pediatric deaths have been reported so far this season; the majority these deaths were children who were not vaccinated for the 2019-20 season.

Influenza A 2009 (H1N1) remained the predominant strain.

The Centers for Disease Control and Prevention (CDC) continues to recommend vaccination as long as influenza viruses are circulating. Annual vaccination is especially important for people at higher risk for complications (children, adults =65 years, pregnant women, and people with underlying medical conditions).

In addition to getting vaccinated, the Florida Department of Health recommends you take everyday precautions to prevent the spread of influenza:

- Wash your hands often with soap and water (if soap is not available, use an alcohol-based sanitizer).

AMERICAN OVERSIGHT

- Avoid touching your eyes, nose, and mouth.

Of note, some of the figures in this report that previously displayed chief complaints of ILI were updated to display discharge diagnoses of influenza or flu to better reflect influenza activity trends in Florida.

Eight outbreaks were reported, down from eleven outbreaks in the previous week. Of the eight outbreaks reported, two were influenza-associated and six were ILI.

One new influenza-associated pediatric death was reported. Thirteen influenza-associated pediatric deaths have been reported so far this season; the majority these deaths were children who were not vaccinated for the 2019-20 season.

Influenza A 2009 (H1N1) remained the predominant strain.

The Centers for Disease Control and Prevention (CDC) continues to recommend vaccination as long as influenza viruses are circulating. Annual vaccination is especially important for people at higher risk for complications (children, adults =65 years, pregnant women, and people with underlying medical conditions).

In addition to getting vaccinated, the Florida Department of Health recommends you take everyday precautions to prevent the spread of influenza:

- Wash your hands often with soap and water (if soap is not available, use an alcohol-based sanitizer).

AMERICAN OVERSIGHT

- Avoid touching your eyes, nose, and mouth.
- If you do get sick with influenza, stay home until fever-free for at least 24 hours (without the use of fever-reducing medication).

Thank you!

Good Afternoon!

Attached is the Week 5, 2020 Florida Flu Review.

Week 5 influenza & influenza-like illness (ILI) activity summary:

Activity increased in week 5 and reached the highest level observed so far this season. Notable increases were observed in all regions of the state. Elevated activity is still expected for several more weeks.

Thirty-five outbreaks were reported, up from 11 outbreaks in the previous week. Of the 35 outbreaks reported, 19 were influenza-associated and 16 were ILI.

Two new influenza-associated pediatric deaths were reported. One child was not vaccinated for the 2019-20 season, and the other was too young to be vaccinated. Seven influenza-associated pediatric deaths have been reported so far this season, all in unvaccinated children.

Influenza A 2009 (H1N1) remained the predominant strain. Earlier in the season, influenza B Victoria lineage viruses were predominant. Influenza B Victoria lineage viruses continue to circulate at lower levels.

The Centers for Disease Control and Prevention (CDC) continues to recommend that people who have not yet been vaccinated do so as soon as possible. Vaccination should continue as long as influenza viruses are circulating. It is especially important for people at higher risk for complications (children, adults =65 years, pregnant women, and people with underlying medical conditions).

On January 10, 2020, CDC issued a health advisory reminding clinicians that influenza B viruses can cause severe illness in people of all ages and reiterating vaccination and antiviral treatment recommendations (emergency.cdc.gov/han/HAN00425.asp).

In addition to getting vaccinated, the Florida Department of Health recommends you take everyday precautions to prevent the spread of influenza and other respiratory viruses:
