People with certain types of exposure to cases of COVID-19 may be housed and quarantined for observation until 14 days after their exposure. The purpose of the observation period is to ensure they don't develop symptoms and infect others during this time. Some people stay at home for the observation period, but others may be housed either separately or in groups in other types of facilities.

In these facilities, individuals and families are provided separate quarters with separate bathroom facilities. They are instructed that congregation and shared public spaces are to be avoided. Because the people under quarantine are not ill, the risk to cleaning staff is inherently low.

Purpose

This guidance provides recommendation on the cleaning and disinfection of rooms of persons under quarantine, as well as associated worker protection practices according to expected job tasks. The goal is to minimize interactions between persons under quarantine and cleaning staff. These recommendations will be updated if additional information becomes available.

General Recommendations for Housing Facilities for Persons Under Quarantine

- Employers should develop policies for worker protection and provide training to all cleaning staff on-site prior to beginning work. Training should include:
  - An understanding of when to use personal protective equipment (PPE)
  - What PPE is necessary and why (see below for PPE recommendations)
  - How to properly don (put on), use, and doff (take off) PPE
  - How to properly dispose of PPE
- Employers must ensure workers are trained on the hazards of the cleaning chemicals used in the workplace in accordance with OSHA's Hazard Communication standard, 29 CFR 1910.1200.
- Employers must comply with OSHA's standards on Bloodborne Pathogens (29 CFR 1910.1030), including proper disposal of regulated waste, and PPE (29 CFR 1910.132).
- Cleaning staff should perform hand hygiene often including immediately after removing PPE by washing hands with soap and water for 20 seconds. If soap and water are not available and hands are not visibly dirty, an alcohol-based hand sanitizer that contains 60%-95% alcohol may be used. However, if hands are visibly dirty, always wash hands with soap and water.

AMERICAN OVERSIGHT

- Cleaning staff should immediately report breaches in PPE (e.g., tear in gloves) or any potential exposures (e.g., contact with a quarantined individual without wearing appropriate PPE) to their supervisor.
- Employers should educate workers to recognize the symptoms of COVID-19 and provide instructions on what to do if they develop symptoms until 14 days after the last day they had possible exposure to the virus.
    - Cleaning staff should immediately notify their supervisor and the local health department if they develop symptoms of COVID-19. The health department will provide guidance on what actions need to be taken.
- Cleaning staff should follow normal preventive actions while at work and home including covering their mouth and nose with a tissue when coughing or sneezing and avoiding touching eyes, nose, or mouth with unwashed hands.
- If surfaces are dirty, they should be cleaned using a detergent and water prior to disinfection.
    - A list of products with EPA-approved emerging viral pathogens claims, maintained by the American Chemistry Council Center for Biocide Chemistries (CBC), is available at: https://www.americanchemistry.com/Novel-Coronavirus-Fighting-Products-List.pdf.
    - Products with EPA-approved emerging viral pathogens claims are expected to be effective against COVID-19 based on data for harder to kill viruses.
    - Follow the manufacturer's instructions for all cleaning and disinfection products (e.g., concentration, application method and contact time, PPE) for use.

Cleaning Activities During the Quarantine Period

Because cleaning needs are limited during the quarantine period, CDC is recommending that cleaning staff do not clean occupied rooms in quarantine facilities. Instead, all rooms should be provisioned with personal cleaning supplies, e.g., tissues, paper towels, cleaners and disinfectants that are EPA-approved against emerging viral pathogens (see list above) for use by persons under quarantine as needed. Rooms and common areas occupied by persons under quarantine should not be cleaned by cleaning staff until all persons under quarantine have been released from quarantine and have vacated the area and no sooner than 24 hours after rooms and common areas have been vacated.

During the quarantine:

- Persons under quarantine should bag trash and place the closed bag outside their door for daily pick up.
- Similarly, persons under quarantine should bag soiled linens and place the closed bag outside their door for pick up.
- Cleaning, laundry, and trash removal staff should wear disposable gloves and gowns for all tasks in the cleaning process, including collection of closed bags.
    - Staff should remove gloves after cleaning a room or area occupied by persons under quarantine before moving to the next room.
    - After delivering bags to their final destination, staff should clean and disinfect any hard, cleanable surfaces where bags have been stored (such as on carts or on the floor).

AMERICAN OVERSIGHT

- Laundry and trash removal staff collecting the closed bags should remove their gloves promptly after bags are delivered to their destination and cleaning and disinfection has been performed.
- Any time staff remove gloves, they should perform hand hygiene immediately by washing their hands with soap and water for 20 seconds. If hands are not visibly dirty and soap and water are not available, an alcohol-based hand sanitizer that contains 60%-95% alcohol may be used. However, if hands are visibly dirty, always wash hands with soap and water.

- If possible, for fabrics or other materials that can be laundered, use the warm water setting and dry items completely on high heat.
- If a person under quarantine has a special need for assisted cleaning (e.g., an elderly person who is unable to clean a spill such as vomiting in their quarters), public health staff will oversee the cleaning process as part of their evaluation of the individual.

Cleaning a Room Vacated by a Person under Quarantine with COVID-19 (Enhanced Cleaning)

Rooms that housed a person under quarantine with COVID-19 should remain closed to further use until cleaned and disinfected by appropriately trained cleaning staff. The room should not be entered by cleaning staff for at least for 24 hours.

- Cleaning staff should wear disposable gloves and gowns for all tasks in the cleaning process.
  - These gloves and gowns should be compatible with the disinfectant products being used
  - Additional PPE might be required based on the cleaning/disinfectant products being used and whether there is a risk for splash.
  - Gloves and gowns should be removed carefully to avoid contamination of the wearer and the surrounding area.
- Cleaning should be undertaken using products with EPA-approved emerging viral pathogens claims (https://www.americanchemistry.com/Novel-Coronavirus-Fighting-Products-List.pdf). All products should be used according to label instructions.
  - Clean the surface first, and then apply the disinfectant as instructed on the disinfectant manufacturer's label. Ensure adequate contact time for effective disinfection.
  - Adhere to any safety precautions or other label recommendations as directed (e.g., allowing adequate ventilation in confined areas, proper disposal of unused product or used containers and donning appropriate PPE).
  - Avoid using product application methods that cause splashing or generate aerosols.
  - Cleaning activities should be supervised and inspected periodically to ensure correct procedures are followed.
  - After cleaning and removal and disposal of gloves, staff should perform hand hygiene by washing hands often with soap and water for at least 20 seconds or using an alcohol-based hand sanitizer that contains 60 to 95% alcohol. Soap and water should be used if the hands are visibly soiled.

AMERICAN OVERSIGHT

- Clean and disinfect all frequently touched surfaces in quarantine locations (e.g., counters, tabletops, doorknobs, light switches, bathroom fixtures, toilets, phones, keyboards, tablets, remotes and bedside tables) according to instructions described for products with EPA-approved emerging viral pathogens claims.
- For soft (porous) surfaces such as carpeted floor, rugs, and drapes, remove visible contamination if present. Launder items as appropriate in accordance with the manufacturer's instructions. Porous materials that will be laundered can be transported to the laundry facility in the usual manner. If possible, launder items using the warm water setting and dry items completely on high heat.
- When cleaning is completed, collect soiled material and PPE in a sturdy, leak-proof (e.g., plastic) bag that is tied shut and not reopened. This waste can go to the regular solid waste stream (e.g., municipal trash) as it is not biohazardous or regulated medical waste.
- If bulk material and spills containing blood or body substances are present, cleaning staff should use absorbent materials, such as towels, to remove the material. The area should then be cleaned and then disinfected with products with EPA-approved emerging viral pathogens claims used according to product label instructions.
- No additional cleaning is needed for supply and return ventilation registers or filtration systems for the building.
- No additional treatment of wastewater is needed before discharging to sanitary sewer.

Cleaning Recommendations for Quarantined Persons from Uncontrolled Sources (e.g. increased likelihood of many cases such as on cruise ships, etc.)

Cleaning for facilities housing persons under quarantine because of exposure from an uncontrolled source should be conducted following the Enhanced Cleaning procedures and include cleaning of common areas outlined above.

Cleaning a Room Vacated by persons under quarantine without COVID-19

After all persons under quarantine are released and assuming the quarantined persons are not from an uncontrolled source (see above):

- If all persons under quarantine have been released and vacated the housing area and no persons tested positive for COVID-19, the facility (e.g., rooms, common areas) should be cleaned according to standard procedures.
- No additional PPE is required beyond what is normally worn for regular housekeeping activities.

Cleaning of Common Areas of a Housing Facility (if used)

If common areas are used by persons under quarantine, those areas will require cleaning and disinfection during the quarantine period.

- Common areas of a facility should be cleaned on a daily basis, and as needed.
- Regardless of known COVID-19 status of persons under quarantine, common areas should be cleaned according to ***Cleaning a Room Vacated by a person under quarantine with COVID-19(Enhanced Cleaning)*** recommendations, since

AMERICAN OVERSIGHT

communication to cleaning staff about persons under quarantine who develop symptoms or test positive for COVID-19 may not be able to occur as quickly as cleaning services are required.

- No quarantined individuals should be present in a common area during cleaning. Common areas of a facility should be closed off to all persons except for cleaning staff before cleaning and disinfection activities take place.

---

Hello Everyone,

Thank you for chatting with us today.

As I mentioned the CDC Healthcare Infection Control can be reached for further TA via eocevent141@cdc.gov or via phone at 404-414-8385

I think your biggest challenge is going to be figuring out the contracted staff and how they have interacted with other facilities. It would be reasonable to apply many of the below listed concepts to other at risk facilities based upon how these staff moved to detect cases earlier among residents and staff. If helpful someone from our team developed a rapid facility phone assessment which could be deployed (attached).

Here are some good links:
LTC guidance which can apply to AL: https://www.cdc.gov/coronavirus/2019-ncov/healthcare-facilities/prevent-spread-in-long-term-care-facilities.html
General IPC guidance: https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html
Criteria for return to work for HCP (healthcare personnel): https://www.cdc.gov/coronavirus/2019-ncov/healthcare-facilities/hcp-return-work.html

Please remember many of the docs I have attached are not CDC cleared. Some were created as tools by our field team or by other jurisdictions so feel free to modify to your own needs.

A couple important points and lessons learned from other states:

1. Ensure a good active monitoring system for residents (at least once a day although more often if possible). They should be mindful (as you know) the elderly may present in other and potentially less dramatic fashion especially if they have baseline lung disease. I have attached a symptom/temp checking that we created for HCP but could be modified for use with residents.
2. Likewise a good monitoring system for all HCP is key. They should be self-monitoring with delegation (i.e., they know who to call with symptoms) when at home and then have a symptom/temp check before starting their shift. This pre-shift check could happen upon

AMERICAN OVERSIGHT

facility arrival or via something like facetime before leaving for work. Just make sure they take their temp and show while on facetime.

3. Implement universal masking for HCP while in the facility. Attached is a PPE strategy for LTC which accounts for shortages in gowns and extend use of masks and eye protection. In addition, I have attached some docs about general PPE for all HCF which we do expect to be posted to the web soon.
4. Ideally gowns, gloves, mask/respirator, eye should be used for all cases, PUIs, and anyone with unknown respiratory illness. Again may need to refer to the PPE strategy doc if not doable. NTEC has a good video that helps with donning and doffing: https://repository.netecweb.org/items/show/688
5. Restrict visitors. Any visitor that must enter should have symptom/temp check, masked, and controlled movement in and out of resident rooms. I have attached an example letter to families that can be modified.
6. Restrict resident movements, no congregate settings.
7. I have attached some cleaning consideration as well to include the use of nursing/CNAs to wipe high touch surfaces for cases or PUIs instead of EVS.
8. I have also attached a line list if you want it.
9. Contact tracing and risk assessment is not practical in this setting and ideally time should be spent in the above activities plus IPC. We understand that work restricting staff may shutter the entire facility and thus the emphasis of the good monitoring of HCP. We discuss this in the new risk assessment at the very bottom of the page: https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html
10. You and other PH staff should be wearing a facemask when you enter the facility and institute self-monitoring as well.

Please feel free to reach out with questions.

Best,
Elizabeth and Nicola

AMERICAN OVERSIGHT

Strategies for Optimizing the Supply of Isolation Gowns

Audience: These considerations are intended for use by federal, state, and local public health officials, occupational health service leaders, infection prevention and control program leaders, and other leaders in healthcare settings who are responsible for developing and implementing policies and procedures for preventing pathogen transmission in healthcare settings.

Purpose: This document offers a series of strategies or options to optimize supplies of isolation gowns in healthcare settings when there is limited supply. It does not address other aspects of pandemic planning; for those, healthcare settings can refer to COVID-19 preparedness plans to address other aspects of preparing to respond to novel coronavirus disease 2019 (COVID-19).

Surge capacity refers to the ability to manage a sudden, unexpected increase in patient volume that would otherwise severely challenge or exceed the present capacity of a facility. While there are no widely accepted measurements or triggers to distinguish surge capacity from daily patient care capacity, surge capacity is a useful framework to approach a decreased supply of isolation gowns during the COVID-19 response. Three general strata have been used to describe surge capacity and can be used to prioritize measures to conserve isolation gown supplies along the continuum of care.1

- **Conventional capacity**: measures consist of providing patient care without any change in daily contemporary practices. This set of measures, consisting of engineering, administrative, and PPE controls should already be implemented in general infection prevention and control plans in healthcare settings.
- **Contingency capacity**: measures may change daily standard practices but may not have any significant impact on the care delivered to the patient or the safety of healthcare personnel (HCP). These practices may be used temporarily when isolation gown demands exceed resources.
- **Crisis capacity**: strategies that are not commensurate with standard U.S. standards of care. These measures, or a combination of these measures, may need to be considered during periods of expected or known isolation gown shortages.

The following contingency and crisis strategies are based upon these assumptions:
1) facilities understand their current isolation gown inventory and supply chain
2) facilities understand their isolation gown utilization rate
3) facilities are in communication with local healthcare coalitions, federal, state, and local public health partners (e.g., public health emergency preparedness and response staff) regarding identification of additional supplies
4) facilities have already implemented other engineering and administrative control measures within conventional capacity strategies including:

- Reducing the number of patients going to the hospital or outpatient settings
- Excluding healthcare personnel (HCP) not directly involved in patient care
- Reducing face-to-face HCP encounters with patients
- Excluding visitors to patients with confirmed or suspected COVID-19
- Cohorting patients and HCP
- Maximizing use of telemedicine

5) facilities have provided HCP with required education and training, including having them demonstrate competency with donning and doffing, with any PPE ensemble that is used to perform job responsibilities, such as provision of patient care

DRAFT

AMERICAN OVERSIGHT

Conventional Capacity Strategies

Use of isolation gown alternatives that offer equivalent or higher protection
Several fluid-resistant and impermeable protective clothing options are available in the marketplace for HCP. These include isolation gowns and surgical gowns. When selecting the most appropriate protective clothing, employers should consider all of the available information on recommended protective clothing, including the potential limitations. Nonsterile, disposable patient isolation gowns, which are used for routine patient care in healthcare settings, are appropriate for use by HCP when caring for patients with suspected or confirmed COVID-19. In times of gown shortages, surgical gowns should be prioritized for surgical and other sterile procedures. Current U.S. guidelines do not require use of gowns that conform to any standards.

Contingency Capacity Strategies

Selectively cancel elective and non-urgent procedures and appointments for which a gown is typically used by HCP

Shift gown use towards cloth isolation gowns
Reusable (i.e., washable) gowns are typically made of polyester or polyester-cotton fabrics. Gowns made of these fabrics can be safely laundered according to routine procedures and reused. Care should be taken to ensure that HCP do not touch outer surfaces of the gown during care.

- Laundry operations and personnel may need to be augmented to facilitate additional washing loads and cycles
- Systems are established to routinely inspect, maintain (e.g., mend a small hole in a gown, replace missing fastening ties), and replace reusable gowns when needed (e.g., when they are thin or ripped)

Consider the use of coveralls
Coveralls typically provide 360-degree protection because they are designed to cover the whole body, including the back and lower legs, and sometimes the head and feet as well. While the material and seam barrier properties are essential for defining the protective level, the coverage provided by the material used in the garment design, as well as certain features including closures, will greatly affect the protective level. HCP unfamiliar with the use of coveralls must be trained and practiced in their use, prior to using during patient care.
In the United States, the NFPA 1999 standard specifies the minimum design, performance, testing, documentation, and certification requirements for new single-use and new multiple-use emergency medical operations protective clothing, including coveralls for HCP."

Use of expired gowns beyond the manufacturer-designated shelf life for training
The majority of isolation gowns do not have a manufacturer-designated shelf life. However, consideration can be made to using gowns that do and are past their manufacturer-designated shelf life. If there is no date available on the gown label or packaging, facilities should contact the manufacturer.

Use of gowns or coveralls conforming to international standards

DRAFT

AMERICAN OVERSIGHT

Current guidelines do not require use of gowns that conform to any standards. In times of shortages, healthcare facilities can consider using international gowns and coveralls. Gowns and coveralls that conform to international standards, including with EN 13795 and EN14126, could be reserved for activities that may involve moderate to high amounts of body fluids.

\.

Crisis Capacity Strategies

Cancel all elective and non-urgent procedures and appointments for which a gown is typically used by HCP

Extended use of isolation gowns

Consideration can be made to extend the use of isolation gowns (disposable or cloth) such that the same gown is worn by the same HCP when interacting with more than one patient known to be infected with the same infectious disease when these patients housed in the same location (i.e., COVID-19 patients residing in an isolation cohort). This can be considered only if there are no additional co-infectious diagnoses transmitted by contact (such as *Clostridium difficile*) among patients. If the gown becomes visibly soiled, it must be removed and discarded as per usual practices.

Re-use of cloth isolation gowns among multiple patients in a patient cohort area

Disposable gowns are not typically amenable to being doffed and re-used because the ties and fasteners typically break during doffing. Cloth isolation gowns could potentially be untied and retied and could be considered for re-use without laundering in between.

In a situation where the gown is being used as part of standard precautions to protect HCP from a splash, the risk of re-using a non-visibly soiled cloth isolation gown may be lower. However, for care of patients with suspected or confirmed COVID-19, the risk of re-use of cloth isolation gowns without laundering among single HCP caring for multiple patients or among multiple HCP is unclear. Any gown that becomes visibly soiled during patient care should be disposed of and cleaned.

Prioritization of gowns

Gowns should be prioritized for the following activities:

- During care activities where splashes and sprays are anticipated, which typically includes aerosol generating procedures
- During the following high-contact patient care activities that provide opportunities for transfer of pathogens to the hands and clothing of healthcare providers, such as:
    - Dressing, bathing/showering, transferring, providing hygiene, changing linens, changing briefs or assisting with toileting, device care or use, wound care

Surgical gowns should be prioritized for surgical and other sterile procedures. Facilities may consider suspending use of gowns for endemic multidrug resistant organisms (MDROs), (e.g., MRSA, VRE, ESBL-producing organisms).

When No Gowns Are Available

DRAFT

AMERICAN OVERSIGHT

Use of gown alternatives that have not been evaluated as effective

In situation of severely limited or no available isolation gowns, the following pieces of clothing can be considered as a last resort for care of COVID-19 patients as single use. However, none of these options can be considered PPE, since their capability to protect HCP is unknown. Preferable features include long sleeves and closures (snaps, buttons) that can be fastened and secured..

Disposable laboratory coats

- Reusable (washable) patient gownsReusable (washable) laboratory coats
  Disposable aprons
- Combinations of clothing: Combinations of pieces of clothing can be considered for activities that may involve body fluids and when there are no gowns available:
  - Long sleeve aprons in combination with long sleeve patient gowns or laboratory coats
  - Open back gowns with long sleeve patient gowns or laboratory coats
  - Sleeve covers in combination with aprons and long sleeve patient gowns or laboratory coats

Reusable patient gowns and lab coats can be safely laundered according to routine procedures.

- Laundry operations and personnel may need to be augmented to facilitate additional washing loads and cycles
- Systems are established to routinely inspect, maintain (e.g., mend a small hole in a gown, replace missing fastening ties) and replace reusable gowns when needed (e.g., when they are thin or ripped)

AMERICAN OVERSIGHT

Strategies for Optimizing the Supply of Facemasks

Audience: These considerations are intended for use by federal, state, and local public health officials, occupational health service leaders, infection prevention and control program leaders, and other leaders in healthcare settings who are responsible for developing and implementing policies and procedures for preventing pathogen transmission in healthcare settings.

Purpose: This document offers a series of strategies or options to optimize supplies of facemasks in healthcare settings when there is limited supply. It does not address other aspects of pandemic planning; for those, healthcare settings can refer to COVID-19 preparedness plans to address other aspects of preparing to respond to novel coronavirus disease 2019 (COVID-19).

Surge capacity refers to the ability to manage a sudden, unexpected increase in patient volume that would otherwise severely challenge or exceed the present capacity of a facility. While there are no commonly accepted measurements or triggers to distinguish surge capacity from daily patient care capacity, surge capacity is a useful framework to approach a decreased supply of facemasks during the COVID-19 response. Three general strata have been used to describe surge capacity and can be used to prioritize measures to conserve facemask supplies along the continuum of care.

- **Conventional capacity**: measures consist of providing patient care without any change in daily contemporary practices. This set of measures, consisting of engineering, administrative, and PPE controls should already be implemented in general infection prevention and control plans in healthcare settings.
- **Contingency capacity**: measures may change daily standard practices but may not have any significant impact on the care delivered to the patient or the safety of healthcare personnel (HCP). These practices may be used temporarily when facemask demands exceed resources.
- **Crisis capacity**: strategies that are not commensurate with U.S. standards of care. These measures, or a combination of these measures, may need to be considered during periods of expected or known facemask shortages.

The following contingency and crisis strategies are based upon these assumptions:
1) facilities understand their facemask inventory and supply chain
2) facilities understand their facemask utilization rate
3) facilities are in communication with local healthcare coalitions, federal, state, and local public health partners (e.g., public health emergency preparedness and response staff) regarding identification of additional supplies.
4) facilities have already implemented other engineering and administrative control measures including:
    - Reducing the number of patients going to the hospital or outpatient settings
    - Excluding HCP not essential for patient care from entering their care area
    - Reducing face-to-face HCP encounters with patients
    - Excluding visitors to patients with confirmed or suspected COVID-19
    - Cohorting patients and HCP
    - Maximizing use of telemedicine
5) facilities have provided HCP with required education and training, including having them demonstrate competency with donning and doffing, with any PPE ensemble that is used to perform job responsibilities, such as provision of patient care

Conventional Capacity Strategies

Use facemasks according to product labeling and local, state, and federal requirements

DRAFT

AMERICAN OVERSIGHT

- FDA-cleared surgical masks are designed to protect against splashes and sprays and are prioritized for use when such exposures are anticipated, including surgical procedures
- Facemasks that are not regulated by FDA, such as some procedure masks, which are typically used for isolation purposes, may not provide protection against splashes and sprays

Contingency Capacity Strategies

Selectively cancel elective and non-urgent procedures and appointments for which a facemask is typically used by HCP

Remove facemasks for visitors in public areas

Healthcare facilities can consider removing all facemasks from public areas. Facemasks can be available to provide to symptomatic patients upon check in at entry points. All facemasks should be placed in a secure and monitored site. This is especially important in high-traffic areas like emergency departments.

Implement extended use of facemasks

Extended use of facemasks is the practice of wearing the same facemask for repeated close contact encounters with several different patients, without removing the facemask between patient encounters.

- The facemask should be removed and discarded if soiled, damaged, or hard to breathe through.
- HCP must take care not to touch their facemask. If they touch or adjust their facemask they must immediately perform hand hygiene.
- HCP should leave the patient care area if they need to remove the facemask.

Restrict facemasks to use by HCP, rather than patients for source control.

Have patients with symptoms of respiratory infection use tissues or other barriers to cover their mouth and nose.

Crisis Capacity Strategies

Cancel all elective and non-urgent procedures and appointments for which a facemask is typically used by HCP.

Use facemasks beyond the manufacturer-designated shelf life during patient care activities.

If there is no date available on the facemask label or packaging, facilities should contact the manufacturer. The user should visually inspect the product prior to use and, if there are concerns (such as degraded materials or visible tears), discard the product.

Implement limited re-use of facemasks.

Limited re-use of facemasks is the practice of using the same facemask by one HCP for multiple encounters with different patients but removing it after each encounter. As it is unknown what the potential contribution of contact transmission is for SARS-CoV-2, care should be taken to ensure that HCP do not touch outer surfaces of the mask during care, and that mask removal and replacement be done in a careful and deliberate manner.

- The facemask should be removed and discarded if soiled, damaged, or hard to breathe through.
- Not all facemasks can be re-used.
    - Facemasks that fasten to the provider via ties may not be able to be undone without tearing and should be considered only for extended use, rather than re-use.

DRAFT

AMERICAN OVERSIGHT

    - Facemasks with elastic ear hooks may be more suitable for re-use.
- HCP should leave patient care area if they need to remove the facemask. Facemasks should be carefully folded so that the outer surface is held inward and against itself to reduce contact with the outer surface during storage. The folded mask can be stored between uses in a clean sealable paper bag or breathable container.

Prioritize facemasks for selected activities such as:

- For provision of essential surgeries and procedures
- During care activities where splashes and sprays are anticipated
- During activities where prolonged face-to-face or close contact with a potentially infectious patient is unavoidable
- For performing aerosol generating procedures, if respirators are no longer available

When No Facemasks Are Available, Options Include

Exclude HCP at higher risk for severe illness from COVID-19 from contact with known or suspected COVID-19 patients

During severe resource limitations, consider excluding HCP who may be at higher risk for severe illness from COVID-19, such as those of older age, those with chronic medical conditions, or those who may be pregnant, from caring for patients with confirmed or suspected COVID-19 infection.

Designate convalescent HCP for provision of care to known or suspected COVID-19 patients

It may be possible to designate HCP who have clinically recovered from COVID-19 to preferentially provide care for additional patients with COVID-19. Individuals who have recovered from COVID-19 infection may have developed some protective immunity, but this has not yet been confirmed.

Consider use of expedient patient isolation rooms for risk reduction

Portable fan devices with high-efficiency particulate air (HEPA) filtration that are carefully placed can increase the effective air changes per hour of clean air to the patient room, reducing risk to individuals entering the room without respiratory protection. NIOSH has developed guidance for using portable HEPA filtration systems to create expedient patient isolation rooms. The expedient patient isolation room approach involves establishing a high-ventilation-rate, negative pressure, inner isolation zone that sits within a “clean” larger ventilated zone.

Consider use of ventilated headboards

NIOSH has developed the ventilated headboard that draws exhaled air from a patient in bed into a HEPA filter, decreasing risk of HCP exposure to patient-generated aerosol. This technology consists of lightweight, sturdy, and adjustable aluminum framing with a retractable plastic canopy. The ventilated headboard can be deployed in combination with HEPA fan/filter units to provide surge isolation capacity within a variety of environments, from traditional patient rooms to triage stations, and emergency medical shelters.

HCP use of homemade masks

In settings where facemasks are not available, HCP might use homemade masks (e.g., bandana, scarf) for care of patients with COVID-19 as a last resort. However, homemade masks are not considered

DRAFT

AMERICAN OVERSIGHT

PPE, since their capability to protect HCP is unknown. Caution should be exercised when considering this option. Homemade masks should ideally be used in combination with a face shield that covers the entire front (that extends to the chin or below) and sides of the face.

Use a faceshield that covers the entire front (that extends to the chin or below) and sides of the face with no facemask

AMERICAN OVERSIGHT

Strategies for Optimizing the Supply of Eye Protection

Audience: These considerations are intended for use by federal, state, and local public health officials, occupational health service leaders, infection prevention and control program leaders, and other leaders in healthcare settings who are responsible for developing and implementing policies and procedures for preventing pathogen transmission in healthcare settings.

Purpose: This document offers a series of strategies or options to optimize supplies of eye protection in healthcare settings when there is limited supply. It does not address other aspects of pandemic planning; for those, healthcare settings can refer to COVID-19 preparedness plans to address other aspects of preparing to respond to novel coronavirus disease 2019 (COVID-19).

Surge capacity refers to the ability to manage a sudden, unexpected increase in patient volume that would otherwise severely challenge or exceed the present capacity of a facility. While there are no commonly accepted measurements or triggers to distinguish surge capacity from daily patient care capacity, surge capacity is a useful framework to approach a decreased supply of eye protection during the COVID-19 response. Three general strata have been used to describe surge capacity and can be used to prioritize measures to conserve eye protection supplies along the continuum of care.

- **Conventional capacity**: measures consist of providing patient care without any change in daily contemporary practices. This set of measures, consisting of engineering, administrative, and PPE controls should already be implemented in general infection prevention and control plans in healthcare settings.
- **Contingency capacity**: measures may change daily standard practices but may not have any significant impact on the care delivered to the patient or the safety of HCP. These practices may be used temporarily when eye protection demands exceed resources.
- **Crisis capacity**: strategies that are not commensurate with U.S. standards of care. These measures, or a combination of these measures, may need to be considered during periods of expected or known eye protection shortages.

The following contingency and crisis strategies are based upon these assumptions:
1) facilities understand their eye protection inventory and supply chain
2) facilities understand their eye protection utilization rate
3) facilities are in communication with local healthcare coalitions, federal, state, and local public health partners (e.g., public health emergency preparedness and response staff) regarding identification of additional supplies
4) facilities have already implemented other engineering and administrative control measures including:
    - Reducing the number of patients going to the hospital or outpatient settings
    - Excluding HCP not essential for patient care from entering their care area
    - Reducing face-to-face HCP encounters with patients
    - Excluding visitors to patients with confirmed or suspected COVID-19
    - Cohorting patients and HCP
    - Maximizing use of telemedicine
5) facilities have provided HCP with required education and training, including having them demonstrate competency with donning and doffing, with any PPE ensemble that is used to perform job responsibilities, such as provision of patient care

Conventional Capacity Strategies

Use eye protection according to product labeling and local, state, and federal requirements

DRAFT

AMERICAN OVERSIGHT

Contingency Capacity Strategies

Selectively cancel elective and non-urgent procedures and appointments for which eye protection is typically used by HCP

Shift eye protection supplies from disposable to re-usable devices (i.e., goggles and reusable face shields)

- Consider preferential use of powered air purifying respirators (PAPRs) or full-face elastomeric respirators which have built-in eye protection.
- Ensure appropriate cleaning and disinfection between users if goggles or reusable face shields are used.

Implement extended use of eye protection

Extended use of eye protection is the practice of wearing the same eye protection for repeated close contact encounters with several different patients, without removing eye protection between patient encounters. Extended use of eye protection can be applied to disposable and reusable devices.

- Eye protection should be removed and reprocessed if it becomes visibly soiled or difficult to see through.
    - If a disposable face shield is reprocessed, it should be **dedicated to one HCP** and reprocessed whenever it is visibly soiled or removed (e.g., when leaving the isolation area) prior to putting it back on. See protocol for removing and reprocessing eye protection below.
- Eye protection should be discarded if damaged (e.g., face shield can no longer fasten securely to the provider, if visibility is obscured and reprocessing does not restore visibility).
- HCP should take care not to touch their eye protection. If they touch or adjust their eye protection they must immediately perform hand hygiene.
- HCP should leave patient care area if they need to remove their eye protection. See protocol for removing and reprocessing eye protection below.

Crisis Capacity Strategies

Cancel all elective and non-urgent procedures and appointments for which eye protection is typically used by HCP

Use eye protection devices beyond the manufacturer-designated shelf life during patient care activities

If there is no date available on the eye protection device label or packaging, facilities should contact the manufacturer. The user should visually inspect the product prior to use and, if there are concerns (such as degraded materials), discard the product.

Prioritize eye protection for selected activities such as:

- During care activities where splashes and sprays are anticipated, which typically includes aerosol generating procedures
- During activities where prolonged face-to-face or close contact with a potentially infectious patient is unavoidable

Consider using safety glasses (e.g., trauma glasses) that have extensions to cover the side of the eyes

DRAFT

AMERICAN OVERSIGHT

Exclude HCP at higher risk for severe illness from COVID-19 from contact with known or suspected COVID-19 patients

- During severe resource limitations, consider excluding HCP who may be at higher risk for severe illness from COVID-19, such as those of older age, those with chronic medical conditions, or those who may be pregnant, from caring for patients with confirmed or suspected COVID-19 infection.

Designate convalescent HCP for provision of care to known or suspected COVID-19 patients

- It may be possible to designate HCP who have clinically recovered from COVID-19 to preferentially provide care for additional patients with COVID-19. Individuals who have recovered from COVID-19 infection may have developed some protective immunity, but this has not yet been confirmed.

Selected options for Reprocessing Eye Protection

Adhere to recommended manufacturer instructions for cleaning and disinfection

When manufacturer instructions for cleaning and disinfection are unavailable, such as for single use disposable faceshields, consider

1. While wearing gloves, carefully wipe the *inside, followed by the outside* of the face shield or goggles using a clean cloth saturated with neutral detergent solution or cleaner wipe.
2. Carefully wipe the *outside* of the face shield or goggles using a wipe or clean cloth saturated with EPA-registered hospital disinfectant solution.
3. Wipe the outside of face shield or goggles with clean water or alcohol to remove residue.
4. Fully dry (air dry or use clean absorbent towels).
5. Remove gloves and perform hand hygiene.

DRAFT

AMERICAN OVERSIGHT

Self-Monitoring of Asymptomatic Healthcare Personnel (HCP)

Instructions: HCP should check their temperature and complete this form twice daily for 14 days after the date of the last exposure. If temperature is above or equal to 38.0°C/100.0°F, HCP report subjective fevers or any of the following symptoms, they should separate yourself from others and call their local or state public health authority or healthcare facility. They should ensure their temperature is below 38.0°C/100.0°F and that they don't have any of the following symptoms before they leave home and report to work.

Name			Employee ID #	Phone			Email		Job Title			Supervisor		Date of last exposure		
Day # After Exposure	Date	Time	Temp	Symptoms (check if you have any of the following)

AMERICAN OVERSIGHT

Help Keep our Residents Safe from COVID-19

Dear Residents, Families, Friends, Volunteers,

[Nursing home A] is committed to keeping our residents safe and need your help. The virus causing Coronavirus Disease 2019 (abbreviated COVID-19) can cause outbreaks in nursing homes. Many nursing home residents are elderly or have medical conditions putting them at a very high risk of becoming sick, or even severely ill with COVID-19. Visitors and healthcare personnel (HCP) are the most likely sources of introduction of the virus that causes COVID-19 into a facility.

To protect our vulnerable residents, even before COVID-19 is seen in our community, we are immediately taking the following aggressive actions to reduce the risk of COVID-19 in our residents and staff:

1. **We are limiting visitation.**

We strongly encourage you to postpone your visit. We know that your presence is important for your loved one but, per guidance from the Centers for Disease Control and Prevention (CDC), this is a necessary action to protect their health. We are introducing alternative methods of visitation (such as skype, FaceTime, etc.) so that you can continue to communicate with your loved ones. As the situation with COVID-19 is rapidly changing, we might need to further limit visitation to those who are essential for the resident's emotional well-being and care or end of life situations. Anyone who does enter the building will be expected to frequently clean their hands and limit their visit to a designated area within the building. You may be asked to wear a mask while you are in the building.

Ill people should not visit. We will be performing screenings; visitors with any of the following will not be allowed into the building:

- Fever or symptoms of respiratory infection (e.g., cough, sore throat, or shortness of breath)
- International travel within the last 14 days to affected countries. For updated information on high-risk countries visit: https://www.cdc.gov/coronavirus/2019-ncov/travelers/index.html
- Contact with an individual with COVID-19.

2. **We are monitoring healthcare personnel and residents for symptoms of respiratory illness:**

We are asking non-essential personnel including volunteers and consultant personnel not to enter the building. Healthcare personnel will be monitored for fever and symptoms of respiratory infection. Ill healthcare personnel will be asked to stay home. You may see healthcare personnel wearing facemasks, eye protection, gown, and gloves in order to prevent germs from spreading and help keep residents safe. Healthcare personnel will clean their hands frequently.

We are assessing residents daily for fevers and symptoms of respiratory infection in order to quickly identify ill residents and implement additional infection prevention activities. When ill residents are identified, they will be monitored closely, asked to stay in their rooms or wear a mask.

AMERICAN OVERSIGHT

3. We are limiting activities within the facility:

We will be limiting group activities and community outings for residents in order to keep our residents and healthcare personnel safe. If there is COVID-19 in the community or in the facility, we will need to completely cancel activities, further restrict visitation, and deliver meals resident rooms.

We encourage you to review the CDC website for information about COVID-19, including its symptoms, how it spreads, and actions you can take to protect your health: https://www.cdc.gov/coronavirus/2019-ncov/index.html

Thank you very much for everything you are doing to keep our residents and facility staff safe and healthy. We continue to monitor the situation in our community; we will keep you informed about any new precautions we think are necessary to keep your loved one safe. Please contact us with additional questions at **[facility contact info]**.

AMERICAN OVERSIGHT

Guidelines for cleaning and disinfection for SARS_CoV_2

- Dedicated medical equipment should be used for patient care.
- All non-dedicated, non-disposable medical equipment used for patient care should be cleaned and disinfected according to manufacturer's instructions and facility policies.
- Ensure that environmental cleaning and disinfection procedures are followed consistently and correctly.
- Management of laundry, food service utensils, and medical waste should also be performed in accordance with routine procedures.
- Use EPA-approved disinfection products listed on this website: https://www.epa.gov/pesticide-registration/list-n-disinfectants-use-against-sars-cov-2
- Follow the manufacturer's instructions for all cleaning and disinfection products (e.g., concentration, application method and contact time, PPE) for use.
- Clean the surface first, and then apply the disinfectant as instructed on the disinfectant manufacturer's label. Ensure adequate contact time for effective disinfection.
- Adhere to any safety precautions or other label recommendations as directed (e.g., allowing adequate ventilation in confined areas, proper disposal of unused product or used containers and donning appropriate PPE).
- After cleaning and removal and disposal of gloves, staff should perform hand hygiene by washing hands often with soap and water for at least 20 seconds or using an alcohol-based hand sanitizer that contains 60 to 95% alcohol. Soap and water should be used if the hands are visibly soiled.

Best practices for long-term care facilities:

- Avoid using product application methods that cause splashing or generate aerosols.
- Cleaning activities should be supervised and inspected periodically to ensure correct procedures are followed.
- Review cleaning and disinfection products and protocols with floor staff and housekeeping
    - Ensure they understand the necessary contact time
    - Differences between porous and non-porous surfaces
- Room cleaning
    - Daily cleaning
    - High touch surfaces every shift (door handles, bedside tables, bed rails, TV remote, call button, light switches
- Facilities should consider assigning daily cleaning and disinfection of high-touch surfaces to nursing personnel who will already be in the room providing care to the patient.
- Shared equipment: clean and disinfect after every resident use
- Dedicated equipment: clean and disinfect prior to storage

Resources:

AMERICAN OVERSIGHT

- This document contains those disinfectants already registered with EPA for coronavirus effectiveness, at the link here https://www.epa.gov/pesticide-registration/list-n-disinfectants-use-against-sars-cov-2 .
- Overall IPC guidance for COVID-19 can be found on CDC's website: https://www.cdc.gov/coronavirus/2019-ncov/infection-control/infection-prevention-control-faq.html
- Detailed information on environmental infection control in healthcare settings can be found in CDC's Guidelines for Environmental Infection Control in Health-Care Facilities and Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings [section IV.F. Care of the environment].

AMERICAN OVERSIGHT

PPE Strategies for LTCFs during Cluster of COVID-19 Infections:

When there are cases if the facility:

- Universal masking of HCP while in the facility
  - Consider changing every 2 hours or if it become visibly soiled or wet (see further guidance below for extended use).
- Consider using all recommend PPE (mask/respirator, eye protection, gowns, gloves) for the care of any resident if available.

For any contact with residents with respiratory infections, healthcare personnel (HCP) MUST wear all of the following if gowns are not readily available:

- Respirator (or Facemask if Respirator is not available or HCP are not fit-tested)
  - A respirator must be used if performing an aerosol-generating procedure (e.g., nebulizer therapy)
- Eye protection (Goggles or Face shield); Any eye protection that is not immediately discarded after use must be dedicated to each provider
- Gloves

Gowns MUST be added in the following situations:

- Performing an aerosol-generating procedure (e.g., nebulizer therapy);
- During care activities where splashes and sprays are anticipated;
- During the following high-contact resident care activities:
  - Dressing, bathing/showering, transferring, providing hygiene, changing linens, changing briefs or assisting with toileting, device care or use, wound care

The following PPE must NEVER be used for more than one resident:

- Gloves
- Gown

Using the same respirator (or facemask if used) and eye protection is permitted for repeated close contact encounters with several residents, without removing between resident encounters (Extended Use).

- This should only be done between roommate pairs or residents in different rooms who are symptomatic
  - In units where illness is wide-spread, HCP could continue use of same respirator (or facemask if used) and eye protection for 2 hours before changing
- **HCP should avoid touching their face protection**.
- Hand hygiene must be performed after the HCP touches their face protection at any point.

AMERICAN OVERSIGHT

- The respirator (or facemask if used) MUST be discarded and the eye protection must be replaced (can be reused after cleaning and disinfection) in the following scenarios:
    - If damp, damaged, or hard to breathe through.
    - If used during aerosol generating procedures.
    - If contaminated with blood, respiratory or nasal secretions, or other bodily fluids from residents.
- The face shield MUST be discarded if it becomes damaged such that it can no longer fasten securely to the provider or become even slightly difficult to see through.

AMERICAN OVERSIGHT

Rapid Telephone Assessment and Recommendations for Facilities during COVID-19 Outbreak

The purpose of this document is to provide guidance on infection prevention and control information to obtain from facilities and recommendations in the setting of a COVID-19 outbreak.

Facility name: _____

Facility type: _____

Date of contact: _____

Facility demographics –

1. Who oversees infection prevention at your facility?

2. How would you describe your facility? What kind of care is provided at your facility?

3. What is your current census and breakdown by different units?

4. Have you made any changes at your facility in response to the coronavirus outbreak? If so, what are those

5. Are you restricting visitors at your facility? If so, are there any exceptions? How are your preventing visitors from entering the facility?

   (If they are not doing this, would recommend that they restrict all visitors except for end of life visitation; this has been mandated by the governor)

6. Are you performing screening of all employees before they report to work?

   (Ideally, this would occur at the entrance to the facility, before they begin their shift. Includes temperature check and check for symptoms like subjective fever, cough, difficulty breathing. If

AMERICAN OVERSIGHT

they have a fever of 100.0F or higher or symptoms, they should be asked to leave work and consider seeing a healthcare provider.)

7. Are group activities still occurring at your facility (e.g., communal meals, mass/church, art or gym classes, etc.)?

   (ideally, this should be discontinued if there are cases in the community or any cases within the facility)

8. Are the residents/patients at your facility screened regularly? What type of screening are you doing?

   (Ideally, the facility should be screening their patients/residents at least once a day, but preferably 2+ times daily. This should include either measuring temperatures or report of subjective fever and any symptoms like difficulty breathing, shortness of breath, and cough. If they have a fever (temperature of 100.0F or higher) or symptoms, they should be evaluated by a medical professional and can consider testing for coronavirus.)

There are three main components to infection prevention and control that I would like to talk about today. The three big things that we know prevents the spread of infections in facilities is good hand hygiene, appropriate use of personal protective equipment, and good environmental cleaning. The first one we will talk about is hand hygiene.

Hand Hygiene

1. Can you tell me about your hand hygiene (HH) policy at your facility?

2. Is there a preference for soap and water or alcohol-based hand rub (ABHR)?

3. Do you have a program in place where you audit HH? If so, what are your rates for HH?

4. How is your supply of soap/alcohol-based hand rub?

AMERICAN OVERSIGHT

(Consider discussing that ABHR is generally better at cleaning healthcare workers' hands and that staff generally do not wash their hands appropriately. ABHR should be prioritized for coronavirus these reasons and would be the preferred way to clean hands for this outbreak. There are concerns that surveyors may be requiring some facilities to use soap and water with every third application of ABHR, but you could consider telling them that this should not prevent them from using ABHR in this setting.)

Next we can move into personal protection equipment or PPE use.

1. What type of training do your employees get for PPE use and how frequently?

   (If it is only at the time or hire or annually, consider recommending an in-service with staff to ensure they are competent is appropriate PPE use)

2. Is PPE use audited? For example, does anyone watch how PPE is used as people enter and leave a room? If so, do you have any issues with PPE use?

3. How is your supply of PPE?
   a. Surgical masks
   b. Respirators
   c. Gowns
   d. Gloves
   e. Eye protection

4. Where do your employees take off PPE?

   (ideally as they exit the room, by the door)
5. Do you have signs (or signage) to indicate what type of precautions a patient is on or what PPE is needed to enter a room?

   (Many LTC facilities will have a sign that says see nurse. This is done to try and protect personal healthcare information, but it doesn't tell staff what they need to wear. You can recommend using a transmission based precaution sign such as https://www.cdc.gov/infectioncontrol/basics/transmission-based-precautions.html#anchor_1564058318)

AMERICAN OVERSIGHT

6. What precautions are being used for your patients that may be suspect or confirmed cases?

   (Should be gowns, gloves, N95/respirator or surgical mask if running low, and eye protection)
7. How do you communicate isolation status or needs at the time of patient transfer to another facility?

   (Often this is a verbal report to the receiving nurse or facility)

If you are having issues with your supply of PPE or ABHR, consider reaching out to the DRC's for supplies and coordination – they can be reached ***how***

Finally, we will talk about environmental cleaning. Making sure the environment is cleaned well is one of the best ways to prevent spread of infections to other patients.

8. What type of cleaning product is used at your facility?

   (If you are talking to the IP head [like the DON/ADON] they probably won't be able to answer this. If they cannot, that's not unusual. You can share List N from the FDA which includes all products that are authorized for use for coronavirus in healthcare settings: https://www.epa.gov/pesticide-registration/list-n-disinfectants-use-against-sars-cov-2)

9. Do you know the contact time for that product?

   (Contact time is how long the product needs to sit on a surface for it to kill/inactivate bacteria and viruses. This ranges from 1 minute to 10 minutes depending on the product. It's imperative that the facility know what the contact time is for their products and ensuring that environmental services knows exactly how long to keep surfaces wet. Many times that means reapplying a product before it dries until it reaches that contact time – reinforce this).
10. Who cleans common or shared equipment like nurse-on-a-stick/blood pressure machine or thermometers?

11. What product is used for that? (Again, reinforcing contact time)

    (These should be cleaned after every patient use. The facility should also dedicate whatever equipment is possible to a suspect or case-patient like thermometers or stethoscopes)

AMERICAN OVERSIGHT

That is all of my questions. Any questions that you have for me?

Next we can recap the recommendations for your facility:

1.
2.
3.
4.
5.

Any last questions or thoughts?

You can reach us at *** if you have further questions or to follow-up on some of this information. We will also be sending you an e-mail; could you provide me with a good e-mail address to send this to?

_____

-Wrap up and thanks!

Florida Arbovirus Surveillance
Week 10: March 1-7, 2020

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West

AMERICAN OVERSIGHT

Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of March 1-7, 2020, the following arboviral activity was recorded in Florida.

WNV activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week. No sentinel chickens tested positive for antibodies to WNV this week. In 2020, 30 sentinel chickens have been reported from nine counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2020, no positive samples have been reported.

EEEV activity: No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported this week. Three sentinel chickens tested positive for antibodies to EEEV this week in Orange and Volusia counties. In 2020, 10 sentinel chickens, one horse, and one mosquito pool have been reported from five counties.

International Travel-Associated Dengue Fever Cases: No cases of dengue fever were reported this week in persons that had international travel. In 2020, seventeen travel-associated cases have been reported.

Dengue Fever Cases Acquired in Florida: One case of locally acquired dengue fever was reported this week in Monroe County. In 2020, one case of locally acquired dengue fever has been reported.

International Travel-Associated Chikungunya Fever Cases: No cases of chikungunya fever were reported this week in persons that had international travel. In 2020, no travel-associated chikungunya fever cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2020, no cases of locally acquired chikungunya fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week in persons that had international travel. In 2020, no travel-associated Zika fever cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2020, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts: Monroe County is currently under a mosquito-borne illness advisory. Miami-Dade County is currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert.

There is a Level 2 Travel Health Notice for Nigeria related to the transmission of yellow fever virus. There are also Level 1 Travel Health Notices for Central and South America, Mexico, the Caribbean, Asia, the Pacific Islands, Africa, and the Middle East related to the transmission of dengue virus, for Burundi related to Malaria transmission, and for Ethiopia

AMERICAN OVERSIGHT

related to chikungunya transmission. Additional information on travel health notices can be found at the following link: wwwnc.cdc.gov/travel/notices. For a map of arboviral disease activity in the United States visit: wwwn.cdc.gov/arbonet/maps/ADB_Diseases_Map/index.html.

AMERICAN OVERSIGHT

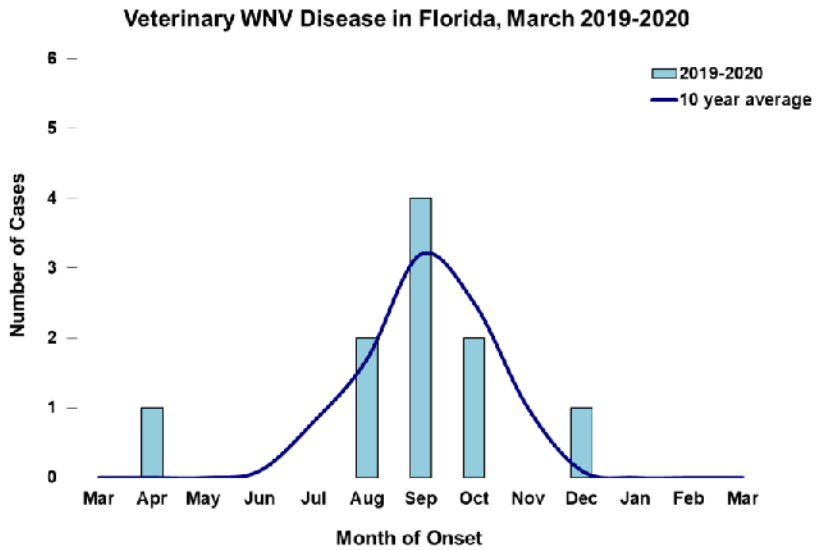
2020 Human Case Summary*

International Travel-Associated Dengue Fever Cases
Seventeen cases of dengue fever with onset in 2020 have been reported in individuals with travel history to a dengue endemic area in the two weeks prior to onset. Counties reporting cases were: Brevard, Broward (5), Franklin, Hillsborough (3), Miami-Dade (5), Seminole, and St. Lucie. Two cases were reported in non-Florida residents. In 2020, sixteen cases of dengue reported in Florida have been serotyped by PCR. Please see the table below for a breakdown of cases by country of origin and serotype.

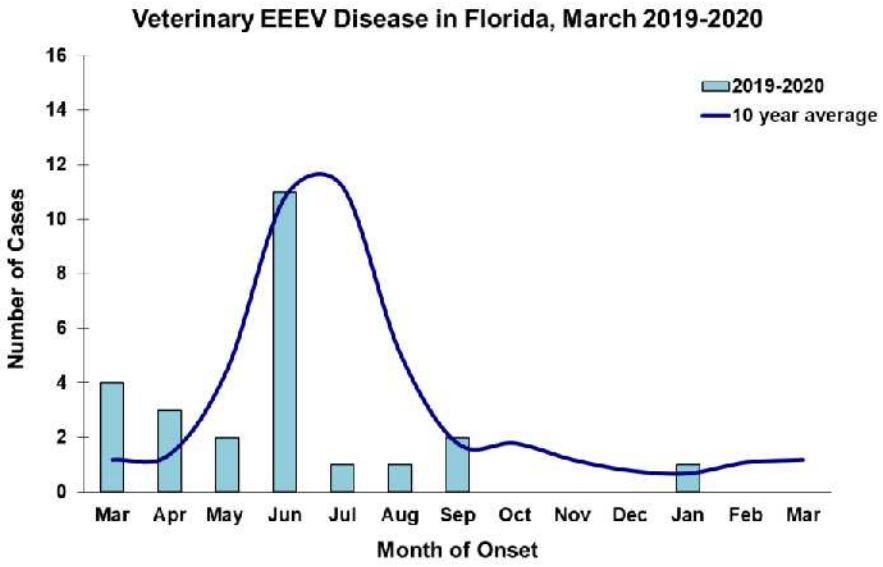
Country of Exposure	DENV-1	DENV-2	DENV-3	DENV-4	DENV-1/ DENV-3	Unknown	Total
Jamaica			3		1		4
Colombia	2						2
Cuba	1	1					2
Dominican Republic	2						2
Bahamas	1						1
Bolivia	1						1
Brazil		1					1
Nicaragua		1					1
Paraguay				1			1
Puerto Rico/US Virgin Islands	1						1
US Virgin Islands						1	1
Total	**8**	**3**	**3**	**1**	**1**	**1**	**17**

Dengue Fever Cases Acquired in Florida: In 2020, one case of locally acquired dengue fever has been reported in Monroe County, with onset in February. The case was reported in a non-Florida resident.



International Travel-Associated Malaria Cases: Four cases of malaria with onset in 2020 have been reported. Countries of origin were: Cameroon, Dominican Republic, Nicaragua, and Nigeria. Counties reporting cases were: Miami-Dade (2), Orange, and Polk. One case was reported in a non-Florida resident.

Three cases (75%) were diagnosed with *Plasmodium falciparum*. One case (25%) was diagnosed with *Plasmodium vivax*.

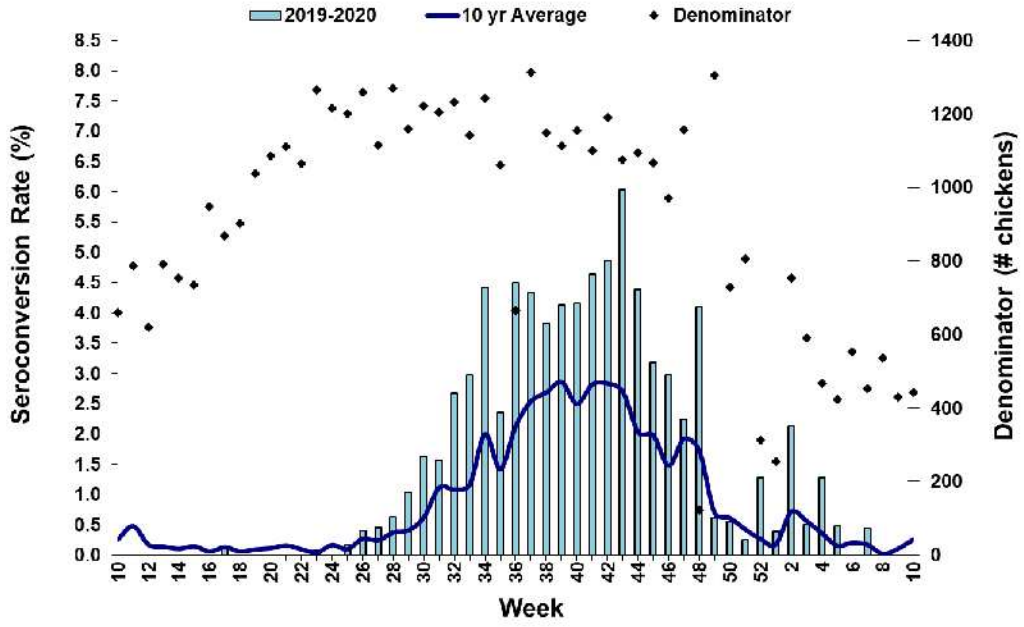


Veterinary Cases*

*Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

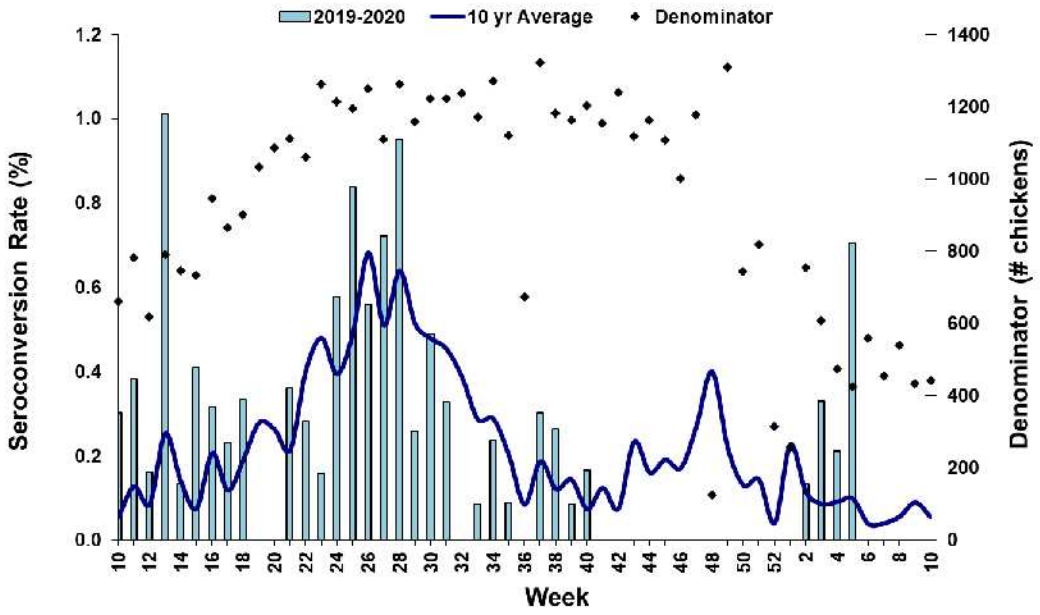
No veterinary cases were reported this week.

AMERICAN OVERSIGHT



Sentinel Chickens*

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.



Three sentinel chickens tested positive for antibodies to EEEV this week in Orange and Volusia counties

County	Collection Date	Seroconversion Rates (%)						County Totals	
		Flavi	SLEV	WNV	Alpha	EEEV	HJV	Collection Week	YTD
Orange	2/24/20				3.13	3.13		2 EEEV	3 WNV, 7 EEEV
Volusia	2/24/20				2.08	2.08		1 EEEV	1 EEEV

AMERICAN OVERSIGHT

Sentinel Seroconversions to EEEV in Florida, 2019-2020

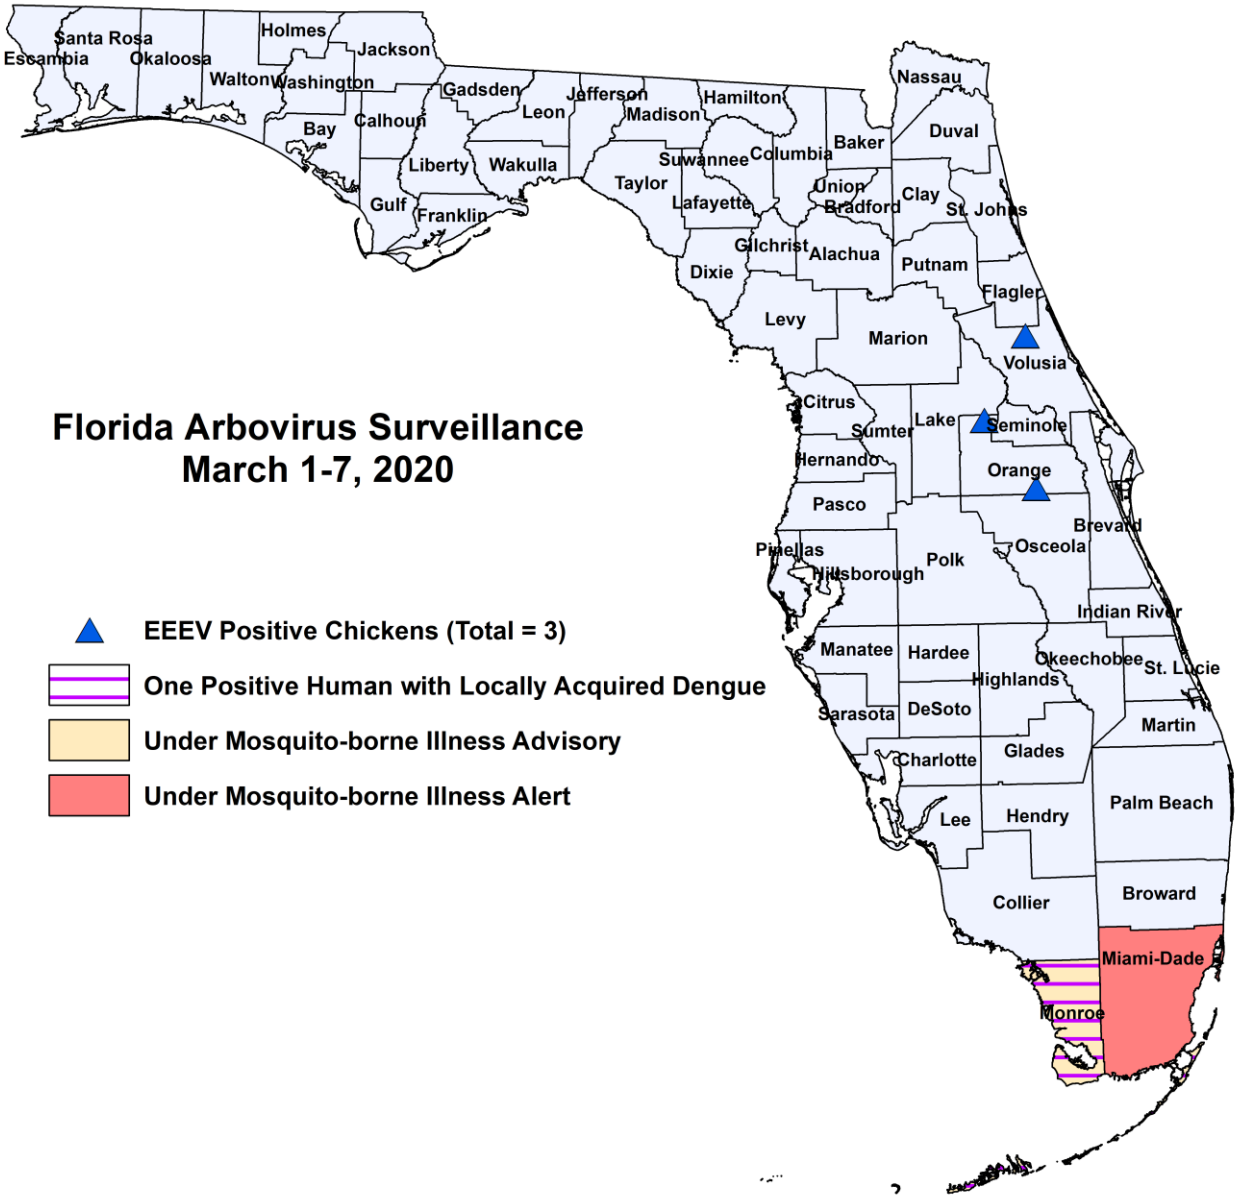
Mosquito Pools

No mosquito pools tested positive for EEEV or WNV this week.

County	Collection Date	Result	Species	County YTD

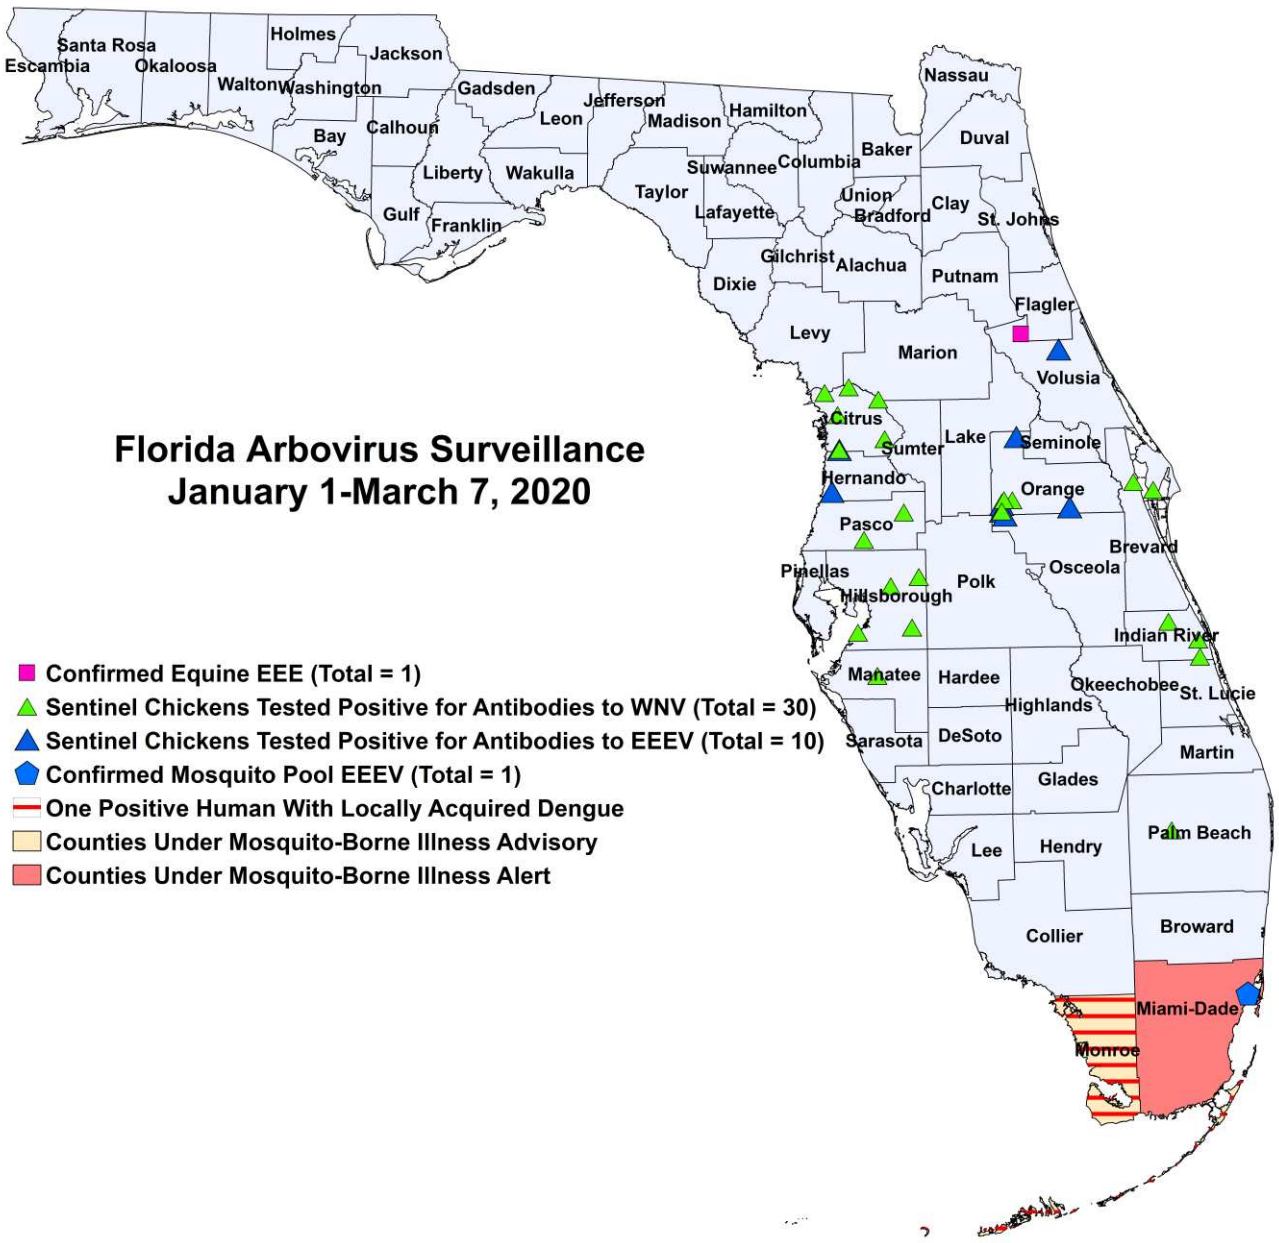
Dead Birds

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, six reports representing a total of 36 dead birds, including one crow, one raptor, and six doves, were received from six counties.



In 2020, 78 reports representing a total of 218 dead birds (17 crows, 1 jay, 18 raptors, 6 doves) were received from 27 of Florida's 67 counties.

2020



County	Total Dead Birds	Crows	Jays	Raptors	Doves
Duval	15	1	0	0	0
Lake	1	0	0	1	0
Lee	6	0	0	0	0
Miami-Dade	15	0	0	0	6
Palm Beach	2	0	0	0	0
Sarasota	1	0	0	0	0

AMERICAN OVERSIGHT

For more surveillance information, please see the DOH website at: www.floridahealth.gov/diseases-and-conditions/mosquito-borne-diseases/surveillance.html

For arbovirus surveillance information for the United States, please see the Centers for Disease Control and Prevention website at: www.cdc.gov/ncidod/dvbid/westnile/surv&control.htm

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.

Florida Arbovirus Surveillance
Week 11: March 8-14, 2020

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West

AMERICAN OVERSIGHT

Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of March 8-14, 2020, the following arboviral activity was recorded in Florida.

WNV activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week. No sentinel chickens tested positive for antibodies to WNV this week. In 2020, 30 sentinel chickens have been reported from nine counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2020, no positive samples have been reported.

EEEV activity: No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported this week. Two sentinel chickens tested positive for antibodies to EEEV this week in Citrus and Orange counties. In 2020, 12 sentinel chickens, one horse, and one mosquito pool have been reported from five counties.

International Travel-Associated Dengue Fever Cases: One case of dengue fever was reported this week in a person that had international travel. In 2020, 18 travel-associated cases have been reported.

Dengue Fever Cases Acquired in Florida: No cases of locally acquired dengue fever were reported this week. In 2020, one case of locally acquired dengue fever has been reported.

International Travel-Associated Chikungunya Fever Cases: No cases of chikungunya fever were reported this week in persons that had international travel. In 2020, no travel-associated chikungunya fever cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2020, no cases of locally acquired chikungunya fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week in persons that had international travel. In 2020, no travel-associated Zika fever cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2020, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts: Monroe County is currently under a mosquito-borne illness advisory. Miami-Dade County is currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert.

There is a Level 2 Travel Health Notice for Nigeria related to the transmission of yellow fever virus. There are also Level 1 Travel Health Notices for Central and South America, Mexico, the Caribbean, Asia, the Pacific Islands, Africa, and the Middle East related to the transmission of dengue virus, for Burundi related to Malaria transmission, and for Ethiopia

AMERICAN OVERSIGHT

related to chikungunya transmission. Additional information on travel health notices can be found at the following link: wwwnc.cdc.gov/travel/notices. For a map of arboviral disease activity in the United States visit: wwwn.cdc.gov/arbonet/maps/ADB_Diseases_Map/index.html.

AMERICAN OVERSIGHT

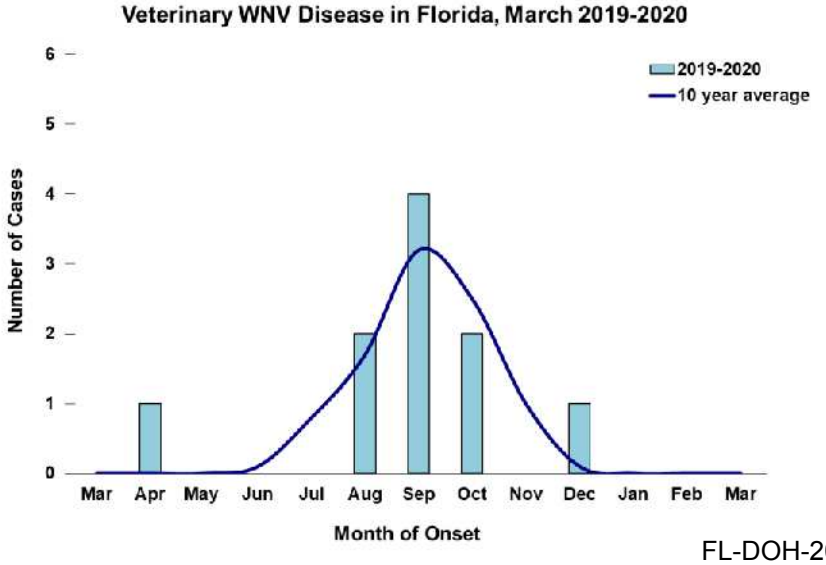
2020 Human Case Summary*

International Travel-Associated Dengue Fever Cases
Eighteen cases of dengue fever with onset in 2020 have been reported in individuals with travel history to a dengue endemic area in the two weeks prior to onset. Counties reporting cases were: Brevard, Broward (5), Duval, Franklin, Hillsborough (3), Miami-Dade (5), Seminole, and St. Lucie. Two cases were reported in non-Florida residents. In 2020, sixteen cases of dengue reported in Florida have been serotyped by PCR. Please see the table below for a breakdown of cases by country of origin and serotype.

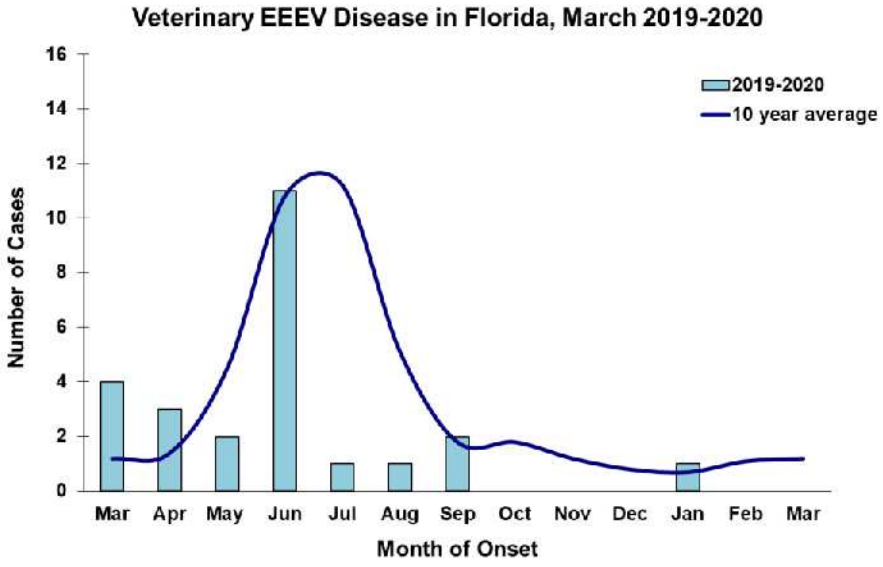
Country of Exposure	DENV-1	DENV-2	DENV-3	DENV-4	DENV-1/ DENV-3	Unknown	Total
Jamaica			3		1		4
Colombia	2						2
Cuba	1	1					2
Dominican Republic	2						2
Bahamas	1						1
Bolivia	1						1
Brazil		1					1
Mexico						1	1
Nicaragua		1					1
Paraguay				1			1
Puerto Rico/US Virgin Islands	1						1
US Virgin Islands						1	1
Total	**8**	**3**	**3**	**1**	**1**	**2**	**18**

Dengue Fever Cases Acquired in Florida: In 2020, one case of locally acquired dengue fever has been reported in Monroe County, with onset in February. The case was reported in a non-Florida resident.



International Travel-Associated Malaria Cases: Five cases of malaria with onset in 2020 have been reported. Countries of origin were: Cameroon, Dominican Republic, Nicaragua, Nigeria, and Uganda. Counties reporting cases were: Miami-Dade (2), Orange, Palm Beach, and Polk. One case was reported in a non-Florida resident.

Four cases (80%) were diagnosed with *Plasmodium falciparum*. One case (20%) was diagnosed with *Plasmodium vivax*.

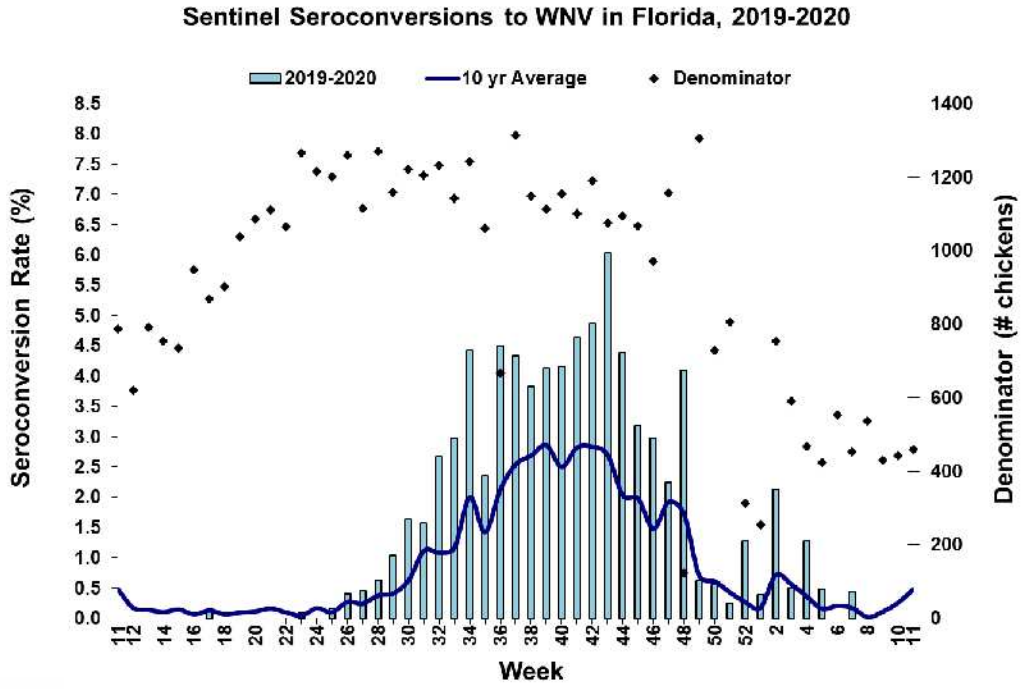


Veterinary Cases*

*Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

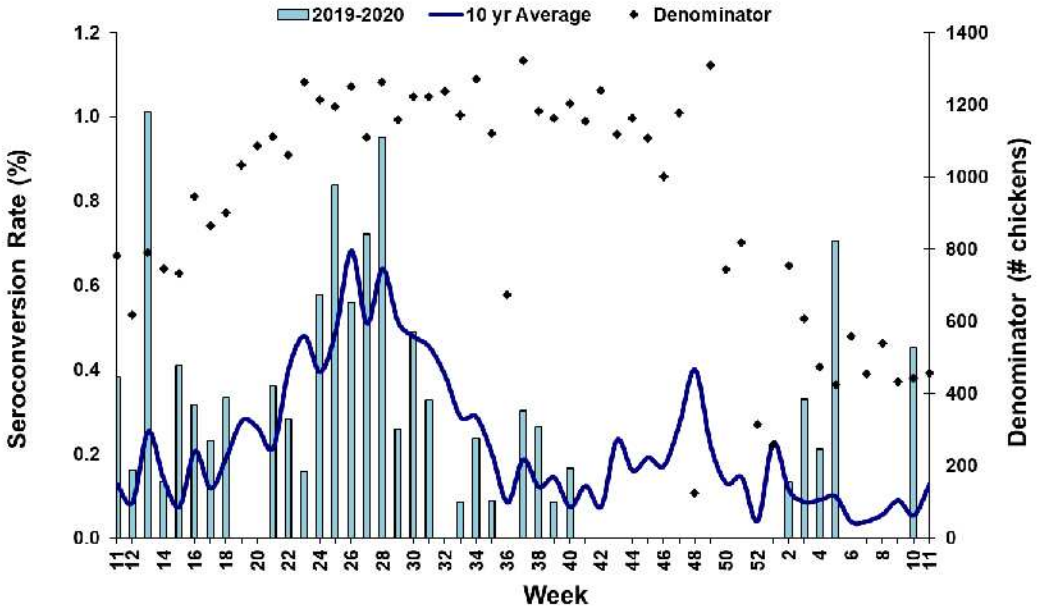
No veterinary cases were reported this week.

AMERICAN OVERSIGHT



Sentinel Chickens*

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.



Two sentinel chickens tested positive for antibodies to EEEV this week in Citrus and Orange counties.

County	Collection Date	Seroconversion Rates (%)						County Totals	
		Flavi	SLEV	WNV	Alpha	EEEV	HJV	Collection Week	YTD
Citrus	3/2/2020				1.28	1.28		1 EEEV	8 WNV, 2 EEEV
Orange	3/2/2020				1.59	1.59		1 EEEV	3 WNV, 8 EEEV

AMERICAN OVERSIGHT

Sentinel Seroconversions to EEEV in Florida, 2019-2020

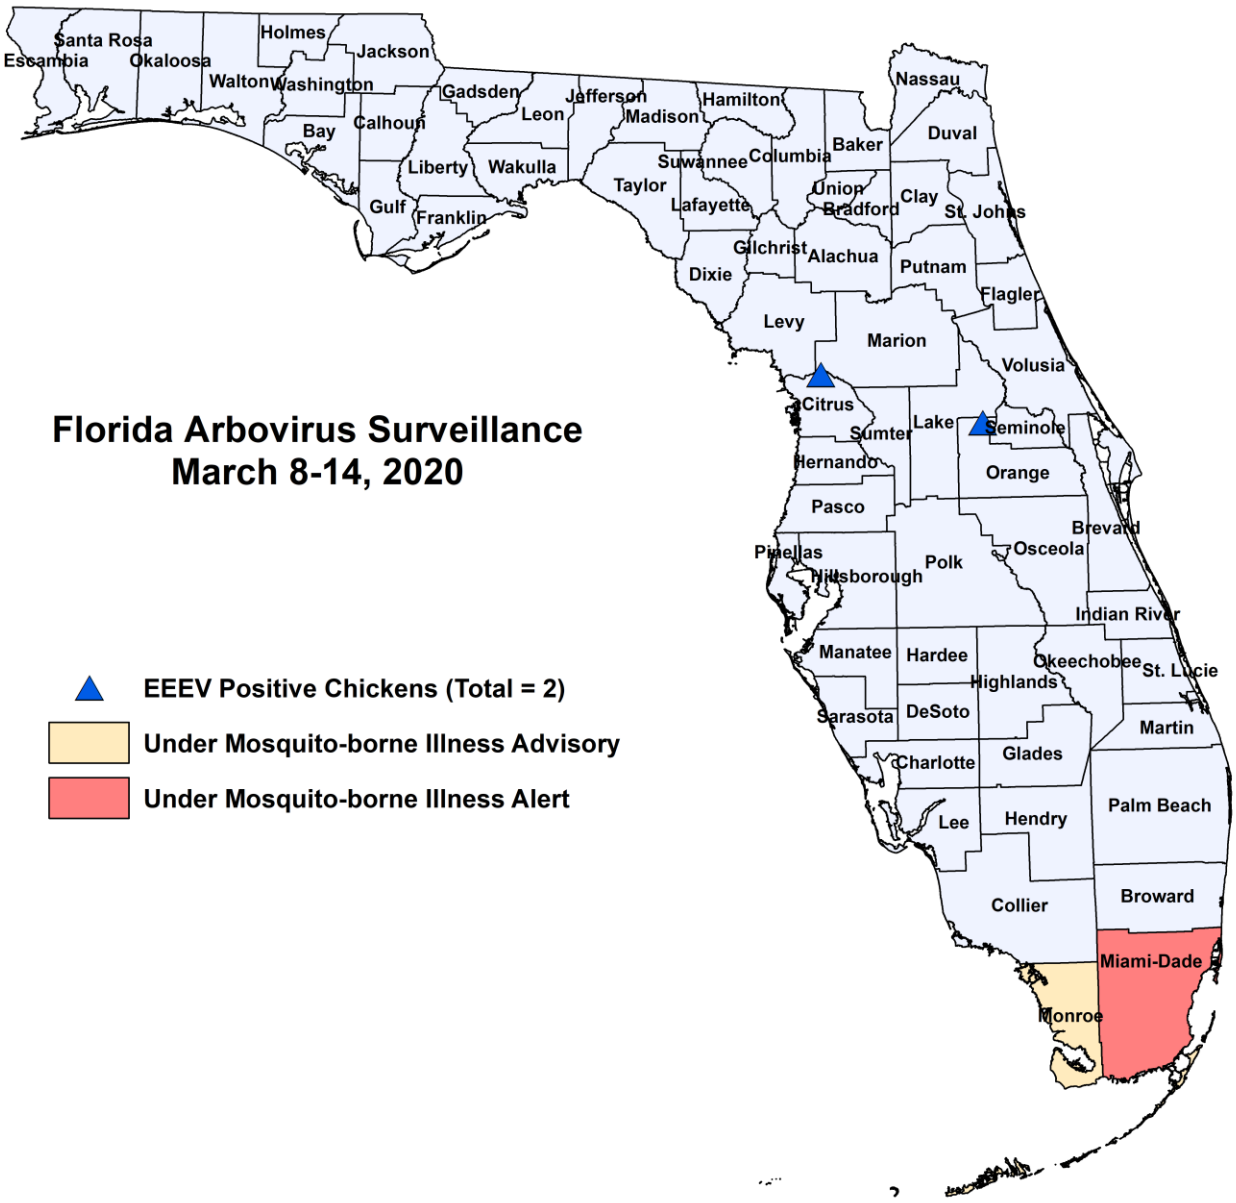
Mosquito Pools

No mosquito pools tested positive for EEEV or WNV this week.

County	Collection Date	Result	Species	County YTD

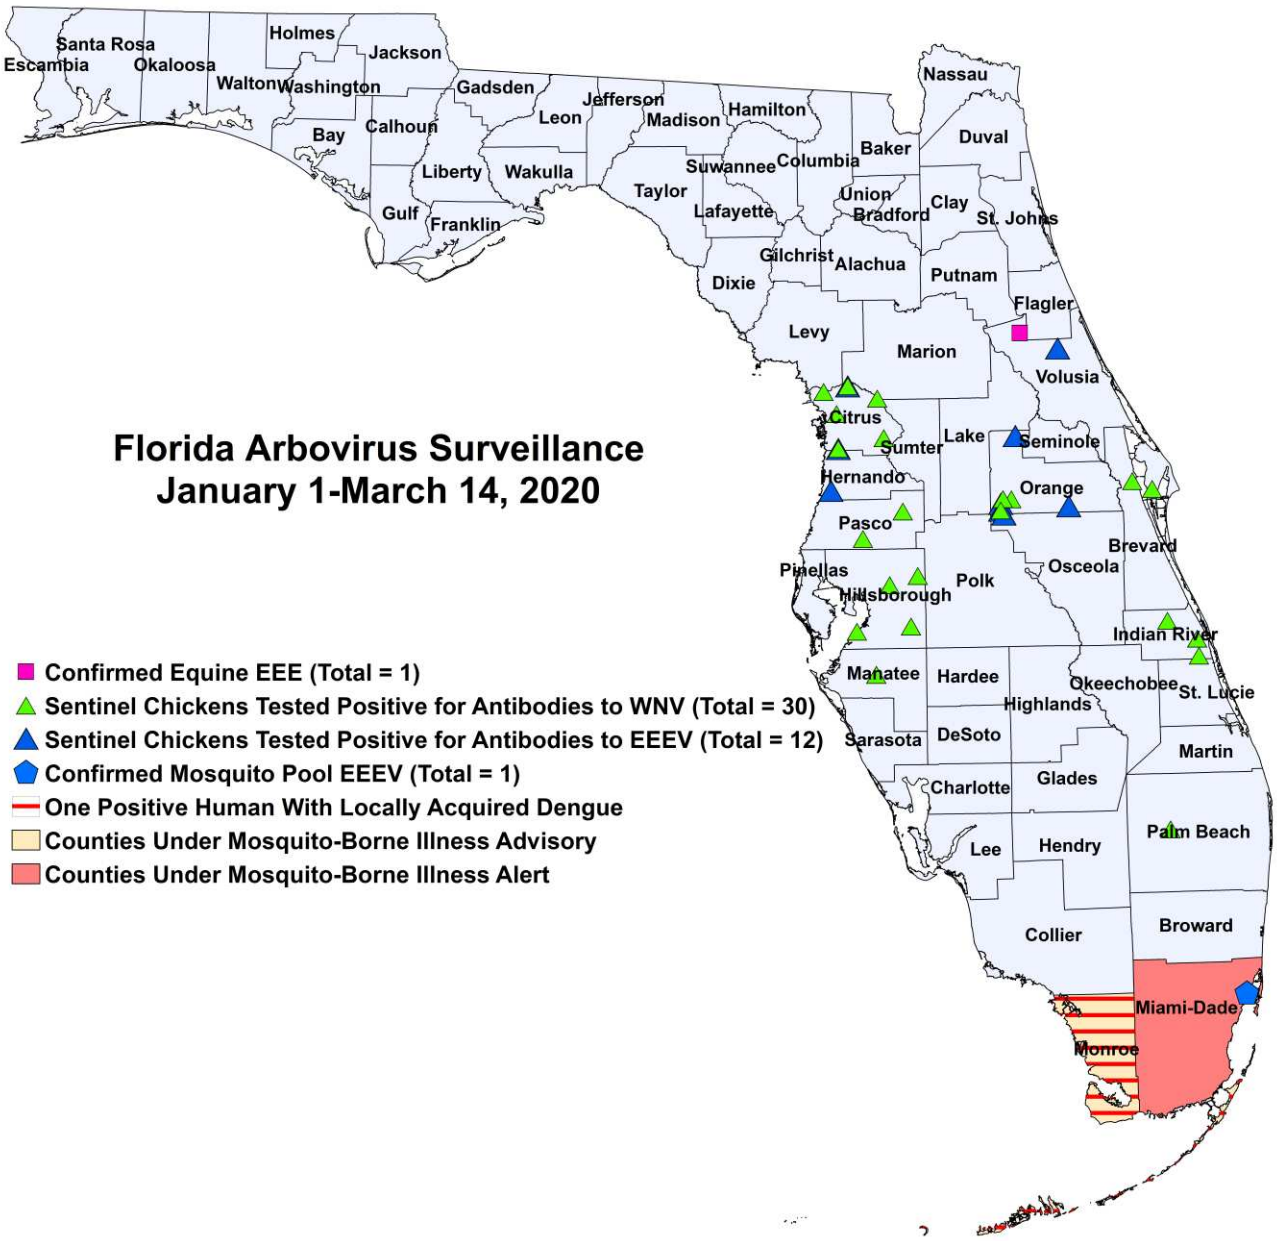
Dead Birds

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, 13 reports representing a total of 37 dead birds, including one crow, one raptor, and one dove, were received from nine counties.



In 2020, 91 reports representing a total of 255 dead birds (18 crows, 1 jay, 19 raptors, 7 doves) were received from 27 of Florida's 67 counties.

2020



County	Total Dead Birds	Crows	Jays	Raptors	Doves
Brevard	1	0	0	0	0
Collier	1	0	0	0	0
Duval	15	0	0	0	0
Lee	4	0	0	1	0
Okaloosa	1	0	0	0	0
Pinellas	2	0	0	0	0
Polk	7	1	0	0	1
Sarasota	1	0	0	0	0
Volusia	5	0	0	0	0

For more surveillance information, please see the DOH website at: www.floridahealth.gov/diseases-and-conditions/mosquito-borne-diseases/surveillance.html

For arbovirus surveillance information for the United States, please see the Centers for Disease Control and Prevention website at: www.cdc.gov/ncidod/dvbid/westnile/surv&control.htm

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.

Florida Arbovirus Surveillance

AMERICAN OVERSIGHT

Week 12: March 15-21, 2020

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of March 15-21, 2020, the following arboviral activity was recorded in Florida.

WNV activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week Four sentinel chickens tested positive for antibodies to WNV this week in Hillsborough County. In 2020, 34 sentinel chickens have been reported from nine counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2020, no positive samples have been reported.

EEEV activity: No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported this week. No sentinel chickens tested positive for antibodies to EEEV this week. In 2020, 12 sentinel chickens, one horse, and one mosquito pool have been reported from five counties.

International Travel-Associated Dengue Fever Cases: One case of dengue fever was reported this week in a person that had international travel. In 2020, 19 travel-associated cases have been reported.

Dengue Fever Cases Acquired in Florida: No cases of locally acquired dengue fever were reported this week. In 2020, one case of locally acquired dengue fever has been reported.

International Travel-Associated Chikungunya Fever Cases: No cases of chikungunya fever were reported this week in persons that had international travel. In 2020, no travel-associated chikungunya fever cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2020, no cases of locally acquired chikungunya fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week in persons that had international travel. In 2020, no travel-associated Zika fever cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2020, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts: Monroe County is currently under a mosquito-borne illness advisory. Miami-Dade County is currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert.

AMERICAN OVERSIGHT

There is a Level 2 Travel Health Notice for Nigeria related to the transmission of yellow fever virus. There are also Level 1 Travel Health Notices for Central and South America, Mexico, the Caribbean, Asia, the Pacific Islands, Africa, and the Middle East related to the transmission of dengue virus, for Burundi related to Malaria transmission, and for Ethiopia related to chikungunya transmission. AMERICAN OVERSIGHT

Florida Arbovirus Surveillance
Week 12: March 15-21, 2020

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of March 15-21, 2020, the following arboviral activity was recorded in Florida.

WNV activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week Four sentinel chickens tested positive for antibodies to WNV this week in Hillsborough County. In 2020, 34 sentinel chickens have been reported from nine counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2020, no positive samples have been reported.

EEEV activity: No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported this week. No sentinel chickens tested positive for antibodies to EEEV this week. In 2020, 12 sentinel chickens, one horse, and one mosquito pool have been reported from five counties.

International Travel-Associated Dengue Fever Cases: One case of dengue fever was reported this week in a person that had international travel. In 2020, 19 travel-associated cases have been reported.

Dengue Fever Cases Acquired in Florida: No cases of locally acquired dengue fever were reported this week. In 2020, one case of locally acquired dengue fever has been reported.

International Travel-Associated Chikungunya Fever Cases: No cases of chikungunya fever were reported this week in persons that had international travel. In 2020, no travel-associated chikungunya fever cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2020, no cases of locally acquired chikungunya fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week in persons that had international travel. In 2020, no travel-associated Zika fever cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2020, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts: Monroe County is currently under a mosquito-borne illness advisory. Miami-Dade County is currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert.

There is a Level 2 Travel Health Notice for Nigeria related to the transmission of yellow fever virus. There are also Level 1 Travel Health Notices for Central and South America, Mexico, the Caribbean, Asia, the Pacific Islands, Africa, and the Middle East related to the transmission of dengue virus, for Burundi related to Malaria transmission, and for Ethiopia related to chikungunya transmission. Additional information on travel health notices can be found at the following link: wwwnc.cdc.gov/travel/notices. For a map of arboviral disease activity in the United States visit: wwwn.cdc.gov/arbonet/maps/ADB_Diseases_Map/index.html.

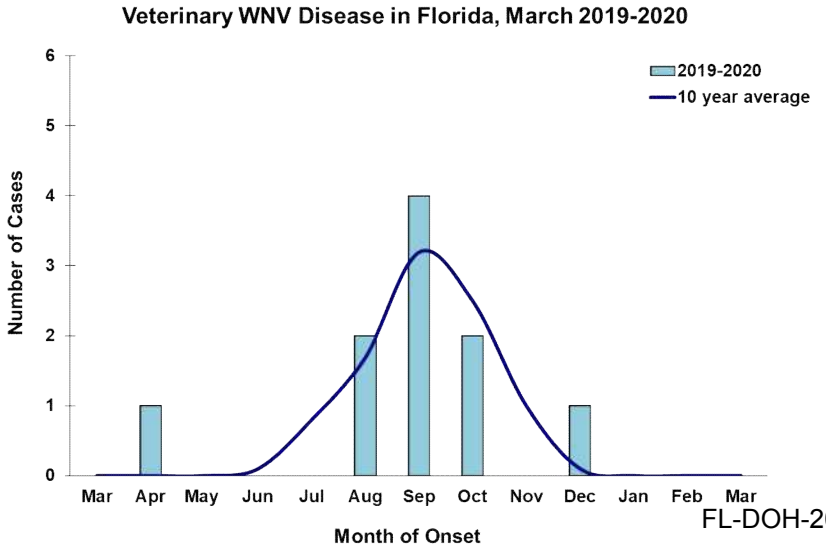
AMERICAN OVERSIGHT

2020 Human Case Summary*

International Travel-Associated Dengue Fever Cases
Nineteen cases of dengue fever with onset in 2020 have been reported in individuals with travel history to a dengue endemic area in the two weeks prior to onset. Counties reporting cases were: Brevard, Broward (5), Collier, Duval, Franklin, Hillsborough (3), Miami-Dade (5), Seminole, and St. Lucie. Three cases were reported in non-Florida residents. In 2020, sixteen cases of dengue reported in Florida have been serotyped by PCR. Please see the table below for a breakdown of cases by country of origin and serotype.

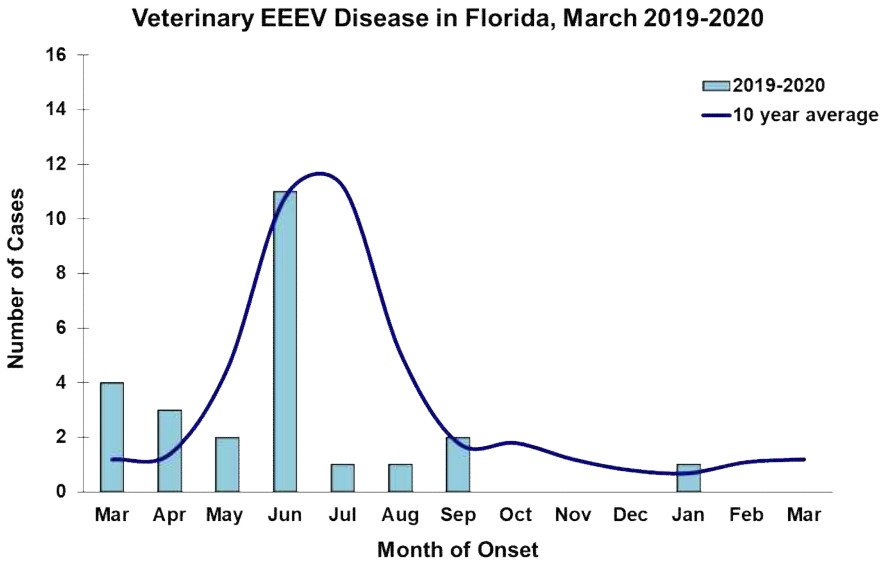
Country of Exposure	DENV-1	DENV-2	DENV-3	DENV-4	DENV-1/ DENV-3	Unknown	Total
Jamaica			3		1		4
Colombia	2						2
Cuba	1	1					2
Dominican Republic	2						2
Bahamas	1						1
Bolivia	1						1
Brazil		1					1
Mexico						1	1
Nicaragua		1					1
Paraguay				1			1
Puerto Rico						1	1
Puerto Rico/US Virgin Islands	1						1
US Virgin Islands						1	1
Total	**8**	**3**	**3**	**1**	**1**	**3**	**19**

Dengue Fever Cases Acquired in Florida: In 2020, one case of locally acquired dengue fever has been reported in Monroe County, with onset in February. The case was reported in a non-Florida resident.



International Travel-Associated Malaria Cases: Five cases of malaria with onset in 2020 have been reported. Countries of origin were: Cameroon, Dominican Republic, Nicaragua, Nigeria, and Uganda. Counties reporting cases were: Miami-Dade (2), Orange, Palm Beach, and Polk. One case was reported in a non-Florida resident.

Four cases (80%) were diagnosed with *Plasmodium falciparum.* One case (20%) was diagnosed with *Plasmodium vivax*.

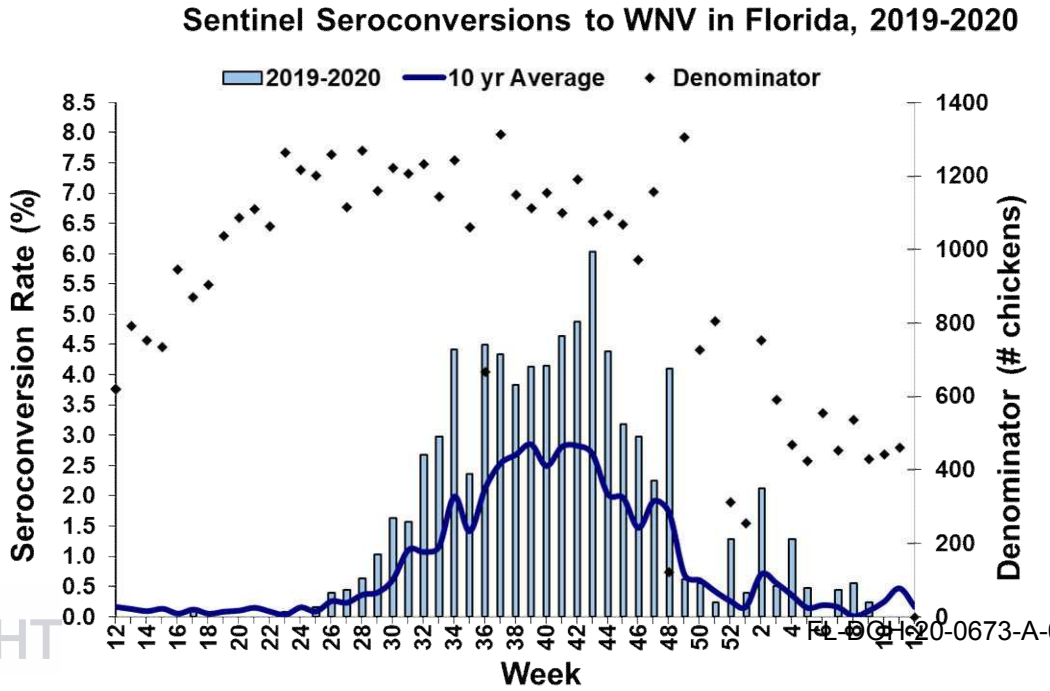


Veterinary Cases*

*Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

No veterinary cases were reported this week.

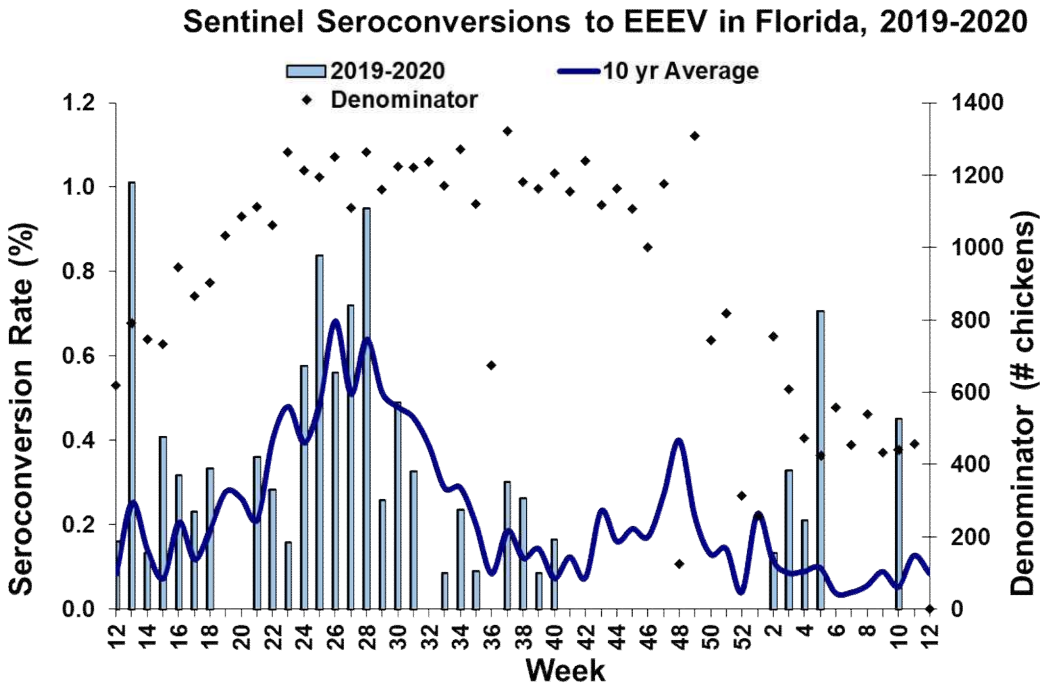
AMERICAN OVERSIGHT



Sentinel Chickens*

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.

Four sentinel chickens tested positive for antibodies to WNV this week in Hillsborough County.



Due to increased testing needs in response to COVID-19, the Florida Department of Health is temporarily suspending testing of sentinel chickens. After this week, there will be no sentinel chicken test results posted until testing is reinstituted.

County	Collection Date	Seroconversion Rates (%)						County Totals	
		Flavi	SLEV	WNV	Alpha	EEEV	HJV	Collection Week	YTD
Hillsborough	2/18/2020	6.25		6.25				3 WNV	12 WNV
	2/25/2020	2.33		2.33				1 WNV	

AMERICAN OVERSIGHT

FL-DOH-20-0673-A-003772

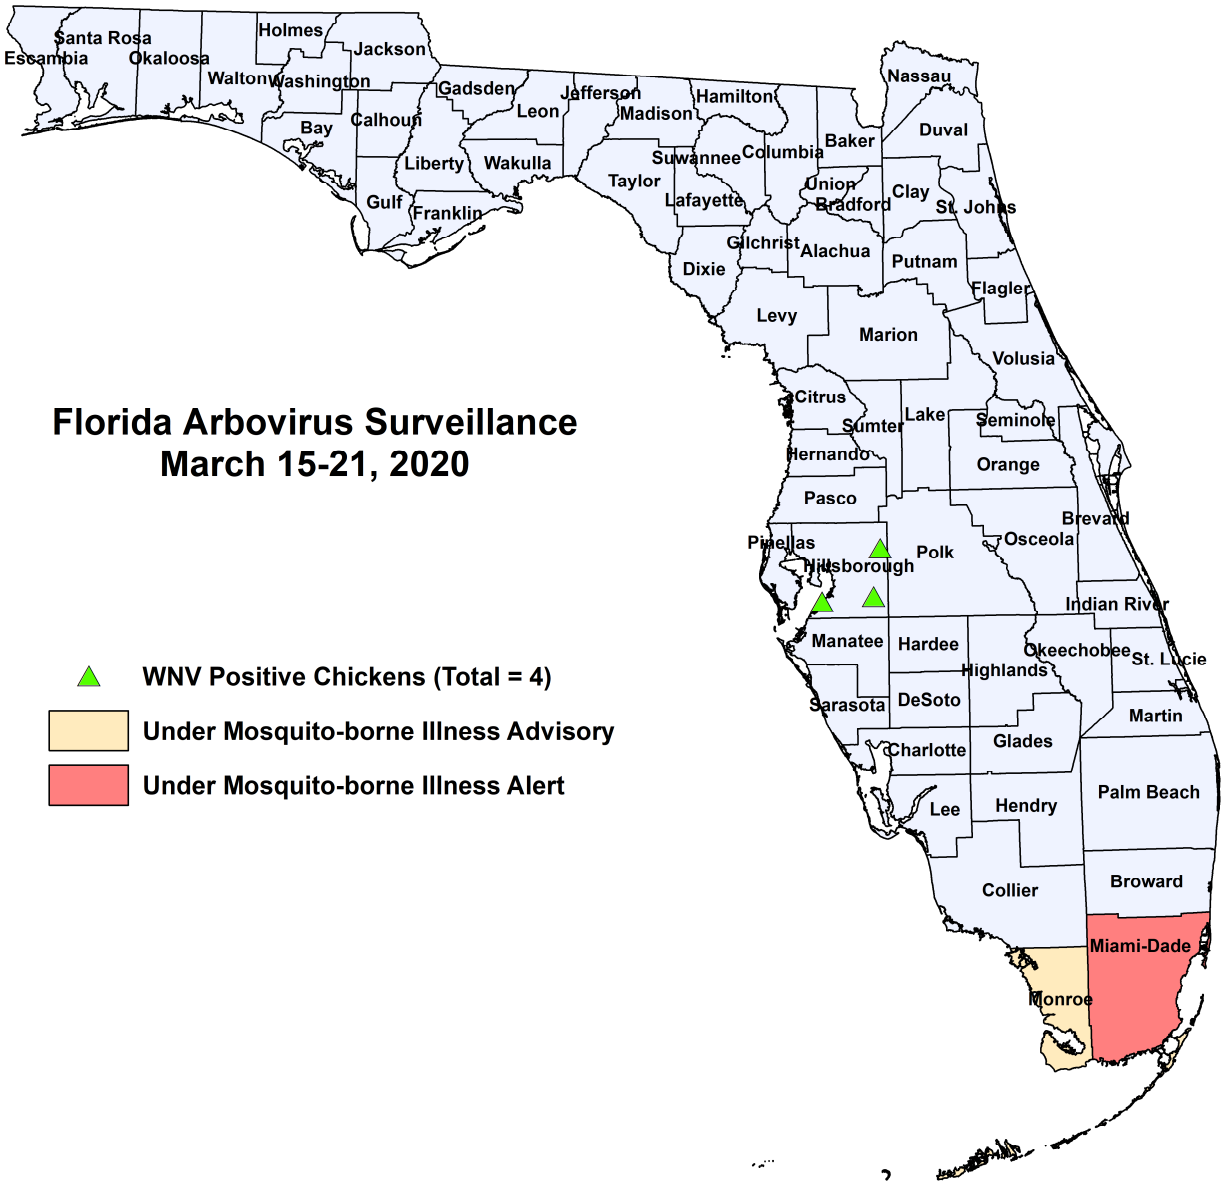
Mosquito Pools

No mosquito pools tested positive for EEEV or WNV this week.

County	Collection Date	Result	Species	County YTD

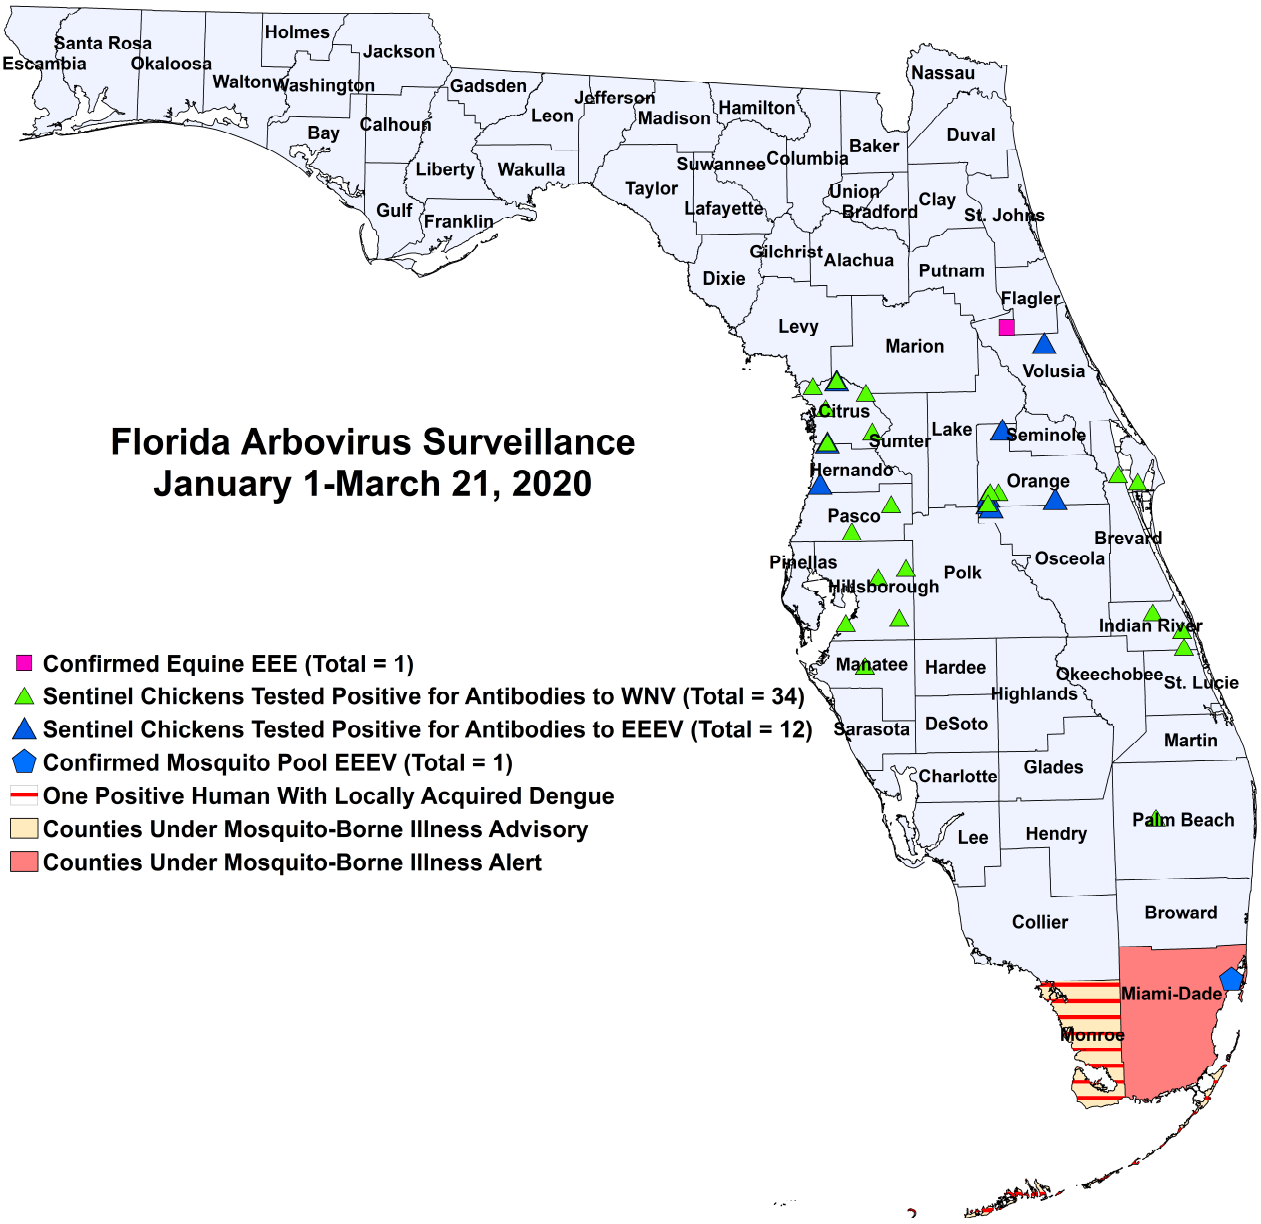
Dead Birds

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, seven reports representing a total of 17 dead birds, including three raptors, were received from seven counties.



In 2020, 98 reports representing a total of 272 dead birds (18 crows, 1 jay, 22 raptors, 7 doves) were received from 31 of Florida's 67 counties.

2020



County	Total Dead Birds	Crows	Jays	Raptors	Doves
Alachua	2	0	0	0	0
Bay	1	0	0	0	0
Dade	1	0	0	1	0
Levy	10	0	0	0	0
Manatee	1	0	0	1	0
Pinellas	1	0	0	0	0
Walton	1	0	0	1	0

For more surveillance information, please see the DOH website at: www.floridahealth.gov/diseases-and-conditions/mosquito-borne-diseases/surveillance.html

For arbovirus surveillance information for the United States, please see the Centers for Disease Control and Prevention website at: www.cdc.gov/ncidod/dvbid/westnile/surv&control.htm

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.

Florida Arbovirus Surveillance
Week 5: January 26-February 1, 2020

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West

AMERICAN OVERSIGHT

Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of January 26-February 1, 2020, the following arboviral activity was recorded in Florida.

This report contains information for 2019 and 2020. This week's report will be the last update for 2019.
Please visit the following website for up to date 2019 human case numbers as final data cleaning occurs: FloridaHealth.gov/diseases-and-conditions/mosquito-borne-diseases/surveillance.html.

WNV activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week. Four sentinel chickens tested positive for antibodies to WNV this week in Citrus, Hillsborough, and Palm Beach counties. In 2020, 19 sentinel chickens have been reported from seven counties. In 2019, positive samples from two humans, one blood donor, ten horses, one eagle, and 808 sentinel chickens have been reported from 31 counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2020, no positive samples have been reported. In 2019, positive samples from eight sentinel chickens have been reported from eight counties.

EEEV activity: No human cases of EEEV infection were reported this week. One horse with EEEV infection was reported this week in Volusia County. No sentinel chickens tested positive for antibodies to EEEV this week. In 2020, three sentinel chickens, one horse, and one mosquito pool have been reported from four counties. In 2019, positive samples from 28 horses, one emu, one eagle, and 115 sentinel chickens have been reported from 31 counties.

International Travel-Associated Dengue Fever Cases: One 2019 case of dengue fever was reported this week in a person that had international travel. In 2019, 406 travel-associated cases have been reported. Seven 2020 cases of dengue fever were reported this week in persons that had international travel. In 2020, seven travel-associated cases have been reported.

Dengue Fever Cases Acquired in Florida: No cases of locally acquired dengue fever were reported this week. In 2019, 16 cases of locally acquired dengue fever have been reported.

International Travel-Associated Chikungunya Fever Cases: No cases of chikungunya fever were reported this week in persons that had international travel. In 2019, eight travel-associated cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2019, no cases of locally acquired chikungunya fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week in persons that had international travel. In 2019, 36 travel-associated cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were

AMERICAN OVERSIGHT

reported this week. In 2019, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts: Broward County is currently under a mosquito-borne illness advisory. Miami-Dade County is currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert.

There is a Level 2 Travel Health Notice for Nigeria related to the transmission of yellow fever virus. There are also Level 1 Travel Health Notices for Central and South America, Mexico, the Caribbean, Asia, the Pacific Islands, Africa, and the Middle East related to the transmission of dengue virus, for Burundi related to Malaria transmission, and for Ethiopia related to chikungunya transmission. Additional information on travel health notices can be found at the following link: wwwnc.cdc.gov/travel/notices. For a map of arboviral disease activity in the United States visit: wwwn.cdc.gov/arbonet/maps/ADB_Diseases_Map/index.html.

2019 Human Case Summary*

West Nile Virus Illnesses Acquired in Florida: Two human cases of WNV illness acquired in Florida has been reported in 2019 in Duval (July) and Sumter (October) counties. One asymptomatic positive blood donor has been reported in 2019 from Bay County (August).

International Travel-Associated Chikungunya Fever Cases: Eight cases of chikungunya fever with onset in 2019 have been reported in individuals with travel history to a chikungunya endemic country in the two weeks prior to onset. Countries of origin were: Brazil, Haiti, India (3), and Thailand (3). Counties reporting cases were: Alachua, Lee, Manatee, Marion, Miami-Dade (2), Orange, and Palm Beach. Two cases were reported in non-Florida residents.

International Travel-Associated Dengue Fever Cases: Four hundred six cases of dengue fever with onset in 2019 have been reported in individuals with travel history to a dengue endemic country in the two weeks prior to onset. Counties reporting cases were: Alachua (4), Brevard (2), Broward (47), Charlotte, Citrus, Collier (4), Desoto, Duval (6), Hillsborough (22), Lake (2), Lee (13), Manatee (2), Marion, Miami-Dade (232), Orange (18), Osceola (3), Palm Beach (26), Pasco (4), Pinellas (3), Polk, Putnam, Sarasota (2), Seminole (4), St. Lucie (5), and Volusia. Twenty-six cases were reported in non-Florida residents. Thirteen cases met the criteria for severe dengue (dengue shock syndrome [DSS] or dengue hemorrhagic fever [DHF]). Those at greater risk for DSS and DHF include persons with previous dengue infection, pregnant women, infants, the elderly, and those with co-morbidities. However, severe illness can also occur in those without any of these risk factors. In 2019, 335 cases of dengue reported in Florida have been serotyped by PCR.* Please see the below table for a breakdown of cases by country of origin and serotype.

Country of Exposure	DENV-1	DENV-2	DENV-3	DENV-4	DENV-1/ DENV-2	DENV-1/ DENV-3	DENV-2/ DENV-3	Unknown*	Total

Total	**1**	**1**	**5**	**7**

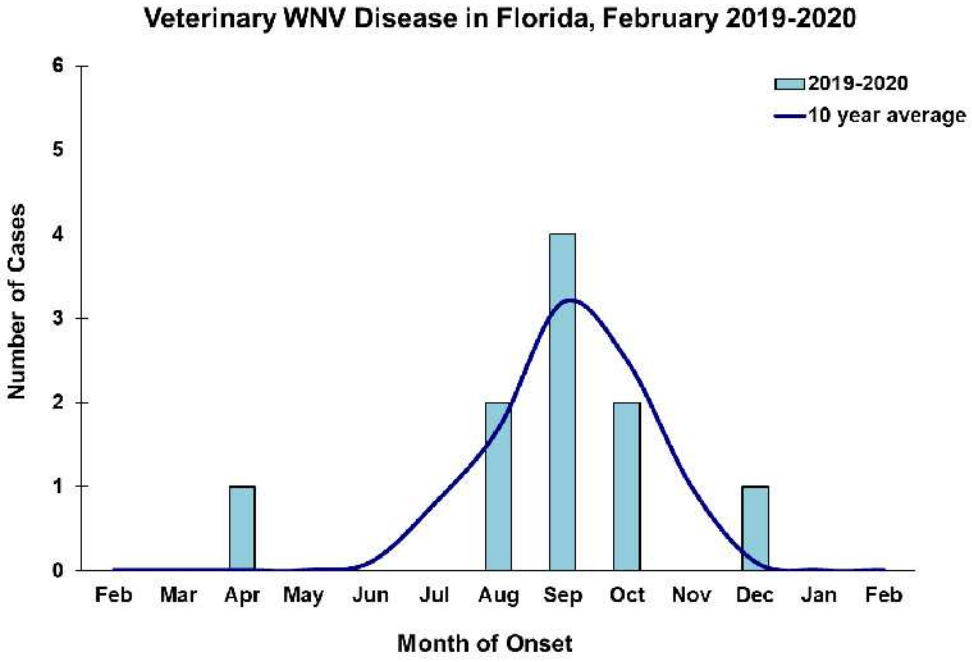
**Serotyping for 5 cases are pending and will be added in future weeks.

Dengue Fever Cases Acquired in Florida: In 2019, 16 cases of locally acquired dengue fever have been reported in Broward, Hillsborough, and Miami-Dade (14) counties, with onsets in March, July (2), August (3), September (6), October (2), and December (2).

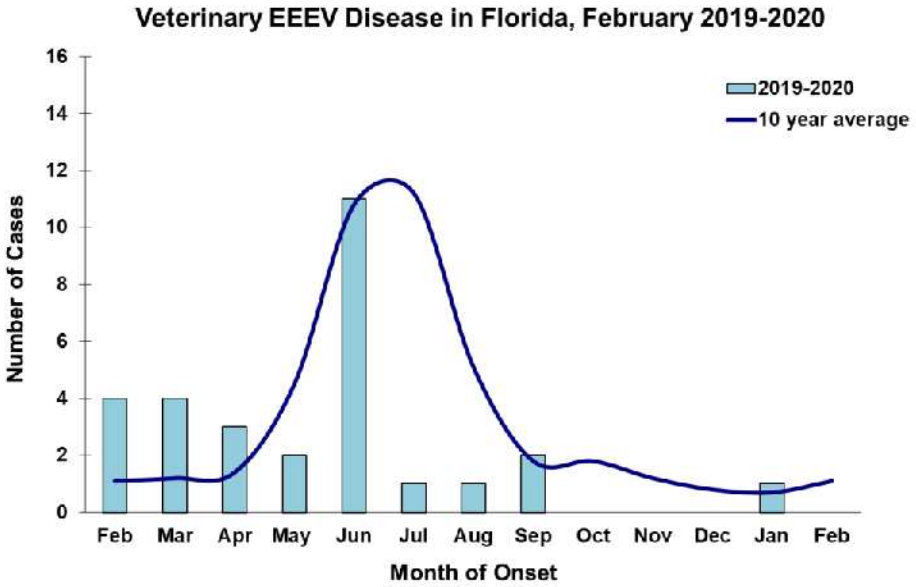
International Travel-Associated Zika Fever Cases: In 2019, 36 cases of Zika fever have been reported in individuals with travel history to a country or area experiencing Zika virus activity. Countries of origin were: Brazil, Colombia (1), Cuba (6), Guatemala (5), Haiti (11), Honduras (4), Jamaica, Nicaragua, Philippines, Puerto Rico, and Venezuela (3). Counties reporting cases were: Broward (5), Collier (3), Duval, Hillsborough (2), Indian River, Lee, Miami-Dade (17), Orange (4), Palm Beach, and Sarasota. Three cases were reported in non-Florida residents. Florida is monitoring a total of 23 pregnant women in 2019.

International Travel-Associated Malaria Cases: Seventy-three cases of malaria with onset in 2019 have been reported. Countries of origin were: Afghanistan, Angola (3), Central African Republic (3), Chad, Congo, Democratic Republic of the Congo (4), Gabon (2), Ghana (10), Guinea, Guyana, India (4), Ivory Coast (6), Kenya (3), Liberia (3), Nicaragua, Nigeria (16), Papua New Guinea, Sierra Leone (2), Sudan, Togo, Uganda (4), Venezuela, and Zambia (3). Counties reporting cases were: Bay, Brevard (3), Broward (6), Duval (10), Hillsborough (5), Lake (2), Lee, Manatee, Miami-Dade (13), Okaloosa, Orange (9), Pasco (6), Pinellas (6), Polk (3), Seminole (4), Volusia and Washington. Twenty cases were reported in non-Florida residents.

Fifty-nine cases (81%) were diagnosed with *Plasmodium falciparum*. Nine cases (12%) were diagnosed with *Plasmodium vivax*. Three cases (4%) were diagnosed with *Plasmodium ovale*. Two cases (3%) were diagnosed with *Plasmodium malariae*.



Two cases of malaria with onset in 2020 has been reported. Countries of origin were: Dominican Republic and Nigeria. Counties reporting cases were: Miami-Dade and Polk. Both cases were diagnosed with *Plasmodium falciparum*. One case was reported in a non-Florida resident.

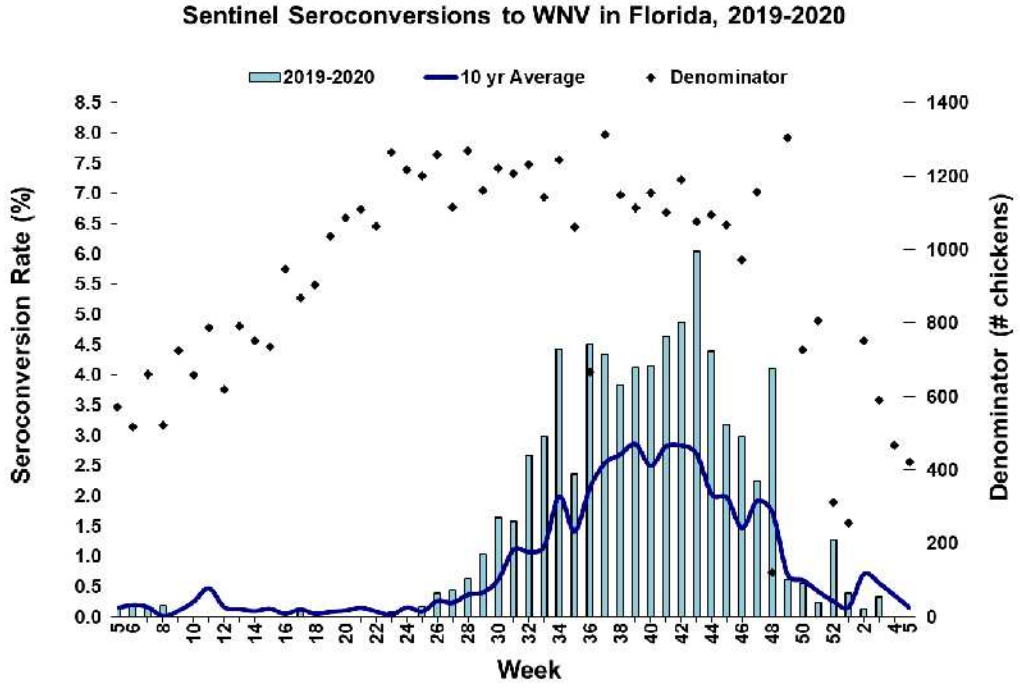


AMERICAN OVERSIGHT

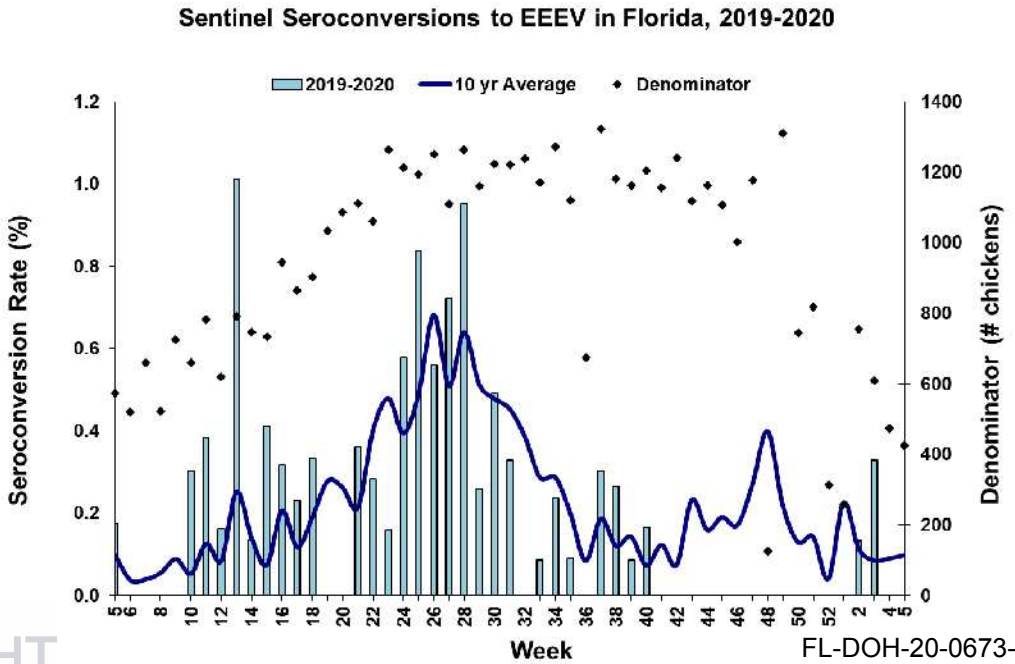
Veterinary Cases*

*Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

One horse with EEEV infection was reported this week in Volusia County.



AMERICAN OVERSIGHT



Sentinel Chickens*

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.

Four sentinel chickens tested positive for antibodies to WNV this week in Citrus, Hillsborough, and Palm Beach counties.

County	Collection Date	Seroconversion Rates (%)						County Totals	
		Flavi	SLEV	WNV	Alpha	EEEV	HJV	Collection Week	YTD
Citrus	1/21/2020	1.41		1.41				1 WNV	7 WNV, 1 EEEV
Hillsborough	1/6/2020	4.44		4.44				2 WNV	2 WNV
Palm Beach	1/20/2020	4.17		4.17				1 WNV	1 WNV

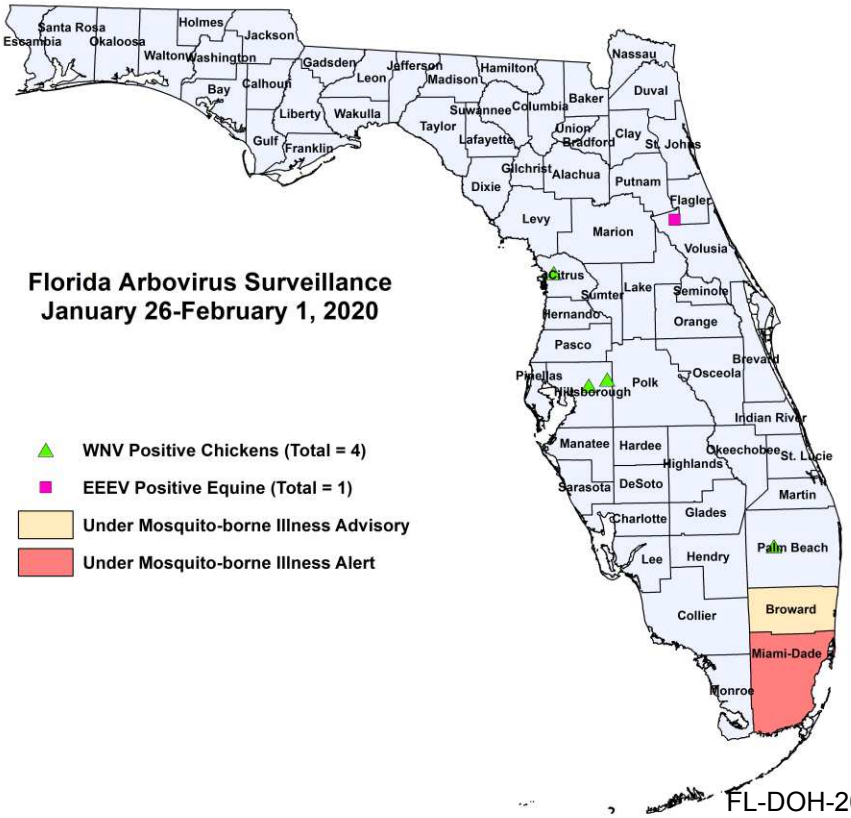
AMERICAN OVERSIGHT

Mosquito Pools

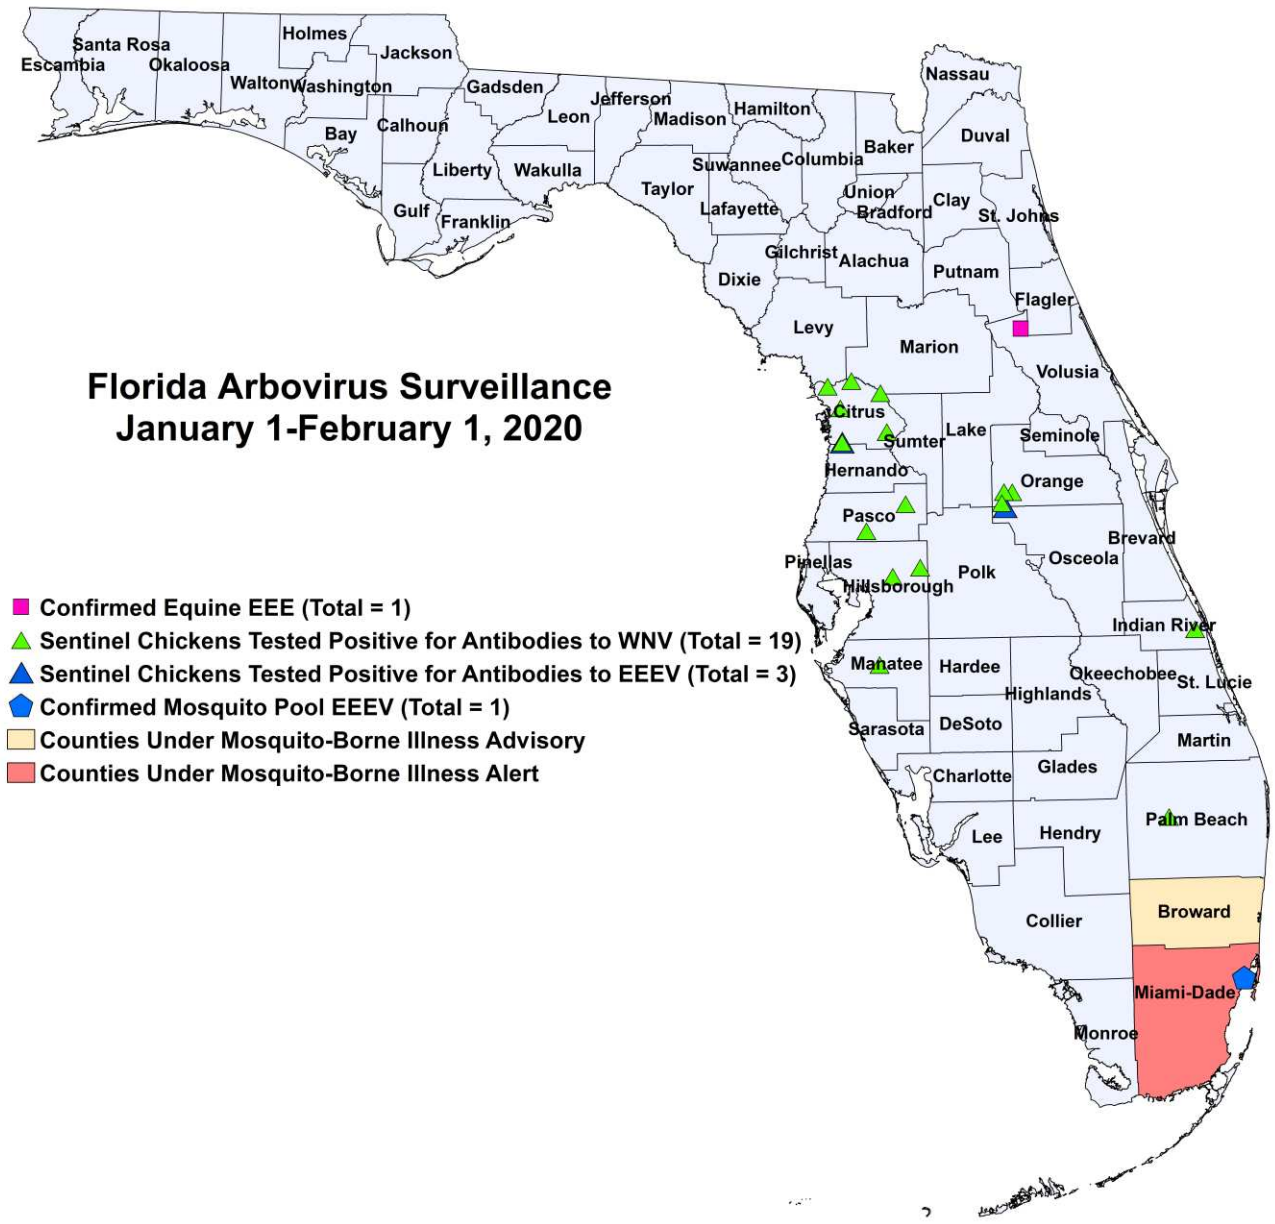
No mosquito pools tested positive for EEEV or WNV this week.

County	Collection Date	Result	Species	County YTD

Dead Birds



The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, 12 reports representing a total of 61 dead birds, including 16 crows and one raptor, were received from eight counties.



In 2020, 36 reports representing a total of 111 dead birds (16 crows, 9 raptors) were received from 20 of Florida's 67 counties.

2020

County	Total Dead Birds	Crows	Jays	Raptors	Doves
Baker	15	15	0	0	0
Charlotte	1	0	0	0	0
Escambia	5	0	0	0	0

For more surveillance information, please see the DOH website at: www.floridahealth.gov/diseases-and-conditions/mosquito-borne-diseases/surveillance.html

For arbovirus surveillance information for the United States, please see the Centers for Disease Control and Prevention website at: www.cdc.gov/ncidod/dvbid/westnile/surv&control.htm

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.

Florida Arbovirus Surveillance
Week 6: February 2-8, 2020

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West

AMERICAN OVERSIGHT

Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of February 2-8, 2020, the following arboviral activity was recorded in Florida.

WNV activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week. Three sentinel chickens tested positive for antibodies to WNV this week in Citrus and Indian River counties. In 2020, 22 sentinel chickens have been reported from eight counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2020, no positive samples have been reported.

EEEV activity: No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported this week. Three sentinel chickens tested positive for antibodies to EEEV this week in Hernando and Orange counties. In 2020, six sentinel chickens, one horse, and one mosquito pool have been reported from five counties.

International Travel-Associated Dengue Fever Cases: One case of dengue fever was reported this week in a person that had international travel. In 2020, eight travel-associated cases have been reported.

Dengue Fever Cases Acquired in Florida: No cases of locally acquired dengue fever were reported this week. In 2020, no cases of locally acquired dengue fever have been reported.

International Travel-Associated Chikungunya Fever Cases: No cases of chikungunya fever were reported this week in persons that had international travel. In 2020, no travel-associated chikungunya fever cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2020, no cases of locally acquired chikungunya fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week in persons that had international travel. In 2020, no travel-associated Zika fever cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2020, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts: Miami-Dade County is currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert.

There is a Level 2 Travel Health Notice for Nigeria related to the transmission of yellow fever virus. There are also Level 1 Travel Health Notices for Central and South America, Mexico, the Caribbean, Asia, the Pacific Islands, Africa, and the Middle East related to the transmission of dengue virus, for Burundi related to Malaria transmission, and for Ethiopia

Florida Arbovirus Surveillance
Week 6: February 2-8, 2020

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of February 2-8, 2020, the following arboviral activity was recorded in Florida.

WNV activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week. Three sentinel chickens tested positive for antibodies to WNV this week in Citrus and Indian River counties. In 2020, 22 sentinel chickens have been reported from eight counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2020, no positive samples have been reported.

EEEV activity: No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported this week. Three sentinel chickens tested positive for antibodies to EEEV this week in Hernando and Orange counties. In 2020, six sentinel chickens, one horse, and one mosquito pool have been reported from five counties.

International Travel-Associated Dengue Fever Cases: One case of dengue fever was reported this week in a person that had international travel. In 2020, eight travel-associated cases have been reported.

Dengue Fever Cases Acquired in Florida: No cases of locally acquired dengue fever were reported this week. In 2020, no cases of locally acquired dengue fever have been reported.

International Travel-Associated Chikungunya Fever Cases: No cases of chikungunya fever were reported this week in persons that had international travel. In 2020, no travel-associated chikungunya fever cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2020, no cases of locally acquired chikungunya fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week in persons that had international travel. In 2020, no travel-associated Zika fever cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2020, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts: Miami-Dade County is currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert.

There is a Level 2 Travel Health Notice for Nigeria related to the transmission of yellow fever virus. There are also Level 1 Travel Health Notices for Central and South America, Mexico, the Caribbean, Asia, the Pacific Islands, Africa, and the Middle East related to the transmission of dengue virus, for Burundi related to Malaria transmission, and for Ethiopia related to chikungunya transmission. AMERICAN OVERSIGHT

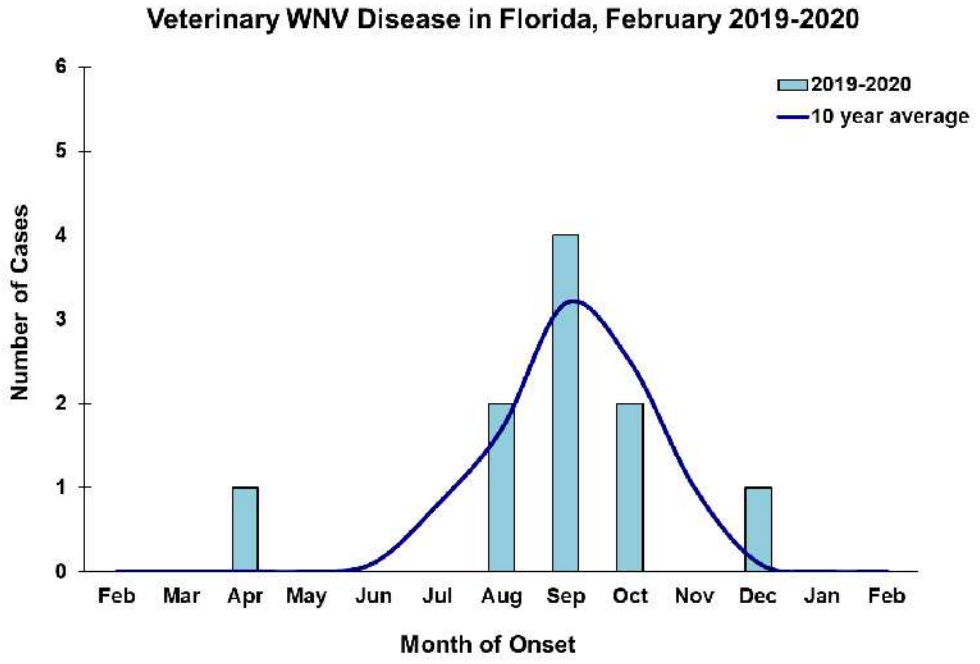
2020 Human Case Summary*

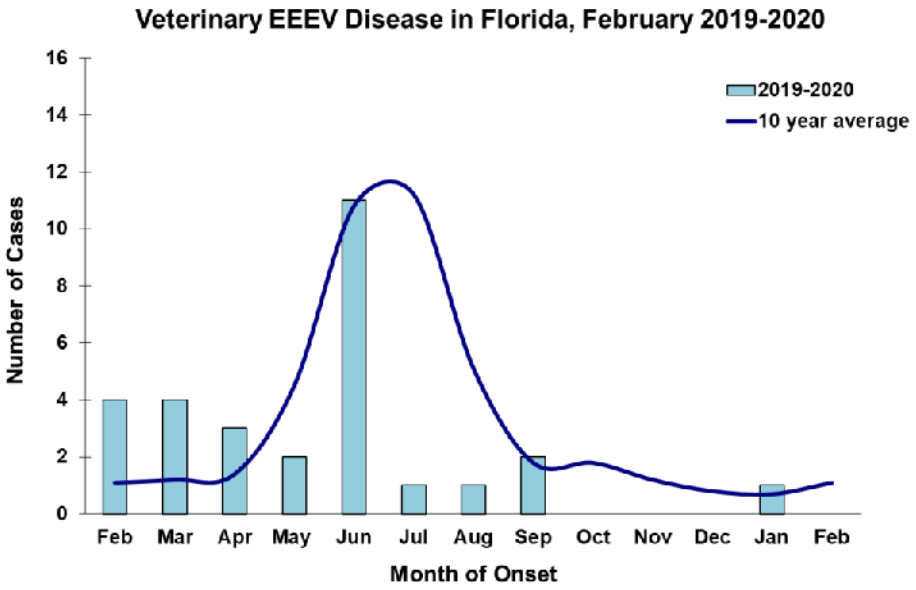
International Travel-Associated Dengue Fever Cases
Eight cases of dengue fever with onset in 2020 have been reported in individuals with travel history to a dengue endemic area in the two weeks prior to onset. Counties reporting cases were: Broward (2), Franklin, Hillsborough, Miami-Dade (3), and St. Lucie. One case was reported in a non-Florida resident. In 2020, two cases of dengue reported in Florida have been serotyped by PCR*. Please see the table below for a breakdown of cases by country of origin and serotype.

Country of Exposure	DENV-1	DENV-1/ DENV-3	Unknown**	Total
Bolivia			1	1
Cuba			2	2
Jamaica		1	1	2
Bahamas	1			1
Dominican Republic			1	1
Puerto Rico/U.S. Virgin Islands			1	1
Total	**1**	**1**	**6**	**8**



*Serotyping for 6 cases are pending and will be added in future weeks.

International Travel-Associated Malaria Cases: Two cases of malaria with onset in 2020 has been reported. Countries of origin were: Dominican Republic and Nigeria. Counties reporting cases were: Miami-Dade and Polk. Both cases were diagnosed with *Plasmodium falciparum*. One case was reported in a non-Florida resident.

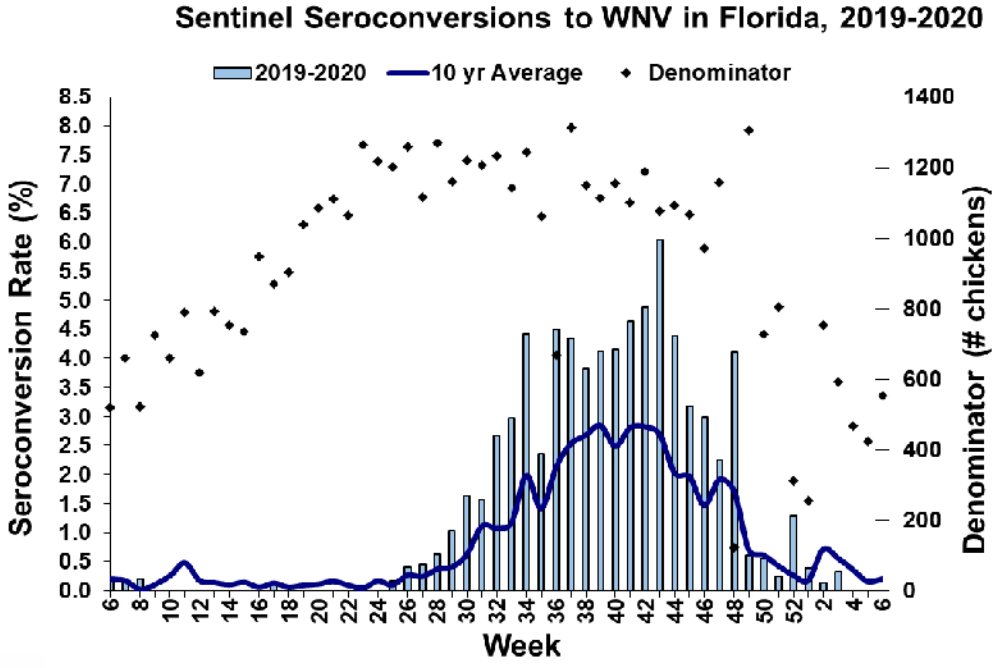


Veterinary Cases*

*Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

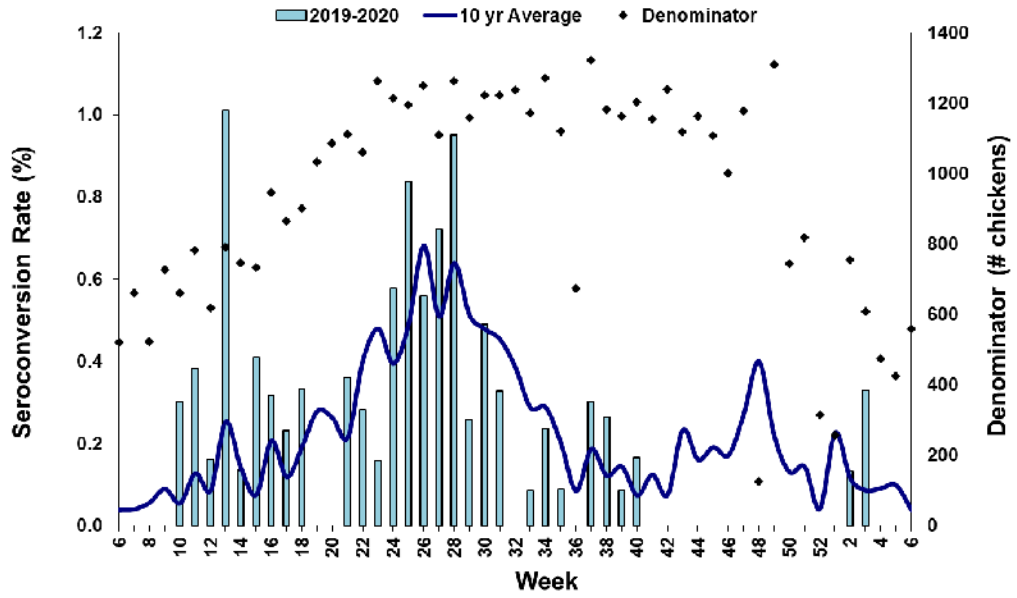
No veterinary cases were reported this week.

AMERICAN OVERSIGHT



Sentinel Chickens*

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.



Three sentinel chickens tested positive for antibodies to WNV this week in Citrus and Indian River counties. Three sentinel chickens tested positive for antibodies to EEEV this week in Hernando and Orange counties.

County	Collection Date	Seroconversion Rates (%)						County Totals	
		Flavi	SLEV	WNV	Alpha	EEEV	HJV	Collection Week	YTD
Citrus	1/14/20	4.05		4.05				1 WNV	8 WNV, 1 EEEV
Hernando	1/21/20				5.56	5.56		1 EEEV	1 EEEV
Indian River	1/9/20-1/10/20	2.63		2.63				2 WNV	2 WNV
Orange	1/27/20-1/28/20				2.47	2.47		2 EEEV	3 WNV, 4 EEEV

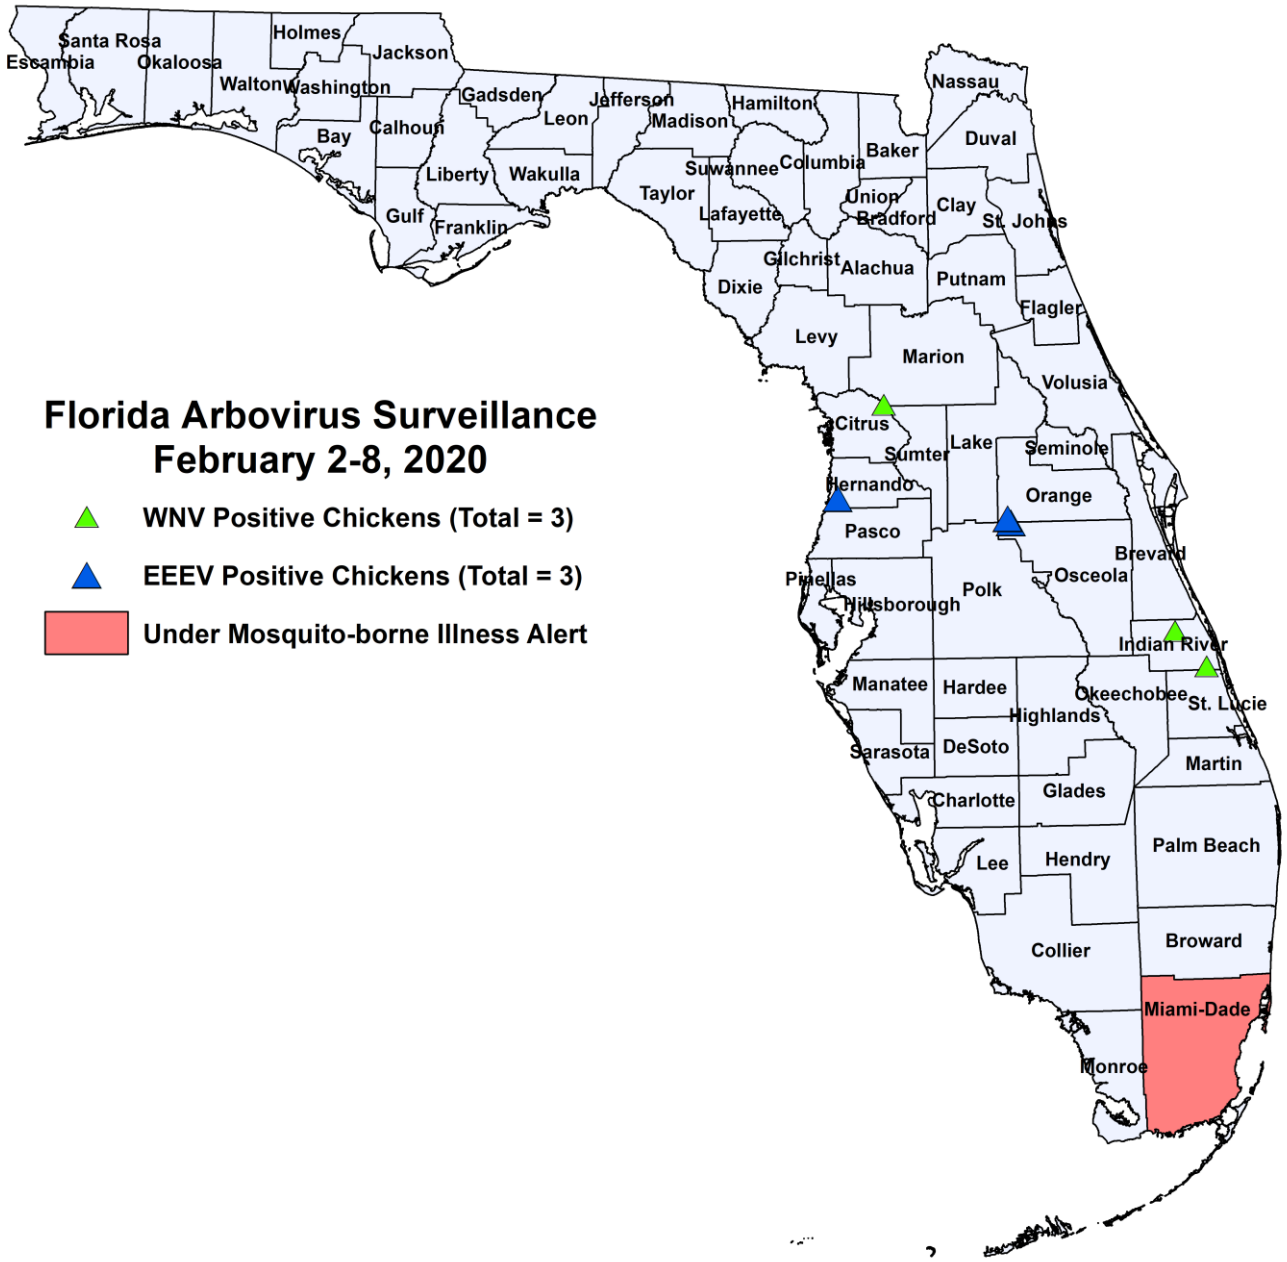
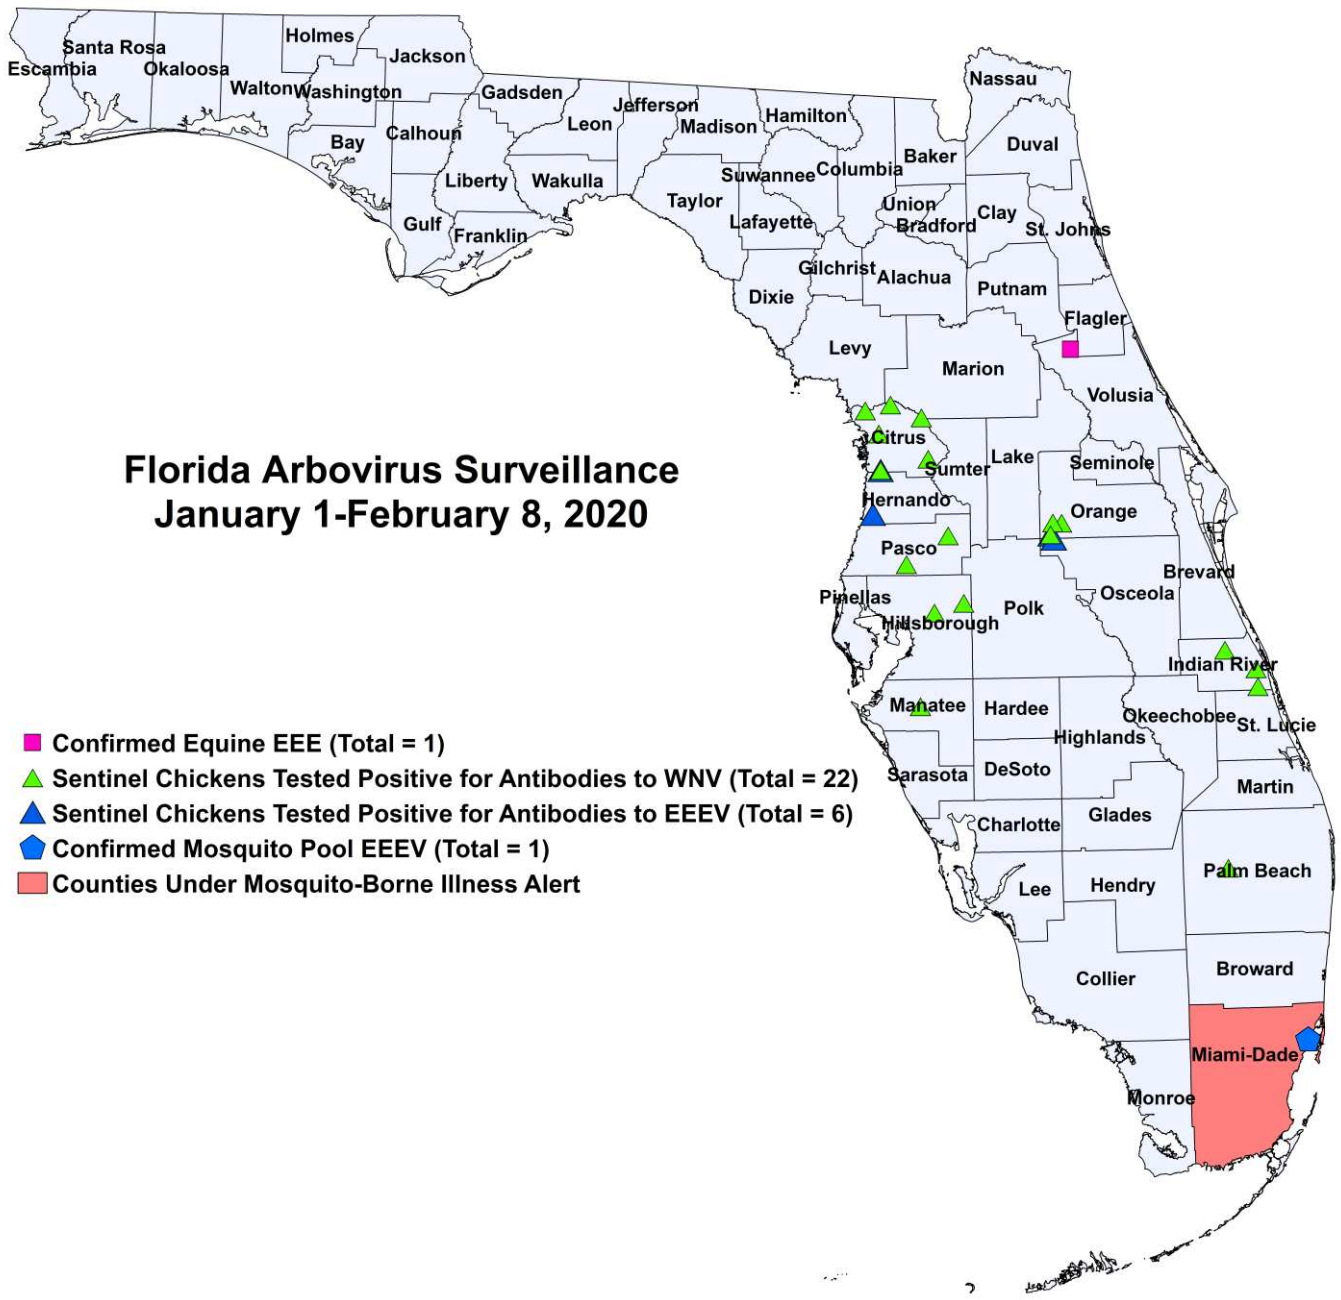
Dead Birds

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, 12 reports representing a total of 28 dead birds, including one jay and two raptors, were received from nine counties.



In 2020, 48 reports representing a total of 139 dead birds (16 crows, 1 jay, 11 raptors) were received from 22 of Florida's 67 counties.

2020



County	Total Dead Birds	Crows	Jays	Raptors	Doves

For arbovirus surveillance information for the United States, please see the Centers for Disease Control and Prevention website at: www.cdc.gov/ncidod/dvbid/westnile/surv&control.htm

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.

Florida Arbovirus Surveillance

Week 8: February 16-22, 2020

AMERICAN OVERSIGHT

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of February 16-22, 2020, the following arboviral activity was recorded in Florida.

WNV activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week. Four sentinel chickens tested positive for antibodies to WNV this week in Hillsborough and Brevard counties. In 2020, 28 sentinel chickens have been reported from nine counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2020, no positive samples have been reported.

EEEV activity: No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported this week. One sentinel chicken tested positive for antibodies to EEEV this week in Orange County. In 2020, seven sentinel chickens, one horse, and one mosquito pool have been reported from five counties.

International Travel-Associated Dengue Fever Cases: One case of dengue fever was reported this week in a person that had international travel. In 2020, fourteen travel-associated cases have been reported.

Dengue Fever Cases Acquired in Florida: No cases of locally acquired dengue fever were reported this week. In 2020, no cases of locally acquired dengue fever have been reported.

International Travel-Associated Chikungunya Fever Cases: No cases of chikungunya fever were reported this week in persons that had international travel. In 2020, no travel-associated chikungunya fever cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2020, no cases of locally acquired chikungunya fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week in persons that had international travel. In 2020, no travel-associated Zika fever cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2020, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts: Miami-Dade County is currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert.

There is a Level 2 Travel Health Notice for Nigeria related to the transmission of yellow fever virus. There are also Level 1 Travel Health Notices for Central and South America,

AMERICAN OVERSIGHT

Mexico, the Caribbean, Asia, the Pacific Islands, Africa, and the Middle East related to the transmission of dengue virus, for Burundi related to Malaria transmission, and for Ethiopia related to chikungunya transmission. Additional information on travel health notices can be found at the following link: wwwnc.cdc.gov/travel/notices. For a map of arboviral disease activity in the United States visit: wwwn.cdc.gov/arbonet/maps/ADB_Diseases_Map/index.html.

AMERICAN OVERSIGHT

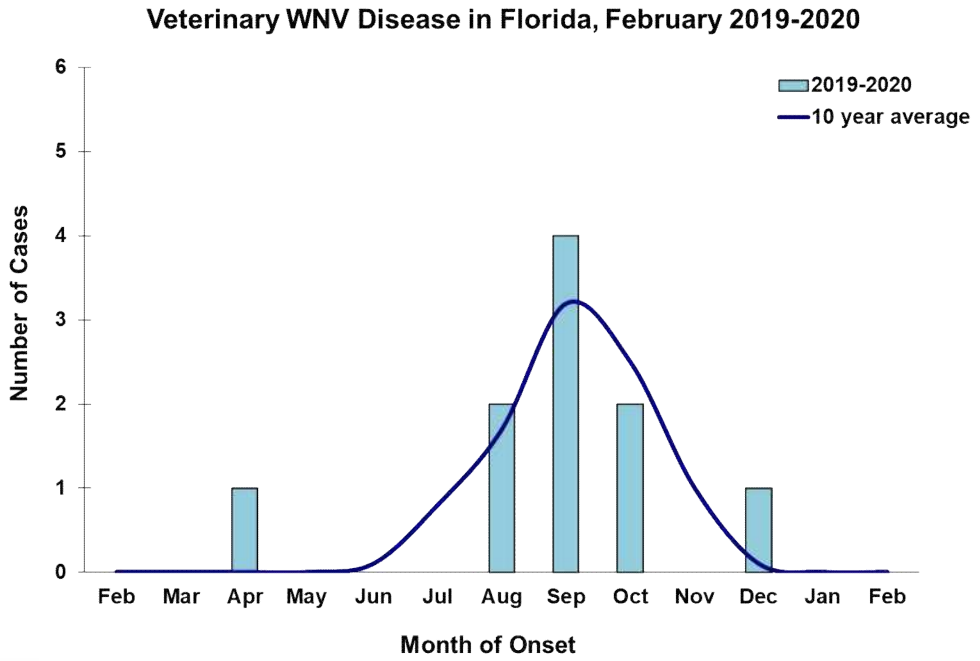
2020 Human Case Summary*

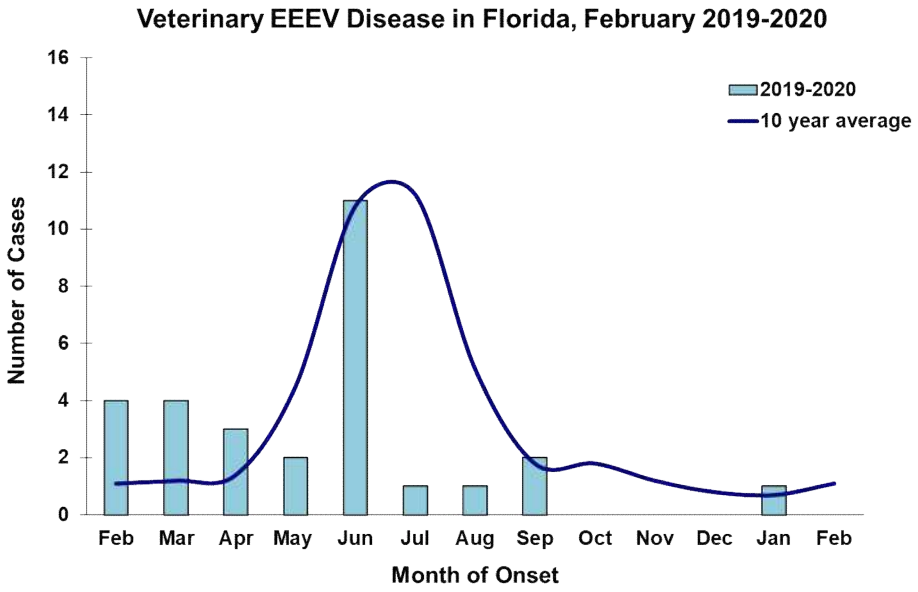
International Travel-Associated Dengue Fever Cases
Fourteen cases of dengue fever with onset in 2020 have been reported in individuals with travel history to a dengue endemic area in the two weeks prior to onset. Counties reporting cases were: Broward (5), Franklin, Hillsborough (3), Miami-Dade (3), Seminole, and St. Lucie. Two cases were reported in non-Florida residents. In 2020, three cases of dengue reported in Florida have been serotyped by PCR*. Please see the table below for a breakdown of cases by country of origin and serotype.

Country of Exposure	DENV-1	DENV-3	DENV-1/ DENV-3	Unknown*	Total
Jamaica		1	1	2	4
Cuba				2	2
Bahamas	1				1
Bolivia				1	1
Brazil				1	1
Colombia				1	1
Dominican Republic				1	1
Nicaragua				1	1
Puerto Rico/U.S. Virgin Islands				1	1
U.S. Virgin Islands				1	1
Total	**1**	**1**	**1**	**11**	**14**



*Serotyping for 10 cases are pending and will be added in future weeks.

International Travel-Associated Malaria Cases: Two cases of malaria with onset in 2020 have been reported. Countries of origin were: Dominican Republic and Nigeria. Counties reporting cases were: Miami-Dade and Polk. Both cases were diagnosed with *Plasmodium falciparum*. One case was reported in a non-Florida resident.

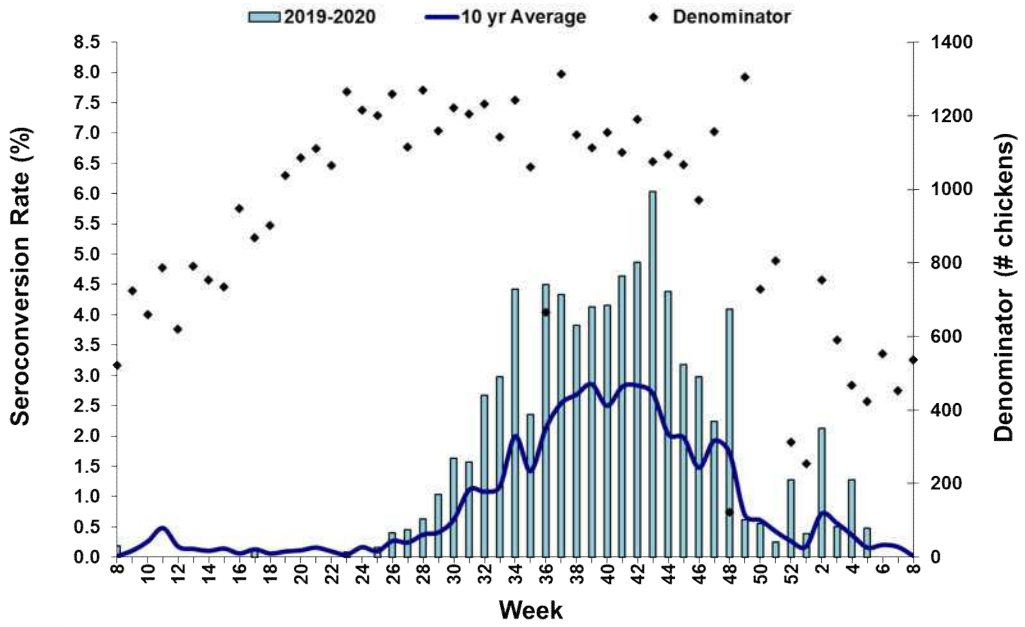


Veterinary Cases*

*Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

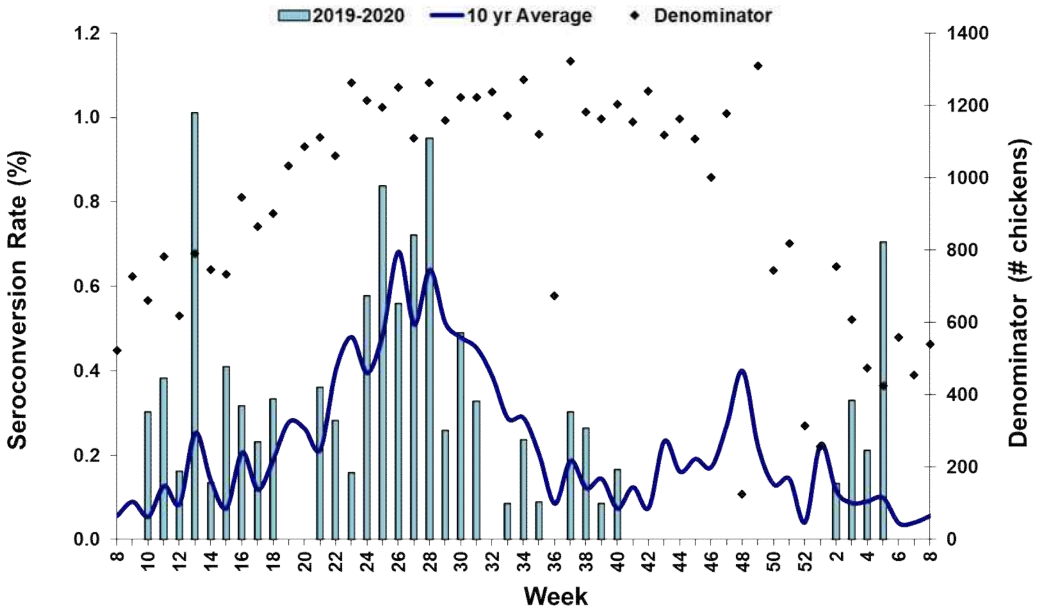
No veterinary cases were reported this week.

AMERICAN OVERSIGHT



Sentinel Chickens*

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.



Four sentinel chickens tested positive for antibodies to WNV this week in Hillsborough and Brevard counties. One sentinel chicken tested positive for antibodies to EEEV this week in Orange County.

County	Collection Date	Seroconversion Rates (%)						County Totals	
		Flavi	SLEV	WNV	Alpha	EEEV	HJV	Collection Week	YTD
Brevard	1/23/20-1/24/20	3.77		3.77				2 WNV	2 WNV
Hillsborough	1/29/20	4.44		4.44				2 WNV	6 WNV
Orange	1/27/20				3.70	3.70		3 EEEV	3 WNV, 5 EEEV

AMERICAN OVERSIGHT

Sentinel Seroconversions to EEEV in Florida, 2019-2020

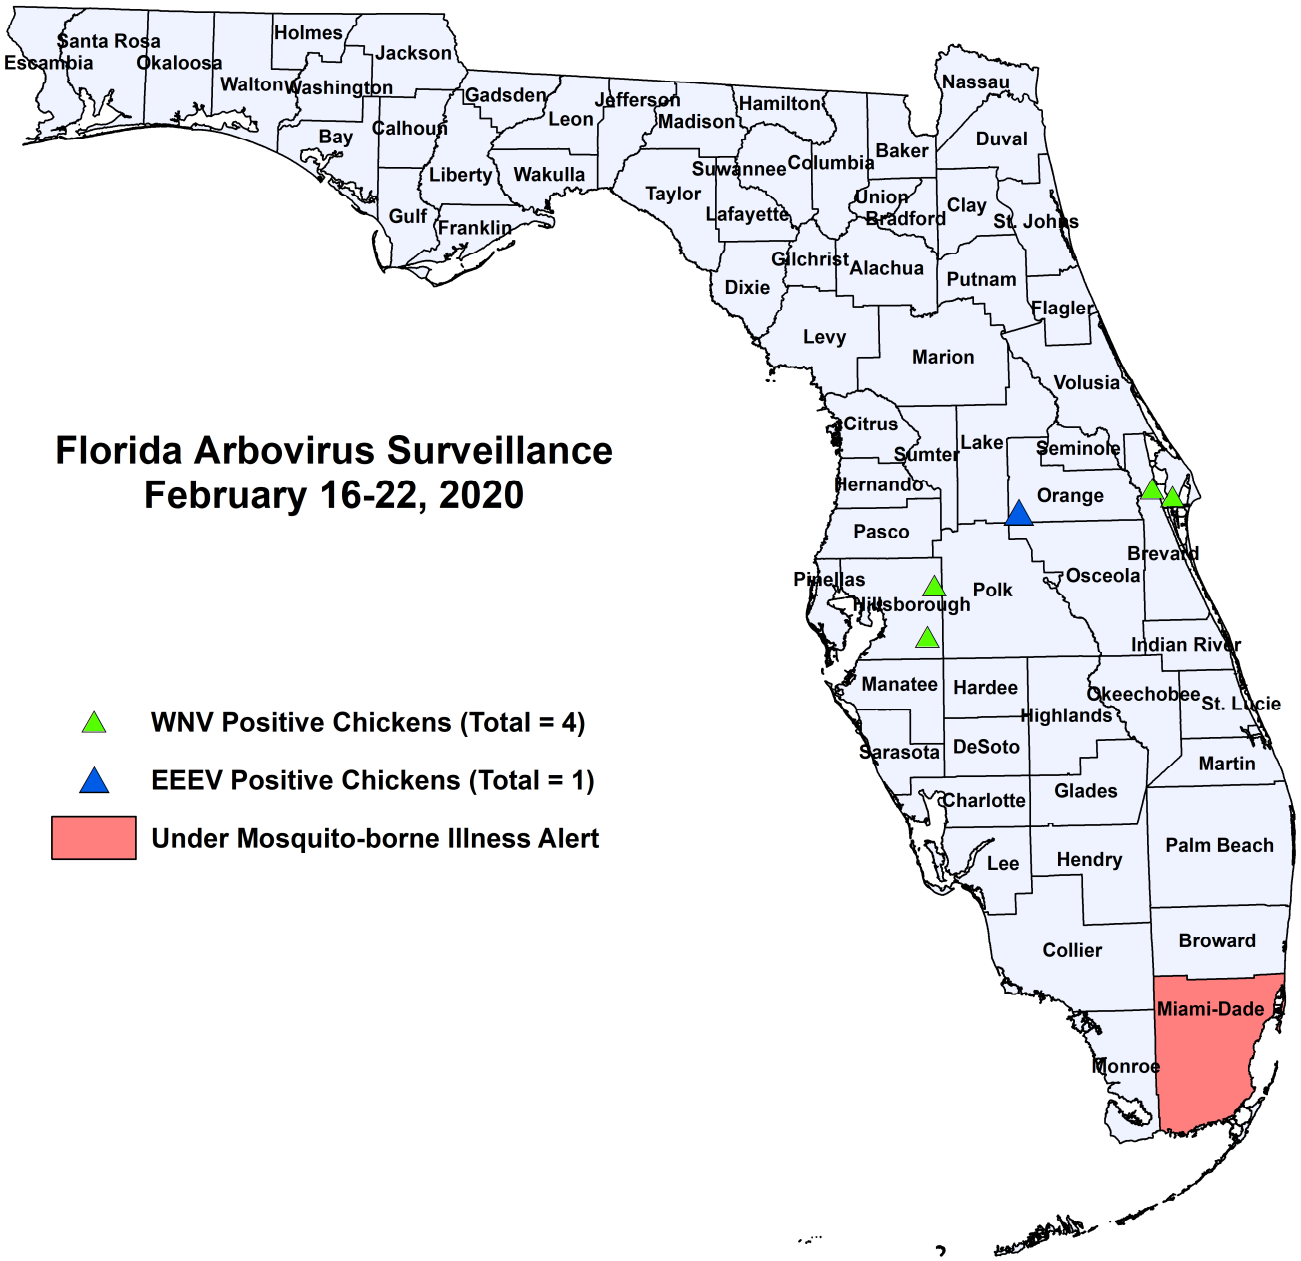
Mosquito Pools

No mosquito pools tested positive for EEEV or WNV this week.

County	Collection Date	Result	Species	County YTD

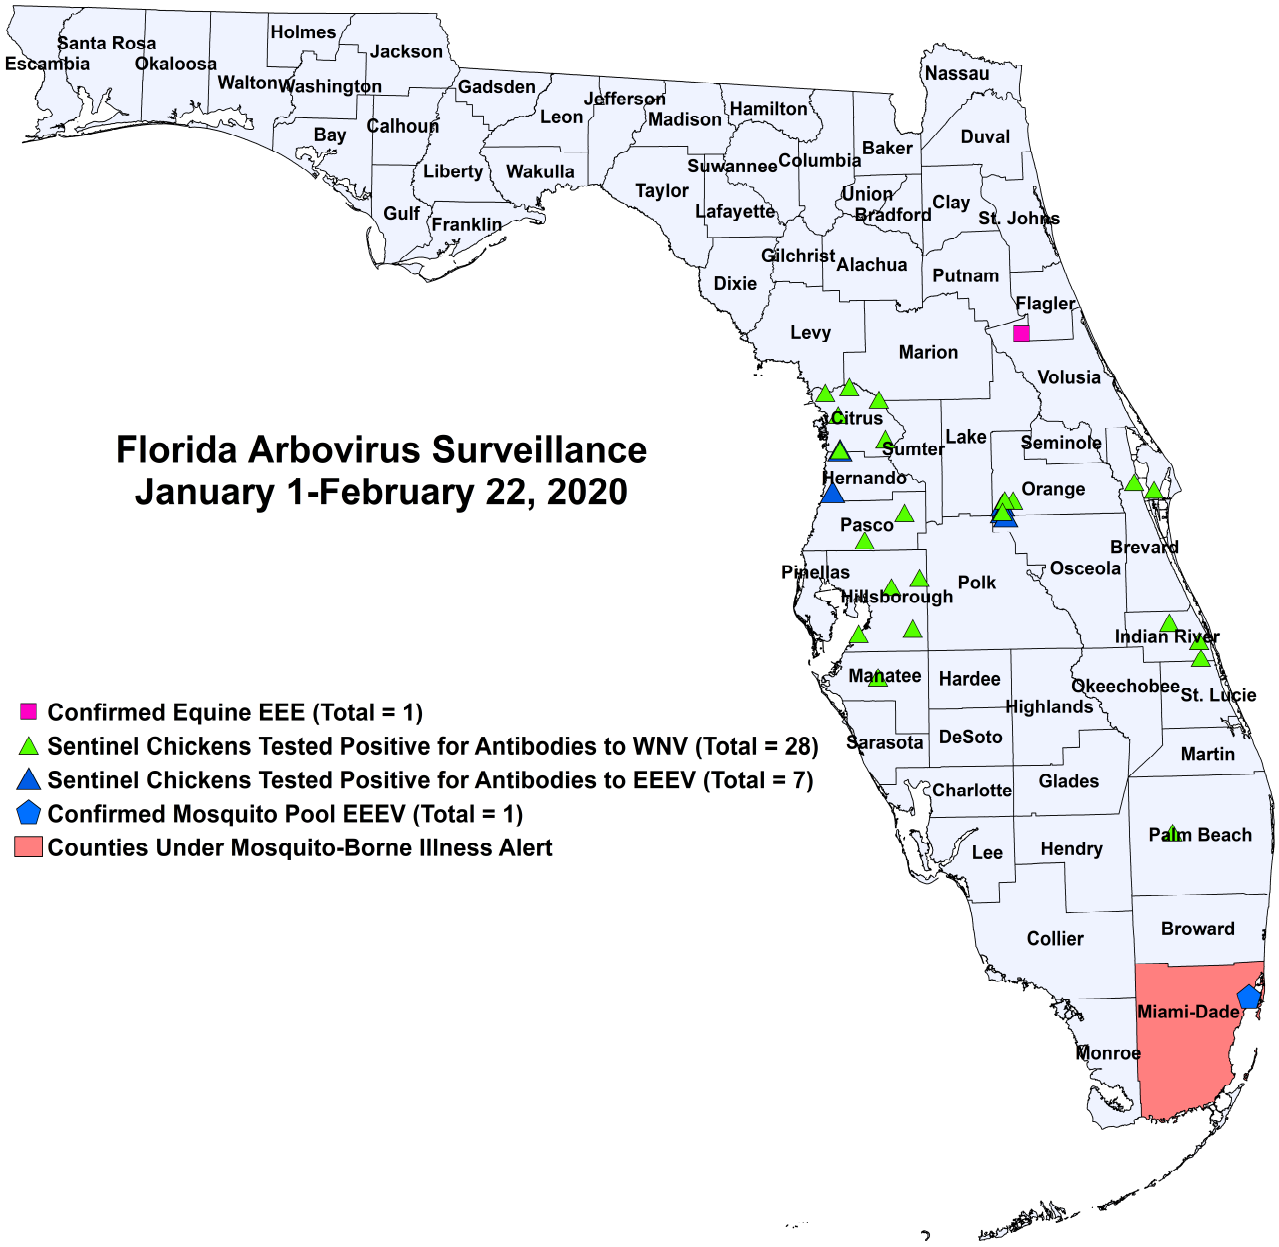
Dead Birds

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, six reports representing a total of 19 dead birds, including two raptors, were received from six counties.



In 2020, 62 reports representing a total of 171 dead birds (16 crows, 1 jay, 16 raptors) were received from 25 of Florida's 67 counties.

2020



County	Total Dead Birds	Crows	Jays	Raptors	Doves
Broward	1	0	0	1	0
Charlotte	1	0	0	0	0
Collier	1	0	0	0	0
Okaloosa	5	0	0	0	0
Palm Beach	1	0	0	1	0
Volusia	10	0	0	0	0

For more surveillance information, please see the DOH website at: www.floridahealth.gov/diseases-and-conditions/mosquito-borne-diseases/surveillance.html

For arbovirus surveillance information for the United States, please see the Centers for Disease Control and Prevention website at: www.cdc.gov/ncidod/dvbid/westnile/surv&control.htm

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.

Florida Arbovirus Surveillance
Week 9: February 23-29, 2020

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West

AMERICAN OVERSIGHT

Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of February 23-29, 2020, the following arboviral activity was recorded in Florida.

WNV activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week. Two sentinel chickens tested positive for antibodies to WNV this week in Hillsborough County. In 2020, 30 sentinel chickens have been reported from nine counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2020, no positive samples have been reported.

EEEV activity: No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported this week. No sentinel chickens tested positive for antibodies to EEEV this week. In 2020, seven sentinel chickens, one horse, and one mosquito pool have been reported from five counties.

International Travel-Associated Dengue Fever Cases: Three cases of dengue fever were reported this week in persons that had international travel. In 2020, seventeen travel-associated cases have been reported.
Dengue Fever Cases Acquired in Florida: No cases of locally acquired dengue fever were reported this week. In 2020, no cases of locally acquired dengue fever have been reported.

International Travel-Associated Chikungunya Fever Cases: No cases of chikungunya fever were reported this week in persons that had international travel. In 2020, no travel-associated chikungunya fever cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2020, no cases of locally acquired chikungunya fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week in persons that had international travel. In 2020, no travel-associated Zika fever cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2020, no cases of locally acquired Zika fever have been reported.

Advisories/Alerts: Miami-Dade County is currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert.

There is a Level 2 Travel Health Notice for Nigeria related to the transmission of yellow fever virus. There are also Level 1 Travel Health Notices for Central and South America, Mexico, the Caribbean, Asia, the Pacific Islands, Africa, and the Middle East related to the transmission of dengue virus, for Burundi related to Malaria transmission, and for Ethiopia related to chikungunya transmission. Additional information on travel health notices can be

AMERICAN OVERSIGHT

Florida Arbovirus Surveillance
Week 9: February 23-29, 2020

Arbovirus surveillance in Florida includes endemic mosquito-borne viruses such as West Nile virus (WNV), Eastern equine encephalitis virus (EEEV), and St. Louis encephalitis virus (SLEV), as well as exotic viruses such as dengue virus (DENV), chikungunya virus (CHIKV), Zika virus (ZIKV), and California encephalitis group viruses (CEV). Malaria, a parasitic mosquito-borne disease is also included. During the period of February 23-29, 2020, the following arboviral activity was recorded in Florida.

WNV activity: No human cases of WNV infection were reported this week. No horses with WNV infection were reported this week. Two sentinel chickens tested positive for antibodies to WNV this week in Hillsborough County. In 2020, 30 sentinel chickens have been reported from nine counties.

SLEV activity: No human cases of SLEV infection were reported this week. No sentinel chickens tested positive for antibodies to SLEV this week. In 2020, no positive samples have been reported.

EEEV activity: No human cases of EEEV infection were reported this week. No horses with EEEV infection were reported this week. No sentinel chickens tested positive for antibodies to EEEV this week. In 2020, seven sentinel chickens, one horse, and one mosquito pool have been reported from five counties.

International Travel-Associated Dengue Fever Cases: Three cases of dengue fever were reported this week in persons that had international travel. In 2020, seventeen travel-associated cases have been reported.

Dengue Fever Cases Acquired in Florida: No cases of locally acquired dengue fever were reported this week. In 2020, no cases of locally acquired dengue fever have been reported.

International Travel-Associated Chikungunya Fever Cases: No cases of chikungunya fever were reported this week in persons that had international travel. In 2020, no travel-associated chikungunya fever cases have been reported.

Chikungunya Fever Cases Acquired in Florida: No cases of locally acquired chikungunya fever were reported this week. In 2020, no cases of locally acquired chikungunya fever have been reported.

International Travel-Associated Zika Fever Cases: No cases of Zika fever were reported this week in persons that had international travel. In 2020, no travel-associated Zika fever cases have been reported.

Zika Fever Cases Acquired in Florida: No cases of locally acquired Zika fever were reported this week. In 2020, no cases of locally acquired Zika fever have been reported.

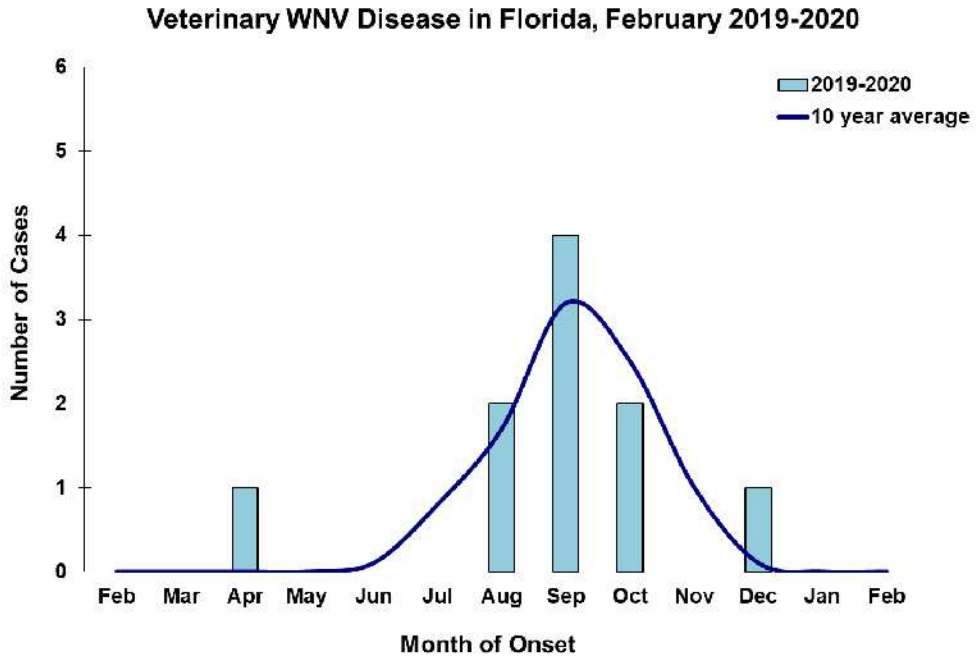
Advisories/Alerts: Miami-Dade County is currently under a mosquito-borne illness alert. No other counties are currently under mosquito-borne illness advisory or alert.

There is a Level 2 Travel Health Notice for Nigeria related to the transmission of yellow fever virus. There are also Level 1 Travel Health Notices for Central and South America, Mexico, the Caribbean, Asia, the Pacific Islands, Africa, and the Middle East related to the transmission of dengue virus, for Burundi related to Malaria transmission, and for Ethiopia related to chikungunya transmission. Additional information on travel health notices can be found at the following link: wwwnc.cdc.gov/travel/notices. For a map of arboviral disease activity in the United States visit: wwwn.cdc.gov/arbonet/maps/ADB_Diseases_Map/index.html.

AMERICAN OVERSIGHT

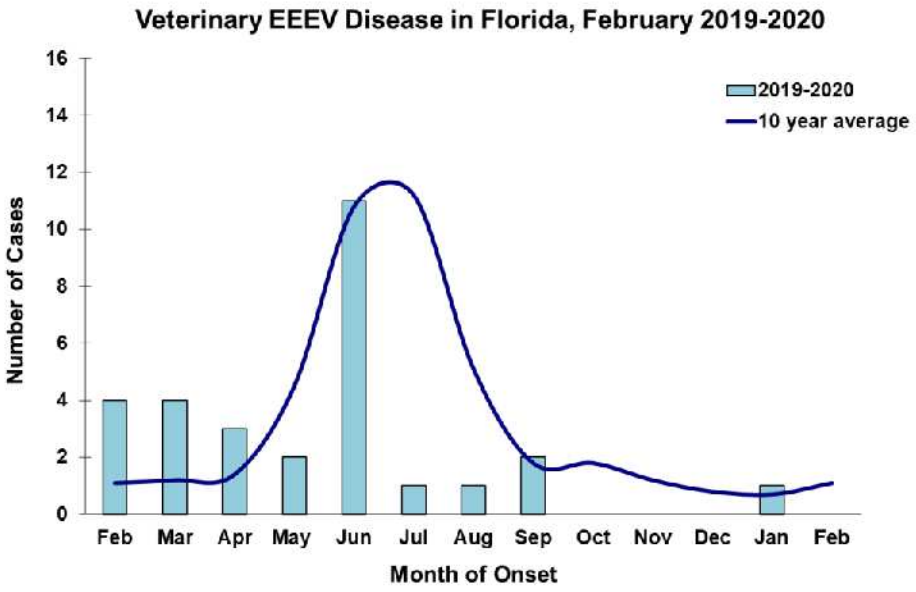
2020 Human Case Summary*

International Travel-Associated Dengue Fever Cases
Seventeen cases of dengue fever with onset in 2020 have been reported in individuals with travel history to a dengue endemic area in the two weeks prior to onset. Counties reporting cases were: Brevard, Broward (5), Franklin, Hillsborough (3), Miami-Dade (5), Seminole, and St. Lucie. Two cases were reported in non-Florida residents. In 2020, sixteen cases of dengue reported in Florida have been serotyped by PCR. Please see the table below for a breakdown of cases by country of origin and serotype.



Country of Exposure	DENV-1	DENV-2	DENV-3	DENV-4	DENV-1/ DENV-3	Unknown	Total
Jamaica			3		1		4
Cuba	1	1					2
Colombia	2						2
Dominican Republic	2						2
Bolivia	1						1
Puerto Rico/US Virgin Islands	1						1
Bahamas	1						1
US Virgin Islands						1	1
Paraguay				1			1
Brazil		1					1
Nicaragua		1					1
Total	**8**	**3**	**3**	**1**	**1**	**1**	**17**

International Travel-Associated Malaria Cases: Two cases of malaria with onset in 2020 have been reported. Countries of origin were: Dominican Republic and Nigeria. Counties reporting cases were: Miami-Dade and Polk. Both cases were diagnosed with *Plasmodium falciparum*. One case was reported in a non-Florida resident.

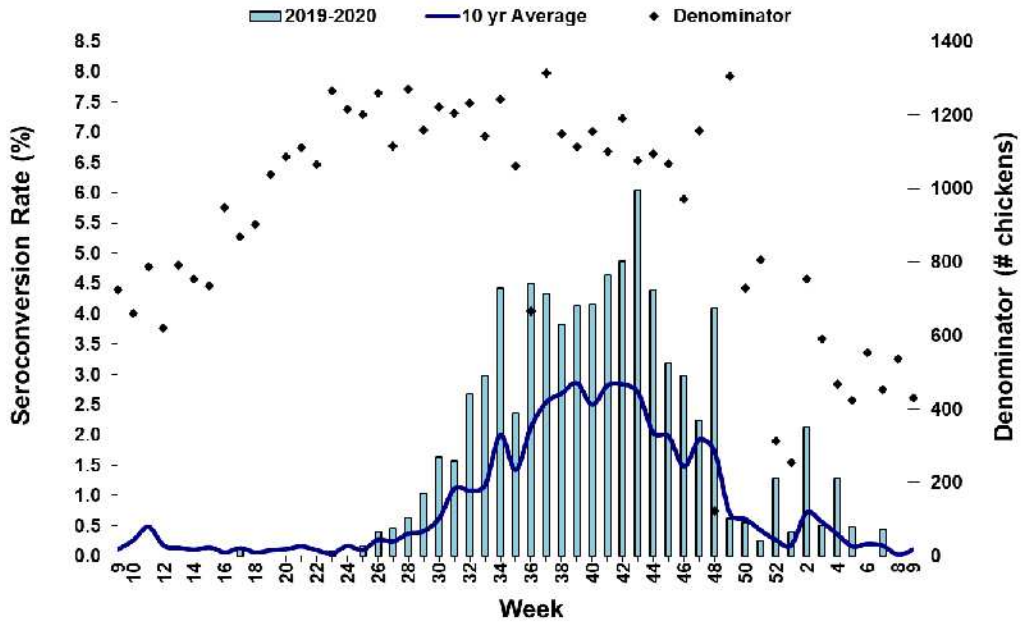


Veterinary Cases*

*Veterinary cases are reported by date of onset. Only mammalian veterinary cases are included in the graphs.

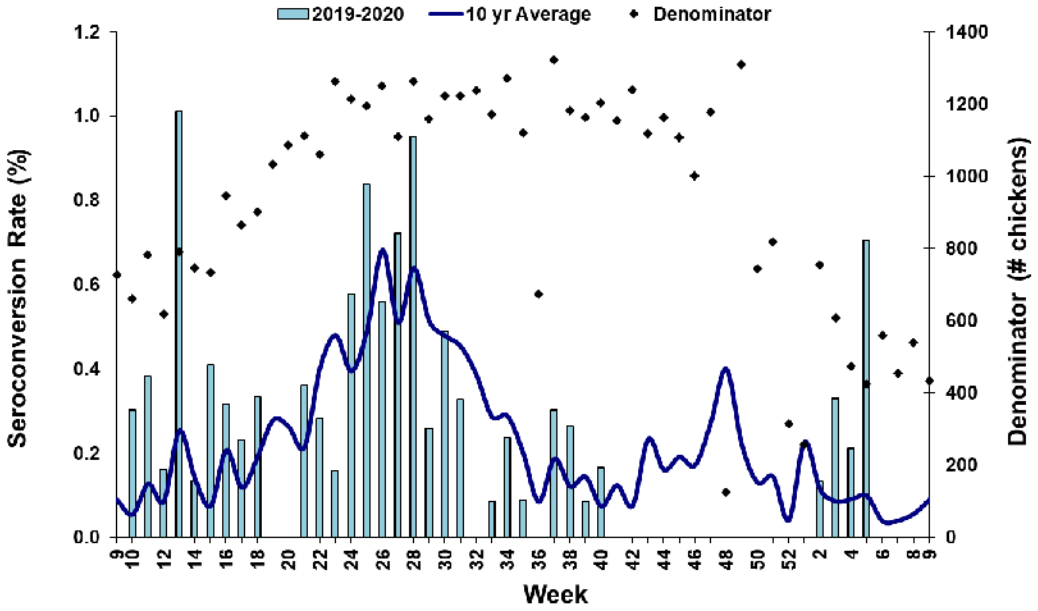
No veterinary cases were reported this week.

AMERICAN OVERSIGHT



Sentinel Chickens*

The table below is for the reporting of confirmatory laboratory results from this week. Some of the samples were collected at earlier dates. The date of collection is recorded for samples collected on that day along with the total number of positives and the corresponding seroconversion rate for the week the sample was collected.



Two sentinel chickens tested positive for antibodies to WNV this week in Hillsborough County.

County	Collection Date	Seroconversion Rates (%)						County Totals	
		Flavi	SLEV	WNV	Alpha	EEEV	HJV	Collection Week	YTD
Hillsborough	1/29/20	4.17		4.17				2 WNV	8 WNV

AMERICAN OVERSIGHT

Sentinel Seroconversions to EEEV in Florida, 2019-2020

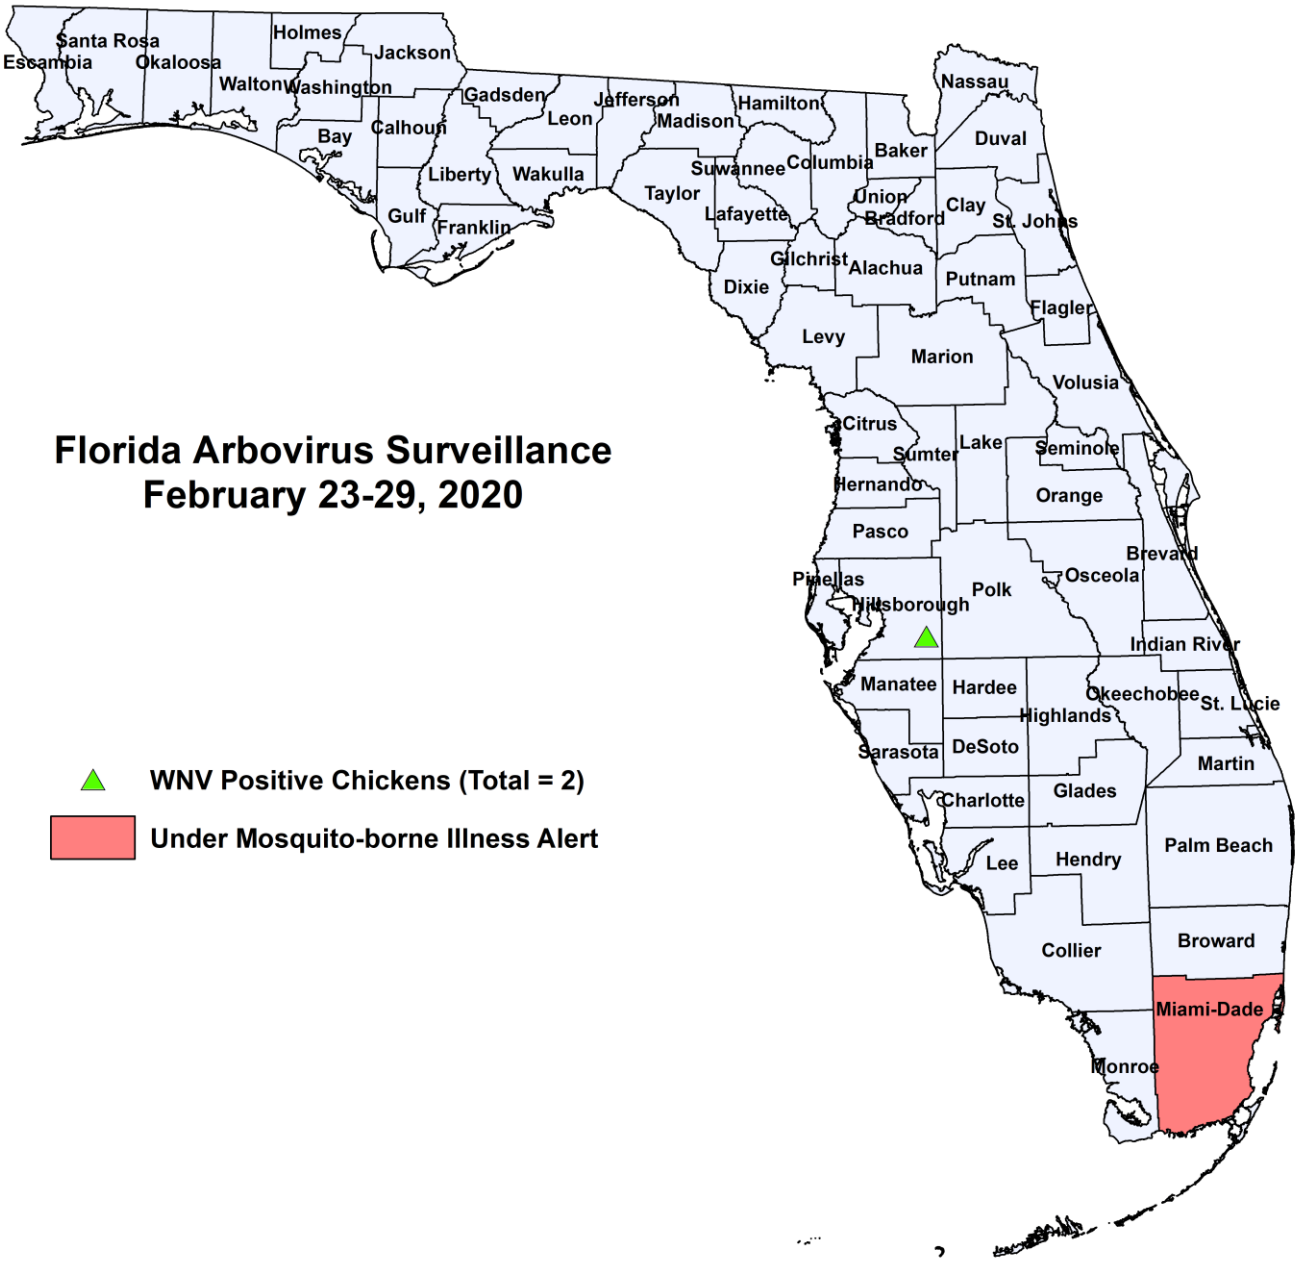
Mosquito Pools

No mosquito pools tested positive for EEEV or WNV this week.

County	Collection Date	Result	Species	County YTD

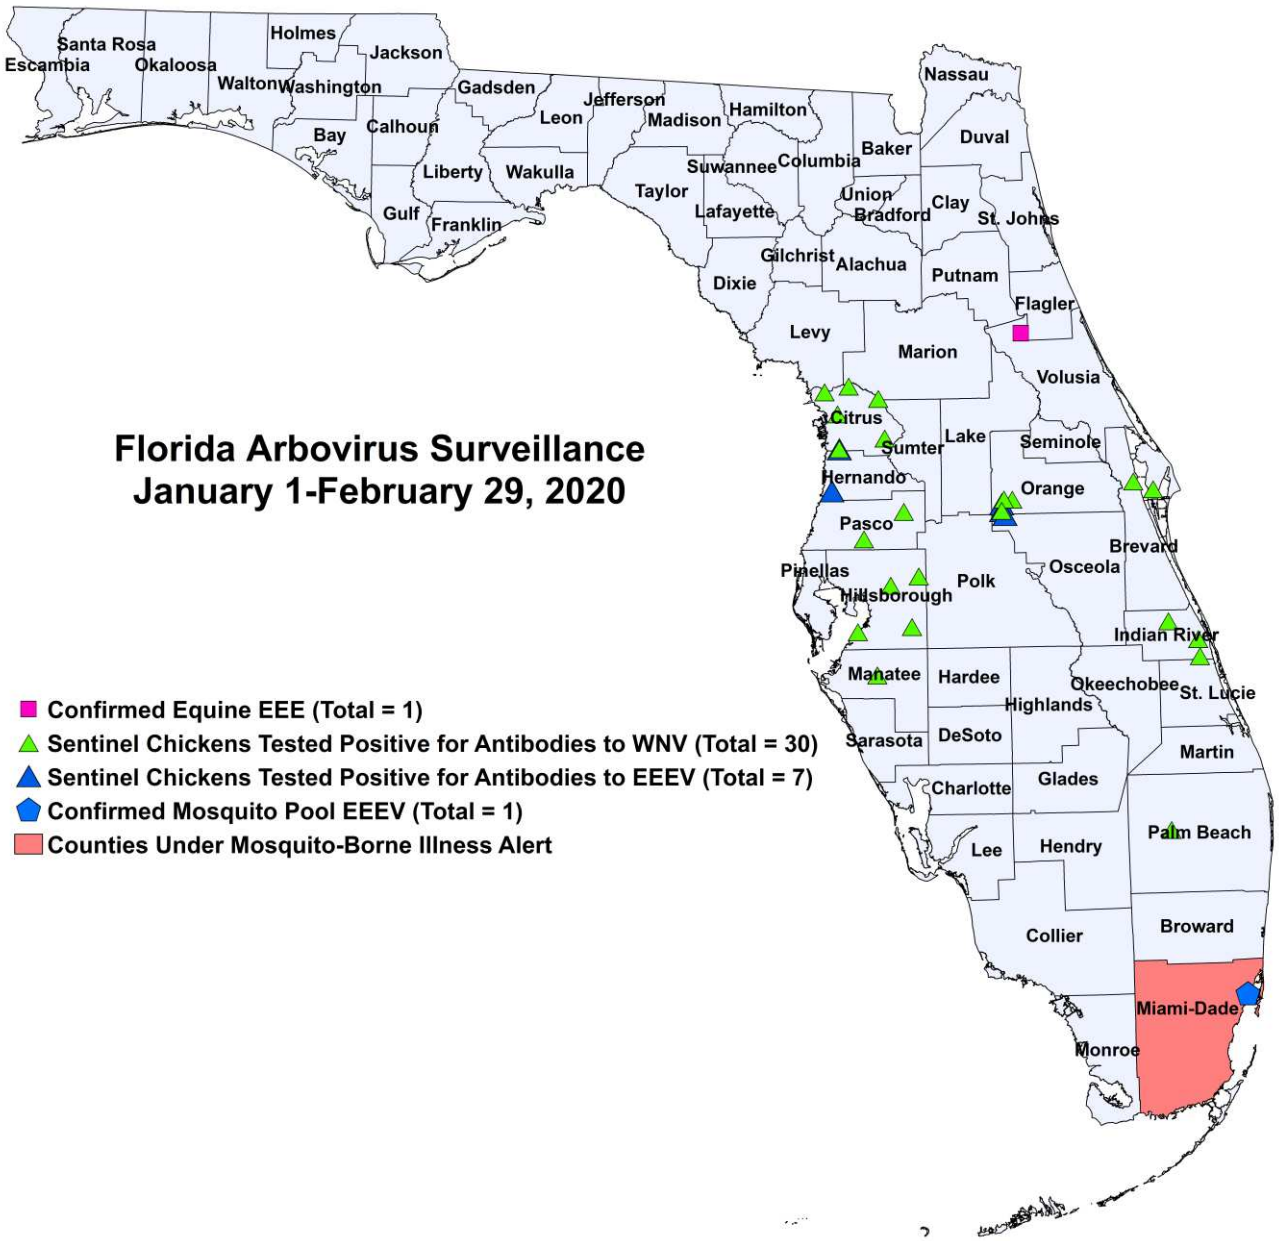
Dead Birds

The Fish and Wildlife Conservation Commission (FWC) collects reports of dead birds, which can be an indication of arbovirus circulation in an area. This week, 10 reports representing a total of 11 dead birds, including one raptor, were received from nine counties.



In 2020, 72 reports representing a total of 182 dead birds (16 crows, 1 jay, 17 raptors) were received from 25 of Florida's 67 counties.

2020



County	Total Dead Birds	Crows	Jays	Raptors	Doves
Collier	1	0	0	0	0
Escambia	2	0	0	0	0
Hillsborough	2	0	0	0	0

For more surveillance information, please see the DOH website at: www.floridahealth.gov/diseases-and-conditions/mosquito-borne-diseases/surveillance.html

For arbovirus surveillance information for the United States, please see the Centers for Disease Control and Prevention website at: www.cdc.gov/ncidod/dvbid/westnile/surv&control.htm

Case tallies included in the weekly Florida arbovirus surveillance report include confirmed and probable cases for EEE, WNV infection, SLE, dengue, chikungunya, and malaria by date of onset. Suspect cases are not included. Activity is mapped by county of exposure rather than county of residence. Case definitions being used in Florida are consistent with national criteria provided by the Council of State and Territorial Epidemiologists (CSTE) and may be viewed at: www.floridahealth.gov/diseases-and-conditions/disease-reporting-and-management/disease-reporting-and-surveillance/index.html. Case tallies reported by CDC do not include suspect cases and cases are reported by patient state of residence rather than where the exposure occurred. Data is provided by county health departments, Department of Health Bureau of Public Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are provided by the Department of Agriculture and Consumer Services.

Importance:	High

Good afternoon,

The ELC has been informed all funding for COVID-19 response is being funded thru the Crisis NOFO. Therefore, I am forwarding this request I received for financial assistance from Florida Department of Health in the amount of $874,632.

Thanking you in advance for your consideration of this request. Please let me know if you need further assistance from the ELC.

De'Lisa

De'Lisa D. Simpson, MBA

De'Lisa

Please find the attached request from the Florida Department of Health for supplemental ELC funding from the Cross Cutting Emerging Issues Project. This request will be used to support Florida's Epidemiology and Laboratory Response to the current COVID-19 Outbreak. This funding was previously applied for in funding opportunity number: CDC RFA-CK19-1904 and was approved but was not funded. Please feel free to reach out to Dr. Blackmore or myself if you have any questions or concerns regarding this matter.

Atlanta, Georgia 30341

Dear Ms. Simpson,

Please find this request submitted by the Florida Department of Health for funding to support Coronavirus Response (COVID-19) from the Cross Cutting Emerging Issues Project, Epidemiology and Laboratory Capacity Grant (ELC). This funding was previously applied for in funding opportunity number: CDC-RFA-CK19-1904, in the ELC Grant and was approved but was not funded. The grant project period is from August 1, 2019 to July 31, 2024. This request includes a detailed budget with justification and indirect cost rate agreement.

Thank you for your continued support of this important public health program. If further information is needed, please contact Dr. Carina Blackmore, Principal Investigator, at 850 245-4732 or at Carina.Blackmore@flhealth.gov

Sincerely,

Carina Blackmore

In-state	6	$370	10	$22,200
Travel Total				**$22,200**

In-State Justification

In-State: Travel for epidemiologists to travel to affected counties to support the Coronavirus response.

(cost per 2-day trip):

Meals/Per Diem	$116
Hotels ($150 per night)	$150
Rental Car ($26 per day)	$52
Gas for Rental Vehicle	$30
Incidentals Tolls/Parking	$22
	$370

F.

Other Category	Cost	Quantity	Months	Total
Mobile Device Service	$40	6	4	$960
Other Total				**$960**

G.

Contractual Category	
LabWare Consultants	$50,000
Biostatistician	$42,000
Merlin System Development	$135,000
Merlin System Tester	$80,000
Contractual Total	**$307,000**

Contractor: LabWare, Inc.

Period of Performance: TBD

Method of Selection: Single Source

Scope of Work: LabWare consultants will assist the Bureau of Public Health Laboratory's in-house LabWare system administrators to implement system enhancements to more rapidly track, prioritize and process Coronavirus specimens. LabWare modifications will process information associated with specimens ordered through the in-house electronic laboratory order system for county health departments. Through the interface, local county health departments provide information about pregnancy status, symptoms, and travel history, but the order information is not viewable from within the LabWare system to the laboratorians performing the testing or the staff responsible for the receipt and triaging specimens for testing. LabWare modifications will be made to communicate critical information collected via the order process to the surveillance application (Merlin). Enhancements to LabWare will also be made to improve the order experience by clinical providers external to the health department. This will enable providers to order Coronavirus testing via a web interface. The order interface will accommodate collection of Coronavirus specific questions (symptoms and onset date, travel history, and pregnancy status). Providers will also be able to see, print and access the results from the order interface which will reduce or alleviate the need for laboratory staff time to print and fax results. LabWare modifications will be made to store CDC test result information and send that result (after entered) to Merlin. LabWare modifications will be made to further interoperability with the surveillance application (Merlin) to enable laboratory staff to view Person Under Investigation Information. Consultants will complete system modifications, test scripts and regression testing and attend weekly project meetings.

Cost: 1 Consultant at $1,000 per day x 50 days = $50,000

AMERICAN OVERSIGHT

Contractor: TBD
Period of Performance: TBD
Method of Selection: State Term Contract
Scope of Work: The Biostatistician will perform activities associated with Coronavirus surveillance, including monitoring data quality, creating guidance materials as needed, providing training, and assisting with system development to collect and manage data; Review data both at the case, community and state level, as well as looking at trends over time and in special populations; Provide support to the state and county health departments as needed with data entry, data cleaning, and data management of Coronavirus cases; Review data in-depth to identify and address data quality issues, including proposing system solutions and following-up regularly with the state and county health department users to ensure high data quality; Produce daily and weekly Coronavirus surveillance reports to be shared internally and externally; Develop and distribute reports to manage case and laboratory data and those that can be used by the state and county health department staff to quickly assess Coronavirus trends to support decision making and guide policy development; Serve as a liaison with other key stakeholders involved in Coronavirus response.

Cost: $70 per hour x 600 hours = $42,000

Contractor: TBD (Merlin System Developer
Period of Performance: TBD
Method of Selection: State Term Contract
Scope of Work: Developer will perform system modifications to the Central Outbreak Documentation system and Merlin Outbreak Module to ensure specific outbreak response activities are met. Additional modifications will be performed following the response hot wash and gap analyses. Development will be performed in SQL and may include linkages to EpiInfo and web-based data collection and LabWare (the state laboratory information management system). Selection Type - State Term; Contract Type – Commercial; Company Name - TBD; Program Area Support - Outbreak Response; Contract Period - TBD; Accountability - Monthly Report; Description - Position contract for systems development.

Cost: $90 per hour x 1,500 hours = $135,000

Contractor: TBD (Merlin System Tester)
Period of Performance: TBD
Method of Selection: State Term Contract
Scope of Work: Ensure all the changes have been properly implemented and the core functionality in Merlin remains intact following implementation of development changes necessary to support the response. Conducts testing on coding changes completed by the developer prior to changes released to the production environment (see changes described above under developer and project manager). The tester will complete regression testing and produce automated test scripts to ensure that all following changes in Merlin do not create any disruptions on the existing code. All code released to production systems are required to go through a skilled systems tester prior to production release. Selection Type - State Term; Contract Type – Commercial; Company Name –TBD; Program Area Support – Health Information Systems; Contract Period - TBD; Accountability - Monthly Report; Description - Position contract for systems testing.

Cost: $80 per hour x 1,000 hours = $80,000

H.	**Total Direct Costs**	**$798,254**
I.	**Indirect Costs**	**$76,378**

Indirect Cost rates are negotiated between the Florida Department of Health and the U.S. Department of Health and Human Services – Cost Allocation Unit. These costs cover administrative expenses that support multiple programs and cannot be identified as program or grant specific costs.

Costs associated with fixed costs such as lease space, utilities, phone, etc., are not considered part of the indirect cost pool and are charged directly to the grants where the staff are housed and paid directly from a grant. These fixed costs are standard costs associated with a full time equivalent (FTE) and are developed by the Executive Office of the Governor as part of the Legislative Budget Standards each year. These costs are listed under the "Other" category of the grant.

STATE AND LOCAL GOVERNMENTS RATE AGREEMENT

EIN: 59-3502843

ORGANIZATION:
Florida Department of Health
4052 Bald Cypress Way
Bin #B-20
Tallahassee, FL 32399-1729

DATE:01/18/2019

FILING REF.: The preceding agreement was dated 03/23/2018

The rates approved in this agreement are for use on grants, contracts and other agreements with the Federal Government, subject to the conditions in Section III.

SECTION I: INDIRECT COST RATES

RATE TYPES: FIXED FINAL PROV. (PROVISIONAL) PRED. (PREDETERMINED)

	EFFECTIVE PERIOD				
TYPE	**FROM**	**TO**	**RATE(%)**	**LOCATION**	**APPLICABLE TO**
FIXED	07/01/2019	06/30/2020	26.52	On Site	State Health
FIXED	07/01/2019	06/30/2020	9.10	On Site	Children Medical Services (1)
FIXED	07/01/2019	06/30/2020	12.21	On Site	Medical Quality Assurance
FIXED	07/01/2019	06/30/2020	9.64	On Site	Disability Determination
PROV.	07/01/2020	06/30/2023			Use same rates and conditions as those cited for fiscal year ending June 30, 2020.
PRED.	07/01/2016	06/30/2020	6.80	All	Children's Medical Services (2)

*BASE

AMERICAN OVERSIGHT

Direct salaries and wages including all fringe benefits.

AMERICAN OVERSIGHT

SECTION II: SPECIAL REMARKS

TREATMENT OF FRINGE BENEFITS:

The fringe benefits are specifically identified to each employee and are charged individually as direct costs. The directly claimed fringe benefits are listed below.

TREATMENT OF PAID ABSENCES

Vacation, holiday, sick leave pay and other paid absences are included in salaries and wages and are claimed on grants, contracts and other agreements as part of the normal cost for salaries and wages. Separate claims are not made for the cost of these paid absences.

(1) Unrestricted Rate
(2) Restricted Rate

AMERICAN OVERSIGHT

Equipment means an article of nonexpendable, tangible personal property having a useful life of more than 1 year(s) and an acquisition cost of $5,000 or more per unit.

Fringe Benefits:
FICA
Retirement
Disability Insurance
Health Insurance
Life Insurance

STATE HEALTH SERVICES:

The fixed rate for the fiscal year ending 06/30/20 includes an over recovery of $554,671 from final settlement of the actual costs for the fiscal year ended 06/30/18. The fixed rate for the fiscal year ended 06/30/18 is considered final.

CHILDREN'S MEDICAL SERVICES:

The fixed rate for the fiscal year ending 06/30/20 includes an under recovery of $22,566 from final settlement of the actual costs for the fiscal year ended 06/30/18. The fixed rate for the fiscal year ended 06/30/18 is considered final.

MEDICAL QUALITY ASSURANCE:

The fixed rate for the fiscal year ending 06/30/20 includes an over recovery of $706,431 from final settlement of actual costs for the fiscal year ended 06/30/18. The fixed rate for the fiscal year ended 06/30/18 is considered final.

DISABILITY DETERMINATION:

The fixed rate for the fiscal year ending 06/30/20 includes an under recovery of $43,666 from final settlement of the actual costs for the fiscal year ended 06/30/18. The fixed rate for the fiscal year ended 06/30/18 is considered final.

Your next proposal based on actual costs for the fiscal year ending 06/30/19 is due in our office by 12/31/19.

AMERICAN OVERSIGHT

SECTION III: GENERAL

A. LIMITATIONS:

The rates in this Agreement are subject to any statutory or administrative limitations and apply to a given grant, contract or other agreement only to the extent that funds are available. Acceptance of the rates is subject to the following conditions: (1) Only costs incurred by the organization were included in its indirect cost pool as finally accepted: such costs are legal obligations of the organization and are allowable under the governing cost principles; (2) The same costs that have been treated as indirect costs are not claimed as direct costs; (3) Similar types of costs have been accorded consistent accounting treatment; and (4) The information provided by the organization which was used to establish the rates is not later found to be materially incomplete or inaccurate by the Federal Government. In such situations the rate(s) would be subject to renegotiation at the discretion of the Federal Government.

B. ACCOUNTING CHANGES:

This Agreement is based on the accounting system purported by the organization to be in effect during the Agreement period. Changes to the method of accounting for costs which affect the amount of reimbursement resulting from the use of this Agreement require prior approval of the authorized representative of the cognizant agency. Such changes include, but are not limited to, changes in the charging of a particular type of cost from indirect to direct. Failure to obtain approval may result in cost disallowances.

C. FIXED RATES:

If a fixed rate is in this Agreement, it is based on an estimate of the costs for the period covered by the rate. When the actual costs for this period are determined, an adjustment will be made to a rate of a future year(s) to compensate for the difference between the costs used to establish the fixed rate and actual costs.

D. USE BY OTHER FEDERAL AGENCIES:

The rates in this Agreement were approved in accordance with the authority in Title 2 of the Code of Federal Regulations, Part 200 (2 CFR 200), and should be applied to grants, contracts and other agreements covered by 2 CFR 200, subject to any limitations in A above. The organization may provide copies of the Agreement to other Federal Agencies to give them early notification of the Agreement.

E. OTHER:

If any Federal contract, grant or other agreement is reimbursing indirect costs by a means other than the approved rate(s) in this Agreement, the organization should (1) credit such costs to the affected programs, and (2) apply the approved rate(s) to the appropriate base to identify the proper amount of indirect costs allocable to these programs.

De'Lisa

Please find the attached request from the Florida Department of Health for supplemental ELC funding from the Cross Cutting Emerging Issues Project. This request will be used to support Florida's Epidemiology and Laboratory Response to the current COVID-19 Outbreak. This funding was previously applied for in funding opportunity number: CDC RFA-CK19-1904 and was approved but was not funded. Please feel free to reach out to Dr. Blackmore or myself if you have any questions or concerns regarding this matter.

March 4, 2020

Ms. De'Lisa Simpson
Project officer
Epidemiology and Laboratory for Infectious Diseases Program
Centers for Disease Control and Prevention
2920 Brandywine Road
Atlanta, Georgia 30341

Dear Ms. Simpson,

Please find this request submitted by the Florida Department of Health for funding to support Coronavirus Response (COVID-19) from the Cross Cutting Emerging Issues Project, Epidemiology and Laboratory Capacity Grant (ELC). This funding was previously applied for in funding opportunity number: CDC-RFA-CK19-1904, in the ELC Grant and was approved but was not funded. The grant project period is from August 1, 2019 to July 31, 2024. This request includes a detailed budget with justification and indirect cost rate agreement.

Thank you for your continued support of this important public health program. If further information is needed, please contact Dr. Carina Blackmore, Principal Investigator, at 850 245-4732 or at Carina.Blackmore@flhealth.gov

Sincerely,

Carina Blackmore, DVM, PhD. Dipl. ACVPM
State Epidemiologist
Director Division of Disease Control and Health Protection
Principal Investigator, ELC Grant

Florida Department of Health

Budgetary Summary of Expenditures by Category

Personnel	**$240,000**
Fringe	**$48,000**
Equipment	**$35,000**
Supplies	**$145,094**
Travel	**$22,200**
Other	**$960**
Contractual	**$307,000**
Total Direct Costs	**$798,254**
Indirect Costs	**$76,378**
Total	**$874,632**

A.

Personnel Category	**FTEs**	**(All are Other Personnel Services)**	
Epidemiology	**6.00**		**$120,000**
Laboratory	**9.00**		**$120,000**
Salary Total	**6.00**		**$240,000**

Employee	Position Title	Location	Months	FTEs	Amount
TBD	Biological Scientist IV	South Florida	4	1.00	$20,000

This position will support Coronavirus (COVID-19) field investigation and surveillance work in Miami-Dade, Broward, Palm Beach Counties in South Florida. The current model of deploying existing state and county health department personnel to assist with the surge of cases is unsustainable.

Employee	Position Title	Location	Months	FTEs	Amount
TBD	Biological Scientist IV	South Florida	4	1.00	$20,000

This position will support Coronavirus (COVID-19) field investigation and surveillance work in Miami-Dade, Broward, Palm Beach Counties in West Central Florida. The current model of deploying existing state and county health department personnel to assist with the surge of cases is unsustainable.

Employee	Position Title	Location	Months	FTEs	Amount
TBD	Biological Scientist IV	Central Florida	4	1.00	$20,000

This position will support Coronavirus (COVID-19) field investigation and surveillance work in Central Florida (Orlando Area) Florida. The current model of deploying existing state and county health department personnel to assist with the surge of cases is unsustainable.

Employee	Position Title	Location	Months	FTEs	Amount
TBD	Biological Scientist IV	West Central Florida	4	1.00	$20,000

This position will support Coronavirus (COVID-19) field investigation and surveillance work in West Central Florida (Tampa, St. Peterburg Florida. The current model of deploying existing state and county health department personnel to assist with the surge of cases is unsustainable.

Employee	Position Title	Location	Months	FTEs	Amount
TBD	Biological Scientist IV	Hillsborough CHD	4	1.00	$20,000

This position will support Coronavirus (COVID-19) field investigation and surveillance work at the Hillsborough. The current model of deploying existing state and county health department personnel to assist with the surge of cases is unsustainable.

Employee	Position Title	Location	Months	FTEs	Amount
TBD	Biological Scientist IV	Orange CHD	4	1.00	$20,000

This position will support Coronavirus (COVID-19) field investigation and surveillance work at the Orange CHD.. The current model of deploying existing state and county health department personnel to assist with the surge of cases is unsustainable.

Employee	Position Title	Location	Months	FTEs	Amount
TBD	Medical Laboratory Scientist II	Tampa Laboratory	4	3.00	$40,000

These positions will support Coronavirus (COVID-19) laboratory analysis and detection work.

Employee	Position Title	Location	Months	FTEs	Amount
TBD	Medical Laboratory Scientist II	Jacksonville Laboratory	4	3.00	$40,000

These positions will support Coronavirus (COVID-19) laboratory analysis and detection work.

Employee	Position Title	Location	Months	FTEs	Amount
TBD	Medical Laboratory Scientist II	Miami Laboratory	4	3.00	$40,000

These positions will support Coronavirus (COVID-19) laboratory analysis and detection work.

Fringe Benefits Category	Salary		Fringe	
FICA, Health Insurance and Retirement	**$240,000**	**x**	**20%**	**$48,000**
Fringe Benefits Total				**$48,000**

C.

Equipment	
EZ1	**$35,000**
Equipment Total	**$35,000**

The EZ1 automated extraction instrument will be used for testing COVID-19.

D.

Supplies Category	Quantity	Cost/Item	Total
Computers	6	$999.00	$5,994
Mobile Devices	6	$500.00	$3,000
Portable Monitor	6	$350.00	$2,100
Laboratory Testing Supplies			$134,000
Supplies Total			**$145,094**

E.

Travel Category	Staff	Cost	Trips	Total
In-state	6	$370	10	$22,200
Travel Total				**$22,200**

In-State Justification

In-State: Travel for epidemiologists to travel to affected counties to support the Coronavirus response.

(cost per 2-day trip):

Meals/Per Diem	$116
Hotels ($150 per night)	$150
Rental Car ($26 per day)	$52
Gas for Rental Vehicle	$30
Incidentals Tolls/Parking	$22
	$370

F.

Other Category	Cost	Quantity	Months	Total
Mobile Device Service	$40	6	4	$960
Other Total				**$960**

G.

Contractual Category	
LabWare Consultants	$50,000
Biostatistician	$42,000
Merlin System Development	$135,000
Merlin System Tester	$80,000
Contractual Total	**$307,000**

Contractor: LabWare, Inc.

Period of Performance: TBD

Method of Selection: Single Source

Scope of Work: LabWare consultants will assist the Bureau of Public Health Laboratory's in-house LabWare system administrators to implement system enhancements to more rapidly track, prioritize and process Coronavirus specimens. LabWare modifications will process information associated with specimens ordered through the in-house electronic laboratory order system for county health departments. Through the interface, local county health departments provide information about pregnancy status, symptoms, and travel history, but the order information is not viewable from within the LabWare system to the laboratorians performing the testing or the staff responsible for the receipt and triaging specimens for testing. LabWare modifications will be made to communicate critical information collected via the order process to the surveillance application (Merlin). Enhancements to LabWare will also be made to improve the order experience by clinical providers external to the health department. This will enable providers to order Coronavirus testing via a web interface. The order interface will accommodate collection of Coronavirus specific questions (symptoms and onset date, travel history, and pregnancy status). Providers will also be able to see, print and access the results from the order interface which will reduce or alleviate the need for laboratory staff time to print and fax results. LabWare modifications will be made to store CDC test result information and send that result (after entered) to Merlin. LabWare modifications will be made to further interoperability with the surveillance application (Merlin) to enable laboratory staff to view Person Under Investigation Information. Consultants will complete system modifications, test scripts and regression testing and attend weekly project meetings.

Cost: 1 Consultant at $1,000 per day x 50 days = $50,000

AMERICAN OVERSIGHT

Contractor: TBD
Period of Performance: TBD
Method of Selection: State Term Contract
Scope of Work: The Biostatistician will perform activities associated with Coronavirus surveillance, including monitoring data quality, creating guidance materials as needed, providing training, and assisting with system development to collect and manage data; Review data both at the case, community and state level, as well as looking at trends over time and in special populations; Provide support to the state and county health departments as needed with data entry, data cleaning, and data management of Coronavirus cases; Review data in-depth to identify and address data quality issues, including proposing system solutions and following-up regularly with the state and county health department users to ensure high data quality; Produce daily and weekly Coronavirus surveillance reports to be shared internally and externally; Develop and distribute reports to manage case and laboratory data and those that can be used by the state and county health department staff to quickly assess Coronavirus trends to support decision making and guide policy development; Serve as a liaison with other key stakeholders involved in Coronavirus response.

Cost: $70 per hour x 600 hours = $42,000

Contractor: TBD (Merlin System Developer
Period of Performance: TBD
Method of Selection: State Term Contract
Scope of Work: Developer will perform system modifications to the Central Outbreak Documentation system and Merlin Outbreak Module to ensure specific outbreak response activities are met. Additional modifications will be performed following the response hot wash and gap analyses. Development will be performed in SQL and may include linkages to EpiInfo and web-based data collection and LabWare (the state laboratory information management system). Selection Type - State Term; Contract Type – Commercial; Company Name - TBD; Program Area Support - Outbreak Response; Contract Period - TBD; Accountability - Monthly Report; Description - Position contract for systems development.

Cost: $90 per hour x 1,500 hours = $135,000

Contractor: TBD (Merlin System Tester)
Period of Performance: TBD
Method of Selection: State Term Contract
Scope of Work: Ensure all the changes have been properly implemented and the core functionality in Merlin remains intact following implementation of development changes necessary to support the response. Conducts testing on coding changes completed by the developer prior to changes released to the production environment (see changes described above under developer and project manager). The tester will complete regression testing and produce automated test scripts to ensure that all following changes in Merlin do not create any disruptions on the existing code. All code released to production systems are required to go through a skilled systems tester prior to production release. Selection Type - State Term; Contract Type – Commercial; Company Name –TBD; Program Area Support – Health Information Systems; Contract Period - TBD; Accountability - Monthly Report; Description - Position contract for systems testing.

Cost: $80 per hour x 1,000 hours = $80,000

H.	**Total Direct Costs**	**$798,254**
I.	**Indirect Costs**	**$76,378**

Indirect Cost rates are negotiated between the Florida Department of Health and the U.S. Department of Health and Human Services – Cost Allocation Unit. These costs cover administrative expenses that support multiple programs and cannot be identified as program or grant specific costs.

Costs associated with fixed costs such as lease space, utilities, phone, etc., are not considered part of the indirect cost pool and are charged directly to the grants where the staff are housed and paid directly from a grant. These fixed costs are standard costs associated with a full time equivalent (FTE) and are developed by the Executive Office of the Governor as part of the Legislative Budget Standards each year. These costs are listed under the "Other" category of the grant.

Sala	+ Fringe	= Subtotal	Indirect Rate	= Total

STATE AND LOCAL GOVERNMENTS RATE AGREEMENT

EIN: 59-3502843

ORGANIZATION:
Florida Department of Health
4052 Bald Cypress Way
Bin #B-20
Tallahassee, FL 32399-1729

DATE:01/18/2019

FILING REF.: The preceding agreement was dated 03/23/2018

The rates approved in this agreement are for use on grants, contracts and other agreements with the Federal Government, subject to the conditions in Section III.

SECTION I: INDIRECT COST RATES

RATE TYPES: FIXED FINAL PROV. (PROVISIONAL) PRED. (PREDETERMINED)

	EFFECTIVE PERIOD				
TYPE	**FROM**	**TO**	**RATE(%)**	**LOCATION**	**APPLICABLE TO**
FIXED	07/01/2019	06/30/2020	26.52	On Site	State Health
FIXED	07/01/2019	06/30/2020	9.10	On Site	Children Medical Services (1)
FIXED	07/01/2019	06/30/2020	12.21	On Site	Medical Quality Assurance
FIXED	07/01/2019	06/30/2020	9.64	On Site	Disability Determination
PROV.	07/01/2020	06/30/2023			Use same rates and conditions as those cited for fiscal year ending June 30, 2020.
PRED.	07/01/2016	06/30/2020	6.80	All	Children's Medical Services (2)

*BASE

AMERICAN OVERSIGHT

Direct salaries and wages including all fringe benefits.

AMERICAN OVERSIGHT

SECTION II: SPECIAL REMARKS

TREATMENT OF FRINGE BENEFITS:

The fringe benefits are specifically identified to each employee and are charged individually as direct costs. The directly claimed fringe benefits are listed below.

TREATMENT OF PAID ABSENCES

Vacation, holiday, sick leave pay and other paid absences are included in salaries and wages and are claimed on grants, contracts and other agreements as part of the normal cost for salaries and wages. Separate claims are not made for the cost of these paid absences.

(1) Unrestricted Rate
(2) Restricted Rate

AMERICAN OVERSIGHT

Equipment means an article of nonexpendable, tangible personal property having a useful life of more than 1 year(s) and an acquisition cost of $5,000 or more per unit.

Fringe Benefits:
FICA
Retirement
Disability Insurance
Health Insurance
Life Insurance

STATE HEALTH SERVICES:

The fixed rate for the fiscal year ending 06/30/20 includes an over recovery of $554,671 from final settlement of the actual costs for the fiscal year ended 06/30/18. The fixed rate for the fiscal year ended 06/30/18 is considered final.

CHILDREN'S MEDICAL SERVICES:

The fixed rate for the fiscal year ending 06/30/20 includes an under recovery of $22,566 from final settlement of the actual costs for the fiscal year ended 06/30/18. The fixed rate for the fiscal year ended 06/30/18 is considered final.

MEDICAL QUALITY ASSURANCE:

The fixed rate for the fiscal year ending 06/30/20 includes an over recovery of $706,431 from final settlement of actual costs for the fiscal year ended 06/30/18. The fixed rate for the fiscal year ended 06/30/18 is considered final.

DISABILITY DETERMINATION:

The fixed rate for the fiscal year ending 06/30/20 includes an under recovery of $43,666 from final settlement of the actual costs for the fiscal year ended 06/30/18. The fixed rate for the fiscal year ended 06/30/18 is considered final.

Your next proposal based on actual costs for the fiscal year ending 06/30/19 is due in our office by 12/31/19.

AMERICAN OVERSIGHT

SECTION III: GENERAL

A. LIMITATIONS:

The rates in this Agreement are subject to any statutory or administrative limitations and apply to a given grant, contract or other agreement only to the extent that funds are available. Acceptance of the rates is subject to the following conditions: (1) Only costs incurred by the organization were included in its indirect cost pool as finally accepted: such costs are legal obligations of the organization and are allowable under the governing cost principles; (2) The same costs that have been treated as indirect costs are not claimed as direct costs; (3) Similar types of costs have been accorded consistent accounting treatment; and (4) The information provided by the organization which was used to establish the rates is not later found to be materially incomplete or inaccurate by the Federal Government. In such situations the rate(s) would be subject to renegotiation at the discretion of the Federal Government.

B. ACCOUNTING CHANGES:

This Agreement is based on the accounting system purported by the organization to be in effect during the Agreement period. Changes to the method of accounting for costs which affect the amount of reimbursement resulting from the use of this Agreement require prior approval of the authorized representative of the cognizant agency. Such changes include, but are not limited to, changes in the charging of a particular type of cost from indirect to direct. Failure to obtain approval may result in cost disallowances.

C. FIXED RATES:

If a fixed rate is in this Agreement, it is based on an estimate of the costs for the period covered by the rate. When the actual costs for this period are determined, an adjustment will be made to a rate of a future year(s) to compensate for the difference between the costs used to establish the fixed rate and actual costs.

D. USE BY OTHER FEDERAL AGENCIES:

The rates in this Agreement were approved in accordance with the authority in Title 2 of the Code of Federal Regulations, Part 200 (2 CFR 200), and should be applied to grants, contracts and other agreements covered by 2 CFR 200, subject to any limitations in A above. The organization may provide copies of the Agreement to other Federal Agencies to give them early notification of the Agreement.

E. OTHER:

If any Federal contract, grant or other agreement is reimbursing indirect costs by a means other than the approved rate(s) in this Agreement, the organization should (1) credit such costs to the affected programs, and (2) apply the approved rate(s) to the appropriate base to identify the proper amount of indirect costs allocable to these programs.

March 4, 2020

Ms. De'Lisa Simpson
Project officer
Epidemiology and Laboratory for Infectious Diseases Program
Centers for Disease Control and Prevention
2920 Brandywine Road
Atlanta, Georgia 30341

Dear Ms. Simpson,

Please find this request submitted by the Florida Department of Health for funding to support Coronavirus Response (COVID-19) from the Cross Cutting Emerging Issues Project, Epidemiology and Laboratory Capacity Grant (ELC). This funding was previously applied for in funding opportunity number: CDC-RFA-CK19-1904, in the ELC Grant and was approved but was not funded. The grant project period is from August 1, 2019 to July 31, 2024. This request includes a detailed budget with justification and indirect cost rate agreement.

Thank you for your continued support of this important public health program. If further information is needed, please contact Dr. Carina Blackmore, Principal Investigator, at 850 245-4732 or at Carina.Blackmore@flhealth.gov

Sincerely,

Carina Blackmore

Subject:	Florida model
Date:	Tuesday, March 24, 2020 12:45:45 PM

Hi Matt and Mike. I am sure you are both busy with the COVID response. As many states are, we are dabbling with modeling. Came across this the model below. Do you know anything about it? Also in the modeling you are doing, anything that would be of value to learn from your work from a state (Florida specifically). Any guidance on priorities we should try to model (where we may have solid enough data to inform policy). We have some thoughts of course but if we can make short cuts we are all for it. If more easily discussed over the phone and you have the time my cell is +18505281595 Take care Carina

AMERICAN OVERSIGHT

CDC's recommendations for implementation of mitigation strategies for Florida, based on current situation with COVID-19 transmission and consideration of the state's large older adult population

Note: Florida has recently implemented many interventions included in the CDC guidance (https://www.cdc.gov/coronavirus/2019-ncov/community/index.html).

The most recent recommendations from Florida can be found at: http://www.floridahealth.gov/diseases-and-conditions/COVID-19/index.html

The following describes CDC recommendations for community interventions in Florida**.**

Bottom Line Up Front:

Florida has had several COVID-19 confirmed cases and exposures related to ports of entry, including shipping ports and airports. Additionally, Florida is a large tourism hub and has an older age population. However, at this time there is not widespread transmission. Due to the current level of COVID-19 transmission in the United States, and Florida's large older adult population, CDC recommends certain community mitigation activities to help slow the spread of COVID-19 into the community and to protect vulnerable members of the community. CDC recommends the following interventions be implemented at this time (Table). These recommendations may be updated, if necessary, based on any changes in the current local situation.

Goals

The goals for using mitigation strategies for Florida are to protect:

- Individuals at increased risk for severe illness, including older adults and persons of any age with underlying health conditions (See Appendix A).
- The healthcare workforce and critical infrastructure workforces

These approaches are used to minimize morbidity and mortality caused by COVID-19 and minimize social and economic impacts of COVID-19. Individuals, communities, businesses, and healthcare organizations are all part of a community mitigation strategy.

Implementation emphasizes:

- Emphasizing individual responsibility for implementation of recommended personal-level actions,
- Empowering businesses, schools, and community organizations to implement recommended actions, particularly in ways that protect persons at risk of severe illness such as older adults and persons with serious underlying health conditions (e.g., Dialysis patients, congestive heart failure, emphysema)
- Focusing on settings that provide critical services to implement recommended actions to protect critical infrastructure and individuals at risk of severe disease

AMERICAN OVERSIGHT

- Minimizing disruptions to daily life to the extent possible

AMERICAN OVERSIGHT

Table. Community mitigation strategies for Florida

For Every Individual and Families at Home	• Monitor local information about COVID-19 in your community.
	• Know the signs and symptoms of COVID-19 and what to do if you become symptomatic.
	• Practice personal protective measures (e.g., hand washing).
	• Create a household plan of action (https://www.cdc.gov/coronavirus/2019-ncov/downloads/community-mitigation-strategy.pdf)
	• Ensure 30-day supply of all medicines.
	• Know about emergency operations plans for schools/workplaces of household members.
	• **Individuals at risk of severe illness (including older adults and persons of any age with underlying health conditions) should stay at home as much as possible.**
	  ○ **Avoid cruise travel and non-essential air travel**
	  ○ **Avoid gatherings or other situations of potential exposures, including church attendance and social events with 10 or more people as much as possible.**

For Every School/Childcare Facility	• Monitor local information about COVID-19 in your community. • Know the signs and symptoms of COVID-19 and what to do if students or staff become symptomatic at school/childcare site. • Review and update emergency operations plan (including implementation of social distancing measures) or develop plan if one is not available. • Students at increased risk of severe illness should consider implementing individual plans for distance learning (e-learning). • Short-term dismissals for school and extracurricular activities as needed (e.g., if cases in staff/students) for cleaning and contact tracing.
For Every Assisted Living Facility, Senior Living Facility, and Adult Day Programs	• **Conduct daily temperature and symptom screening of attendees, staff, and visitors.** • **Support training of staff about strong infection control practices.** • **Restrict visitors to long-term care facilities.**

AMERICAN OVERSIGHT

	• Monitor local information about COVID-19 in your community. • Know the signs and symptoms of COVID-19 and what to do if clients/residents or staff become symptomatic. • Review and update emergency operations plan (including implementation of social distancing measures) or develop a plan if one is not available. • Encourage personal protective measures among staff, residents and clients who live elsewhere (e.g., stay home or in residences when sick, handwashing, respiratory etiquette). • Clean frequently touched surfaces daily. • Ensure hand hygiene supplies are readily available in all buildings.

Every Workplace	• Monitor local information about COVID-19 in your community.
	• Know the signs and symptoms of COVID-19 and what to do if staff become symptomatic at the worksite.
	• Review, update, or develop workplace plans to include liberal leave and telework policies.
	  ○ Consider 7-day leave policies for people with COVID-19 symptoms
	  ○ Consider alternate team approaches for work schedules.
	  ○ Encourage staff to telework (when feasible), particularly individuals at increased risk of severe disease.
	• Work with all local employers to ensure all workers have the financial support to stay home with any respiratory symptoms
	• Encourage personal protective measures among staff (e.g., stay home when sick, handwashing, respiratory etiquette).
	• Clean and disinfect frequently touched surfaces daily.
	• Ensure hand hygiene supplies are readily available in building.
	• Limit large work-related gatherings (e.g., staff meetings, after-work functions).
	• Cancel non-essential work travel.
	• Cancel work-sponsored conferences, tradeshows, etc.

Every Community and Faith-Based Organization	• **Cancel large gatherings (e.g., >250 people), and smaller gatherings that may bring persons together from multiple parts of the country.**

AMERICAN OVERSIGHT

	• **Conduct fever and respiratory screening of staff working at theme parks** • **Reduce number of visitors to theme parks** • Monitor local information about COVID-19 in your community. • Know the signs and symptoms of COVID-19 and what to do if organization members/staff become symptomatic. • Determine ways to continue providing support services to individuals at increased risk of severe disease (services, meals, checking in) while limiting group settings and exposures. • For organizations that serve high-risk populations, consider cancelling gatherings of more than 10 people. • Encourage staff and members to stay home and notify organization administrators of illness when sick. • Encourage personal protective measures among organization/members and staff (e.g., stay home when sick, handwashing, respiratory etiquette). • Clean frequently touched surfaces at organization gathering points daily. • Ensure hand hygiene supplies are readily available in building. • Close areas with known exposures in highly trafficked tourist areas, such as cruise ship wharfs.
Healthcare Settings and Healthcare Providers (Including Outpatient, Nursing Homes/Long-Term Care Facilities, Inpatient, Telehealth)	• **Implement telehealth for rural communities** • **Consider reducing elective procedures** • Implement triage before entering facilities (e.g. parking lot triage, front door); phone triage and telemedicine; limit unnecessary healthcare visits • Encourage HCP to stay home and notify healthcare facility administrators when sick. • Actively monitor HCP absenteeism and respiratory illness among HCP and patients. • Consider implementing temperature/symptom checks for staff, visitors, limit visitor movement in the facility. • Actively monitor PPE supplies • Establish processes to evaluate and test large numbers of patients and HCP with respiratory symptoms (e.g. designated clinics for people with fever, surge tent for overflow triage, offsite testing locations) • Cross train HCP for working in other units to support staffing shortages

AMERICAN OVERSIGHT

Appendix A: Underlying medical conditions that may increase the risk of serious COVID-19 for individuals of any age.

- **Blood disorders** (e.g., sickle cell disease or on blood thinners)
- **Chronic kidney disease as defined by your doctor**. Patient has been told to avoid or reduce the dose of medications because kidney disease, or is under treatment for kidney disease, including receiving dialysis
- **Chronic liver disease as defined by your doctor**. (e.g., cirrhosis, chronic hepatitis) Patient has been told to avoid or reduce the dose of medications because liver disease or is under treatment for liver disease.
- **Compromised immune system (immunosuppression)** (e.g., seeing a doctor for cancer and treatment such as chemotherapy or radiation, received an organ or bone marrow transplant, taking high doses of corticosteroids or other immunosuppressant medications, HIV or AIDS)
- **Current or recent pregnancy** in the last two weeks
- **Endocrine disorders** (e.g., diabetes mellitus)
- **Metabolic disorders** (such as inherited metabolic disorders and mitochondrial disorders)
- **Heart disease** (such as congenital heart disease, congestive heart failure and coronary artery disease)
- **Lung disease including asthma or chronic obstructive pulmonary disease** (chronic bronchitis or emphysema) or other chronic conditions associated with impaired lung function or that require home oxygen
- **Neurological and neurologic and neurodevelopment conditions** [including disorders of the brain, spinal cord, peripheral nerve, and muscle such as cerebral palsy, epilepsy (seizure disorders), stroke, intellectual disability, moderate to severe developmental delay, muscular dystrophy, or spinal cord injury].

Good Afternoon Dr. Meltzer,

Thanks for your support, as we continue to enhance public health efforts. Please share any materials and tools as it relates to modeling that may be helpful in this response. We are interested in learning more about the FluSurge tool and participating in any beta testing of this tool and other tools as they become available. Additionally, please share literature as it relates to these topics that we can review to enhance our understanding of these topics. We sincerely appreciate the continuous support of the Centers for Disease Control and Prevention.

Best Regards,

Shamarial Roberson, DrPH, MPH

Subject:	Follow up from: Monthly Multi-State Collaborative and Cannabis Regulators discussion call on vaping
Date:	Monday, February 3, 2020 3:23:51 PM
Attachments:	Notes from lung injury and cannabis call 011720_For States.pdf

Dear State Colleagues,

It's hard to believe February is already upon us. **I wanted to send out the notes from our cannabis vaping call earlier in January** (see attached). Per our discussions on that call, we'll be **moving to hold these multi-state, all state calls on a quarterly basis**, and will continue to facilitate discussion on cannabis vaping issues, but will incorporate other cannabis and public health topics that are of interest to both medical and adult use states. If you are interested in continuing to participate in all-state cannabis and public health calls, please complete this When2Meet poll so we can try to schedule a March call. We'll talk on that call about getting a standing quarterly call on the calendar (e.g., X day of the last week of the second month of the quarter, or something like that). As a reminder, When2Meet automatically saves your entries. Please remember to select your timezone before completing the poll.

We will also pick back up with quarterly topic-based calls for adult use states only (the multi-state collaborative group), since some additional public health and policy issues exist in the adult use landscape. Adult use states - I will be sending a separate poll to try to schedule one of those calls in February, as I know some of you already have issues you'd like to discuss with each other, with legislative sessions underway.

For both the all-state and adult use state calls, I will continue to develop the agenda in the same manner - reaching out to a variety of states to solicit topics. Please feel free to reach out to me any time with policy questions, TA requests, or topics for these multi-state calls.

Thanks again for all you do in the field!

Respectfully,

AMERICAN OVERSIGHT

Gillian

Gillian L. Schauer, PhD, MPH

Sent: Thursday, January 2, 2020 10:09 PM
To: <Multi-State Cannabis and Public Health Listserv>
Subject: Monthly Multi-State Collaborative and Cannabis Regulators discussion call on vaping
When: Friday, January 17, 2020 10:30 AM-11:30 AM.
Where: Call in line: 1-877-680-2010 Participant code: 23065250

Updated with call in and agenda
Call in line: 1-877-680-2010 Participant code: 23065250

Proposed Agenda for multi-state vaping discussion call:

- Brief roll call by state
- Call purpose/announcements
  - Brief CDC announcement about standing down EVALI Emergency Operations Center
  - Future of these discussion calls
  - Vaping policy tracking
- Updates from states re: marijuana related vaping responses/policy changes
  - General vaping policy & implementation updates, Executive order updates, Legislative session vaping updates, State Cannabis Vaping Response updates
- Specific discussion about:
  - Excipient bans and FDAs inactive ingredient database
  - Regulations to improve the safety of vaping devices
  - Comparing the epidemiology of cases from state to state
  - Flavor bans
- Non-vaping packaging & labeling question from CO (time permitting)
- Next steps and Adjourn

Original message

This time looked the best for those of you who responded to the When2Meet call. As with our prior monthly multi-state collaborative/cannabis regulator EVALI calls, the purpose of this call is to provide a forum for individuals from state public health and regulatory agencies to discuss issues pertinent to state-related work on EVALI. CDC will not provide extensive EVALI updates on this call. CDC holds regular Thursday calls to provide those updates. This call will be discussion based. An agenda will be

AMERICAN OVERSIGHT

developed in collaboration with attendees and will be sent in advance of the call.

Please let me know if you have any specific EVALI topics you would like to discuss as part of the agenda.

Respectfully,
Gillian

AMERICAN OVERSIGHT

NOTES FROM MULTI-STATE COLLABORATIVE ON CANNABIS AND PUBLIC HEALTH CALL ON VAPING LUNG INJURY, 01/17/2020

- **State attendees**: CO, WA, AK, OR, MA, NV, ME, CA, MI, IL, DC, MD, RI, OK, NY, OH, HI, DE
- **Purpose of call:**
  - These calls have been convening state public health professionals and cannabis regulators to provide time/space for discussion about vaping lung injury and cannabis. The standing Thursday weekly calls conducted by CDC have provided a full briefing to partners on EVALI.
- **Housekeeping**
  - Due to a continued decline in new EVALI cases being reported, **CDC is standing down the EVALI Emergency Operations Center** that has been centralizing and coordinating the response at CDC. Work on EVALI will transition back to specific CDC Centers and Divisions. This is a process that routinely occurs for emergency response efforts at CDC. CDC's work will continue to focus round the clock on protecting the nation from this health threat, including by conducting surveillance, examining product and biological samples, providing guidance and TA to state and local health departments, healthcare providers, and the public, and ensuring prompt communication of any new information.
  - **States on this call reported an interest in continuing to convene periodically to discuss Cannabis vaping related public health and policy issues.** Gillian proposed quarterly call with this larger group of medical and non-medical states to discuss a variety of cross cutting policy issues, and quarterly calls with just adult use states (given some unique policy issues in those states). A call will be scheduled for February with adult use states, and for March/early April with the larger group of medical and adult use states.

- **Discussion:**
  - *Update from states on implementation of executive orders*
    - **Washington** – VEA ban will stay in place through March 19th. Two bills introduced in legislature around vaping – one focuses on THC. Challenges with language around flavor ban (which, through executive order in WA, banned any non-cannabis derived flavor additives). Push to allow plant-based, botanically derived terpenes in legislation under consideration now. Industry challenged enforcement of flavor bans (can you tell if botanically derived or derived from cannabis?).
    - **Michigan** – Rules requiring that all products be tested for VEA but did not require for newly manufactured vape products. Requires records of formulation. Have had had a number of testing failures for VEA in products, but non from the regulated market. Bill being considered that would add criminal penalty for anyone who manufactures marijuana products and adds VEA. Draft rules would prohibit any inactive ingredients not approved by FDA for that purpose. Also experiencing a push to allow for plant-based, botanically derived terpenes.
    - **Oregon** – OLCC flavor ban on hold, court case no longer being pursued due to timeline for executive order. Licensed lab in Oregon has purchased botanically derived terpenes to test for a variety of ingredients. No timeline on test results, but will likely be useful knowledge for regulators, public health. EVALI cases in Oregon skew older and more female; 1/3 report nicotine only. Trying to understand if other states seeing different patterns demographically.
    - **Maryland** – Quarantined all vape products until tested for VEA – have not detected any. Working with lab on other potential additives should consider testing for.

AMERICAN OVERSIGHT

- **Massachusetts** – MA CCC has had a quarantine on all vaped products, but now allowing companies to produce new products, but maintaining the right to sequester/quarantine product if any additional concerns arise. CCC has tested products that were quarantined. Has not found VEA, but has found very high levels of lead, suggesting that something is going on with device/cartridge leaching into liquid.
- **California** – Still evaluating options for VEA – but has mostly been confined to unregulated sources in CA. No flavor bans have been proposed for cannabis, but added flavors not widely used in regulated CA market. CA Gov budget proposal seeks to create a new department of marijuana regulation that would consolidate three current agencies involved in regulation.

- *Specific discussion about use of FDA inactive ingredients database*
  - **Colorado:** White paper from CDPHE to make recommendations to MED – suggested FDAs GRAS list and inactive ingredients list. Pros of using it – easily accessible and online database, updated 4x per year. Lists additives that have been declared safe for that intended use. The database includes important identifying numbers (the chemical abstract service number) that can be used to look up the inactive ingredient and quickly get more information on the chemistry and how it interacts with other ingredients. Some cons of the FDA GRAS list: they don't tell you what was reviewed but deemed unsafe and why.
  - **Oregon:** In Oregon, seeing a big influx of PG and other chemicals in infused prerolls (big influx of applications). Unsure how to use the FDA inactive ingredient list for that, since PG appears OK for oral nebulizers and inhalers, but not for vaporization or combustion. The act of heating could cause problems.
  - **Colorado:** Has considered that as well. Consulted with toxicologists. At the end of the day, reverted back to the list. If FDA has deemed it safe, they CO allows, but it's a tricky question, particularly with mode of use.

- *Regulations to improve public health and safety of vaping devices*
  - **Massachusetts:** Interested in this area – and looking at European standards. Looks like there may be an ISO standard for testing vaping devices. Has anyone seen that?
  - **Ohio:** Vapor device rules came about a few years ago. Because you aren't allowed to smoke MJ in Ohio, rules require that the vaping device chamber prevents marijuana from coming into direct contact with the heating elements. This has resulted in people having to buy more expensive devices and may help avoid some of the leaching that other states have described.
  - **Hawaii:** Devices for vaping are the only paraphernalia that retail locations are allowed to sell. Rules required that heating element of device has to be made of an inert material. Cartridges must be single use, pre-sealed, temperature controlled. Hawaii has struggled a bit with what these definitions mean. Two cartridge makers were using clue to make tamper resistant that was then thought to be leaching into product, so now using screw top containers.

- **Next steps and adjourn**

Date:	Friday, March 20, 2020 7:20:02 AM

Hello Dr. Blackmore,

We were alerted that you would like to schedule a follow-up call regarding the LTC facility. The healthcare infection control team is happy to chat. Let us know what time works best.

Thanks,
Elizabeth Soda

AMERICAN OVERSIGHT

From: Baker, Michael (OS/IEA)
To: Baker, Michael (OS/IEA)
Subject: Follow-up items from today"s call on COVID-19
Date: Thursday, February 20, 2020 6:18:30 PM

Dear Partner –

Thank you to all that joined us on today's call on COVID-19 with Secretary Azar, HHS, and DHS officials. While the immediate risk to the American public is still currently low, that has the potential to change rapidly. We strive to continue to provide updates to you, our valuable state partners, so that you have the best information available when developing and executing your preparedness plans.

As mentioned on the call, we wanted to provide you with some further information about available resources and to share again some prompts for consideration when planning state actions.

First, please find below links to CDC and select partner organization sites that focus on state and local readiness. Some of these link to the latest COVID-19 information, while others link to sites focused on resources for any response. As has been noted, pandemic influenza plans often provide some overlap for other infectious disease outbreak plans, so some link to CDC or external partner influenza preparedness guides.

CDC Resources

- Coronavirus Disease 2019 homepage
- State and Local Readiness homepage
- State and Local Government Planning for Influenza
- Public Health Emergency Preparedness (PHEP) Cooperative Agreement
- Epidemiology and Laboratory Capacity for Prevention and Control of Emerging Infectious Diseases (ELC)

Related Links

- Association of State and Territorial Health Officials (ASTHO): Pandemic Influenza
- National Association of County and City Health Officials Local Health Department Pandemic Influenza Guide

In addition to the above links, we wanted to share with you some questions that can inform preparedness plans. These will be particularly important if the U.S. response has to move from aggressive containment to a mitigation response. We encourage you to use these to reflect on these as you explore possible necessary response actions. In a response focused on mitigation rather than containment, state and local officials will be responsible for three key pieces of a state's response:

- Transportation;
- Housing for individuals under observation or quarantine; and
- Communication and Coordination with local and private sector partners.

We encourage you to confer and collaborate with your Attorneys General and legislature leaders to confirm and identify what authorities that you have and any that you may need to be granted.

Authorities & Responsibilities for Prudent State and Local Planning:

- Have you reviewed the scope of your emergency authorities as Governor to respond to a public health crisis in your state?
    - When have you last exercised these authorities?
    - Do you have plans to in the future?

AMERICAN OVERSIGHT

What are your quarantine and isolation authorities, roles, and responsibilities?

- Do you have plans for canceling large events and community gatherings?
- Do you have a mechanism to encourage or compel school closures, if necessary? If so, what is its scope? (public v. private, secondary v. university, time limited, etc.)?
- What are your policies for limiting or discouraging mass transit?
- Coordination and Communication with Local Governments – what authorities do local governments have in your state? What is your coordination plan between state, local, and tribal governments?
- What public health and human resource resources do you have for local governments, the private sector, and non-profits on hygiene or social distancing?
- What are your critical infrastructure, key resources, and essential services that might face personnel shortages?
- Do you have policies and plans in place for state and local government workers?

Finally, the U.S. State Department has posted guidance for cruise ship passengers in the event of planned travel to or within East Asia and the Asia-Pacific Region . That guidance can be found here.

Please don't hesitate to follow up with the Office of Intergovernmental and External Affairs if there are any questions!

Sincerely,
Darcie

Darcie L. Johnston
Director, Intergovernmental Affairs
U.S. Department of Health and Human Services
Darcie.Johnston@hhs.gov

36	DripDrop Hydration Inc	DripDrop ORS is DoD and AMEDD approved Oral Rehydration Solution with NSNs. The class VII part #s are 61406 Lemon; 61407 Berry; 61408 Watermelon; and 61410 Orange. DripDrop ORS has a great taste while having half the sugar and three times the electrolytes than a sports drink. it works as well as an IV and is infinitely more useful because it is easily transported and can be administered by anyone (pour powder into 16 oz water and drink). DripDrop ORS consequently reduces IV need. Has been used in the US by prominent institutions including UCSF, Mayo Clinic, Stanford, Boston Childrfen's and all branches of the US Military 9as well as both professional and collegiate sports teeams). It has been used in the US and around the globe in disaster situations as well. The CDC used DripDrop in Sierra leone and Liberia in the treatment of Ebola and it is currently being used in the Congo for the same. DripDrop has been used for Cholera in Haiti. In the US, medical professionals and consumers use DripDrop ORS to treat dehydration from the cold and flu and it can be used the same in connection with COVID-19. 50	Genasys Inc (also known as LRAD)	LRAD 100X Portable Long Range Communication System. We currently have 196 100X units in stock ready to be shipped. We also have six 450XLs, Tripod Kits and 24V Power Packs readily available. We have already helped National Guard units with communicating to the public from long and safe distances. These systems are already MILSPEC'd items being purchased by all our Military Services and First Responders.	Jeff Palmer	(858) 204-8514	jpalmer@genasys.com
51					
52	Gordian	We provide a service that would be a great assset to the States as they start to receive and execute large amounts of SRM dollars in response to the stimulus packages. We are industry leader in construction cost data and job order contracting. We hhave established job order contracts in several States that the Guard would be able to quickly find contractors.	Lisa Cooley	(505) 239-3446	L.cooley@gordian.com
53					
54	Hughes Network Systems	Hughes Cellular On-Demand ManPack creates an independent LTE wireless network with a wide radius to keep teams connected to each other via smartphones and other devices. Offers an ultra-small, completely virtualized 3GPP LTE core network to deliver fully functional cellular communications which can be deployed for operations around the world. Light and energy-efficient LTE network core creat3es a cellular and Wi-Fi bubble in just minues to meet mission-critical wireless connectivity requirements. With the option to add satellite for backhaul, Hughes can provide an agile, turnkey communications solution for resilient, time-sensitive military and disaster response. Unit price $180,000. Federal Medical Stations

From 2005-2012, DSNS deployed FMS aid to victims of Hurricanes Katrina, Rita, Dean, Gustav, Ike, and Sandy.

Managed by the Division of Strategic National Stockpile (DSNS), federal medical stations (FMS) are rapidly deployable caches containing beds, supplies, and medicines which can quickly turn a pre-identified building into a temporary medical shelter during a national emergency. Care can be provided for 50-250 displaced people for three days before resupply is necessary. The FMS offers health and medical surge capability and capacity for short-term inpatient persons who have sub-acute medical, mental health, or other healthcare needs that cannot be accommodated or provided for in a general shelter.

Each FMS has the ability to increase local healthcare capabilities in mass casualty incidents or potential public health threats. They are flexible, modular, scalable, and tailored to meet the requirements of each incident. The FMS operates in cooperation with federal, state and local authorities.

Use of an FMS requires pre-planning, and prior to an event, state, local, tribal, and territorial (SLTT) jurisdictions collaborate with Health and Human Services' (HHS) Regional Emergency Coordinators (REC) to identify anticipated requirements for FMS support (e.g., conduct FMS site surveys to ensure logistical wraparound services are appropriate and to identify any gaps requiring resolution during a response.) FMS site selection criteria should be met for all potential FMS facilities. Pre-identification of possible FMS sites should be included in SLTT or regional jurisdiction emergency plans.

To assist stakeholders, DSNS deploys an FMS Strike Team (FMSST) to facilitate FMS cache set-up, conduct training for volunteers, and provide subject matter expertise, which can include among others, assessing the facility's limiting factors, providing advice and assistance in support of the FFMS internal set-up, and conducting recovery procedures. FMSST members do not operate the FMS; this is done by teams from the United States Public Health Service Rapid Deployment Force, or the Department of Veterans Affairs, or a combination of other designated groups. FMS deployment for specific locations is organized through the REC.

Federal Medical Stations Minimum Requirements

One FMS requires approximately 40,000 square feet of enclosed, climate-controlled space with the following features:

- Loading dock/ramps, forklifts, pallet jacks, and parking
- Sufficient existing communications/IT support and power supply with back-up
- Availability of support services including, food and water, waste disposal, medical oxygen, laundry, and mortuary services
- Refrigeration and locked storage
- Bathroom and shower capability

Quick Facts
Federal Medical Stations

- Each FMS has a base, treatment, and pharmacy module.
- Each FMS can quickly turn a building into a temporary medical shelter.
- Each FMS is modeled for all age populations.
- Each FMS can be transported by air, water, or ground for maximum geographic distribution.

For additional information, email sns_opcext@cdc.gov.

HOTEL TO HEALTHCARE CONCEPT (H2HC)

ALTERNATE HEALTHCARE FACILITY

19 March 2020

US Army Corps of Engineers®

AMERICAN MEDBRIGHT

FL-DOH-20-0673-A-003899

H2HC – CONCEPT OF THE OPERATION

PHASES

1. SITE – STATE Responsibility

- Identify existing, available facility
- Assess for suitability
- Technical advice/assistance from USACE under FEMA MA – Critical Public Facilities PRT
- Existing utilities and infrastructure (electric, power, water, HVAC, IT,…)
- Lease facility
- Transfer authority to USACE to convert and retrofit facility

2. BUILD – USACE Mission (MA from FEMA)

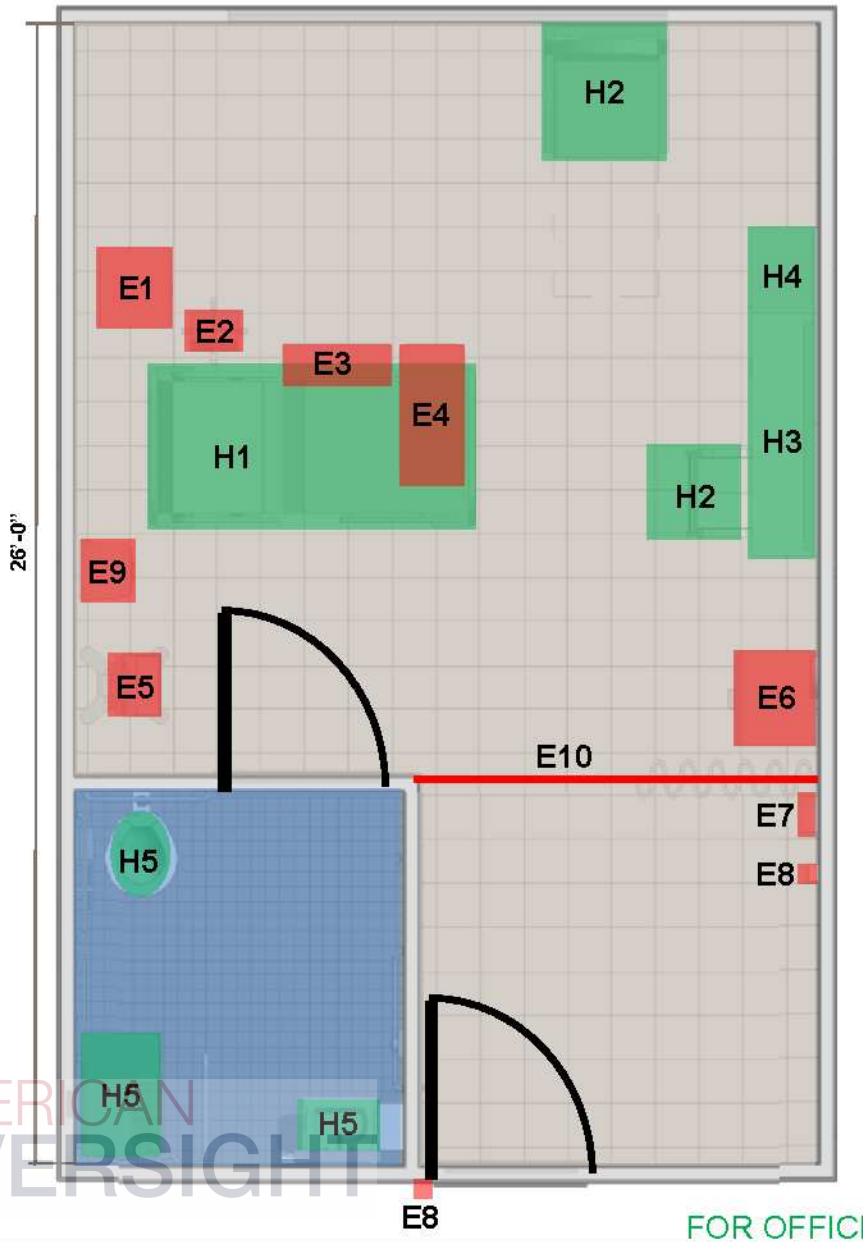
- Convert/Retro-fit existing code-compliant structure
- Hotel, dorm, or apartment building
- Enable conversion of facility to support an ICU-like capability
- Main Functions - supply power (+ auxiliary), remove carpet, modify HVAC for negative pressure, install nurse's station, enable/configure IT infrastructure, etc…
- Stafford Act – emergency contracting authorities, utilizing local, capable business(es); Construction contracts. Cost per Patient = ~$145K or ~$35M for 250-Bed hotel. (minimum, constr. + equip, not including restoration or lease) (Rough Order)

3. SUPPLY – FEMA Mission

- Procure, Install, and Configure medically unique equipment
- Meets end-state requirements
- FEMA would task to either HHS or DLA to procure and install

4. STAFF – STATE Responsibility

- Clearly a state function with available staff
- Expect to be critical path



BUSINESS RULES

- Proximity to existing, permanent medical hospital (10 mile/30 min)
- Readily available (10 mile/30 min) HazWaste disposal, linen/laundry, pharmacy
- Will not be fully ADA compliant; only to extent of existing facility
- USACE Cost estimates will not include real estate or lease acquisition, nor restoration costs post-medical use.
- USACE costs for renovation/construction work and IO&T are minimum costs. Actual cost must be developed when site adapting actual facility
- Facility templates and standards are adapted from DoD UFC criteria.
- Local municipality/county/state standards should be discussed and agreed upon by municipality and the Construction Agent.
- State or City Owned Property Preferred...eases leasing and permitting.
- Built/Renovated after 1990 to mitigate lead paint/asbestos.
- Already has redundant power or emergency power
- Building already Sprinklered and meets Fire Code
- Should be Single Room with attached Bathroom
- Meet Modern Power 3-Phase, 3-Wire
- Utilize exterior wall to install exhaust if needed

FL-DOH-20-0673-A-003900

AMERICAN OVERSIGHT

NOTIONAL HOTEL ROOM to HEALTHCARE ROOM

Medical Support Planning Task Force Initial Questions:

Primary POC: _____
POC E-mail: _____
POC Phone: _____

Responses to the below questions should be based on what your respective State EM/Public Health are using for Planning Factors at this time.

1. What Planning Factors/Assumptions have your respective States developed in regard to providing medical care to individuals who have or are presumed to have a COVID-19 diagnosis or respiratory like illness?

2. Do you anticipate the need for Alternate Care Sites in your State?
    a. If so, how many of these facilities do you anticipate needing and what patient capacity would you like to see?
    b. Potential locations (cities/regions) that may be considered for Alternate Care Facilities?
    c. ACS use with “known positive’ COVID patients with mild symptoms or no symptoms that are not eligible for hospital admission.

3. Would you prefer the site to be any of the following?
    a. Rental of existing hotel facility?
    b. Retrofit of an existing building (Closed hospital, Nursing home, school, dorm, strip-mall, etc.)?
    c. Ambulatory Care/Surgical Centers?
    d. Soft-side/tent like facility?

4. From the below list, what level of care would you like these facilities to provide?
    a. Basic (i.e. In patient basic supportive care including administration of medications and IV fluids)
    b. Medium (Basic care in addition to in-room oxygen delivery)
    c. High (i.e. Ventilator/ICU capable facility)

5. Would you like a dedicated USACE Medical Facility Planner assigned to your State?

6. Based on the number of facilities and capacity requirements from question 2a, what do you expect your needs will be related to medical equipment? Please provide estimated quantities if possible.
    a. Consumable Medical Equipment
    b. Durable Medical Equipment

7. Based on the number of facilities and capacity requirements from question 2a, what do you expect your needs will be related to medical staff? Please provide estimated quantities if possible.
    a. Physicians (MD/DO):
    b. Registered Nurses (RN/ARNP):
    c. Licensed Practical Nurses (LPN):
    d. Respiratory Therapist (RT/RRT):
    e. Medical Assistants (MA):
    f. Case Mangers (CM):

---

UPC team

This is some of what I was speaking to on the phone today about alternate care sites and isolation facilities. More to coma as the days continue.
Thank you Rick for sending.

Regards,
Jeanne

36	DripDrop Hydration Inc	DripDrop ORS is DoD and AMEDD approved Oral Rehydration Solution with NSNs. The class VII part #s are 61406 Lemon; 61407 Berry; 61408 Watermelon; and 61410 Orange. DripDrop ORS has a great taste while having half the sugar and three times the electrolytes than a sports drink. it works as well as an IV and is infinitely more useful because it is easily transported and can be administered by anyone (pour powder into 16 oz water and drink). DripDrop ORS consequently reduces IV need. Has been used in the US by prominent institutions including UCSF, Mayo Clinic, Stanford, Boston Childrfen's and all branches of the US Military 9as well as both professional and collegiate sports teeams). It has been used in the US and around the globe in disaster situations as well. The CDC used DripDrop in Sierra leone and Liberia in the treatment of Ebola and it is currently being used in the Congo for the same. DripDrop has been used for Cholera in Haiti. In the US, medical professionals and consumers use DripDrop ORS to treat dehydration from the cold and flu and it can be used the same in connection with COVID-19.	Steve Duran	(724) 513-4692	steve.duran@dripdropors.com

Federal Medical Stations

From 2005-2012, DSNS deployed FMS aid to victims of Hurricanes Katrina, Rita, Dean, Gustav, Ike, and Sandy.

Managed by the Division of Strategic National Stockpile (DSNS), federal medical stations (FMS) are rapidly deployable caches containing beds, supplies, and medicines which can quickly turn a pre-identified building into a temporary medical shelter during a national emergency. Care can be provided for 50-250 displaced people for three days before resupply is necessary. The FMS offers health and medical surge capability and capacity for short-term inpatient persons who have sub-acute medical, mental health, or other healthcare needs that cannot be accommodated or provided for in a general shelter.

Each FMS has the ability to increase local healthcare capabilities in mass casualty incidents or potential public health threats. They are flexible, modular, scalable, and tailored to meet the requirements of each incident. The FMS operates in cooperation with federal, state and local authorities.

Use of an FMS requires pre-planning, and prior to an event, state, local, tribal, and territorial (SLTT) jurisdictions collaborate with Health and Human Services' (HHS) Regional Emergency Coordinators (REC) to identify anticipated requirements for FMS support (e.g., conduct FMS site surveys to ensure logistical wraparound services are appropriate and to identify any gaps requiring resolution during a response.) FMS site selection criteria should be met for all potential FMS facilities. Pre-identification of possible FMS sites should be included in SLTT or regional jurisdiction emergency plans.

To assist stakeholders, DSNS deploys an FMS Strike Team (FMSST) to facilitate FMS cache set-up, conduct training for volunteers, and provide subject matter expertise, which can include among others, assessing the facility's limiting factors, providing advice and assistance in support of the FFMS internal set-up, and conducting recovery procedures. FMSST members do not operate the FMS; this is done by teams from the United States Public Health Service Rapid Deployment Force, or the Department of Veterans Affairs, or a combination of other designated groups. FMS deployment for specific locations is organized through the REC.

Federal Medical Stations Minimum Requirements

One FMS requires approximately 40,000 square feet of enclosed, climate-controlled space with the following features:

- Loading dock/ramps, forklifts, pallet jacks, and parking
- Sufficient existing communications/IT support and power supply with back-up
- Availability of support services including, food and water, waste disposal, medical oxygen, laundry, and mortuary services
- Refrigeration and locked storage
- Bathroom and shower capability

Quick Facts
Federal Medical Stations

- Each FMS has a base, treatment, and pharmacy module.
- Each FMS can quickly turn a building into a temporary medical shelter.
- Each FMS is modeled for all age populations.
- Each FMS can be transported by air, water, or ground for maximum geographic distribution.

AMERICAN OVERSIGHT

HOTEL TO HEALTHCARE CONCEPT (H2HC)

ALTERNATE HEALTHCARE FACILITY

19 March 2020

US Army Corps of Engineers®

AMERICAN MEDBRIGHT

FL-DOH-20-0673-A-003918

H2HC – CONCEPT OF THE OPERATION

PHASES

1. SITE – STATE Responsibility

- Identify existing, available facility
- Assess for suitability
- Technical advice/assistance from USACE under FEMA MA – Critical Public Facilities PRT
- Existing utilities and infrastructure (electric, power, water, HVAC, IT,…)
- Lease facility
- Transfer authority to USACE to convert and retrofit facility

2. BUILD – USACE Mission (MA from FEMA)

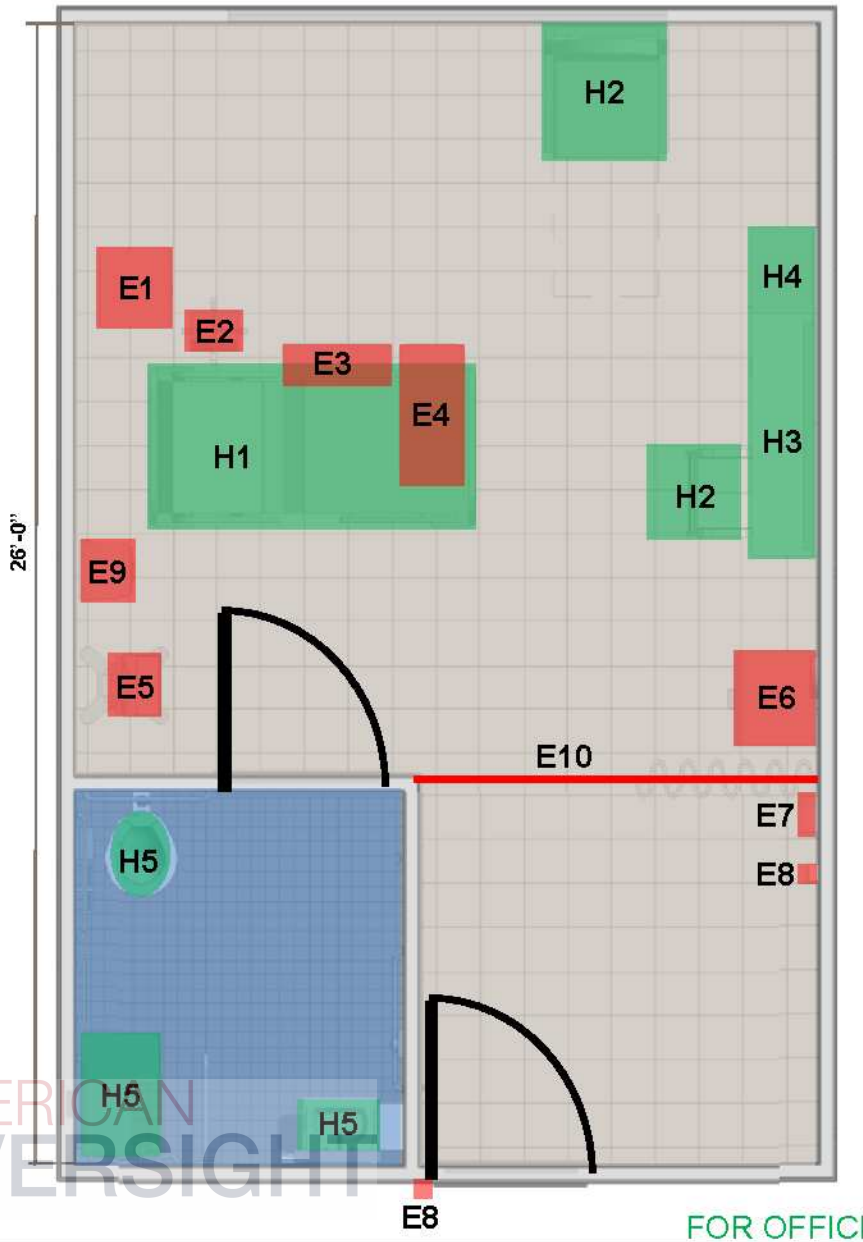
- Convert/Retro-fit existing code-compliant structure
- Hotel, dorm, or apartment building
- Enable conversion of facility to support an ICU-like capability
- Main Functions - supply power (+ auxiliary), remove carpet, modify HVAC for negative pressure, install nurse's station, enable/configure IT infrastructure, etc…
- Stafford Act – emergency contracting authorities, utilizing local, capable business(es); Construction contracts. Cost per Patient = ~$145K or ~$35M for 250-Bed hotel. (minimum, constr. + equip, not including restoration or lease) (Rough Order)

3. SUPPLY – FEMA Mission

- Procure, Install, and Configure medically unique equipment
- Meets end-state requirements
- FEMA would task to either HHS or DLA to procure and install

4. STAFF – STATE Responsibility

- Clearly a state function with available staff
- Expect to be critical path



BUSINESS RULES

- Proximity to existing, permanent medical hospital (10 mile/30 min)
- Readily available (10 mile/30 min) HazWaste disposal, linen/laundry, pharmacy
- Will not be fully ADA compliant; only to extent of existing facility
- USACE Cost estimates will not include real estate or lease acquisition, nor restoration costs post-medical use.
- USACE costs for renovation/construction work and IO&T are minimum costs. Actual cost must be developed when site adapting actual facility
- Facility templates and standards are adapted from DoD UFC criteria.
- Local municipality/county/state standards should be discussed and agreed upon by municipality and the Construction Agent.
- State or City Owned Property Preferred...eases leasing and permitting.
- Built/Renovated after 1990 to mitigate lead paint/asbestos.
- Already has redundant power or emergency power
- Building already Sprinklered and meets Fire Code
- Should be Single Room with attached Bathroom
- Meet Modern Power 3-Phase, 3-Wire
- Utilize exterior wall to install exhaust if needed

FL-DOH-20-0673-A-003919

AMERICAN OVERSIGHT

NOTIONAL HOTEL ROOM to HEALTHCARE ROOM

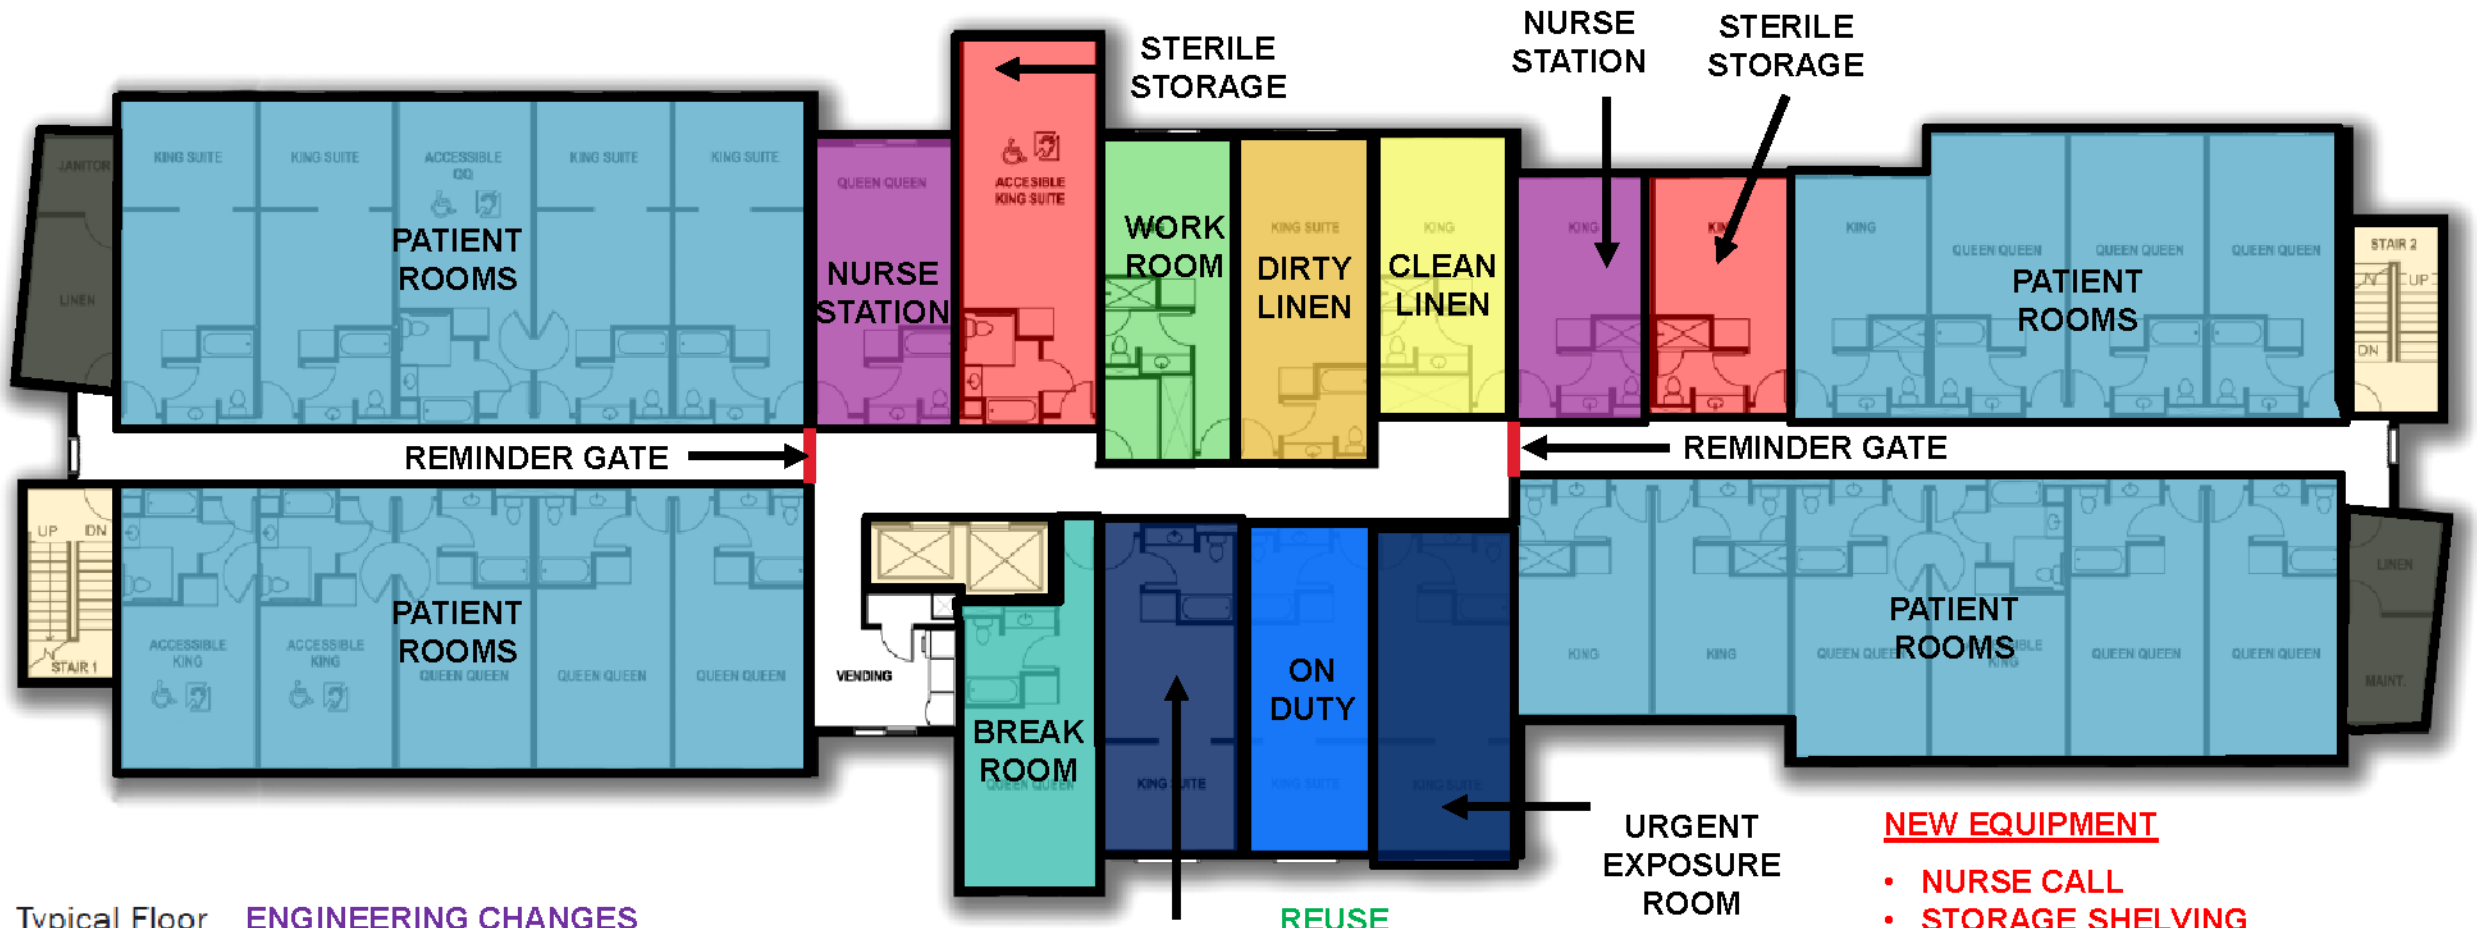
ENGINEERING CHANGES

- REMOVE CARPET
- INSTALL VINYL FLOORING OR EPOXY
- REVISE HVAC DUCTING AND HEPA FILTERING
- ADD EMERGENCY BACK-UP POWER & UPS
- ADD PRIVACY CURTAIN
- ADD ELECTRICAL OUTLETS

REUSE

H1. HOTEL BED *WITH MEDICAL LINENS
H2. HOTEL/RECLINING CHAIR
H3. HOTEL DESK
H4. HOTEL WARDROBE
H5. HOTEL PLUMBING FIXTURES

NEW EQUIPMENT



E1. VENTILATOR CAPABLE; STORAGE CABINET

Medical Support Planning Task Force Initial Questions:

Primary POC: _____
POC E-mail: _____
POC Phone: _____

Responses to the below questions should be based on what your respective State EM/Public Health are using for Planning Factors at this time.

1. What Planning Factors/Assumptions have your respective States developed in regard to providing medical care to individuals who have or are presumed to have a COVID-19 diagnosis or respiratory like illness?

2. Do you anticipate the need for Alternate Care Sites in your State?
    a. If so, how many of these facilities do you anticipate needing and what patient capacity would you like to see?
    b. Potential locations (cities/regions) that may be considered for Alternate Care Facilities?
    c. ACS use with “known positive’ COVID patients with mild symptoms or no symptoms that are not eligible for hospital admission.

3. Would you prefer the site to be any of the following?
    a. Rental of existing hotel facility?
    b. Retrofit of an existing building (Closed hospital, Nursing home, school, dorm, strip-mall, etc.)?
    c. Ambulatory Care/Surgical Centers?
    d. Soft-side/tent like facility?

4. From the below list, what level of care would you like these facilities to provide?
    a. Basic (i.e. In patient basic supportive care including administration of medications and IV fluids)
    b. Medium (Basic care in addition to in-room oxygen delivery)
    c. High (i.e. Ventilator/ICU capable facility)

5. Would you like a dedicated USACE Medical Facility Planner assigned to your State?

6. Based on the number of facilities and capacity requirements from question 2a, what do you expect your needs will be related to medical equipment? Please provide estimated quantities if possible.
    a. Consumable Medical Equipment
    b. Durable Medical Equipment

7. Based on the number of facilities and capacity requirements from question 2a, what do you expect your needs will be related to medical staff? Please provide estimated quantities if possible.
    a. Physicians (MD/DO):
    b. Registered Nurses (RN/ARNP):
    c. Licensed Practical Nurses (LPN):
    d. Respiratory Therapist (RT/RRT):
    e. Medical Assistants (MA):
    f. Case Mangers (CM):
    g. Social Workers (SW):

FYI…apologize if dupe

Attached please find the CDC COVID-19 weekly key messages for Sunday, March 22, 2020. Feel free to share with your staff and other partners.

In addition, CDC released/updated several guidance documents on the CDC COVID-19 webpage.

- New People who are at higher risk for severe illness (consumer page)
- New COVID-19 and Underlying Medical Conditions (healthcare professional page)
- New Interim Guidance for Responding to Coronavirus Disease 2019 (COVID-19) among People Experiencing Unsheltered Homelessness
- Updates to Information for Health Departments on Reporting Cases of COVID-19
    - COVID-19 Case Report Form Instructions
    - Completing a CRF and Specimen guidance

- New FAQs for consumers on Higher Risk & Underlying Conditions

You can also keep up with CDC updates on Coronavirus Disease 2019 by signing up for email updates, syndicating available content, and subscribing to Coronavirus Disease 2019 RSS Feed.

CORONAVIRUS DISEASE 2019 (COVID-19) NAMING

- The International Committee on Taxonomy of Viruses named the novel coronavirus causing an outbreak of respiratory illness that was first detected in Wuhan, Hubei Province, China, Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2).
    - Due to potential for confusion with SARS-CoV, where possible, public communications will use “the virus that causes COVID-19.”
- On February 11, 2020, the World Health Organization (WHO) named the disease caused by this virus Coronavirus Disease 2019 (COVID-19).
    - **Disease name:** COVID-19

OUTBREAK SUMMARY

- There is an expanding outbreak of COVID-19 caused by a novel (new) coronavirus.
    - The outbreak began in China but is spreading worldwide and is now considered a pandemic.

AMERICAN OVERSIGHT

- Initially, many of the patients reportedly had some link to a large seafood and animal market, suggesting animal-to-person spread. Since then, sustained (ongoing) person-to-person spread in the community is occurring in some international locations.
- The newly-emerged COVID-19 is a respiratory disease that seems to be spreading much like flu. It can spread from person to person.
- The new virus can cause illness varying from mild to severe, including potentially resulting in death.
- Outbreaks like this — when a new virus has emerged to infect people and spread between people — are especially concerning.

International

- Global case numbers are reported by WHO in their COVID-19 situation reports.
    - As of **March 21, 292,142** cases have been confirmed worldwide. More than **210,644** of these cases have occurred outside of China.
- On January 30, WHO declared this outbreak a Public Health Emergency of International Concern (PHEIC). A PHEIC is declared if an event poses a public health threat to other nations through the spread of disease and potentially requires a coordinated international response.
- On March 11, 2020, WHO announced that the outbreak of COVID-19 can be characterized as a pandemic.

Domestic

- On January 31, Health and Human Services Secretary Alex M. Azar II declared a public health emergency for the United States to aid the nation's healthcare community in responding to COVID-19.
- This is a very serious public health threat and the federal government is working closely with state, local, tribal, and territorial partners, as well as public health partners, to respond to this public health threat.
- The goal of the ongoing US public health response is to minimize introductions of this virus, detect new cases quickly, and reduce community spread of this new coronavirus in the US.
- As the virus continues to spread internationally and in the United States, it becomes harder and harder contain its spread.
- What is currently known about the potential cases of community spread has raised the level of concern about the immediate threat for COVID-19 for certain communities.
- The coming days and weeks are likely to bring more confirmed cases of COVID-19 in the United States and globally, but strong public health measures now may blunt the impact of the virus in the United States.
- Pandemics of respiratory disease follow a certain progression outlined in the Pandemic Intervals Framework, part of the National Pandemic Strategy.
    - Pandemics begin with an investigation phase, followed by recognition, initiation, and acceleration phases.

AMERICAN OVERSIGHT

    - The peak of illnesses occurs at the end of the acceleration phase, which is followed by a deceleration phase, during which there is a decrease in illnesses.
    - Different countries can be in different phases of the pandemic at any point in time and different parts of the same country can also be in different phases of a pandemic.
    - Nationally, the United States is currently in the initiation phase, but states where community spread is occurring are in the acceleration phase.
    - The duration and severity of each phase can vary depending on the characteristics of the virus and the public health response.
- Public health partners are encouraged to review their pandemic preparedness plans at this time. Selected pandemic preparedness materials are available online.
- On March 13, the President of the United States declared the COVID-19 outbreak a national emergency.
- On March 16, the White House announced a program called "15 Days to Slow the Spread." This is a nationwide effort to slow the spread of COVID-19 through the implementation of social distancing at all levels of society.

U.S. OUTBREAK STATISTICS

Cases in the United States as of **March 20, 2020:**

- **Travel-related: 337**
- **Close contact: 321**
- **Under investigation: 14,561**
- **Total cases: 15,219**
- **Deaths: 201**
- **Jurisdictions reporting cases: All 50 states, the District of Columbia, Puerto Rico, Guam, and the US Virgin Islands have reported cases of COVID-19**

For global cases, please see the WHO daily situation reports.

SITUATION IN THE U.S.

- The number of cases of COVID-19 being reported in the United States is rising quickly.
    - This increase is expected given an increase in testing and ongoing rapid spread of disease across communities in the United States.
    - While these numbers are concerning, the increase is not unexpected.
    - More robust data will allow us to better understand and track the size and scope of the outbreak and strengthen prevention and response efforts.
- Different parts of the country are seeing different levels of COVID-19 activity. The United States nationally is currently in the initiation phase, but states where community spread is occurring are in the acceleration phase. The duration and severity of each phase can vary depending on the characteristics of the virus and the public health response.
- CDC and state and local public health laboratories are testing for the virus that causes COVID-19.
- More and more states are reporting cases of COVID-19 to CDC.
- U.S. COVID-19 cases include:
    - Imported cases in travelers
    - Cases among close contacts of a known case

AMERICAN OVERSIGHT

    - Community-acquired cases where the source of the infection is unknown.
- Twenty-seven U.S. states are reporting some community spread of COVID-19.

CORONAVIRUS BACKGROUND

- Coronaviruses are a group of viruses that have a halo or crown-like (corona) appearance when viewed under a microscope. They are common in many different species of animals, including camels, cattle, cats, and bats.
- It is rare for animal coronaviruses to become capable of infecting humans and then spreading between people.
    - Severe acute respiratory syndrome (SARS-CoV) and Middle East respiratory syndrome (MERS-CoV) are examples of coronaviruses that originated in animals and spread to people.
    - That is what is suspected happened with the virus that causes the current outbreak of COVID-19.
- Human coronaviruses are a common cause of mild to moderate upper-respiratory illness. But three coronaviruses have emerged to cause more severe illness: Severe Acute Respiratory Syndrome (SARS-CoV), Middle East Respiratory Syndrome (MERS-CoV), and now the virus that causes COVID-19.

TRANSMISSION

- Much is unknown about how the new coronavirus that causes COVID-19 spreads. Current knowledge is largely based on what is known about similar coronaviruses.
- Most often, person-to-person spread is thought to happen among people in close contact (about 6 feet) with each other.
- Person-to-person spread is thought to occur mainly through respiratory droplets produced when an infected person coughs or sneezes, similar to how influenza and other respiratory pathogens spread. These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.
- How easily a virus spreads person-to-person can vary. Some viruses are highly contagious (like measles), while other viruses are less so.
- It may be possible that a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose, or possibly their eyes, but this is not thought to be the main way the virus spreads.
- Typically, with most respiratory viruses, people are thought to be most contagious when they are most symptomatic (sickest).
- Mother-to-child transmission during pregnancy is unlikely, but after birth a newborn is susceptible to person-to-person spread.
- There is no reason at this time to think that any animals, including pets, in the United States might be a source of infection with the new coronavirus that causes COVID-19.

AMERICAN OVERSIGHT

    - On February 28, the Hong Kong Agriculture, Fisheries and Conservation Department (AFCD) reported a pet dog had tested "weak positive" to COVID-19 through nose and mouth samples. The dog had contact with a person infected with COVID-19.
        - CDC is working with human and animal health partners to monitor this situation and will continue to provide updates as information becomes available.
        - It's important to remember that dogs have their own coronaviruses, which cannot spread to people.
            - *AFCD official report available*
- At this time, CDC has no data to suggest that this new coronavirus or other similar coronaviruses are spread by mosquitoes or ticks.
    - Mosquitoes and ticks cannot spread all types of viruses. For a virus to pass to a person through a mosquito or tick bite, the virus must be able to replicate inside the mosquito or tick.
- There is much more to learn about the spread of this new coronavirus, severity of the disease, and other features associated with this outbreak and investigations are ongoing. This information will further inform the risk assessment.

DIAGNOSIS AND TREATMENT

Diagnostics

- CDC developed a real time Reverse Transcription-Polymerase Chain Reaction (rRT-PCR) test to detect SARS-CoV-2 (the virus that causes COVID-19) in respiratory samples from clinical specimens.
- On January 24, CDC publicly posted the assay protocol for this test.
- CDC submitted an Emergency Use Authorization (EUA) package to the U.S. Food and Drug Administration on February 3 for its test.
- FDA approved the Emergency Use Authorization on February 4.
- The first manufactured batch of CDC test kits were made available for ordering by domestic and international partners through the agency's International Reagent Resource (IRR) on February 5.
- Upon arrival at public health laboratories, when laboratories began trying to verify the assay, several laboratories reported issues.
    - Specifically, some laboratories found sporadic reactivity in the negative control of one of the three assay components.
    - This sporadic activity resulted in an inconclusive test result.
- Routine quality control (QC) measures aim to identify these types of issues. It is unclear why QC did not detect this issue before the kits were sent out to states.
- On February 18, CDC stood up a new surge laboratory to support testing for COVID-19. This expanded capacity to 350 samples per day
- On February 20, CDC completed contracts with 2 large commercial manufacturers to ensure reagent availability for the public health laboratories

AMERICAN OVERSIGHT

- On February 26, CDC, in conjunction with FDA, determined how to move forward and shared this information immediately with public health labs through the Association of Public Health Laboratories (APHL):
    - CDC is remanufacturing the test kits to ensure that laboratories have effective and reliable kits. The new kits include the two components (e.g., reagents) that are specific to novel coronavirus.
    - Before new test kits were available:
        - States that were able to validate all three assays should continue to test in this manner.
        - States that were able to validate the other two assays (N1 and N2) can test using these two assays.
    - FDA granted CDC "enforcement discretion," which means that testing in this manner was able to move forward while an updated EUA is officially completed.
    - CDC distributed updated instructions for use through APHL.
- On February 27, CDC distributed new test kits to 7 laboratories to serve as evaluation sites to ensure these health departments are able to verify the assay. An additional 40 test kits were hand-carried to IRR for repackaging and distribution to additional public health labs.
- On February 29, IRR began to distribute new test kits to the additional 40 laboratories.
- On March 16, FDA reauthorized the EUA for the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel.
- As of March 21, 91 public health labs are running the CDC test, representing all 50 states, as well as the District of Columbia, Guam, and Puerto Rico.
- Commercial manufacturers are now producing their own tests.
- As of March 22, CDC has tested over 4,607 samples.
- Overall, CDC and public health labs have tested 71,870 samples as of March 22.

Treatment

- There is no specific antiviral treatment for COVID-19. People with COVID-19 should receive supportive care to help relieve symptoms.
- Most people have mild illness and are able to recover at home.
- For severe cases, treatment should include care to support vital organ functions.
- *See more in Management of Patients Guidance for Healthcare Providers section*

PREVENTION

- There is currently no vaccine to prevent COVID-19. The best way to prevent infection is to avoid being exposed to the virus.
- CDC always recommends everyday preventive actions to help prevent the spread of respiratory viruses, including:
    - Avoid touching your eyes, nose, and mouth with unwashed hands.
    - Avoid close contact with people who are sick.

AMERICAN OVERSIGHT

- Stay home when you are sick.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
- Clean and disinfect frequently touched objects and surfaces using a regular household cleaning spray or wipe.
- Wash your hands often with soap and water for at least 20 seconds, especially after blowing your nose, coughing or sneezing; going to the bathroom; and before eating or preparing food.
- If soap and water are not readily available, use an alcohol-based hand sanitizer with at least 60% alcohol. Always wash hands with soap and water if hands are visibly dirty.

PEOPLE AT RISK FOR SERIOUS ILLNESS

- Older adults and people who have severe underlying medical conditions are at higher risk for more serious COVID-19 illness.
- Eight out of 10 deaths reported in the United States have been in adults aged 65 years or older.
- Based upon available information to date, those most at risk include—
    - People 65 years and older
    - People who live in a nursing home or long-term care facility
    - People of any age with the following underlying medical conditions, particularly those that are not well controlled
        - Heart disease
        - Diabetes
        - Lung disease
- Severe illness leading to hospitalization, including ICU admission and death, can occur in adults of any age with COVID-19.
- The risk for serious disease and death from COVID-19 in the United States increases with age.
- Preliminary data in the United States indicate fatality is highest among persons aged 85 years or older, ranging from 10% to 27%.
- Early data suggest older people are twice as likely to have serious COVID-19 illness.
- If you are at increased risk for COVID-19 complications due to age or because you have a serious underlying medical condition, it is especially important for you to take actions to reduce your risk of exposure.
- If you are a person with a serious underlying medical condition that can put you at higher risk, stay home and away from other people.
    - Stock up on supplies.
    - Make a plan with family members, friends, caregivers, and/or healthcare providers and consider including the following in your plan:
        - Alternate caregiver in case your caregiver is sick or paid service is limited or unavailable—it's a good idea to have at least three alternate caregivers
        - A 30-day supply of medications and a checklist to monitor usage
        - Nonperishable food items for at least 14 days

AMERICAN OVERSIGHT

        - Phone bank plan in case of quarantine (this reduces feelings of loneliness and isolation)
    - If you feel sick, use these guidelines to reduce the risk of spread:
        - Stay home.
        - Call your healthcare provider and let them know about your symptoms. Tell them that you have or may have COVID-19. This will help them take care of you and keep other people from getting infected or exposed.
        - If you need emergency help, call 911.
        - If you are not sick enough to be hospitalized, you can recover at home. Follow CDC instructions for how to take care of yourself at home.

What people at higher risk can do to prepare

- Have supplies on hand
    - Contact your healthcare professional to ask about obtaining extra necessary medications to have on hand in case there is an outbreak of COVID-19 in your community and you need to stay home.
    - If you cannot get extra medications, consider using mail-order for medications.
    - Be sure you have over-the-counter medicines and medical supplies (tissues, etc.) to treat fever and other symptoms. Most people will be able to recover from COVID-19 at home.
    - Have enough household items and groceries on hand so that you will be prepared to stay at home for at least 14 days.
- Take everyday precautions
    - Avoid close contact with people who are sick.
    - Take everyday preventive actions.
        - Wash your hands often with soap and water for at least 20 seconds, especially after blowing your nose, coughing, or sneezing, or having been in a public place.
        - If soap and water are not available, use a hand sanitizer that contains at least 60% alcohol.
        - To the extent possible, avoid touching high-touch surfaces in public places – elevator buttons, door handles, handrails, handshaking with people, etc. Use a tissue or your sleeve to cover your hand or finger if you must touch something.
        - Wash your hands after touching surfaces in public places.
        - Avoid touching your face, nose, eyes, etc.
        - Clean and disinfect your home to remove germs. Practice routine cleaning of frequently touched surfaces (for example: tables, doorknobs, light switches, handles, desks, toilets, faucets, sinks and cell phones).
        - Avoid crowds, especially in poorly ventilated spaces. Your risk of exposure to respiratory viruses like COVID-19 may increase in crowded, closed-in settings with little air circulation if there are people in the crowd who are sick.

AMERICAN OVERSIGHT

- If COVID-19 is spreading in your community, take extra measures to put distance between yourself and other people.
    - Stay home as much as possible.
        - Consider ways of getting food brought to your house through family, social, or commercial networks.
- Have a plan for if you get sick.
    - **Consult with your healthcare provider for more information about** monitoring your health for symptoms suggestive of COVID-19**.**
    - Stay in touch with others by phone or email. You may need to ask for help from friends, family, neighbors, community health workers, etc. if you become sick.
    - Determine who can provide you with care if your caregiver gets sick.
    - Plan for how you will get more supplies if you need them before you recover.
- Watch for symptoms and emergency warning signs.
    - Pay attention for potential COVID-19 symptoms including, fever, cough, and shortness of breath. If you feel like you are developing symptoms, call your doctor.
    - If you develop emergency warning signs for COVID-19 get medical attention immediately. In adults, emergency warning signs*:
        - Difficulty breathing or shortness of breath
        - Persistent pain or pressure in the chest
        - New confusion or inability to arouse
        - Bluish lips or face

          *This list is not all inclusive. Please consult your medical provider for any other symptom that is severe or concerning.

What to do if you are at higher risk and get sick

- Stay home and call your doctor.
- Call your healthcare provider and let them know about your symptoms. Tell them that you have or may have COVID-19. This will help them take care of you and keep other people from getting infected or exposed.
- If you are not sick enough to be hospitalized, you can recover at home. Follow CDC instructions for how to take care of yourself at home.
- Know when to get emergency help.
- Get medical attention immediately if you have any of the emergency warning signs listed above.

Community Support for Older Adults

- Community preparedness planning for COVID-19 should include older adults and people with disabilities, and the organizations that support them in their communities, to ensure their needs are taken into consideration.
    - Many of these people live in the community, and many depend on services and supports provided in their homes or in the community to maintain their health and independence.

AMERICAN OVERSIGHT

- Long-term care facilities should be vigilant to prevent the introduction and spread of COVID-19. Information for long-term care facilities can be found here.

Family and Caregiver Support

- Know what medications your loved one is taking and see if you can help them have extra on hand.
- Monitor food and other medical supplies (hearing aid batteries, oxygen, incontinence, dialysis, wound care) needed and create a back-up plan.
- Stock up on non-perishable food items to have on hand in your home to minimize trips to stores.
- If you care for a loved one living in a care facility, monitor the situation, ask about the health of the other residents frequently and know the protocol if there is an outbreak.

Coping for People at Risk for Serious Illness and Caregivers

- People at higher risk for COVID-19 (including older people and people with severe underlying medical conditions), as well as the people who care for and about them, may feel especially stressed, worried, or anxious.
    - Things you can do to take care of yourself and help the people you care for:
        - Take breaks from watching, reading, or listening to news stories, including social media. Remind others that you care for to do the same.
        - Stay connected to others through calls (audio or video), instant messaging, email, letters, or other forms of communication, even if you cannot be together in person.
        - Talk with people you trust about your concerns and how you are feeling.
- If you, or someone you care about, is feeling overwhelmed with emotions like sadness, depression, or anxiety, or if you are concerned about harming yourself or others, call 911 or the SAMHSA Disaster Distress Helpline: 1-800-985-5990 or text TalkWithUs to 66746 (TTY 1-800-846-8517).

Tribal Elders and Multi-generational Tribal Families

- Tribal communities and Urban American Indians and Alaska Natives are particularly vulnerable to COVID-19 because of unique characteristics of health that impact tribal members.
- Any exposure to COVID-19 can pose a threat to tribal and urban American Indian and Alaska Native communities.
- Many tribal communities are made up of interdependent multi-generational families that house many Elders. These families may be both geographically and socially close. For tribal families, avoiding sick children or Elders may not seem practical or desirable.
- Families can take steps to protect the health and safety of Elders.
    - Consider limiting visitation except for caregivers or healers.
    - Avoid communing at social tribal events or gatherings, supermarkets, or casinos.

AMERICAN OVERSIGHT

- Consider seeking out other partners in the community to help with housing accommodations or optional caregiving, in case of illness.

Rural Communities

- Rural communities face some COVID-19 challenges that are different from urban and suburban communities. These differences warrant additional guidance.
- Many rural communities have experienced multiple closings of hospitals and healthcare facilities. This can leave an already vulnerable population without immediate access to healthcare, should an outbreak occur in the community.
- People living in rural communities can take steps to prepare.
    - Identify the two closest healthcare facilities to contact in case of an outbreak
    - Create an information card with the numbers and addresses of healthcare facilities and the family and friends who are physically nearest to you.
    - Locate state, local, or tribal health centers in advance to identify available resources
    - Create a phone tree system (activating a group of people by telephone to get a message out quickly) with family, friends, and neighbors

People with Asthma

- People with asthma may be at higher risk of getting infected with COVID-19. COVID-19 can affect your respiratory tract (nose, throat, lungs), cause an asthma attack, and possibly lead to pneumonia and acute respiratory disease.
- If you have asthma, you should prepare for COVID-19 and follow your Asthma Action Plan.
    - Take your asthma medication exactly as prescribed.
        - Talk to your healthcare provider, insurer, and pharmacist about creating an emergency supply of prescription medications, such as asthma inhalers.
        - Make sure that you have 30 days of non-prescription medications and supplies on hand too, in case you need to stay home for a long time.
    - Know how to use your inhaler.
    - Avoid your asthma triggers.
    - Clean and disinfect frequently touched surfaces like tables, doorknobs, light switches, countertops, handles, desks, phones, keyboards, toilets, faucets, and sinks daily to protect yourself against COVID-19.
        - Avoid disinfectants that can cause an asthma attack.
    - As more cases of COVID-19 are discovered and our communities take action to combat the spread of disease, it is natural for some people to feel concerned or stressed. Strong emotions can trigger an asthma attack. Take steps to help yourself cope with stress and anxiety.
- If you have symptoms
    - Contact your health care provider to ask about your symptoms.

Pregnant People

- Pregnant people may be at higher risk for having severe illness from COVID-19.

AMERICAN OVERSIGHT

- CDC has limited information on adverse pregnancy outcomes in pregnant people with COVID-19.
    - Pregnancy loss, including miscarriage and stillbirth, has been observed in cases of infection with other related coronaviruses [SARS-CoV and MERS-CoV] during pregnancy.
    - There is limited information on infant outcomes of COVID-19 illness during pregnancy.
    - Other respiratory viral infections during pregnancy, such as influenza, have been associated with adverse neonatal outcomes, including low birth weight and preterm birth.
    - High fevers during the first trimester of pregnancy can increase the risk of certain birth defects.
- It is especially important for pregnant people to take actions to reduce their risk of exposure.

MINIMIZING STIGMA AND MISINFORMATION

- Minimizing stigma and misinformation is important, especially during contagious disease outbreaks.
- **Everyone:** Know the facts about COVID-19 and help prevent the spread of rumors:
    - Fight stigma by supporting people who are coming back to school or work after completing their quarantine or isolation period for COVID-19 exposure or illness.
    - Someone who has completed their quarantine or met the requirements to discontinue infection control measures does not pose a risk of spreading COVID-19.
    - People of Asian descent, including Chinese Americans, are not more likely to get coronavirus than anyone else. Let people know that being of Asian descent does not increase the chance of getting or spreading COVID-19.
    - Viruses cannot target people from specific populations, ethnicities, or racial backgrounds.
        - People who have not been in contact with a person who is a confirmed or suspected case are not at greater risk of acquiring and spreading this new virus than others.
- People who returned more than 14 days ago from an area with widespread or ongoing community spread and do not have symptoms of coronavirus do not put others at risk.
- To help counter stigma, public health professionals can:
    - Maintain privacy and confidentiality of those seeking health care and those who may be part of any contact investigation.
    - Communicate the risk or lack of risk from associations with products, people, and places in a timely manner.
    - Raise awareness of COVID-19 while showing empathy for people's concerns and fears.
    - Share accurate information about how the virus spreads.
    - Speak out against negative behaviors, including negative statements on social media about groups of people, or exclusion of people who pose no risk from regular activities.
        - Be cautious about the images that are shared. Make sure they do not reinforce stereotypes.
        - Engage with stigmatized groups in person and through media channels including news media and social media.

AMERICAN OVERSIGHT

- Share with others the need for social support for people who have returned from an area with ongoing spread or are worried about friends or relatives in the affected areas.

TRAVEL

Presidential Proclamations announcing travel restrictions for travelers from China, Iran, United Kingdom, Republic of Ireland, and most of Europe

- On January 31, President Trump issued the first Presidential Proclamation implementing temporary measures to increase our abilities to detect and contain the novel coronavirus proactively and aggressively.
    - The proclamation suspends entry to the United States of foreign nationals who have been in China (excluding Hong Kong and Macau) in the past 14 days.
- On March 2, a Presidential Proclamation suspended entry to the United States of foreign nationals who have been in Iran in the past 14 days.
    - For more information, consult the notice published in the Federal Register.
- On March 11, a Presidential Proclamation suspended entry to the United States of foreign nationals who have been in 26 countries in Europe (known as the Schengen Area) in the past 14 days.
    - The order suspends the entry of foreign nationals for 30 days from these European states: Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and Switzerland.
- On March 14, a Presidential proclamation suspended entry to the United States of foreign nationals who have been in the United Kingdom (excluding overseas territories outside of Europe) or the Republic of Ireland in the past 14 days.
- Exemptions to these travel restrictions include American citizens, legal permanent residents, and immediate family members of US citizens and legal permanent residents. (Hereafter referred to as "American citizens and exempted persons.")
- **Under the Presidential Proclamations:** All American citizens and exempted persons coming from
    - **China, and Iran** will be directed to ("**funneled to"**) one of 11 US airports (the first 11 airports in the list below).
    - **Europe, the United Kingdom, and the Republic of Ireland** will be directed to ("funneled to") one of 13 US airports (including the last 2 airports in the list below).
- American citizens and exempted persons who have been in **China or Iran** in the previous 14 days will have an additional health assessment (screened for fever, cough, or difficulty breathing).
    - If symptomatic, American citizens and exempted persons will be transferred for medical evaluation. (They will not be able to complete their itinerary at that time.)
    - If asymptomatic, American citizens and exempted persons will be allowed to reach their final destination and, after arrival, will be asked to stay home and self-monitor for 14 days.

AMERICAN OVERSIGHT

- American citizens and exempted persons who have been to the **Schengen area of Europe, UK and Ireland** in the previous 14 days will screened by Department of Homeland Security and receive a Travelers' Health Alert Notice.
    - If symptomatic, American citizens and exempted persons will be transferred for medical evaluation. (They will not be able to complete their itinerary at that time.)
    - If asymptomatic, American citizens and exempted persons will be allowed to reach their final destination and, after arrival, will be asked to stay home and self-monitor for 14 days.
- The 13 airports where travelers are being funneled include:
    - John F. Kennedy International Airport (JFK), New York
    - Chicago O'Hare International Airport (ORD), Illinois
    - San Francisco International Airport (SFO), California
    - Seattle-Tacoma International Airport (SEA), Washington
    - Daniel K. Inouye International Airport (HNL), Hawaii
    - Los Angeles International Airport (LAX), California
    - Hartsfield-Jackson Atlanta International Airport (ATL), Georgia
    - Washington-Dulles International Airport (IAD), Virginia
    - Newark Liberty International Airport (EWR), New Jersey
    - Dallas/Fort Worth International Airport (DFW), Texas
    - Detroit Metropolitan Airport (DTW), Michigan
    - Boston Logan International Airport (BOS), Massachusetts
    - Miami International Airport (MIA), Florida
- As of March 18, about 60,000 people have been screened at U.S. airports.

CDC Travel Health Notices and Other Travel Guidance

- CDC has issued Level 3 Travel Health Notices (Avoid Nonessential Travel) for Australia, Brazil, Canada, China, Iran, Israel, Japan, most of Europe (Schengen Area), the United Kingdom and the Republic of Ireland, Malaysia, South Korea, and cruise travel worldwide.
- CDC has issued Level 2 Travel Health Notices (Practice Enhanced Precautions) for the global outbreak.
- CDC has posted after-travel precautions for Travelers from Countries with Widespread Sustained (Ongoing) Transmission Arriving in the United States.
- CDC has posted a webpage about COVID-19 and considerations for travel in the United States.
- On March 19, the U.S. State Department posted a Level 4 Global Health Advisory, warning travelers Do Not Travel.

Repatriation flights and quarantine orders

- CDC has supported the Department of State in the safe and expedient ordered departure of US citizens and residents affected by outbreaks of COVID-19.
- Chartered flights returned passengers from Wuhan City, China and passengers from a cruise ship docked in Japan. (See section: Diamond Princess).

AMERICAN OVERSIGHT

- The Department of Health and Human Services (DHHS) Secretary, under statutory authority, issued federal quarantine orders to all such passengers entering the United States.
    - The quarantine period is for 14 days.
    - The quarantine is a precautionary and preventive step to maximize the containment of the virus in the interest of the health of the American public.
    - This quarantine order also serves to protect the health of the repatriated persons, their families, and their communities.
- Based on what is known about this virus and other coronaviruses, CDC believes the risk to the communities temporarily housing these people is low.
- At the end of the 14-day period, people who have not developed symptoms have their quarantine order lifted and are free to return home.
- As of March 18th, everyone from the Wuhan and Diamond Princess repatriation flights who were quarantined or isolated under federal orders has been released and returned home.
    - A small number of people are still isolated or quarantined under state orders

Cruise Ships and River Cruises*

- The U.S. Government's priority is to protect the health of passengers and crew, their loved ones, the traveling public, and communities within the US.
- CDC recommends all persons defer any travel on cruise ships, including river cruises, worldwide because of the increased risk of COVID-19 on board ships.
- CDC is continuously tracking cruise ships that are coming into domestic ports that may have confirmed, suspected, or no cases of COVID-19.
    - Cruise ships, both domestic and international, carrying American citizens are being assessed and documented.
    - The situation in the United States is evolving, both with increasing community transmission and an increasing number of cruise ships coming into port. CDC is continuing to reevaluate its approach to returning cruise ships.
    - As CDC reevaluates the approach to returning cruise ships, CDC's priority is to protect passengers' and crews' health while helping them get home as quickly and safely as possible.
- On March 13, the Cruise Lines International Association voluntarily suspended cruise travel out of U.S. ports.
    - Many cruise ships will soon be ending their voyages and coming into port in the U.S. and other countries. New cruise voyages will be postponed.
- On March 15, CDC released a Health Alert Network (HAN) Update providing information and guidance about global travel on cruise ships, including river cruises, due to COVID-19.
    - The HAN provides broad information and recommendations for clinicians seeing patients who have recently traveled by cruise ship or river cruise.
    - State and local health departments should check the Epidemic Information Exchange (Epi-X) notification system for information on COVID-19 cases on cruise ships and river cruises. If a ship has one or more confirmed COVID-19 cases on board, CDC will send an Epi-X alert to state health departments alerting them to these cases.

AMERICAN OVERSIGHT

- On March 17, CDC posted a Global Level 3 Travel Health Notice for Cruise Ship Travel recommending travelers defer all cruise ship travel worldwide.
    - Cruise travelers should stay home for 14 days after returning from travel, monitor their health, and practice social distancing.
- In an effort to make sure returning passengers and crew members without symptoms can get home as quickly and safely as possible, CDC will not hold ships in port and will not prevent disembarking passengers and crew from onward travel. They will be treated like other travelers returning from areas with widespread ongoing transmission, such as Europe.
    - Passengers without symptoms will be allowed to travel home immediately via commercial carrier.
    - Cruise line passengers and crew members are advised to stay home for 14 days, monitor their health, and practice social distancing.
        - Social distancing means staying out of crowded places and keeping a distance of about 6 feet (2 meters) from others as much as possible.
        - Cruise lines will give disembarking passengers details about how to monitor themselves at home and practice social distancing.
        - These recommendations are consistent with CDC recommendations for travelers returning from countries with widespread ongoing transmission.
    - Any passengers who get sick with fever, new or worsening cough, or shortness of breath during their cruise should isolate themselves in their cabin and notify the onboard medical center immediately.
        - Crew members who get sick should follow any instructions from the cruise line.
    - If an ill passenger or crew member is identified on board the ship, the cruise line will report to the CDC Quarantine Station responsible for the port. CDC staff will determine if further action is needed.
- If a ship has one or more confirmed COVID-19 cases on board, CDC will send an Epi-X alert to state health departments alerting them to these cases.
- CDC will also alert WHO per the International Health Regulations to ensure non-US citizen travelers are aware of their risk.

Diamond Princess

- CDC supported the Department of State-led mission to repatriate US citizens returning to the United States from Japan who were aboard the *Diamond Princess* cruise ship.
- On February 16, 329 American citizens returned by flights chartered by the State Department.
- Americans returned by flights chartered by the State Department are subject to a 14-day federal quarantine and were housed at two existing federal quarantine sites for repatriated travelers:
    - Travis Air Force Base in California
    - Joint Base San Antonio-Lackland in Texas
- The passengers were screened before leaving the ship and were monitored and evaluated by medical and public health personnel during the trip and after arrival. They were monitored by medical and public health personnel throughout the 14-day quarantine period. All of these individuals completed their quarantine.

AMERICAN OVERSIGHT

- 11 Americans who were on board the *Diamond Princess* remain in Japan, including some who are still hospitalized.

Grand Princess*

- CDC has been working with the California Department of Public Health, other federal, state, and local partners and the Princess Cruise Line to investigate a cluster of COVID-19 cases connected with a Grand Princess voyage from February 11-21. Additionally, CDC worked with the same partners to assess the risk for passengers currently aboard the Grand Princess.
    - CDC notified states about the risk and management of passengers aboard the Grand Princess between February 11 and 21 who might have COVID-19 symptoms.
- The U.S. Department of Health and Human Services (HHS) is continuing to work with state and local partners in California to support the return of passengers from the Grand Princess.
- On March 9, the Grand Princess docked in the Port of Oakland.
    - Passengers were transferred to federal military installations across the United States for medical screening, COVID-19 testing, and a 14-day quarantine.
    - Nearly 1,000 passengers who are California residents are completing the mandatory quarantine at Travis Air Force Base.
    - Additional residents of California and residents of other states are completing the mandatory quarantine at Marine Corps Air Station Miramar in San Diego, Lackland Air Force Base in San Antonio, or Dobbins Air Reserve Base in Georgia.
    - Throughout the quarantine, passengers will be monitored for symptoms of COVID-19.
    - The Department of State is working closely with the home countries of several hundred foreign national passengers to arrange for repatriation to their countries.

**Please continue to look for updates in CDC's Daily Key Points and in next week's Key Messages document. The situation is rapidly evolving and CDC will provide updates as they become available.*

Nile River Cruises

- As of March 14, 2020, 16 state health departments have notified CDC of **62** COVID-19 cases and **42** patients under investigation (PUIs) associated with cruise boats on the Nile River in Egypt. Those 16 states are California, Colorado, Delaware, Florida, Iowa, Illinois, Maryland, North Carolina, New Mexico, Ohio, Pennsylvania, Rhode Island, Tennessee, Texas, Virginia, and Wisconsin.
    - Most of these American citizens have returned to the United States.
    - Three American citizens remain in Egypt, 1 of whom is in the hospital.
- The affected cruise boats on the Nile River include at least the following ships:
    - M/S A'sara
    - M.S. Esplanade
    - M.S. Queen of Hansa
    - M.S. Sun Goddess
    - Crown Empress
    - M.S. Mayfair
- As of March 12, the Pilgrim tour agency suspended all Egyptian river cruise tours.

AMERICAN OVERSIGHT

- On March 19, Cairo, Egypt temporarily halted all flights to its airports as a further measure against the spread of COVID-19. The suspension of air traffic will continue until March 31.
- The M/S A'sara took at least four voyages.
    - Cruise 1 had 9 confirmed cases among American passengers and was associated with a cluster of cases in Texas.
    - Cruise 2 had 2 confirmed cases among American passengers.
    - Cruise 3 had 6 confirmed cases among American passengers.
    - Cruise 4 had 29 confirmed cases among American passengers.
- The M.S/ Queen Hansa sailed February 28–March 2. It had at least 1 confirmed case among American passengers.
- The M.S. Esplanade sailed February 24–February 27. As of March 11, it had 7 cases among American passengers and was associated with a cluster in Iowa.

WHAT CDC IS DOING

CDC Response in the US:

- The federal government is working closely with state, local, tribal, and territorial partners, as well as public health partners, to respond to this public health threat.
- The goal of the ongoing US public health response is to detect new cases quickly and prevent further spread of COVID-19 in this country.
- CDC established a COVID-19 Incident Management Structure on January 7. On January 21, CDC activated its Emergency Operations Center to better provide ongoing support to the COVID-19 response.
    - The US government has taken unprecedented steps with respect to travel in response to the growing public health threat posed by this new coronavirus.
    - Effective February 2, at 5pm, the US government suspended entry of foreign nationals who have been in China within the past 14 days.
        - US citizens, residents, and their immediate family members who have been in mainland China are allowed to enter the United States, but they are subject to health monitoring for up to 14 days.
    - On February 29, the U.S. government announced it was suspending entry of foreign nationals who have been in Iran within the past 14 days.
    - As of March 13, all American citizens and exempted persons coming from most of Europe (knows as the Schengen Area) will be funneled through 13 airports (listed in the above Travel section). As of March 16, all American citizens and exempted persons coming from the United Kingdom (excluding overseas territories outside of Europe) or the Republic of Ireland will also be funneled through those 13 airports.
        - CDC and partners will conduct enhanced illness response at these points of entry.
    - CDC has issued the following travel guidance related to COVID-19:
        - China — Level 3, Avoid Nonessential Travel — updated February 22;
        - Iran — Level 3, Avoid Nonessential Travel — updated February 28;

AMERICAN OVERSIGHT

    - South Korea — Level 3, Avoid Nonessential Travel — updated February 24;
    - Most of Europe (Schengen Area) — Level 3, Avoid Nonessential Travel – updated March 12;
    - Global Outbreak — Level 2, Practice Enhanced Precautions — posted March 11.
    - United Kingdom and Ireland — Level 3, Avoid Nonessential Travel — posted March 15.
    - COVID-19 and Cruise Ship Travel — Level 3, Avoid Nonessential Travel — posted March 17.
    - Malaysia — Level 3, Avoid Nonessential Travel — posted March 18.
    - Australia— Level 3, Avoid Nonessential Travel — posted March 21.
    - Brazil— Level 3, Avoid Nonessential Travel — posted March 21.
    - Canada — Level 3, Avoid Nonessential Travel — posted March 21.
    - Israel — Level 3, Avoid Nonessential Travel — posted March 21.
    - Japan — Level 3, Avoid Nonessential Travel — posted March 21.
- CDC is issuing clinical guidance, including clinical care guidance and healthcare infection control guidance.
- On March 2, FDA announced that commercial companies may sell test kits under CDC's EUA.
- CDC has deployed multidisciplinary teams to support state health departments with clinical management, contact tracing, and communications.
- CDC has helped mobilize state health departments to receive returned repatriated travelers.
- Through the Public Health Emergency Preparedness (PHEP) cooperative agreement, 62 state PHEP programs across the country are part of the multi-agency infrastructure working on quarantine, isolation, case finding, protecting health care workers and assuring medical supply chains.
- On March 16, CDC awarded nearly $570 million in funding to 65 state, local, territorial, and tribal jurisdictions to provide resources to prevent, prepare for, and respond to the COVID-19 outbreak.
    1. CDC made these awards 10 days after the President signed into law the Coronavirus Preparedness and Response Supplemental Appropriations Act, 2020 (P.L. 116-123)
    2. CDC has authorized recipients to begin spending their funds immediately.
- CDC activated the Cooperative Agreement for Emergency Response: Public Health Crisis Response (CDC-RFA-TP18-1802) to award a total of $569,822,380 to the 65 eligible jurisdictions on the approved but unfunded (ABU) list for the cooperative agreement.
    1. The 65 jurisdictions include the 50 states; eight U.S. territories and freely associated states; six directly funded localities (Chicago, Houston, Los Angeles County, New York City, Philadelphia, and the District of Columbia); and one tribal nation (Cherokee Nation).

AMERICAN OVERSIGHT

- This funding gives state and local health departments the flexibility to implement response actions based on the disease characteristics and priorities in their communities.
- The funding supports two required activities:
    1. Accelerated laboratory testing, data collection, and real-time reporting to CDC for identification and tracking of COVID-19 cases in the community; and
    2. Implementation of COVID-19 community intervention plans.
- The supplemental funding is in addition to funding in the amount of $35 million to 21 jurisdictions for immediate COVID-19 response activities.
    - CDC awarded that initial funding on March 6.
    - For the 21 jurisdictions that received the initial funding, CDC has combined their initial funding with the new supplemental funding to reduce the administrative burden of managing two awards.
- CDC has worked with the Department of State, supporting the safe return of Americans who have been stranded as a result of the ongoing outbreaks of COVID-19 and related travel restrictions. CDC has worked to assess the health of passengers as they return to the United States and provided continued daily monitoring of people who are quarantined.
- An important part of CDC's role during a public health emergency is to develop a test for the pathogen and equip state and local public health labs with testing capacity. CDC developed a molecular test to detect COVID-19 from human clinical specimens and distributed this test to state and local health laboratories.
- After distribution of a CDC rRT-PCR test to diagnose COVID-19 to state and local public health labs started, performance issues were identified related to a problem in the manufacturing of one of the reagents. Laboratories were not able to verify the test performance.
- CDC worked on two potential resolutions to this problem.
    - CDC developed a new protocol that uses two of the three components of the original CDC test kit to detect the virus that causes COVID-19 after establishing that the third component, which was the problem with the original test, can be excluded from testing without affecting accuracy.
        - CDC worked with FDA to amend the existing Emergency Use Authorization (EUA) for the test.
    - Further, newly manufactured kits were provided to the International Reagent Resource for distribution.
        - On February 27, CDC distributed new test kits to 7 laboratories to serve as evaluation sites to ensure health departments are able to verify the assay. On February 29, 6 of 7 pilot laboratories reported successful completion of the verification panel.
        - An additional 40 test kits were hand carried to IRR for repackaging and distribution to additional public health labs.

AMERICAN OVERSIGHT

        - On February 28, IRR began to distribute new test kits to the additional 40 laboratories.
        - As of March 19th, 91 public health labs are running the CDC test, representing all 50 states, as well as the District of Columbia, Guam, and Puerto Rico.
        - Commercial manufacturers are now producing their own tests.
    - Combined with other reagents that CDC has procured, there are enough testing kits to test more than 75,000 people.
    - In addition, CDC is conducting laboratory testing in two of its laboratories at its headquarters in Atlanta. CDC can test approximately 350 specimens per day.
    - CDC has been uploading the entire genome of the viruses from reported cases in the United States to GenBank as sequencing was completed.
    - CDC has grown the virus in cell culture, which is necessary for further studies, including for additional genetic characterization. The cell-grown virus was sent to NIH's BEI Resources Repository for use by the broad scientific community.
    - CDC has deployed staff to assist in local areas experiencing clusters of COVID-19.

CDC International Response

Note: Due to the rapidly changing situation, any statements on CDC involvement in China need case-by-case clearance.

- CDC is working diligently and closely with partners to support the response to this novel coronavirus outbreak.
- CDC has staff stationed in more than 60 countries across the globe. CDC has offices in China, in a number of the countries reporting cases of COVID-19, and in countries that have not yet reported cases of COVID-19 but are busy with planning and preparedness efforts.
    - CDC and the government of China have collaborated for the past 30 years addressing public health priorities affecting the US, China, and the world.
- In addition to working with host country officials, CDC staff are working in coordination with Department of State and other agencies within US embassies.
- CDC is mobilizing Atlanta-based staff to support the response. Many of these staffers have extensive experience responding to global outbreaks.
- CDC has identified experts who are prepared to join a planned WHO mission to support efforts to better understand the severity and transmissibility of the virus.
- CDC is providing technical assistance to the Government of Italy for exit screening flights departing from Italy to the United States.
- In China, CDC is an important technical partner for the Chinese Field Epidemiology Training Program (FETP). and has been involved in the program since 2004.
    - More than 800 FETP-trained residents or graduates of FETP are supporting ongoing COVID-19 response efforts.
    - In 2019 specialized FETP training tracks were established in non-communicable diseases and tuberculosis.

AMERICAN OVERSIGHT

- CDC has supported China CDC's national influenza laboratory for more than 20 years.
- CDC works in close partnership with the China CDC's National Influenza Epidemiology, Virology, and Pandemic Preparedness Centers, China's provincial and local CDCs, hospitals, and academic institutions.
- CDC supports Chinese partners in monitoring seasonal and novel influenza viruses, as well as enhancing efforts to detect and respond to seasonal, avian, and other novel influenza viruses with pandemic potential. CDC's key supporting activities include:
    - Strengthening influenza surveillance for seasonal and novel influenza viruses
    - Conducting research to estimate disease burden and vaccine effectiveness among populations at greatest risk (including young children, older adults, and pregnant women)
    - Promoting influenza vaccination policy development and coverage
    - Supporting novel virus risk assessments
    - Establishing pandemic influenza preparedness in China
    - Maintaining close ties between US and China influenza experts
- In other countries, CDC is collaborating with WHO to support Ministries of Health to prepare and respond to the epidemic.
    - CDC is helping to support countries to implement WHO recommendations related to the diagnosis and care of patients, tracking the epidemic, and identifying people who might have COVID-19.
    - CDC staff are also starting to work together with country colleagues to conduct investigations that will help inform response efforts going forward.
    - CDC works closely with countries to establish FETPs that train a workforce of field epidemiologists —or disease detectives— to identify and contain outbreaks close to the source.
    - For country-specific information, please contact CDCglobal@cdc.gov.

RECOMMENDATIONS

- CDC routinely advises that people help protect themselves from respiratory illnesses by washing their hands often, avoiding touching their face with unwashed hands, avoiding close contact with people who appear sick, and cleaning frequently touched surfaces.
    - CDC defines close contact as—
        - Being within about 6 feet (2 meters) of someone with COVID-19 for a prolonged period of time, such as living with, visiting, caring for or sharing a room in a healthcare facility

          - or –
        - By having direct contact with infectious secretions from a patient, such as being coughed on.

AMERICAN OVERSIGHT

- If you are a resident in a community where person-to-person spread of COVID-19 has been detected and you develop COVID-19 symptoms, call your healthcare provider and tell them about your symptoms.
- If you have symptoms of COVID-19 and want to get tested, try calling your state or local health department or a medical provider. While supplies of these tests are increasing, it may still be difficult to find a place to get tested.
- Most people have mild illness and are able to recover at home.
- For people who are ill with COVID-19, but are not sick enough to be hospitalized, please follow CDC guidance on how to reduce the risk of spreading your illness to others. People who are mildly ill with COVID-19 are able to isolate at home during their illness.

Recent International Travelers

- If you have traveled internationally, watch your health, and limit interactions with others for 14 days after returning to the United States.
- If you feel sick with fever, cough, or difficulty breathing during this time, you should:
    - Seek medical advice. Before you go to a doctor's office or emergency room, call ahead and tell them about your recent travel and your symptoms.
    - Avoid contact with others.
    - Not travel while sick.
    - Cover your mouth and nose with a tissue or your sleeve (not your hands) when coughing or sneezing.
    - Clean your hands often by washing them with soap and water for at least 20 seconds or using an alcohol-based hand sanitizer that contains at least 60% alcohol immediately after coughing, sneezing or blowing your nose. Soap and water should be used if hands are visibly dirty.
    - If you were in a country with widespread sustained (ongoing) transmission—China, Iran, South Korea, most of Europe (known as the Schengen Area), the United Kingdom, or the Republic of Ireland—stay home, monitor yourself, and practice social distancing for 14 days after you left that country.

People Confirmed to Have, or Being Evaluated for, COVID-19

- Your doctors and public health staff will evaluate whether you can be cared for at home. If it is determined that you can be isolated at home, you will be monitored by staff from your local or state health department. You should follow the prevention steps below until a healthcare professional or local or state health department says you can return to your normal activities. Detailed information is available at Interim Guidance for Preventing COVID-19 from Spreading to Others in Homes and Communities.
    - Stay home except to get medical care.
    - Separate yourself from other people in your home.
    - Call ahead before visiting your doctor.
    - Wear a facemask.

AMERICAN OVERSIGHT

- Cover your coughs and sneezes with a tissue or cough or sneeze into your sleeve.
- Wash your hands often with soap and water for at least 20 seconds.
- Avoid sharing household items like eating utensils, cups, or linens.
- Monitor your symptoms and seek prompt medical attention if your symptoms worsen.

On February 27, CDC updated interim guidance for state and local public health officials on how to assess and manage the risks posed by patients who may have been exposed to this new coronavirus.

- This guidance establishes four risk categories: High, Medium, Low and No Identifiable Risk.
- The categories are based on a person's travel history and possible contact with patients who have laboratory-confirmed infections.
- The guidance **offers recommendations** for movement restrictions and public health evaluations for people in different risk categories.
- **In most cases, state and local authorities will make these decisions. Federal public health authority primarily extends to international arrivals at ports of entry and preventing interstate communicable disease threats.**
- These guidelines are subject to change as the situation requires. They do not apply retroactively to people who have been in an affected area with sustained transmission during the previous 14 days and are already in the United States, or those being managed as part of a contact investigation.
- CDC will provide separate guidance for healthcare settings.

Close Contacts of Patients Under Investigation

People who have had close contact with someone who is confirmed to have, or being evaluated for, COVID-19, should:

- Monitor your health starting from the day you first had close contact with the person and continue for 14 days after you last had close contact with the person. Watch for these signs and symptoms:
  - Fever—take your temperature twice a day.
  - Coughing.
  - Shortness of breath or difficulty breathing.
  - Other early symptoms to watch for are chills, body aches, sore throat, headache, diarrhea, nausea, vomiting, and runny nose.
- **If you develop fever or any of these symptoms, call your healthcare professional right away.**
  - **Before** going to your medical appointment, be sure to tell your healthcare professional about your close contact with someone who is confirmed to have, or being evaluated for, COVID-19. This notification will help the healthcare professional's office take steps to keep other people from getting infected. Ask your healthcare professional to call the local or state health department.
- On March 16, the White House recommended that if someone in your household has tested positive for COVID-19, the entire household should stay home and you should contact your medical provider.

AMERICAN OVERSIGHT

- Detailed information for caregivers and household members can be found on the Interim Guidance for Preventing COVID-19 from Spreading to Others in Homes and Communities web page.

Healthcare Professionals

- As availability of diagnostic testing for COVID-19 increases, clinicians will be able to access laboratory tests for diagnosing COVID-19 through clinical laboratories performing tests authorized by FDA under an Emergency Use Authorization (EUA).
    - Clinicians will also be able to access laboratory testing through public health laboratories in their jurisdictions.
- This expands testing to a wider group of symptomatic patients. Clinicians should use their judgment to determine if a patient has signs and symptoms compatible with COVID-19 and whether the patient should be tested.
    - Decisions on which patients receive testing should be based on the local epidemiology of COVID-19, as well as the clinical course of illness.
    - Most patients with confirmed COVID-19 have developed fever and/or symptoms of acute respiratory illness (e.g., cough, difficulty breathing).
    - Clinicians are strongly encouraged to test for other causes of respiratory illness, including infections such as influenza.
- Epidemiologic factors that may help guide decisions on whether to test include: any persons, including healthcare workers, who have had close contact with a laboratory-confirmed COVID-19 patient within 14 days of symptom onset, or a history of travel from affected geographic areas within 14 days of symptom onset.

Recommendations for Reporting, Testing, and Specimen Collection

- Clinicians should immediately implement recommended infection prevention and control practices if a patient is suspected of having COVID-19. They should also notify infection control personnel at their healthcare facility and their state or local health department if a patient is classified as a PUI for COVID-19.
- State health departments that have identified a PUI or a laboratory-confirmed case should complete a PUI and Case Report form through the processes identified on CDC's Coronavirus Disease 2019 website.
- State and local health departments can contact CDC's Emergency Operations Center (EOC) at 770-488-7100 for assistance with obtaining, storing, and shipping appropriate specimens to CDC for testing, including after hours or on weekends or holidays.
- Currently, diagnostic testing for COVID-19 is being performed at state public health laboratories and CDC. Testing for other respiratory pathogens should not delay specimen testing for COVID-19.
- On March 13, CDC updated its guidance for specimen collection for testing for COVID-19to to collect a single upper respiratory nasopharyngeal swab (NP) instead of an NP and oropharyngeal swab (OP).

AMERICAN OVERSIGHT

- For patients who develop a productive cough, sputum should be collected and tested for SARS-CoV-2. The induction of sputum is not recommended.
- For patients for whom it is clinically indicated (e.g., those receiving invasive mechanical ventilation), a lower respiratory tract aspirate or bronchoalveolar lavage sample should be collected and tested as a lower respiratory tract specimen.
- Specimens should be collected as soon as possible once a PUI is identified, regardless of the time of symptom onset. See Interim Guidelines for Collecting, Handling, and Testing Clinical Specimens from Patients Under Investigation (PUIs) for COVID-19 and Biosafety FAQs for handling and processing specimens from suspected cases and PUIs.
- Clinical specimens should be collected from PUIs for routine testing of respiratory pathogens at either clinical or public health labs. Note that clinical laboratories should NOT attempt viral isolation from specimens collected.
- Maintain proper infection control when collecting specimens.
- Additional guidance for collection, handling, and testing of clinical specimens is available on CDC's website.
- Detailed information on specimen types and shipping can be found on the Information for Laboratories web page

COMMUNITY BASED INTERVENTIONS (AKA COMMUNITY MITIGATION)

- Protect yourself and your community from getting and spreading respiratory illnesses like coronavirus disease 2019. Everyone has a role to play in getting ready and staying healthy.
    - For most people in the U.S., the immediate risk of being exposed to the virus that causes COVID-19 is thought to be low. The virus is not currently widespread in the U.S.
    - In places where ongoing community spread of the virus that causes COVID-19 has been reported, people are at elevated risk of exposure.
- Currently a vaccine is not available for COVID-19. Until a vaccine is developed, community-based interventions, such as temporary school dismissals, postponing or cancelling large events, social distancing (i.e. limiting face-to-face contact) can help slow the spread of coronavirus.
- Your local public health department and community partners have been preparing for disease outbreaks, like COVID-19 and have plans in place. Now is a good time for businesses, community and faith-based organizations, and health-care systems to reexamine their preparedness plans to make sure they are ready.
- Strong community partnerships between local public health departments, the healthcare sector, faith-based organizations, and other community partners are vital for this response, and will be necessary to prepare for and coordinate if an outbreak occurs in their local communities.
- Community-based interventions can be grouped in three categories:
    - Personal protective measures (e.g., voluntary home isolation of ill persons, voluntary home quarantine of exposed household members, respiratory and cough etiquette, using facemasks in community settings when ill, practicing hand hygiene)

AMERICAN OVERSIGHT

- Community measures aimed at increasing social distancing (e.g., temporary school dismissals, social distancing in workplaces (like working remotely), postponing or cancelling mass gatherings)
- Environmental measures (e.g., routine cleaning of frequently touched objects or surfaces)

Household/Personal Protective Measures

- Everyone can do their part to help plan for, prepare, and respond to this emerging public health threat.
- CDC recommends that individuals/households create an emergency plan of action, practice good personal health habits and plan for home-based care (if needed), be prepared for your child's school or childcare facility to be temporarily dismissed, and plan for changes at your workplace.
- During an outbreak in your community, **stay home when you are sick** with COVID-19 symptoms, keep away from others who are sick, and limit face-to-face contact with others.

Community Measures

- **Mass gatherings:**
  - Mass gatherings and events, such as concerts, festivals, conferences, worship services, and sporting events, increase the chance of a virus, like COVID-19, to spread and infect people crowded together within a close proximity.
  - On March 16, the White House recommended avoiding social gatherings in groups of more than 10 people.
- **Community and faith-based organizations:**
  - Local leaders and community organizers play a vital role to bring the community together to help plan for and reduce the impact of a potential COVID-19 outbreak. Since you know your community members the best, you can ensure groups most vulnerable to COVID-19 are considered and included in the planning process.
  - CDC recommends finding out if your local government has a private-public emergency planning group that meets regularly that you can join. If not, suggest one that should be set up. Building strong alliances before an outbreak can help provide your organization with the support and resources needed.
  - CDC has created interim guidance to help you create an emergency plan for your community and faith-based organization.
- **Administrators of U.S. childcare programs and K-12 schools and administrators of institutions of higher education:**
  - Schools should plan for and prepare for a potential community-level outbreak of COVID-19. Fortunately, many of the steps to plan and prepare for COVID-19 are the same steps schools take to keep students healthy and safe from the flu.
  - The decision to dismiss a school should be made locally. CDC recommends working with local health officials to determine if, when, and for how long schools may need to be

AMERICAN OVERSIGHT

dismissed in the event of an outbreak. (NOTE: The U.S. Department of Education does not recommend using "school closure" terminology.)

- School administrators should plan to provide critical support services, such as continuity of education and continuity of school meal programs, if schools are dismissed.
- CDC has posted guidance for childcare and K-12 school settings on its website.
- CDC has posted recommendations of considerations for school dismissals.
- CDC has posted guidance for institutions of higher education (IHE) on its website.
    - This guidance includes considerations about addressing campus housing. Guidance for IHE with students participating in international travel or study abroad programs is also available.

- **Homeless shelters:**
    - People experiencing homelessness may be at risk for infection during an outbreak of COVID-19.
        - CDC has created interim guidance for homeless shelters that address planning for and responding to COVID-19 in these settings.
        - CDC has also posted Interim Guidance for Responding to COVID-19 among People Experiencing Unsheltered Homelessnessv.

Information for Law Enforcement

- For law enforcement personnel performing daily routine activities, the immediate health risk is low.
- CDC has developed recommendations for law enforcement to protect themselves from exposure.
    - Law enforcement who must make contact with individuals confirmed or suspected to have COVID-19 should follow CDC's Interim Guidance for EMS.
    - Have a trained Emergency Medical Service/ Emergency Medical Technician (EMS/EMT) assess and transport anyone you think might have COVID-19 to a healthcare facility.
    - Ensure only trained personnel wearing appropriate personal protective equipment (PPE) have contact with individuals who have or may have COVID-19.
- Different styles of PPE may be necessary to perform operational duties.
    - These alternative styles (i.e. coveralls) must provide protection that is at least as great as that provided by the minimum amount of PPE recommended.
- Learn your employer's plan for exposure control and participate in all-hands training on the use of PPE for respiratory protection, if available.
- If close contact occurs during apprehension:
    - Clean and disinfect duty belt and gear prior to reuse. Use a household cleaning spray or wipe, according to the product label.
    - Follow standard operating procedures for the containment and disposal of used PPE.
    - Follow standard operating procedures for containing and laundering clothes. Avoid shaking the clothes.

AMERICAN OVERSIGHT

HAND HYGIENE IN COMMUNITY SETTINGS (ENVIRONMENTAL MEASURES)

- Handwashing is one of the best ways to protect yourself and your family from getting sick.
- Clean hands can stop germs from spreading from one person to another and throughout an entire community—from your home and workplace to childcare facilities.
- Wash your hands often with soap and water for at least 20 seconds, especially after blowing your nose, coughing, or sneezing; going to the bathroom; and before eating or preparing food.
- If soap and water are not readily available, use an alcohol-based hand sanitizer with at least 60% alcohol.
- Always wash hands with soap and water if hands are visibly dirty.
- Follow these steps to make sure you wash your hands properly:
    1. Wet your hands with clean, running water (warm or cold), turn off the tap, and apply soap.
    2. Lather your hands by rubbing them together with the soap. Lather the backs of your hands, between your fingers, and under your nails.
    3. Scrub your hands for at least 20 seconds. Need a timer? Hum the "Happy Birthday" song from beginning to end twice.
    4. Rinse your hands well under clean, running water.
    5. Dry your hands using a clean towel or air dry them.

INFECTION PREVENTION AND CONTROL FOR HEALTHCARE SETTINGS

- Healthcare facilities are increasingly unable to procure reliable and sufficient supplies for infection control, including N95 respirators.
- Because of demands associated with the COVID-19 response, CDC has updated the current national COVID-19 infection control guidance for healthcare in the midst of supply realities and growing insight about the spread of COVID-19.
- Protection of healthcare personnel is a priority. CDC's updated guidance on infection control aims to prioritize the use of N95 respirators and other respiratory protection devices for use during high-risk procedures while still protecting health care personnel with facemasks and eye protection during other routine patient care activities, in the setting of respirator shortages.
- CDC's updated, interim IPC guidance also aims to support health care facilities in practical decision-making at the local level to maintain a functional health care system while protecting healthcare workers.
- The guidance also outlines multiple interventions that can be implemented to enhance protection of health care personnel
- CDC has updated guidance on the PPE healthcare personnel should use when caring for patients with known or suspected COVID-19:
    - Eye protection, gown, and gloves continue to be recommended.
    - While respirators remain preferred, facemasks are an acceptable alternative until the supply chain is restored.
        - Facemasks protect the wearer from splashes and sprays.

AMERICAN OVERSIGHT

        - Respirators, which filter inspired air, offer respiratory protection.
    - Respirators should be prioritized for procedures that are likely to generate respiratory aerosols, which would pose the highest exposure risk to healthcare professionals.
- The risk of transmission can be reduced by several types of actions, like prompt screening and triage, limiting personnel in the room, hand hygiene, source control, and effective environmental cleaning.
- CDC reminds all employers and healthcare personnel about the hierarchy of controls.
    - PPE is only one aspect of patient and worker safety and involves a high level of worker involvement and is highly dependent on proper fit and correct use.
- All healthcare facilities should continuously review their infection control supply inventories and taking steps to optimize supplies.
    - This is particularly true for areas in facilities where aerosol-generating procedures are performed, so that appropriate PPE will be available for high-risk procedures now and as potential COVID-19 cases increase.
- Healthcare administrators should continue to do everything possible to acquire the needed supplies to protect their staff and patients.
- When the supply chain is restored, facilities with a respiratory protection program should return to use of respirators for patients with known or suspected COVID-19.
- The anticipated timeline for return to routine levels of PPE is not known.
    - CDC has posted information about strategies to optimize the current supply of N95 respirators, including the use of devices that provide higher levels of respiratory protection (e.g., powered air purifying respirators [PAPRs]) when N95s are not available.
    - CDC has also posted a companion checklist to help healthcare facilities prioritize the implementation of the strategies is available.
- The majority of nursing homes and outpatient clinics, including hemodialysis facilities, do not typically procure N-95 respirators, currently have respiratory protection programs, nor fit-tested HCP. Therefore, they would not be able to implement all the recommended infection control interventions for care of COVID-19 patients.
    - Without respiratory protection programs and fit testing, unnecessary transfer of stable patients with known or suspected COVID-19 to another facility (e.g., acute care hospital) for evaluation and care may occur.
    - In areas with community transmission, acute-care facilities will be quickly overwhelmed by transfers of patients who have only mild illness and do not require hospitalization.
- Healthcare personnel (HCP) are on the front lines of caring for patients with confirmed or possible COVID-19. HCP caring for these patients have an increased risk of exposure to this virus.
- HCP can minimize their risk of exposure when caring for confirmed or possible COVID-19 patients by following CDC infection prevention and control (IPC) guidelines, including use of recommended personal protective equipment (PPE).
- Infection control procedures and appropriate use of PPE are necessary to prevent infections from spreading while caring for patients. CDC reminds all employers and HCP that PPE is only one aspect of safe care of patients with COVID-19.

AMERICAN OVERSIGHT

    - Focusing only on PPE gives a false sense of security of safe care and worker safety.
    - It is critical to focus on other strategies to prevent spread of COVID-19 in healthcare settings. Examples include prompt screening and triage of patients and limiting the numbers of healthcare personnel entering the patient room.
- CDC's current guidelines are designed to prevent the spread of COVID-19 within healthcare facilities to healthcare personnel, visitors, and other patients who may be exposed to a patient with COVID-19.
- Healthcare personnel caring for patients with confirmed or suspected COVID-19 should adhere to CDC recommendations for infection prevention and control (IPC):
    - Assess and triage patients with acute respiratory symptoms and risk factors for COVID-19 to minimize chances of exposure. Care for patients with known or suspected COVID-19 in a single-person room with the door closed. Reserve Airborne Infection Isolation Rooms (AIIRs) for patients undergoing aerosol-generating procedures.
    - Use Standard, Contact, and Airborne Precautions, including eye protection, when caring for patients with confirmed or possible COVID-19.
    - Perform hand hygiene with alcohol-based hand sanitizer before and after all patient contact, before and after contact with potentially infectious materials, and before putting on and upon removal of PPE, including gloves. Use soap and water if hands are visibly soiled.
    - Practice how to properly don, use, and doff PPE in a manner to prevent self-contamination.
    - Perform aerosol-generating procedures (e.g., sputum induction, open suctioning of airways) in an AIIR, while following appropriate IPC practices, including use of appropriate PPE.
    - The collection of respiratory specimens (e.g., nasopharyngeal swabs) are not considered aerosol generating procedures. These procedures should take place in an examination room with the door closed.
    - Healthcare facilities can minimize the chance for exposures by ensuring facility policies and practices are in place and implemented before patient arrival, upon patient arrival, and throughout the duration of the affected patient's time in the healthcare setting.
    - CDC has created Interim Considerations for Infection Prevention and Control of Coronavirus Disease 2019 (COVID-19) in Inpatient Obstetric Healthcare Settings
- Healthcare facilities should promptly notify state or local public health authorities of patients with known or possible COVID-19 (i.e., persons under investigation or PUIs), and should designate specific persons within the healthcare facility who are responsible for communication with public health officials and dissemination of information to HCP.
- All healthcare facilities should ensure that their healthcare personnel are correctly trained and capable of implementing infection control procedures. Individual healthcare personnel should ensure they understand and can adhere to infection control requirements.

AMERICAN OVERSIGHT

- Routine cleaning and disinfection procedures are appropriate for SARS-CoV-2 in healthcare settings, including those patient-care areas in which aerosol-generating procedures are performed.
    - Products with EPA-approved emerging viral pathogens claims are recommended for use against SARS-CoV-2, the virus that causes COVID-19.
- Management of laundry, food service utensils, and medical waste should also be performed in accordance with routine procedures. Federal, state, and local guidelines and regulations specify the categories of medical waste that are subject to regulation and outline the requirements associated with treatment and disposal.
- CDC recommends that employees who are confirmed to have COVID-19, those who appear to have acute respiratory illness symptoms upon arrival to work, and persons who become sick during the work day promptly put on a facemask, be separated from other people, and be sent home immediately.
- If facemasks are not available, sick healthcare personnel should cover their noses and mouths with a tissue when coughing or sneezing (or an elbow or shoulder if no tissue is available), prior to leaving the facility.

Long-term care facilities

- The general strategies CDC recommends to prevent the spread of COVID-19 in long-term care facilities (LTCF) are the same strategies these facilities use every day to detect and prevent the spread of other respiratory viruses like influenza. View Strategies to Prevent the Spread of COVID-19 in LTCF for more information.
- All healthcare facilities can take steps now to prepare for COVID-19 and protect both their patients and staff.
- In late February, there was an outbreak of COVID-19 in a long-term care facility in Washington state infecting patients and a healthcare professionals.
- CDC deployed a team to Washington to support the ongoing investigation to find and identify how the patients were exposed and do extensive contact tracing of people who were exposed or might have been exposed to the patients.

WHAT CDC IS DOING TO PROTECT HEALTHCARE PERSONNEL

- CDC is providing regular communication to the US healthcare community through targeted outreach activities.
- CDC is rapidly developing guidance and resources to protect US healthcare personnel. Current guidance and recommendations are designed to protect healthcare personnel and prevent the spread of the virus that causes COVID-19 within US healthcare facilities.
- CDC has deployed field teams to provide onsite infection control assessment and consultation to the US healthcare facilities currently treating confirmed COVID-19 patients and the passengers returning from China.
- CDC is preparing first responders, healthcare providers, and health systems, by:

AMERICAN OVERSIGHT

    - Establishing visibility across healthcare systems to understand healthcare use, particularly surges in demand for medical care and associated resources.
    - Conducting extensive outreach to clinical and hospital professional organizations to ensure health system preparedness.
    - Producing guidance documents on infection control, hospital clinical evaluation and patient management.
    - Working closely with healthcare facilities and providers to reinforce infection control principles that recognize PPE is one component of a larger set of practices that help to limit the spread of disease.
    - Developing a range of respirator conservation strategies, including strategies to make supplies last longer (such as using alternative products like reusable respirators) and extending the use of disposable respirators.
    - Leveraging existing telehealth tools to direct people to the right level of care.
    - Working with supply chain partners to understand supply usage, what products are available, and when more aggressive measures may need to be taken to ensure that HCPs at highest risk have access to PPE.
    - Sharing information with stakeholders to help them recognize when to shift the strategies they are using.
- The first report of an infected healthcare provider occurred on February 29 in a long-term care facility in Washington.
- Healthcare personnel (HCP) often have prolonged close contact with patients in healthcare settings and may come in contact with a person infected with COVID-19. HCPs can protect themselves by properly following recommended infection control practices, including the appropriate use of PPE when caring for patients with COVID-19.
- CDC recommends evaluating asymptomatic HCPs with close contact or a potential exposure to COVID-19 by assessing risk, monitoring symptoms, and determining the need for appropriate work restrictions.

OPTIMIZING THE SUPPLY OF N95 RESPIRATORS

- Protection of healthcare workers is a priority. CDC's Strategies for Optimizing the Supply of N95 Respirators offers a series of strategies or options to optimize supplies of disposable N95 filtering facepiece respirators (commonly called "N95 respirators") in healthcare settings where there is limited supply.
- It also includes considerations for use by federal, state, and local public health officials, respiratory protection program managers, occupational health service leaders, infection prevention and control program leaders, and other leaders in healthcare settings who are responsible for developing and implementing policies and procedures for preventing pathogen transmission in healthcare settings.
- CDC has provided additional resources related to these strategies:
    - Checklist for Healthcare Facilities: Strategies for Optimizing the Supply of N95 Respirators during the COVID-19 Response is intended to help healthcare facilities

AMERICAN OVERSIGHT

prioritize the implementation of the strategies presented in the Strategies for Optimizing the Supply for N95 Respirators guidance.

- Release of Stockpiled N95 Filtering Facepiece Respirators Beyond the Manufacturer-Designated Shelf Life: Considerations for the COVID-19 Response
    - In times of increased demand and decreased supply, consideration can be made to use the N95s listed in the guidance past their manufacturer-designated shelf life when responding to COVID-19.
    - This preliminary information from the NIOSH study suggests certain N95 models beyond their manufacturer-designated shelf life will be protective. CDC recommends that N95s that have exceeded their manufacturer-designated shelf life should be used only as outlined in the Strategies for Optimizing the Supply of N95 Respirators.

MANAGEMENT OF PATIENTS GUIDANCE FOR HEALTHCARE PROVIDERS

Clinical Presentation

- Most frequently reported symptoms of COVID-19 include fever, cough, sore throat, myalgia, or fatigue. Less commonly reported symptoms include sputum production, headache, hemoptysis, and diarrhea. Older patients and people with chronic medical conditions may be at higher risk of severe illness.
    - Possible risk factors for progressing to severe illness may include, but are not limited to, older age and people of any age with underlying chronic medical conditions such as heart disease, lung disease and diabetes.

Clinical Course

- Symptoms among reported cases of COVID-19 vary in severity from mild illness to severe or fatal illness.
- Some reports suggest the potential for clinical deterioration during the second week of illness.
- Among hospitalized patients with confirmed COVID-19, some will develop complications:
    - Acute respiratory distress syndrome (ARDS)
    - Intensive care for respiratory support
    - Pneumonia resulting in death
    - Secondary infection

Laboratory and Radiographic Findings

- SARS-CoV-2 RNA has been detected from upper and lower respiratory tract specimens, and the virus has been isolated from bronchoalveolar lavage fluid.
- The duration of shedding of SARS-CoV-2 RNA in the upper and lower respiratory tracts is not yet known but may be several weeks or longer.

Clinical Management and Treatment

AMERICAN OVERSIGHT

- There are no U.S. Food and Drug Administration (FDA)-approved drugs specifically for the treatment of patients with COVID-19.
- At present, clinical management includes infection prevention and control measures and supportive care, including supplementary oxygen and mechanical ventilatory support when indicated.
- Patients with mild clinical presentation may not initially require hospitalization.
- The decision to monitor a patient in the inpatient or outpatient setting should be made on a case-by-case basis.

Therapeutic Options for COVID-19 Patients

- There are two approved drugs (chloroquine and hydroxychloroquine) and one investigational agent (remdesivir) currently in use in the United States.
    - The two approved drugs have not been approved specifically for the treatment of patients with COVID-19.
    - For full information on therapeutic options and obtaining these drugs, visit Information for Clinicians on Therapeutic Options for COVID-19 Patients.
- Remdesivir is an investigational intravenous drug with broad antiviral activity that inhibits viral replication through premature termination of RNA transcription. It has in-vitro activity against SARS-CoV-2 and in-vitro and in-vivo activity against related betacoronaviruses.
    - It is available through three clinical trials or on an uncontrolled compassionate use basis.
- Hydroxychloroquine and chloroquine are oral prescription drugs that have been used for treatment of malaria and certain inflammatory conditions.
    - Based upon limited in-vitro and anecdotal data, chloroquine or hydroxychloroquine are currently recommended for treatment of hospitalized COVID-19 patients in several countries.

INTERIM GUIDANCE FOR BUSINESSES AND EMPLOYERS (NON-HEALTHCARE SETTINGS)

- Interim guidance for businesses and employers to plan for and respond to COVID-19 is now available on CDC's website. This interim guidance may help prevent workplace exposures to acute respiratory illnesses, including COVID-19, in non-healthcare settings.
- Employers can use strategies now to prevent workplace exposures to acute respiratory illness:
    - Actively encouraging sick employees to stay home
    - Separating sick employees
    - Emphasizing staying home when sick, respiratory etiquette, and hand hygiene by all employees
    - Performing routine environmental cleaning
    - Advising employees before traveling to take certain steps
    - Checking the CDC's Traveler's Health Notices website for the latest guidance and recommendations for each country to which you will travel
- Some people, like healthcare workers caring for COVID-19 patients and other close contacts of COVID-19 patients, will have an increased risk of infection.

AMERICAN OVERSIGHT

    - Employees who are well but who have a sick family member at home with COVID-19 should notify their supervisor and refer to CDC guidance for how to conduct a risk assessment of their potential exposure. Recommendations released March 16 state that if someone in a household has tested positive, keep the entire household at home.
    - If an employee is confirmed to have COVID-19, employers should inform fellow employees of their possible exposure to COVID-19 in the workplace but maintain confidentiality as required by the Americans with Disabilities Act. Employees exposed to a co-worker with confirmed COVID-19 should refer to CDC guidance for how to conduct a risk assessment of their potential exposure.
- Employers should be ready to implement strategies to protect the workforce from COVID-19 while ensuring the continuity of operations.
    - An infectious disease outbreak response plan should include possible work-related exposures and health risks to employees. The plan should also explore flexible worksites (e.g., telecommuting) and work hours in accordance with human resource policies.
    - Determine how you will operate if absenteeism spikes from increases in sick employees, those who stay home to care for sick family members, and those who must stay home to watch their children dismissed from childcare programs and K-12 schools.

AMERICAN OVERSIGHT

From: Sayler, Erik
To: St Laurent, Louise R; Grow, Stefan
Cc: Larson, Bradford U (Brad) Col USAF NG FLANG (USA); Deleon, Melissa (FLNG)
Subject: FW: [EXTERNAL] FW: MOA for CST testing lab (UNCLASSIFIED)
Date: Wednesday, March 25, 2020 5:18:42 PM
Attachments: MOA FLARNG CST and DOH 20200324.docx

Louise & Stefan,
Attached is the FLNG MOA for the testing machine between DOH and FLNG. Col. Bradford's team drafted it. Are these the right state parties to the MOA? The Colonel said the lab comes with some NG personnel, but they are not currently CLIA certified. Also, supplies and wrap-around services will need to be procured. Do you have any edits? If you have any questions, please let me know.

All,
Some logistics items to be addressed/questions to be answered about the lab, but don't necessarily need to be addressed in the MOA. These are logs/finc/management questions but worth noting and sharing internally.

1. Staffing the lab
    a. How many lab techs are needed to operate the lab at full capacity.
    b. The Colonel says the lab can test 500 samples per day, but is that in an 8, 12, or 24 hour period?
    c. Currently the NG personnel are not CLIA certified; so lab techs will need to be procured – who pays for the lab techs (DOH, AHCA, DEM)
2. Testing materials
    a. What materials are included with the lab (what not included)
    b. What materials are needed to operate the lab at full capacity
    c. Procuring those material that help the lab operate – who procures/pays for these material
3. Wrap-around services
    a. What services are needed (ie, 24-hr security, food for staff, maintenance of lab, etc.)
    b. Who pays for the wrap-around services (DOH, AHCA, DEM)?
4. Timing – It will take at least a week to get the lab.
5. Location – where to stage the lab – that's a logs/mgt decision
6. Other items??

Erik

Attached is the draft MOA we discussed. Please let me know if you have any suggestions. I contacted LTC Eastman and asked what we would need and what we may receive to run this machine. The National Guard Bureau is still working those details as far as what PPE, pipets, kits, etc. may come with the machine. He will get back with me. NGB is sending 2 to NY, so we will have a good idea of what to expect based on what they receive. He did say this would not get to us for about a week even if we do get one.

MEMORANDUM OF AGREEMENT
BETWEEN
FLORIDA NATIONAL GUARD
44th WEAPONS OF MASS DESTRUCTION - CIVIL SUPPORT TEAM
AND
FLORIDA DEPARTMENT OF HEALTH
AGREEMENT NO.: DOH-03-24-2020

I. PURPOSE

The purpose of this Memorandum of Agreement (MOA) is to enable the Florida National Guard (FLNG) 44th Weapons of Mass Destruction Civil Support Team (WMD-CST) to provide assistance to the State of Florida, Department of Health (DOH) in relation to the COVID-19 Pandemic.

It is understood by the parties to this MOA that requests by DOH for the support of the WMD-CST to assist in response to the response to the COVID-19 Pandemic may include multi-agency, federal, state, and local cooperative agencies and law enforcement activities (Governmental Entities). It is further understood that each party's participation in these activities is limited as specified in Paragraph II, Scope of Work, of this MOA and that each party will bear their own expenses related to execution of this MOA.

II. SCOPE OF WORK

For the purposes of this agreement, the WMD-CST will:

1. **Work under the Command and Control of Military leadership while assisting the FL DOH to accomplish the objectives outlined by FL DOH.**
2. **Provide any NGB CST program issued ABI 7500 PCR machine for use by the FL DOH, provide maintenance of such machinery, and provide non-medical/non-laboratory certified personnel to assist, as necessary.**

Commented [LBUCMN1]: Please fill in with real name.

For purposes of this agreement, the FL DOH will:

1. **Define objectives FL DOH and WMD-CST are working to accomplish.**
2. **Provide CLIA certified personnel to collect and analyze specimens as needed during the COVID-19 Pandemic using the NGB CST program issued ABI 7500 PCR machine.**
3. **Provide any necessary training to WMD-CST members.**

III. AUTHORITY AND COMPLIANCE WITH RELEVANT LAWS AND REGULATIONS

DOH shall not request, and the WMD-CST shall not provide, any services not in compliance with all state and federal laws. Any support provided by WMD-CST under this MOA is done in the performance of those members' duty under the provisions of Florida Statute 250.31.

AMERICAN OVERSIGHT

In the event that WMD-CST is assisting an entity and comes into contact with protected information, the parties will ensure proper controls and protections are in place and such information is managed in accordance with applicable law.

IV. FLORIDA NATIONAL GUARD POINT OF CONTACT

The Point of Contact for the FLNG is:
Lieutenant Colonel Troy M. Eastman,
Commander, FLARNG 44th Weapons of Mass Destruction – Civil Support Team (WMD-CST) Florida
Phone: 904-682-2401 (direct); 904-813-4043 (mobile)
E-mail: troy.m.eastman.mil@mail.mil

V. STATE OF FLORIDA POINT OF CONTACT

The Point of Contact for the DOH is:

_____
_____
Phone: _____
E-mail: _____

V. NOTIFICATIONS BY FLNG OF SERVICES

DOH acknowledges that the FLNG may notify the National Guard Bureau was about tasks performed under this MOA. Any information provided will be limited to a general categorization of the service provided, general client classification, and will not include specific details or outcomes. No further details will be disclosed to ensure client confidentiality.

VI. TERM

This MOA shall commence on the date of the last signature below, and shall end on August 31, 2020, or sooner if the State emergency in response to COVID-19 Pandemic ends, services as contemplated by this MOA are completed and accepted by DOH, or if this MOA is terminated as set forth in paragraph VII below.

VII. MODIFICATIONS TO THIS AGREEMENT

Any amendments or changes to this to this Agreement must be in writing and executed by all parties hereto.

VIII. TERMINATION

Either party may terminate this MOA by giving written notice to all parties hereto. Early termination of support must provide a minimum of 48 hours' notice, and such notice shall be delivered by email. Such termination notice period shall not commence until receipt of delivery is obtained.

AMERICAN OVERSIGHT

IX. COMPENSATION

The parties understand and agree that all parties bear their own cost associated with services provided pursuant to this MOA.

X. DISCLAIMER OF LIABILITY

Pursuant to Florida Statute 250.31, in no event shall the DOH, the FLNG or its members be liable to DOH or any third parties affected by the services provided by FLNG for any damages of any kind whatsoever, arising out of services provided pursuant to this Agreement, or for special, indirect, consequential, incidental, or punitive damages however caused, and regardless of the theory of liability, arising out of the services provided by the FLNG. Any claims by any person against the FLNG will be directed to the Florida Department of Legal Affairs.

XI. SEVERABILITY

In the event that any provision or section herein is held invalid or unenforceable, the remaining provisions and sections shall remain in full force and effect.

Hi Michelle –

Below please see an update on care for guests upon arrival at MIA.

Dr. Barth Green, the Global Coordinator for CDC, will accept all 45 US nationals from the Silver Explorer, providing that Bec Ware, R.N. can provide him details about these people. Minutes ago, I spoke with Bec, and she will provide Dr. Green with the information that he needs, including their marital status, their physical condition, where they are landing and what time they are to arrive at Miami International Airport. He will have a Medical team waiting to greet these folks, to screen them, and to triage them accordingly.

Until then, I will arrange for Dr. Green to receive 60 Quest Novel Coronavirus (2019-nCoV)/COVID-19 test kits from my office, so that he can make final determinations on those who are ill. Ms. Stephanie Buchler will follow Quest collection instructions and will ensure courier specimen pickup, if necessary.

Dr. Green will direct his Medical staff to triage the arrival of these patients to either Jackson Memorial Hospital or Hotel St. Michel in Coral Gables, depending on their physical condition.

Subject: RE: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

EXTERNAL EMAIL CAUTION: Use caution opening attachments or clicking links.

Here is interim guidance from CDC for these two ships/flights (also attached)

1. Pre-departure
    a. Send ship and flight manifests to CDC.
    b. Send information about possible COVID illness among any passengers (not just American Citizens and including reports of # of persons with confirmed or suspected COVID) to CDC
    c. Distribute general CDC COVID info-graphic and instructions for cruise ship passengers.
    d. In advance, cruise line should make arrangements for land-based management, including for persons with symptoms/illness (as described below) and communicate and clear those plans to appropriate local/state health authorities.
2. At disembarkation from boat and before boarding charter flight, screening questionnaire completed
    a. General screening questionnaire provided by CDC, or other questionnaire as per local/national authorities at port administered to passengers/crew disembarking
    b. Persons who are ill must be evaluated at local health facility – not allowed to board charter unless cleared by local clinician and deemed fit-to-fly.
3. Passengers without any symptoms can board charter flights.
4. During flight, have clinicians (physician and nurse) on board charter to assist/evaluate any passengers who become ill during travel and to assist at arrival in US
5. Upon arrival at airport in US
    a. CBP/CWMD will perform screening as if passengers were arriving from level 3 countries, as per their protocols.
    b. CDC Quarantine Station staff are available for illness response, as per protocol.

AMERICAN OVERSIGHT

c. Any ill persons are evaluated and referred for evaluation locally as per Quarantine Station protocol.

d. Passengers who are not ill will be allowed to continue their travel on commercial flights.

6. After arrival
   a. CDC will provide EpiX notification to receiving states, if meet criteria from our protocol.

   b. Passengers should understand that all must self-quarantine and practice social distancing for 14 days.

7. For an air ambulance/medical evacuation flight, passengers should go to pre-determined clinical facility as arranged by cruise line/air ambulance company. This plan must be in place and cleared with local and state health authorities before departure of the charter flight.
   a. Persons who do not require hospitalization but are not fit-to-travel to home destination, should remain in hotel (as cleared with local/state health authorities) until fit-to travel.

      i. Alternative transportation arranges such as private vehicle or charter flights to home destination made be possible based on individual assessment.

      ii. Additional guidance is available at https://www.cdc.gov/coronavirus/2019-ncov/downloads/sick-with-2019-nCoV-fact-sheet.pdf

   b. These persons must follow all CDC guidance for persons who have been on cruise ships in the last 14 days. They must stay home for 14 days from the time they disembark, practice social distancing, and monitor their health. Social distancing means staying out of crowded places, avoiding group gatherings, and maintaining distance (approximately 6 feet or 2 meters) from others when possible.

Sorry - now with Eleni from RC. Again, due-outs are:

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

Subject: Royal Caribbean Ships off Brazil/Chile

All -

Thank you for joining the call today. Leah - I don't believe I have everyone from CDC who was on the call, including Rachel - please add if that's the case.

I've listed the do-outs that I'm tracking below, and this chain can serve as the new, smaller group of folks working on the Brazil/Chile RC ships.

- State - send CDC global ship tracking list; create small-group email distro;
- CDC - send Royal Caribbean and Amy Dubois/HHS protocols for screening; Make determination on screening protocols for passengers from a "healthy" ship
- Royal Caribbean - send #s of Canadians to CDC; update on infection status; send manifests for four ships

Subject: RE: [EXTERNAL] Re: Royal Caribbean Ships off Brazil/Chile

EXTERNAL EMAIL CAUTION: Use caution opening attachments or clicking links.

Here is interim guidance from CDC for these two ships/flights (also attached)

1. Pre-departure
    a. Send ship and flight manifests to CDC.
    b. Send information about possible COVID illness among any passengers (not just American Citizens and including reports of # of persons with confirmed or suspected COVID) to CDC
    c. Distribute general CDC COVID info-graphic and instructions for cruise ship passengers.
    d. In advance, cruise line should make arrangements for land-based management, including for persons with symptoms/illness (as described below) and communicate and clear those plans to appropriate local/state health authorities.
2. At disembarkation from boat and before boarding charter flight, screening questionnaire completed
    a. General screening questionnaire provided by CDC, or other questionnaire as per local/national authorities at port administered to passengers/crew disembarking
    b. Persons who are ill must be evaluated at local health facility – not allowed to board charter unless cleared by local clinician and deemed fit-to-fly.
3. Passengers without any symptoms can board charter flights.
4. During flight, have clinicians (physician and nurse) on board charter to assist/evaluate any passengers who become ill during travel and to assist at arrival in US
5. Upon arrival at airport in US
    a. CBP/CWMD will perform screening as if passengers were arriving from level 3 countries, as per their protocols.
    b. CDC Quarantine Station staff are available for illness response, as per protocol.
    c. Any ill persons are evaluated and referred for evaluation locally as per Quarantine Station protocol.
    d. Passengers who are not ill will be allowed to continue their travel on commercial flights.
6. After arrival

AMERICAN OVERSIGHT

a. CDC will provide EpiX notification to receiving states, if meet criteria from our protocol.

b. Passengers should understand that all must self-quarantine and practice social distancing for 14 days.

7. For an air ambulance/medical evacuation flight, passengers should go to pre-determined clinical facility as arranged by cruise line/air ambulance company. This plan must be in place and cleared with local and state health authorities before departure of the charter flight.
   a. Persons who do not require hospitalization but are not fit-to-travel to home destination, should remain in hotel (as cleared with local/state health authorities) until fit-to travel.

      i. Alternative transportation arranges such as private vehicle or charter flights to home destination made be possible based on individual assessment.

      ii. Additional guidance is available at https://www.cdc.gov/coronavirus/2019-ncov/downloads/sick-with-2019-nCoV-fact-sheet.pdf

   b. These persons must follow all CDC guidance for persons who have been on cruise ships in the last 14 days. They must stay home for 14 days from the time they disembark, practice social distancing, and monitor their health. Social distancing means staying out of crowded places, avoiding group gatherings, and maintaining distance (approximately 6 feet or 2 meters) from others when possible.

AMERICAN OVERSIGHT

Health Alert:
Coronavirus Disease 2019 (COVID-19)

You have recently been on a cruise ship or river cruise.

COVID-19 is a respiratory illness that can spread from person to person.

Stay home for 14 days from the time you left the cruise ship or river cruise and practice social distancing

Take these steps to monitor your health and practice social distancing:

1. Take your temperature with a thermometer two times a day and monitor for fever. Also watch for cough or trouble breathing.

2. Stay home and avoid contact with others. Do not go to work or school for this 14-day period. Discuss your work situation with your employer before returning to work.

3. Do not take public transportation, taxis, or ride-shares during the time you are practicing social distancing.

4. Avoid crowded places (such as shopping centers and movie theaters) and limit your activities in public.

5. Keep your distance from others (about 6 feet or 2 meters).

What To Do If You Get Sick

If you get sick with fever (100.4°F/38°C or higher), cough, or have trouble breathing:

- Seek medical care. Call ahead before you go to a doctor's office or emergency room.

- Tell your doctor about your recent travel and your symptoms.

- Avoid contact with others.

If you need to seek medical care for other reasons, such as dialysis, call ahead to your doctor and tell them about your recent travel on a cruise ship or river cruise.

For additional questions on monitoring your health, contact your local public health officials.

Visit the website for more information on monitoring your health and how to contact local public health officials. Visit: www.cdc.gov/COVIDtravel

AMERICAN OVERSIGHT

FL-DOH-20-0673-A-003991

ONE FORM PER TRAVELER **Form filled by:** _____

UNITED STATES: PRE-BOARDING PUBLIC HEALTH SCREENING FOR US RETURNING PASSENGERS

Family name: _____

First (given) name: _____

Birth date: ___ /___ / ___ (Day/Month/Year)

SPECIMEN ID # _____

Cabin number _____

INSTRUCTIONS: Read out loud the text in italics and check the corresponding boxes

I am going to ask you a few questions about your health. It will take less than five minutes.

Were you sharing a cabin with someone who has tested positive for novel coronavirus (COVID-19)?

☐ Yes, ☐ No, ☐ Don't know

1. *Today or in the past 72 hours did you have fever?* (Check all that apply)
   ☐ Yes
   If yes,
   ☐ *was this a subjective temperature (feeling feverish) without measuring*?
   ☐ was temperature *measured and 100°F (37.8°C) or higher?*
   ☐ No fever
   ☐ Don't know

2. *In the past 72 hours did you have any of the following respiratory symptoms? If you have a pre-existing condition that causes coughing or shortness of breath, please tell me if these symptoms are worse than usual* (Check all that apply)

   a) New onset or worsening cough, ☐ yes ☐ no

   b) New onset or worsening shortness of breath ☐ yes ☐ no

3. *In the past 72 hours did you have any of the following gastrointestinal symptoms:*
   a) *Diarrhea* (*3 or more loose stools in 24 hrs*) ☐ yes ☐ no

   b) *Vomiting* ☐ yes ☐ no

To be filled out by the health screening staff

4. Measured temperature: _____☐°C ☐°F
5. Visible signs of cough or difficulty breathing ☐ yes ☐no
6. Appears obviously unwell

INSTRUCTIONS

REFER TO TEAM LEAD IF traveler responds yes to any of the criteria in questions 1, 2, or 3 **OR** has a measured temperature of ≥100 °F (37.8 °C) **OR** has visible signs of cough or difficulty breathing (question 5) **OR** appears obviously unwell (question 6)

AMERICAN OVERSIGHT

Proposed SOP for Disembarking International Cruise Ships With Passengers Arriving In US On Charter Flights (Working Draft As Of 3/16/20)

1) Pre-departure
    a. Send ship and flight manifests to CDC.
    b. Send information about possible COVID illness among any passengers (not just American Citizens and including reports of # of persons with confirmed or suspected COVID) to CDC
    c. Distribute general CDC COVID info-graphic and instructions for cruise ship passengers.
    d. In advance, cruise line should make arrangements for land-based management, including for persons with symptoms/illness (as described below) and communicate and clear those plans to appropriate local/state health authorities.
2) At disembarkation from boat and before boarding charter flight, screening questionnaire completed
    a. General screening questionnaire provided by CDC, or other questionnaire as per local/national authorities at port administered to passengers/crew disembarking
    b. Persons who are ill must be evaluated at local health facility – not allowed to board charter unless cleared by local clinician and deemed fit-to-fly.
3) Passengers without any symptoms can board charter flights.
4) During flight, have clinicians (physician and nurse) on board charter to assist/evaluate any passengers who become ill during travel and to assist at arrival in US
5) Upon arrival at airport in US
    a. CBP/CWMD will perform screening as if passengers were arriving from level 3 countries, as per their protocols.
    b. CDC Quarantine Station staff are available for illness response, as per protocol.
    c. Any ill persons are evaluated and referred for evaluation locally as per Quarantine Station protocol.
    d. Passengers who are not ill will be allowed to continue their travel on commercial flights.
6) After arrival
    a. CDC will provide EpiX notification to receiving states, if meet criteria from our protocol.
    b. Passengers should understand that all must self-quarantine and practice social distancing for 14 days.
7) If there is an air ambulance flight, passengers should go to pre-determined clinical facility as arranged by cruise line/air ambulance company. This plan must be in place and cleared with local and state health authorities before departure of the charter flight.
    a. Persons who do not require hospitalization but are not fit-to-travel to home destination, should remain in hotel (as cleared with local/state health authorities) until fit-to travel.
        i. Alternative transportation arranges such as private vehicle or charter flights to home destination made be possible based on individual assessment.
        ii. Additional guidance is available at https://www.cdc.gov/coronavirus/2019-ncov/downloads/sick-with-2019-nCoV-fact-sheet.pdf
    b. These persons must follow all CDC guidance for persons who have been on cruise ships in the last 14 days. They must stay home for 14 days from the time they disembark, practice social distancing, and monitor their health. Social distancing means staying out of crowded places, avoiding group gatherings, and maintaining distance (approximately 6 feet or 2 meters) from others when possible.

Subject:	FW: Cancellation of EIS conference – next steps
Date:	Monday, March 16, 2020 3:07:00 PM

Dear prematched supervisors, many of you have already received the message below. For those who do not have a current officer, in light of the ongoing response we have made the difficult decision to cancel EIS conference this year. If you have made travel arrangements, please go ahead and cancel those. For those who have the time, consider dropping a note to your incoming officer to touch base in lieu of seeing them at conference.

If you have any questions, please reach out to us. Thank you for all you are doing and for hosting an incoming EISO.

Thank you – Jennifer

Subject: Cancellation of EIS conference – next steps

EISOs,

I am writing to inform you of the cancellation of the EIS conference scheduled for May 4–7th. As of March 15, 2020, CDC is recommending the cancellation or postponement of in-person events consisting of 50 people or more throughout the U.S. We have been working on contingency planning for weeks and we determined that even a virtual conference is not feasible given the presenters and audience are needed for the COVID-19 response. During this time, response priorities take precedence over developing presentations for EIS Conference.

We understand that cancelling conference has broad implications for all of you, especially the 2nd year EISOs. We are cognizant of the potential impacts on CAL completion, job searching, graduation,

AMERICAN OVERSIGHT

and other elements that are important to all of you and the program. We want you to know the following:

- The match for the incoming class will be conducted virtually with an extended recruitment period starting on March 23, 2020 and an extended period for virtual interviewing from April 20 – May 8.

- We will work with 2nd year officers on a case-by-case basis if your COVID-19 response involvement might compromise your ability to complete your CALs. We do not want CAL completion to be a deterrent to your involvement. If you have concerns, please reach out to your EWB supervisor or CIO liaison to discuss your situation.

- We are working to plan a 2-day EIS presentation and graduation event for June. The event would include presentations from 2nd year EISOs who needed conference to fulfill the CAL requirement, a graduation ceremony, and the EIS satirical review.

- We know that EIS conference is a time when many of you were planning to network and interview for jobs. We are working to identify alternative ways to support your search for CDC jobs.

For all of you currently or preparing to deploy, we hope that the cancellation of the conference alleviates any tension you might have been experiencing regarding how to prepare your presentation in the midst of COVID-19, Ebola, and polio responses.

EISO's are playing a vital role in supporting this nation's public health response, at the local, state, and federal level. Thank you for your service. Your dedication and contributions are valued and appreciated. At this time, we expect every EISO to contribute to the response in some way. We expect most field EISOs are supporting the response within their assigned jurisdiction and do not expect you to deploy elsewhere. If you are not already involved in response activities, please volunteer now. If you need guidance on how to find a deployment role, please contact us at EpiAid@cdc.gov. If you have had difficulty obtaining supervisory approval to support the response, please contact your CIO liaison or EWB supervisor so that we can assist.

Please reserve time on your schedules for a **call on March 18, 2020 at 12 pm EST** to answer your questions and discuss planning for an EIS presentation and graduation event for all EISOs tentatively scheduled for June. We will be sending the link for the Skype Meeting ASAP.

Respectfully,
Eric

Eric Pevzner, PhD, MPH

CDC COCA Call: COVID-19 Update—Information for Clinicians Caring for Children and Pregnant Womenr

AMERICAN OVERSIGHT

Pregnant woman with doctor

Join us for this week's COCA call, which focuses on current information about COVID-19 as it relates to children and pregnant women. Topics will include infection prevention and control measures in inpatient obstetric healthcare settings (CDC's Interim Considerations for Infection Prevention and Control of Coronavirus Disease 2019 (COVID-19) in Inpatient Obstetric Healthcare Settings) and resources available to care for pediatric patients.

When: Thursday March 12, 2020
Time: 2:00-3:00 pm (ET)

How to join?
Please click the link below:
https://zoom.us/j/200932054

Or iPhone one-tap:
US: +16468769923,,200932054# or +16699006833,,200932054#

Or Telephone:
US: +1 646 876 9923 or +1 669 900 6833

Webinar ID: 200 932 054
International numbers available: https://zoom.us/u/anixAVgIV
If you are unable to attend this live COCA Call, it will be available to view on-demand a few hours after the call.

Special Request: Due to the high demand we anticipate for this COCA Call, we kindly ask participants to access it in a group format, if possible, to allow for the maximum number of people to participate.

Watch on Facebook: You may also participate in this COCA Call by joining COCA's Facebook Live.

Continuing Education will not be offered for this COCA Call.

For more information on this call, visit CDC's COCA website:
https://emergency.cdc.gov/coca/calls/2020/callinfo_031220.asp

Sent: Thursday, March 5, 2020 7:22 PM
To: CDC IMS 2019 NCOV Response Epi Surveillance State Coordination Unit <eocevent118@cdc.gov>
Subject: CDC COVID-19 Case Count Confirmation 03/05/2020

Dear Partners,

As described in an email sent from the CSTE COVID-19 Leadership Team (see attached), CDC is instituting a standard process for confirming publicly reported cases by jurisdiction.

What you need to do/know now:

- We will conduct case confirmation **daily** (Monday – Friday). As the response evolves, the frequency of these requests will likely decrease.
- At the bottom of this email, you will find a table with the current preliminary case counts we have for each jurisdiction **as of 4 pm ET on Thursday, March 5**.
- By **9 am ET Friday, March 6**, please confirm case counts for your jurisdiction (your numbers **as of 4 pm ET Thursday, March 5)** using the CDC Case Confirmation Portal (data are collected via Epi Info and stored on a secure CDC server):

AMERICAN OVERSIGHT

https://go.usa.gov/xdftq

What you need to know about how your information will be presented:

- These data represent cases detected and tested in the United States through U.S. public health surveillance systems since January 21, 2020. They do not include people who returned to the United States via State Department-chartered flights. **We ask that the preliminary information shared in this email not be distributed.**
- What will be shared on the CDC website (updated daily at 12 pm, ET):
    - **The total case count** [presumptive + lab-confirmed], i.e., the actual number of *total* cases (e.g., 0, 6, 35) will be posted. **EXCEPTION**: **Jurisdictions with one to five cases will be depicted as a range: "1–5 cases"**
    - Other information shared will be used for internal awareness and will not be shared publicly at this time.

What you need to do/know later:

- DCIPHER users can update and analyze their own jurisdiction's data at: https://dcipher.cdc.gov/. If your jurisdiction does not currently have DCIPHER users, but you would like to move to Phase 2 reporting as described in the attached guidance, please email eocevent118@cdc.gov to confirm your readiness.

Sincerely,

CDC COVID-19 Epidemiology Task Force

**Values to be shared on the CDC website

***Reported deaths are reported from state or local health department and include confirmed and presumptive cases.

AMERICAN OVERSIGHT

Dear state and territorial partners:

Thank you for your continued partnership in the ongoing emergency response to COVID-19. The information included below aligns with what was shared by CDC during the 5 pm ET CSTE call on Saturday, February 29th regarding: 1) confirming a jurisdiction's 'Phase 2' status for reporting PUI and cases; 2) updates to the PUI and Case Report Form; 3) an update on the status of historical PUI data imports into DCIPHER; 4) clarifications to the CDC reporting process for PUI/Case Report Forms and lab findings; 5) management of the PHLIP laboratory reporting process; and 6) major avoidable issues we hope to overcome with your assistance. We plan for the noted changes to go into effect at **5 pm ET, Sunday, March 1.**

Jurisdictional 'Phase 2' Status

As we have previously outlined, jurisdictions need to be able to do several tasks before they can move into 'Phase 2'. These include assessing ill persons and determining PUI status; assigning unique identifiers to PUI and cases at the reporting jurisdiction level; and reporting PUI and cases of COVID-19 using a brief, combined form.

Given the need to maintain timely, actionable data at the national level, and process laboratory results at CDC for initial or confirmatory testing, **we anticipate that all jurisdictions will be onboarded to 'Phase 2' during the week of March 2.** As soon as your jurisdiction is able to confirm its 'Phase 2' status, please email eocevent118@cdc.gov.

As part of the 'Phase 2' rollout, CDC needs to better understand each jurisdiction's plan for providing data to CDC for the PUI and Case Report Form via DCIPHER, an electronic PUI and case reporting system. We request that each jurisdiction provides a list of ≤5 DCIPHER users before **Monday, March 2 at 5pm ET,** if they have not already done so. In addition, we ask that jurisdictions confirm their intent to input data on PUI and case-patients directly into the DCIPHER platform (preferred option) or if alternative arrangements need to be made to send data to CDC. Please email eocevent118@cdc.gov with the requested information by **March 2 at 5pm ET**.

Updates to PUI and Case Report Form on CDC's Website

On the PUI and Case Report Form included in the CSTE email on Wednesday, February 26th, there were 2 'current status of person' options: "person under investigation" or "laboratory-confirmed case." Given increased laboratory capacity at the state and local level to test for the virus that causes COVID-19 and the need to send presumptive positive specimens to CDC for confirmatory testing, there will now be 5 status classifications.

1. PUI, testing pending*
2. PUI, tested negative*
3. Presumptive case (positive local test), confirmatory testing pending†
4. Presumptive case (positive local test), confirmatory testing negative†
5. Laboratory-confirmed case†

**Testing conducted by local lab or CDC lab*
† At this time, all confirmatory testing occurs at CDC

We have also added critical laboratory testing result fields at the end of the PUI and Case Report Form to reflect COVID-19 laboratory test results from state or local laboratories and CDC. CDC will work towards populating our laboratory results into the CDC result field for each specimen sent to us so that results can be viewed in DCIPHER as they are resulted and communicated to individual jurisdictions.

These updates to the PUI and Case Report Form, as well as data dictionary and instructions, can be found in Attachments 2-4, and were made available on CDC's website as of March 1, 2020.

Historical PUI Data Imported into DCIPHER

As of February 28, data reported to CDC on PUI, presumptive cases, and laboratory-confirmed cases have been made available in DCIPHER.

AMERICAN OVERSIGHT

- Jurisdictions in 'Phase 2' are now able to go into the DCIPHER platform to view and edit existing records of PUI, presumptive positive, and laboratory-confirmed cases, as their status changes or more data become available.
- Jurisdictions in 'Phase 1' should continue to call the EOC Watch Desk at 770-488-7100 to update information on existing PUI, presumptive positive, or laboratory-confirmed cases of COVID-19.

CDC Reporting Process for PUI/Case Reports and Lab Findings

For reporting jurisdictions that have the capacity to do their own testing:

For jurisdictions that are in 'Phase 2':

1. The jurisdiction should enter all PUIs or Presumptive Cases (persons with a positive test performed locally without CDC lab confirmation*) into DCIPHER with the jurisdiction-issued nCoV ID, unless other arrangements to transmit data have been made and approved by CDC.
2. If a specimen is tested locally and is **NEGATIVE**:
    a. Please update the person's disposition to 'PUI, tested negative' in DCIPHER.
3. If a specimen is tested locally and is **POSITIVE**:
    a. Call the EOC Watch Desk/PUI desk at **770-488-7100** and notify CDC of the positive result. The specimen will be identified as a 'presumptive positive'* until the result is confirmed at CDC per the Emergency Use Agreement.
    b. On the call with CDC, please provide: (1) jurisdiction-issued nCoV ID and (2) a brief summary of the person's information that aligns with information collected and submitted on the PUI and Case Report Form.
    c. Send the specimen to CDC for confirmatory testing, labeled with the nCoV ID.
    d. Please also update the person's disposition in DCIPHER to "Presumptive Case, confirmatory testing pending"

For jurisdictions that are in 'Phase 1':

1. The jurisdictions should call the EOC Watch Desk/PUI desk at 770-488-7100 to receive a CDC-issued nCoV ID, and to complete a PUI and Case Report Form.
2. If a specimen is tested locally and is **NEGATIVE**:
    a. Please email eocevent118@cdc.gov and provide the nCoV ID and test result.
3. If a specimen is tested locally and is **POSITIVE**:
    a. Call the EOC Watch Desk/PUI desk at **770-488-7100** and notify them of the positive result. The specimen will be identified as a 'presumptive positive'* until the result is confirmed at CDC per the Emergency Use Agreement.
    b. On the call with CDC, please provide: (1) jurisdiction-issued nCoV ID and (2) a brief summary of the person's information that aligns with information collected on the PUI and Case Report form.
    c. Send the specimen to CDC for confirmatory testing, labeled with the nCoV ID.

For reporting jurisdictions that do not have testing capacity and are sending specimens to CDC for testing:

For jurisdictions that are in 'Phase 2':

1. The jurisdiction should enter all PUIs into DCIPHER with the jurisdiction-issued nCoV IDs, unless other arrangements to transmit data have been made and approved by CDC.
2. Please ensure the jurisdiction-issued nCoV ID is entered in the **alternative specimen ID** field on the 50.34/DASH form sent in with the specimen to CDC for testing.
3. Testing results will be returned to the state lab per current protocol.

For jurisdictions that are in 'Phase 1':

1. The jurisdiction should call the EOC Watch Desk/PUI desk at **770-488-7100** to obtain a CDC-issued nCoV ID number, and complete a PUI and Case Report Form.

AMERICAN OVERSIGHT

2. Please make sure the CDC-issued nCoV ID is entered in the **alternative specimen ID** field on the 50.34/DASH form sent in with the specimen to CDC for testing.
3. Testing results will be returned to the state lab per current protocol.

Specimens from Presumptive Cases must be tested at CDC to change their disposition to 'Confirmed Case'. However, **local public health action is recommended for Presumptive Cases identified through local or state laboratory testing.*

Management of the PHLIP reporting process

CDC and APHL have been working with public health laboratories to add automated reporting of the novel coronavirus test results through their existing influenza reporting mechanism, which is most frequently PHLIP.

We ask that participating PHLIP labs begin including nCoV IDs within the lab test message reported through PHLIP. This will allow CDC to: (1) Match these records with persons reported into DCIPHER and (2) work with states to properly characterize the status of persons without existing records in DCIPHER. Information on how to include the nCoV ID in the message is available via APHL starting at the bottom of Page 4 (Attachment 5).

Major avoidable challenges we hope to overcome with your assistance

We recognize the challenges that public health emergencies bring. With your assistance, we hope to avoid the following challenges by following the processes outlined above:

1. Unclear data flow processes for jurisdictional data on PUI and case-patients to CDC
2. Laboratory samples that are not able to be linked with PUI or case-patients
3. Incorrect reports of national and state-level PUI and case burden

We appreciate your ongoing partnership. Please email eocevent118@cdc.gov with any questions regarding the PUI or case reporting process.

Best,
CDC COVID-19 Epidemiology Task Force

AMERICAN OVERSIGHT

Sent: Tuesday, March 03, 2020 5:36 PM EST
To: CSTE Emergency Response <Preparedness@cste.org>
CC: CSTE Novel Coronavirus 2019 <CSTEncov2019@cste.org>
Subject: CSTE COVID-19 Response | New CDC Standard Process for Displaying Reported Cases

Sent to State Epidemiologists and the CSTE Executive Board

Good evening,

Please see below for a message from CDC's COVID-19 Epidemiology Task Force:

> Colleagues,
>
> To coordinate consistent public messaging and improve data visualization on the CDC public-facing website for the COVID-19 response homepage, CDC is instituting a daily, standard process for displaying reported *cases by state*. Today, this process was discussed with the CSTE COVID-19 Core Group to work collaboratively and incorporate jurisdictional implementation feedback.
>
> **CDC plans to initiate this process tonight, 3/3/2020. Around 6 pm ET, CDC will send each state an email**(emails will go to the staff identified as DCIPHER contacts and the State Epidemiologist) that includes two items:
> 1. Current case count as of 4 pm ET
>   a. Graphical map will represent case count ranges by state (count of presumptive, lab confirmed, total [presumptive + lab confirmed], and deaths among cases)
>   b. Map table will represent **only total case counts by state**. If state reports 1 to 5 cases, counts will be represented as a range (*i.e.,* 1-5 cases). The other information collected will not be shared publicly, but are for internal awareness.
> 2. Link to DCIPHER where the jurisdiction can review, update, and visualize their data
>
> By 9 am ET the following day, please provide written confirmation to CDC (eocevent118@cdc.gov) of receiving the report and either:
> - confirm the case count information provided (cases as of 4 pm ET), or,
> - if incorrect, provide updated values.
>
> These case counts by state will then be reflected in the CDC web update scheduled for release at 12 pm ET.
>
> ****NEW** Daily rhythm for case-confirmation process and external communication**
>
> 
>
>
> 1. (12:00pm, ET): Deadline for CSV States to submit cases to DCIPHER.**This reflects an update in guidance (previous deadline was 9am, ET).**
> 2. (4:00pm, ET): Deadline for Direct Data Entry States to submit cases to DCIPHER
> 3. (6:00pm, ET): CDC sends 4pm ET numbers back to states for final confirmation by 9:00am, ET, next day
> 4. (9:00am, ET next day): Deadline for states to confirm cases for public reporting on CDC COVID-19 homepage
>   a. If no confirmation email received, CDC will use last confirmed numbers reported by state
>   b. If no confirmation email received and state has never confirmed cases to CDC, CDC will take enhanced proactive steps to seek confirmation from the state reporting their initial case(s). If no response from state, cases will not be reported on CDC web update
> 5. (12:00pm, ET): CDC COVID-19 homepage updates go live online
>
> Sincerely,
> CDC COVID-19 Epidemiology Task Force

AMERICAN OVERSIGHT

CDC Daily Key Points
Coronavirus Disease 2019 ("COVID-19") Pandemic
March 24, 2020 as of 9:30pm

Updated text is shown in colored text.

SNAPSHOT

- CDC has reported:
  - 44,183 confirmed and presumptive positive cases of COVID-19
  - 544 COVID-19-related deaths
  - All 50 states, the District of Columbia, Puerto Rico, Guam, and the US Virgin Islands have reported cases of COVID-19.

MAIN KEY POINTS

- On March 16, 2020 President Trump and the White House Coronavirus Task Force issued new guidelines to help protect Americans during the Coronavirus pandemic.
  - The initiative, called 15 Days to Slow the Spread, lays out guidelines for a nationwide effort to slow the spread of COVID-19. It calls for the implementation of measures to increase social distancing between people at all levels of society.
  - This is a massive proactive, preventive response to COVID-19. It aims to slow the spread and blunt the impact of this disease on the United States.
- All segments of U.S. society have a role to play at this time:
  - People across the country are asked to stay home as much as much as possible and otherwise practice social distancing.
  - This includes canceling or postponing gatherings of more than 10 people and closing schools in some areas as determined by local and state governments.
  - It also includes special measures to protect those people who are most vulnerable to this disease.
  - People who are sick are asked to follow CDC guidance on recovering at home and follow the new guidance for when it's OK to interact with other people again.
- There is no vaccine to protect against COVID-19 and no medications approved to treat it.
- There is a body of evidence—based on about 200 journal articles—that supports the effectiveness of social distancing measures, both when used alone and in combination with other measures.
  - Much of this data is outlined in CDC's Community Mitigation Guidelines to Prevent Pandemic Influenza — United States, 2017.
  - These recommendations work better when implemented in concert.
- While the new guidelines are recommended for the 15-day period ending March 30, government leaders will continually reassess the status of the outbreak in the United States. It may be that these measures will need to be modified or extended for additional periods of time.
- This is a historic, unprecedented outbreak, the likes of which have not been seen since the influenza pandemic of 1918.
- The White House Task Force on Coronavirus has established www.coronavirus.gov as the centralized website for the Federal government.
  - CDC continues to maintain www.cdc.gov/covid19.

AMERICAN OVERSIGHT

CDC Daily Key Points
Coronavirus Disease 2019 ("COVID-19") Pandemic
March 24, 2020 as of 9:30pm

SITUATION UPDATE

- 44,183 reported cases of COVID-19 have been detected in all 50 states.
- 569 of these cases occurred through close contact with another case.
- 479 cases occurred in people who had traveled to international areas with sustained (ongoing) transmission and among their close contacts.
- 43,135 cases are either still being investigated to determine the source of exposure, or have an unknown source of exposure and are therefore assumed to be a result of community spread.
- The number of cases of COVID-19 being reported in the United States is rising quickly.
    - Early on, most cases in the United States were among travelers returning from affected countries or close contacts of people who had COVID-19.
    - Now, more and more cases are resulting from community spread where the source of the exposure is unknown.
- As COVID-19 activity continues to increase, it will be possible to track activity using some existing surveillance systems that track respiratory illnesses, including flu.
- CDC's most recent FluView showed that the percent of specimens testing positive for influenza at clinical laboratories is decreasing. At the same time, levels of influenza-like-illness (ILI)—as measured by people seeking care for fever, cough, and sore throat—increased for the second week in a row after declining for three weeks.
    - This means that more people are seeking care for respiratory illness than usual at this time of year and that the increase is not due to increasing influenza activity.
    - There are likely multiple factors that contribute to this increase. These may include concern over COVID-19 causing people to seek treatment for respiratory illness when they otherwise would not have, delayed or cancelled visits for routine healthcare, and the ILI surveillance system picking up COVID-19 illness activity.
- CDC and partners that collaborate on surveillance are adapting many of the surveillance systems that routinely collect information on viruses, illnesses, hospitalizations and deaths to better track COVID-19.
    - They are additionally creating new systems to track COVID-19.
    - All sources of information will be made available in one place on the web to facilitate tracking of COVID-19
    - The agency plans to roll out COVID-19 surveillance data on the website this week.
- As of March 23, 91 state and local public health labs in 50 states, the District of Columbia, Guam, and Puerto Rico verified they are successfully using COVID-19 diagnostic tests. See map showing which states and territories have one or more laboratories that have successfully verified and are currently using COVID-19 diagnostic tests.
- As of March 23, 2020, CDC and local and state public health laboratories had tested a total of 88,042 specimens.
- Private laboratories are increasing their testing capacity. In addition to the approximately 2,500 tests per day currently done nationally, it is projected that:
    - Roche will increase their capacity up to 10,000 tests per day by end of this week
    - BioReference will increase their capacity by an additional 3,000 tests per day.

AMERICAN OVERSIGHT

CDC Daily Key Points
Coronavirus Disease 2019 ("COVID-19") Pandemic
March 24, 2020 as of 9:30pm

- In addition, the Food and Drug Administration has issued a number of Emergency Use Authorizations for commercial manufacturers to develop other COVID-19 tests, including a point-of-care test that could deliver results in as short as 30 minutes.,

CDC GUIDANCE UPDATES

- On March 23, 2020 CDC posted additional guidance for specific community settings including:
  - Management of COVID-19 in Correctional and Detention Facilities,
  - Discontinuation of Transmission-Based Precautions and Disposition of Patients with COVID-19 in Healthcare Settings, and
  - Infection Control Guidance for Personnel at Blood and Plasma Collection Facilities.
- On March 22, CDC posted COVID-19 information specific to children including:
  - Tips for parents during school dismissal,
  - Guidance for Schools and Childcare Programs, and
  - Updated FAQs related to children and COVID-19
- On March 22, CDC posted Guidance for Retirement Communities and Independent Living to help them plan, prepare, and respond to COVID-19.
- On March 19, CDC updated technical guidance and consumer information about cleaning and disinfecting your home when someone is sick.
- On March 17, updates were made to CDC guidance on alternate non-95 PPE guidance: Strategies for Optimizing the Supply of N95 Respirators: Crisis/Alternate Strategies.
- CDC is reviewing and updating travel notices almost on a daily basis.
  - On March 23, CDC issued 9 additional Level 3 Travel notices for Ecuador, India, Indonesia, Philippines, Qatar, Romania, Saudi Arabia, Singapore, and South Africa.
- CDC updated its guidance for specimen collection for testing for COVID-19 to collect a single upper respiratory nasopharyngeal swab (NP) instead of an NP and oropharyngeal swab (OP).
- CDC also posted new guidance on when people who have had COVID-19 and have been isolating at home can discontinue isolating in Discontinuation of Home Isolation for Persons with COVID-19.
  - People with COVID-19 who have symptoms and were directed to care for themselves at home may discontinue home isolation if:
    - At least 3 days (72 hours) have passed since recovery—defined as resolution of fever without the use of fever-reducing medications and improvement in respiratory symptoms (e.g., cough, shortness of breath); and,
    - At least 7 days have passed since symptoms first appeared.
- CDC posted Guidance for child care settings, including a decision tree on when schools should close.

WHAT YOU CAN DO

- Everyone can do their part to help respond to this emerging public health threat:
  - On March 16, the White House announced a program called 15 Days to Slow the Spread, which is a nationwide effort to slow the spread of COVID-19 through the implementation of social distancing at all levels of society.

AMERICAN OVERSIGHT

    - CDC developed print resources to promote this message, including a Stay at home if you are sick! poster.
- Older people and people with severe chronic conditions should take special precautions because they are at higher risk of developing serious COVID-19 illness.
- If you are a healthcare provider, use your judgement to determine if a patient has signs and symptoms compatible with COVID-19 and whether the patient should be tested. Factors to consider, in addition to clinical symptoms, may include:
    - Does the patient have recent travel from an affected area?
    - Has the patient been in close contact with someone with COVID-19 or patients with pneumonia of unknown cause?
    - Does the patient reside in an area where there has been community spread of COVID-19?
- If you are a healthcare provider or a public health responder caring for a COVID-19 patient, please take care of yourself and follow recommended infection control procedures.
- CDC and federal partners recommend that people postpone routine medical or dental care at this time. This will help to reduce the burden on the healthcare system.
    - If you cannot postpone medical treatment, call your provider before visiting to see if they offer consultations by phone or telemedicine.
- People who get a fever or cough should consider whether they might have COVID-19, depending on where they live, their travel history, or other exposures.
    - More than half of the United States is seeing some level of community spread of COVID-19.
    - Testing for COVID-19 may be accessed through medical providers or public health departments, but there is no treatment for this virus.
    - Most people have mild illness and are able to recover at home without medical care.
- For people who are ill with COVID-19, but are not sick enough to be hospitalized, please follow CDC guidance on how to reduce the risk of spreading your illness to others. People who are mildly ill with COVID-19 are able to isolate at home during their illness.
- If you have been in China or another affected area or have been exposed to someone sick with COVID-19 in the last 14 days, you will face some limitations on your movement and activity. Please follow instructions during this time. Your cooperation is integral to the ongoing public health response to try to slow spread of this virus.

For more information please visit the Coronavirus Disease 2019 Outbreak Page at: www.cdc.gov/COVID19.

AMERICAN OVERSIGHT

NEW!

Third Edition of the CIFOR

Guidelines for Foodborne Disease Outbreak Response

The CIFOR Guidelines are a comprehensive source of information on foodborne disease investigation and control for local, state and federal health agencies.

The Guidelines describe:

- the overall approach to addressing foodborne disease outbreaks, including preparation, detection, investigation, control and follow-up.
- the roles of key organizations in foodborne disease outbreaks.

Download the new Guidelines for free: https://cifor.us

FL-DOH-20-0673-A-004015

Flip to see what's new in the Third Edition

AMERICAN OVERSIGHT

NEW in the CIFOR Guidelines Third Edition

Extremely streamlined and easy to read

Provides information on the value and use of complaint systems

Highlights Whole Genome Sequencing and Culture-Independent Diagnostic Testing)

Highlights expanded importance of epi data:

- Recommends routine interviewing to collect detailed exposure information
- Expands effective models of sub-cluster investigations and product tracebacks

Better illustrates how epi, lab, and environmental data come together

Highlights importance of environmental assessments

CIFOR is a multidisciplinary collaboration of national associations and federal agencies working together since 2006 to improve methods to detect, investigate, control and prevent foodborne disease outbreaks. **Learn more at https://cifor.us.**

March 16, 2020

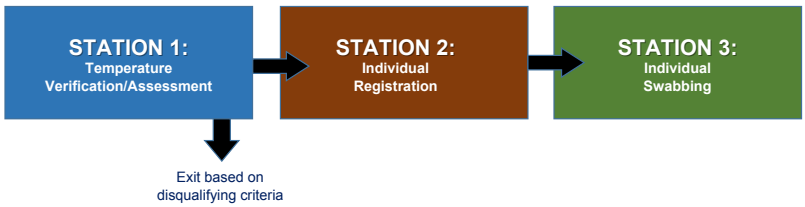
DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

1

AMERICAN OVERSIGHT

COVID-19 COMMUNITY-BASED TESTING SITES

PRE-SCREENING PROCESS AND INSTRUCTIONS:



- Individual visits website to determine need for testing at **[URL TBD]**
- Instructed to Bring:
  - Photo ID for all adults needing testing
  - Health insurance card (everyone will be tested regardless if they have insurance)
  - Healthcare or first responder ID
- Instructed not to take fever-reducing medicine prior to testing (such as Tylenol [acetaminophen] or Advil [ibuprofen]) for at least 6-8hrs prior to arrival

ESTIMATED TESTING SITE CAPACITY:

(per hour):

- 1 Lane Operation (for vehicles with 1 individual):
  12-24 individuals screened
  12 vehicles
- 2 Lane Operation (for vehicles with 2-4 individuals):
  48 individuals screened
  24 vehicles

PROCESS FLOW:

COVID-19

COMMUNITY-BASED TESTING SITES

CBTS FLOW

Security: Greeting and confirm windows can roll down and that persons are seated next to a window

DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

AMERICAN OVERSIGHT

COVID-19

COMMUNITY-BASED TESTING SITES

STATION 1: Temperature Verification/Assessment

Personnel Roles:

1. **Runners:** Take and document temperature on collection form (form holds patient ID number)
2. **Assessors:** Provide a document to vehicle providing public health information to include:
   - What should you do while you wait for test results?
   - Monitoring symptoms
   - If you test positive for COVID-19, continue to monitor your symptoms and manage appropriately
   - When can you stop isolating at home?

Individuals Must Meet one of these Criteria:

Criteria 1:	65 years of age and older with temperature of 99.6F or greater and respiratory symptoms
Criteria 2:	First responders, Healthcare workers* (regardless of symptoms)

Individuals not meeting criteria are asked to leave the line

If you develop symptoms after leaving the site, visit **[URL TBD]** to check if you qualify for testing

**Healthcare workers = personnel who are currently working in a healthcare facility, including long-term care facilities.*

DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

EAD: added “Criteria 3: Any person with respiratory symptoms and a temperature over 100.4F”

AMERICAN OVERSIGHT

COVID-19

COMMUNITY-BASED TESTING SITES

STATION 2: Individual Registration

Personnel Roles:

- **Recorder (1):** Document on written form demographic information for patient(s). Record unique identifier (barcode), site, date and lane number.

First	**Email**	**Form of Identification**
Last	**Address**	**Healthcare or First Responder ID**
Phone	**License Plate**	**Insurance Information**

Note: information collected may change based on testing company requirements

- **Recorder (2):** Registers document in electronic data collection tool capturing demographic information for patients to be tested

Unique Identifier (Barcode), Site, Date and Lane Info

Information flow dependent upon state requirements and processes

DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

AMERICAN OVERSIGHT

COVID-19 **COMMUNITY-BASED TESTING SITES**

STATION 3: Individual Swabbing

Personnel Roles:

Primary Swabber	Decon Staff	Secondary Swabber	Quality Control Staff	Runner
• Issue individual tissue (clear nasal passage) • Use pen light to check for nasal obstructions. Do not force swab – if an obstruction is encountered, try the other nostril. If both nostrils are obstructed, contact on-site medical provider. • Receive collection tube/swab • Take swab of patient(s) in car • Return swab back into tube • Label tube with patient ID • Insert tube into secondary containment (sample bag) • Receive decon wipe to decon sample bag • Place sample bag onto temporary sample bag staging table • Work with decon staff to doff top layer PPE • Remove PPE: Gloves, Sleeves	• Observe swabbing operation for safety/occupational contamination • Provide decon wipes without touching swabber(s) • Assist the swabber during doffing	• Don PPE (i.e., replace gloves and sleeves) to prepare for next vehicle • Becomes primary swabber for next vehicle	• Collects deconned sample bag to ensure sample ID is on the sample tube • Collects collection form from the runner • Verifies patient ID on tube and form is the same • Places form and sample bag in envelope, signs form as chain of custody, places envelope in shipping container • Confirms temperature in cooler stays within range	• Documents temperature on collection form and relevant demographic data • Stays with vehicle throughout all 3 stations • Returns to station 1 to prepare for next vehicle after donning clean PPE

DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

EAD: added to QC Staff: “confirms temperature in cooler stays within range” and added under runner, “ after donning clean PPE”

NOTE: identified need for Swabber to have either: a table to put bag/tube on, so they can provide tissue/gauze and also check nares for any obstruction prior to conducting swab or an “assistant swabber” to facilitate the nares review prior to swabbing

AMERICAN OVERSIGHT

COVID-19

COMMUNITY-BASED TESTING SITES

STATION 3: Individual Swabbing

Swab Processing:

Collection:

1. ***Swabber confirms verbal authorization from passenger***
2. ***Swabber confirms no obstruction in nares of person being swabbed (using pen light)***
3. ***Swabber collects sample***
4. ***Swabber bags collected sample***
    1. ***Offers tissue or gauze to person being swabbed***
    2. ***Conducts swab***
    3. ***Places swab into proper collection tube and breaks swab as needed***
    4. ***Caps sample tube***
    5. ***Places sealed tube in corresponding sample bag***
    6. ***Places tube, form, and sample bag into a second bag***
5. ***QC officer verifies that all UNIs match on sample tube, bag, and paperwork***
6. ***Sample is deposited in the refrigerator and then transferred to the insulated shipping container with cold pack and telatemp [must be packed by trained personnel]***
7. ***Samples are mailed to corresponding lab within 48 hours***
    1. ***Plan is to mail samples twice daily to appropriate lab***

DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

COMMUNITY-BASED TESTING SITES

CBTS OPERATION CONSIDERATIONS

OTHER CONSIDERATIONS FOR LOCAL DECISION:

- Security
- Local Fire/EMS Support
- Traffic Control
- Operator Communications
  - Including training and signage at each tent
- Linguistics / Interpreters
- Public Communication
- Water / Feeding for Operators
- Sanitation / Safety
- Training – Safety Officer
- Training – Quality Control Officer
- Recommendations for change of clothes/laundering of clothes worn during operations
- Access and Functional Capability Requirements
- Daily tracking and reporting mechanism for results

For additional information about Community-Based Testing Sites, please contact your FEMA Regional Administrator.

DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

EAD: added Local Fire/EMS support and Quality Control officer Training, recommendations for change of clothes/laundering of clothes work during operations

Should we also add:

1. handwashing stations/protocol?
2. How to mix/check bleach/sanitizing solution protocol
3. QC/temp monitoring protocol (including cold-pack storage overnight protocol)

to this slide?

AMERICAN OVERSIGHT

Pre-Screening Process and Instructions

- CALL or EMAIL a health care provider first. If the provider recommends obtaining a test or seek care, follow the provider's advice **BEFORE** going into any health care facility.
- **DO NOT** go to an emergency room to get a test for COVID-19 unless you are having a medical emergency. For COVID-19, that means severe respiratory symptoms, such as shortness of breath or breathing difficulties.
- DO call 911 or go to an emergency room if you are having a medical emergency. Tell the dispatcher your symptoms and proceed as advised.
- Instruct individuals to visit website, determining need for drive-thru testing at <URL TBD>.
- Instructed to bring to any CBTS:
  - Photo ID for all adults needing testing
  - Health insurance card (everyone will be tested regardless if they have insurance)
  - Healthcare or first responder ID
- Instructed not to take fever-reducing medicine within 6-8 hours prior to testing [such as Tylenol (acetaminophen) or Advil (ibuprofen)]
- If eligible, patients will be provided a list of available times and testing center(s) for their visit.
- People who come to be tested at the CBTS must bring:
  - Photo Identification (does not need to be government issued).
- If the CBTS personnel determine an individual meets the testing criteria, they will be tested. If the person does **NOT** meet the criteria to be tested, they will **NOT** be tested.

Other Considerations:

- Be prepared for longer wait times. No restrooms may be available.
- For the safety of all personnel, testing sites will only be operational contingent upon safe weather (testing sites may have to close unexpectedly as needed)

Media Presence

Be prepared for media personnel and/or live coverage. Although this may be discouraged by the community sites, it is a possibility. (Collaborate with State Health Department to protect patient privacy and discourage media coverage).

AMERICAN OVERSIGHT

Language/Translators

Telephone interpretation may be available for speakers of other languages or anyone requesting translation. Phone call-in translation is available. Local health systems have such partnerships and resources and can utilize what is currently used within local healthcare system networks.

Pre-Screening Criteria

1. **Criteria 1**: Anyone ≥65 years of age with on-site confirmed temperature of 99.6^{0}F **and** with respiratory symptoms
2. **Criteria 2:** First responders, Healthcare workers* (regardless of presence of symptoms). *This includes only staff with direct contact with patients (not those in administrative roles) or as determined at the state level.

Definition of First Responder: Any individual responding to the public health task or mission, as determined by the jurisdiction.

Definition of Healthcare Worker: any individual working or providing direct patient care in acute or critical settings (hospitals, clinics, long-term care facilities, emergency medicine).

Regional/State sites can clarify or expand this classification based on needs/demand and adjust accordingly.

Pre-Arrival to Testing Site Instructions

1. Ensure pre-screening completed online (highly recommended)
2. If there are multiple people in one vehicle, each person will be individually registered and be tested if they meet the testing criteria.
3. Passenger Capacity: 3 - Max of 4 individuals per vehicle
    a. Must be sitting at an operating/usable window
    b. additional passengers to be tested will have to start at the front of the line after moving to operational window
4. Every person(s) must remain in the vehicle from time of arrival to departure of testing area
5. Testing will be done via open vehicle window. Ensure windows are operational.

At Arrival to Testing Site Instructions

1. Pull forward slowly, as instructed until arriving to first station.
2. Place car into park.
3. Roll down window.
4. Shut off engine.

AMERICAN OVERSIGHT

Testing Flow- See Appendix A for 3-Station Personnel Role Details

Station 1 – Temperature verification/Assessment (est. time: 3-5 min)

- Assessors use infrared thermometers to verify individual temperature
  - Preference for laser thermometers to reduce any potential contact
- Assessor should verbalize date to the Runner assigned to each vehicle
  - Follow criteria guidelines to determine if individual should proceed or exit
    - If no temperature based on criteria (below), person should exit
    - If temperature noted according to guidelines below, the person should proceed with drive-thru testing
- Individuals must meet one of these 2 criteria:
  - **Criteria 1**: Anyone ≥65 years of age with on-site confirmed temperature of 99.6^{0}F or greater **and** with respiratory symptoms
  - **Criteria 2:** First responders, Healthcare workers* (regardless of presence of symptoms).
  - Individuals who do NOT meet testing criteria will exit the drive thru via a dedicated exit point
- Assessors provide an information packet to vehicle telling patients public health information to include contact information
- Assessors should disinfect or remove sleeves/outer gloves at decon station in station 1, according to their level of contact
  - No contact = disinfect
  - Contact = remove and replace outer layer of sleeves/gloves
- Runners document temperature on collection form and follow car through the entire site
  - Form holds patient ID number and other demographic information
  - Awaits confirmation from Assessor/Temp Checker that vehicle/individual will proceed to station 2
  - Follows each vehicle through entire process

Station 2 – Individual Registration (est.time: ~5 min per person)

- Recorders complete paper form with demographic information for each patient to be tested (information relayed to Recorders via the Runner for each car):
  - First Name
  - Last Name

AMERICAN OVERSIGHT

- Phone
- Email
- Address
- Insurance (Carrier, Plan ID, Group ID)
- Recorders enter patient information from form in electronic data collection tool

Station 3 – Swabbing and Decontamination (est. time: 6-8 min)

- **Primary Swabber**
  - Confirm verbal authorization from person being swabbed for swab collection (ask runner)
  - Issue individual tissue (clear nasal passage/cover cough/sneeze post collection)
  - Use pen light to check nares for obstructions
  - Receive collection tube/swab from runner
  - Take swab of individual(s) in car
  - Return swab back into tube
  - Label tube with patient ID
  - Insert tube into secondary containment (sample bag)
  - Receive decon wipe to decon sample bag
  - Place sample bag into temporary sample bag staging table
  - Places form and sample bag in envelope, signs form as chain of custody, places envelope in shipping container
  - Have QC officer verify all labels match, and place sample into sample cooler
    - Samples must stay at temperature between 2 -8 C
    - Samples must be shipped in less than 48 hours from collection
  - Work with decon staff to doff top layer PPE
- Runner should now doff all PPE/decon as appropriate, and then rehab, and get fresh PPE for next car. Please note if runner used clipboard as a writing surface, they would need to sanitize it.
- Remove PPE: Gloves, Sleeves, Decon staff (at least one decon staff at all times)
  - Observe swabbing operation for safety/occupational contamination
  - Provide decon wipes without touching swabber(s)

AMERICAN OVERSIGHT

    - Assist the swabber during doffing, following listed steps on signage in decon area
- **Secondary Swabber**
    - Don PPE (i.e., replace gloves and sleeves) PPE to prepare for next vehicle
    - Becomes primary swabber for next vehicle
- **Quality Control Staff**
    - Collects deconned sample bag to ensure sample ID is on the sample tube
    - Collects collection form from the runner
    - Verifies patient ID on tube and form is the same
    - Verifies temperature of samples from collection until shipping
        - Samples will be moved to refrigeration until shipping
        - Shipping should be arranged for at least 2x per day

        [add shipping and storage guidelines]
- **Insurance**
    - Billing to be done when request for lab results are submitted; if they do not have insurance that's acceptable
- Call Center (for results):
    - Contracted call center will be calling each individual/custodian with test results.
    - 3 scenarios have been predetermined with scripting to be given to those calling (THIS IS NOT FINALIZED/AVAILBLE)
- Provider Credentialing:
    - Registered Nurse (minimum), Advanced Practice Providers (Nurse Practitioner or Physician Assistant), Pharmacists trained on swabbing procedures, or Physicians. Provider must have a current and valid license as required by state operating in.

- **Laboratory Processing**
    - All labs will be processed using LabCorp or Quest.

AMERICAN OVERSIGHT

Staffing Recommendations

*consider multi-lane operations to expedite sample collection and minimize wait times in the event of increased surge

- Station 5 – Individual Swabbing

TESTING STATIONS	Fully Federal or private partner (1-lane operation)	Fully Federal or private partner (2-lane operation)
TEMP CHECK	Assessor: 2 Runners: 1	Assessor: 4 Runner: 2
REGISTRATION	Registration: 2 Runner: 1	Registration: 4 Runner: 2
SAMPLING/DECON	Samplers: 4 Runner: 1 Decon: 2	Samplers: 8 Runner: 2 Decon: 4
Admin	Logistics: 2 Safety Officer: 2 Admin/Planning: 1 Team Lead: 1	Logistics: 4 Safety Officer: 2 Admin/Planning: 1 Team Lead: 1 (P
Other Staff	Team Leader(Provider) : 1	Team Leader(provider): 1 Water/Sanitation: 3
Total Count	**20**	**38**

- Please note that security and EMS need to be discussed with the local community

Individual Roles

Role	PPE
Temp checker	N95, Scrubs, Gown, Double Gloves, Faceshield, Apron, Ear Loop Mask, Sleeves
Security	Gloves, Faceshield, N95, Gown
HCP	PAPR, Tyvek, Apron, Double glove, Booties, Shroud, Scrubs, Sleeves

AMERICAN OVERSIGHT

Runner / Documentation	Goggles, Gown, Double Gloves, Scrubs, N95, Sleeves
Decontamination	Tyvek, Booties, Double Glove, N95, Shroud, Scrubs
Logs	Work Gloves, Surgical Mask, Faceshield
Safety Officer	Faceshield, N95, Gloves, Scrubs, Gown
Admin / Finance	Computer, Faceshield, Gloves, Scrubs
Team Lead	Faceshield, Ear Loop Mask, Gloves, Apron, Scrubs
Data Entry	Computer, Faceshield, Ear Loop Mask, Gloves, Scrubs
Quality Control / Sample Processing	N95, Scrubs, Gown, Gloves, Faceshield, Apron, Ear Loop Mask

AMERICAN OVERSIGHT

Estimated Community Based Testing Site (CBTS) Capacity

- 1-lane operation:
  - 12-24 (max) individuals screened per hour
- 2-lane operation for vehicles with driver and 1+passenger(s):
  - 48 (max) individuals screened per hour
  - ~24 vehicles per hour at each station
  - 12 hours a day operational period

Recommended Training

All team members:

- Personal Protective Equipment (PPE) Types (per role requirement), Donning and Doffing, PPE usage, PPE decontamination between patients, PPE disposal
- Respiratory Protection / Fit Testing
- Role-specific training (process, communications to team and persons being tested)
- Drive Through Site Operations, Safety, Clean Boundaries, PPE requirements in potentially contaminated areas, Leadership and Chain of Command, Emergency Procedures

Additional Training for Specific Site Roles:

Temp checker (Assessor)	Temperature monitoring equipment training; crowd control, standard greetings (script)
Security	NA
HCP	Scope of Practice, Code Procedures, Data Reporting Plan to Local Health
Runner	NA
Decontamination	Spill cleanup
Logs	Inventory, Resupply ordering procedures
Safety Officer	ICS 215, 208, HASP/HERA for site/region
Admin / Finance / Data entry	Electronic record procedures, site personnel (accountability), end of shift screening data
Team Lead	Public Information / Talking Points
Quality Control / Sample Processing	Sample processing form completion (site specific), chain of custody procedures, sample handling, processing, storage, packaging for transfer

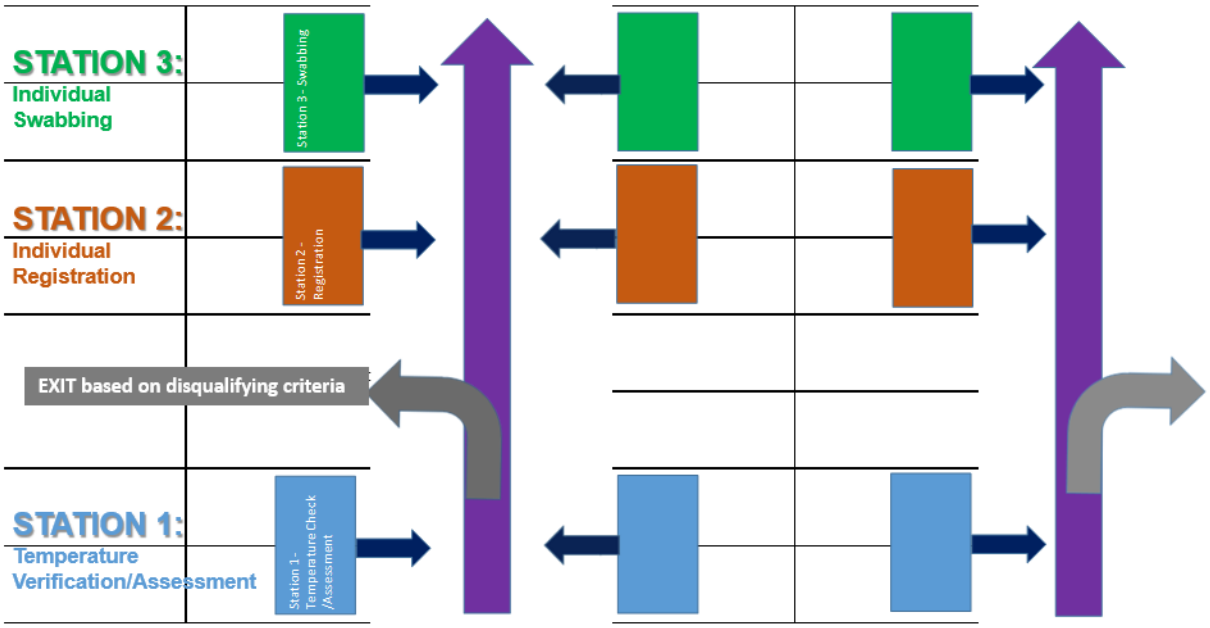
AMERICAN OVERSIGHT

Site Request / Site Suitability Requests

- Physical Address
- Spacing Recommendations
  - 2-lane drive-through set up: 80 ft x 50 ft (44 personnel)
  - 1-lane drive-through set up: 80 ft x 25 ft (20 personnel)
- Traffic flow pattern / map in and around site
- ICS 206 Medical Plan Completion (to best of ability)
- Points of Contact for Security (local law enforcement), , Local and/or State Health Department, Local Fire/EMS services, Biohazard Waste Services (e.g., Local Health Department)
- Other anticipated requirements (e.g., gaps in supply list, personnel augmentation)

Other Operations Considerations

- Security
- Local Fire/EMS standby
- Communications for site operations
- Linguistics/
- Public Communication
- Water/Sanitation
    - Define hazardous waste and who will collect
- Training – Safety Officer
- Training – Quality Control Officer
- Report mechanism for results
    - Lab reports results to local public health department for contact screening
    - Call center for patients test results (being established)
- Equipment storage
    - Refrigeration of samples/ice packs
    - Tents (if applicable)
    - PPE
    - Other equipment
- Handwashing stations



AMERICAN OVERSIGHT

CBTS Staff Participation – Post Operation

- All participants involved in the CBTS will be followed up in accordance with local and state Department of Public Health requirements and ideally, would be consistent with healthcare worker protocols in that designated area.

Appendix A: Community-Based Testing Sites (CBTS) Supply List (see attached "Complete CBTS Supply List 17Mar2020 1130hrs")

Appendix B: Example CBTS Flow Map

Appendix C: CBTS Station 3 Individual Swabbing

Personnel Roles:

Primary Swabber	Decon Staff	Secondary Swabber	Quality Control Staff	Runner
• Issue individual tissue (clear nasal passage) • Use pen light to check for nasal obstructions • Receive collection tube/swab • Take swab of patient(s) in car • Return swab back into tube • Label tube with patient ID • Insert tube into secondary containment (sample bag) • Receive decon wipe to decon sample bag • Place sample bag onto temporary sample	• Observe swabbing operation for safety/occupational contamination • Provide decon wipes without touching swabber(s) • Assist the swabber during doffing	• Don PPE (i.e., replace gloves and sleeves) to prepare for next vehicle • Becomes primary swabber for next vehicle	• Collects deconned sample bag to ensure sample ID is on the sample tube • Collects collection form from the runner • Verifies patient ID on tube and form is the same • Places form and sample bag in bag, seals form as chain of custody, places envelope in shipping container	• Documents temperature on collection form and relevant demographic data • Stays with vehicle throughout all 3 stations • Returns to station 1 to

COVID-19 COMMUNITY-BASED TESTING SITES PROCESS AND STAFFING FLOW

Commissioned Corps Headquarters

March 16, 2020

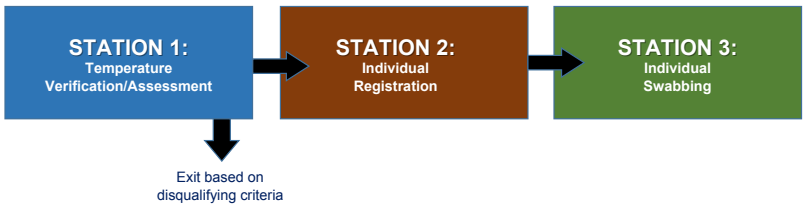
DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

1

AMERICAN OVERSIGHT

COVID-19 COMMUNITY-BASED TESTING SITES

PRE-SCREENING PROCESS AND INSTRUCTIONS:



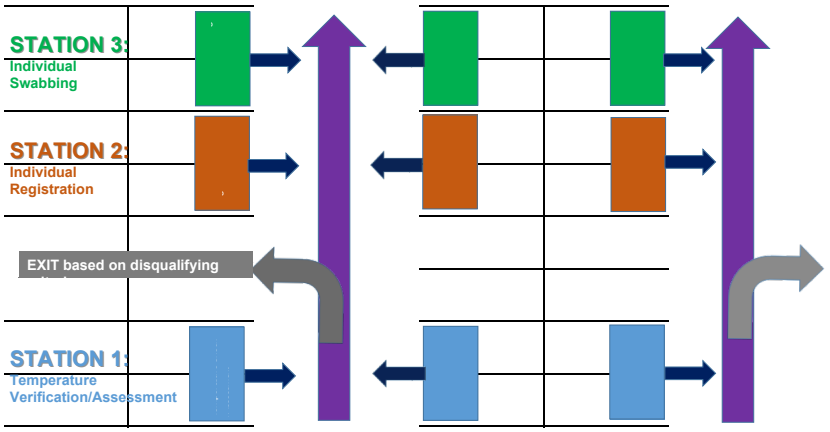
- Individual visits website to determine need for testing at **[URL TBD]**
- Instructed to Bring:
  - Photo ID for all adults needing testing
  - Health insurance card (everyone will be tested regardless if they have insurance)
  - Healthcare or first responder ID
- Instructed not to take fever-reducing medicine prior to testing (such as Tylenol [acetaminophen] or Advil [ibuprofen]) for at least 6-8hrs prior to arrival

ESTIMATED TESTING SITE CAPACITY:

(per hour):

- 1 Lane Operation (for vehicles with 1 individual):
  12-24 individuals screened
  12 vehicles
- 2 Lane Operation (for vehicles with 2-4 individuals):
  48 individuals screened
  24 vehicles

PROCESS FLOW:



DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

AMERICAN OVERSIGHT

COVID-19

COMMUNITY-BASED TESTING SITES

CBTS FLOW

Security: Greeting and confirm windows can roll down and that persons are seated next to a window

DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

AMERICAN OVERSIGHT

COVID-19

COMMUNITY-BASED TESTING SITES

STATION 1: Temperature Verification/Assessment

Personnel Roles:

1. **Runners:** Take and document temperature on collection form (form holds patient ID number)
2. **Assessors:** Provide a document to vehicle providing public health information to include:
   - What should you do while you wait for test results?
   - Monitoring symptoms
   - If you test positive for COVID-19, continue to monitor your symptoms and manage appropriately
   - When can you stop isolating at home?

Individuals Must Meet one of these Criteria:

Criteria 1:	65 years of age and older with temperature of 99.6F or greater and respiratory symptoms
Criteria 2:	First responders, Healthcare workers* (regardless of symptoms)

Individuals not meeting criteria are asked to leave the line

If you develop symptoms after leaving the site, visit **[URL TBD]** to check if you qualify for testing

**Healthcare workers = personnel who are currently working in a healthcare facility, including long-term care facilities.*

DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

EAD: added “Criteria 3: Any person with respiratory symptoms and a temperature over 100.4F”

AMERICAN OVERSIGHT

COVID-19

COMMUNITY-BASED TESTING SITES

STATION 2: Individual Registration

Personnel Roles:

- **Recorder (1):** Document on written form demographic information for patient(s). Record unique identifier (barcode), site, date and lane number.

First	**Email**	**Form of Identification**
Last	**Address**	**Healthcare or First Responder ID**
Phone	**License Plate**	**Insurance Information**

Note: information collected may change based on testing company requirements

- **Recorder (2):** Registers document in electronic data collection tool capturing demographic information for patients to be tested

Unique Identifier (Barcode), Site, Date and Lane Info

Information flow dependent upon state requirements and processes

DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

AMERICAN OVERSIGHT

COVID-19 **COMMUNITY-BASED TESTING SITES**

STATION 3: Individual Swabbing

Personnel Roles:

Primary Swabber	Decon Staff	Secondary Swabber	Quality Control Staff	Runner
• Issue individual tissue (clear nasal passage) • Use pen light to check for nasal obstructions. Do not force swab – if an obstruction is encountered, try the other nostril. If both nostrils are obstructed, contact on-site medical provider. • Receive collection tube/swab • Take swab of patient(s) in car • Return swab back into tube • Label tube with patient ID • Insert tube into secondary containment (sample bag) • Receive decon wipe to decon sample bag • Place sample bag onto temporary sample bag staging table • Work with decon staff to doff top layer PPE • Remove PPE: Gloves, Sleeves	• Observe swabbing operation for safety/occupational contamination • Provide decon wipes without touching swabber(s) • Assist the swabber during doffing	• Don PPE (i.e., replace gloves and sleeves) to prepare for next vehicle • Becomes primary swabber for next vehicle	• Collects deconned sample bag to ensure sample ID is on the sample tube • Collects collection form from the runner • Verifies patient ID on tube and form is the same • Places form and sample bag in envelope, signs form as chain of custody, places envelope in shipping container • Confirms temperature in cooler stays within range	• Documents temperature on collection form and relevant demographic data • Stays with vehicle throughout all 3 stations • Returns to station 1 to prepare for next vehicle after donning clean PPE

DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

EAD: added to QC Staff: “confirms temperature in cooler stays within range” and added under runner, “ after donning clean PPE”

NOTE: identified need for Swabber to have either: a table to put bag/tube on, so they can provide tissue/gauze and also check nares for any obstruction prior to conducting swab or an “assistant swabber” to facilitate the nares review prior to swabbing

AMERICAN OVERSIGHT

COVID-19

COMMUNITY-BASED TESTING SITES

STATION 3: Individual Swabbing

Swab Processing:

Collection:

1. ***Swabber confirms verbal authorization from passenger***
2. ***Swabber confirms no obstruction in nares of person being swabbed (using pen light)***
3. ***Swabber collects sample***
4. ***Swabber bags collected sample***
    1. ***Offers tissue or gauze to person being swabbed***
    2. ***Conducts swab***
    3. ***Places swab into proper collection tube and breaks swab as needed***
    4. ***Caps sample tube***
    5. ***Places sealed tube in corresponding sample bag***
    6. ***Places tube, form, and sample bag into a second bag***
5. ***QC officer verifies that all UNIs match on sample tube, bag, and paperwork***
6. ***Sample is deposited in the refrigerator and then transferred to the insulated shipping container with cold pack and telatemp [must be packed by trained personnel]***
7. ***Samples are mailed to corresponding lab within 48 hours***
    1. ***Plan is to mail samples twice daily to appropriate lab***

STAFFING RECOMMENDATIONS

TESTING STATIONS	STATE CBTS (1-lane operation)	STATE CBTS (2-lane operation)
Assessment	Assessor: 2 Runners: 1	Assessor: 4 Runner: 2
Registration	Registration: 2 Runner: 1	Registration: 4 Runner: 2
Sampling/Decon	Samplers: 4 Runner: 1 Decon: 2	Samplers: 8 Runner: 2 Decon: 4
Admin	Logistics: 2 Safety Officer: 2 Admin/Planning: 1 Team Lead: 1	Logistics: 4 Safety Officer: 2 Admin/Planning: 1 Team Lead: 1
Other Staff	Facilitator: 1	Facilitator: 1 Water/Sanitation: 3
Estimated Personnel	20	38

2-lane operation for vehicles with driver and 1+ passenger(s): 12 (min) – 48 (max) individuals/hour

DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

**make sure there is a note/slide that includes # position type per hour, because while assessment and/or registration pax can stay for ~4-8hrs, swabber swill need to rotate more often, which ultimately requires more swabbers

AMERICAN OVERSIGHT

COVID-19

COMMUNITY-BASED TESTING SITES

CBTS OPERATION CONSIDERATIONS

OTHER CONSIDERATIONS FOR LOCAL DECISION:

- Security
- Local Fire/EMS Support
- Traffic Control
- Operator Communications
  - Including training and signage at each tent
- Linguistics / Interpreters
- Public Communication
- Water / Feeding for Operators
- Sanitation / Safety
- Training – Safety Officer
- Training – Quality Control Officer
- Recommendations for change of clothes/laundering of clothes worn during operations
- Access and Functional Capability Requirements
- Daily tracking and reporting mechanism for results

For additional information about Community-Based Testing Sites, please contact your FEMA Regional Administrator.

DELIBERATIVE AND PRE-DECISIONAL COMMUNICATION

EAD: added Local Fire/EMS support and Quality Control officer Training, recommendations for change of clothes/laundering of clothes work during operations

Should we also add:

1. handwashing stations/protocol?
2. How to mix/check bleach/sanitizing solution protocol
3. QC/temp monitoring protocol (including cold-pack storage overnight protocol)

to this slide?

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

Pre-Screening Process and Instructions

- CALL or EMAIL a health care provider first. If the provider recommends obtaining a test or seek care, follow the provider's advice **BEFORE** going into any health care facility.
- **DO NOT** go to an emergency room to get a test for COVID-19 unless you are having a medical emergency. For COVID-19, that means severe respiratory symptoms, such as shortness of breath or breathing difficulties.
- DO call 911 or go to an emergency room if you are having a medical emergency. Tell the dispatcher your symptoms and proceed as advised.
- Instruct individuals to visit website, determining need for drive-thru testing at <URL TBD>.
- Instructed to bring to any CBTS:
  - Photo ID for all adults needing testing
  - Health insurance card (everyone will be tested regardless if they have insurance)
  - Healthcare or first responder ID
- Instructed not to take fever-reducing medicine within 6-8 hours prior to testing [such as Tylenol (acetaminophen) or Advil (ibuprofen)]
- If eligible, patients will be provided a list of available times and testing center(s) for their visit.
- People who come to be tested at the CBTS must bring:
  - Photo Identification (does not need to be government issued).
- If the CBTS personnel determine an individual meets the testing criteria, they will be tested. If the person does **NOT** meet the criteria to be tested, they will **NOT** be tested.

Other Considerations:

- Be prepared for longer wait times. No restrooms may be available.
- For the safety of all personnel, testing sites will only be operational contingent upon safe weather (testing sites may have to close unexpectedly as needed)

Media Presence

Be prepared for media personnel and/or live coverage. Although this may be discouraged by the community sites, it is a possibility. (Collaborate with State Health Department to protect patient privacy and discourage media coverage).

AMERICAN OVERSIGHT

Language/Translators

Telephone interpretation may be available for speakers of other languages or anyone requesting translation. Phone call-in translation is available. Local health systems have such partnerships and resources and can utilize what is currently used within local healthcare system networks.

Pre-Screening Criteria

1. **Criteria 1**: Anyone ≥65 years of age with on-site confirmed temperature of 99.6^{0}F **and** with respiratory symptoms
2. **Criteria 2:** First responders, Healthcare workers* (regardless of presence of symptoms). *This includes only staff with direct contact with patients (not those in administrative roles) or as determined at the state level.

Definition of First Responder: Any individual responding to the public health task or mission, as determined by the jurisdiction.

Definition of Healthcare Worker: any individual working or providing direct patient care in acute or critical settings (hospitals, clinics, long-term care facilities, emergency medicine).

Regional/State sites can clarify or expand this classification based on needs/demand and adjust accordingly.

Pre-Arrival to Testing Site Instructions

1. Ensure pre-screening completed online (highly recommended)
2. If there are multiple people in one vehicle, each person will be individually registered and be tested if they meet the testing criteria.
3. Passenger Capacity: 3 - Max of 4 individuals per vehicle
    a. Must be sitting at an operating/usable window
    b. additional passengers to be tested will have to start at the front of the line after moving to operational window
4. Every person(s) must remain in the vehicle from time of arrival to departure of testing area
5. Testing will be done via open vehicle window. Ensure windows are operational.

At Arrival to Testing Site Instructions

1. Pull forward slowly, as instructed until arriving to first station.
2. Place car into park.
3. Roll down window.
4. Shut off engine.

AMERICAN OVERSIGHT

Testing Flow- See Appendix A for 3-Station Personnel Role Details

Station 1 – Temperature verification/Assessment (est. time: 3-5 min)

- Assessors use infrared thermometers to verify individual temperature
  - Preference for laser thermometers to reduce any potential contact
- Assessor should verbalize date to the Runner assigned to each vehicle
  - Follow criteria guidelines to determine if individual should proceed or exit
    - If no temperature based on criteria (below), person should exit
    - If temperature noted according to guidelines below, the person should proceed with drive-thru testing
- Individuals must meet one of these 2 criteria:
  - **Criteria 1**: Anyone ≥65 years of age with on-site confirmed temperature of 99.6^{0}F or greater **and** with respiratory symptoms
  - **Criteria 2:** First responders, Healthcare workers* (regardless of presence of symptoms).
  - Individuals who do NOT meet testing criteria will exit the drive thru via a dedicated exit point
- Assessors provide an information packet to vehicle telling patients public health information to include contact information
- Assessors should disinfect or remove sleeves/outer gloves at decon station in station 1, according to their level of contact
  - No contact = disinfect
  - Contact = remove and replace outer layer of sleeves/gloves
- Runners document temperature on collection form and follow car through the entire site
  - Form holds patient ID number and other demographic information
  - Awaits confirmation from Assessor/Temp Checker that vehicle/individual will proceed to station 2
  - Follows each vehicle through entire process

Station 2 – Individual Registration (est.time: ~5 min per person)

- Recorders complete paper form with demographic information for each patient to be tested (information relayed to Recorders via the Runner for each car):
  - First Name
  - Last Name

AMERICAN OVERSIGHT

- Phone
- Email
- Address
- Insurance (Carrier, Plan ID, Group ID)
- Recorders enter patient information from form in electronic data collection tool

Station 3 – Swabbing and Decontamination (est. time: 6-8 min)

- **Primary Swabber**
  - Confirm verbal authorization from person being swabbed for swab collection (ask runner)
  - Issue individual tissue (clear nasal passage/cover cough/sneeze post collection)
  - Use pen light to check nares for obstructions
  - Receive collection tube/swab from runner
  - Take swab of individual(s) in car
  - Return swab back into tube
  - Label tube with patient ID
  - Insert tube into secondary containment (sample bag)
  - Receive decon wipe to decon sample bag
  - Place sample bag into temporary sample bag staging table
  - Places form and sample bag in envelope, signs form as chain of custody, places envelope in shipping container
  - Have QC officer verify all labels match, and place sample into sample cooler
    - Samples must stay at temperature between 2 -8 C
    - Samples must be shipped in less than 48 hours from collection
  - Work with decon staff to doff top layer PPE
- Runner should now doff all PPE/decon as appropriate, and then rehab, and get fresh PPE for next car. Please note if runner used clipboard as a writing surface, they would need to sanitize it.
- Remove PPE: Gloves, Sleeves, Decon staff (at least one decon staff at all times)
  - Observe swabbing operation for safety/occupational contamination
  - Provide decon wipes without touching swabber(s)

AMERICAN OVERSIGHT

    - Assist the swabber during doffing, following listed steps on signage in decon area
- **Secondary Swabber**
    - Don PPE (i.e., replace gloves and sleeves) PPE to prepare for next vehicle
    - Becomes primary swabber for next vehicle
- **Quality Control Staff**
    - Collects deconned sample bag to ensure sample ID is on the sample tube
    - Collects collection form from the runner
    - Verifies patient ID on tube and form is the same
    - Verifies temperature of samples from collection until shipping
        - Samples will be moved to refrigeration until shipping
        - Shipping should be arranged for at least 2x per day

        [add shipping and storage guidelines]
- **Insurance**
    - Billing to be done when request for lab results are submitted; if they do not have insurance that's acceptable
- Call Center (for results):
    - Contracted call center will be calling each individual/custodian with test results.
    - 3 scenarios have been predetermined with scripting to be given to those calling (THIS IS NOT FINALIZED/AVAILBLE)
- Provider Credentialing:
    - Registered Nurse (minimum), Advanced Practice Providers (Nurse Practitioner or Physician Assistant), Pharmacists trained on swabbing procedures, or Physicians. Provider must have a current and valid license as required by state operating in.

- **Laboratory Processing**
    - All labs will be processed using LabCorp or Quest.

AMERICAN OVERSIGHT

Staffing Recommendations

*consider multi-lane operations to expedite sample collection and minimize wait times in the event of increased surge

- Station 5 – Individual Swabbing

TESTING STATIONS	Fully Federal or private partner (1-lane operation)	Fully Federal or private partner (2-lane operation)
TEMP CHECK	Assessor: 2 Runners: 1	Assessor: 4 Runner: 2
REGISTRATION	Registration: 2 Runner: 1	Registration: 4 Runner: 2
SAMPLING/DECON	Samplers: 4 Runner: 1 Decon: 2	Samplers: 8 Runner: 2 Decon: 4
Admin	Logistics: 2 Safety Officer: 2 Admin/Planning: 1 Team Lead: 1	Logistics: 4 Safety Officer: 2 Admin/Planning: 1 Team Lead: 1 (P
Other Staff	Team Leader(Provider) : 1	Team Leader(provider): 1 Water/Sanitation: 3
Total Count	**20**	**38**

- Please note that security and EMS need to be discussed with the local community

Individual Roles

Role	PPE
Temp checker	N95, Scrubs, Gown, Double Gloves, Faceshield, Apron, Ear Loop Mask, Sleeves
Security	Gloves, Faceshield, N95, Gown
HCP	PAPR, Tyvek, Apron, Double glove, Booties, Shroud, Scrubs, Sleeves

AMERICAN OVERSIGHT

Runner / Documentation	Goggles, Gown, Double Gloves, Scrubs, N95, Sleeves
Decontamination	Tyvek, Booties, Double Glove, N95, Shroud, Scrubs
Logs	Work Gloves, Surgical Mask, Faceshield
Safety Officer	Faceshield, N95, Gloves, Scrubs, Gown
Admin / Finance	Computer, Faceshield, Gloves, Scrubs
Team Lead	Faceshield, Ear Loop Mask, Gloves, Apron, Scrubs
Data Entry	Computer, Faceshield, Ear Loop Mask, Gloves, Scrubs
Quality Control / Sample Processing	N95, Scrubs, Gown, Gloves, Faceshield, Apron, Ear Loop Mask

AMERICAN OVERSIGHT

Estimated Community Based Testing Site (CBTS) Capacity

- 1-lane operation:
  - 12-24 (max) individuals screened per hour
- 2-lane operation for vehicles with driver and 1+passenger(s):
  - 48 (max) individuals screened per hour
  - ~24 vehicles per hour at each station
  - 12 hours a day operational period

Recommended Training

All team members:

- Personal Protective Equipment (PPE) Types (per role requirement), Donning and Doffing, PPE usage, PPE decontamination between patients, PPE disposal
- Respiratory Protection / Fit Testing
- Role-specific training (process, communications to team and persons being tested)
- Drive Through Site Operations, Safety, Clean Boundaries, PPE requirements in potentially contaminated areas, Leadership and Chain of Command, Emergency Procedures

Additional Training for Specific Site Roles:

Temp checker (Assessor)	Temperature monitoring equipment training; crowd control, standard greetings (script)
Security	NA
HCP	Scope of Practice, Code Procedures, Data Reporting Plan to Local Health
Runner	NA
Decontamination	Spill cleanup
Logs	Inventory, Resupply ordering procedures
Safety Officer	ICS 215, 208, HASP/HERA for site/region
Admin / Finance / Data entry	Electronic record procedures, site personnel (accountability), end of shift screening data
Team Lead	Public Information / Talking Points
Quality Control / Sample Processing	Sample processing form completion (site specific), chain of custody procedures, sample handling, processing, storage, packaging for transfer

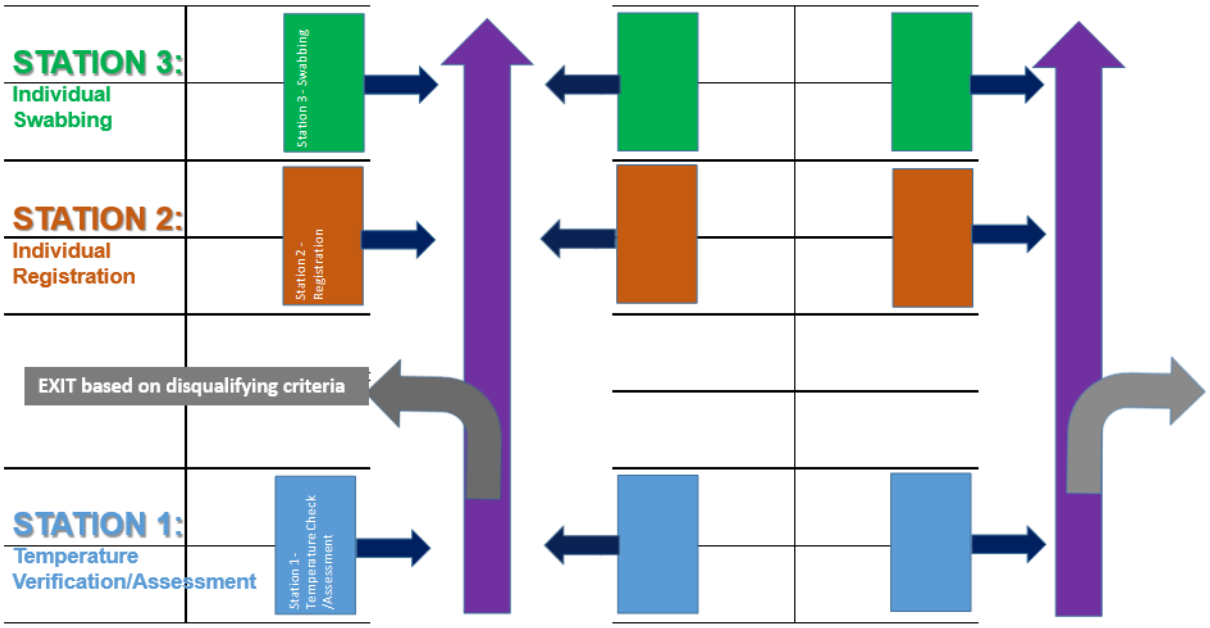
AMERICAN OVERSIGHT

Site Request / Site Suitability Requests

- Physical Address
- Spacing Recommendations
  - 2-lane drive-through set up: 80 ft x 50 ft (44 personnel)
  - 1-lane drive-through set up: 80 ft x 25 ft (20 personnel)
- Traffic flow pattern / map in and around site
- ICS 206 Medical Plan Completion (to best of ability)
- Points of Contact for Security (local law enforcement), , Local and/or State Health Department, Local Fire/EMS services, Biohazard Waste Services (e.g., Local Health Department)
- Other anticipated requirements (e.g., gaps in supply list, personnel augmentation)

Other Operations Considerations

- Security
- Local Fire/EMS standby
- Communications for site operations
- Linguistics/
- Public Communication
- Water/Sanitation
    - Define hazardous waste and who will collect
- Training – Safety Officer
- Training – Quality Control Officer
- Report mechanism for results
    - Lab reports results to local public health department for contact screening
    - Call center for patients test results (being established)
- Equipment storage
    - Refrigeration of samples/ice packs
    - Tents (if applicable)
    - PPE
    - Other equipment
- Handwashing stations



AMERICAN OVERSIGHT

CBTS Staff Participation – Post Operation

- All participants involved in the CBTS will be followed up in accordance with local and state Department of Public Health requirements and ideally, would be consistent with healthcare worker protocols in that designated area.

Appendix A: Community-Based Testing Sites (CBTS) Supply List (see attached "Complete CBTS Supply List 17Mar2020 1130hrs")

Appendix B: Example CBTS Flow Map

Appendix C: CBTS Station 3 Individual Swabbing

Personnel Roles:

Primary Swabber	Decon Staff	Secondary Swabber	Quality Control Staff	Runner
• Issue individual tissue (clear nasal passage) • Use pen light to check for nasal obstructions • Receive collection tube/swab • Take swab of patient(s) in car • Return swab back into tube • Label tube with patient ID • Insert tube into secondary containment (sample bag) • Receive decon wipe to decon sample bag • Place sample bag onto temporary sample	• Observe swabbing operation for safety/occupational contamination • Provide decon wipes without touching swabber(s) • Assist the swabber during doffing	• Don PPE (i.e., replace gloves and sleeves) to prepare for next vehicle • Becomes primary swabber for next vehicle	• Collects deconned sample bag to ensure sample ID is on the sample tube • Collects collection form from the runner • Verifies patient ID on tube and form is the same • Places form and sample bag in bag and seals form as chain of custody, places envelope in shipping container	• Documents temperature on collection form and relevant demographic data • Stays with vehicle throughout all 3 stations • Returns to station 1 to

Subject: COVID-19 Stakeholder Call to Acton
Importance: High

Office of the Assistant Secretary for Preparedness and Response hosts COVID-19 stakeholder call

The United States is currently responding to an outbreak of respiratory disease caused by a novel (new) coronavirus. Our public health and medical response is aggressive and multi-layered, with the goal of detecting introductions of this virus in the United States, understanding virus transmission, and reducing potential spread and impact.

We know that planning for an emerging infectious disease outbreak, like COVID-19, is critical to protecting the health and welfare of our nation. As such, we invite you to join a call with representatives from the U.S. Department of Health and Human Services to discuss emerging developments in the COVID-19 response and to learn about activities your jurisdictions can do now to prepare for, respond to, and be resilient in the face of COVID-19.

Invited participants include Health Care Coalitions; National Hospital Preparedness Program participants; and nongovernmental associations serving the needs of long term care facilities and vulnerable populations.

What: COVID-19 Stakeholder Call to Action
When: Monday, March 2, 2020 (6:00-7:00 pm ET)
Dial-in Number: 1-800-369-1924
Passcode: 8652907

AMERICAN OVERSIGHT

COVID-19 Healthcare Planning Checklist

Hover over form fields for instructions.

Planning for a potential emerging infectious disease pandemic, like COVID-19, is critical to protecting the health and welfare of our nation. To assist state, local, tribal, and territorial partners in their planning efforts, the U.S. Department of Health and Human Services (HHS) Office of the Assistant Secretary for Preparedness and Response has developed the following checklist. It identifies specific activities your jurisdiction can do now to prepare for, respond to, and be resilient in the face of COVID-19. Many of the activities in this checklist are specific for COVID-19, however many, pertain to any public health emergency.

This checklist is adapted from a variety of HHS Pandemic Influenza Pandemic Planning resources. It is not intended to set forth mandatory requirements by the Federal government. Each jurisdiction should determine for itself whether it is adequately prepared for disease outbreaks in accordance with its own laws and authorities. We strongly encourage continued review of HHS' Centers for Disease Control (CDC) COVID-19 guidance which is available on their website for the most current information.

1. **Safety / Infection Control Activities**

Completed	In Progress	Not Started	Activities
○	○	○	1.1 Develop a pandemic safety plan and appoint a safety officer to modify as required.
○	○	○	1.2 Develop an agency/facility pandemic safety plan and appoint a safety officer to modify as required.
○	○	○	1.3 Provide staff education about COVID-19 infection control and update polices as required.
○	○	○	1.4 Support N95 respirator fit-testing for all agency/facility employees and just-in-time education on recommended infection control precautions including fit checking, applying simple mask to patients with cough, and hand hygiene.
○	○	○	1.5 Monitor availability of N95 respirators/powered air purifying respirators (PAPRs) and other supplies including alcohol-based hand disinfectants, gloves, etc., and watch and alert coalition members to supply shortages. Make recommendations on possible alternatives.
○	○	○	1.6 Prepare guidelines for conservative and re-use of N95 respirators/PAPRs if severe shortages are imminent (ideally regionally and in conjunction with local public health, occupational safety, and infection prevention providers and agencies - for example, consider use by only the highest-risk staff, re-use in selected situations, continued use while working on cohorted units, etc.).
○	○	○	1.7 Plan contingencies if appropriate levels of respiratory protection are unavailable.
○	○	○	1.8 Develop guidance for staff monitoring for signs of illness (including self-reporting, self-quarantine, and start/end of shift evaluation) and create a mechanism for reporting both illness and absenteeism.
○	○	○	1.9 Develop a return to work post illness policy for health care workers. This should be as consistent as possible across the coalition.
○	○	○	1.10 Encourage HCFs to plan for staff access to medical care for themselves and their families; determine whether illness will be handled as workers' compensation or personal insurance depending on situation/criteria and share best practices.
○	○	○	1.11 Determine contingency plan for at-risk staff (e.g., pregnant, other defined risk groups) including job expectations and potential alternate roles and locations.
○	○	○	1.12 Evaluate the need for family support to enable staff to work (e.g., childcare, pet care). Provide information for family care plans.

AMERICAN OVERSIGHT

FL-DOH-20-0673-A-004069

2. **EMS Activities**

Completed	In Progress	Not Started	Activities
○	○	○	2.1 Determine coordination mechanisms, scope, and likely authorities between coalition EMS agencies including information sharing, resource monitoring/assistance, and policy coordination. Work with local intelligence fusion centers to assist with information sharing and coordination.
○	○	○	2.2 Determine actions that the state EMS agency is likely to take including: • Suspension or modification of operational requirements for EMS agencies • Specific emergency orders or actions that may limit liability and/or expand scope of operations
○	○	○	2.3 Determine local ordinances or laws that may affect EMS disaster operations and the authorities or ability to suspend or modify if needed to support non-traditional operations.
○	○	○	2.4 Evaluate available indicators that may be needed for planning or by other partners and how to track them, e.g., EEI such as number of transports, number of potential COVID-19 cases, staff illness/absenteeism.
○	○	○	2.5 Evaluate indicators that have effects on EMS and coordinate access through the health care coalition (e.g., status of emergency departments, alternate care sites, epidemiologic information/ forecasting, weather (e.g., snowstorms), availability of staff, availability of supplies).
○	○	○	2.6 Determine vulnerable supplies and coordinate with vendors and the health care coalition to develop contingency plans/allocation plans.
○	○	○	2.7 Develop public messages that emphasize using 911 only for life-threatening emergencies and coordinate with the joint information system.
○	○	○	2.8 Develop information sharing process both for internal staff and between EMS agencies.
○	○	○	2.9 Develop just-in-time education for EMS personnel relative to infection prevention and control, self-care, transmission and family protection, and normal stress responses.
○	○	○	2.10 Pre-identify strategies and resources to ensure behavioral health support for staff to mitigate adverse stress and grief and loss reactions.
○	○	○	2.11 Determine virtual coordination mechanisms that will enable remote engagement of senior staff to prevent exposures and maximize ability to engage in both daily and incident operations.
○	○	○	2.12 Determine how agency/regional EMS incident action plans will be managed.
○	○	○	2.13 Prepare to initiate auto-answer/recorded answering of 911 calls including diversion of information or non-emergency calls to another call center (e.g., public health hotline). Consider activating a community hotline if such a call center does not exist.
○	○	○	2.14 Evaluate protocols for conducting call screening to recognize COVID-19 -like symptoms (e.g., cough and fever) and advise the responding EMS personnel of a potentially infectious patient.

AMERICAN OVERSIGHT

2. EMS Activities (cont'd)

Completed	In Progress	Not Started	Dispatch Activities
○	○	○	2.15 Adjust response configurations to allow flexibility including: • Prioritization of calls for service (for services that do not currently use priority dispatch systems) including basic algorithms for non-medically trained dispatchers or referring calls to recorded information, nurse triage hotlines, public health information lines, or other technology-based systems • Recommending self-transport or referral to primary care if appropriate (may need to triage calls to medical provider to evaluate if this capability is available) • Assignment of less than usual resources (e.g., assign law enforcement only on injury accidents unless and until clear information that non-ambulatory/critical injuries a represent) • Assignment of non-traditional resources (e.g., using `jump' cars, community paramedicine, and other responses) • Diversion to an alternate care site • Increasing interpretive service assistance

Completed	In Progress	Not Started	Response Activities
○	○	○	2.16 Develop triggers for implementing closest hospital transport - ideally done regionally.
○	○	○	2.17 Develop triggers for implementing `batch' transports (e.g., answering another call immediately if your current patient is stable) - ideally regionally.
○	○	○	2.18 Determine indicators and triggers for changing staff shifts and crew configuration - ideally this should be implemented consistently in the region.
○	○	○	2.19 Provide criteria for patient assessment and emphasis on cough/respiratory and hand hygiene as well as strict adherence to appropriate infection control precautions per Centers for Disease Control and Prevention (CDC) guidance.
○	○	○	2.20 Develop criteria for on-scene denial of transport by EMS personnel for COVID-19 -like illness and other patients - with or without on-line medical control - ideally regional rather than agency-based criteria and process.
○	○	○	2.21 Develop/provide patient information sheets on homecare for COVID-19 -like illness including usual clinical symptoms and course, infection prevention, treatment, and when to seek additional medical care.
○	○	○	2.22 Develop/provide patient information sheets for other conditions that may be left without transport if the service volume suggests a relevant need (e.g., minor injuries).
○	○	○	2.23 Determine alternate transport resources and triggers to utilize them, e.g., private ambulance, wheelchair, contract/courier, for hire vehicles, military assets, buses.
○	○	○	2.24 Evaluate available staff vs. available transport units to determine ability to meet other non-transport missions (e.g., community paramedicine, EMS personnel staffing alternate care locations or providing hospital support).
○	○	○	2.25 Determine necessary changes to record-keeping including use of templates.

AMERICAN OVERSIGHT

3. **Hospitals and Health Care Activities**

Completed	In Progress	Not Started	Coordination Regulatory Activities
○	○	○	3.1 Determine coordination mechanisms, scope, and likely authorities between coalition hospitals and health care systems including information sharing, resource monitoring/assistance, and policy coordination. This should include the role of the coalition to engage with vendors of PPE, pharmaceuticals, and other medical supplies that may be in shortage. Conduct a coordination conference call with healthcare facilities to ensure awareness and consistency.
○	○	○	3.2 Determine mechanism to engage outpatient settings (homecare, ambulatory care) in information sharing and policy/response coordination.
○	○	○	3.3 Determine mechanisms to engage skilled nursing facilities in information sharing and policy/ response coordination.
○	○	○	3.4 Determine actions that the state of emergency management or public health agency is likely to take that affect health care including: • Suspension or modification of requirements for hospitals or clinics • Specific emergency orders or actions that may limit liability or expand scope of operations (for facilities and providers, including volunteers) • Requests for 1135 waivers from the Centers for Medicare & Medicaid Services (CMS) • Crisis standards of care activation • Issuance of clinical guidelines for care and resource allocation • 'Taking powers' of the state relative to medical materials and staff (i.e., does the state have ability to commandeer resources under their emergency powers and does this include medical materials?) • Promulgation or enforcement of legal obligations of medical staff to provide care
○	○	○	3.5 Evaluate available indicators that may be needed for planning or by other partners and how to track them, e.g., number ED visits available beds, available ventilators, number of potential COVID-19 cases, staff illness/absenteeism.
○	○	○	3.6 Evaluate indicators that have effects on hospitals and coordinate access through the health care coalitions (e.g., status of EMS agencies, alternate care sites, epidemiologic information/ forecasting, availability of supplies).
○	○	○	3.7 Determine a process for expedited credentialing of supplemental staff and for the orientation/ mentoring of supplemental or shared staff.
○	○	○	3.8 Determine threshold for use and priority list for supplemental staff (e.g., first shared health care system staff, then similarity credentialed and licensed staff, then Medical Reserve Corps, etc.)
○	○	○	3.9 Determine indicators and potential triggers for implementation of alternate care systems in conjunction with public health.
○	○	○	3.10 Develop public messages that emphasize using emergency departments only for life-threatening emergencies and coordinate with the joint information system. Be prepared to manage the expectations of the public relative to scarce resources (what is the shortage, what is being done, who are the priority groups, etc.).
○	○	○	3.11 Determine common visitor policies for coalition hospitals.
○	○	○	3.12 Develop just-in-time education for health care personnel relative to COVID-19 transmission, clinical course, at-risk populations, complications, treatment prevention and control, self-care, transmission and family protection, and normal stress responses.

AMERICAN OVERSIGHT

Completed	In Progress	Not Started	Coordination Regulatory Activities
○	○	○	3.13 Pre-identify strategies and resources to ensure behavioral health support for staff to mitigate adverse stress and grief and loss reactions.
○	○	○	3.14 Determine how facility/regional hospital incident action plans will be managed.
○	○	○	3.15 Determine how awareness of retail pharmacy stocks will be maintained and shared with ambulatory/emergency care workers.
○	○	○	3.16 Determine behavioral health support plan that includes use of individual HCF staff as well as local, regional, state and federal assistance for meeting patients and staff needs (including those in a leadership role.)
○	○	○	3.17 Determine direction for tracking response cost and lost revenue implications associated with response.

Completed	In Progress	Not Started	Health Care Facility Activities
○	○	○	3.18 Determine incident management activation/configuration based on impact (phased approach) as well as incident action plan cycle and development process.
○	○	○	3.19 Identify SMEs to inform operational decisions and potential resource allocation decisions.
○	○	○	3.20 Determine methods for patient/family information provision including alternate languages/ interpretive services.
○	○	○	3.21 Determine staff communication mechanisms and redundant information management process.
○	○	○	3.22 Determine indicators and potential triggers for changing services provided (e.g., limit elective services).
○	○	○	3.23 Determine strategies to maintain services for at-risk patients during outbreak period (e.g., pregnant, dialysis) but unrelated to COVID-19.
○	○	○	3.24 Determine likely resource shortages and identify relevant vendor, cache, and coalition options for managing shortages.
○	○	○	3.25 Develop service restriction plans in case of staff shortages or increased demand (e.g., respiratory care, nutritional support, pharmacy, laboratory, radiology, elective surgeries/ procedures).
○	○	○	3.26 Develop/update crisis standard of care language in emergency operations plan including the potential for triage decision-making (who, process, communication, considerations) and staff management (how will staff expertise be maximally utilized vs. add additional training for some staff.
○	○	○	3.27 Evaluate the plan for providing just-in-time staff education via electronic and other non-classroom means including information about the COVID-19, transmission, infection prevention measures, usual clinical symptoms and course, risk factors, and complications.
○	○	○	3.28 Establish connection with homecare and long-term care partners to facilitate rapid discharge process from the hospital.

AMERICAN OVERSIGHT

Completed	In Progress	Not Started	
○	○	○	3.29 Develop indicators and possible triggers for implementing alternate systems of care (including phone and web-based assessments as well as in-person care) including establishing health care system-based alternate care sites (e.g., on-site or managed completely by health care entity at owned and re-purposed site).
○	○	○	3.30 Develop indicators and possible triggers for establishing community alternate care sites in conjunction with public health and emergency management including what support may be required from the health care system.
○	○	○	3.31 Develop demand staffing plans for all categories of staff. Modify staff responsibilities and shifts as required (supervisory staff work clinically, suspend most education and other administrative burdens, determine where less-trained staff can safely provide support and the extent of family member support).
○	○	○	3.32 Engage union/labor leaders in relevant discussions of staff responsibilities and hours during pandemics.
○	○	○	3.33 Anticipate supply shortages and coordinate with vendors, the health care coalition, and emergency management to coordinate resource supply, distribution, and scarce resource strategies.
○	○	○	3.34 Develop a plan for implementing a supplemental facility security/controlled access plan (which may be phased) particularly during the peak pandemic weeks to assure controlled campus ingress and egress and monitoring.
○	○	○	3.35 Provide patients and staff with information about stress responses, resilience, and available professional mental health resources. Develop staff monitoring for those exposed to high levels of cumulative stress or specific severe stressors (death of co-worker, etc.).
○	○	○	3.36 Consider ways to maintain staff resilience and morale when congregate gatherings and close physical contact are discouraged. This may need to include memorial services for staff members.
○	○	○	3.37 Determine if the fatality management plan is sufficient for an increased volume of decedents at the facility.
○	○	○	3.38 Develop procedure for notifying the state agency for healthcare administration if licensed bed availability/capacity changes as a result of COVID-19.
Completed	**In Progress**	**Not Started**	**Emergency Department Activities**
○	○	○	3.39 Determine screening process and location (e.g., curb side screening prior to entry, supplemental screening at intake, etc.).
○	○	○	3.40 Determine how suspect cases will be isolated from other waiting patients and during ED care.
○	○	○	3.41 Emphasize hand and respiratory hygiene and other infection prevention techniques through education, policies, signage, and easy availability of supplies.
○	○	○	3.42 Develop referral plans for patients that do not need emergency care.

AMERICAN OVERSIGHT

Completed	In Progress	Not Started	
○	○	○	3.59 Develop care plans that reduce the number of staff caring for suspect/confirmed cases and protocolize care.
○	○	○	3.60 Adjust daily nursing expectations/duties as required to meet demand.
○	○	○	3.61 Develop environmental services room decontamination and waste stream plans.
○	○	○	3.62 Assure the specific needs of pediatric and at-risk populations are addressed in surge capacity planning.
○	○	○	3.63 Provide patients and families with information about stress responses, resilience, and available professional mental health/behavioral health resources.
○	○	○	3.64 Develop palliative care plans for implementation when needed.

Completed	In Progress	Not Started	**Outpatient Services/Community Health Centers/Free Standing Health Facilities Activities**
○	○	○	3.65 Develop staffing plan to allow for expanded service hours when needed. Determine if outpatient locations and services should remain open if the threat is too great to staff and patients.
○	○	○	3.66 Determine screening process and location (e.g., curbside screening prior to entry, supplemental screening at intake, separate well/ill clinics, etc.).
○	○	○	3.67 Develop telemedicine service plan for use for patients with special needs or general population.
○	○	○	3.68 Develop a plan to expedite medication refills, obstetrician visits, and other office visits prior to the arrival of COVID-19 cases in the community. The practice should have days to weeks to pre-emptively manage its workload in anticipation of limited elective services during the outbreak period.
○	○	○	3.69 Develop a process for screening and triage of phone and email requests for care to limit office visits to those that require an in-person provider evaluation.
○	○	○	3.70 Develop a process to limit/cancel non-essential visits which can `flex' with the demands of the COVID-19 outbreak.
○	○	○	3.71 Emphasize hand and respiratory hygiene and other infection prevention techniques through education, policies, signage, and easy availability of supplies. Develop patient movement and transportation route plans.
○	○	○	3.72 Evaluate maximal use of space. Convert specialty clinics to acute care, extend hours, etc.
○	○	○	3.73 Consider which clinics may be converted into in-patient units (e.g., surgicenters).
○	○	○	3.74 Develop referral/deferral plans for patients that do not need acute care (e.g., perform virtual/ telephone medication management, automate prescription refills).
○	○	○	3.75 Assure administrative engagement in decision-making/use of incident management to assure continuity and consistency between providers and agencies/facilities.

AMERICAN OVERSIGHT

Completed	In Progress	Not Started	
○	○	○	3.76 Develop infection prevention plan for the clinic specific to COVID-19 and conduct education and develop signage and other necessary materials.
○	○	○	3.77 Create templated charts for COVID-19 patients including discharge instructions and prescriptions.
○	○	○	3.78 Create `fast-track' or other methods for rapid evaluation and prescribing for minor illness.
○	○	○	3.79 Determine how suspect cases will be isolated from other patients in the clinic space.
○	○	○	3.80 Consider specific clinics designated for suspect cases, or specific hours for acute illness clinics.
○	○	○	3.81 Develop care plans that reduce the number of staff caring for suspect/confirmed cases and protocolize care.
○	○	○	3.82 Determine at-risk and functional needs populations that may be impacted and assure access to care.
○	○	○	3.83 Plan to provide just-in-time staff education via electronic and other non-classroom means including information about COVID-19 transmission, infection prevention measures, usual clinical symptoms and course, treatment, risk factors, and complications.
○	○	○	3.84 Determine potential indicators/triggers for alternate care systems (including telephone prescribing/encounters and early evaluation and treatment locations as needed).
○	○	○	3.85 Provide or develop patient resources on COVID-19 including transmission, prevention, usual clinical course, risks for more severe disease, and when to seek medical care. These materials should also encourage patients to have at least a 30 day supply of usual medications on hand.
○	○	○	3.86 Provide patients and families with information about stress responses, resilience, and available professional mental health/behavioral health resources.
○	○	○	3.87 Assure the specific needs of pediatric and at-risk populations are addressed in surge capacity planning.

Completed	In Progress	Not Started	**Homecare Activities**
○	○	○	3.88 Determine incident management process and authorities; assure administrative engagement and support.
○	○	○	3.89 Establish prioritization process for homecare intake or ongoing services including denial and referral to other services. Adjust home visit schedules and responsibilities as required.
○	○	○	3.90 Establish liaison process with hospitals to share information on current and projected capacity and needs.
○	○	○	3.91 Establish liaison process with health care coalition to provide updates on capacity and assist with resource and staffing issues including the process for requesting additional resources from coalition partners or emergency management.

AMERICAN OVERSIGHT

Completed	In Progress	Not Started	
○	○	○	3.92 Determine contingency staffing plan.
○	○	○	3.93 Address staff transportation-related issues that may be anticipated such as reduced access to fuel.
○	○	○	3.94 Develop/provide education to homecare professionals about COVID-19 transmission, and complications (in addition to infection control/staff safety information as outlined above).
○	○	○	3.95 Emphasize hand and respiratory hygiene and other infection prevention techniques through education, policies, signage, and easy availability of supplies.
○	○	○	3.96 Develop/provide just-in-time training to staff taking on non-traditional roles as required to maintain critical services. Coordinate with health care coalition to determine potential options.
○	○	○	3.97 Obtain or develop printed materials (including at appropriate reading level and in relevant languages) for clients including information about COVID-19 (including infection prevention measures and clinical disease), service modifications due to COVID-19, and resources. These materials should encourage patients to have at least a 30 day supply of usual medications on hand.
○	○	○	3.98 Determine how volunteer/other staff could contribute to homecare activities.
○	○	○	3.99 Establish telephone/virtual support for clients to provide information and `check in' status.
○	○	○	3.100 Monitor clients for mental health related issues and provide information on normal stress responses.
○	○	○	3.101 Provide just-in-time staff education via electronic and other non-classroom means including information about COVID-19, transmission, infection prevention measures, usual clinical symptoms and course, treatment, risk factors, and complications.
○	○	○	3.102 Assure that at-risk individuals serviced (e.g., on home oxygen, dialysis patients, etc.) have ongoing access to appropriate services and are listed in an agency database for easy reference.
○	○	○	3.103 Provide patients and families with information about stress responses, resilience, and available professional mental health/behavioral health resources.

Completed	In Progress	Not Started	**Long-term Care/Skilled Nursing Activities**
○	○	○	3.104 Determine incident management process and authorities; assure administrative engagement and support.
○	○	○	3.105 Liaison with the health care coalition/hospitals to assure maximal available residential beds.
○	○	○	3.106 Determine potential supply shortages and work with vendors and the health care coalition if resource availability is limited.
○	○	○	3.107 Develop a process to address shortages of supplies at the facility level including administration, nursing, medical direction, and subject matter expert input - ideally this can be a regional construct rather than at each facility.

AMERICAN OVERSIGHT

Completed	In Progress	Not Started	
○	○	○	3.108 Develop a plan for more advanced care at the facility if hospital capacity is unavailable. This should involve nursing, medical direction, administrative representatives, and include consideration of telemedicine.
○	○	○	3.109 Determine any potential regulatory relief (CMS 1135 or other waivers, state regulations relief, staffing requirements, etc.) that may be needed to effectively respond to COVID-19 as well as issues regarding staff licensure/certification.
○	○	○	3.110 Determine with medical director and nursing director changes in thresholds for emergency department referral. These may vary across the period according to demand.
○	○	○	3.111 Evaluate potential staffing and responsibility changes and how less-trained staff and families could contribute to operations.
○	○	○	3.112 Evaluate potential staffing and responsibility changes and how less-trained staff and families could contribute to operations.
○	○	○	3.113 Develop a process for rapid credentialing and training of non-facility supplemental health care staff.
○	○	○	3.114 Develop infection detection process at the facility to promptly detect and isolate residents and staff with suspected COVID-19 and monitor their close contacts.
○	○	○	3.115 Emphasize hand and respiratory hygiene and other infection prevention techniques through education, policies, signage, and easy availability of supplies.
○	○	○	3.116 Develop visitor policies designed to minimize potential exposures (ideally consistent across the coalition) and communicate via physical (signs at entrances and on units) and electronic means. Determine if visitation should be restricted or stopped if threat is too high for patients and staff.
○	○	○	3.117 Communicate any change in services or policies to staff, residents, families, and the health care coalition.
○	○	○	3.118 Designate a point of contact for the health care coalition.
○	○	○	3.119 Designate a point of contact for family/resident information or questions.
○	○	○	3.120 Develop infection control/isolation plan for ill suspect or confirmed cases.
○	○	○	3.121 Provide patients and families with information about stress responses, resilience, and available professional mental health/behavioral health resources.
○	○	○	3.122 Assure fatality management plans are appropriate to address potentially increased numbers of deaths during a COVID-19 outbreak.
○	○	○	3.123 Plan for providing just-in-time staff education via electronic and other non-classroom means including information about COVID-19 , transmission, infection prevention measures, usual clinical symptoms and course, treatment, risk factors, and complications.

AMERICAN OVERSIGHT

Completed	In Progress	Not Started	Alternate Care Site/System Activities
○	○	○	3.124 Assure integration with public health and other health systems regarding consistent scripts for web and telephone based nurse triage lines/9-1-1 public safety answering points/ poison control centers/locally generated "apps" and integration with additional telephone/virtual prescribing - particularly for at-risk populations.
○	○	○	3.125 Determine support needed from the health care system for `flu clinics' for early screening and treatment as planned by public health.
○	○	○	3.126 Understand/assist with plan for alternate care site(s) for hospital overflow - roles, responsibilities, authorities, staffing, material resources, criteria, level of clinical care (understanding that this may not be feasible if staff absenteeism is high at the hospitals).
○	○	○	3.127 Assure the specific needs of pediatric and at-risk populations are addressed in surge capacity planning.
○	○	○	3.128 Assure enough staff, supplies, prophylaxis, and logistical support are on hand before opening the site.
○	○	○	3.129 Provide patients and families with information about stress responses, resilience, and available professional mental health/behavioral health resources.

Subject: DCIPHER DEMO: COVID-19 Traveler Health Screening Data
When: Friday, March 6, 2020 1:30 PM-2:00 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Skype Meeting - CDC Blgd 21, Room 4118

Please join us at the next demonstration of how to access COVID-19 Traveler Health Screening Data in the Data Collation & Integration for Public Health Event Response (DCIPHER) platform. This demo is similar to the first demo held last week, and appropriate for new DCIPHER users, or users who would like a refresher. Please forward to relevant members of your state teams, as necessary.

This demo will be facilitated by CDC DCIPHER technical staff, and CDC DGMQ staff.

Please note The demo will be live, however, participants are not required or expected to log into DCIPHER and follow along. If participants do not currently have access to DCIPHER, the demo is still a beneficial introduction to how the system is being utilized in the CDC COVID-19 Response.

COVID-19 Response Travel Training Document

This training guide will take you through the process to enter data into DCIPHER, update data within DCIPHER and view Reports. This guide is intended for users that are viewing the EpiX travel data and completing the Aggregate State Monitoring Form for the 2019 Novel Coronavirus Response.

Platform Navigation

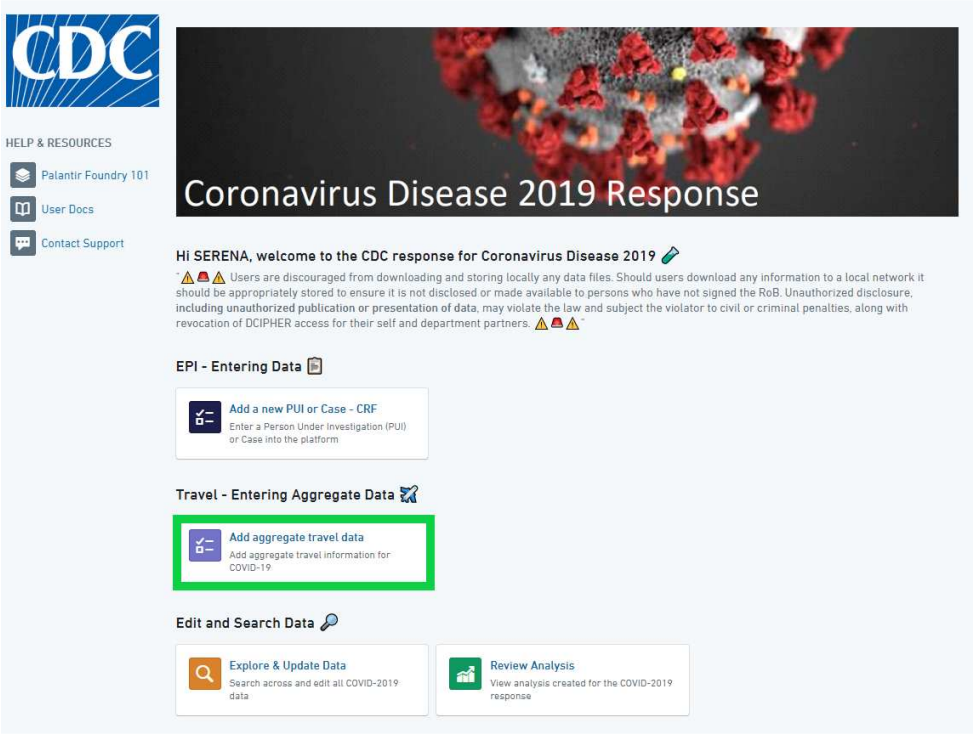
After logging into DCIPHER users will see the below DCIPHER Homepage. Under activities users can select the "COVID-19 Response" button.

After clicking the COVID-19 Response button, users will see the below landing page for the Coronavirus Disease 2019 Response. The key features are the "Entering Data" section and the "Edit and Search Data" button. The tutorial will focus on these two areas.

If the landing page does not load correctly (e.g., missing buttons), please reference the troubleshooting tips at the end of this tutorial)

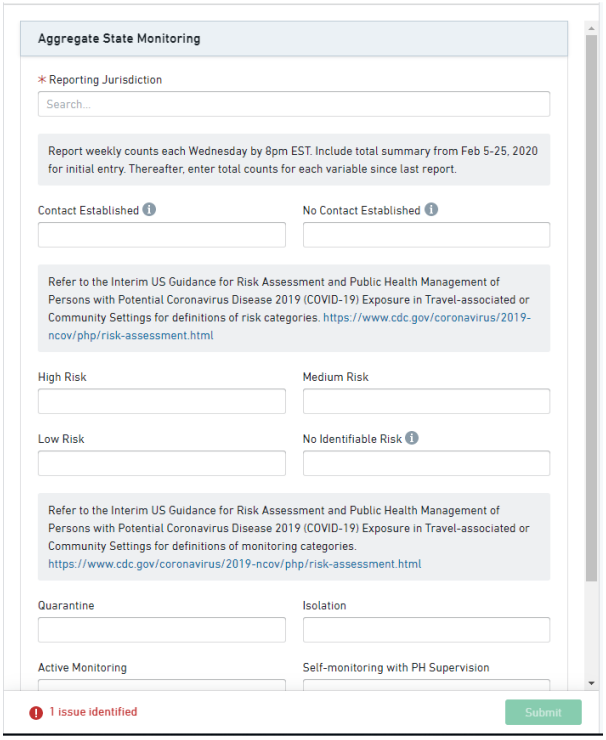
AMERICAN MEDICINE

FL-DOH-20-0673-A-004083



Entering data in the Aggregate State Monitoring form

To enter data into the aggregate state monitoring form, go to the 2019-nCoV Response landing page at

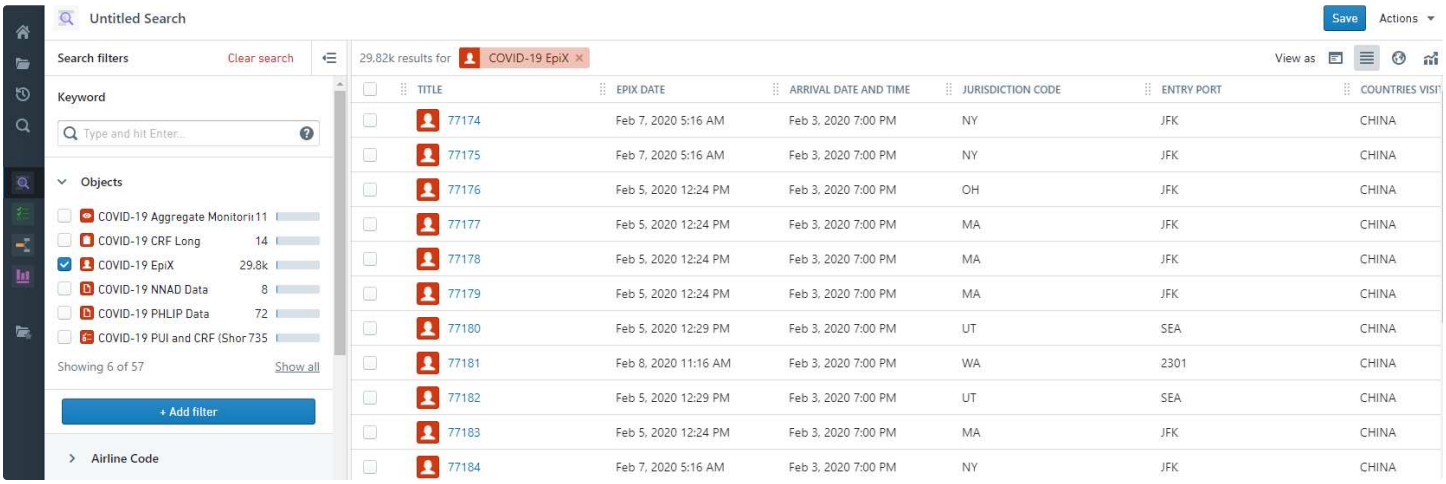


https://dcipher.cdc.gov/workspace/home

On the landing page click the "Add aggregate travel data" button (indicated by a green box below) to open the Aggregate State Monitoring form.

AMERICAN MEDICINE

This will open the Aggregate State Monitoring form. Please enter all appropriate information and click the submit button. Fields that are required are indicated by a red asterisk.



Viewing EpiX Travel Data

AMERICAN MEDICINE

Data that was entered via EpiX can be viewed within the platform. To view this data navigate back to the landing page after

You will be taken to a list of travelers for your state that have been submitted. You can then search and click on the travelers of interest. The travelers are listed by their DGMQ ID.

After opening the traveler of interest, you will be shown the Traveler View. This provides summary information on the traveler including a timeline, personal information, temporary contact information, medical information, and travel information.

Troubleshooting Tips

AMERICAN MEDICAL ONLINE

This sections covers a few troubleshooting steps for users to follow should they encounter an issue.

COVID-19 Landing Page does not load correctly:

If the landing page is missing the main buttons (Add a New Case, Explore & Update Cases, View National Report) please follow the steps below:

1. Clear your browser history including cookies and cached images/files and close your browser
2. Open Chrome and go to the following url: https://dcipher.cdc.gov/workspace/home
3. If you still do not see buttons to "Add aggregate travel data" and "Explore & Update Data," please restart your computer
4. Open Chrome and go to the following url: https://dcipher.cdc.gov/workspace/home

If the landing page still does not load, users can reach the main buttons using the below links:

1. Add Aggregate Data: https://dcipher.cdc.gov/workspace/fforms/f/new/ri.fforms.main.form.6e026126-e26d-4560-a69e-5cfebb981cae
2. Explore & Update Cases: https://dcipher.cdc.gov/workspace/hubble/search/N4Ig1gpgng7g9gJwCYgFwhAGhHARgKwgGMAXAFSgAcIBnNAbQF1sAzASwBsSIE7UmAvkA?searchId=a4aaf1b4-a6ac-4a51-b9b7-90367b9ec046

Subject: FW: EIS Supervisor Seminar: EIS Conference and Match Orientation
Importance: High

This seminar is primarily for supervisors who have been approved to match for the EIS Class of 2020; however, all supervisors are welcome to participate.

EIS Supervisors –

With the cancellation of the EIS Conference, the match for the incoming EIS class will now be conducted virtually. Please join us for this important supervisor seminar on the EIS virtual match.

During this EIS virtual match orientation, we will go over

* Cancellation of EIS Conference considerations
* Virtual match timeline
* Overview of logistics
* Virtual match host site support
* Q&A

For those unable to attend, this session will be recorded.

Thank you,

EIS Program

Dear Dr. Roberson,
It was good to talk to you just now about the arriving charter flights expected from the 2 cruise ships in Brazil and Chile. Please find the attached summary from the earlier call. As I mentioned, Dr. Cindy Friedman, the CDC Cruise Ship Task Force Lead, spoke to Dr. Rivkees earlier today.

I am copying Cindy, Paul (co-lead of the Task Force). I am part of their team and assisting with these two ships. I am also copying Michelle Decenteceo, Officer-in-Charge at the Miami Quarantine Station, and Andy Klevos, Regional Officer in Charge – both from the CDC Division of Global Migration and Quarantine.

Please feel free to contact me with any questions.

I will forward the correspondence with the cruise line to you.

Kindly,
Michelle

For Internal Use Only

Florida Cruise Ship Summary: 3/17/2020

On March 16th CDC was notified about two Royal Caribbean cruise ships with at least one confirmed COVID-19 case on each ship. Each ship had American citizens on board; one was in Recife, Brazil and the other in Puerto Montt, Chile. Royal Caribbean is chartering flights to transport the American passengers back to the United States. Below is a summary of what the cruise line plans to do to return the 148 persons to the United States. A total of three charter flights are expected to depart South America and arrive at Miami International airport. The date and time of arrival has not been confirmed, but Royal Caribbean have indicated a possible departure time during the evening of March 17. All asymptomatic persons on charter flights to Miami will be treated as if they are arriving from Level 3 countries. They will be screened by CBP staff with secondary screenings provided by CDC quarantine officer as necessary. All returning travelers on these charter flights will be instructed to self-quarantine and self-monitor for symptoms for 14 days per CDC guidance.

Silver Shadow (Brazil)

- 103 AMCITS (20 of these are Florida residents)
- Two confirmed COVID-19 cases were on ship (non-AMCITS)
- Plans for charter flight
    - One charter flight to Miami International Airport
    - Asymptomatic travelers to return to their homes from Miami to self-quarantine for 14 days

Silver Explorer (Chile)

- 45 AMCITS (8 of these are Florida residents)
- At least one confirmed COVID-19 case was on the cruise ship (non-AMCIT)
- Plans for charter flights
    - Two charter flights to Miami International Airport
        - First flight with 37 asymptomatic persons
        - Second flight is a medical ambulance with 8 persons who either have reported influenza-like illness or were at higher risk for exposure (cabinmate of person with symptoms); none of these persons have been tested for COVID-19 and all are reported to be medically stable to fly to Miami.
            - The eight persons with symptoms are residents of California (3), Florida (1), Georgia(2), Oregon (1), Pennsylvania (1)

Subject: FW: Florida Healthcare Provider Stakeholder Call for 2019 Novel Coronavirus

---

Good Morning MDCHPC Partners,

This is a reminder and future calendar reminder for the FDOH Stakeholder call on COVID-19.

Subject: Florida Healthcare Provider Stakeholder Call for 2019 Novel Coronavirus
When: Occurs every Wednesday effective 2/12/2020 from 2:00 PM to 3:00 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Call-In Information: 888-585-9008 Pin #: 208-305-233

The Florida Department of Health invites you to join us for a weekly public health stakeholder conference call regarding the 2019 novel corona virus outbreak. The target audience for this call is the healthcare community in Florida. During the call we will provide the most current situation both globally, as well as in Florida and share the Department's response actions.

Please share this invitation with your membership as appropriate.

When: Each Wednesday at 2:00 p.m. EST

Call in Information: 888-585-9008 Pin 208-305-233

Subject: FW: Florida Healthcare Provider Stakeholder Call for 2019 Novel Coronavirus

---

Good Morning MDCHPC Partners,

This is a reminder and future calendar reminder for the FDOH Stakeholder call on COVID-19.

Subject: Florida Healthcare Provider Stakeholder Call for 2019 Novel Coronavirus
When: Occurs every Wednesday effective 2/12/2020 from 2:00 PM to 3:00 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Call-In Information: 888-585-9008 Pin #: 208-305-233

The Florida Department of Health invites you to join us for a weekly public health stakeholder conference call regarding the 2019 novel corona virus outbreak. The target audience for this call is the healthcare community in Florida. During the call we will provide the most current situation both globally, as well as in Florida and share the Department's response actions.

Please share this invitation with your membership as appropriate.

When: Each Wednesday at 2:00 p.m. EST

Call in Information: 888-585-9008 Pin 208-305-233

Subject: Florida Healthcare Provider Stakeholder Call for 2019 Novel Coronavirus
When: Occurs every Wednesday from 2:00 PM to 3:00 PM effective 2/12/2020.
Where: Call-In Information: 888-585-9008 Pin #: 208-305-233

The Florida Department of Health invites you to join us for a weekly public health stakeholder conference call regarding the 2019 novel corona virus outbreak. The target audience for this call is the healthcare community in Florida. During the call we will provide the most current situation both globally, as well as in Florida and share the Department's response actions.

Please share this invitation with interested parties as appropriate.

When: Each Wednesday at 2:00 p.m. EST

Call in Information: 888-585-9008 Pin 208-305-233

Best,

Aja L. Arrindell, M.P.H., M.S.

Surveillance Epidemiologist

Florida Department of Health in Duval County

515 W 6th St
Jacksonville, FL 32206

Office: (904) 253-1855

Cell: (904) 627-0647

Fax: (904) 253-1851

FLORIDA HEALTH PERFORMS

INCREASE CHILDHOOD VACCINES
Increase vaccination of children to prevent disease and keep all of Florida's children protected from health threats.

DECREASE HIV INFECTIONS
Reduce the incidence of HIV infections to allow more Floridians to live longer healthier lives.

DECREASE INFANT MORTALITY
Reduce infant mortality to improve health outcomes for all infants.

Mission: To protect, promote & improve the health of all people in Florida through integrated state, county, & community efforts.

Please note: Florida has a very broad public records law. Most written communications to or from state officials regarding state business are public records available to the public and media upon request. Your e-mail, therefore, may be subject to public disclosure.

AMERICAN OVERSIGHT

From: Sevak, Krunal (CDC/DDPHSIS/CSTLTS/DPPS)
To: Wallace, Marla D.; Clark, Marah
Cc: DSLRCrisisCoag (CDC); Stanek, Danielle R; Morrison, Andrea; Blackmore, Carina; Hansen, Sabrina (CDC/DDPHSIS/CSTLTS/DPPS)
Subject: FW: Florida Hurricane Crisis CoAg Vector Control Project
Date: Monday, February 24, 2020 2:25:27 PM
Importance: High

Good Afternoon Marla, Marah,

After speaking with OGS, the recommendation is for the State of FL to move forward with submitting the request as an official amendment in GrantSolutions.

Using official state letterhead, a process which you should be familiar, I would strongly advise breaking down the following:

- Show what the prior activities and amounts were (and why they are no longer feasible)
- Show what the new activities and amounts are (and how they are supported under the NOFO)
    - For the trailers, please be sure to provide ample justification and if possible necessary specs, quotes, and vendors. The more thoroughly tied to the NOFO, the more helpful it will be.

If you need any assistance, or would like me to view the official draft prior to submission, I would be happy to review.

Kind regards,
Kevin Sevak

Cc: DSLRCrisisCoag (CDC) <DSLRCrisisCoag@cdc.gov>
Subject: RE: Florida Hurricane Crisis CoAg Vector Control Project

Good Afternoon,

In order for CDC To make an informed decision regarding their proposed request an official request should be submitted to CDC via grant solutions.

Damond

From: Sevak, Krunal (CDC/DDPHSIS/CSTLTS/DPPS) <ydh1@cdc.gov>

Cc: DSLRCrisisCoag (CDC) <DSLRCrisisCoag@cdc.gov>
Subject: FW: Florida Hurricane Crisis CoAg Vector Control Project
Importance: High

Good afternoon Damond,

I am reaching out to you on behalf of Sabrina Hansen, who is the Project Officer for Florida under Hurricane Crisis CoAg TP18-1802. Sabrina is currently supporting Coronavirus response activities.

Her jurisdiction has requested a redirection of funds for two activities. Prior to submission into GMM we were wanting to get some feedback. The first of which is straight forward, but the second may require more attention.

AMERICAN OVERSIGHT

The request entails that funds would actually be staying in the same budget category, however they are proposing a chance in two activities.

1. The first is to contract again with the University of Florida Institute of Food and Agricultural Sciences Center for Public Issues and Education in Agriculture and Natural Resources (PIE Center) to create materials designed to educate the public about mosquito control. The justification they provided aligns with Domain 5 of approved activities under the grant. I found this to be an allowable use of funds, but wanted to get your concurrence. More information on this can be found highlighted in this color below.

2. Secondly, FL is proposing to purchase two trailers: One trailer to move equipment around the county, increasing their capacity in post storm treatment response. The other is interested in using the trailer to educate their constituents. Detailed justification and estimates can be found attached. I have requested quotes and further information already, but sought your advice on such a purchase. Further justification on this can be found **attached** and below in this color.

Thank you for all your help!

Kind regards,

Krunal Sevak (Kevin) MBA, MPH

Subject: RE: Florida Hurricane Crisis CoAg Vector Control Project

The PIE Center Project is $90,000 and would come from the Mosquito Control Districts funding of $2,706,643. Which is a little more than 3% of 2.7 million and 1.6% of the total award for Vector Control.

The funding for the trailers is also part of the Mosquito Control Districts funding. This funding has already been allocated to 2 of the districts. They reached out to us see if trailers would be allowable in the grant. We can reach back out to have them submit the quotes and specifications. The activity outreach and education is already an approved activity within the Mosquito Control Districts Project.

Have a nice weekend.

Hi Marla,

Hope all is well. Thank you for your message. It's clear you have done your due diligence in reviewing **LA**'s vector project needs and are proposing some alternative use of funds. **Do you means FL?**

To be clear, are you clearing the idea of a redirection of funds towards the activities you mentioned below? I know you mentioned the funds are already in the correct budget category, but it is a matter of altering the activities.

In that's the case, it would be helpful to have specifics - a sheet outlining the previous activities and how much funds were involved, and then then where the money is going to (new activities). Please also provide vendor quotes and specific justification, as you laid out below, on official letter head, similar to what is typically done in an amendment/redirection.

In other words, we need to see clearly see what the money was originally approved for, and how much, and where the money is going toward now, how much, justifications, and associated quotes… Based on that, we will review and get the necessary prior approval, and if approved, have the appropriate changes documented in GMM.

Please let me know if this makes sense. Thank you!

Subject: Florida Hurricane Crisis CoAg Vector Control Project

Sabrina,

Although the funding in the correct category of contractual we have a few question regarding approval of some projects within Vector Control.

A few of the mosquito control districts would like to purchase trailers to use for outreach and education of the public. I have read the guidance and did not see anything that prohibited this.

We would also like to contract again with the University of Florida Institute of Food and Agricultural Sciences Center for Public Issues and Education in Agriculture and Natural Resources (PIE Center) to create materials designed to educate the public about mosquito control in a simplified, understandable format that would increase public understanding of scientific information related to mosquito control. The PIE Center conducted focus groups on the public's and local officials' knowledge and perception of mosquito control, and the findings were used to create messages used in the Prevent & Protect project (https://preventmosquitoes.org/). PIE Center was able to create two toolkits (mosquito control and emergency response), infographics and information sheets, lesson plans, as well as social media plans, and conducted some preliminary evaluations of the materials. As the next step for this project, PIE Center plans to use this funding to conduct more in-depth evaluations of the materials, identify best methods of facilitating education about mosquito control topics, increase training for teachers and other groups, and develop an online mosquito control communication training program to share best practices and developed tools. The previous contract was using ELC Zika funding.

We feel like it would fit under Domain 5: Strengthen Countermeasures and Mitigation. The funding being provided to the mosquito control programs under that domain specifically mentions: These funds would help local jurisdictions in preventing transmission of endemic and exotic arboviruses by using evidence based, best management practices which can also include source reduction, communication, and public education.

Please feel to email or call me if you have any additional questions or concerns.

State and Local Leaders,

On **Thursday, March 12, at 2:00 p.m. Eastern Time**, please join Senior Administration Officials for a briefing call on COVID-19 (coronavirus) regarding President Trump issuing a proclamation under section 212(f) of the Immigration and Nationality Act (INA) to restrict travel to the United States from foreign nationals who have recently been in certain European countries. Additional details can be found below. We will also provide an update on implementing mitigation strategies for communities with local COVID-transmission (A Framework for Mitigation: Implementation of Mitigation Strategies for Communities with Local COVID-19 Transmission).

Briefing Call Registration on 212(f) & Community Mitigation Strategies

- **Date: Today,** Thursday, March 11
- **Time:** 2:00 PM ET (please note time zone)
- **Call-In Registration**: **CLICK HERE**
- **Note:** You must RSVP to join the call. Upon successful registration, you will receive dial-in details to the email address you use to register. Note that multiple people cannot dial-in using the same registration information.

Below, please find additional information. The White House Office of Intergovernmental Affairs (WH IGA) will continue to share pertinent information as it becomes available. Please do not hesitate to reach out to our

AMERICAN OVERSIGHT

office directly if we can be of assistance.

Sincerely,
Zach

President Donald J. Trump Has Taken Unprecedented Steps to Respond to The Coronavirus and Protect the Health and Safety Of Americans

"Together we are putting into policy a plan to prevent, detect, treat and create a vaccine against coronavirus to save lives in America and the world. America will get it done!" – President Donald J. Trump

President Donald J. Trump signed a Presidential Proclamation, which suspends the entry of most foreign nationals who have been in certain European countries at any point during the 14 days prior to their scheduled arrival to the United States. These countries, known as the Schengen Area, include: Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and Switzerland. This does not apply to legal permanent residents, (generally) immediate family members of U.S. citizens, and other individuals who are identified in the proclamation.

Statement from DHS Acting Secretary Chad F. Wolf: "Protecting the American people from threats to their safety is the most important job of the President of the United States. The actions President Trump is taking to deny entry to foreign nationals who have been in affected areas will keep Americans safe and save American lives. I applaud the president for making this tough but necessary decision. While these new travel restrictions will be disruptive to some travelers, this decisive action is needed to protect the American public from further exposure to the potentially deadly coronavirus. In January and February, the Administration issued similar travel restrictions on individuals who had been in China and Iran. That action proved to be effective in slowing the spread of the virus to the U.S., while public health officials prepared. In the next 48 hours, in the interest of public health, I intend to issue a supplemental Notice of Arrivals Restriction requiring U.S. passengers that have been in the Schengen Area to travel through select airports where the U.S. Government has implemented enhanced screening procedures."

RESTRICTING TRAVEL FROM IMPACTED AREAS: President Donald J. Trump is taking further action to curb the spread of the coronavirus to the United States from other countries.

- President Trump is issuing a proclamation under section 212(f) of the

AMERICAN OVERSIGHT

Immigration and Nationality Act (INA) to restrict travel to the United States from foreign nationals who have recently been in certain European countries.
    - Section 212(f) of the INA only applies to the movement of human beings, not goods or cargo.
- The restriction applies to foreign nationals who have been in the Schengen Area, 26 countries in Europe with open borders agreements, in the last 14 days.
- Those who are exempt from these restrictions, such as American citizens, will be directed to a limited number of airports where screening can take place.
- There is extensive travel back and forth between Europe that heightens the risk here in the United States.

LOOKING OUT FOR AMERICAN BUSINESSES AND WORKERS: President Donald J. Trump is committed to protecting American businesses and workers from the impacts of coronavirus.

- The President is announcing an economic assistance package to help support businesses and workers who have been harmed by this outbreak.

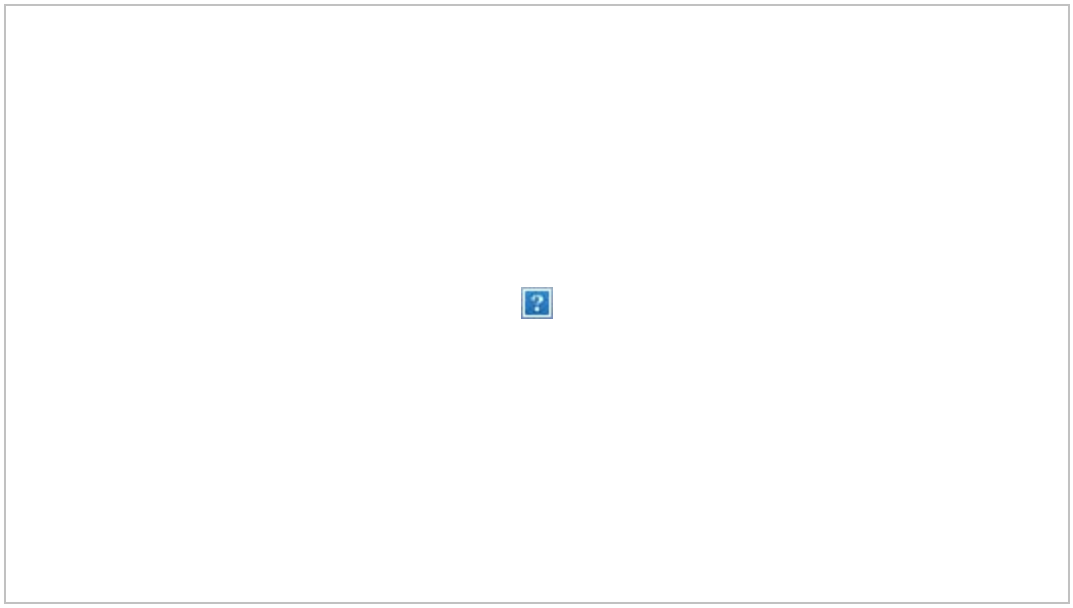
- President Trump has instructed the Small Business Administration (SBA) to exercise available authority to provide loans to businesses affected by the coronavirus.
    - These loans will help overcome disruptions caused by the coronavirus.
    - The President is calling on Congress to increase funding for this program by an additional $50 billion.
- The President will be instructing the Department of the Treasury to defer tax payments for certain individuals and businesses negatively impacted by the coronavirus.
    - This action will provide more than $200 billion of additional liquidity to the economy.
- President Trump is calling on Congress to immediately pass payroll tax relief.
- The President announced that he will soon be taking emergency action to provide financial relief for workers who are ill, quarantined, or caring for others due to the coronavirus.
    - The President also called on Congress to take action to extend this relief for workers.

LEADING AN AGGRESSIVE, WHOLE-OF-GOVERNMENT APPROACH: President Trump has taken unprecedented steps to protect the health of Americans in response to the coronavirus.

- The President is leveraging all of our resources to respond to the coronavirus, bringing together government and private industry in a collaborative response.

AMERICAN OVERSIGHT

- The Trump Administration declared a public health emergency in January to bolster response efforts.
- President Trump took early action to help curb the spread of the virus from other countries to the United States, providing important time for response and preparations.
    - In January, President Trump acted quickly to restrict travel from foreign nationals traveling from China.
    - In February, the President restricted travel for individuals recently traveling from Iran.
    - The Administration put into place mandatory screening for all travelers coming into the country from Italy and South Korea.
    - Travel advisories for severely impacted areas like Italy and South Korea have been raised to their highest level.
- Today, the President directed his Administration to make general-use face masks available to our healthcare workers.
    - The Administration's actions will help make millions of general-use respirators available to keep healthcare workers safe and mitigate transmission of the virus.
- President Trump signed into law more than $8 billion to fund response efforts.
- The Administration has taken bold steps to incentivize the development of therapeutics and vaccines to treat and prevent the spread of the coronavirus.
- Working across the public and private sectors, the Trump Administration continues to drastically expand testing capacity.
    - More than 1 million tests have been distributed nationwide, with another 4 million tests being shipped out by the end of the week.
    - Testing is now available in every State lab in the country and commercial labs are now deploying tests, which will help generate a dramatic increase in availability.
- The Trump Administration has released guidance on how to keep businesses, schools, community gathering places, and families safe.
    - From the start, President Trump has made keeping the public informed a top priority.
- The Administration has announced that health plans with health savings accounts will be able to cover coronavirus testing and treatment without co-payments.



ICYMI | Vice President Pence Discusses the Coronavirus Response on the Morning Shows

Earlier this morning, Vice President Pence joined Good Morning America, The Today Show, Fox & Friends, New Day, and CBS This Morning to discuss the steps that this administration is taking to

AMERICAN OVERSIGHT

combat the coronavirus.

ON ABC's GOOD MORNING AMERICA

WATCH HERE.

From very early on, President Trump took decisive action to put the health of the American people first.

> "We all have known from the beginning that the coronavirus would continue to spread across this country, and it's one of the reasons why, from very early on, President Trump took decisive action to put the health of the American people first, not only declaring a public health emergency in January, but in that same month he suspended all travel from China -- an unprecedented move -- and quarantined Americans that were returning from the region. Since that time, George, we've -- we've issued travel advisories for areas of South Korea, Italy; screened all persons coming on direct flights. But, frankly, as we watched the epicenter of the coronavirus shift from China and South Korea to Europe, the President thought it was proper for us to impose a 30-day suspension on all travel from continental Europe."

The President, again, made another unprecedented decision in suspending all travel from Europe, because we want to stop the flow of people bringing the coronavirus here.

> "The reality is that, really, just two weeks ago, in Italy, there were less than 500 cases and now there's 12,000 cases in Italy, George. We have tens of thousands of people that travel to the United States from Europe every day. Seventy percent of new cases in the world were in Europe. And when we looked yesterday at the -- what was then the 35 states where we had cases, about 30 of them could be traced to contacts with Europe. And so the President, again, made another unprecedented decision in suspending all travel from Europe, because we essentially want -- we essentially want to stop the flow of people bringing the coronavirus here, but then continuing to surge resources, particularly into California, Washington State, New York, and other communities

AMERICAN OVERSIGHT

where we've seen community spread. It's a combination of efforts that's being driven by the top health experts in the world on our task force. But the President -- the President showed again yesterday a willingness to take decisive action on multiple levels to protect the American people."

We want to send a very clear message to Americans that if for any reason you believe you've been exposed to the coronavirus, you should not be worried about the cost of testing or treatment.

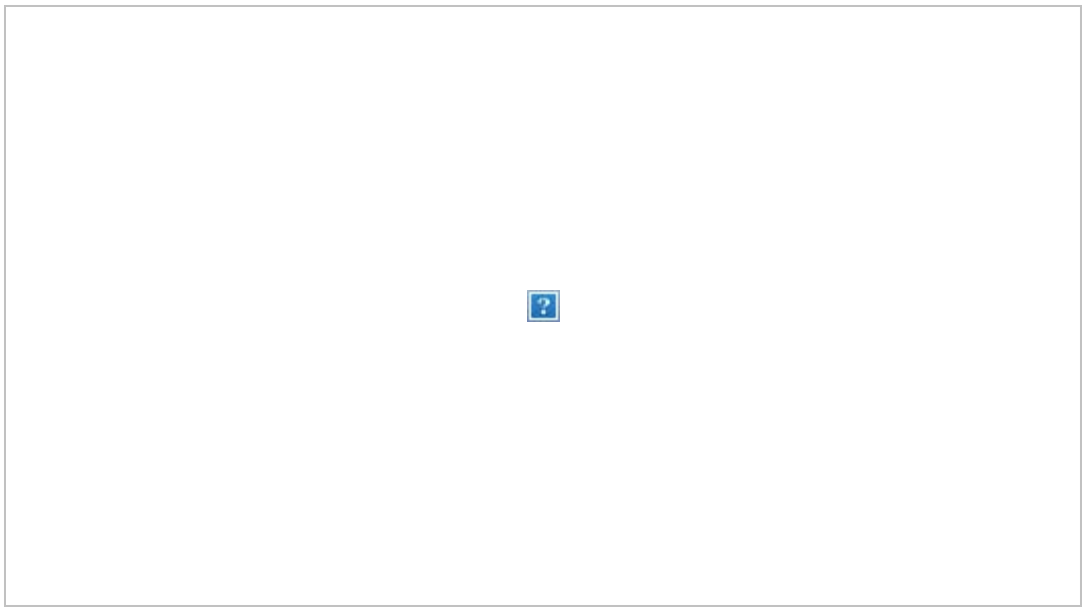
"We're making steady progress. We're going to continue to make a very clear message to Americans that if for any reason you believe you've been exposed to the coronavirus or you have symptoms, we don't want people to be worried about the cost of testing, to be worried about the cost of treatment… As the President made clear last night, we're working with Congress and exploring actions the President can take to make sure that hourly wage earners know that you can stay home without risking losing a paycheck or losing your job if you feel if you feel that you've been exposed to the coronavirus."

ON NBC's TODAY SHOW

WATCH HERE.

From early on in this effort, we have addressed the testing issue. We made changes through the FDA that allowed for state labs and hospitals to engage in testing.

"From early on in this effort we've been addressing the testing issue. We made changes through the FDA that allowed for state labs and university hospitals and hospitals to engage in testing. And I'm pleased to report every state lab in America can do testing now. Many university laboratories are doing it. Washington State – the University of Washington is doing extraordinary work. but we are literally working hour by hour to expand the testing and we think the key Savannah is going to be what we call commercial laboratories like LabCorp and Quest who are already spinning up production at the president's



AMERICAN OVERSIGHT

direction last week on tests that can be available on a broad basis in the days ahead for the American people. we're making real progress but rest assured we're going to continue to drive forward."

The American people should know that President Trump has no higher priority than the health, safety and well-being of the American people.

"The American people should know that President Trump has no higher priority than the health and safety and wellbeing of the people in this country. You can go to coronavirus.gov right now to find out what every American can do to keep yourself, your family, your workplace and your school safe. But you can rest assured we're going to focus on communities where we've had community spread, and the President's action yesterday suspending travel from Europe is one more example of how he's putting the health of America first."

ON FOX NEWS' FOX & FRIENDS

WATCH HERE AND HERE.

The President has called this a whole-of-government approach, but he has also called this is a whole-of-America approach.

"The President, you know, he said this was a whole-of-government approach but he also said this is a whole-of-America approach. So he's brought in business leaders from nursing homes; yesterday, banking; hospitals, and the rest. But one of the things we did that's most important on testing was the President brought in the leaders of the top commercial laboratories in the country who, as we speak, have already approved a test that is being spun up. It's being sent out to market. Quest, LabCorp, the largest commercial laboratories in the country, are working very closely with our administration. We're clearing the red tape out of the way. That's going to be the way that, in the days ahead, we're going to -- we're going to have broad-based testing available all across the country."

We are working together to contain the spread of the coronavirus.

AMERICAN OVERSIGHT

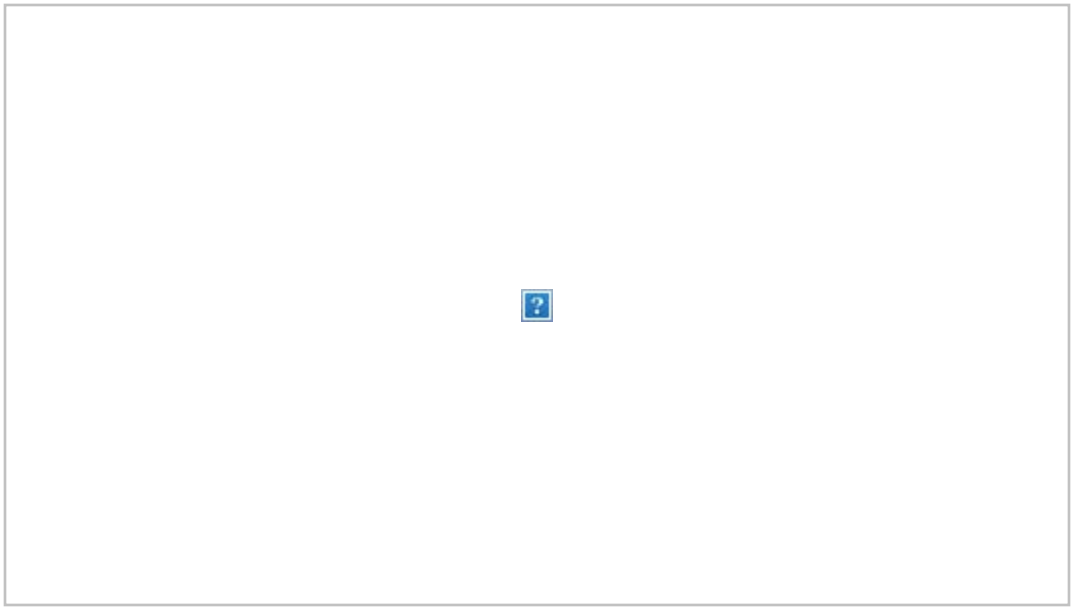
And we will get through this.

> "Our goal, as the coronavirus spreads in this country -- and the vast majority who would contract it will have flu-like symptoms and recover. Our goal nonetheless is to hold down that overall number as much as possible. And we will do that with the continuing cooperation of American families, schools, businesses, and states. And that's the vision President Trump has. All of us working together will get through this."

We are focusing on supporting efforts at the state and local level in Washington State, and in California. CDC issued strong guidelines for those communities about public activities, large gatherings and at schools. We will continue simply to follow the data on this.

> "Make no mistake about it: We are also focusing on supporting efforts at the state and local level in California, in Washington State, and in California. CDC issued very strong guidelines for those communities about public activities, large gatherings, schools. And we'll continue simply to follow the data on this and make strong recommendations where we have what's known as "community spread. But for every American, right now, as the President said last night, it's a good time to use common sense. Wash your hands often. Clean, you know, often-used surfaces. All that information is available at Coronavirus.gov. So we're going to try and mitigate the spread in this country but also prevent, through the President's decisive action last night, people from bringing the coronavirus into the United States any further from Europe."

We are encouraging best practices for every American. We are focusing on communities where we have community spread.



> "I want to say to your viewers, just as the President said last night, the risk to the average American of contracting the coronavirus remains low, but we do know that seniors with serious underlying chronic health conditions are particularly vulnerable to very serious outcomes. And so we're encouraging best practices for every American. We're focusing on communities where we have community spread."

Those with a family member who is a senior citizen should support them in engaging in good hygiene and good health practices.

> "For any American that's watching today that has a family member or a loved one who's a senior citizen with a serious underlying health condition, this is a very good time to help and to support them to be able to avoid public places, and everyone around them to engage in good hygiene and good practices to protect those that are most vulnerable."

ON CNN's NEW DAY

AMERICAN OVERSIGHT

WATCH HERE AND HERE.

We have been meeting with industry leaders in one relevant industry after another to ensure that the full resources of America are being brought to bear.

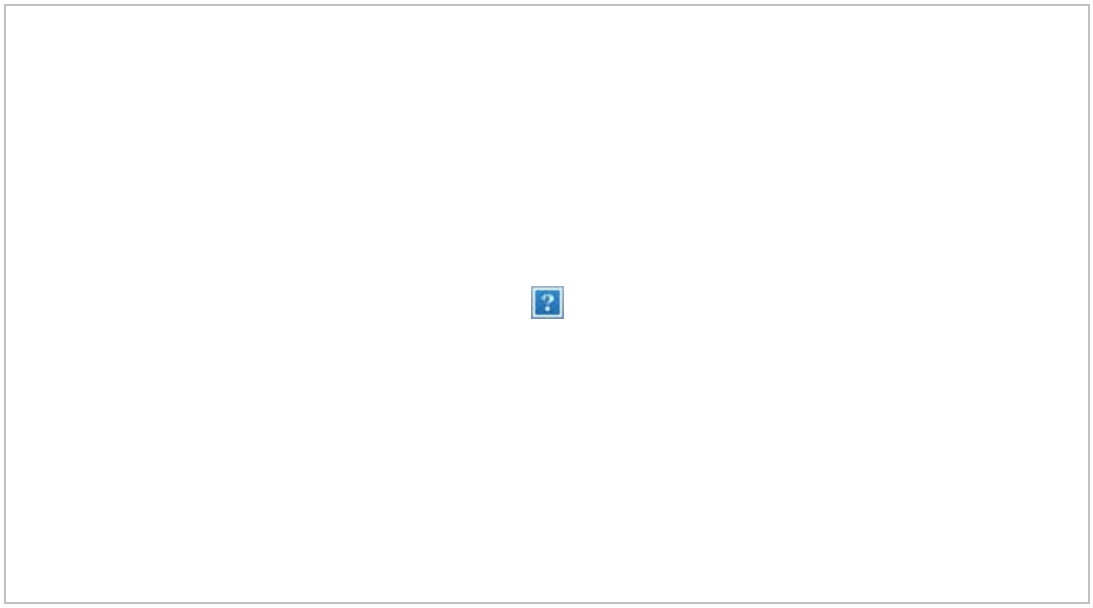
> "We're not doing a travel ban as our strategy. The suspending all travel for 30 days from Europe is a part of the strategy. The other part is an aggressive mitigation strategy. I spoke to the governors of New York, Washington State, and California tomorrow -- or yesterday. CDC issued strong guidance to those areas where we have community spread. We've flowed resources. We've flowed support to those areas. And so it's a combination of strategies that the President has employed here. As he says, it's "all hands on deck," "a whole-of-government approach," but it's also a whole-of-America approach. We've literally been meeting with industry leaders in one relevant industry after another to ensure that the full resources of America are being brought to bear."

Any American who is concerned about being exposed to the coronavirus, should call their doctor and get tested.

> "Anyone who's looking on today who might be concerned that they were exposed to coronavirus or have symptoms should call their doctor. Their doctor, with any question, can call their state laboratory and be able to find out how they can have a test processed."

We are making steady progress. We don't want anybody to avoid having a test because they are concerned financially.

> "But make no mistake about it: We're making steady progress. We've made changes at the FDA in January, at the President's direction. And the American people can be confident we're going to continue to roll out the test. And maybe most significant on that score is that the President brought health insurance companies in last week and they all agreed to waive the co-pays on testing. We expanded testing to Medicare and Medicaid patients. And we also expanded coverage for treatment, and health insurance companies expanded coverage for treatment. We don't



AMERICAN OVERSIGHT

want anybody to avoid having a test because they're concerned financially."

The risk to the average American remains low.

"I want people to know that the risk to contracting the coronavirus, according to all of our experts, for the average American remains low. Most people that contract it, will have flu-like symptoms and recover."

ON CBS This Morning

WATCH HERE.

We are going to continue to put in every effort in place to protect the health and safety of the American people.

"The President took the unprecedented step of suspending all travel from China which was the originating country of this virus. We also established travel advisories, and we've been screening passengers on all direct flights from South Korea and Italy. But with the epicenter of this epidemic now moving from China and South Korea to Europe, yesterday the President again took the unprecedented step of suspending all travel from Europe for the next 30 days, and that in combination with our strong mitigation efforts in communities that are experiencing what our experts call community spread, areas of California, Washington State, and New York, we're going to continue to put every effort at home and with regard to these travel restrictions in place to protect the health and safety of the American people."

In the days ahead, we are going to continue to see the availability of tests at your local doctor and your local pharmacy expand.

"Testing is happening in every state lab in the country. Many university hospitals have taken the FDA test, like the University of Washington, is doing a great job expanding testing capabilities. But the biggest piece on the testing is that our commercial labs that the President brought in last week, companies like Quest and LabCorp, have already had approved a new test that they several days ago had begun to take to market which

AMERICAN OVERSIGHT

they can do in a vast and expansive way across the country. And literally in the days ahead, we're going to continue to see the availability of tests at your local doctor, ultimately at your local pharmacy, continue to expand."

When President Trump learned that 70% of the new cases this week, around the world, were in Europe, he took decisive action to protect the American people.

"Make no mistake about it: All the new cases in the world, this week, 70% of the new cases were in Europe. And the increase has been dramatic. When the President imposed the travel advisory and we began screening all flights, all passengers coming into the United States from Italy two weeks ago, there were roughly 500 coronavirus cases. Now there's 12,000, about 1,000 in Germany, about 1,000 in France. That's the reason why the President essentially said full stop, we're going to suspend all travel, and that American citizens coming home and legal residents will be funneled through 13 different airports. They'll get an initial health screening coming in. But we're going to ask everyone returning to our country to self-quarantine for 14 days."

President Donald J. Trump Has Taken Unprecedented Steps to Respond to The Coronavirus and Protect the Health and Safety Of Americans

"Together we are putting into policy a plan to prevent, detect, treat and create a vaccine against coronavirus to save lives in America and the world. America will get it done!" – President Donald J. Trump

President Donald J. Trump signed a Presidential Proclamation, which suspends the entry of most foreign nationals who have been in certain European countries at any point during the 14 days prior to their scheduled arrival to the United States. These countries, known as the Schengen Area, include: Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and Switzerland. This does not apply to legal permanent residents, (generally) immediate family members of U.S. citizens, and other individuals who are identified in the proclamation.

Statement from DHS Acting Secretary Chad F. Wolf: "Protecting the American people from threats to their safety is the most important job of the President of the United States. The actions President Trump is taking to deny entry to foreign nationals who have been in affected areas will keep Americans safe and save American lives. I applaud the president for making this tough but necessary decision. While these new travel restrictions will be disruptive to some travelers, this decisive action is needed to protect the American public from further exposure to the potentially deadly coronavirus. In January and February, the Administration issued similar travel restrictions on individuals who had been in China and Iran. That action proved to be effective in slowing the spread of the virus to the U.S., while public health officials prepared. In the next 48 hours, in the interest of public health, I intend to issue a supplemental Notice of Arrivals Restriction requiring U.S. passengers that have been in the Schengen Area to travel through select airports where the U.S. Government has implemented enhanced screening procedures."

RESTRICTING TRAVEL FROM IMPACTED AREAS: President Donald J. Trump is taking further action to curb the spread of the coronavirus to the United States from other countries.

- President Trump is issuing a proclamation under section 212(f) of the

AMERICAN OVERSIGHT

Immigration and Nationality Act (INA) to restrict travel to the United States from foreign nationals who have recently been in certain European countries.
    - Section 212(f) of the INA only applies to the movement of human beings, not goods or cargo.
- The restriction applies to foreign nationals who have been in the Schengen Area, 26 countries in Europe with open borders agreements, in the last 14 days.
- Those who are exempt from these restrictions, such as American citizens, will be directed to a limited number of airports where screening can take place.
- There is extensive travel back and forth between Europe that heightens the risk here in the United States.

LOOKING OUT FOR AMERICAN BUSINESSES AND WORKERS: President Donald J. Trump is committed to protecting American businesses and workers from the impacts of coronavirus.

- The President is announcing an economic assistance package to help support businesses and workers who have been harmed by this outbreak.

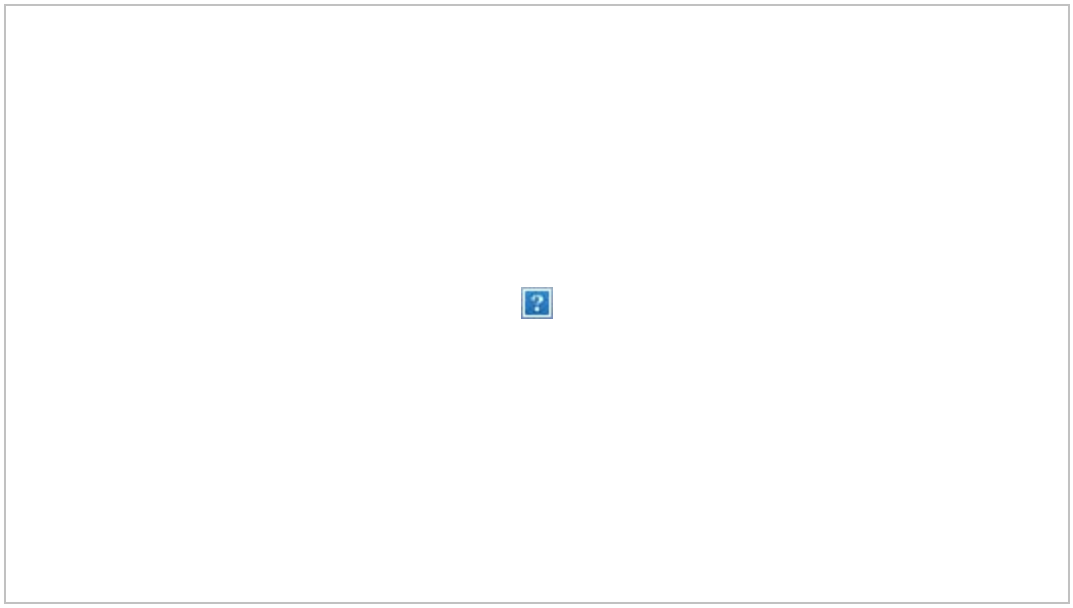
- President Trump has instructed the Small Business Administration (SBA) to exercise available authority to provide loans to businesses affected by the coronavirus.
    - These loans will help overcome disruptions caused by the coronavirus.
    - The President is calling on Congress to increase funding for this program by an additional $50 billion.
- The President will be instructing the Department of the Treasury to defer tax payments for certain individuals and businesses negatively impacted by the coronavirus.
    - This action will provide more than $200 billion of additional liquidity to the economy.
- President Trump is calling on Congress to immediately pass payroll tax relief.
- The President announced that he will soon be taking emergency action to provide financial relief for workers who are ill, quarantined, or caring for others due to the coronavirus.
    - The President also called on Congress to take action to extend this relief for workers.

LEADING AN AGGRESSIVE, WHOLE-OF-GOVERNMENT APPROACH: President Trump has taken unprecedented steps to protect the health of Americans in response to the coronavirus.

- The President is leveraging all of our resources to respond to the coronavirus, bringing together government and private industry in a collaborative response.

AMERICAN OVERSIGHT

- The Trump Administration declared a public health emergency in January to bolster response efforts.
- President Trump took early action to help curb the spread of the virus from other countries to the United States, providing important time for response and preparations.
    - In January, President Trump acted quickly to restrict travel from foreign nationals traveling from China.
    - In February, the President restricted travel for individuals recently traveling from Iran.
    - The Administration put into place mandatory screening for all travelers coming into the country from Italy and South Korea.
    - Travel advisories for severely impacted areas like Italy and South Korea have been raised to their highest level.
- Today, the President directed his Administration to make general-use face masks available to our healthcare workers.
    - The Administration's actions will help make millions of general-use respirators available to keep healthcare workers safe and mitigate transmission of the virus.
- President Trump signed into law more than $8 billion to fund response efforts.
- The Administration has taken bold steps to incentivize the development of therapeutics and vaccines to treat and prevent the spread of the coronavirus.
- Working across the public and private sectors, the Trump Administration continues to drastically expand testing capacity.
    - More than 1 million tests have been distributed nationwide, with another 4 million tests being shipped out by the end of the week.
    - Testing is now available in every State lab in the country and commercial labs are now deploying tests, which will help generate a dramatic increase in availability.
- The Trump Administration has released guidance on how to keep businesses, schools, community gathering places, and families safe.
    - From the start, President Trump has made keeping the public informed a top priority.
- The Administration has announced that health plans with health savings accounts will be able to cover coronavirus testing and treatment without co-payments.



ICYMI | Vice President Pence Discusses the Coronavirus Response on the Morning Shows

Earlier this morning, Vice President Pence joined Good Morning America, The Today Show, Fox & Friends, New Day, and CBS This Morning to discuss the steps that this administration is taking to

AMERICAN OVERSIGHT

combat the coronavirus.

ON ABC's GOOD MORNING AMERICA

WATCH HERE.

From very early on, President Trump took decisive action to put the health of the American people first.

> "We all have known from the beginning that the coronavirus would continue to spread across this country, and it's one of the reasons why, from very early on, President Trump took decisive action to put the health of the American people first, not only declaring a public health emergency in January, but in that same month he suspended all travel from China -- an unprecedented move -- and quarantined Americans that were returning from the region. Since that time, George, we've -- we've issued travel advisories for areas of South Korea, Italy; screened all persons coming on direct flights. But, frankly, as we watched the epicenter of the coronavirus shift from China and South Korea to Europe, the President thought it was proper for us to impose a 30-day suspension on all travel from continental Europe."

The President, again, made another unprecedented decision in suspending all travel from Europe, because we want to stop the flow of people bringing the coronavirus here.

> "The reality is that, really, just two weeks ago, in Italy, there were less than 500 cases and now there's 12,000 cases in Italy, George. We have tens of thousands of people that travel to the United States from Europe every day. Seventy percent of new cases in the world were in Europe. And when we looked yesterday at the -- what was then the 35 states where we had cases, about 30 of them could be traced to contacts with Europe. And so the President, again, made another unprecedented decision in suspending all travel from Europe, because we essentially want -- we essentially want to stop the flow of people bringing the coronavirus here, but then continuing to surge resources, particularly into California, Washington State, New York, and other communities

AMERICAN OVERSIGHT

where we've seen community spread. It's a combination of efforts that's being driven by the top health experts in the world on our task force. But the President -- the President showed again yesterday a willingness to take decisive action on multiple levels to protect the American people."

We want to send a very clear message to Americans that if for any reason you believe you've been exposed to the coronavirus, you should not be worried about the cost of testing or treatment.

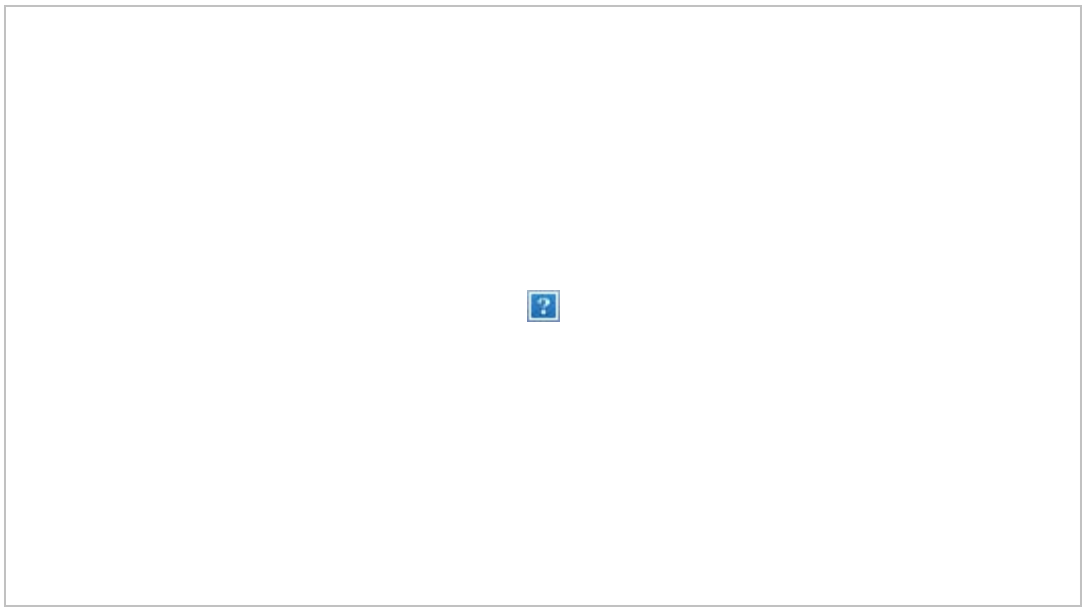
"We're making steady progress. We're going to continue to make a very clear message to Americans that if for any reason you believe you've been exposed to the coronavirus or you have symptoms, we don't want people to be worried about the cost of testing, to be worried about the cost of treatment… As the President made clear last night, we're working with Congress and exploring actions the President can take to make sure that hourly wage earners know that you can stay home without risking losing a paycheck or losing your job if you feel if you feel that you've been exposed to the coronavirus."

ON NBC's TODAY SHOW

WATCH HERE.

From early on in this effort, we have addressed the testing issue. We made changes through the FDA that allowed for state labs and hospitals to engage in testing.

"From early on in this effort we've been addressing the testing issue. We made changes through the FDA that allowed for state labs and university hospitals and hospitals to engage in testing. And I'm pleased to report every state lab in America can do testing now. Many university laboratories are doing it. Washington State – the University of Washington is doing extraordinary work. but we are literally working hour by hour to expand the testing and we think the key Savannah is going to be what we call commercial laboratories like LabCorp and Quest who are already spinning up production at the president's



AMERICAN OVERSIGHT

direction last week on tests that can be available on a broad basis in the days ahead for the American people. we're making real progress but rest assured we're going to continue to drive forward."

The American people should know that President Trump has no higher priority than the health, safety and well-being of the American people.

"The American people should know that President Trump has no higher priority than the health and safety and wellbeing of the people in this country. You can go to coronavirus.gov right now to find out what every American can do to keep yourself, your family, your workplace and your school safe. But you can rest assured we're going to focus on communities where we've had community spread, and the President's action yesterday suspending travel from Europe is one more example of how he's putting the health of America first."

ON FOX NEWS' FOX & FRIENDS

WATCH HERE AND HERE.

The President has called this a whole-of-government approach, but he has also called this is a whole-of-America approach.

"The President, you know, he said this was a whole-of-government approach but he also said this is a whole-of-America approach. So he's brought in business leaders from nursing homes; yesterday, banking; hospitals, and the rest. But one of the things we did that's most important on testing was the President brought in the leaders of the top commercial laboratories in the country who, as we speak, have already approved a test that is being spun up. It's being sent out to market. Quest, LabCorp, the largest commercial laboratories in the country, are working very closely with our administration. We're clearing the red tape out of the way. That's going to be the way that, in the days ahead, we're going to -- we're going to have broad-based testing available all across the country."

We are working together to contain the spread of the coronavirus.

AMERICAN OVERSIGHT

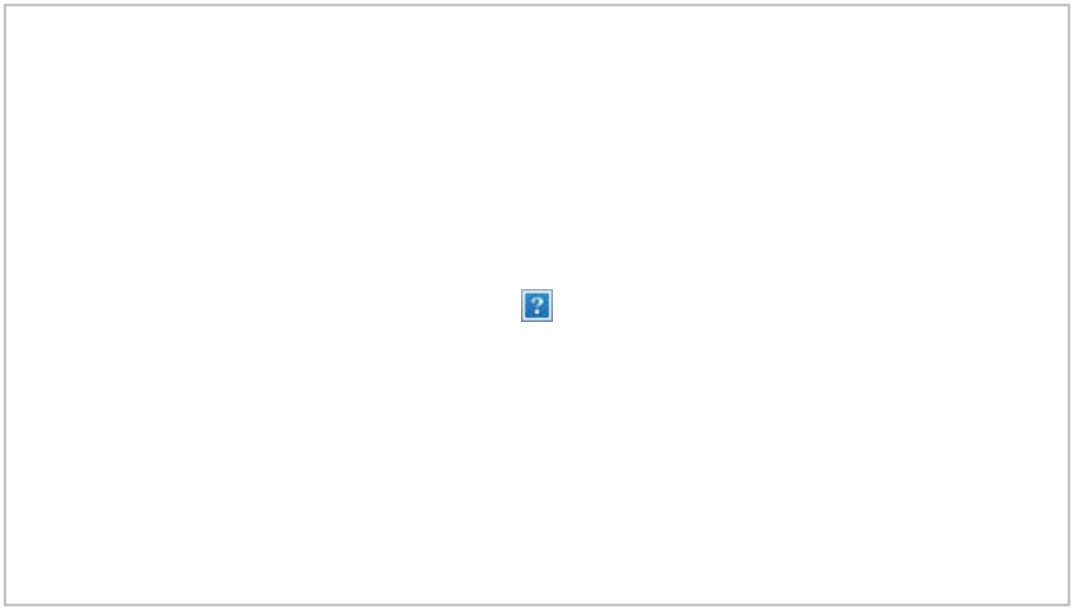
And we will get through this.

> "Our goal, as the coronavirus spreads in this country -- and the vast majority who would contract it will have flu-like symptoms and recover. Our goal nonetheless is to hold down that overall number as much as possible. And we will do that with the continuing cooperation of American families, schools, businesses, and states. And that's the vision President Trump has. All of us working together will get through this."

We are focusing on supporting efforts at the state and local level in Washington State, and in California. CDC issued strong guidelines for those communities about public activities, large gatherings and at schools. We will continue simply to follow the data on this.

> "Make no mistake about it: We are also focusing on supporting efforts at the state and local level in California, in Washington State, and in California. CDC issued very strong guidelines for those communities about public activities, large gatherings, schools. And we'll continue simply to follow the data on this and make strong recommendations where we have what's known as "community spread. But for every American, right now, as the President said last night, it's a good time to use common sense. Wash your hands often. Clean, you know, often-used surfaces. All that information is available at Coronavirus.gov. So we're going to try and mitigate the spread in this country but also prevent, through the President's decisive action last night, people from bringing the coronavirus into the United States any further from Europe."

We are encouraging best practices for every American. We are focusing on communities where we have community spread.



> "I want to say to your viewers, just as the President said last night, the risk to the average American of contracting the coronavirus remains low, but we do know that seniors with serious underlying chronic health conditions are particularly vulnerable to very serious outcomes. And so we're encouraging best practices for every American. We're focusing on communities where we have community spread."

Those with a family member who is a senior citizen should support them in engaging in good hygiene and good health practices.

> "For any American that's watching today that has a family member or a loved one who's a senior citizen with a serious underlying health condition, this is a very good time to help and to support them to be able to avoid public places, and everyone around them to engage in good hygiene and good practices to protect those that are most vulnerable."

ON CNN's NEW DAY

AMERICAN OVERSIGHT

WATCH HERE AND HERE.

We have been meeting with industry leaders in one relevant industry after another to ensure that the full resources of America are being brought to bear.

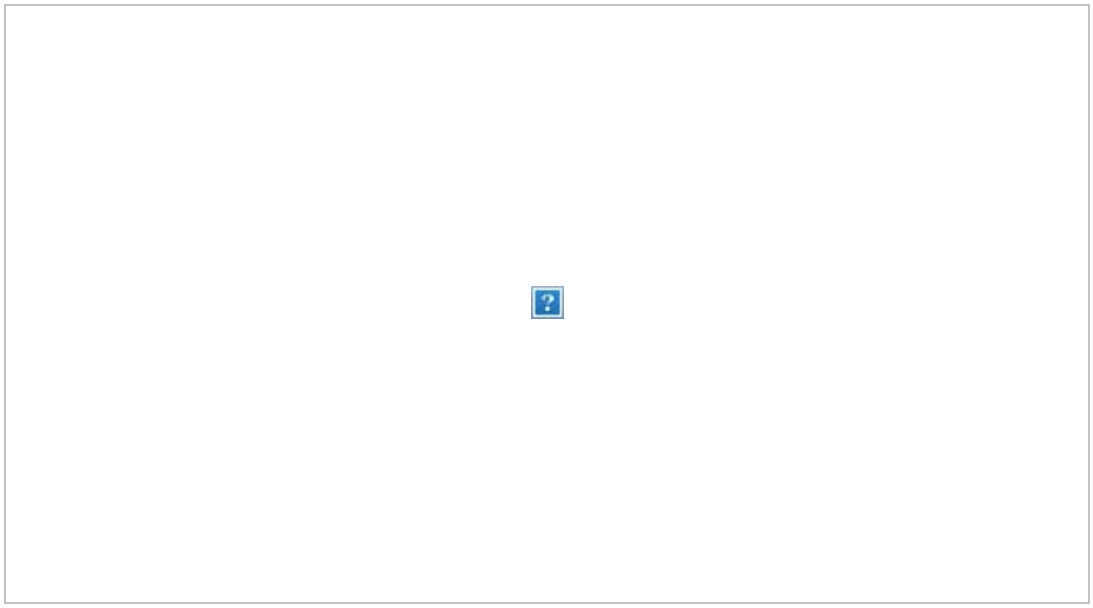
> "We're not doing a travel ban as our strategy. The suspending all travel for 30 days from Europe is a part of the strategy. The other part is an aggressive mitigation strategy. I spoke to the governors of New York, Washington State, and California tomorrow -- or yesterday. CDC issued strong guidance to those areas where we have community spread. We've flowed resources. We've flowed support to those areas. And so it's a combination of strategies that the President has employed here. As he says, it's "all hands on deck," "a whole-of-government approach," but it's also a whole-of-America approach. We've literally been meeting with industry leaders in one relevant industry after another to ensure that the full resources of America are being brought to bear."

Any American who is concerned about being exposed to the coronavirus, should call their doctor and get tested.

> "Anyone who's looking on today who might be concerned that they were exposed to coronavirus or have symptoms should call their doctor. Their doctor, with any question, can call their state laboratory and be able to find out how they can have a test processed."

We are making steady progress. We don't want anybody to avoid having a test because they are concerned financially.

> "But make no mistake about it: We're making steady progress. We've made changes at the FDA in January, at the President's direction. And the American people can be confident we're going to continue to roll out the test. And maybe most significant on that score is that the President brought health insurance companies in last week and they all agreed to waive the co-pays on testing. We expanded testing to Medicare and Medicaid patients. And we also expanded coverage for treatment, and health insurance companies expanded coverage for treatment. We don't



AMERICAN OVERSIGHT

want anybody to avoid having a test because they're concerned financially."

The risk to the average American remains low.

"I want people to know that the risk to contracting the coronavirus, according to all of our experts, for the average American remains low. Most people that contract it, will have flu-like symptoms and recover."

ON CBS This Morning

WATCH HERE.

We are going to continue to put in every effort in place to protect the health and safety of the American people.

"The President took the unprecedented step of suspending all travel from China which was the originating country of this virus. We also established travel advisories, and we've been screening passengers on all direct flights from South Korea and Italy. But with the epicenter of this epidemic now moving from China and South Korea to Europe, yesterday the President again took the unprecedented step of suspending all travel from Europe for the next 30 days, and that in combination with our strong mitigation efforts in communities that are experiencing what our experts call community spread, areas of California, Washington State, and New York, we're going to continue to put every effort at home and with regard to these travel restrictions in place to protect the health and safety of the American people."

In the days ahead, we are going to continue to see the availability of tests at your local doctor and your local pharmacy expand.

"Testing is happening in every state lab in the country. Many university hospitals have taken the FDA test, like the University of Washington, is doing a great job expanding testing capabilities. But the biggest piece on the testing is that our commercial labs that the President brought in last week, companies like Quest and LabCorp, have already had approved a new test that they several days ago had begun to take to market which

AMERICAN OVERSIGHT

they can do in a vast and expansive way across the country. And literally in the days ahead, we're going to continue to see the availability of tests at your local doctor, ultimately at your local pharmacy, continue to expand."

When President Trump learned that 70% of the new cases this week, around the world, were in Europe, he took decisive action to protect the American people.

"Make no mistake about it: All the new cases in the world, this week, 70% of the new cases were in Europe. And the increase has been dramatic. When the President imposed the travel advisory and we began screening all flights, all passengers coming into the United States from Italy two weeks ago, there were roughly 500 coronavirus cases. Now there's 12,000, about 1,000 in Germany, about 1,000 in France. That's the reason why the President essentially said full stop, we're going to suspend all travel, and that American citizens coming home and legal residents will be funneled through 13 different airports. They'll get an initial health screening coming in. But we're going to ask everyone returning to our country to self-quarantine for 14 days."

Subject: RE: LAB FORMS AND PROCESS DOCUMENTS

Linda,

They have updated 1 of the forms and pushed it out to DOH at 6:52. This new version is the one I am pushing out to the printer for Miami and Orlando, and all the stuff being printed be found attached/who gets which printout and quantities can be found below:

- 3,000- What to Expect
- 3,000- Test Result Info Sheets
- 3,000- Requisition Form, that citizens should be filling out and handing back during the screening process. (Station 2) - The recommendation is **3,000 of each.**

AMERICAN OVERSIGHT

- 10,000-Info Sheet for Not Meeting Criteria
- 150- Scripts for those who will be doing initial greetings with the citizens arriving for testing. (Station 1)
- 150- Lab Processing Instructions for those doing the sample collection. (Station 3)
- 150- Informed Consent Instructions, for staff working at station 2.

If you have any more questions, please let me know .

COVID-19

INSTRUCTIONS

While awaiting test results

You will receive a call from 1-833-447-0001 (Caller ID: Results Center) with test results in 3-5 days.

What should you do about work while you wait for test results?

- If you <u>are experiencing symptoms</u>: Stay home and, if applicable, notify your supervisor and note the date of testing.
- If you <u>are not experiencing symptoms</u>: Follow recommendations below to protect yourself. If you are a healthcare facility worker or first responder, request guidance from your supervisor on any potential work and patient care restrictions until you know your test results.
- Avoid using public transportation, ride-sharing or taxis when commuting.

What should you do to protect yourself while you wait for test results?

- Wash your hands often with soap and water for at least 20 seconds. Clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol if soap and water are not available.
- Avoid close contact with people who are sick. Put distance between yourself and others when possible.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Clean all “high-touch” surfaces every day. High touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables.
- Cover coughs and sneezes.
- If available, wear a facemask if you are sick.

When you receive a call from 1-833-447-0001 (Caller ID: Results Center), please answer.
Due to privacy considerations, we are unable to leave a message. We will attempt two follow up calls.
If you have not received your test **result in 7 days**, contact your state or local health department.

Monitor any symptoms:

- Note the day any new symptoms begin.
- Check your temperature two times a day.
- Keep a daily record of fever, cough, and additional respiratory symptoms.
- Seek further evaluation from a healthcare provider via telemedicine or an in-person if your symptoms get worse. **Call ahead before visiting your doctor** and tell them you have been tested for COVID-19.
- Even if you don’t experience symptoms, you <u>might</u> make others sick.

Seek medical attention immediately if you develop any of the following emergency warning signs for COVID-19 or other medical emergencies:

- Extremely difficult breathing
- Bluish lips or face
- Constant pain or pressure in the chest
- Severe constant dizziness or lightheadedness
- Acting confused
- Difficult to wake up
- Slurred speech (new or worsening)
- New seizure or seizures that won’t stop

This list is not all-inclusive. Please consult your medical provider for any other symptoms that are severe or concerning.

For medical emergencies, **<u>call 911</u>** & notify the dispatch personnel that you may have COVID-19.

FOR MORE INFORMATION VISIT: WWW.CORONAVIRUS.GOV

AMERICAN OVERSIGHT

Coronavirus

COVID-19

TEST RESULTS

If you test positive for COVID-19

- Most cases can be cared for at home.
  - Do not go to the hospital to seek care unless you have a medical emergency.
- Do not go to work. Notify your employer of your positive test result. Begin home isolation.
- **Continue to monitor your symptoms at home as described on the opposite side.**
- Seek medical attention if you develop ANY of the following:
  - ❑ Extreme difficulty breathing
  - ❑ Bluish lips or face
  - ❑ Constant pain or pressure in the chest
  - ❑ Severe constant dizziness or lightheadedness
  - ❑ Difficult to wake up
  - ❑ Slurred speech (new or worsening)
  - ❑ New seizures or seizures that won't stop

What should you expect?

- Most people experience minor symptoms such as fever and cough.
- Over-the-counter medications that lesson symptoms of fever and cough may help. It is important to get rest and drink plenty of fluids.
- There is currently no vaccine or medication to treat or prevent COVID-19.

When does home isolation end?

- If you test positive for COVID-19, stay home and limit contact with others until:
  - You have been fever-free for at least 3 days without using medicine that reduces fevers

    AND
  - Your other symptoms have improved

    AND
  - At least 7 days have passed since your symptoms first appeared
- In all cases, follow the guidance of your healthcare provider and local health department.

If you test negative for COVID-19

- You are probably not infected at this time. However, you could have been exposed and test positive later. You must continue to practice all the protective measures to keep yourself and others negative.
- As long as the virus that causes COVID-19 is spreading in your community, continue to follow recommendations to protect yourself, including:
  - practice social distancing, wash your hands often, avoid touching your face, and avoid social gatherings according to local guidance.
- Follow guidance from your healthcare provider and your state and local health departments.

Coronavirus

COVID-19 INFORMATION

At this time, this Community-based Testing Site is only testing healthcare facility workers and first responders or has reached capacity.

If you are experiencing COVID-19 symptoms or may have been exposed, contact your state or local health department for additional testing sites.

Continue to take steps to protect yourself

- Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry.
- Avoid close contact with people who are sick.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Clean all “high-touch” surfaces every day. High touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables.

Continue to take steps to protect others

- Stay home if you’re sick.
- Cover coughs and sneezes.
- If available, wear a facemask if you are sick.

Monitor any symptoms:

- Note the day your symptoms begin.
- Check your own temperature two times a day.
- Keep a daily record of fever, cough, and additional respiratory symptoms.
- Seek further evaluation from a healthcare provider via telemedicine or in-person if your symptoms get worse. **Call ahead before visiting your doctor.**

Seek medical attention immediately if you develop any of the following emergency warning signs for COVID-19 or other medical emergencies:

- Extremely difficult breathing
- Bluish lips or face
- Constant pain or pressure in the chest
- Severe constant dizziness or lightheadedness
- Acting confused
- Difficult to wake up
- Slurred speech (new or worsening)
- New seizure or seizures that won’t stop

This list is not all-inclusive. Please consult your medical provider for any other symptoms that are severe or concerning.

For medical emergencies, **call 911** & notify the dispatch personnel that you may have COVID-19.

COVID-19

WHAT TO EXPECT AT COMMUNITY-BASED TESTING SITES

For Healthcare Facility Workers & First Responders

- **You must arrive in a personal vehicle**
- **Items to bring:**
  - Photo ID
  - Health insurance card (everyone will be tested regardless if they have insurance)
  - Healthcare facility employee or first responder ID/Badge (if applicable)

THINGS TO CONSIDER

- There are **no** bathrooms;
- Each person who needs testing must be seated next to a **working window**;
- All passengers must **stay inside** vehicles from arrival to departure;
- Try to **limit** the people in your vehicle to those needing testing; and
- There may be **significant wait times**.

ARRIVAL

- Each vehicle will be greeted and directed by personnel in full medical protective gear.

TEMPERATURE CHECK

- Your temperature will be checked using a no touch thermometer.

REGISTRATION

- Each person needing testing will be asked to provide the following:
  - Photo ID
  - First and last name
  - Healthcare facility employee or first responder ID/badge (if applicable)
  - Current address (where you are staying)
  - Best phone number to reach you (indicate mobile/landline)
  - Insurance card (if available)

TESTING

- A healthcare provider in personal protective equipment will provide you with instructions.
- You will be given a tissue to blow your nose and will need to keep your tissue to dispose on your own.
- A soft swab will be inserted deep into your nose to get the necessary sample. This may be slightly uncomfortable; however, the test is quick and should take less than a minute.

INFORMATION & DEPARTURE

- Once the test is complete, you will move to the final station.
- You will be given information to take with you on what to do while awaiting test results. **Please keep this paper until you get your test results.**
- Depart/Exit Community-based Testing Site.
- Follow the instructions on the paper provided by the Community-based Testing Site. Continue to monitor and record symptoms. You will receive test results via telephone.

For medical emergencies, call 911 and notify the dispatch that you may have COVID-19.

SCRIPT FOR WEDNESDAY, MARCH 18:**

Script 1: Greeting

Good morning/afternoon, are you here for COVID-19 testing? Today we are only testing healthcare facility workers and first responders. Are you a healthcare facility worker or first responder?

“I am a healthcare facility work or first responder”

Here is what to expect at the testing site today. The registration team will verify that you meet these criteria. <*Provide “What to Expect” handout and number.*>

“I don’t meet that criteria”

We will not be able to test you today at this location. Here is some useful information that may be helpful about COVID-19 and other resources for testing. <*Provide “Information” handout.*>

Script 2: Not in an enclosed personal vehicle

I’m sorry, you must be in an enclosed personal vehicle for your safety. We will not be able to test you at this location. Here is some useful information that may be helpful about COVID-19 and other resources for testing. <*Provide “Information” handout.*>

Script 3: Site has reached capacity

We have reached the maximum number of vehicles that we can accommodate today. Here is some useful information that may be helpful about COVID-19 and other resources for testing. As a reminder, this site is only for healthcare facility workers and first responders today. If you meet the criteria; please come back tomorrow.

PRIVACY ACT STATEMENT AND INFORMED CONSENT

Community Based Testing Sites are recommended to:

1. Print the attached 1-page “Informed Consent” verbiage.
2. Both English and Spanish versions are provided.
3. Recommend print multiple copies (double-sided printing)
4. Laminate if possible (for ease of sanitizing, as needed)
5. Identify the personnel at the registration site who will verbally read this to each individual proceeding for testing.
6. Recommended: hold up the Informed Consent for individuals to follow along while it is being verbally read.
7. For any individual requesting translation, utilize resources available, including telephonic. Collaborate with local healthcare network systems if necessary.

Verbal Informed Consent to be read out loud to each individual (see page 2):

PRIVACY ACT STATEMENT

Collection of this information is authorized by the Public Readiness and Emergency Preparedness Act (PREP Act), Pub. L. No. 109-148, and the President's Proclamation of a National Emergency Concerning the Novel Coronavirus Disease (COVID-19) Outbreak. Your information will be used to notify you of your test results and to seek reimbursement from your health insurance provider, if applicable. Providing this information is voluntary, however failure to do so will make it impossible for us to notify you of your results. We will share this information with a diagnostics lab that will test your sample, with a call center that will notify you of your results, and with your health insurance provider.

"You have agreed, by coming to this test site, to participate in testing designed to identify whether you have been infected by the novel coronavirus and have developed COVID-19, the disease caused by the novel coronavirus. Your participation in this process is voluntary. Should you decide not to participate, you will not suffer any penalty or loss of benefits to which you are otherwise entitled. In addition, you should be aware of the following: This test involves the administration of a nasal swab that will capture mucus and secretions from your nose. This procedure is called a nasopharyngeal swab and is used to identify upper respiratory infections. Administering the swab is a low risk procedure, but there is a small risk that the swab could cause damage to the posterior nasopharynx. Your participation in this process and any records developed as a result of your participation that could be used to identify you are confidential and will be maintained in confidence.

Please indicate verbally that I have read this statement to you and that you give your informed consent to participate in this testing."

AMERICAN OVERSIGHT

Pre-Sampling Lab Process Instructions

Sample Test Medium Instructions:

- Your sampling kits contain Universal Transport Medium (UTM); please read this **CRITICAL** information:
  - **Storage Considerations**:
    This product must be stored in its original packaging at a temperature between 2-25^{0}C (35.6 - 77^{0}F) until the time of use. Do not overheat or freeze prior to use.
  - After collection, the specimen should be stored at 2-8°C (35.6-46.4°F) and processed within 48 hours.
  - When shipped, sample must remain at 2-8°C (35.6-46.4°F).
    For full product package insert instruction: https://www.copanusa.com/wp-content/uploads/2020/02/UTM-Package-Insert.pdf

Requisition Form Instructions for Sites:

- Recommend sites update certain fields within the form (before printing on-site):
  - **Site ID/Number**: Add organization name and ID as applicable (i.e. CVS #2100)
  - **Site Location**: If Community Based Testing Site (CBTS) has a specific name, input this here and keep it consistent throughout duration of testing. Labs will associate samples with this site specifically.
  - **Site Address**: Physical location must be added within header to include city, state, zip code.
  - Consider pre-populate the month and year within the form. Only date will need to be entered manually on-site
  - Print estimated amount needed for operations for the week.
- **Every field** on the attached form **is required** for the labs to be able to successfully process samples (including the fields within the header).
  - LABS WILL NOT PROCESS SAMPLE IF ANY PORTION OF THIS FORM IS NOT FILLED OUT.
- Sites must identify and designate a personnel member to verbally **read** the informed consent and privacy language to individuals (*verbiage is below*) before proceeding with registration and accurately identifying responses at the bottom of the form. Both ENGLISH/SPANISH versions are provided.

- **SAMPLE BARCODES**

  - Each individual being tested will receive a unique sample identification from the contract lab company.

AMERICAN OVERSIGHT

- Two (2) unique adhesive **matched barcodes** will be placed on 1) the sample tube and 2) on the requisition form.
- All samples will be identified with **two items**: a unique barcode and a label with written DOB of individual being tested.
- The barcodes must meet the following specifications:

  - Must have a human readable string (16 character max)
  - Must be Code 128 (barcode standard)

- Required supplies have been put on state supply list: paper/printers for forms, barcodes, labels (for DOB on sample), pens

  - Note: Quest has recommended a company called Standard Register who is ready to assist with form printing and would be able to print forms with barcodes pre-attached. If states want to procure forms and barcodes through them, the contact is Kevin Witte, cell phone: 973-723-1317, email: kevin.witte@taylorcommunications.com

*if community based testing sites are in collaboration with local health networks, and already have pre-existing electronic intake process(es) or a pre-existing hardcopy intake forms that includes all information that needs to be identified, please utilize those.

The attached intake form is **highly recommended,** as it includes ALL necessary components for labs to successfully process samples as intended. If using other private sector forms, but intending to send sample results to either LabCorp or Quest, ensure the required fields within the requisition form here are also populated on the other (private sector) form.

PRIVACY ACT STATEMENT AND INFORMED CONSENT

Community Based Testing Sites are recommended to:

1. Print the attached 1-page “Informed Consent” verbiage.
2. Both English and Spanish versions are provided.
3. Recommend print multiple copies (double-sided printing)
4. Laminate if possible (for ease of sanitizing, as needed)
5. Identify the personnel at the registration site who will verbally read this to each individual proceeding for testing.
6. Recommended: hold up the Informed Consent for individuals to follow along while it is being verbally read.
7. For any individual requesting translation, utilize resources available, including telephonic. Collaborate with local healthcare network systems if necessary.

Verbal Informed Consent to be read out loud to each individual (see page 2):

AMERICAN OVERSIGHT

PRIVACY ACT STATEMENT

Collection of this information is authorized by the Public Readiness and Emergency Preparedness Act (PREP Act), Pub. L. No. 109-148, and the President's Proclamation of a National Emergency Concerning the Novel Coronavirus Disease (COVID-19) Outbreak. Your information will be used to notify you of your test results and to seek reimbursement from your health insurance provider, if applicable. Providing this information is voluntary, however failure to do so will make it impossible for us to notify you of your results. We will share this information with a diagnostics lab that will test your sample, with a call center that will notify you of your results, and with your health insurance provider.

"You have agreed, by coming to this test site, to participate in testing designed to identify whether you have been infected by the novel coronavirus and have developed COVID-19, the disease caused by the novel coronavirus. Your participation in this process is voluntary. Should you decide not to participate, you will not suffer any penalty or loss of benefits to which you are otherwise entitled. In addition, you should be aware of the following: This test involves the administration of a nasal swab that will capture mucus and secretions from your nose. This procedure is called a nasopharyngeal swab and is used to identify upper respiratory infections. Administering the swab is a low risk procedure, but there is a small risk that the swab could cause damage to the posterior nasopharynx. Your participation in this process and any records developed as a result of your participation that could be used to identify you are confidential and will be maintained in confidence.

Please indicate verbally that I have read this statement to you and that you give your informed consent to participate in this testing."

Pre-Sampling Lab Process Instructions

Sample Test Medium Instructions:

- Your sampling kits contain Universal Transport Medium (UTM); please read this **CRITICAL** information:
  - **Storage Considerations**:
    This product must be stored in its original packaging at a temperature between 2-25^{0}C (35.6 - 77^{0}F) until the time of use. Do not overheat or freeze prior to use.
  - After collection, the specimen should be stored at 2-8°C (35.6-46.4°F) and processed within 48 hours.
  - When shipped, sample must remain at 2-8°C (35.6-46.4°F).
    For full product package insert instruction: https://www.copanusa.com/wp-content/uploads/2020/02/UTM-Package-Insert.pdf

Requisition Form Instructions for Sites:

- Recommend sites update certain fields within the form (before printing on-site):
  - **Site ID/Number**: Add organization name and ID as applicable (i.e. CVS #2100)
  - **Site Location**: If Community Based Testing Site (CBTS) has a specific name, input this here and keep it consistent throughout duration of testing. Labs will associate samples with this site specifically.
  - **Site Address**: Physical location must be added within header to include city, state, zip code.
  - Consider pre-populate the month and year within the form. Only date will need to be entered manually on-site
  - Print estimated amount needed for operations for the week.
- **Every field** on the attached form **is required** for the labs to be able to successfully process samples (including the fields within the header).
  - LABS WILL NOT PROCESS SAMPLE IF ANY PORTION OF THIS FORM IS NOT FILLED OUT.
- Sites must identify and designate a personnel member to verbally **read** the informed consent and privacy language to individuals (*verbiage is below*) before proceeding with registration and accurately identifying responses at the bottom of the form. Both ENGLISH/SPANISH versions are provided.

- **SAMPLE BARCODES**

  - Each individual being tested will receive a unique sample identification from the contract lab company.

AMERICAN OVERSIGHT

- Two (2) unique adhesive **matched barcodes** will be placed on 1) the sample tube and 2) on the requisition form.
- All samples will be identified with **two items**: a unique barcode and a label with written DOB of individual being tested.
- The barcodes must meet the following specifications:

  - Must have a human readable string (16 character max)
  - Must be Code 128 (barcode standard)

- Required supplies have been put on state supply list: paper/printers for forms, barcodes, labels (for DOB on sample), pens

  - Note: Quest has recommended a company called Standard Register who is ready to assist with form printing and would be able to print forms with barcodes pre-attached. If states want to procure forms and barcodes through them, the contact is Kevin Witte, cell phone: 973-723-1317, email: kevin.witte@taylorcommunications.com

*if community based testing sites are in collaboration with local health networks, and already have pre-existing electronic intake process(es) or a pre-existing hardcopy intake forms that includes all information that needs to be identified, please utilize those.

The attached intake form is **highly recommended,** as it includes ALL necessary components for labs to successfully process samples as intended. If using other private sector forms, but intending to send sample results to either LabCorp or Quest, ensure the required fields within the requisition form here are also populated on the other (private sector) form.

Pre-Sampling Lab Process Instructions

Sample Test Medium Instructions:

- Your sampling kits contain Universal Transport Medium (UTM); please read this **CRITICAL** information:
  - **Storage Considerations**:
    This product must be stored in its original packaging at a temperature between 2-25^{0}C (35.6 - 77^{0}F) until the time of use. Do not overheat or freeze prior to use.
  - After collection, the specimen should be stored at 2-8°C (35.6-46.4°F) and processed within 48 hours.
  - When shipped, sample must remain at 2-8°C (35.6-46.4°F).
    For full product package insert instruction: https://www.copanusa.com/wp-content/uploads/2020/02/UTM-Package-Insert.pdf

Requisition Form Instructions for Sites:

- Recommend sites update certain fields within the form (before printing on-site):
  - **Site ID/Number**: Add organization name and ID as applicable (i.e. CVS #2100)
  - **Site Location**: If Community Based Testing Site (CBTS) has a specific name, input this here and keep it consistent throughout duration of testing. Labs will associate samples with this site specifically.
  - **Site Address**: Physical location must be added within header to include city, state, zip code.
  - Consider pre-populate the month and year within the form. Only date will need to be entered manually on-site
  - Print estimated amount needed for operations for the week.
- **Every field** on the attached form **is required** for the labs to be able to successfully process samples (including the fields within the header).
  - LABS WILL NOT PROCESS SAMPLE IF ANY PORTION OF THIS FORM IS NOT FILLED OUT.
- Sites must identify and designate a personnel member to verbally **read** the informed consent and privacy language to individuals (*verbiage is below*) before proceeding with registration and accurately identifying responses at the bottom of the form. Both ENGLISH/SPANISH versions are provided.

- **SAMPLE BARCODES**

  - Each individual being tested will receive a unique sample identification from the contract lab company.

AMERICAN OVERSIGHT

- Two (2) unique adhesive **matched barcodes** will be placed on 1) the sample tube and 2) on the requisition form.
- All samples will be identified with **two items**: a unique barcode and a label with written DOB of individual being tested.
- The barcodes must meet the following specifications:

  - Must have a human readable string (16 character max)
  - Must be Code 128 (barcode standard)

- Required supplies have been put on state supply list: paper/printers for forms, barcodes, labels (for DOB on sample), pens

  - Note: Quest has recommended a company called Standard Register who is ready to assist with form printing and would be able to print forms with barcodes pre-attached. If states want to procure forms and barcodes through them, the contact is Kevin Witte, cell phone: 973-723-1317, email: kevin.witte@taylorcommunications.com

*if community based testing sites are in collaboration with local health networks, and already have pre-existing electronic intake process(es) or a pre-existing hardcopy intake forms that includes all information that needs to be identified, please utilize those.

The attached intake form is **highly recommended,** as it includes ALL necessary components for labs to successfully process samples as intended. If using other private sector forms, but intending to send sample results to either LabCorp or Quest, ensure the required fields within the requisition form here are also populated on the other (private sector) form.

Good morning USZPIR and SET-NET partners,

We wanted to make sure that you were all aware of the below resources for the novel coronavirus, COVID-19.

This **Thursday, March 5, at 2:00pm Eastern**, there will be a Clinician Outreach and Communication Activity (COCA) call where clinicians "will learn what they can do to prepare for COVID-19 including identifying persons under investigation, applying infection prevention and control measures, assessing risks for exposures, optimizing the use of personal protective equipment supplies, and managing and caring for patients (inpatient and at home)."

Call information is found at the link below. Participants are asked to access the call in a group format due to high demand. Target audience is physicians, nurses, pharmacists, veterinarians, physician assistants, health educators, and other clinicians.
https://emergency.cdc.gov/coca/calls/2020/callinfo_030520.asp

The following page has everything in one place from CDC:
https://www.cdc.gov/coronavirus/2019-ncov/index.html

Within that site, there is also a specific page with information on pregnancy, breastfeeding, and children:
https://www.cdc.gov/coronavirus/2019-ncov/specific-groups/pregnant-women.html

Just sharing in case it is helpful for you or your colleagues.

Please let us know if you have any questions.

Best,
Megan

10 ways to manage respiratory symptoms at home

Continue to monitor and record symptoms. The Florida Department of Health in Miami-Dade County will be contacting you with results within 7 days of testing.

1. **Stay home** from work, school, and away from other public places. If you must go out, avoid using any kind of public transportation, ridesharing, or taxis.

2. **Monitor your symptoms** carefully. If your symptoms get worse, call your healthcare provider immediately.

3. **Get rest and stay hydrated.**

4. If you have a medical appointment, **call the healthcare provider** ahead of time and tell them that you have or may have COVID-19.

5. For medical emergencies, call 911 and **notify the dispatch personnel** that you have or may have COVID-19.

6. **Cover your cough and sneezes.**

7. **Wash your hands often** with soap and water for at least 20 seconds or clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol.

8. As much as possible, **stay** in a specific room and **away from other people** in your home. Also, you should use a separate bathroom, if available. If you need to be around other people in or outside of the home, wear a facemask.

9. **Avoid sharing personal items** with other people in your household, like dishes, towels, and bedding.

10. **Clean all surfaces** that are touched often, like counters, tabletops, and doorknobs. Use household cleaning sprays or wipes according to the label instructions.

AMERICAN OVERSIGHT

INTERNAL REFERENCE ONLY

Pre-Arrival to Testing Site Instructions

1. Vehicle Capacity: 2 – (1 Driver and 1 Passenger)
    a. The passenger must be sitting at an operating window
2. If there are two (2) people in one (1) vehicle, each person is individually registered and tested if they meet the testing criteria.
    a. A vehicle with more than two (2) people will be turned away from the testing site.
    b. If a vehicle arrives with more than two (2) people, the onsite lead Charge Nurse will make a clinical decision to proceed.
    c. If a person arrives with no appointment, the onsite lead Charge Nurse will make a clinical decision to proceed.
3. Each person(s) must remain in the vehicle from time of arrival to departure of the testing area
4. Testing is done via an open vehicle window. Ensure windows are operational.

THINGS TO CONSIDER ·There are no bathrooms; · Each person needing a test must be seated next to a working window; · All passengers must remain in the vehicle from arrival to departure; ·Try to limit the people in your vehicle to those needing a test; · Eat prior to appointment or bring snacks and water. There may be significant wait times (expect several hours)

At Arrival to Testing Site Instructions

1. Pull forward slowly, as instructed until arriving to first station.
2. Place car into park.
3. Slightly roll down window and speak loudly.

Testing Flow

Station 1 – Appointment Validation

- Assessors will ask for person(s) ID and confirm individual's name and the assigned code matches the appointment list
- Assessors provide an information packet to vehicle informing person(s) of public health information, including contact information

AMERICAN OVERSIGHT

Station 2 – Lab Registration (est. time: ~5 min per person)

- Scribers complete paper form with demographic information for each person to be tested (information relayed to Scribers via the Runner for each car):
    - First Name
    - Last Name
    - Phone
    - Email
    - Address
    - Date of Birth
    - Sex
    - Race & Ethnicity
- Scriber places lab requisition bag under the wiper of the front vehicle window.

Station 3 – Swabbing and Decontamination (est. time: 5 min)

- **Primary Swabber**
    - Confirm verbal authorization from person being swabbed for swab collection (ask runner)
    - Receive collection tube and swab from runner
    - Label collection tube with person's ID
    - Take swab of person(s) in car
    - Immediately place specimen swab into specimen collection tube
    - Insert specimen collection tube into secondary containment (specimen bag)
    - Place specimen bag on to temporary specimen bag staging table
    - Place form and sample bag in envelope, signs form as chain of custody, and places envelope in shipping container
    - Quality Control officer verifies all labels match and places specimen into sample cooler
        - Specimens must be maintained at a temperature between 2˚ -8˚ C (35.6˚F to 46.4˚F)
        - Specimens must be shipped in less than 48 hours of collection

VEHICLE EXITS

AMERICAN OVERSIGHT

Laboratory Processing

- All labs are processed using LabCorp

- **Results**
  - Participants are called by a Florida Department of Health in Miami-Dade employee to receive results.
  - Results may take up to 7 days depending on lab processing.

- **Negative Results**

Encourage individual to practice proper hygiene techniques, maintain social distancing measures as well as monitoring for signs and symptoms of COVID-19. Proper hygiene measures include washing the hands before meals and after using the bathroom, avoiding touching their face, proper covering of cough and sneeze.

- **Positive Results**

Monitor for signs and symptoms of complications such as:

- Difficulty breathing or shortness of breath,
- Persistent pain or pressure in the chest,
- new confusion or inability to arouse
- Blush lips or face

If this occurs, person is to immediately go to the nearest hospital or call 911. Currently, there is no treatment or vaccine for COVID-19. The best treatment available is based on the individuals' symptoms. Get plenty of rest, fluids, and use fever reducing and pain medication if needed. A Florida Department of Health in Miami-Dade employee will be reaching out all positive COVID-19 individuals daily either by telephone or via text messaging.

AMERICAN OVERSIGHT

Testing Request from Community

Agent: Thank you for contacting the _____. My name is _____. How can I assist you today?

Caller: I would like a COVID-19 test.

Agent: Are you or a family member experiencing any **severe** acute lower respiratory illness? The emergency warning signs include, but not limited to:

- Difficulty breathing or shortness of breath,
- Persistent pain or pressure in the chest,
- New confusion or inability to arouse
- Bluish lips or face

Caller Answers "Yes," then direct the person to seek emergency care immediately or call 911 for assistance. Caller answers "no" continue with the script.

Agent: Before directing you to a testing site, I will need to determine if you meet the criteria for COVID-19 testing.

Agent: Do you have a cough or shortness of breath

Caller Answers "Yes" to either cough or shortness of breath continue with the script.

Caller Answers "No". Then caller does not meet criteria.

AND the individual meets one or more of the following criteria

Agent: Are you age 65 or greater?

Caller Answers "Yes" continue script caller meets criteria.

Caller Answers "No" caller does not meet criteria.

Agent: Are you immunocompromised?

Caller Answers "Yes" continue script caller meets criteria.

Caller Answers "No" caller does not meet criteria.

CALLER MEETS CRITERIA:

Agent: You have met the criteria for COVID-19 testing. Miami-Dade County has a COVID-19 drive thru specimen collection site. Are you interested in scheduling an appointment?

Caller: Yes

Agent: *Proceed to make an appointment. Collect caller's demographic information, provide caller with address, special code and time of appointment. They should plan on arriving early as wait times will be long.*

AMERICAN OVERSIGHT

AGENT INFORMS CALLER

THINGS TO CONSIDER ·There are no bathrooms; · Each person needing a test must be seated next to a working window; · All passengers must remain in the vehicle from arrival to departure; ·Try to limit the people in your vehicle to those needing a test; · Eat prior to arriving to the specimen collection site; · Bring snacks and beverages as there may be significant wait times (expect several hours).

Agent: Only people with an appointment, special code and a valid Florida ID, license, passport, etc. will be tested.

Agent: Will you be driving yourself to the COVID-19 test collection site?

Caller Answers "Yes"

Agent: Upon arrival to the specimen collection site, you are to remain in your vehicle from the time of arrival to departure of the testing area. Testing will be done via an open vehicle window. Please ensure your window is operable.

Caller Answers "No"

Agent: Only you and your driver should be in the car upon arrival at the test site. Your driver will be registered and tested. Both windows of the vehicle should be operable. If you bring anyone other than yourself and a designated driver, you will be turned away and your appointment will be canceled.

Agent: Please confirm verbally that you understand this.

Caller: How soon can I get my test results?

Agent: Your results should be available within 7 days of testing. A Florida Department of Health in Miami-Dade employee will call you. Please do not call the state lab, the state health department or the local health department to get your results.

CALLER DOES NOT MEET CRITERIA:

Agent: I am sorry but based on the criteria for the specimen collection site you do not meet criteria for testing at this time. You may reach out to your medical provider for additional medical guidance. Please continue to take steps to protect yourself • Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry. • Avoid close contact with people who are sick. • Avoid touching your eyes, nose, and mouth with unwashed hands. • Clean all "high-touch" surfaces every day. High touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables. Continue to take steps to protect others • Stay home if you're sick. • Cover coughs and sneezes. • If available, wear a facemask if you are sick.

Always reach out and **c**ontact your medical provider for guidance.

AMERICAN OVERSIGHT

Monitor for any symptoms:

- Note the day your symptoms begin.
- Check your own temperature two times a day.
- Keep a daily record of fever, cough, and additional respiratory symptoms.
- Seek further evaluation from a healthcare provider via telemedicine or in-person if your symptoms get worse. Always call before visiting your doctor's office.
- Seek medical attention immediately if you develop any of the following emergency warning signs for COVID-19 or other medical emergencies **Call 911 in case of an emergency**: - Extreme difficulty breathing - Bluish lips or face - Constant pain or pressure in the chest - Severe constant dizziness or lightheadedness - Acting confused - Difficult to wake up - Slurred speech (new or worsening).

For medical emergencies, call 911 and notify the dispatch personnel that you may have COVID-19.

If you have no insurance or a medical provider, I can direct you to the Florida Department of Health in Miami-Dade website for a list of Federally Qualified Health Centers. Please visit Miamidade.floridahealth.gov

If you have additional questions, you can call the Department of Health 24/7 COVID-19 Call Center The number to call is **1 (866) 779-6121** or visit http://miamidade.floridahealth.gov/

MEMORANDUM

TO: Members of the Press

FROM: Helen Aguirre Ferré, Director of Communications, Governor Ron DeSantis

DATE: March 24, 2020

RE: Executive Orders 20-82 and 20-83

Good evening:

Today, Governor Ron DeSantis issued Executive Order 20-82, directing all persons who enter the State of Florida from an area with substantial community spread, to include the New York Tri-State Area (Connecticut, New Jersey and New York), to isolate or quarantine for a period of 14 days from the time of entry into the State of Florida or the duration of the person's presence in the State of Florida, whichever is shorter.

The Governor also issued Executive Order 20-83, directing the State Surgeon General and State Health Officer to issue a public health advisory to all persons over 65 years of age urging them to stay home and to take such other measures as necessary to limit their risk of exposure to COVID-19.

PDF copies of the Executive Orders are attached to this email and provided below.

Sincerely,

Helen Aguirre Ferré
Director of Communications
Governor Ron DeSantis

STATE OF FLORIDA

OFFICE OF THE GOVERNOR
EXECUTIVE ORDER NUMBER 20-82

(Emergency Management - COVID-19 –Isolation of Individuals Traveling to Florida)

WHEREAS, Novel Coronavirus Disease 2019 (COVID-19) is a severe acute respiratory illness that can spread among humans through respiratory transmission and presents with symptoms similar to those of influenza; and

WHEREAS, on March 1, 2020, I issued Executive Order number 20-51 directing the Florida Department of Health to issue a Public Health Emergency; and

WHEREAS, on March 1, 2020, the State Surgeon General and State Health Officer declared a Public Health Emergency exists in the State of Florida as a result of COVID-19; and

WHEREAS, on March 9, 2020, I issued Executive Order 20-52 declaring a state of emergency for the entire State of Florida as a result of COVID-19; and

WHEREAS, many cases of COVID-19 in Florida have resulted from individuals coming into the State of Florida from international travel and other states, posing great risk to Florida residents; and

WHEREAS, on March 23, 2020, I issued Executive Order 20-80 requiring the screening, isolation and quarantine of individuals whose point of departure originated outside the State of Florida in an area with substantial community spread, to include the New York Tri-State Area; and

WHEREAS, Florida is experiencing an increase in individuals fleeing to Florida from states where "shelter-in-place" orders are being implemented, including from the New York Tri-State Area; and

WHEREAS, as Governor, I am responsible for meeting the dangers presented to this state and its people by this emergency.

NOW, THEREFORE, I, RON DESANTIS, as Governor of Florida, by virtue of the authority vested in me by Article IV, Section (1)(a) of the Florida Constitution, Chapter 252,

AMERICAN OVERSIGHT

Florida Statutes, and all other applicable laws, promulgate the following Executive Order to take immediate effect:

Section 1.

A. I hereby direct all persons who enter the State of Florida from an area with substantial community spread, to include the New York Tri-State Area (Connecticut, New Jersey and New York), to isolate or quarantine for a period of 14 days from the time of entry into the State of Florida or the duration of the person's presence in the State of Florida, whichever is shorter. This Order shall not apply to persons employed by the airlines and those performing military, emergency or health response. This Order shall take effect immediately and apply retroactively to all persons who have entered Florida after being in any area with substantial community spread within the previous 14 days. All persons isolating or quarantining under this Section shall be responsible for all costs associated with their isolation or quarantine, including transportation, lodging, food, medical care and any other expenses to sustain the person during the period of isolation or quarantine.

B. I hereby direct all persons covered under Section 1(A) of this Order to inform any individual in Florida with whom they have had direct physical contact in the past 21 days that they traveled from an area with substantial community spread.

Section 2. Failure to follow Section 1 of this Order is a second-degree misdemeanor pursuant to section 252.50, Florida Statutes, and is punishable by imprisonment not to exceed 60 days, a fine not to exceed $500, or both.

Section 3.

A. Pursuant to section 252.47, Florida Statutes, I hereby direct all state, county and local law enforcement authorities to enforce this Order. Any law enforcement authority that interacts with a person in violation of Section 1(A) of

AMERICAN OVERSIGHT

this Order shall immediately report the individual, along with personal identifying and contact information, to the Florida Department of Health.

B. Pursuant to section 381.0012(5), Florida Statutes, "it shall be the duty of every state and county attorney, sheriff, police officer, and other appropriate city and county officials upon the request to assist the Department of Health" in enforcing any isolation or quarantine, state health law and order of the Department of Health issued pursuant to this Order.

Section 4. This Executive Order shall expire upon the expiration of Executive Order 20-52, including any extensions, or upon an Executive Order lifting the isolation or quarantine after advice from the State Health Officer and Surgeon General.

STATE OF FLORIDA

OFFICE OF THE GOVERNOR
EXECUTIVE ORDER NUMBER 20-83

(Emergency Management - COVID-19 –Protective Measures for Vulnerable Populations, Gatherings of Private Citizens and Density of the Workforce)

WHEREAS, Novel Coronavirus Disease 2019 (COVID-19) is a severe acute respiratory illness that can spread among humans through respiratory transmission and presents with symptoms similar to those of influenza; and

WHEREAS, on March 1, 2020, I issued Executive Order number 20-51 directing the Florida Department of Health to issue a Public Health Emergency; and

WHEREAS, on March 1, 2020, the State Surgeon General and State Health Officer declared a Public Health Emergency exists in the State of Florida as a result of COVID-19; and

WHEREAS, on March 9, 2020, I issued Executive Order 20-52 declaring a state of emergency for the entire State of Florida as a result of COVID-19; and

WHEREAS, according to the Centers for Disease Control and Prevention (CDC), older adults and people of any age with serious underlying medical conditions are particularly

AMERICAN OVERSIGHT

at risk for severe illness or death due to COVID-19; and

WHEREAS, on March 16, 2020, President Donald J. Trump and the CDC issued "15 Days to Slow the Spread" guidance advising individuals to avoid social gatherings in groups of more than 10 people and advising older persons and persons with serious underlying health conditions to stay home and away from others; and

WHEREAS, as Governor, I am responsible for meeting the dangers presented to this state and its people by this emergency.

NOW, THEREFORE, I, RON DESANTIS, as Governor of Florida, by virtue of the authority vested in me by Article IV, Section (1)(a) of the Florida Constitution, Chapter 252, Florida Statutes, and all other applicable laws, promulgate the following Executive Order to take immediate effect:

Section 1.

A. I hereby direct the State Surgeon General and State Health Officer to issue a public health advisory to all persons over 65 years of age urging them to stay home and to take such other measures as necessary to limit their risk of exposure to COVID-19.

B. I further direct the State Surgeon General and State Health Officer to issue a public health advisory to persons that have a serious underlying medical condition that places them at a high risk of severe illness from COVID-19. Consistent with CDC guidance, such conditions include, but not limited to, chronic lung disease or moderate to severe asthma; serious heart conditions; immunocompromised status, including those in cancer treatment; and severe obesity. The Surgeon General's advisory must urge these persons to stay home and to take such other measures as necessary to limit their risk of exposure to COVID-19.

Section 2. I hereby direct the State Surgeon General and State Health Officer to issue a public health advisory against all social or recreational gatherings of 10 or more people.

Section 3. I hereby direct the State Surgeon General and State Health Officer to issue a public health advisory to those who can work remotely urging them to do so.

Section 4. Any action(s) taken or document(s) issued by the State Surgeon General

AMERICAN OVERSIGHT

and State Health Officer pursuant to this Executive Order shall not constitute a rule as defined in section 120.52(16), Florida Statutes, and are specifically exempted from any and all requirements or procedures outlined in chapter 120 and section 252.46, Florida Statutes.

Section 5. This Executive Order shall expire upon the expiration of Executive Order 20-52, including any extensions.

###

Please note that under Florida law correspondence sent to the Governor's Office, which is not confidential or exempt pursuant to chapter 119 of the Florida Statutes, is a public record made available upon request.

Pursuant to section 381.0012(5), Florida Statutes, "it shall be the duty of every state and county attorney, sheriff, police officer, and other appropriate city and county officials upon the request to assist the Department of Health" in enforcing any isolation or quarantine, state health law and order of the Department of Health issued pursuant to this Order.

Section 4. This Executive Order shall expire upon the expiration of Executive Order 20-52, including any extensions, or upon an Executive Order lifting the isolation or quarantine after advice from the State Health Officer and Surgeon General.

IN TESTIMONY WHEREOF, I have hereunto set my hand and caused the Great Seal of the State of Florida to be affixed, at Tallahassee, this 24th day of March, 2020.

STATE OF FLORIDA

OFFICE OF THE GOVERNOR
EXECUTIVE ORDER NUMBER 20-83

(Emergency Management - COVID-19 –Protective Measures for Vulnerable Populations, Gatherings of Private Citizens and Density of the Workforce)

WHEREAS, Novel Coronavirus Disease 2019 (COVID-19) is a severe acute respiratory illness that can spread among humans through respiratory transmission and presents with symptoms similar to those of influenza; and

WHEREAS, on March 1, 2020, I issued Executive Order number 20-51 directing the Florida Department of Health to issue a Public Health Emergency; and

WHEREAS, on March 1, 2020, the State Surgeon General and State Health Officer declared a Public Health Emergency exists in the State of Florida as a result of COVID-19; and

WHEREAS, on March 9, 2020, I issued Executive Order 20-52 declaring a state of emergency for the entire State of Florida as a result of COVID-19; and

WHEREAS, according to the Centers for Disease Control and Prevention (CDC), older adults and people of any age with serious underlying medical conditions are particularly at risk for severe illness or death due to COVID-19; and

WHEREAS, on March 16, 2020, President Donald J. Trump and the CDC issued "15 Days to Slow the Spread" guidance advising individuals to avoid social gatherings in groups of more than 10 people and advising older persons and persons with serious underlying health conditions to stay home and away from others; and

WHEREAS, as Governor, I am responsible for meeting the dangers presented to this state and its people by this emergency.

AMERICAN OVERSIGHT

NOW, THEREFORE, I, RON DESANTIS, as Governor of Florida, by virtue of the authority vested in me by Article IV, Section (1)(a) of the Florida Constitution, Chapter 252, Florida Statutes, and all other applicable laws, promulgate the following Executive Order to take immediate effect:

Section 1.

A. I hereby direct the State Surgeon General and State Health Officer to issue a public health advisory to all persons over 65 years of age urging them to stay home and to take such other measures as necessary to limit their risk of exposure to COVID-19.

B. I further direct the State Surgeon General and State Health Officer to issue a public health advisory to persons that have a serious underlying medical condition that places them at a high risk of severe illness from COVID-19. Consistent with CDC guidance, such conditions include, but not limited to, chronic lung disease or moderate to severe asthma; serious heart conditions; immunocompromised status, including those in cancer treatment; and severe obesity. The Surgeon General's advisory must urge these persons to stay home and to take such other measures as necessary to limit their risk of exposure to COVID-19.

Section 2. I hereby direct the State Surgeon General and State Health Officer to issue a public health advisory against all social or recreational gatherings of 10 or more people.

Section 3. I hereby direct the State Surgeon General and State Health Officer to issue a public health advisory to those who can work remotely urging them to do so.

Section 4. Any action(s) taken or document(s) issued by the State Surgeon General and State Health Officer pursuant to this Executive Order shall not constitute a rule as defined in section 120.52(16), Florida Statutes, and are specifically exempted from any and all requirements or procedures outlined in chapter 120 and section 252.46, Florida Statutes.

AMERICAN OVERSIGHT

Section 5. This Executive Order shall expire upon the expiration of Executive Order 20-52, including any extensions.

IN TESTIMONY WHEREOF, I have hereunto set my hand and caused the Great Seal of the State of Florida to be affixed, at Tallahassee, this 24th day of March, 2020.

Subject: Please Disseminate: Handouts for Community-based Testing Sites

PLEASE DISSEMINATE TO YOUR STATES AND LOCAL HEALTH PARTNERS PARTICIPATING IN THE CBTS INITIATIVE

Intended Use of the Handouts Provided to Community-based Testing Sites:

These 3 documents were developed as resources to hand out to individuals at specific points during their experience at the Community-based Testing Sites. Please review the purpose and instructions for each document.

1) What to Expect At Community-based Testing Sites

Purpose: To give individuals step-by-step instructions of what will occur during their experience at the testing site.

Instructions:

Hand out this document to the people who are in line and below our capacity numbers. (Note: When the website is launched, the same information will also be available in text format with a print option.)

2) Information:

Purpose: To provide individuals who will not be tested because of capacity issues or because they do not meet testing criteria at that site have useful information on what to do next.

Instructions:

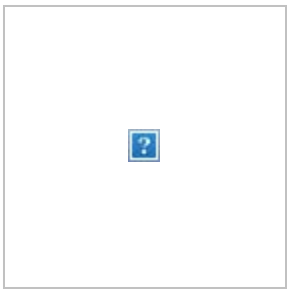
Hand out this document to the following:

- people who are in line but will not receive testing because we have exceeded capacity
- people who are in line but will not receive testing because they are not healthcare facility workers or first-responders

3) Instructions and Test Results sheets (recommend printing double-sided)

Purpose: The instructions sheet provides individuals who have been tested instructions on what to do while they wait for test results and how their test results will be delivered. The tests results sheet provides instructions for what to do if you have tested positive and if you have tested negative.

Instructions:



Hand out this document at the final station and instruct people to keep the paper until they receive the test results.

COVID-19

INFORMATION

At this time, this Community-based Testing Site is only testing healthcare facility workers and first responders or has reached capacity.

If you are experiencing COVID-19 symptoms or may have been exposed, contact your state or local health department for additional testing sites.

Continue to take steps to protect yourself

- Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry.
- Avoid close contact with people who are sick.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Clean all "high-touch" surfaces every day. High touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables.

Continue to take steps to protect others

- Stay home if you're sick.
- Cover coughs and sneezes.
- If available, wear a facemask if you are sick.

Monitor any symptoms:

- Note the day your symptoms begin.
- Check your own temperature two times a day.
- Keep a daily record of fever, cough, and additional respiratory symptoms.
- Seek further evaluation from a healthcare provider via telemedicine or in-person if your symptoms get worse. **Call ahead before visiting your doctor.**

Seek medical attention immediately if you develop any of the following emergency warning signs for COVID-19 or other medical emergencies:

- Extremely difficult breathing
- Bluish lips or face
- Constant pain or pressure in the chest
- Severe constant dizziness or lightheadedness
- Acting confused
- Difficult to wake up
- Slurred speech (new or worsening)
- New seizure or seizures that won't stop

This list is not all-inclusive. Please consult your medical provider for any other symptoms that are severe or concerning.

For medical emergencies, **call 911** & notify the dispatch personnel that you may have COVID-19.

INSTRUCTIONS

For Tested Healthcare Facility Workers & First Responders

You will receive a call from 1-833-447-0001 with test results in 3-5 days.

What should you do about work while you wait for test results?

- Please inform your supervisor at work that you have been tested for COVID-19 and note the date of testing.
- If you are experiencing symptoms: Notify your supervisor and stay home.
- If you are not experiencing symptoms: Request guidance from your supervisor on any potential work and patient care restrictions until you know your test results.
- Avoid using public transportation, ride-sharing or taxis when commuting.

What should you do to protect yourself while you wait for test results?

- Wash your hands often with soap and water for at least 20 seconds. Clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol if soap and water are not available.
- Avoid close contact with people who are sick.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Clean all "high-touch" surfaces every day. High touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables.
- Cover coughs and sneezes.
- If available, wear a facemask if you are sick.

When you receive a call from 1-833-447-0001 (Caller ID: Results Center), please answer.
Due to privacy considerations, we are unable to leave a message. We will attempt two follow up calls.
If you have not received your test **result in 7 days**, contact your state or local health department.

Monitor any symptoms:

- Note the day any new symptoms begin.
- Check your own temperature two times a day.
- Keep a daily record of fever, cough, and additional respiratory symptoms.
- Seek further evaluation from a healthcare provider via telemedicine or an in-person if your symptoms get worse. **Call ahead before visiting your doctor** and tell them you have been tested for COVID-19.
- Even if you don't experience symptoms, you might make others sick.

Seek medical attention immediately if you develop any of the following emergency warning signs for COVID-19 or other medical emergencies:

- Extremely difficult breathing
- Bluish lips or face
- Constant pain or pressure in the chest
- Severe constant dizziness or lightheadedness
- Acting confused
- Difficult to wake up
- Slurred speech (new or worsening)
- New seizure or seizures that won't stop

This list is not all-inclusive. Please consult your medical provider for any other symptoms that are severe or concerning.

For medical emergencies, **call 911** & notify the dispatch personnel that you have COVID-19.

COVID-19

TEST RESULTS

For Healthcare Facility Workers & First Responders

If you test positive for COVID-19, keep your entire household home

- Most cases can be cared for at home.
  - Do not go to the hospital to seek care unless you have a medical emergency.
- Do not go to work. Notify your employer of your positive test result.
- **Continue to monitor your symptoms at home as described on the opposite side.**
- Seek medical attention if you develop ANY of the following:
  - ❑ Extreme difficulty breathing
  - ❑ Bluish lips or face
  - ❑ Constant pain or pressure in the chest
  - ❑ Severe constant dizziness or lightheadedness
  - ❑ Difficult to wake up
  - ❑ Slurred speech (new or worsening)
  - ❑ New seizures or seizures that won't stop

What should you expect?

- Most people experience minor symptoms such as fever and cough.
- Over-the-counter medications that lesson symptoms of fever and cough may help. It is important to get rest and drink plenty of fluids.
- There is currently no vaccine or medication to treat or prevent COVID-19.

When does home isolation end?

- If you test positive for COVID-19, stay home and limit contact with others until:
  - You have been fever-free for at least 3 days without using medicine that reduces fevers

    AND
  - Your other symptoms have improved

    AND
  - At least 7 days have passed since your symptoms first appeared
- You will need to consult your employer prior to returning to work.

If you test negative for COVID-19

- You are probably not infected at this time. However, you could have been exposed and test positive later. You must continue to practice all the protective measures to keep yourself and others negative.
- As long as the virus that causes COVID-19 is spreading in your community, continue to follow recommendations to protect yourself, including:
  - practice social distancing, wash your hands often, avoid touching your face, and avoid social gatherings according to local guidance.
- Follow guidance from your healthcare provider and your state and local health departments.

COVID-19

WHAT TO EXPECT AT COMMUNITY-BASED TESTING SITES

For Healthcare Facility Workers & First Responders

- **You must arrive in a personal vehicle**
- **Items to bring:**
  - Photo ID
  - Health insurance card (everyone will be tested regardless if they have insurance)
  - Healthcare facility employee or first responder ID/Badge (if applicable)

THINGS TO CONSIDER

- There are **no** bathrooms;
- Each person who needs testing must be seated next to a **working window**;
- All passengers must **stay inside** vehicles from arrival to departure;
- Try to **limit** the people in your vehicle to those needing testing; and
- There may be **significant wait times**.

ARRIVAL

- Each vehicle will be greeted and directed by personnel in full medical protective gear.

TEMPERATURE CHECK

- Your temperature will be checked using a no touch thermometer.

REGISTRATION

- Each person needing testing will be asked to provide the following:
  - Photo ID
  - First and last name
  - Healthcare facility employee or first responder ID/badge
  - Current address (where you are staying)
  - Best phone number to reach you (indicate mobile/landline)
  - Insurance card (if available)

TESTING

- A healthcare provider in personal protective equipment will provide you with instructions.
- You will be given a tissue to blow your nose and will need to keep your tissue to dispose on your own.
- A soft swab will be inserted deep into your nose to get the necessary sample. This may be slightly uncomfortable; however, the test is quick and should take less than a minute.

INFORMATION & DEPARTURE

- Once the test is complete, you will move to the final station.
- You will be given information to take with you on what to do while awaiting test results. **Please keep this paper until you get your test results.**
- Depart/Exit Community-based Testing Site.
- Follow the instructions on the paper provided by the Community-based Testing Site. Continue to monitor and record symptoms. You will receive test results via telephone.

Subject: Please Disseminate: Handouts for Community-based Testing Sites

****PLEASE DISSEMINATE TO YOUR STATES AND LOCAL HEALTH PARTNERS PARTICIPATING IN THE CBTS INITIATIVE****

Intended Use of the Handouts Provided to Community-based Testing Sites:

These 3 documents were developed as resources to hand out to individuals at specific points during their experience at the Community-based Testing Sites. Please review the purpose and instructions for each document.

1) What to Expect At Community-based Testing Sites

Purpose: To give individuals step-by-step instructions of what will occur during their experience at the testing site.

Instructions:

Hand out this document to the people who are in line and below our capacity numbers. (Note: When the website is launched, the same information will also be available in text format with a print option.)

2) Information:

Purpose: To provide individuals who will not be tested because of capacity issues or because they do not meet testing criteria at that site have useful information on what to do next.

Instructions:

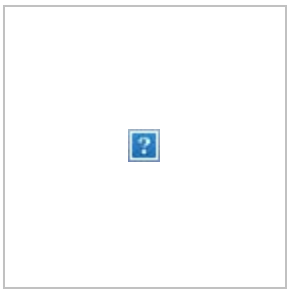
Hand out this document to the following:

- people who are in line but will not receive testing because we have exceeded capacity
- people who are in line but will not receive testing because they are not healthcare facility workers or first-responders

3) Instructions and Test Results sheets (recommend printing double-sided)

Purpose: The instructions sheet provides individuals who have been tested instructions on what to do while they wait for test results and how their test results will be delivered. The tests results sheet provides instructions for what to do if you have tested positive and if you have tested negative.

Instructions:



Hand out this document at the final station and instruct people to keep the paper until they receive the test results.

COVID-19

INFORMATION

At this time, this Community-based Testing Site is only testing healthcare facility workers and first responders or has reached capacity.

If you are experiencing COVID-19 symptoms or may have been exposed, contact your state or local health department for additional testing sites.

Continue to take steps to protect yourself

- Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry.
- Avoid close contact with people who are sick.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Clean all "high-touch" surfaces every day. High touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables.

Continue to take steps to protect others

- Stay home if you're sick.
- Cover coughs and sneezes.
- If available, wear a facemask if you are sick.

Monitor any symptoms:

- Note the day your symptoms begin.
- Check your own temperature two times a day.
- Keep a daily record of fever, cough, and additional respiratory symptoms.
- Seek further evaluation from a healthcare provider via telemedicine or in-person if your symptoms get worse. **Call ahead before visiting your doctor.**

Seek medical attention immediately if you develop any of the following emergency warning signs for COVID-19 or other medical emergencies:

- Extremely difficult breathing
- Bluish lips or face
- Constant pain or pressure in the chest
- Severe constant dizziness or lightheadedness
- Acting confused
- Difficult to wake up
- Slurred speech (new or worsening)
- New seizure or seizures that won't stop

This list is not all-inclusive. Please consult your medical provider for any other symptoms that are severe or concerning.

For medical emergencies, **call 911** & notify the dispatch personnel that you may have COVID-19.

INSTRUCTIONS

For Tested Healthcare Facility Workers & First Responders

You will receive a call from 1-833-447-0001 with test results in 3-5 days.

What should you do about work while you wait for test results?

- Please inform your supervisor at work that you have been tested for COVID-19 and note the date of testing.
- If you are experiencing symptoms: Notify your supervisor and stay home.
- If you are not experiencing symptoms: Request guidance from your supervisor on any potential work and patient care restrictions until you know your test results.
- Avoid using public transportation, ride-sharing or taxis when commuting.

What should you do to protect yourself while you wait for test results?

- Wash your hands often with soap and water for at least 20 seconds. Clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol if soap and water are not available.
- Avoid close contact with people who are sick.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Clean all "high-touch" surfaces every day. High touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables.
- Cover coughs and sneezes.
- If available, wear a facemask if you are sick.

When you receive a call from 1-833-447-0001 (Caller ID: Results Center), please answer.
Due to privacy considerations, we are unable to leave a message. We will attempt two follow up calls.
If you have not received your test **result in 7 days**, contact your state or local health department.

Monitor any symptoms:

- Note the day any new symptoms begin.
- Check your own temperature two times a day.
- Keep a daily record of fever, cough, and additional respiratory symptoms.
- Seek further evaluation from a healthcare provider via telemedicine or an in-person if your symptoms get worse. **Call ahead before visiting your doctor** and tell them you have been tested for COVID-19.
- Even if you don't experience symptoms, you might make others sick.

Seek medical attention immediately if you develop any of the following emergency warning signs for COVID-19 or other medical emergencies:

- Extremely difficult breathing
- Bluish lips or face
- Constant pain or pressure in the chest
- Severe constant dizziness or lightheadedness
- Acting confused
- Difficult to wake up
- Slurred speech (new or worsening)
- New seizure or seizures that won't stop

This list is not all-inclusive. Please consult your medical provider for any other symptoms that are severe or concerning.

For medical emergencies, **call 911** & notify the dispatch personnel that you have COVID-19.

Coronavirus

COVID-19

TEST RESULTS

For Healthcare Facility Workers & First Responders

If you test positive for COVID-19, keep your entire household home

- Most cases can be cared for at home.
  - Do not go to the hospital to seek care unless you have a medical emergency.
- Do not go to work. Notify your employer of your positive test result.
- **Continue to monitor your symptoms at home as described on the opposite side.**
- Seek medical attention if you develop ANY of the following:
  - ❑ Extreme difficulty breathing
  - ❑ Bluish lips or face
  - ❑ Constant pain or pressure in the chest
  - ❑ Severe constant dizziness or lightheadedness
  - ❑ Difficult to wake up
  - ❑ Slurred speech (new or worsening)
  - ❑ New seizures or seizures that won't stop

What should you expect?

- Most people experience minor symptoms such as fever and cough.
- Over-the-counter medications that lesson symptoms of fever and cough may help. It is important to get rest and drink plenty of fluids.
- There is currently no vaccine or medication to treat or prevent COVID-19.

When does home isolation end?

- If you test positive for COVID-19, stay home and limit contact with others until:
  - You have been fever-free for at least 3 days without using medicine that reduces fevers

    AND
  - Your other symptoms have improved

    AND
  - At least 7 days have passed since your symptoms first appeared
- You will need to consult your employer prior to returning to work.

If you test negative for COVID-19

- You are probably not infected at this time. However, you could have been exposed and test positive later. You must continue to practice all the protective measures to keep yourself and others negative.
- As long as the virus that causes COVID-19 is spreading in your community, continue to follow recommendations to protect yourself, including:
  - practice social distancing, wash your hands often, avoid touching your face, and avoid social gatherings according to local guidance.
- Follow guidance from your healthcare provider and your state and local health departments.

Coronavirus
COVID-19

WHAT TO EXPECT AT COMMUNITY-BASED TESTING SITES

For Healthcare Facility Workers & First Responders

- **You must arrive in a personal vehicle**
- **Items to bring:**
  - Photo ID
  - Health insurance card (everyone will be tested regardless if they have insurance)
  - Healthcare facility employee or first responder ID/Badge (if applicable)

THINGS TO CONSIDER

- There are **no** bathrooms;
- Each person who needs testing must be seated next to a **working window**;
- All passengers must **stay inside** vehicles from arrival to departure;
- Try to **limit** the people in your vehicle to those needing testing; and
- There may be **significant wait times**.

ARRIVAL

- Each vehicle will be greeted and directed by personnel in full medical protective gear.

TEMPERATURE CHECK

- Your temperature will be checked using a no touch thermometer.

REGISTRATION

- Each person needing testing will be asked to provide the following:
  - Photo ID
  - First and last name
  - Healthcare facility employee or first responder ID/badge
  - Current address (where you are staying)
  - Best phone number to reach you (indicate mobile/landline)
  - Insurance card (if available)

TESTING

- A healthcare provider in personal protective equipment will provide you with instructions.
- You will be given a tissue to blow your nose and will need to keep your tissue to dispose on your own.
- A soft swab will be inserted deep into your nose to get the necessary sample. This may be slightly uncomfortable; however, the test is quick and should take less than a minute.

INFORMATION & DEPARTURE

- Once the test is complete, you will move to the final station.
- You will be given information to take with you on what to do while awaiting test results. **Please keep this paper until you get your test results.**
- Depart/Exit Community-based Testing Site.
- Follow the instructions on the paper provided by the Community-based Testing Site. Continue to monitor and record symptoms. You will receive test results via telephone.

Subject: FW: Protecting Your Health and Safety During the COVID-19 Response

Just wanted to make sure you saw the highlighted sentence below.

AMERICAN OVERSIGHT

From: CDC OD Announcements <CDCODANNOUNCE@cdc.gov>
Sent: Thursday, March 5, 2020 2:41 PM
To: CDC OD Announcements <CDCODANNOUNCE@cdc.gov>
Subject: Protecting Your Health and Safety During the COVID-19 Response

As Dr. Redfield has said, CDC's efforts to respond to the novel coronavirus disease 2019 (COVID-19) are a remarkable demonstration of your commitment to public health and to those whom we serve. As we continue to see the spread of COVID-19 in communities across the country, including recent cases in Georgia, I wanted to share what we're doing to both protect your health and safety and to ensure CDC's ability to respond to this global outbreak.

Health and Safety for CDC Staff
The health and safety of our staff are critically important. While the immediate health risk for most Americans is considered low, current events have raised the risk in some communities. We should all practice everyday preventive actions to help prevent the person-to-person and community spread of COVID-19, including staying home when you are sick.

Inside CDC, our DeployCDC site is an excellent resource. Whether you're preparing to deploy, returning from a deployment, or supporting a deployer, I encourage you to check this site regularly for important information.

The Office of Personnel Management Tuesday released preliminary guidance for federal agencies. I encourage all supervisors to take advantage of workplace flexibilities like telework to ensure the health and safety of CDC staff. If CDC is forced to alter operations, we will follow CDC's recently updated Pandemic Workforce Protection Plan and our Continuity of Operations Plan. CDC also has a number of preparedness resources, including how you can prepare your health for an emergency.

Ensuring CDC's Ability to Respond
CDC has moved quickly to secure the resources needed for this evolving response. In addition to using our Infectious Diseases Rapid Response Reserve Fund, CDC recently received a transfer from HHS and Congress is expected to act this week on a supplemental funding request. We continue to see positive support for CDC's work and hope we receive the supplemental funding to support this complex, fast-moving response.

To ensure CDC maintains its response readiness, CDC/ATSDR is canceling all travel except mission-critical and response-related travel. Please work with members of your CIO leadership team, who are reviewing current travel plans as we have done in the past. We will evaluate this and other guidance as this response evolves.

Whether you're involved directly with the response or helping to keep all our other important work going, thank you for all you're doing to keep Americans safe and healthy.

Sherri Berger, MSPH
Chief Operating Officer, CDC

AMERICAN OVERSIGHT

US OUTBREAKS
New

- Outbreak of *E. coli* Infections Linked to Clover Sprouts

Updated

- Coronavirus Disease 2019 (COVID-19)
- Outbreak of *Salmonella* Infections Linked to Cut Fruit

See a selected list of ongoing and past US outbreaks of zoonotic diseases on the Healthy Pets, Healthy People website.

See the CDC Current Outbreak List, including foodborne outbreaks, at cdc.gov/outbreaks.

One Health uses a collaborative, multisectoral, and trans-disciplinary approach — working at the local, regional, national, and global levels — with the goal of achieving optimal health outcomes recognizing the interconnection between people, animals, plants, and their shared environment.

Email topic suggestions or provide feedback to ZOHUCall@cdc.gov.

Subject: Action Required: COVID-19 impact on your polio TDY

Hi everyone,

Let me first say that we appreciate everyone's effort on the polio surge and your flexibility in these uncertain and rapidly changing times with the COVID-19 response. We in the polio EOC, as well as CDC as whole, have your safety and health as our top priority.

You are receiving this email because you are currently set to return home from your polio TDY between 7-14 days from now. **We ask that you work with the EOC to immediately curtail your travel and return to the US.**

If you believe that anything may impact your date for return to work at your home office, please let us know and we can reach out to your supervisory chain. New agency guidance regarding post-deployment telework and monitoring policies should be coming out by the end of the week and will be sent to you.

Please continue to monitor all information you receive from the post where you are located which may impact your travel, as well as any guidance you receive from the EOC. Thank you for your contributions to polio eradication, the contributions you may be being asked to make regarding COVID-19 in your TDY location, and your commitments to CDC's mission.

John F. Vertefeuille, PhD, MHS
Incident Manager

AMERICAN OVERSIGHT

Resident Room To Room Checks (Make copies per Number of Residents)

General Guidelines:

- See every resident. Make sure no resident is in acute distress. If so, immediately call 911.
- Ask each resident: How are you feeling? Do you have a cough? Do you have a fever? Do you have any trouble breathing?

Room Number	# of People in Room	Any showing symptoms of COVID19	What symptoms	Did you call 911

Facility Question (Make additional copies as needed)

Staff Questionnaire

AMERICAN OVERSIGHT

Staff Name	Staff Occupation and Yes/No Direct Patient Contact	Traveled (Yes/No) If yes, where?	Dates traveled	Are they Working? If yes when did they return to work?	Is the staff showing symptoms of any illness? (LIST)

AMERICAN OVERSIGHT

Have staff been trained on PPE?	Yes	No
Have all employees been trained on hand hygiene?	Yes	No
What is the COVID-19 screening process for employees?		
Were the employees trained on the COVID-19 screening process?		
What date did you start COVID-19 screening?		

Facility Questions

What's the schedule for the residents? Congregation areas – eating, entertainment…		
What is the screening process for any visitors?		
Who are your maintenance staff and what is the cleaning schedule? What products do they use? Do you have a list? Can we see the controls/cleaning products? Do you have a visitor log? Please provide. Are the people who drop off and pick up deliveries on that list?		
Do you have a sick leave log, volunteer log? Please provide?		
What is the staff to patient ratio? How often do the nurses visit the residents? What do they do when they visit?		
Do you keep shift change reports? Please provide those.		
Do you have a medical director? Who is that and how often does he visit the facility? What does he do when he visits? Do you have a schedule? Please provide.		
What are your procedures and protocols for handling infectious disease control? Do you have an isolation room? How do you handle a potential outbreak? Do you mark the room?		
Do any other agencies come in and provide services, ie. Hospice? Who? Names and phone numbers

Craig, Jack and Harz Mountain:

Thank you for your continued service to AVES and for your belief in and support of One Health.

May we all continue our efforts to implement it at all levels of academia, research, government and policy. Had it been fully in place we just might not be dealing with Covid-19 now??

Warmly,

Cheryl Stroud, DVM, PhD
Executive Director, One Health Commission

CC: Shere, Jack A - APHIS (jack.a.shere@usda.gov) <jack.a.shere@usda.gov>

All:

I am very proud to announce that Dr. Jack Shere has accepted his elected role of President-Elect in the American Veterinary Epidemiology Society and will be inducted at the end of the AVMA awards breakfast meeting in San Diego on Monday, Aug 3rd, location TBD. He will serve for three years in this position. I have pasted in Dr. Shere's bio below. Most recently, he was appointed the Associate Administrator of the USDA Animal Plant Health Inspection Service (APHIS). He has had a long and very productive career with ever-increasing responsibilities and has led the response to many important animal disease outbreaks in US history.

Dr. Jack Shere, Associate Administrator, APHIS

Dr. Jack Shere was appointed Associate Administrator in August 2019. He works in partnership with Administrator Kevin Shea and fellow Associate Administrators Dr. Mike Watson and Dr. Mark Davidson to carry out the Agency's day-to-day operations, represent APHIS on Departmental-level and cross-Agency working groups, and oversee the activities of every APHIS program area and support unit on behalf of employees and stakeholders. Particularly, Dr. Shere will concentrate on emergency preparedness and planning, as well as homeland and national security issues. Among his duties will be a special focus on the emerging African swine fever threat throughout the world.

AMERICAN OVERSIGHT

Dr. Shere was Veterinary Services' (VS) Deputy Administrator since March 2016, where he served as the nation's Chief Veterinary Officer and led VS in protecting and improving the health, quality, and marketability of U.S. agricultural animals, animal products, and veterinary biologics. Dr. Shere joined VS in 1990 as a field veterinary medical officer in Nebraska and Wisconsin and has held many leadership positions since then, including VS' Associate Deputy Administrator, Eastern Regional Director, and Associate Western Regional Director.

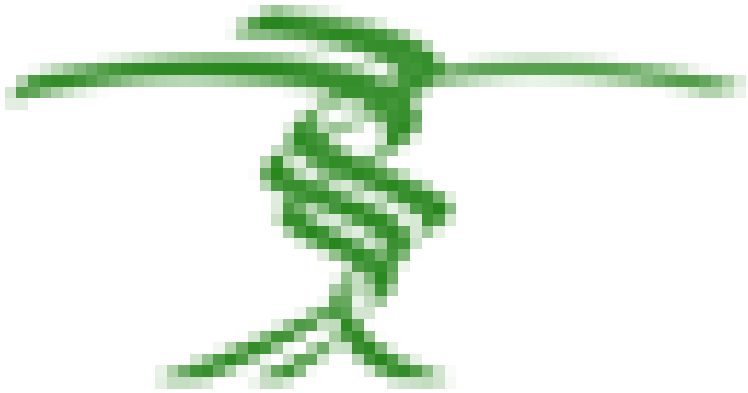
Dr. Shere has extensive experience with animal disease outbreaks, including salmonella enteritidis, foot-and-mouth disease in England, low pathogenic avian influenza, Exotic Newcastle Disease (END), and highly pathogenic avian influenza. During the extensive 2002-2003 END outbreak in California, Texas, New Mexico, and Utah, Dr. Shere served as the Joint Area Commander and Incident Commander, leading a massive federal and state eradication effort for nine months until the disease was eradicated from the United States.

Dr. Shere received a Bachelor of Science in Biology and Chemistry in 1981, a Doctor of Veterinary Medicine in 1987, and a Master of Science in Education with a minor in Counseling in 1988 – all from Iowa State University. He received PhD's in Poultry Science and Microbiology in 2001 from the University of Wisconsin. He also practiced veterinary clinical medicine for 3 years in Georgia.

From the entire Board of Directors of the AVES, we send hearty congratulations—we know that your mentors Drs. Jim Steele and Charles Thoen are smiling down on you! We all look forward to working with you to help take the AVES from its early beginnings by Jim in 1964 on into the future!

Many thanks as always to Hartz Mountain for the sole sponsorship of the AVES all the way back to 1964. We also want to thank Mr. Keith Goldman, our Hartz liaison for all of his efforts to help us sustain the AVES and to recognize our awardees for their contributions to animal health, human health and One Health!

Sincerely,



Craig

CRAIG N. CARTER

Dr. Blackmore,

We are more than happy to assist and roster a group of CDC SMEs for a call. Just let us know where things land internally for you and what needs, if any, remain.

Chris

Dr. Blackmore:

AMERICAN OVERSIGHT

I communicated to our morning team that there was follow up needed with you all. Separately, FL health leadership (FL Surgeon General I think?) reached out to Jay Butler here at CDC separately to discuss issues, involving our cruise ship task force. Chris Jones, the lead for our call unit, followed up and was told that local leadership was connected with staff at the Miami Quarantine station and that there were no additional questions.

Are there remaining issues you would like to discuss? We can have a call tonight or set up additional calls in the AM. Apologize for the miscommunication: we were told all was taken care of. Happy to help in any way we can!

Sara

CMS Develops Additional Code for Coronavirus Lab Tests

Agency Issues Fact Sheets Detailing Coverage under Programs

On March 6, CMS took additional actions to ensure America's patients, healthcare facilities and clinical laboratories are prepared to respond to the 2019-Novel Coronavirus (COVID-19).

CMS has developed a second Healthcare Common Procedure Coding System (HCPCS) code that can be used by laboratories to bill for certain COVID-19 diagnostic tests to help increase testing and track new cases. In addition, CMS released new fact sheets that explain Medicare, Medicaid, Children's Health Insurance Program, and Individual and Small Group Market Private Insurance coverage for services to help patients prepare as well.

"CMS continues to leverage every tool at our disposal in responding to COVID-19," said CMS Administrator Seema Verma. "Our new code will help encourage doctors and laboratories to use these essential tests for patients who need them. At the same time, we are providing critical information to our 130 million

AMERICAN OVERSIGHT

beneficiaries, many of whom are understandably wondering what will be covered when it comes to this virus. CMS will continue to devote every available resource to this effort, as we cooperate with other government agencies to keep the American people safe."

HCPCS is a standardized coding system that Medicare and other health insurers use to submit claims for services provided to patients. Last month, CMS developed the first HCPCS code (U0001) to bill for tests and track new cases of the virus. This code is used specifically for CDC testing laboratories to test patients for SARS-CoV-2. The second HCPCS billing code (U0002) allows laboratories to bill for non-CDC laboratory tests for SARS-CoV-2/2019-nCoV (COVID-19). On February 29, 2020, the Food and Drug Administration (FDA) issued a new, streamlined policy for certain laboratories to develop their own validated COVID-19 diagnostics. This second HCPCS code may be used for tests developed by these additional laboratories when submitting claims to Medicare or health insurers. CMS expects that having specific codes for these tests will encourage testing and improve tracking.

The Medicare claims processing systems will be able to accept these codes starting on April 1, 2020, for dates of service on or after February 4, 2020. Local Medicare Administrative Contractors (MACs) are responsible for developing the payment amount for claims they receive for these newly created HCPCS codes in their respective jurisdictions until Medicare establishes national payment rates. Laboratories may seek guidance from their MAC on payment for these tests prior to billing for them. As with other laboratory tests, there is generally no beneficiary cost sharing under Original Medicare.

To ensure the public has clear information on coverage and benefits under CMS programs, the agency also released three fact sheets that cover diagnostic laboratory tests, immunizations and vaccines, telemedicine, drugs, and cost-sharing policies.

Medicare Fact Sheet Highlights: In addition to the diagnostic tests described above, Medicare covers all medically necessary hospitalizations, as well as brief "virtual check-ins," which allows patients and their doctors to connect by phone or video chat.

Medicaid and Children's Health Insurance Program (CHIP) Fact Sheet Highlights: Testing and diagnostic services are commonly covered services, and laboratory and x-ray services are a mandatory benefit covered and reimbursed in all states. States are required to provide both inpatient and outpatient hospital services to beneficiaries. All states provide coverage of hospital care for children and pregnant women enrolled in CHIP. Specific questions on covered benefits should be directed to the respective state Medicaid and CHIP agency.

Individual and Small Group Market Insurance Coverage: Existing federal rules governing health insurance coverage, including with respect to viral infections, apply to the diagnosis and treatment of with Coronavirus (COVID-19). This includes plans purchased through HealthCare.gov. Patients should contact their insurer to determine specific benefits and coverage policies. Benefit and coverage details may vary by state and by plan. States may choose to work with plans and issuers to determine the coverage and cost-sharing parameters for COVID-19 related diagnoses, treatments, equipment, telehealth and home health services, and other related costs.

Summary of CMS Public Health Action on COVID-19 to date:

On March 4, 2020, CMS issued a call to action to healthcare providers nationwide to ensure they are implementing longstanding infection control procedures and issued important guidance to help State Survey Agencies and Accrediting Organizations prioritize their inspections of healthcare facilities to focus exclusively on issues related to infection control and other serious health and safety threats. For more information on CMS actions to prepare for and respond to COVID-19, visit: CMS Announces Actions to Address Spread of Coronavirus.

AMERICAN OVERSIGHT

On February 13, 2020, CMS issued a new HCPCS code for healthcare providers and laboratories to test patients for COVID-19 using the CDC-developed test. For more information about this code: Public Health News Alert: CMS Develops New Code for Coronavirus Lab Test.

On February 6, 2020, CMS issued a memo to help the nation's healthcare facilities take critical steps to prepare for COVID19.

On February 6, 2020, CMS also gave CLIA-certified laboratories information about how they can test for SARS-CoV-2. Read more: Suspension of Survey Activities memorandum

CMS Develops Additional Code for Coronavirus Lab Tests

Agency Issues Fact Sheets Detailing Coverage under Programs

On March 6, CMS took additional actions to ensure America's patients, healthcare facilities and clinical laboratories are prepared to respond to the 2019-Novel Coronavirus (COVID-19).

CMS has developed a second Healthcare Common Procedure Coding System (HCPCS) code that can be used by laboratories to bill for certain COVID-19 diagnostic tests to help increase testing and track new cases. In addition, CMS released new fact sheets that explain Medicare, Medicaid, Children's Health Insurance Program, and Individual and Small Group Market Private Insurance coverage for services to help patients prepare as well.

"CMS continues to leverage every tool at our disposal in responding to COVID-19," said CMS Administrator Seema Verma. "Our new code will help encourage doctors and laboratories to use these essential tests for patients who need them. At the same time, we are providing critical information to our 130 million

AMERICAN OVERSIGHT

beneficiaries, many of whom are understandably wondering what will be covered when it comes to this virus. CMS will continue to devote every available resource to this effort, as we cooperate with other government agencies to keep the American people safe."

HCPCS is a standardized coding system that Medicare and other health insurers use to submit claims for services provided to patients. Last month, CMS developed the first HCPCS code (U0001) to bill for tests and track new cases of the virus. This code is used specifically for CDC testing laboratories to test patients for SARS-CoV-2. The second HCPCS billing code (U0002) allows laboratories to bill for non-CDC laboratory tests for SARS-CoV-2/2019-nCoV (COVID-19). On February 29, 2020, the Food and Drug Administration (FDA) issued a new, streamlined policy for certain laboratories to develop their own validated COVID-19 diagnostics. This second HCPCS code may be used for tests developed by these additional laboratories when submitting claims to Medicare or health insurers. CMS expects that having specific codes for these tests will encourage testing and improve tracking.

The Medicare claims processing systems will be able to accept these codes starting on April 1, 2020, for dates of service on or after February 4, 2020. Local Medicare Administrative Contractors (MACs) are responsible for developing the payment amount for claims they receive for these newly created HCPCS codes in their respective jurisdictions until Medicare establishes national payment rates. Laboratories may seek guidance from their MAC on payment for these tests prior to billing for them. As with other laboratory tests, there is generally no beneficiary cost sharing under Original Medicare.

To ensure the public has clear information on coverage and benefits under CMS programs, the agency also released three fact sheets that cover diagnostic laboratory tests, immunizations and vaccines, telemedicine, drugs, and cost-sharing policies.

Medicare Fact Sheet Highlights: In addition to the diagnostic tests described above, Medicare covers all medically necessary hospitalizations, as well as brief "virtual check-ins," which allows patients and their doctors to connect by phone or video chat.

Medicaid and Children's Health Insurance Program (CHIP) Fact Sheet Highlights: Testing and diagnostic services are commonly covered services, and laboratory and x-ray services are a mandatory benefit covered and reimbursed in all states. States are required to provide both inpatient and outpatient hospital services to beneficiaries. All states provide coverage of hospital care for children and pregnant women enrolled in CHIP. Specific questions on covered benefits should be directed to the respective state Medicaid and CHIP agency.

Individual and Small Group Market Insurance Coverage: Existing federal rules governing health insurance coverage, including with respect to viral infections, apply to the diagnosis and treatment of with Coronavirus (COVID-19). This includes plans purchased through HealthCare.gov. Patients should contact their insurer to determine specific benefits and coverage policies. Florida has a very broad public records law. Written communications to or from state officials regarding state business constitute public records. Public records are available to the public and media upon request, unless the information is subject to a specific statutory exemption. Therefore, any information that you send to this address, including your contact information, may be subject to public disclosure.

Please note that under Florida law correspondence sent to the Governor's Office, which is not confidential or exempt pursuant to chapter 119 of the Florida Statutes, is a public record made available upon request.

AMERICAN OVERSIGHT

STATE OF FLORIDA

OFFICE OF THE GOVERNOR
EXECUTIVE ORDER NUMBER 20-52

(Emergency Management - COVID-19 Public Health Emergency)

WHEREAS, Novel Coronavirus Disease 2019 (COVID-19) is a severe acute respiratory illness that can spread among humans through respiratory transmission and presents with symptoms similar to those of influenza; and

WHEREAS, in late 2019, a new and significant outbreak of COVID-19 emerged in China; and

WHEREAS, the World Health Organization previously declared COVID-19 a Public Health Emergency of International Concern; and

WHEREAS, in response to the recent COVID-19 outbreak in China, Iran, Italy, Japan and South Korea, the Centers for Disease Control and Prevention ("CDC") has deemed it necessary to prohibit or restrict non-essential travel to or from those countries; and

WHEREAS, on March 1, 2020, I issued Executive Order number 20-51 directing the Florida Department of Health to issue a Public Health Emergency; and

WHEREAS, on March 1, 2020, the State Surgeon General and State Health Officer declared a Public Health Emergency exists in the State of Florida as a result of COVID-19; and

WHEREAS, on March 7, 2020, I directed the Director of the Division of Emergency Management to activate the State Emergency Operations Center to Level 2 to provide coordination and response to the COVID-19 emergency; and

WHEREAS, as of March 9, 2020, eight counties in Florida have positive cases for COVID-19, and COVID-19 poses a risk to the entire state of Florida; and

AMERICAN OVERSIGHT

WHEREAS, the CDC currently recommends community preparedness and everyday prevention measures be taken by all individuals and families in the United States, including voluntary home isolation when individuals are sick with respiratory symptoms, covering coughs and sneezes with a tissue and disposal of the tissue immediately thereafter, washing hands often with soap and water for at least 20 seconds, using of alcohol-based hand sanitizers with 60%-95% alcohol if soap and water are not readily available and routinely cleaning frequently touched surfaces and objects to increase community resilience and readiness for responding to an outbreak; and

WHEREAS, the CDC currently recommends mitigation measures for communities experiencing an outbreak including staying at home when sick, keeping away from others who are sick, limiting face-to-face contact with others as much as possible, consulting with your healthcare provider if individuals or members of a household are at high risk for COVID-19 complications, wearing a facemask if advised to do so by a healthcare provider or by a public health official, staying home when a household member is sick with respiratory disease symptoms if instructed to do so by public health officials or a health care provider; and

WHEREAS, as Governor, I am responsible for meeting the dangers presented to this state and its people by this emergency.

NOW, THEREFORE, I, RON DESANTIS, as Governor of Florida, by virtue of the authority vested in me by Article IV, Section (1)(a) of the Florida Constitution, Chapter 252, Florida Statutes, and all other applicable laws, promulgate the following Executive Order to take immediate effect:

Section 1. Because of the foregoing conditions, I declare a state of emergency exists in the State of Florida.

AMERICAN OVERSIGHT

Section 2. I designate the Director of the Division of Emergency Management ("Director") as the State Coordinating Officer for the duration of this emergency and direct him to execute the State's Comprehensive Emergency Management Plan and other response, recovery, and mitigation plans necessary to cope with the emergency. Additionally, I designate the State Health Officer and Surgeon General as a Deputy State Coordinating Officer and State Incident Commander.

Pursuant to section 252.36(1)(a), Florida Statutes, I delegate to the State Coordinating Officer the authority to exercise those powers delineated in sections 252.36(5)-(10), Florida Statutes, which he shall exercise as needed to meet this emergency, subject to the limitations of section 252.33, Florida Statutes. In exercising the powers delegated by this Order, the State Coordinating Officer shall confer with the Governor to the fullest extent practicable. The State Coordinating Officer shall also have the authority to:

A. Seek direct assistance and enter into agreements with any and all agencies of the United States Government as may be needed to meet the emergency.

B. Designate additional Deputy State Coordinating Officers, as necessary.

C. Suspend the effect of any statute, rule, or order that would in any way prevent, hinder, or delay any mitigation, response, or recovery action necessary to cope with this emergency.

D. Enter orders as may be needed to implement any of the foregoing powers; however, the requirements of sections 252.46 and 120.54(4), Florida Statutes, do not apply to any such orders issued by the State Coordinating Officer; however, no such order shall remain in effect beyond the expiration of this Executive Order, to include any extension.

Section 3. I order the Adjutant General to activate the Florida National Guard, as needed, to deal with this emergency.

AMERICAN OVERSIGHT

Section 4. I find that the special duties and responsibilities resting upon some State, regional, and local agencies and other governmental bodies in responding to the emergency may require them to suspend the application of the statutes, rules, ordinances, and orders they administer. Therefore, I issue the following authorizations:

A. Pursuant to section 252.36(1)(a), Florida Statutes, the Executive Office of the Governor may suspend all statutes and rules affecting budgeting to the extent necessary to provide budget authority for state agencies to cope with this emergency. The requirements of sections 252.46 and 120.54(4), Florida Statutes, do not apply to any such suspension issued by the Executive Office of the Governor; however, no such suspension shall remain in effect beyond the expiration of this Executive Order, to include any extension.

B. Each State agency may suspend the provisions of any regulatory statute prescribing the procedures for conduct of state business or the orders or rules of that agency, if strict compliance with the provisions of any such statute, order, or rule would in any way prevent, hinder, or delay necessary action in coping with the emergency. This includes, but is not limited to, the authority to suspend any and all statutes, rules, ordinances, or orders which affect leasing, printing, purchasing, travel, and the condition of employment and the compensation of employees. For the purposes of this Executive Order, "necessary action in coping with the emergency" means any emergency mitigation, response, or recovery action: (1) prescribed in the State Comprehensive Emergency Management Plan ("CEMP"); or (2) ordered by the State Coordinating Officer. The requirements of sections 252.46 and 120.54, Florida Statutes, shall not apply to any such suspension issued by a State agency; however, no such suspension shall remain in effect beyond the expiration of this Executive Order, to include any extensions.

AMERICAN OVERSIGHT

C. In accordance with section 465.0275, Florida Statutes, pharmacists may dispense up to a 30-day emergency prescription refill of maintenance medication to persons who reside in an area or county covered under this Executive Order and to emergency personnel who have been activated by their state and local agency but who do not reside in an area or county covered by this Executive Order.

D. In accordance with section 252.38, Florida Statutes, each political subdivision within the State of Florida may waive the procedures and formalities otherwise required of the political subdivision by law pertaining to:

1) Performance of public work and taking whatever prudent action is necessary to ensure the health, safety, and welfare of the community;

2) Entering into contracts; however, political subdivisions are cautioned against entering into time and materials contracts without ceiling as defined by 2 CFR 200.318(j) or cost plus percentage contracts as defined by 2 CFR 200.323(d);

3) Incurring obligations;

4) Employment of permanent and temporary workers;

5) Utilization of volunteer workers;

6) Rental of equipment;

7) Acquisition and distribution, with or without compensation, of supplies, materials, and facilities; and,

8) Appropriation and expenditure of public funds.

E. All State agencies responsible for the use of State buildings and facilities may close such buildings and facilities in those portions of the State affected by this emergency, to the extent necessary to meet this emergency. I direct each State agency to report the closure of any State

AMERICAN OVERSIGHT

building or facility to the Secretary of the Department of Management Services. Under the authority contained in section 252.36, Florida Statutes, I direct each County to report the closure of any building or facility operated or maintained by the County or any political subdivision therein to the Secretary of the Department of Management Services. Furthermore, I direct the Secretary of the Department of Management Services to:

1) Maintain an accurate and up-to-date list of all such closures; and,

2) Provide that list daily to the State Coordinating Officer.

Section 5. I find that the demands placed upon the funds appropriated to the agencies of the State of Florida and to local agencies are unreasonably great and the funds currently available may be inadequate to pay the costs of coping with this emergency. In accordance with section 252.37(2), Florida Statutes, I direct that sufficient funds be made available, as needed, by transferring and expending moneys appropriated for other purposes, moneys from unappropriated surplus funds, or from the Budget Stabilization Fund.

Section 6. All State agencies entering emergency final orders or other final actions in response to this emergency shall advise the State Coordinating Officer contemporaneously or as soon as practicable.

Section 7. Medical professionals and workers, social workers, and counselors with good and valid professional licenses issued by states other than the State of Florida may render such services in Florida during this emergency for persons affected by this emergency with the condition that such services be rendered to such persons free of charge, and with the further condition that such services be rendered under the auspices of the American Red Cross or the Florida Department of Health.

AMERICAN OVERSIGHT

Section 8. All activities taken by the Director of the Division of Emergency Management and the State Health Officer and Surgeon General with respect to this emergency before the issuance of this Executive Order are ratified. This Executive Order shall expire sixty days from this date unless extended.

IN TESTIMONY WHEREOF, I have hereunto set my hand and caused the Great Seal of the State of Florida to be affixed, at Tallahassee, this 9th day of March, 2020.

RON DESANTIS, GOVERNOR

ATTEST:

Relief for Clinicians, Providers, Hospitals and Facilities Participating in Quality Reporting Programs in Response to COVID-19

COVID-19 Provider Enrollment Relief FAQs

Relief for Clinicians, Providers, Hospitals and Facilities Participating in Quality Reporting Programs in Response to COVID-19

On March 22, CMS announced it is granting exceptions from reporting requirements and extensions for clinicians and providers participating in Medicare quality reporting programs with respect to upcoming measure reporting and data submission for those programs. The action comes as part of the Trump Administration's response to 2019 Novel Coronavirus (COVID-19).

AMERICAN OVERSIGHT

CMS is implementing additional extreme and uncontrollable circumstances policy exceptions and extensions for upcoming measure reporting and data submission deadlines for several CMS programs. For those programs with data submission deadlines in April and May 2020, submission of those data will be optional, based on the facility's choice to report.

CMS recognizes that quality measure data collection and reporting for services furnished during this time period may not be reflective of their true level of performance on measures such as cost, readmissions, and patient experience during this time of emergency and seeks to hold organizations harmless for not submitting data during this period.

You can find a copy of the press release here: https://www.cms.gov/newsroom/press-releases/cms-announces-relief-clinicians-providers-hospitals-and-facilities-participating-quality-reporting

CMS will continue monitoring the developing COVID-19 situation and assess options to provide additional relief to clinicians, facilities, and their staff so they can focus on caring for patients.

This action, and earlier CMS actions in response to COVID-19, are part of the ongoing White House Task Force efforts. To keep up with the important work the Task Force is doing in response to COVID-19, please visit the coronavirus.gov webpage. For a complete and updated list of CMS actions, and other information specific to CMS, please visit the Current Emergencies Webpage on CMS.Gov.

AMERICAN OVERSIGHT

COVID-19 Provider Enrollment Relief FAQs

On March 22, CMS released Frequently Asked Questions on Medicare Provider Enrollment Relief related to COVID-19, including the toll-free hotlines available to provide expedited enrollment and answer questions related to COVID-19 enrollment requirements.

A copy of the FAQs can be found here: https://www.cms.gov/files/document/provider-enrollment-relief-faqs-covid-19.pdf

These tools, and earlier CMS actions in response to the COVID-19 emergency, are all part of ongoing White House Coronavirus Task Force efforts. To keep up with the important work the Task Force is doing in response to COVID-19, please visit the coronavirus.gov webpage. For a complete and updated list of CMS actions, guidance, and other information in response to COVID-19, please visit the Current Emergencies Website.

Relief for Clinicians, Providers, Hospitals and Facilities Participating in Quality Reporting Programs in Response to COVID-19

COVID-19 Provider Enrollment Relief FAQs

Relief for Clinicians, Providers, Hospitals and Facilities Participating in Quality Reporting Programs in Response to COVID-19

On March 22, CMS announced it is granting exceptions from reporting requirements and extensions for clinicians and providers participating in Medicare quality reporting programs with respect to upcoming measure reporting and data submission for those programs. The action comes as part of the Trump Administration's response to 2019 Novel Coronavirus (COVID-19).

AMERICAN OVERSIGHT

CMS is implementing additional extreme and uncontrollable circumstances policy exceptions and extensions for upcoming measure reporting and data submission deadlines for several CMS programs. For those programs with data submission deadlines in April and May 2020, submission of those data will be optional, based on the facility's choice to report.

CMS recognizes that quality measure data collection and reporting for services furnished during this time period may not be reflective of their true level of performance on measures such as cost, readmissions, and patient experience during this time of emergency and seeks to hold organizations harmless for not submitting data during this period.

You can find a copy of the press release here: https://www.cms.gov/newsroom/press-releases/cms-announces-relief-clinicians-providers-hospitals-and-facilities-participating-quality-reporting

CMS will continue monitoring the developing COVID-19 situation and assess options to provide additional relief to clinicians, facilities, and their staff so they can focus on caring for patients.

This action, and earlier CMS actions in response to COVID-19, are part of the ongoing White House Task Force efforts. To keep up with the important work the Task Force is doing in response to COVID-19, please visit the coronavirus.gov webpage. For a complete and updated list of CMS actions, and other information specific to CMS, please visit the Current Emergencies Webpage on CMS.Gov.

Relief for Clinicians, Providers, Hospitals and Facilities Participating in Quality Reporting Programs in Response to COVID-19

COVID-19 Provider Enrollment Relief FAQs

Relief for Clinicians, Providers, Hospitals and Facilities Participating in Quality Reporting Programs in Response to COVID-19

On March 22, CMS announced it is granting exceptions from reporting requirements and extensions for clinicians and providers participating in Medicare quality reporting programs with respect to upcoming measure reporting and data submission for those programs. The action comes as part of the Trump Administration's response to 2019 Novel Coronavirus (COVID-19).

AMERICAN OVERSIGHT

CMS is implementing additional extreme and uncontrollable circumstances policy exceptions and extensions for upcoming measure reporting and data submission deadlines for several CMS programs. For those programs with data submission deadlines in April and May 2020, submission of those data will be optional, based on the facility's choice to report.

CMS recognizes that quality measure data collection and reporting for services furnished during this time period may not be reflective of their true level of performance on measures such as cost, readmissions, and patient experience during this time of emergency and seeks to hold organizations harmless for not submitting data during this period.

You can find a copy of the press release here: https://www.cms.gov/newsroom/press-releases/cms-announces-relief-clinicians-providers-hospitals-and-facilities-participating-quality-reporting

CMS will continue monitoring the developing COVID-19 situation and assess options to provide additional relief to clinicians, facilities, and their staff so they can focus on caring for patients.

This action, and earlier CMS actions in response to COVID-19, are part of the ongoing White House Task Force efforts. To keep up with the important work the Task Force is doing in response to COVID-19, please visit the coronavirus.gov webpage. For a complete and updated list of CMS actions, and other information specific to CMS, please visit the Current Emergencies Webpage on CMS.Gov.

AMERICAN OVERSIGHT

COVID-19 Provider Enrollment Relief FAQs

On March 22, CMS released Frequently Asked Questions on Medicare Provider Enrollment Relief related to COVID-19, including the toll-free hotlines available to provide expedited enrollment and answer questions related to COVID-19 enrollment requirements.

A copy of the FAQs can be found here: https://www.cms.gov/files/document/provider-enrollment-relief-faqs-covid-19.pdf

These tools, and earlier CMS actions in response to the COVID-19 emergency, are all part of ongoing White House Coronavirus Task Force efforts. To keep up with the important work the Task Force is doing in response to COVID-19, please visit the coronavirus.gov webpage. For a complete and updated list of CMS actions, guidance, and other information in response to COVID-19, please visit the Current Emergencies Website.

Subject: FW: Florida Hurricane Crisis CoAg Vector Control Project

Good Afternoon Marla, Marah,

After speaking with OGS, the recommendation is for the State of FL to move forward with submitting the request as an official amendment in GrantSolutions.

Using official state letterhead, a process which you should be familiar, I would strongly advise breaking down the following:

- Show what the prior activities and amounts were (and why they are no longer feasible)
- Show what the new activities and amounts are (and how they are supported under the NOFO)
    - For the trailers, please be sure to provide ample justification and if possible necessary specs, quotes, and vendors. The more thoroughly tied to the NOFO, the more helpful it will be.

If you need any assistance, or would like me to view the official draft prior to submission, I would be happy to review.

Kind regards,
Kevin Sevak

Subject: RE: Florida Hurricane Crisis CoAg Vector Control Project

Good Afternoon,

In order for CDC To make an informed decision regarding their proposed request an official request should be submitted to CDC via grant solutions.

Damond

AMERICAN OVERSIGHT

Subject: FW: Florida Hurricane Crisis CoAg Vector Control Project
Importance: High

Good afternoon Damond,

I am reaching out to you on behalf of Sabrina Hansen, who is the Project Officer for Florida under Hurricane Crisis CoAg TP18-1802. Sabrina is currently supporting Coronavirus response activities.

Her jurisdiction has requested a redirection of funds for two activities. Prior to submission into GMM we were wanting to get some feedback. The first of which is straight forward, but the second may require more attention.

The request entails that funds would actually be staying in the same budget category, however they are proposing a chance in two activities.

1. The first is to contract again with the University of Florida Institute of Food and Agricultural Sciences Center for Public Issues and Education in Agriculture and Natural Resources (PIE Center) to create materials designed to educate the public about mosquito control. The justification they provided aligns with Domain 5 of approved activities under the grant. I found this to be an allowable use of funds, but wanted to get your concurrence. More information on this can be found highlighted in this color below.

2. Secondly, FL is proposing to purchase two trailers: One trailer to move equipment around the county, increasing their capacity in post storm treatment response. The other is interested in using the trailer to educate their constituents. Detailed justification and estimates can be found attached. I have requested quotes and further information already, but sought your advice on such a purchase. Further justification on this can be found **attached** and below in this color.

Thank you for all your help!

Kind regards,
Krunal Sevak (Kevin) MBA, MPH

Subject: RE: Florida Hurricane Crisis CoAg Vector Control Project

The PIE Center Project is $90,000 and would come from the Mosquito Control Districts funding of $2,706,643. Which is a little more than 3% of 2.7 million and 1.6% of the total award for Vector Control.

The funding for the trailers is also part of the Mosquito Control Districts funding. This funding has already been allocated to 2 of the districts. They reached out to us see if trailers would be allowable in the grant. We can reach back out to have them submit the quotes and specifications. The activity outreach and education is already an approved activity within the Mosquito Control Districts Project.

Have a nice weekend.

Subject: RE: Florida Hurricane Crisis CoAg Vector Control Project

Hi Marla,

Hope all is well. Thank you for your message. It's clear you have done your due diligence in reviewing **LA**'s vector project needs and are proposing some alternative use of funds. **Do you means FL?**

To be clear, are you clearing the idea of a redirection of funds towards the activities you mentioned below? I know you mentioned the funds are already in the correct budget category, but it is a matter of altering the activities.

In that's the case, it would be helpful to have specifics - a sheet outlining the previous activities and how much funds were involved, and then then where the money is going to (new activities). Please also provide vendor quotes and specific justification, as you laid out below, on official letter head, similar to what is typically done in an amendment/redirection.

In other words, we need to see clearly see what the money was originally approved for, and how much, and where the money is going toward now, how much, justifications, and associated quotes… Based on that, we will review and get the necessary prior approval, and if approved, have the appropriate changes documented in GMM.

Please let me know if this makes sense. Thank you!

Kind regards,

Subject: Florida Hurricane Crisis CoAg Vector Control Project

Sabrina,

Although the funding in the correct category of contractual we have a few question regarding approval of some projects within Vector Control.

A few of the mosquito control districts would like to purchase trailers to use for outreach and education of the public. I have read the guidance and did not see anything that prohibited this.

We would also like to contract again with the University of Florida Institute of Food and Agricultural Sciences Center for Public Issues and Education in Agriculture and Natural Resources (PIE Center) to create materials designed to educate the public about mosquito control in a simplified, understandable format that would increase public understanding of scientific information related to mosquito control. The PIE Center conducted focus groups on the public's and local officials' knowledge and perception of mosquito control, and the findings were used to create messages used in the Prevent & Protect project (https://preventmosquitoes.org/). PIE Center was able to create two toolkits (mosquito control and emergency response), infographics and information sheets, lesson plans, as well as social media plans, and conducted some preliminary evaluations of the materials. As the next step for this project, PIE Center plans to use this funding to conduct more in-depth evaluations of the materials, identify best methods of facilitating education about mosquito control topics, increase training for teachers and other groups, and develop an online mosquito control communication training program to share

AMERICAN OVERSIGHT

best practices and developed tools. The previous contract was using ELC Zika funding.

We feel like it would fit under Domain 5: Strengthen Countermeasures and Mitigation. The funding being provided to the mosquito control programs under that domain specifically mentions: These funds would help local jurisdictions in preventing transmission of endemic and exotic arboviruses by using evidence based, best management practices which can also include source reduction, communication, and public education.

Please feel to email or call me if you have any additional questions or concerns.

CDC HPV Vaccine

COVID-19 resources and updates for pediatricians

The American Academy of Pediatrics is advising members of the steps they can take now to prepare as the outbreak continues to spread. Visit the *AAP News* Coronavirus disease outbreak page for regular COVID-19 news updates. Here are some additional resources on COVID-19:

- AAP Red Book Online: 2019 Novel Coronavirus (COVID-19) Infections
- CDC: COVID-19 Information for healthcare professionals
- CDC: Frequently Asked Questions and Answers: Coronavirus Disease-2019 (COVID-19) and Children
- AAP: Preparedness Checklist for Pediatric Practices
- World Health Organization: Coronavirus
- HealthyChildren.org: 2019 Novel Coronavirus (COVID-19)

Top stories in *AAP News*

zaapocn_p1NS.jpg

COVID-19 testing criteria expanded
As the availability of diagnostic tests increases, the CDC is telling clinicians to use their judgment when deciding whether to test someone for COVID-19.

CDC: 136 children have died of flu; virus activity still high

AMERICAN OVERSIGHT

Deaths among children are higher than during the same period in every other season since reporting started in 2004-'05 with the exception of the 2009 H1N1 pandemic.

Prioritizing children in national disaster preparedness planning
Since 9/11, greater focus has been placed on the impact of disasters on children, which influenced national and local preparedness and planning efforts. As a result, pediatricians may be asked to advise on preparing for disasters.

FDA strengthens warning about mental health side effects linked to montelukast
The FDA implemented a boxed warning for Montelukast (Singulair and generics) following continued reports of neuropsychiatric events such as agitation, depression, sleeping problems and suicidal thoughts and actions.

This week from the AAP

RadioMD: Infant Safe Sleep

Having a new baby is exciting, and parents want to do everything right. RadioMD has just released a HealthyChildren.org podcast "Infant Safe Sleep" to help answer questions of young parents about how to keep babies snug and safe at night. Dr. Elizabeth Murray joins host Melanie Cole, MS to discuss safe infant sleeping practices.

Pediatric Dermatology Case of the Month feature

The AAP Section on Dermatology (SOD) continues to sponsor a Pediatric Dermatology Case of the Month feature. This online, educational tool was created to address pediatric dermatology knowledge gaps among practicing pediatricians and pediatric trainees. Cases of interest and those that address the American Board of Pediatrics content specifications are presented each month in vignette form. Please contact jgorlewski@aap.org if you would like to be notified when a new case is posted or if you would like to contribute a case.

Webinar: Achieving Optimal Nutrition
The Important Role of Schools and Pediatricians

Tuesday, March 17
12:00 PM (Eastern) | 11:00 AM (Central) | 10:00 AM (Mountain) | 9:00 AM (Pacific)

Reese Pinworm Meds

The American Academy of Pediatrics, with support from National Dairy Council, is hosting a Webinar on the importance of school meals. Join us for a lunchtime discussion on the vital role school meals play in child growth and development as well as helping children learn about and practice healthy eating.

- Robert Murray, MD, FAAP, will share opportunities to help pediatricians work effectively with schools on practical approaches to address nutrition during the office visit.
- Donna Martin, EdS, RD, LD, School Nutrition Director for Burke County Schools in Georgia will share a case study about practical implementation approaches of the school meal program.

New from ShopAAP

Pediatric Education for Prehospital Professionals (PEPP), Fourth Edition Now Available!

Celebrating its 20th anniversary, PEPP is an evidence-based resource of essential medical content for the assessment and management of infants and children in the field. This respected and ground-breaking program paired physicians and EMS providers together to ensure the content reflects current best practices and the realities of the field. Developed by the American Academy of Pediatrics, PEPP is designed to give prehospital professionals the knowledge, skills, and confidence they need to effectively assess and manage pediatric patients. Visit shop.aap.org for more information and to order PEPP, Fourth Edition.

Take advantage of early-bird pricing for the 2020 Diagnosis and Treatment of Common Pediatric Mental Health Disorders Course

Register by March 24, 2020 and save $150. This course is designed to enable participants to learn critical concepts in the recognition of pediatric mental health disorders and apply evidence-based strategies to manage patients' illnesses

CDC HPV Vaccine

COVID-19 resources and updates for pediatricians

The American Academy of Pediatrics is advising members of the steps they can take now to prepare as the outbreak continues to spread. Visit the *AAP News* Coronavirus disease outbreak page for regular COVID-19 news updates. Here are some additional resources on COVID-19:

- AAP Red Book Online: 2019 Novel Coronavirus (COVID-19) Infections
- CDC: COVID-19 Information for healthcare professionals
- CDC: Frequently Asked Questions and Answers: Coronavirus Disease-2019 (COVID-19) and Children
- AAP: Preparedness Checklist for Pediatric Practices
- World Health Organization: Coronavirus
- HealthyChildren.org: 2019 Novel Coronavirus (COVID-19)

Top stories in *AAP News*

zaapocn_p1NS.jpg

COVID-19 testing criteria expanded
As the availability of diagnostic tests increases, the CDC is telling clinicians to use their judgment when deciding whether to test someone for COVID-19.

CDC: 136 children have died of flu; virus activity still high

AMERICAN OVERSIGHT

Deaths among children are higher than during the same period in every other season since reporting started in 2004-'05 with the exception of the 2009 H1N1 pandemic.

Prioritizing children in national disaster preparedness planning
Since 9/11, greater focus has been placed on the impact of disasters on children, which influenced national and local preparedness and planning efforts. As a result, pediatricians may be asked to advise on preparing for disasters.

FDA strengthens warning about mental health side effects linked to montelukast
The FDA implemented a boxed warning for Montelukast (Singulair and generics) following continued reports of neuropsychiatric events such as agitation, depression, sleeping problems and suicidal thoughts and actions.

This week from the AAP

RadioMD: Infant Safe Sleep

Having a new baby is exciting, and parents want to do everything right. RadioMD has just released a HealthyChildren.org podcast "Infant Safe Sleep" to help answer questions of young parents about how to keep babies snug and safe at night. Dr. Elizabeth Murray joins host Melanie Cole, MS to discuss safe infant sleeping practices.

Pediatric Dermatology Case of the Month feature

The AAP Section on Dermatology (SOD) continues to sponsor a Pediatric Dermatology Case of the Month feature. This online, educational tool was created to address pediatric dermatology knowledge gaps among practicing pediatricians and pediatric trainees. Cases of interest and those that address the American Board of Pediatrics content specifications are presented each month in vignette form. Please contact jgorlewski@aap.org if you would like to be notified when a new case is posted or if you would like to contribute a case.

Webinar: Achieving Optimal Nutrition
The Important Role of Schools and Pediatricians

Tuesday, March 17
12:00 PM (Eastern) | 11:00 AM (Central) | 10:00 AM (Mountain) | 9:00 AM (Pacific)

Reese Pinworm Meds

The American Academy of Pediatrics, with support from National Dairy Council, is hosting a Webinar on the importance of school meals. Join us for a lunchtime discussion on the vital role school meals play in child growth and development as well as helping children learn about and practice healthy eating.

- Robert Murray, MD, FAAP, will share opportunities to help pediatricians work effectively with schools on practical approaches to address nutrition during the office visit.
- Donna Martin, EdS, RD, LD, School Nutrition Director for Burke County Schools in Georgia will share a case study about practical implementation approaches of the school meal program.

New from ShopAAP

Pediatric Education for Prehospital Professionals (PEPP), Fourth Edition Now Available!

Celebrating its 20th anniversary, PEPP is an evidence-based resource of essential medical content for the assessment and management of infants and children in the field. This respected and ground-breaking program paired physicians and EMS providers together to ensure the content reflects current best practices and the realities of the field. Developed by the American Academy of Pediatrics, PEPP is designed to give prehospital professionals the knowledge, skills, and confidence they need to effectively assess and manage pediatric patients. Visit shop.aap.org for more information and to order PEPP, Fourth Edition.

Take advantage of early-bird pricing for the 2020 Diagnosis and Treatment of Common Pediatric Mental Health Disorders Course

Register by March 24, 2020 and save $150. This course is designed to enable participants to learn critical concepts in the recognition of pediatric mental health disorders and apply evidence-based strategies to manage patients' illnesses

Subject: CDC COVID Tips for Everyday

CDC posted some new resources last night regarding simple things Americans can do every day to protect themselves from COVID-19. They target families, schools, and workplaces. Please find these resources online at: https://www.cdc.gov/coronavirus/2019-ncov/downloads/workplace-school-and-home-guidance.pdf

AMERICAN OVERSIGHT

Clinician Screening Tool for Identifying Persons Under Investigation for Coronavirus Disease 2019 (COVID-19)

Version 2 | February 28, 2020

Only consider persons with travel to an affected geographic area[1] or close contact[2] with a laboratory-confirmed[3,4] COVID-19 patient within 14 days of symptom onset or persons with severe respiratory illness[5] without an alternative diagnosis.

- Ask the patient to wear a surgical mask.
- Evaluate the patient in a private room with the door closed, ideally an airborne isolation room, if available.
- Initiate contact and airborne precautions, including use of eye protection (e.g., goggles or a face shield) for all health care professionals and other staff entering the room.
- Visit **www.cdc.gov/coronavirus/2019-ncov/hcp/infection-control.html** for additional recommendations on infection control recommendations for patients under investigation for COVID-19 in health care settings.

A. Person traveled to or from an **affected geographic area[1]** with widespread or sustained community transmission.

Does the person have fever[6] **and** symptoms of lower respiratory illness (e.g., cough, shortness of breath)?

YES / NO

B. Person had **close contact[2]** with a laboratory-confirmed[3,4] COVID-19 patient

Does the person have fever[6] **or** symptoms of lower respiratory illness (e.g., cough, shortness of breath)?

YES / NO

C. Person with **severe acute lower respiratory illness[5]** and fever requiring hospitalization.

Does the person have an alternative explanatory diagnosis (e.g., influenza)?

YES / NO

STOP: No COVID-19 testing needed
Continue to treat patient normally.

This patient meets the criteria for a patient under investigation for COVID-19. The Florida Department of Health asks that you **immediately** notify both infection control personnel at your health care facility and your county health department (**FloridaHealth.gov/CHDEpiContact**).

[1]Affected areas are defined as geographic regions where sustained community transmission has been identified. Countries with CDC Level 2 or 3 Travel Health Notices include: China, South Korea, Iran, Italy, and Japan (as of February 28,2020). A current list of affected areas can be found at **www.cdc.gov/coronavirus/2019-ncov/travelers/**.

[2]Close contact is defined as: (1) being within approximately 6 feet (2 meters) of a COVID-19 case for a prolonged period of time; close contact can occur while caring for, living with, visiting, or sharing a healthcare waiting area or room with a COVID-19 case, or (2) having direct contact with infectious secretions of a COVID-19 case (e.g., being coughed on). If such contact occurs while not wearing recommended personal protective equipment or PPE (e.g., gowns, gloves, NIOSH-certified disposable N95 respirator, eye protection), criteria for PUI consideration are met. Data to inform the definition of close contact are limited. Considerations when assessing close contact include the duration of exposure (e.g., longer exposure time likely increases exposure risk) and the clinical symptoms of the person with COVID-19 (e.g., coughing likely increases exposure risk as does exposure to a severely ill patient). Special consideration should be given to healthcare personnel exposed in healthcare settings

[3]Documentation of laboratory-confirmation of COVID-19 may not be possible for travelers or persons caring for patients in other countries.

[4]For healthcare personnel, testing may be considered if there has been exposure to a person with suspected COVID-19 without laboratory confirmation.

[5]Category includes single or clusters of patients with severe acute lower respiratory illness (e.g., pneumonia, ARDS) of unknown etiology in which COVID-19 is being considered.

[6]Fever may be subjective or confirmed.

Clinician Screening Tool for Identifying Persons Under Investigation for Coronavirus Disease 2019 (COVID-19)

Version 2 | February 28, 2020

Only consider persons with travel to an affected geographic area[1] or close contact[2] with a laboratory-confirmed[3,4] COVID-19 patient within 14 days of symptom onset or persons with severe respiratory illness[5] without an alternative diagnosis.

- Ask the patient to wear a surgical mask.
- Evaluate the patient in a private room with the door closed, ideally an airborne isolation room, if available.
- Initiate contact and airborne precautions, including use of eye protection (e.g., goggles or a face shield) for all health care professionals and other staff entering the room.
- Visit **www.cdc.gov/coronavirus/2019-ncov/hcp/infection-control.html** for additional recommendations on infection control recommendations for patients under investigation for COVID-19 in health care settings.

A. Person traveled to or from an **affected geographic area[1]** with widespread or sustained community transmission.

Does the person have fever[6] **and** symptoms of lower respiratory illness (e.g., cough, shortness of breath)?

YES

NO

B. Person had **close contact[2]** with a laboratory-confirmed[3,4] COVID-19 patient

Does the person have fever[6] **or** symptoms of lower respiratory illness (e.g., cough, shortness of breath)?

YES

NO

C. Person with **severe acute lower respiratory illness[5]** and fever requiring hospitalization.

Does the person have an alternative explanatory diagnosis (e.g., influenza)?

YES

NO

STOP: No COVID-19 testing needed
Continue to treat patient normally.

This patient meets the criteria for a patient under investigation for COVID-19. The Florida Department of Health asks that you **immediately** notify both infection control personnel at your health care facility and your county health department (**FloridaHealth.gov/CHDEpiContact**).

[1]Affected areas are defined as geographic regions where sustained community transmission has been identified. Countries with CDC Level 2 or 3 Travel Health Notices include: China, South Korea, Iran, Italy, and Japan (as of February 28,2020). A current list of affected areas can be found at **www.cdc.gov/coronavirus/2019-ncov/travelers/**.

[2]Close contact is defined as: (1) being within approximately 6 feet (2 meters) of a COVID-19 case for a prolonged period of time; close contact can occur while caring for, living with, visiting, or sharing a healthcare waiting area or room with a COVID-19 case, or (2) having direct contact with infectious secretions of a COVID-19 case (e.g., being coughed on). If such contact occurs while not wearing recommended personal protective equipment or PPE (e.g., gowns, gloves, NIOSH-certified disposable N95 respirator, eye protection), criteria for PUI consideration are met. Data to inform the definition of close contact are limited. Considerations when assessing close contact include the duration of exposure (e.g., longer exposure time likely increases exposure risk) and the clinical symptoms of the person with COVID-19 (e.g., coughing likely increases exposure risk as does exposure to a severely ill patient). Special consideration should be given to healthcare personnel exposed in healthcare settings

[3]Documentation of laboratory-confirmation of COVID-19 may not be possible for travelers or persons caring for patients in other countries.

[4]For healthcare personnel, testing may be considered if there has been exposure to a person with suspected COVID-19 without laboratory confirmation.

[5]Category includes single or clusters of patients with severe acute lower respiratory illness (e.g., pneumonia, ARDS) of unknown etiology in which COVID-19 is being considered.

[6]Fever may be subjective or confirmed.

Subject: COVID-19 Standards for Hospitals & Nursing Homes from Centers for Medicaid & Medicare Services
Importance: High

CHDs,

For your situational awareness, please find newly released standards for hospitals and nursing homes related to COVID-19 from Centers for Medicaid & Medicare Services. These are being distributed by AHCA directly to providers. They both include guidance for screening visitors and employees for these facilities.

Please distribute locally as appropriate.

FROM: Director
Quality, Safety & Oversight Group

SUBJECT: Guidance for Infection Control and Prevention Concerning Coronavirus Disease (COVID-19): FAQs and Considerations for Patient Triage, Placement and Hospital Discharge

Memorandum Summary

- ***CMS is committed*** to taking critical steps to ensure America's health care facilities and clinical laboratories are prepared to respond to the threat of the COVID-19.
- ***Coordination with the Centers for Disease Control (CDC) and local public health departments*** - We encourage all hospitals to monitor the CDC website for information and resources and contact their local health department when needed (CDC Resources for Health Care Facilities: https://www.cdc.gov/coronavirus/2019-ncov/healthcare-facilities/index.html).
- ***Hospital Guidance and Actions*** **-** CMS regulations and guidance support hospitals taking appropriate action to address potential and confirmed COVID cases and mitigate transmission including screening, discharge and transfers from the hospital, and visitation.

Background

The Centers for Medicare & Medicaid Services (CMS) is committed to the protection of patients and residents of healthcare facilities from the spread of infectious disease. This memorandum responds to questions we have received and provides important guidance for hospitals and critical access hospitals (CAH's) in addressing the COVID-19 outbreak and minimizing transmission to other individuals. Specifically, we address FAQs related to optimizing patient placement, with the goal of addressing the needs of the individual patient while protecting other patients and healthcare workers.

Guidance

Hospitals should monitor the CDC website (https://www.cdc.gov/coronavirus/2019-ncov/index.html) for up to date information and resources. They should contact their local health department if they have questions or suspect a patient or healthcare provider has COVID-19. Hospitals should have plans for monitoring healthcare personnel with exposure to patients with known or suspected COVID-19. Additional information about monitoring healthcare personnel

AMERICAN OVERSIGHT

is available here: https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html

Guidance for Addressing Patient Triage and Placement of Patients with known or suspected COVID-19

Which patients are at risk for severe disease for COVID-19?
Based upon CDC data, older adults and those with underlying chronic medical conditions or immunocompromised state may be most at risk for severe outcomes. This should be considered in the decision to monitor the patient as an outpatient or inpatient.

How should facilities screen visitors and patients for COVID-19?

Hospitals should identify visitors and patients at risk for having COVID-19 infection before or immediately upon arrival to the healthcare facility. They should ask patients about the following:

1. Fever or symptoms of a respiratory infection, such as a cough and sore throat.
2. International travel within the last 14 days to restricted countries. For updated information on restricted countries visit: https://www.cdc.gov/coronavirus/2019-ncov/travelers/index.html
3. Contact with someone with known or suspected COVID-19.

For patients, implement respiratory hygiene and cough etiquette (i.e., placing a facemask over the patient's nose and mouth if that has not already been done) and isolate the patient in an examination room with the door closed. If the patient cannot be immediately moved to an examination room, ensure they are not allowed to wait among other patients seeking care. Identify a separate, well-ventilated space that allows waiting patients to be separated by 6 or more feet, with easy access to respiratory hygiene supplies. In some settings, medically-stable patients might opt to wait in a personal vehicle or outside the healthcare facility where they can be contacted by mobile phone when it is their turn to be evaluated.

Inform infection prevention and control services, local and state public health authorities, and other healthcare facility staff as appropriate about the presence of a person under investigation for COVID-19. Additional guidance for evaluating patients in U.S. for COVID-19 infection can be found on the CDC COVID-19 website.

Provide supplies for respiratory hygiene and cough etiquette, including 60%-95% alcohol-based hand sanitizer (ABHS), tissues, no touch receptacles for disposal, facemasks, and tissues at healthcare facility entrances, waiting rooms, patient check-ins, etc.

How should facilities monitor or restrict health care facility staff?
The same screening performed for visitors should be performed for hospital staff.

- Health care providers (HCP) who have signs and symptoms of a respiratory infection should not report to work.
- Any staff that develop signs and symptoms of a respiratory infection while on-the-job, should:

AMERICAN OVERSIGHT

    - Immediately stop work, put on a facemask, and self-isolate at home;
    - Inform the hospital's infection preventionist, and include information on individuals, equipment, and locations the person came in contact with; and
    - Contact and follow the local health department recommendations for next steps (e.g., testing, locations for treatment).
- Refer to the CDC guidance for exposures that might warrant restricting asymptomatic healthcare personnel from reporting to work (https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html).

Hospitals should contact their local health department for questions, and frequently review the CDC website dedicated to COVID-19 for health care professionals (https://www.cdc.gov/coronavirus/2019-nCoV/hcp/index.html).

What are recommended infection prevention and control practices, including considerations for patient placement, when evaluating and care for a patients with known or suspected COVID-19?

Recommendations for patient placement and other detailed infection prevention and control recommendations regarding hand hygiene, Transmission-Based Precautions, environmental cleaning and disinfection, managing visitors, and monitoring and managing healthcare personnel are available in the CDC Interim Infection Prevention and Control Recommendations for Patients with Confirmed Coronavirus Disease 2019 (COVID-19) or Persons under Investigation for COVID-19 in Healthcare Settings.

Do all patients with known or suspected COVID-19 infection require hospitalization?
Patients may not require hospitalization and can be managed at home if they are able to comply with monitoring requests. More information is available here: https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-home-care.html

Are there specific considerations for patients requiring diagnostic or therapeutic interventions?
Patients with known or suspected COVID-19 should continue to receive the intervention appropriate for the severity of their illness and overall clinical condition. Because some procedures create high risks for transmission (e.g., intubation) additional precautions include: 1) HCP should wear all recommended PPE, 2) the number of HCP present should be limited to essential personnel, and 3) the room should be cleaned and disinfected in accordance with environmental infection control guidelines.

Additional information about performing aerosol-generating procedures is available here: https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html

When is it safe to discontinue Transmission-based Precautions for hospitalized patients with COVID-19?
The decision to discontinue Transmission-Based Precautions for hospitalized patients with COVID-19 should be made on a case-by-case basis in consultation with clinicians, infection prevention and control specialists, and public health officials. This decision should consider disease severity, illness signs and symptoms, and results of laboratory testing for COVID-19 in respiratory specimens

AMERICAN OVERSIGHT

More detailed information about criteria to discontinue Transmission-Based Precautions are available here: https://www.cdc.gov/coronavirus/2019-ncov/hcp/disposition-hospitalized-patients.html

Can hospitals restrict visitation of patients?
Medicare regulations require a hospital to have written policies and procedures regarding the visitation rights of patients, including those setting forth any clinically necessary or reasonable restriction or limitation that the hospital may need to place on such rights and the reasons for the clinical restriction or limitation. CMS sub-regulatory guidance identifies infection control concern as an example of when clinical restrictions may be warranted. Patients must be informed of his/her visitation rights and the clinical restrictions or limitations on visitation.

The development of such policies and procedures require hospitals to focus efforts on preventing and controlling infections, not just between patients and personnel, but also between individuals across the entire hospital setting (for example, among patients, staff, and visitors) as well as between the hospital and other healthcare institutions and settings and between patients and the healthcare environment. Hospitals should work with their local, State, and Federal public health agencies to develop appropriate preparedness and response strategies for communicable disease threats.

What are the considerations for discharge to a subsequent care location for patients with COVID-19?
The decision to discharge a patient from the hospital should be made based on the clinical condition of the patient. If Transmission-Based Precautions must be continued in the subsequent setting, the receiving facility must be able to implement all recommended infection prevention and control recommendations.

Although COVID-19 patients with mild symptoms may be managed at home, the decision to discharge to home should consider the patient's ability to adhere to isolation recommendations, as well as the potential risk of secondary transmission to household members with immunocompromising conditions. More information is available here: https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-home-care.html

What are the implications of the Medicare Hospital Discharge Planning Regulations for Patients with COVID-19?
Medicare's Discharge Planning Regulations (which were updated in November 2019) requires that hospital assess the patient's needs for post-hospital services, and the availability of such services. When a patient is discharged, all necessary medical information (including communicable diseases) must be provided to any post-acute service provider. For COVID-19 patients, this must be communicated to the receiving service provider prior to the discharge/transfer and to the healthcare transport personnel.

Can hospitals restrict visitation of patients?
Medicare regulations require a hospital to have written policies and procedures regarding the visitation rights of patients, including those setting forth any clinically necessary or reasonable restriction or limitation that the hospital may need to place on such rights and the reasons for the clinical restriction or limitation. CMS sub-regulatory guidance identifies infection control

AMERICAN OVERSIGHT

concern as an example of when clinical restrictions may be warranted. Patients must be informed of his/her visitation rights and the clinical restrictions or limitations on visitation.

The development of such policies and procedures require hospitals to focus efforts on preventing and controlling infections, not just between patients and personnel, but also between individuals across the entire hospital setting (for example, among patients, staff, and visitors) as well as between the hospital and other healthcare institutions and settings and between patients and the healthcare environment. Hospitals should work with their local, State, and Federal public health agencies to develop appropriate preparedness and response strategies for communicable disease threats.

Important CDC Resources:

- CDC Resources for Health Care Facilities: https://www.cdc.gov/coronavirus/2019-ncov/healthcare-facilities/index.html
- CDC Updates: https://www.cdc.gov/coronavirus/2019-ncov/whats-new-all.html
- CDC FAQ for COVID-19**:** https://www.cdc.gov/coronavirus/2019-ncov/infection-control/infection-prevention-control-faq.html
- CDC Interim Infection Prevention and Control Recommendations for Patients with Confirmed Coronavirus Disease 2019 (COVID19) or Persons Under Investigation for COVID-19 in Healthcare Settings.: **https://www.cdc.gov/coronavirus/2019-ncov/infection-control/controrecommendations.html?CDC_AA_refVal=https%3A%2F%2Fwww.cdc.gov%2Fcoronavirus%2F2019-ncov%2Fhcp%2Finfection-control.html**

CDC Updates:
https://www.cdc.gov/coronavirus/2019-ncov/whats-new-all.html

CMS Resources
CMS has additional guidance which may be beneficial to hospitals related to EMTALA requirements and other topics surrounding the health and safety standards during emergencies. The document Provider Survey and Certification Frequently Asked Questions (FAQs), Declared Public Health Emergency All-Hazards are located at https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertEmergPrep/Downloads/All-Hazards-FAQs.pdf. These FAQs are not limited to situations involving 1135 Waivers, but are all encompassing FAQs related to public health emergencies and survey activities and functions.

Contact: Questions about this memorandum should be addressed to QSOG_EmergencyPrep@cms.hhs.gov. Questions about COVID-19 guidance/screening criteria should be addressed to the State Epidemiologist or other responsible state or local public health officials in your state.

Effective Date: Immediately. This policy should be communicated with all survey and certification staff, their managers and the State/Regional Office training coordinators immediately.

DATE: **March 4, 2020**

TO: State Survey Agency Directors

FROM: Director
Quality, Safety & Oversight Group

SUBJECT: Guidance for Infection Control and Prevention of Coronavirus Disease 2019 (COVID-19) in nursing homes

Memorandum Summary

- ***CMS is committed*** to taking critical steps to ensure America's health care facilities and clinical laboratories are prepared to respond to the threat of the COVID-19.
- **Guidance for Infection Control and Prevention of COVID-19 -** CMS is providing additional guidance to nursing homes to help them improve their infection control and prevention practices to prevent the transmission of COVID-19.
- **Coordination with the Centers for Disease Control (CDC) and local public health departments -** We encourage all nursing homes to monitor the CDC website for information and resources and contact their local health department when needed (CDC Resources for Health Care Facilities: https://www.cdc.gov/coronavirus/2019-ncov/healthcare-facilities/index.html).

Background

CMS is responsible for ensuring the health and safety of nursing homes by enforcing the standards required to help each resident attain or maintain their highest level of well-being. In light of the recent spread of COVID-19, we're providing additional guidance to nursing homes to help control and prevent the spread of the virus.

Guidance

Facilities should monitor the CDC website for information and resources (links below). They should contact their local health department if they have questions or suspect a resident of a nursing home has COVID-19. Per CDC, prompt detection, triage and isolation of potentially infectious patients are essential to prevent unnecessary exposures among patients, healthcare personnel, and visitors at the facility. Therefore, facilities should continue to be vigilant in identifying any possible infected individuals. Facilities should consider frequent monitoring for potential symptoms of respiratory infection as needed throughout the day. Furthermore, we encourage facilities to take advantage of resources that have been made available by CDC and

AMERICAN OVERSIGHT

CMS to train and prepare staff to improve infection control and prevention practices. Lastly, facilities should maintain a person-centered approach to care. This includes communicating effectively with patients, patient representatives and/or their family, and understanding their individual needs and goals of care.

Facilities experiencing an increased number of respiratory illnesses (regardless of suspected etiology) among patients/residents or healthcare personnel should immediately contact their local or state health department for further guidance.

In addition to the overarching regulations and guidance, we're providing the following information (Frequently Asked Questions) about some specific areas related to COVID-19:

Guidance for Limiting the Transmission of COVID-19 for Nursing Homes

How should facilities monitor or limit visitors?
Facilities should screen visitors for the following:

1. International travel within the last 14 days to restricted countries. For updated information on restricted countries visit: https://www.cdc.gov/coronavirus/2019-ncov/travelers/index.html
2. Signs or symptoms of a respiratory infection, such as a fever, cough, and sore throat.
3. Has had contact with someone with or under investigation for COVID-19.

If visitors meet the above criteria, facilities may restrict their entry to the facility. Regulations and guidance related to restricting a resident's right to visitors can be found at 42 CFR §483.10(f)(4), and at F-tag 563 of Appendix PP of the State Operations Manual. Specifically, a facility may need to restrict or limit visitation rights for reasonable clinical and safety reasons. This includes, "restrictions placed to prevent community-associated infection or communicable disease transmission to the resident. A resident's risk factors for infection (e.g., immunocompromised condition) or current health state (e.g., end-of-life care) should be considered when restricting visitors. In general, visitors with signs and symptoms of a transmissible infection (e.g., a visitor is febrile and exhibiting signs and symptoms of an influenza-like illness) should defer visitation until he or she is no longer potentially infectious (e.g., 24 hours after resolution of fever without antipyretic medication)."

How should facilities monitor or restrict health care facility staff?
The same screening performed for visitors should be performed for facility staff (numbers 1, 2, and 3 above).

- Health care providers (HCP) who have signs and symptoms of a respiratory infection should not report to work.
- Any staff that develop signs and symptoms of a respiratory infection while on-the-job, should:
    - Immediately stop work, put on a facemask, and self-isolate at home;
    - Inform the facility's infection preventionist, and include information on individuals, equipment, and locations the person came in contact with; and
    - Contact and follow the local health department recommendations for next steps (e.g., testing, locations for treatment).
- Refer to the CDC guidance for exposures that might warrant restricting asymptomatic healthcare personnel from reporting to work (https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html).

AMERICAN OVERSIGHT

Facilities should contact their local health department for questions, and frequently review the CDC website dedicated to COVID-19 for health care professionals (https://www.cdc.gov/coronavirus/2019-nCoV/hcp/index.html).

When should nursing homes consider transferring a resident with suspected or confirmed infection with COVID-19 to a hospital?
Nursing homes with residents suspected of having COVID-19 infection should contact their local health department. Residents infected with COVID-19 may vary in severity from lack of symptoms to mild or severe symptoms or fatality. Initially, symptoms maybe mild and not require transfer to a hospital as long as the facility can follow the infection prevention and control practices recommended by CDC. Facilities without an airborne infection isolation room (AIIR) are not required to transfer the patient assuming: 1) the patient does not require a higher level of care and 2) the facility can adhere to the rest of the infection prevention and control practices recommended for caring for a resident with COVID-19. (https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html)

The resident may develop more severe symptoms and require transfer to a hospital for a higher level of care. Prior to transfer, emergency medical services and the receiving facility should be alerted to the resident's diagnosis, and precautions to be taken including placing a facemask on the resident during transfer. If the patient does not require hospitalization they can be discharged to home (in consultation with state or local public health authorities) if deemed medically and socially appropriate. Pending transfer or discharge, place a facemask on the patient and isolate him/her in a room with the door closed.

When should a nursing home accept a resident who was diagnosed with COVID-19 from a hospital?
A nursing home can accept a patient diagnosed with COVID-19 and still under Transmission-based Precautions for COVID-19 as long as it can follow CDC guidance for transmission-based precautions. If a nursing home cannot, it must wait until these precautions are discontinued. CDC has released Interim Guidance for Discontinuing Transmission-Based Precautions or In-Home Isolation for Persons with Laboratory-confirmed COVID-19. Information on the duration of infectivity is limited, and the interim guidance has been developed with available information from similar coronaviruses. CDC states that decisions to discontinue Transmission-based Precautions in hospitals will be made on a case-by-case basis in consultation with clinicians, infection prevention and control specialists, and public health officials. Discontinuation will be based on multiple factors (see current CDC guidance for further details).

Note: Nursing homes should admit any individuals that they would normally admit to their facility, including individuals from hospitals where a case of COVID-19 was/is present.

Other considerations for facilities:

- Review CDC guidance for Infection Prevention and Control Recommendations for Patients with Confirmed Coronavirus Disease 2019: https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html
- Increase the availability and accessibility of alcohol-based hand sanitizer (ABHS), tissues, no touch receptacles for disposal, and facemasks at healthcare facility entrances, waiting rooms, patient check-ins, etc.

AMERICAN OVERSIGHT

    - Ensure ABHS is accessible in all resident-care areas including inside and outside resident rooms.
- Increase signage for vigilant infection prevention, such as hand hygiene and cough etiquette.
- Properly clean, disinfect and limit sharing of medical equipment between residents and areas of the facility.
- Provide additional work supplies to avoid sharing (e.g., pens, pads) and disinfect workplace areas (nurse's stations, phones, internal radios, etc.).

What other resources are available for facilities to help improve infection control and prevention?
CMS urges providers to take advantage of several resources that are available:

CDC Resources:
- Infection preventionist training: https://www.cdc.gov/longtermcare/index.html
- CDC Resources for Health Care Facilities: https://www.cdc.gov/coronavirus/2019-ncov/healthcare-facilities/index.html
- CDC Updates: https://www.cdc.gov/coronavirus/2019-ncov/whats-new-all.html
- CDC FAQ for COVID-19**:** https://www.cdc.gov/coronavirus/2019-ncov/infection-control/infection-prevention-control-faq.html

CMS Resources:
- Long term care facility – Infection control self-assessment worksheet: https://qsep.cms.gov/data/252/A._NursingHome_InfectionControl_Worksheet11-8-19508.pdf
- Infection control toolkit for bedside licensed nurses and nurse aides ("Head to Toe Infection Prevention (H2T) Toolkit"): https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/LTC-CMP-Reinvestment
- Infection Control and Prevention regulations and guidance: 42 CFR 483.80, Appendix PP of the State Operations Manual. See F-tag 880: https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/GuidanceforLawsAndRegulations/Downloads/Appendix-PP-State-Operations-Manual.pdf

Contact: Email DNH_TriageTeam@cms.hhs.gov

Effective Date: Immediately. This policy should be communicated with all survey and certification staff, their managers and the State/Regional Office training coordinators immediately.

Subject: COVID-19 Standards for Hospitals & Nursing Homes from Centers for Medicaid & Medicare Services
Importance: High

CHDs,

For your situational awareness, please find newly released standards for hospitals and nursing homes related to COVID-19 from Centers for Medicaid & Medicare Services. These are being distributed by AHCA directly to providers. They both include guidance for screening visitors and employees for these facilities.

Please distribute locally as appropriate.

SUBJECT: Guidance for Infection Control and Prevention Concerning Coronavirus Disease (COVID-19): FAQs and Considerations for Patient Triage, Placement and Hospital Discharge

Memorandum Summary

- ***CMS is committed*** to taking critical steps to ensure America's health care facilities and clinical laboratories are prepared to respond to the threat of the COVID-19.
- ***Coordination with the Centers for Disease Control (CDC) and local public health departments*** - We encourage all hospitals to monitor the CDC website for information and resources and contact their local health department when needed (CDC Resources for Health Care Facilities: https://www.cdc.gov/coronavirus/2019-ncov/healthcare-facilities/index.html).
- ***Hospital Guidance and Actions*** **-** CMS regulations and guidance support hospitals taking appropriate action to address potential and confirmed COVID cases and mitigate transmission including screening, discharge and transfers from the hospital, and visitation.

Background

The Centers for Medicare & Medicaid Services (CMS) is committed to the protection of patients and residents of healthcare facilities from the spread of infectious disease. This memorandum responds to questions we have received and provides important guidance for hospitals and critical access hospitals (CAH's) in addressing the COVID-19 outbreak and minimizing transmission to other individuals. Specifically, we address FAQs related to optimizing patient placement, with the goal of addressing the needs of the individual patient while protecting other patients and healthcare workers.

Guidance

Hospitals should monitor the CDC website (https://www.cdc.gov/coronavirus/2019-ncov/index.html) for up to date information and resources. They should contact their local health department if they have questions or suspect a patient or healthcare provider has COVID-19. Hospitals should have plans for monitoring healthcare personnel with exposure to patients with known or suspected COVID-19. Additional information about monitoring healthcare personnel

AMERICAN OVERSIGHT

is available here: https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html

Guidance for Addressing Patient Triage and Placement of Patients with known or suspected COVID-19

Which patients are at risk for severe disease for COVID-19?
Based upon CDC data, older adults and those with underlying chronic medical conditions or immunocompromised state may be most at risk for severe outcomes. This should be considered in the decision to monitor the patient as an outpatient or inpatient.

How should facilities screen visitors and patients for COVID-19?

Hospitals should identify visitors and patients at risk for having COVID-19 infection before or immediately upon arrival to the healthcare facility. They should ask patients about the following:

1. Fever or symptoms of a respiratory infection, such as a cough and sore throat.
2. International travel within the last 14 days to restricted countries. For updated information on restricted countries visit: https://www.cdc.gov/coronavirus/2019-ncov/travelers/index.html
3. Contact with someone with known or suspected COVID-19.

For patients, implement respiratory hygiene and cough etiquette (i.e., placing a facemask over the patient's nose and mouth if that has not already been done) and isolate the patient in an examination room with the door closed. If the patient cannot be immediately moved to an examination room, ensure they are not allowed to wait among other patients seeking care. Identify a separate, well-ventilated space that allows waiting patients to be separated by 6 or more feet, with easy access to respiratory hygiene supplies. In some settings, medically-stable patients might opt to wait in a personal vehicle or outside the healthcare facility where they can be contacted by mobile phone when it is their turn to be evaluated.

Inform infection prevention and control services, local and state public health authorities, and other healthcare facility staff as appropriate about the presence of a person under investigation for COVID-19. Additional guidance for evaluating patients in U.S. for COVID-19 infection can be found on the CDC COVID-19 website.

Provide supplies for respiratory hygiene and cough etiquette, including 60%-95% alcohol-based hand sanitizer (ABHS), tissues, no touch receptacles for disposal, facemasks, and tissues at healthcare facility entrances, waiting rooms, patient check-ins, etc.

How should facilities monitor or restrict health care facility staff?
The same screening performed for visitors should be performed for hospital staff.

- Health care providers (HCP) who have signs and symptoms of a respiratory infection should not report to work.
- Any staff that develop signs and symptoms of a respiratory infection while on-the-job, should:

AMERICAN OVERSIGHT

    - Immediately stop work, put on a facemask, and self-isolate at home;
    - Inform the hospital's infection preventionist, and include information on individuals, equipment, and locations the person came in contact with; and
    - Contact and follow the local health department recommendations for next steps (e.g., testing, locations for treatment).
- Refer to the CDC guidance for exposures that might warrant restricting asymptomatic healthcare personnel from reporting to work (https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html).

Hospitals should contact their local health department for questions, and frequently review the CDC website dedicated to COVID-19 for health care professionals (https://www.cdc.gov/coronavirus/2019-nCoV/hcp/index.html).

What are recommended infection prevention and control practices, including considerations for patient placement, when evaluating and care for a patients with known or suspected COVID-19?

Recommendations for patient placement and other detailed infection prevention and control recommendations regarding hand hygiene, Transmission-Based Precautions, environmental cleaning and disinfection, managing visitors, and monitoring and managing healthcare personnel are available in the CDC Interim Infection Prevention and Control Recommendations for Patients with Confirmed Coronavirus Disease 2019 (COVID-19) or Persons under Investigation for COVID-19 in Healthcare Settings.

Do all patients with known or suspected COVID-19 infection require hospitalization?
Patients may not require hospitalization and can be managed at home if they are able to comply with monitoring requests. More information is available here: https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-home-care.html

Are there specific considerations for patients requiring diagnostic or therapeutic interventions?
Patients with known or suspected COVID-19 should continue to receive the intervention appropriate for the severity of their illness and overall clinical condition. Because some procedures create high risks for transmission (e.g., intubation) additional precautions include: 1) HCP should wear all recommended PPE, 2) the number of HCP present should be limited to essential personnel, and 3) the room should be cleaned and disinfected in accordance with environmental infection control guidelines.

Additional information about performing aerosol-generating procedures is available here: https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html

When is it safe to discontinue Transmission-based Precautions for hospitalized patients with COVID-19?
The decision to discontinue Transmission-Based Precautions for hospitalized patients with COVID-19 should be made on a case-by-case basis in consultation with clinicians, infection prevention and control specialists, and public health officials. This decision should consider disease severity, illness signs and symptoms, and results of laboratory testing for COVID-19 in respiratory specimens

AMERICAN OVERSIGHT

More detailed information about criteria to discontinue Transmission-Based Precautions are available here: https://www.cdc.gov/coronavirus/2019-ncov/hcp/disposition-hospitalized-patients.html

Can hospitals restrict visitation of patients?
Medicare regulations require a hospital to have written policies and procedures regarding the visitation rights of patients, including those setting forth any clinically necessary or reasonable restriction or limitation that the hospital may need to place on such rights and the reasons for the clinical restriction or limitation. CMS sub-regulatory guidance identifies infection control concern as an example of when clinical restrictions may be warranted. Patients must be informed of his/her visitation rights and the clinical restrictions or limitations on visitation.

The development of such policies and procedures require hospitals to focus efforts on preventing and controlling infections, not just between patients and personnel, but also between individuals across the entire hospital setting (for example, among patients, staff, and visitors) as well as between the hospital and other healthcare institutions and settings and between patients and the healthcare environment. Hospitals should work with their local, State, and Federal public health agencies to develop appropriate preparedness and response strategies for communicable disease threats.

What are the considerations for discharge to a subsequent care location for patients with COVID-19?
The decision to discharge a patient from the hospital should be made based on the clinical condition of the patient. If Transmission-Based Precautions must be continued in the subsequent setting, the receiving facility must be able to implement all recommended infection prevention and control recommendations.

Although COVID-19 patients with mild symptoms may be managed at home, the decision to discharge to home should consider the patient's ability to adhere to isolation recommendations, as well as the potential risk of secondary transmission to household members with immunocompromising conditions. More information is available here: https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-home-care.html

What are the implications of the Medicare Hospital Discharge Planning Regulations for Patients with COVID-19?
Medicare's Discharge Planning Regulations (which were updated in November 2019) requires that hospital assess the patient's needs for post-hospital services, and the availability of such services. When a patient is discharged, all necessary medical information (including communicable diseases) must be provided to any post-acute service provider. For COVID-19 patients, this must be communicated to the receiving service provider prior to the discharge/transfer and to the healthcare transport personnel.

Can hospitals restrict visitation of patients?
Medicare regulations require a hospital to have written policies and procedures regarding the visitation rights of patients, including those setting forth any clinically necessary or reasonable restriction or limitation that the hospital may need to place on such rights and the reasons for the clinical restriction or limitation. CMS sub-regulatory guidance identifies infection control

AMERICAN OVERSIGHT

concern as an example of when clinical restrictions may be warranted. Patients must be informed of his/her visitation rights and the clinical restrictions or limitations on visitation.

The development of such policies and procedures require hospitals to focus efforts on preventing and controlling infections, not just between patients and personnel, but also between individuals across the entire hospital setting (for example, among patients, staff, and visitors) as well as between the hospital and other healthcare institutions and settings and between patients and the healthcare environment. Hospitals should work with their local, State, and Federal public health agencies to develop appropriate preparedness and response strategies for communicable disease threats.

CMS Resources
CMS has additional guidance which may be beneficial to hospitals related to EMTALA requirements and other topics surrounding the health and safety standards during emergencies. The document Provider Survey and Certification Frequently Asked Questions (FAQs), Declared Public Health Emergency All-Hazards are located at https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertEmergPrep/Downloads/All-Hazards-FAQs.pdf. These FAQs are not limited to situations involving 1135 Waivers, but are all encompassing FAQs related to public health emergencies and survey activities and functions.

Contact: Questions about this memorandum should be addressed to QSOG_EmergencyPrep@cms.hhs.gov. Questions about COVID-19 guidance/screening criteria should be addressed to the State Epidemiologist or other responsible state or local public health officials in your state.

Effective Date: Immediately. This policy should be communicated with all survey and certification staff, their managers and the State/Regional Office training coordinators immediately.

SUBJECT: Guidance for Infection Control and Prevention of Coronavirus Disease 2019 (COVID-19) in nursing homes

Memorandum Summary

- ***CMS is committed*** to taking critical steps to ensure America's health care facilities and clinical laboratories are prepared to respond to the threat of the COVID-19.
- **Guidance for Infection Control and Prevention of COVID-19 -** CMS is providing additional guidance to nursing homes to help them improve their infection control and prevention practices to prevent the transmission of COVID-19.
- **Coordination with the Centers for Disease Control (CDC) and local public health departments -** We encourage all nursing homes to monitor the CDC website for information and resources and contact their local health department when needed (CDC Resources for Health Care Facilities: https://www.cdc.gov/coronavirus/2019-ncov/healthcare-facilities/index.html).

Background

CMS is responsible for ensuring the health and safety of nursing homes by enforcing the standards required to help each resident attain or maintain their highest level of well-being. In light of the recent spread of COVID-19, we're providing additional guidance to nursing homes to help control and prevent the spread of the virus.

Guidance

Facilities should monitor the CDC website for information and resources (links below). They should contact their local health department if they have questions or suspect a resident of a nursing home has COVID-19. Per CDC, prompt detection, triage and isolation of potentially infectious patients are essential to prevent unnecessary exposures among patients, healthcare personnel, and visitors at the facility. Therefore, facilities should continue to be vigilant in identifying any possible infected individuals. Facilities should consider frequent monitoring for potential symptoms of respiratory infection as needed throughout the day. Furthermore, we encourage facilities to take advantage of resources that have been made available by CDC and

AMERICAN OVERSIGHT

CMS to train and prepare staff to improve infection control and prevention practices. Lastly, facilities should maintain a person-centered approach to care. This includes communicating effectively with patients, patient representatives and/or their family, and understanding their individual needs and goals of care.

Facilities experiencing an increased number of respiratory illnesses (regardless of suspected etiology) among patients/residents or healthcare personnel should immediately contact their local or state health department for further guidance.

In addition to the overarching regulations and guidance, we're providing the following information (Frequently Asked Questions) about some specific areas related to COVID-19:

Guidance for Limiting the Transmission of COVID-19 for Nursing Homes

How should facilities monitor or limit visitors?
Facilities should screen visitors for the following:

1. International travel within the last 14 days to restricted countries. For updated information on restricted countries visit: https://www.cdc.gov/coronavirus/2019-ncov/travelers/index.html
2. Signs or symptoms of a respiratory infection, such as a fever, cough, and sore throat.
3. Has had contact with someone with or under investigation for COVID-19.

If visitors meet the above criteria, facilities may restrict their entry to the facility. Regulations and guidance related to restricting a resident's right to visitors can be found at 42 CFR §483.10(f)(4), and at F-tag 563 of Appendix PP of the State Operations Manual. Specifically, a facility may need to restrict or limit visitation rights for reasonable clinical and safety reasons. This includes, "restrictions placed to prevent community-associated infection or communicable disease transmission to the resident. A resident's risk factors for infection (e.g., immunocompromised condition) or current health state (e.g., end-of-life care) should be considered when restricting visitors. In general, visitors with signs and symptoms of a transmissible infection (e.g., a visitor is febrile and exhibiting signs and symptoms of an influenza-like illness) should defer visitation until he or she is no longer potentially infectious (e.g., 24 hours after resolution of fever without antipyretic medication)."

How should facilities monitor or restrict health care facility staff?
The same screening performed for visitors should be performed for facility staff (numbers 1, 2, and 3 above).

- Health care providers (HCP) who have signs and symptoms of a respiratory infection should not report to work.
- Any staff that develop signs and symptoms of a respiratory infection while on-the-job, should:
    - Immediately stop work, put on a facemask, and self-isolate at home;
    - Inform the facility's infection preventionist, and include information on individuals, equipment, and locations the person came in contact with; and
    - Contact and follow the local health department recommendations for next steps (e.g., testing, locations for treatment).
- Refer to the CDC guidance for exposures that might warrant restricting asymptomatic healthcare personnel from reporting to work (https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html).

AMERICAN OVERSIGHT

Facilities should contact their local health department for questions, and frequently review the CDC website dedicated to COVID-19 for health care professionals (https://www.cdc.gov/coronavirus/2019-nCoV/hcp/index.html).

When should nursing homes consider transferring a resident with suspected or confirmed infection with COVID-19 to a hospital?
Nursing homes with residents suspected of having COVID-19 infection should contact their local health department. Residents infected with COVID-19 may vary in severity from lack of symptoms to mild or severe symptoms or fatality. Initially, symptoms maybe mild and not require transfer to a hospital as long as the facility can follow the infection prevention and control practices recommended by CDC. Facilities without an airborne infection isolation room (AIIR) are not required to transfer the patient assuming: 1) the patient does not require a higher level of care and 2) the facility can adhere to the rest of the infection prevention and control practices recommended for caring for a resident with COVID-19. (https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html)

The resident may develop more severe symptoms and require transfer to a hospital for a higher level of care. Prior to transfer, emergency medical services and the receiving facility should be alerted to the resident's diagnosis, and precautions to be taken including placing a facemask on the resident during transfer. If the patient does not require hospitalization they can be discharged to home (in consultation with state or local public health authorities) if deemed medically and socially appropriate. Pending transfer or discharge, place a facemask on the patient and isolate him/her in a room with the door closed.

When should a nursing home accept a resident who was diagnosed with COVID-19 from a hospital?
A nursing home can accept a patient diagnosed with COVID-19 and still under Transmission-based Precautions for COVID-19 as long as it can follow CDC guidance for transmission-based precautions. If a nursing home cannot, it must wait until these precautions are discontinued. CDC has released Interim Guidance for Discontinuing Transmission-Based Precautions or In-Home Isolation for Persons with Laboratory-confirmed COVID-19. Information on the duration of infectivity is limited, and the interim guidance has been developed with available information from similar coronaviruses. CDC states that decisions to discontinue Transmission-based Precautions in hospitals will be made on a case-by-case basis in consultation with clinicians, infection prevention and control specialists, and public health officials. Discontinuation will be based on multiple factors (see current CDC guidance for further details).

Note: Nursing homes should admit any individuals that they would normally admit to their facility, including individuals from hospitals where a case of COVID-19 was/is present.

Other considerations for facilities:

- Review CDC guidance for Infection Prevention and Control Recommendations for Patients with Confirmed Coronavirus Disease 2019: https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html
- Increase the availability and accessibility of alcohol-based hand sanitizer (ABHS), tissues, no touch receptacles for disposal, and facemasks at healthcare facility entrances, waiting rooms, patient check-ins, etc.

AMERICAN OVERSIGHT

    - Ensure ABHS is accessible in all resident-care areas including inside and outside resident rooms.
- Increase signage for vigilant infection prevention, such as hand hygiene and cough etiquette.
- Properly clean, disinfect and limit sharing of medical equipment between residents and areas of the facility.
- Provide additional work supplies to avoid sharing (e.g., pens, pads) and disinfect workplace areas (nurse's stations, phones, internal radios, etc.).

What other resources are available for facilities to help improve infection control and prevention?
CMS urges providers to take advantage of several resources that are available:

CDC Resources:
- Infection preventionist training: https://www.cdc.gov/longtermcare/index.html
- CDC Resources for Health Care Facilities: https://www.cdc.gov/coronavirus/2019-ncov/healthcare-facilities/index.html
- CDC Updates: https://www.cdc.gov/coronavirus/2019-ncov/whats-new-all.html
- CDC FAQ for COVID-19**:** https://www.cdc.gov/coronavirus/2019-ncov/infection-control/infection-prevention-control-faq.html

CMS Resources:
- Long term care facility – Infection control self-assessment worksheet: https://qsep.cms.gov/data/252/A._NursingHome_InfectionControl_Worksheet11-8-19508.pdf
- Infection control toolkit for bedside licensed nurses and nurse aides ("Head to Toe Infection Prevention (H2T) Toolkit"): https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/LTC-CMP-Reinvestment
- Infection Control and Prevention regulations and guidance: 42 CFR 483.80, Appendix PP of the State Operations Manual. See F-tag 880: https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/GuidanceforLawsAndRegulations/Downloads/Appendix-PP-State-Operations-Manual.pdf

Contact: Email DNH_TriageTeam@cms.hhs.gov

Effective Date: Immediately. This policy should be communicated with all survey and certification staff, their managers and the State/Regional Office training coordinators immediately.

FYI

The Governor has issued Executive Order 20-51, directing a Public Health Emergency and establishing Florida's Response Protocol for COVID-19. As a result, the State Surgeon General has issued a Declaration of Public Health Emergency for the State of Florida. Please review the attached Executive Order and Declaration.

Thank you for your continued support of our public health preparedness and response.

AMERICAN OVERSIGHT

--

Ann Hill, Executive Director
Emerald Coast Healthcare Coalition
850-585-1679

AMERICAN OVERSIGHT

STATE OF FLORIDA
DEPARTMENT OF HEALTH
DECLARATION OF PUBLIC HEALTH EMERGENCY

WHEREAS, Coronavirus Disease 2019 (COVID-19) is a severe acute respiratory illness that appears to occur through respiratory transmission and presents with symptoms similar to those of influenza; and

WHEREAS, as of February 29, 2020, COVID-19 has spread throughout China and to 67 other countries and territories, including 62 cases within the United States; and

WHEREAS, the Centers for Disease Control and Prevention recommends that all states and territories implement aggressive measures to slow and contain transmission of COVID-19 in the United States; and

WHEREAS, on January 30, 2020, the World Health Organization declared a public health emergency of international concern related to COVID-19; and

WHEREAS, on January 31, 2020, the United States Department of Health and Human Services declared that a public health emergency exists nationwide as a result of confirmed cases of COVID-19 in the United States; and

WHEREAS, one Hillsborough County resident and one Manatee County resident have tested presumptively positive for COVID-19; and

WHEREAS, on March 1, 2020, Governor Ron DeSantis issued Executive Order 20-51, declaring that appropriate measures to control the spread of COVID-19 in the State of Florida are necessary, and therefore directed that a Public Health Emergency be declared in the State of Florida; and

WHEREAS, implementation of basic precautions of infection control and prevention, including staying at home when ill and practicing respiratory and hand hygiene are necessary to slow or prevent the spread of COVID-19; and

WHEREAS, COVID-19 is a communicable disease with significant morbidity and mortality, and presents a severe danger to public health; and

WHEREAS, COVID-19 is a threat to public health in Florida.

NOW, THEREFORE, I, Scott A. Rivkees, M.D., State Surgeon General and State Health Officer, by virtue of Executive Order Number 20-51 issued by Governor Ron DeSantis, the authority vested in me by section 381.00315, Florida Statutes, and after consultation with

AMERICAN OVERSIGHT

Governor Ron DeSantis and public health officials within the Department of Health, do hereby declare that a public health emergency exists in the State of Florida. In order to respond to this emergency, the following shall commence:

Section 1. In order to protect public health, I find it is necessary for the Florida Department of Health to request assistance from the Centers for Disease Control and Prevention to address this public health emergency.

Section 2. In order to protect public health, I find it is necessary to advise individuals in the State of Florida that have traveled to an area that the Centers for Disease Control and Prevention has issued a Warning Level 3 or Alert Level 2 Travel Health Notice, or have been in close contact with an individual that has traveled to such an area, that develop symptoms of fever, cough, shortness of breath, or difficulty breathing within 14 days of such travel or close contact should immediately contact the Florida Department of Health in their current county and self-isolate until cleared by the Florida Department of Health.

Section 3. In order to protect public health, I find it is necessary to advise any individuals who believe they may have been exposed to COVID-19 to contact their local county health department **prior to** travelling to any physician's office, emergency department, hospital, or urgent care center, to ensure proper protective measures are taken to prevent further risk of spread to others.

Section 4. In order to protect public health, I find it is necessary to remind health care providers, hospitals, and labs that they are required to immediately report all suspected cases of COVID-19 to the local county health department to ensure a prompt public health response to prevent disease among close contacts.

Section 5. In order to protect public health, the Florida Department of Health will maintain an Incident Management Team to coordinate the public health response for the State of Florida.

Section 6. In order to protect public health, the Florida Department of Health, at such time when necessary, may take actions to protect the public health, pursuant to the authority of section 381.00315, Florida Statutes, including quarantine, isolation and other interventions.

Issued this 1st day of March 2020, in Department of Health offices, Tallahassee, Leon County, Florida.

Scott A. Rivkees, M.D.
State Surgeon General

AMERICAN OVERSIGHT

STATE OF FLORIDA

OFFICE OF THE GOVERNOR
EXECUTIVE ORDER NUMBER 20-51

(Establishes COVID-19 Response Protocol and Directs Public Health Emergency)

WHEREAS, Coronavirus Disease 2019 (COVID-19) is a severe acute respiratory illness that can spread among humans through respiratory transmission and presents with symptoms similar to those of influenza; and

WHEREAS, in late 2019, a new and significant outbreak of COVID-19 emerged in China; and

WHEREAS, the World Health Organization declared COVID-19 a Public Health Emergency of International Concern; and

WHEREAS, in response to the recent COVID-19 outbreak in China, Iran, Italy and South Korea, the Centers for Disease Control and Prevention ("CDC") has deemed it necessary to prohibit or restrict non-essential travel to or from those countries; and

WHEREAS, in response to the recent COVID-19 outbreak in Japan, the CDC has advised older travelers and those with chronic medical conditions to avoid nonessential travel and all travelers to exercise enhanced precautions; and

WHEREAS, the CDC currently recommends community preparedness and everyday prevention measures be taken by all individuals and families in the United States, including voluntary home isolation when individuals are sick with respiratory symptoms, covering coughs and sneezes with a tissue and disposal of the tissue immediately thereafter, washing hands often with soap and water for at least 20 seconds, use of alcohol-based hand sanitizers with 60%-95%

AMERICAN OVERSIGHT

alcohol if soap and water are not readily available and routinely cleaning frequently touched surfaces and objects to increase community resilience and readiness for responding to an outbreak; and

WHEREAS, two individuals in the State of Florida tested presumptively positive for COVID-19, including a resident of Manatee County and a resident of Hillsborough County; and

WHEREAS, the CDC currently recommends mitigation measures in communities with COVID-19 cases, including staying at home when sick, keeping away from others who are sick and staying at home when a household member is sick with respiratory disease symptoms or if instructed to do so by public health officials or a health care provider; and

WHEREAS, it is necessary and appropriate to take action to ensure that COVID-19 remains controlled and that residents and visitors in Florida remain safe and secure;

NOW, THEREFORE, I, RON DESANTIS, as Governor of Florida, by virtue of the authority vested in me by Article IV, Section (1)(a) of the Florida Constitution, and all other applicable laws, promulgate the following Executive Order to take immediate effect:

Section 1. Because of the foregoing conditions, I direct the State Health Officer and Surgeon General, Dr. Scott Rivkees, to declare a public health emergency in the State of Florida, pursuant to his authority in section 381.00315, Florida Statutes. The State Health Officer is authorized and directed to use his judgment as to the duration of this public health emergency.

Section 2. In accordance with section 381.0011(7), Florida Statutes, I direct the State Health Officer to take any action necessary to protect the public health.

Section 3. I direct the State Health Officer to follow the guidelines established by the CDC in establishing protocols to control the spread of COVID-19 and educate the public on prevention.

AMERICAN OVERSIGHT

Section 4. In accordance with section 381.0011(7), Florida Statutes, I designate the Florida Department of Health as the lead state agency to coordinate emergency response activities among the various state agencies and local governments. The State Health Officer, or his designee, shall advise the Executive Office of the Governor on the implementation of these emergency response activities.

Section 5. All actions taken by the State Health Officer with respect to this emergency before the issuance of this Executive Order are ratified.

Section 6. The Florida Department of Health will actively monitor, at a minimum, all persons meeting the definition of a Person Under Investigation ("PUI") as defined by the CDC for COVID-19 for a period of at least 14 days or until the PUI tests negative for COVID-19. Active monitoring by the Florida Department of Health will include at least the following:

A. Risk assessment within 24 hours of learning an individual meets the criteria for a PUI.

B. Twice-daily temperature checks.

Section 7. The Florida Department of Health, pursuant to its authority in section 381.00315, Florida Statutes, will ensure that all individuals meeting the CDC's definition of a PUI are isolated or quarantined for a period of 14 days or until the person tests negative for COVID-19.

Section 8. I hereby direct the Florida Department of Health to make its own determinations as to quarantine, isolation and other necessary public health interventions as permitted under Florida law.

Section 9. I direct all agencies under the direction of the Governor to fully cooperate with the Florida Department of Health, and any representative thereof in furtherance of this Order.

AMERICAN OVERSIGHT

Agencies not under the direction of the Governor are requested to provide such assistance as is required.

IN TESTIMONY WHEREOF, I have hereunto set my hand and caused the Great Seal of the State of Florida to be affixed, at Tallahassee, this 1st day of March, 2020.

RON DESANTIS, GOVERNOR

ATTEST:

SECRETARY OF STATE

FYI

The Governor has issued Executive Order 20-51, directing a Public Health Emergency and establishing Florida's Response Protocol for COVID-19. As a result, the State Surgeon General has issued a Declaration of Public Health Emergency for the State of Florida. Please review the attached Executive Order and Declaration.

Thank you for your continued support of our public health preparedness and response.

AMERICAN OVERSIGHT

STATE OF FLORIDA
DEPARTMENT OF HEALTH
DECLARATION OF PUBLIC HEALTH EMERGENCY

WHEREAS, Coronavirus Disease 2019 (COVID-19) is a severe acute respiratory illness that appears to occur through respiratory transmission and presents with symptoms similar to those of influenza; and

WHEREAS, as of February 29, 2020, COVID-19 has spread throughout China and to 67 other countries and territories, including 62 cases within the United States; and

WHEREAS, the Centers for Disease Control and Prevention recommends that all states and territories implement aggressive measures to slow and contain transmission of COVID-19 in the United States; and

WHEREAS, on January 30, 2020, the World Health Organization declared a public health emergency of international concern related to COVID-19; and

WHEREAS, on January 31, 2020, the United States Department of Health and Human Services declared that a public health emergency exists nationwide as a result of confirmed cases of COVID-19 in the United States; and

WHEREAS, one Hillsborough County resident and one Manatee County resident have tested presumptively positive for COVID-19; and

WHEREAS, on March 1, 2020, Governor Ron DeSantis issued Executive Order 20-51, declaring that appropriate measures to control the spread of COVID-19 in the State of Florida are necessary, and therefore directed that a Public Health Emergency be declared in the State of Florida; and

WHEREAS, implementation of basic precautions of infection control and prevention, including staying at home when ill and practicing respiratory and hand hygiene are necessary to slow or prevent the spread of COVID-19; and

WHEREAS, COVID-19 is a communicable disease with significant morbidity and mortality, and presents a severe danger to public health; and

WHEREAS, COVID-19 is a threat to public health in Florida.

NOW, THEREFORE, I, Scott A. Rivkees, M.D., State Surgeon General and State Health Officer, by virtue of Executive Order Number 20-51 issued by Governor Ron DeSantis, the authority vested in me by section 381.00315, Florida Statutes, and after consultation with

AMERICAN OVERSIGHT

Governor Ron DeSantis and public health officials within the Department of Health, do hereby declare that a public health emergency exists in the State of Florida. In order to respond to this emergency, the following shall commence:

Section 1. In order to protect public health, I find it is necessary for the Florida Department of Health to request assistance from the Centers for Disease Control and Prevention to address this public health emergency.

Section 2. In order to protect public health, I find it is necessary to advise individuals in the State of Florida that have traveled to an area that the Centers for Disease Control and Prevention has issued a Warning Level 3 or Alert Level 2 Travel Health Notice, or have been in close contact with an individual that has traveled to such an area, that develop symptoms of fever, cough, shortness of breath, or difficulty breathing within 14 days of such travel or close contact should immediately contact the Florida Department of Health in their current county and self-isolate until cleared by the Florida Department of Health.

Section 3. In order to protect public health, I find it is necessary to advise any individuals who believe they may have been exposed to COVID-19 to contact their local county health department **prior to** travelling to any physician's office, emergency department, hospital, or urgent care center, to ensure proper protective measures are taken to prevent further risk of spread to others.

Section 4. In order to protect public health, I find it is necessary to remind health care providers, hospitals, and labs that they are required to immediately report all suspected cases of COVID-19 to the local county health department to ensure a prompt public health response to prevent disease among close contacts.

Section 5. In order to protect public health, the Florida Department of Health will maintain an Incident Management Team to coordinate the public health response for the State of Florida.

Section 6. In order to protect public health, the Florida Department of Health, at such time when necessary, may take actions to protect the public health, pursuant to the authority of section 381.00315, Florida Statutes, including quarantine, isolation and other interventions.

Issued this 1st day of March 2020, in Department of Health offices, Tallahassee, Leon County, Florida.

Scott A. Rivkees, M.D.
State Surgeon General

AMERICAN OVERSIGHT

STATE OF FLORIDA

OFFICE OF THE GOVERNOR
EXECUTIVE ORDER NUMBER 20-51

(Establishes COVID-19 Response Protocol and Directs Public Health Emergency)

WHEREAS, Coronavirus Disease 2019 (COVID-19) is a severe acute respiratory illness that can spread among humans through respiratory transmission and presents with symptoms similar to those of influenza; and

WHEREAS, in late 2019, a new and significant outbreak of COVID-19 emerged in China; and

WHEREAS, the World Health Organization declared COVID-19 a Public Health Emergency of International Concern; and

WHEREAS, in response to the recent COVID-19 outbreak in China, Iran, Italy and South Korea, the Centers for Disease Control and Prevention ("CDC") has deemed it necessary to prohibit or restrict non-essential travel to or from those countries; and

WHEREAS, in response to the recent COVID-19 outbreak in Japan, the CDC has advised older travelers and those with chronic medical conditions to avoid nonessential travel and all travelers to exercise enhanced precautions; and

WHEREAS, the CDC currently recommends community preparedness and everyday prevention measures be taken by all individuals and families in the United States, including voluntary home isolation when individuals are sick with respiratory symptoms, covering coughs and sneezes with a tissue and disposal of the tissue immediately thereafter, washing hands often with soap and water for at least 20 seconds, use of alcohol-based hand sanitizers with 60%-95%

AMERICAN OVERSIGHT

alcohol if soap and water are not readily available and routinely cleaning frequently touched surfaces and objects to increase community resilience and readiness for responding to an outbreak; and

WHEREAS, two individuals in the State of Florida tested presumptively positive for COVID-19, including a resident of Manatee County and a resident of Hillsborough County; and

WHEREAS, the CDC currently recommends mitigation measures in communities with COVID-19 cases, including staying at home when sick, keeping away from others who are sick and staying at home when a household member is sick with respiratory disease symptoms or if instructed to do so by public health officials or a health care provider; and

WHEREAS, it is necessary and appropriate to take action to ensure that COVID-19 remains controlled and that residents and visitors in Florida remain safe and secure;

NOW, THEREFORE, I, RON DESANTIS, as Governor of Florida, by virtue of the authority vested in me by Article IV, Section (1)(a) of the Florida Constitution, and all other applicable laws, promulgate the following Executive Order to take immediate effect:

Section 1. Because of the foregoing conditions, I direct the State Health Officer and Surgeon General, Dr. Scott Rivkees, to declare a public health emergency in the State of Florida, pursuant to his authority in section 381.00315, Florida Statutes. The State Health Officer is authorized and directed to use his judgment as to the duration of this public health emergency.

Section 2. In accordance with section 381.0011(7), Florida Statutes, I direct the State Health Officer to take any action necessary to protect the public health.

Section 3. I direct the State Health Officer to follow the guidelines established by the CDC in establishing protocols to control the spread of COVID-19 and educate the public on prevention.

AMERICAN OVERSIGHT

Section 4. In accordance with section 381.0011(7), Florida Statutes, I designate the Florida Department of Health as the lead state agency to coordinate emergency response activities among the various state agencies and local governments. The State Health Officer, or his designee, shall advise the Executive Office of the Governor on the implementation of these emergency response activities.

Section 5. All actions taken by the State Health Officer with respect to this emergency before the issuance of this Executive Order are ratified.

Section 6. The Florida Department of Health will actively monitor, at a minimum, all persons meeting the definition of a Person Under Investigation ("PUI") as defined by the CDC for COVID-19 for a period of at least 14 days or until the PUI tests negative for COVID-19. Active monitoring by the Florida Department of Health will include at least the following:

A. Risk assessment within 24 hours of learning an individual meets the criteria for a PUI.

B. Twice-daily temperature checks.

Section 7. The Florida Department of Health, pursuant to its authority in section 381.00315, Florida Statutes, will ensure that all individuals meeting the CDC's definition of a PUI are isolated or quarantined for a period of 14 days or until the person tests negative for COVID-19.

Section 8. I hereby direct the Florida Department of Health to make its own determinations as to quarantine, isolation and other necessary public health interventions as permitted under Florida law.

Section 9. I direct all agencies under the direction of the Governor to fully cooperate with the Florida Department of Health, and any representative thereof in furtherance of this Order.

AMERICAN OVERSIGHT

Agencies not under the direction of the Governor are requested to provide such assistance as is required.

IN TESTIMONY WHEREOF, I have hereunto set my hand and caused the Great Seal of the State of Florida to be affixed, at Tallahassee, this 1st day of March, 2020.

RON DESANTIS, GOVERNOR

ATTEST:

SECRETARY OF STATE

Message from AAP President Sally Goza, MD, FAAP

As COVID-19 continues to spread in communities, pediatricians can prepare to handle suspected cases in their patient population in the same way they prepare for other infectious disease outbreaks, such as influenza or RSV. The same principles apply:

- Keep children out of the health care system if it's not necessary
- Advise individuals to stay home if they are sick.
- Review infection-control measures. This can include asking patients with symptoms to call ahead, so they can be evaluated in isolation from other patients.
- Collaborate with hospitals and health systems on local response and to prepare for surges.
- Check with local and state health departments for information on specific local and state responses.

We have also heard from members that children and adolescents in their practice have expressed fear and anxiety about the outbreak. Pediatricians can be a calm, reassuring voice that can help alleviate these fears.

As a general pediatrician myself who has been in practice through especially severe RSV and flu outbreaks, I understand how important it is to remain reassuring to worried parents, clear in my guidance and practical and transparent in my approach to talking to patients who are old enough to understand what's going on.

David Schonfeld, MD, FAAP, a member of the AAP Council on Disaster Preparedness and Recovery, recommends keeping the conversation straightforward and direct, while avoiding graphic details. More information is available in the HealthyChildren.org article on talking to children about disasters and other events in the news. He also offers advice specific to COVID-19 in this interview for CNN.

AAP also offers general information for parents on COVID-19 in the HealthyChildren.org article authored by H. Cody Meissner, M.D., FAAP. This article will be updated to reflect the most recent information as the outbreak evolves.

AMERICAN OVERSIGHT

AAP continues to be in close communication with leaders at the Centers for Disease Control & Prevention. We are committed to providing you with updates and information about practice recommendations and infection-control measures as it is developed.

Updated information will also be posted on the Red Book Online Outbreaks page and in *AAP News*.

MEMORÁNDUM

PARA: Superintendentes del distrito escolar, Administradores y Educadores

DE: Jacob Oliva

FECHA: 3 de marzo de 2020

ASUNTO: **Preparación de Florida para COVID-19 (Coronavirus)**

Recientemente se confirmaron dos casos de COVID-19 (coronavirus) en Florida, lo que llevó al gobernador Ron DeSantis y al cirujano general estatal Scott Rivkees a declarar una emergencia de salud pública (Orden Ejecutiva 20-51). **Actualmente, todavía hay un bajo riesgo en Florida. La planificación y la preparación siempre son importantes, y el Departamento de Educación de Florida (FDOE) entiende que las preocupaciones sobre la salud y la seguridad son primordiales para todas las comunidades educativas.** Se alienta a las escuelas, los distritos escolares, los colegios y las universidades a comunicarse con su departamento de salud local para obtener la información y asistencia más actualizada sobre COVID-19. Los departamentos de salud del condado están completamente integrados con el Departamento de Salud de Florida (FDOH) y el Centro para el Control de Enfermedades (CDC), y están bien equipados para responder si es necesario. El CDC también ha publicado una guía provisional para administradores de programas de cuidado infantil de EE. UU. y escuelas K-12 para planificar, preparar y responder a COVID-19.

COVID-19 se propaga de manera similar a la gripe, principalmente a través del contacto de un individuo infectado y se transmite al toser y estornudar. Los síntomas comunes incluyen fiebre, tos, dificultad para respirar y problemas respiratorias inferiores y superiores. Es más probable que ocurra en las personas ancianas y aquellos con condiciones de salud subyacentes, y la mayoría de las personas con el virus tendrán un caso leve y podrán ser tratados en el hogar.

A medida que COVID-19 evoluciona, lo más importante para las escuelas es **planificar y prepararse:**

- Revisar, actualizar e implementar planes de operaciones de emergencia. Esto debe hacerse en colaboración con los departamentos de salud locales.
- Asegurarse de que las estrategias de lavarse las manos incluyan **lavarse con agua y jabón durante al menos 20 segundos o usar desinfectante para manos que contenga al menos 60% de alcohol.**
- Desarrollar sistemas de intercambio de información con padres y socios locales.

AMERICAN OVERSIGHT

- **Realice una limpieza de rutina**, incluidas las superficies tocadas con frecuencia.

El Departamento de Salud de Florida puede realizar una prueba de COVID-19 en los laboratorios de Jacksonville, Miami y Tampa, lo que permite que los resultados de las pruebas estén disponibles dentro de las 24 a 48 horas. Si entra en contacto con un individuo que ha viajado recientemente a un área donde el CDC ha emitido un aviso de salud de viaje de nivel 2 o nivel 3 como China, Italia, Corea del Sur y Japón, existen protocolos:

- **Comuníquese de inmediato con el departamento de salud de su condado local al desarrollar síntomas, antes de visitar un médico.**
- Las personas pueden ser evaluadas en cualquier hospital local. **CUALQUIER** hospital local está equipado para manejar COVID-19. Las pruebas se realizarán en Jacksonville, Miami o Tampa.
- El objetivo es **contención** para detener cualquier transmisión**.**

Actualmente es la temporada de gripe, y lo alentamos a que continúe enfatizando estas directrices comunes con todos los miembros de la comunidad escolar, estudiantes, personal y padres:

- Vacúnese contra la gripe y tome antivirales contra la gripe si se lo recetan.
- Si está enfermo, quédese en casa**.**
- Lávese las manos a menudo con agua y jabón durante al menos 20 segundos.
- Lleve y use desinfectante de manos a base de alcohol que contenga al menos 60% de alcohol.
- Evite tocarse los ojos, la nariz y la boca con las manos sucias.
- Llame con anticipación antes de visitar a su médico.
- Cúbrase la boca y la nariz con un pañuelo cuando tosa o estornude. Deseche inmediatamente el pañuelo usado.
- Controle sus síntomas.

Por último, una tendencia emergente a nivel nacional es que las instituciones educativas tomen precauciones adicionales con respecto a los estudiantes, el personal y los administradores que pueden regresar de viajes al extranjero a China, Irán, Italia, Corea del Sur y Japón. Las universidades y los colegios estatales de Florida ahora requieren que esos estudiantes se auto aíslen por 14 días, antes de regresar al campus, y que cancelen los viajes patrocinados por universidades y colegios a estos países. Nuestro equipo en el Departamento de Educación de Florida estaría encantado de discutir estrategias con usted para implementar mejores prácticas similares a fin de reducir los riesgos para sus estudiantes.

Se puede encontrar información útil en los siguientes sitios web:

- Departamento de Salud de Florida: http://www.floridahealth.gov/
- Centro de Control de Enfermedades: https://www.cdc.gov/
- Departamento de Educación de Florida: http://fldoe.org/em-response/
- Consulte este folleto útil del CDC relacionado con el lavado de manos y el desinfectante de manos.
- Consulte este folleto útil del CDC sobre como detener la propagación de gérmenes.

Florida está haciendo todo lo posible para prepararse y responder a COVID-19 y el Departamento de Educación de Florida está disponible para asistir según sea necesario. Las actualizaciones diarias se publicaran en el sitio web del DOH, y tenga la seguridad de que FDOE le proporcionará actualizaciones a medida que las tengamos.

JACOB OLIVA
CHANCELLOR OF PUBLIC SCHOOLS

AMERICAN OVERSIGHT

DiseaseControl@flhealth.gov

Florida Department of Education
Dr. Dianne Mennitt
School Nurse Consultant
850-245-0475
Dianne.Mennitt@fldoe.org
DPS: 2020-36

SUBJECT: Florida Preparedness for COVID-19 (Coronavirus)

Yesterday, Governor Ron DeSantis hosted a press conference regarding COVID-19 (Coronavirus), and announced **there are no confirmed cases in Florida**. **Currently there is a low risk in Florida.** However, planning and preparing is always important and the Florida Department of Education (FDOE) understands that concerns about health and safety are paramount for all education communities. In response to such concerns, we encourage you to access up-to-date information and resources from the Florida Department of Health (FDOH) website or the Centers for Disease Control and Prevention (CDC) website.

FDOH has been closely monitoring COVID-19 since November 2019, and emphasizes that there is low health risk in the United States. The FDOH Incident Management Team has been working in lockstep with the CDC on daily updates, and hundreds of dedicated FDOH professionals are positioned to respond if the need arises in each county. In addition, county health departments are fully integrated with FDOH and CDC, and are well equipped to respond if necessary.

This virus is spread mostly through contact from an infected individual and transmitted by coughing and sneezing. Common symptoms include fever, coughing, shortness of breath, and lower and upper respiratory issues. It is more likely to occur in the elderly and those with underlying health conditions.

If there is an individual with a suspected case of COVID-19, there are protocols in place with **ALL** Florida health care providers and practitioners:

- Immediately contact your health care practitioner or any local hospital. **ANY** local hospital is equipped to handle COVID-19.
- Individuals will be evaluated at any local hospital, and tests will be sent to the CDC for evaluation.
- The goal is **containment** to stop any transmission.

AMERICAN OVERSIGHT

It is currently flu season, and FDOH recommends getting a flu vaccine, taking everyday preventive actions to help stop the spread of germs, and taking flu antivirals if prescribed. We encourage you to continue to stress these common guidelines with all members of the school community, students, staff and parents:

- If you are sick, stay home.
- Wash your hands often with soap and warm water for at least 20 seconds.
- Carry and use alcohol-based hand sanitizer.
- Avoid touching your eyes, nose and mouth with unwashed hands.
- Call ahead before visiting your doctor.
- Cover your mouth and nose with a tissue when you cough or sneeze.
- Monitor your symptoms.

Please see this helpful flier from the CDC related to handwashing and the use of alcohol based sanitizer.

Florida is doing everything in its power to prepare and respond to COVID-19 and the FDOE is available to assist as needed. Daily updates will be posted on the FDOH website, and rest assured FDOE will provide you with updates as we have them.

DPS: 2020-39

MEMORANDUM

TO: School District Superintendents, Administrators, and Educators

FROM: Chancellor Jacob Oliva

DATE: March 3, 2020

SUBJECT: Florida Preparedness for COVID-19 (Coronavirus)

Two cases of COVID-19 (coronavirus) were recently confirmed in Florida, leading to Governor Ron DeSantis and State Surgeon General Scott Rivkees declaring a public health emergency (Executive Order 20-51). **Currently, there is still a low risk in Florida. Planning and preparing is always important, and the Florida Department of Education (FDOE) understands that concerns about health and safety are paramount for all education communities.** Schools, school districts, colleges and universities are encouraged to contact their local health department for the most up-to-date information and assistance regarding COVID-19. County health departments are fully integrated with the Florida Department of Health (FDOH) and the Center for Disease Control (CDC), and are well equipped to respond if necessary. The CDC has also published Interim Guidance for Administrators of US Childcare Programs and K-12 Schools to Plan, Prepare, and Respond to COVID-19.

COVID-19 is spread similarly to the flu, mostly through contact from an infected individual and transmitted by coughing and sneezing. Common symptoms include fever, coughing, shortness of breath, and lower and upper respiratory issues. It is more likely to occur in the elderly and those with underlying health conditions, and most individuals with the virus will have a mild case and will be able to be treated at home.

As COVID-19 evolves, the most important thing for schools to do is **plan and prepare:**

- Review, update and implement emergency operations plans. This should be done in collaboration with local health departments.
- Ensure handwashing strategies include **washing with soap and water for at least 20 seconds or using hand sanitizer that contains at least 60% alcohol.**
- Develop information-sharing systems with parents and local partners.
- **Perform routine cleaning**, including frequently touched surfaces.

The Florida Department of Health is able to test for COVID-19 in labs in Jacksonville, Miami and Tampa, allowing tests results to be available within 24 to 48 hours. If you come into contact with an individual who has recently traveled to an area that the CDC has issued a level 2 or level 3 travel health notice such as China, Italy, South Korea and Japan, there are protocols in place:

AMERICAN OVERSIGHT

- **Immediately contact your local county health department upon developing symptoms, before visiting a doctor.**
- Individuals will be evaluated at any local hospital. **ANY** local hospital is equipped to handle COVID-19. Testing will be conducted in Jacksonville, Miami or Tampa.
- The goal is **containment** to stop any transmission.

It is currently flu season, and we encourage you to continue to stress these common guidelines with all members of the school community, students, staff, and parents:

- Get a flu shot, and take flu antivirals if prescribed.
- If you are sick, stay home**.**
- Wash your hands often with soap and warm water for at least 20 seconds.
- Carry and use alcohol-based hand sanitizer.
- Avoid touching your eyes, nose and mouth with unwashed hands.
- Call ahead before visiting your doctor.
- Cover your mouth and nose with a tissue when you cough or sneeze. Immediately dispose of used tissue.
- Monitor your symptoms.

Lastly, an emerging trend nationally is for educational institutions to take additional precautions regarding students, staff and administrators who may be returning from overseas travel to China, Iran, Italy, South Korea and Japan. Florida's state universities and colleges are now requiring those students to self-isolate for 14 days, before returning to campus, as well as cancelling university- and college-sponsored travel to these countries. Our team at the Florida Department of Education would be happy to discuss strategies with you around implementing similar best practices, in order to reduce the risks to your students.

- Centers for Disease Control: https://www.cdc.gov/
- Florida Department of Education: http://fldoe.org/em-response/
- Please see this helpful flier from the CDC related to handwashing and hand sanitizer.
- Please see this helpful flier from the CDC related to stopping the spread of germs.

Florida is doing everything in their power to prepare and respond to COVID-19 and the Florida Department of Education is available to assist as needed. Daily updates will be posted on the DOH website, and rest assured FDOE will provide you with updates as we have them.

To reiterate, there is still a low risk in Florida. Florida is fully prepared to respond to COVID-19. We will continue to provide regular updates.

MEMORANDUM

TO: College Presidents

FROM: Kathy Hebda

DATE: March 2, 2020

SUBJECT: **COVID-19 Travel Precaution**

Following guidance from Governor Ron DeSantis and State Surgeon General Dr. Scott Rivkees, we request that each college take immediate action to request all employees and students who return from travel to China, Iran, Italy, Japan and South Korea to self-isolate and not return to campus for 14 days after their return. Consistent with this guidance, we recommend canceling all college-sponsored travel to these countries.

We encourage you to continue to be in regular contact with your local Department of Health officials and to review any of your college's relevant procedures.

MEMORANDUM

TO: State University Presidents and Provosts

FROM: Sydney Kitson, Chair, Board of Governors
Marshall M. Criser III, Chancellor, Board of Governors

DATE: March 2, 2020

RE: COVID-19 Travel Precaution

Following guidance from Governor Ron DeSantis and State Surgeon General Dr. Scott Rivkees, we request that each University take immediate action to request all faculty employees and students who return from travel to China, Iran, Italy, Japan and South Korea to self-quarantine and not return to campus for fourteen days after their return. Consistent with this guidance, we recommend canceling all university sponsored travel to these countries.

MEMORÁNDUM

PARA: Superintendentes del distrito escolar, Administradores y Educadores

DE: Jacob Oliva

FECHA: 3 de marzo de 2020

ASUNTO: **Preparación de Florida para COVID-19 (Coronavirus)**

Información de contacto:
Departamento de Salud de Florida
850-245-4444
DiseaseControl@flhealth.gov

Departamento de Educación de Florida
Dra. Dianne Mennitt
850-245-0475
Dianne.Mennitt@fldoe.org

Recientemente se confirmaron dos casos de COVID-19 (coronavirus) en Florida, lo que llevó al gobernador Ron DeSantis y al cirujano general estatal Scott Rivkees a declarar una emergencia de salud pública (Orden Ejecutiva 20-51). **Actualmente, todavía hay un bajo riesgo en Florida. La planificación y la preparación siempre son importantes, y el Departamento de Educación de Florida (FDOE) entiende que las preocupaciones sobre la salud y la seguridad son primordiales para todas las comunidades educativas.** Se alienta a las escuelas, los distritos escolares, los colegios y las universidades a comunicarse con su departamento de salud local para obtener la información y asistencia más actualizada sobre COVID-19. Los departamentos de salud del condado están completamente integrados con el Departamento de Salud de Florida (FDOH) y el Centro para el Control de Enfermedades (CDC), y están bien equipados para responder si es necesario. El CDC también ha publicado una guía provisional para administradores de programas de cuidado infantil de EE. UU. y escuelas K-12 para planificar, preparar y responder a COVID-19.

COVID-19 se propaga de manera similar a la gripe, principalmente a través del contacto de un individuo infectado y se transmite al toser y estornudar. Los síntomas comunes incluyen fiebre, tos, dificultad para respirar y problemas respiratorias inferiores y superiores. Es más probable que ocurra en las personas ancianas y aquellos con condiciones de salud subyacentes, y la mayoría de las personas con el virus tendrán un caso leve y podrán ser tratados en el hogar.

A medida que COVID-19 evoluciona, lo más importante para las escuelas es **planificar y prepararse:**

- Revisar, actualizar e implementar planes de operaciones de emergencia. Esto debe hacerse en colaboración con los departamentos de salud locales.
- Asegurarse de que las estrategias de lavarse las manos incluyan **lavarse con agua y jabón durante al menos 20 segundos o usar desinfectante para manos que contenga al menos 60% de alcohol.**
- Desarrollar sistemas de intercambio de información con padres y socios locales.

AMERICAN OVERSIGHT

- **Realice una limpieza de rutina**, incluidas las superficies tocadas con frecuencia.

El Departamento de Salud de Florida puede realizar una prueba de COVID-19 en los laboratorios de Jacksonville, Miami y Tampa, lo que permite que los resultados de las pruebas estén disponibles dentro de las 24 a 48 horas. Si entra en contacto con un individuo que ha viajado recientemente a un área donde el CDC ha emitido un aviso de salud de viaje de nivel 2 o nivel 3 como China, Italia, Corea del Sur y Japón, existen protocolos:

- **Comuníquese de inmediato con el departamento de salud de su condado local al desarrollar síntomas, antes de visitar un médico.**
- Las personas pueden ser evaluadas en cualquier hospital local. **CUALQUIER** hospital local está equipado para manejar COVID-19. Las pruebas se realizarán en Jacksonville, Miami o Tampa.
- El objetivo es **contención** para detener cualquier transmisión**.**

Actualmente es la temporada de gripe, y lo alentamos a que continúe enfatizando estas directrices comunes con todos los miembros de la comunidad escolar, estudiantes, personal y padres:

- Vacúnese contra la gripe y tome antivirales contra la gripe si se lo recetan.
- Si está enfermo, quédese en casa**.**
- Lávese las manos a menudo con agua y jabón durante al menos 20 segundos.
- Lleve y use desinfectante de manos a base de alcohol que contenga al menos 60% de alcohol.
- Evite tocarse los ojos, la nariz y la boca con las manos sucias.
- Llame con anticipación antes de visitar a su médico.
- Cúbrase la boca y la nariz con un pañuelo cuando tosa o estornude. Deseche inmediatamente el pañuelo usado.
- Controle sus síntomas.

Por último, una tendencia emergente a nivel nacional es que las instituciones educativas tomen precauciones adicionales con respecto a los estudiantes, el personal y los administradores que pueden regresar de viajes al extranjero a China, Irán, Italia, Corea del Sur y Japón. Las universidades y los colegios estatales de Florida ahora requieren que esos estudiantes se auto aíslen por 14 días, antes de regresar al campus, y que cancelen los viajes patrocinados por universidades y colegios a estos países. Nuestro equipo en el Departamento de Educación de Florida estaría encantado de discutir estrategias con usted para implementar mejores prácticas similares a fin de reducir los riesgos para sus estudiantes.

Se puede encontrar información útil en los siguientes sitios web:

- Departamento de Salud de Florida: http://www.floridahealth.gov/
- Centro de Control de Enfermedades: https://www.cdc.gov/
- Departamento de Educación de Florida: http://fldoe.org/em-response/
- Consulte este folleto útil del CDC relacionado con el lavado de manos y el desinfectante de manos.
- Consulte este folleto útil del CDC sobre como detener la propagación de gérmenes.

Florida está haciendo todo lo posible para prepararse y responder a COVID-19 y el Departamento de Educación de Florida está disponible para asistir según sea necesario. Las actualizaciones diarias se publicaran en el sitio web del DOH, y tenga la seguridad de que FDOE le proporcionará actualizaciones a medida que las tengamos.

JACOB OLIVA
CHANCELLOR OF PUBLIC SCHOOLS

AMERICAN OVERSIGHT

MEMORANDUM

TO: School District Superintendents, School Administrators, and Educators

FROM: Jacob Oliva

DATE: February 28, 2020

Contact Information:
Florida Department of Health
850-245-4444
DiseaseControl@flhealth.gov

Florida Department of Education
Dr. Dianne Mennitt
School Nurse Consultant
850-245-0475
Dianne.Mennitt@fldoe.org
DPS: 2020-36

SUBJECT: Florida Preparedness for COVID-19 (Coronavirus)

Yesterday, Governor Ron DeSantis hosted a press conference regarding COVID-19 (Coronavirus), and announced **there are no confirmed cases in Florida**. **Currently there is a low risk in Florida.** However, planning and preparing is always important and the Florida Department of Education (FDOE) understands that concerns about health and safety are paramount for all education communities. In response to such concerns, we encourage you to access up-to-date information and resources from the Florida Department of Health (FDOH) website or the Centers for Disease Control and Prevention (CDC) website.

FDOH has been closely monitoring COVID-19 since November 2019, and emphasizes that there is low health risk in the United States. The FDOH Incident Management Team has been working in lockstep with the CDC on daily updates, and hundreds of dedicated FDOH professionals are positioned to respond if the need arises in each county. In addition, county health departments are fully integrated with FDOH and CDC, and are well equipped to respond if necessary.

This virus is spread mostly through contact from an infected individual and transmitted by coughing and sneezing. Common symptoms include fever, coughing, shortness of breath, and lower and upper respiratory issues. It is more likely to occur in the elderly and those with underlying health conditions.

If there is an individual with a suspected case of COVID-19, there are protocols in place with **ALL** Florida health care providers and practitioners:

- Immediately contact your health care practitioner or any local hospital. **ANY** local hospital is equipped to handle COVID-19.
- Individuals will be evaluated at any local hospital, and tests will be sent to the CDC for evaluation.
- The goal is **containment** to stop any transmission.

AMERICAN OVERSIGHT

It is currently flu season, and FDOH recommends getting a flu vaccine, taking everyday preventive actions to help stop the spread of germs, and taking flu antivirals if prescribed. We encourage you to continue to stress these common guidelines with all members of the school community, students, staff and parents:

- If you are sick, stay home.
- Wash your hands often with soap and warm water for at least 20 seconds.
- Carry and use alcohol-based hand sanitizer.
- Avoid touching your eyes, nose and mouth with unwashed hands.
- Call ahead before visiting your doctor.
- Cover your mouth and nose with a tissue when you cough or sneeze.
- Monitor your symptoms.

Please see this helpful flier from the CDC related to handwashing and the use of alcohol based sanitizer.

Florida is doing everything in its power to prepare and respond to COVID-19 and the FDOE is available to assist as needed. Daily updates will be posted on the FDOH website, and rest assured FDOE will provide you with updates as we have them.

MEMORANDUM

TO: School District Superintendents, Administrators, and Educators

FROM: Chancellor Jacob Oliva

DATE: March 3, 2020

SUBJECT: Florida Preparedness for COVID-19 (Coronavirus)

Two cases of COVID-19 (coronavirus) were recently confirmed in Florida, leading to Governor Ron DeSantis and State Surgeon General Scott Rivkees declaring a public health emergency (Executive Order 20-51). **Currently, there is still a low risk in Florida. Planning and preparing is always important, and the Florida Department of Education (FDOE) understands that concerns about health and safety are paramount for all education communities.** Schools, school districts, colleges and universities are encouraged to contact their local health department for the most up-to-date information and assistance regarding COVID-19. County health departments are fully integrated with the Florida Department of Health (FDOH) and the Center for Disease Control (CDC), and are well equipped to respond if necessary. The CDC has also published Interim Guidance for Administrators of US Childcare Programs and K-12 Schools to Plan, Prepare, and Respond to COVID-19.

COVID-19 is spread similarly to the flu, mostly through contact from an infected individual and transmitted by coughing and sneezing. Common symptoms include fever, coughing, shortness of breath, and lower and upper respiratory issues. It is more likely to occur in the elderly and those with underlying health conditions, and most individuals with the virus will have a mild case and will be able to be treated at home.

As COVID-19 evolves, the most important thing for schools to do is **plan and prepare:**

- Review, update and implement emergency operations plans. This should be done in collaboration with local health departments.
- Ensure handwashing strategies include **washing with soap and water for at least 20 seconds or using hand sanitizer that contains at least 60% alcohol.**
- Develop information-sharing systems with parents and local partners.
- **Perform routine cleaning**, including frequently touched surfaces.

The Florida Department of Health is able to test for COVID-19 in labs in Jacksonville, Miami and Tampa, allowing tests results to be available within 24 to 48 hours. If you come into contact with an individual who has recently traveled to an area that the CDC has issued a level 2 or level 3 travel health notice such as China, Italy, South Korea and Japan, there are protocols in place:

AMERICAN OVERSIGHT

- **Immediately contact your local county health department upon developing symptoms, before visiting a doctor.**
- Individuals will be evaluated at any local hospital. **ANY** local hospital is equipped to handle COVID-19. Testing will be conducted in Jacksonville, Miami or Tampa.
- The goal is **containment** to stop any transmission.

It is currently flu season, and we encourage you to continue to stress these common guidelines with all members of the school community, students, staff, and parents:

- Get a flu shot, and take flu antivirals if prescribed.
- If you are sick, stay home**.**
- Wash your hands often with soap and warm water for at least 20 seconds.
- Carry and use alcohol-based hand sanitizer.
- Avoid touching your eyes, nose and mouth with unwashed hands.
- Call ahead before visiting your doctor.
- Cover your mouth and nose with a tissue when you cough or sneeze. Immediately dispose of used tissue.
- Monitor your symptoms.

Lastly, an emerging trend nationally is for educational institutions to take additional precautions regarding students, staff and administrators who may be returning from overseas travel to China, Iran, Italy, South Korea and Japan. Florida's state universities and colleges are now requiring those students to self-isolate for 14 days, before returning to campus, as well as cancelling university- and college-sponsored travel to these countries. Our team at the Florida Department of Education would be happy to discuss strategies with you around implementing similar best practices, in order to reduce the risks to your students.

Helpful information can be found at the following websites:

- Florida Department of Health: http://www.floridahealth.gov/
- Centers for Disease Control: https://www.cdc.gov/
- Florida Department of Education: http://fldoe.org/em-response/
- Please see this helpful flier from the CDC related to handwashing and hand sanitizer.
- Please see this helpful flier from the CDC related to stopping the spread of germs.

Florida is doing everything in their power to prepare and respond to COVID-19 and the Florida Department of Education is available to assist as needed. Daily updates will be posted on the DOH website, and rest assured FDOE will provide you with updates as we have them.

To reiterate, there is still a low risk in Florida. Florida is fully prepared to respond to COVID-19. We will continue to provide regular updates.

MEMORANDUM

TO: College Presidents

FROM: Kathy Hebda

DATE: March 2, 2020

SUBJECT: **COVID-19 Travel Precaution**

Following guidance from Governor Ron DeSantis and State Surgeon General Dr. Scott Rivkees, we request that each college take immediate action to request all employees and students who return from travel to China, Iran, Italy, Japan and South Korea to self-isolate and not return to campus for 14 days after their return. Consistent with this guidance, we recommend canceling all college-sponsored travel to these countries.

We encourage you to continue to be in regular contact with your local Department of Health officials and to review any of your college's relevant procedures.

MEMORANDUM

TO: State University Presidents and Provosts

FROM: Sydney Kitson, Chair, Board of Governors
Marshall M. Criser III, Chancellor, Board of Governors

DATE: March 2, 2020

RE: COVID-19 Travel Precaution

Following guidance from Governor Ron DeSantis and State Surgeon General Dr. Scott Rivkees, we request that each University take immediate action to request all faculty employees and students who return from travel to China, Iran, Italy, Japan and South Korea to self-quarantine and not return to campus for fourteen days after their return. Consistent with this guidance, we recommend canceling all university sponsored travel to these countries.

Subject: COVID-19 Information Toolkit

CHDs,

Attached please find a link to our public facing toolkit with a variety of information resources for COVID-19. Numerous new resources have been added today and more will be added throughout the day, of particular interest is a visitor screening tool for healthcare facilities. Please share these with your local partners and continue to check this link for updated resources.

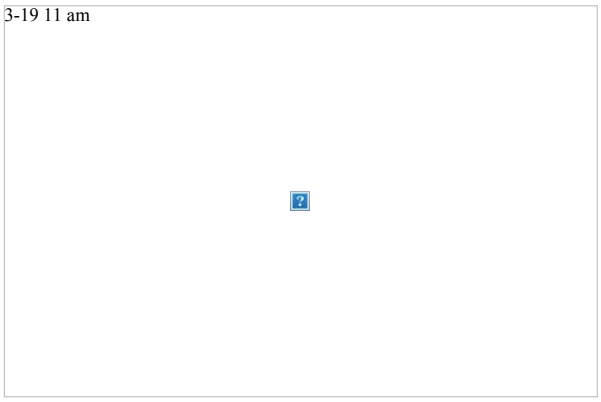
Florida Department of Health Updates New COVID-19 Cases, 11 a.m. Update

~360 positive cases in Florida Residents and 30 positive cases in non-Florida residents~

TALLAHASSEE — To keep Florida residents and visitors safe, informed and aware about the status of the virus, The Florida Department of Health has launched a COVID-19 dashboard that will be updated twice daily. Today, as of 10 a.m., there are 390 total** Florida cases.



New Florida cases include:

- 62 additional positive COVID-19 cases (61 Florida residents and 1 non-Florida resident) reported to the Florida Department of Health.
- There are currently 360 positive cases in Florida residents and 30 positive cases in non-Florida residents.

Florida recently partnered with private laboratories around the state to expand COVID-19 laboratory testing capacity. This partnership will increase the number of tests conducted each day and ensure Floridians receive the critical health information they need in a timely manner.

Expansion to private laboratories changes the COVID-19 testing landscape in Florida. Private laboratories will run tests as they receive swab samples from practitioners. Testing and reporting times will vary among commercial and DOH laboratories. Demographic information may be updated during investigations. These twice daily reports reflect the state's efforts to accurately and transparently share information.

More information on a case-by-case basis can also be found here.

For more detail on Florida resident cases, please visit the live DOH Dashboard here.

* Florida residents that are diagnosed with COVID-19 and isolated out of state are not reflected on the Florida map.

**Total cases overview includes positive cases in Florida residents and non-Florida residents tested in Florida.

More Information on COVID-19

To find the most up-to-date information and guidance on COVID-19, please visit the Department of Health's dedicated COVID-19 webpage. For information and advisories from the Centers for Disease Control (CDC), please visit the CDC COVID-19 website. For more information about current travel advisories issued by the U.S. Department of State, please visit the travel advisory website.

For any other questions related to COVID-19 in Florida, please contact the Department's dedicated COVID-19 Call Center by calling **1-866-779-6121. The Call Center is available 24 hours per day**. Inquiries may also be emailed to **COVID-19@flhealth.gov.**

About the Florida Department of Health

The Florida Department of Health, nationally accredited by the Public Health Accreditation Board, works to protect, promote and improve the health of all people in Florida through integrated state, county and community efforts.

Follow us on Facebook, Instagram and Twitter at @HealthyFla. For more information please visit www.FloridaHealth.gov.

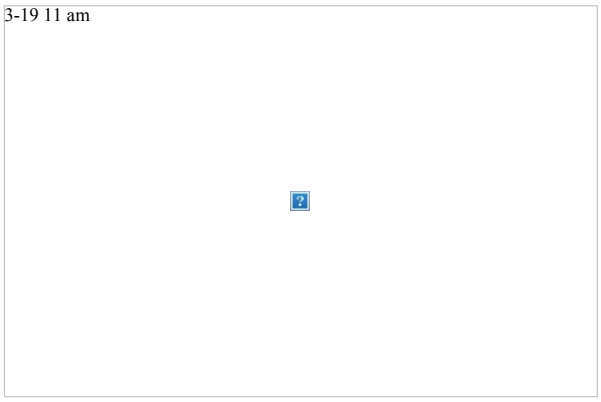
Florida Department of Health Updates New COVID-19 Cases, 11 a.m. Update

~360 positive cases in Florida Residents and 30 positive cases in non-Florida residents~

TALLAHASSEE — To keep Florida residents and visitors safe, informed and aware about the status of the virus, The Florida Department of Health has launched a COVID-19 dashboard that will be updated twice daily. Today, as of 10 a.m., there are 390 total** Florida cases.



New Florida cases include:

- 62 additional positive COVID-19 cases (61 Florida residents and 1 non-Florida resident) reported to the Florida Department of Health.
- There are currently 360 positive cases in Florida residents and 30 positive cases in non-Florida residents.

Florida recently partnered with private laboratories around the state to expand COVID-19 laboratory testing capacity. This partnership will increase the number of tests conducted each day and ensure Floridians receive the critical health information they need in a timely manner.

Expansion to private laboratories changes the COVID-19 testing landscape in Florida. Private laboratories will run tests as they receive swab samples from practitioners. Testing and reporting times will vary among commercial and DOH laboratories. Demographic information may be updated during investigations. These twice daily reports reflect the state's efforts to accurately and transparently share information.

More information on a case-by-case basis can also be found here.

For more detail on Florida resident cases, please visit the live DOH Dashboard here.

* Florida residents that are diagnosed with COVID-19 and isolated out of state are not reflected on the Florida map.

**Total cases overview includes positive cases in Florida residents and non-Florida residents tested in Florida.

More Information on COVID-19

To find the most up-to-date information and guidance on COVID-19, please visit the Department of Health's dedicated COVID-19 webpage. For information and advisories from the Centers for Disease Control (CDC), please visit the CDC COVID-19 website. For more information about current travel advisories issued by the U.S. Department of State, please visit the travel advisory website.

For any other questions related to COVID-19 in Florida, please contact the Department's dedicated COVID-19 Call Center by calling **1-866-779-6121. The Call Center is available 24 hours per day**. Inquiries may also be emailed to **COVID-19@flhealth.gov.**

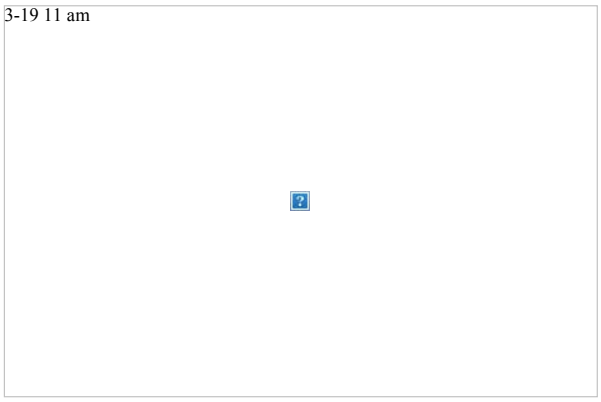
Florida Department of Health Updates New COVID-19 Cases, 11 a.m. Update

~360 positive cases in Florida Residents and 30 positive cases in non-Florida residents~

TALLAHASSEE — To keep Florida residents and visitors safe, informed and aware about the status of the virus, The Florida Department of Health has launched a COVID-19 dashboard that will be updated twice daily. Today, as of 10 a.m., there are 390 total** Florida cases.



New Florida cases include:

- 62 additional positive COVID-19 cases (61 Florida residents and 1 non-Florida resident) reported to the Florida Department of Health.
- There are currently 360 positive cases in Florida residents and 30 positive cases in non-Florida residents.

Florida recently partnered with private laboratories around the state to expand COVID-19 laboratory testing capacity. This partnership will increase the number of tests conducted each day and ensure Floridians receive the critical health information they need in a timely manner.

Expansion to private laboratories changes the COVID-19 testing landscape in Florida. Private laboratories will run tests as they receive swab samples from practitioners. Testing and reporting times will vary among commercial and DOH laboratories. Demographic information may be updated during investigations. These twice daily reports reflect the state's efforts to accurately and transparently share information.

More information on a case-by-case basis can also be found here.

For more detail on Florida resident cases, please visit the live DOH Dashboard here.

* Florida residents that are diagnosed with COVID-19 and isolated out of state are not reflected on the Florida map.

**Total cases overview includes positive cases in Florida residents and non-Florida residents tested in Florida.

Guidance and Clarification on Division of Emergency Management (DEM) Emergency Order No. 20-006

An Emergency Order was recently issued to create broad limitations on visitation at long-term care and residential facilities to protect residents from COVID-19. To assist with clarifying this directive, the Agency for Health Care Administration has started a list of the most commonly asked questions.

1. **What are necessary health care services as allowed by the Emergency Order?**

   Medically necessary health care includes health services as well as support services such as activities of daily living and assistance with resident self-administration of medication. This exception applies to individuals who previously performed them on a regular basis.

   For example, any family member or sitter who provided assistance with activities of daily living, such as feeding a resident or assisting with bathing, prior to the Emergency Order issued on March 15, 2020, may continue to provide these services.

2. **Can staff who have been on a flight within the last 14 days enter a facility?**

   Yes. Facility staff are exempt from the 14-day air travel prohibition if the individual does not meet any of the other screening criteria. The facility must still follow the required documentation criteria.

3. **Can hospice workers enter the facility?**

   Yes. Hospice workers are allowed to see a resident with hospice

AMERICAN OVERSIGHT

orders so long as the hospice workers meet the other screening criteria in the Emergency Order.

The full Emergency Order is available here: https://ahca.myflorida.com/docs/DEM_ORDER_NO.20-006_In_re_COVID-19_Public_Health_Emergency_Issued_March_15_2020.pdf

The Agency for Health Care Administration is committed to better health care for all Floridians. The Agency administers Florida's Medicaid program, licenses and regulates more than 44,000 health care facilities and 53 health plans, and publishes health care data and statistics at www.FloridaHealthFinder.gov. Additional information about Agency initiatives is available via Facebook (AHCAFlorida), Twitter (@AHCA_FL) and YouTube (/AHCAFlorida).

AGENCY FOR HEALTH CARE ADMINISTRATION

RON DESANTIS
GOVERNOR

MARY C. MAYHEW
SECRETARY

Guidance and Clarification on Division of Emergency Management (DEM) Emergency Order No. 20-006

An Emergency Order was recently issued to create broad limitations on visitation at long-term care and residential facilities to protect residents from COVID-19. To assist with clarifying this directive, the Agency for Health Care Administration has started a list of the most commonly asked questions.

1. **What are necessary health care services as allowed by the Emergency Order?**

   Medically necessary health care includes health services as well as support services such as activities of daily living and assistance with resident self-administration of medication. This exception applies to individuals who previously performed them on a regular basis.

   For example, any family member or sitter who provided assistance with activities of daily living, such as feeding a resident or assisting with bathing, prior to the Emergency Order issued on March 15, 2020, may continue to provide these services.

2. **Can staff who have been on a flight within the last 14 days enter a facility?**

   Yes. Facility staff are exempt from the 14-day air travel prohibition if the individual does not meet any of the other screening criteria. The facility must still follow the required documentation criteria.

3. **Can hospice workers enter the facility?**

   Yes. Hospice workers are allowed to see a resident with hospice

AMERICAN OVERSIGHT

orders so long as the hospice workers meet the other screening criteria in the Emergency Order.

The full Emergency Order is available here: https://ahca.myflorida.com/docs/DEM_ORDER_NO.20-006_In_re_COVID-19_Public_Health_Emergency_Issued_March_15_2020.pdf

The Agency for Health Care Administration is committed to better health care for all Floridians. The Agency administers Florida's Medicaid program, licenses and regulates more than 44,000 health care facilities and 53 health plans, and publishes health care data and statistics at www.FloridaHealthFinder.gov. Additional information about Agency initiatives is available via Facebook (AHCAFlorida), Twitter (@AHCA_FL) and YouTube (/AHCAFlorida).

The State of Florida Issues Updates on COVID-19

TALLAHASSEE, Fla. — The State of Florida is responding to COVID-19. In an effort to keep Florida residents and visitors safe and aware regarding the status of the virus, the Florida Department of Health will issue this update every day, seven days per week.

Governor Ron DeSantis is in constant communication with Florida Division of Emergency Management Director Jared Moskowitz and State Surgeon General Dr. Scott Rivkees as the State of Florida continues to monitor and respond to the threat of COVID-19.

Today, in a briefing at the State Emergency Operations Center, Governor DeSantis announced the following:

- Governor DeSantis announced he is going to supplement federal Small Business Administration (SBA) loans. The Governor activated the Florida Small Business Emergency Loan Program. Up to $50 million has been allocated for the program.
- Governor Ron DeSantis directed the Department of Revenue to provide flexibility on the deadlines of taxes due such as corporate income tax and sales tax to assist businesses that are adversely impacted from COVID-19 mitigation measures.
- Floridians throughout the state are lending a hand to stop the spread of COVID-19:
  - Members of the Florida House of Representatives have been activated to their National Guard units**,**
  - The Players Championship donated thousands of pounds of food to Feeding Northeast Florida**,**
  - Miami-Dade County school administrators are handing out computers and mobile devices, and
  - Comcast agreed to provide free WiFi for the next 60 days to kids who do not have it.

- The Miami Dolphins, Jacksonville Jaguars and the Orange County Convention Center have agreed to open their parking lots to stage supplies and locate testing sites.
- Restaurants throughout the state including Jimmy John’s in Tallahassee and Toasted Restaurant in Orange County are providing children with free lunch throughout the week.
- Drive through testing sites are expected to open, throughout the state, in addition to the first proposed state site at Memorial Healthcare System in Broward. So far, sites are being developed in in Myers, Pensacola, West Palm Beach and Tallahassee.
- The Floridians who were at held at the Dobbins Air Reserve Base are on their way back to Florida; 15 Floridians have elected to stay at the base to care for their family members.
- On March 9, Governor DeSantis issued Executive Order 20-52, declaring a State of Emergency for COVID-19. By declaring a State of

AMERICAN OVERSIGHT

Emergency, Governor DeSantis is ensuring that state and local governments have the resources and flexibility they need to prepare and respond.

More Information on COVID-19

To find the most up-to-date information and guidance on COVID-19, please visit the Department of Health's dedicated COVID-19 webpage. For information and advisories from the Centers for Disease Control (CDC), please visit the CDC COVID-19 website. For more information about current travel advisories issued by the U.S. Department of State, please visit the travel advisory website.

For any other questions related to COVID-19 in Florida, please contact the Department's dedicated COVID-19 Call Center by calling **(866) 779-6121. The Call Center is available 24 hours per day**. Inquiries may also be emailed to **COVID-19@flhealth.gov.**

What you Should Know

COVID-19 can spread from person to person through small droplets from the nose or mouth, including when an individual coughs or sneezes. These droplets may land on objects and surfaces. Other people may contract COVID-19 by touching these objects or surfaces, then touching their eyes, nose or mouth.

Symptoms of COVID-19 are fever, cough and shortness of breath. Symptoms may appear in as few as two days or as many as 14 days following exposure. Most people recover from COVID-19 without needing special treatment. The elderly and those with underlying medical problems like high blood pressure, heart problems and diabetes are more likely to develop serious illness.

There is currently no vaccine to prevent COVID-19. The best way to prevent illness is to avoid being exposed to the virus. The Department recommends everyday preventive actions to help stop the spread of respiratory diseases, including:

- Avoiding close contact with people who are sick;
- Staying home when you are sick and avoiding contact with persons in poor health;
- Avoiding touching your eyes, nose and mouth with unwashed hands;
- Covering your cough or sneezing into a tissue, then disposing of the tissue;
- Washing your hands often with soap and water for at least 20 seconds, especially after going to the bathroom, before eating, after blowing your nose, coughing or sneezing;
- If soap and water are not readily available, use an alcohol-based hand sanitizer with at least 60% alcohol. Always wash hands with soap and water if hands are visibly dirty; and
- Cleaning and disinfecting frequently touched objects and surfaces using a regular household cleaning spray or wipe.

The CDC does not recommend that asymptomatic, healthy people wear a facemask to protect themselves from respiratory diseases, including COVID-19. Facemasks should be used by people who show symptoms of COVID-19 to help prevent the spread of the disease to others. The use of facemasks is also crucial for health workers and people who are taking care of someone in close settings (at home or in a health care facility).
A person that experiences a fever and symptoms of respiratory illness, such as fever, cough or shortness of breath, within 14 days after travel from any other destination with community transmission should call ahead to their health care provider and local CHD and mention their recent travel or close contact.

If a person has had close contact with someone showing these symptoms who has recently traveled from this area or been in contact with a person with laboratory-confirmed COVID-19, he or she should call ahead to a health care professional and the CHD. The health care provider will work with the Department to determine if the person should be tested for COVID-19.

Actions the state has taken to prepare for and respond to COVID-19:

DEPARTMENT OF HEALTH

- At the direction of Governor DeSantis, State Surgeon General Dr. Scott Rivkees declared a Public Health Emergency for COVID-19 in Florida.
- Governor DeSantis announced that the State ordered an additional 2,500 test kits to supplement the adequate resources already available to test for COVID-19. These additional test kits will enable the Department of Health, working with Florida health care providers, to test up to an additional 625,000 individuals. The Governor also suspended non-essential in state and all out-of-state travel for state employees for 30 days.
- Established an Incident Management Team to coordinate response operations.
- Defined a high-level phased response strategy for COVID-19.
- Activated a dedicated incident command post for on-site response activities.
- Conducted three public health and health care stakeholder conference calls to provide statewide updates on the current outbreak situation, response actions and guidance for pandemic planning. Over five hundred participants joined the calls.
- Established a public call center for questions regarding COVID-19. The call center launched Monday, March 2.
- Developed and distributed COVID-19 presentation materials to County Health Departments (CHD) for use at community meetings.
- Activated the Joint Information Center in coordination with the Division of Emergency Management.
- Developed and implemented protocols for investigation, surveillance and monitoring for COVID-19 to rapidly detect and contain cases.
- Established mechanisms for monitoring and coordination with the Centers for Disease Control and Prevention (CDC) regarding epidemiological activities.
- Distributed CDC Interim Guidance for public health personnel evaluating Persons Under Investigation (PUI) and asymptomatic close contacts of confirmed cases at their home or non-home residential settings to CHDs.
- Approved and disseminated an updated Clinician Screening Tool for identifying COVID-19 PUIs.
- Distributed a health care provider letter regarding enhanced surveillance and preparedness for COVID-19 to associations, licensed providers, Health Care Coalitions and CHDs.
- Implemented testing at all three State Public Health Laboratories.
- Distributed updated CDC guidance for schools to CHDs and the Department of Education.
- Distributed updated laboratory guidance regarding implementation of testing at State Public Health Laboratories.
- Developing a laboratory surge plan.
- Developing a clinician-level briefing for medical audiences.
- Identifying and monitoring close contacts of presumptive cases. Any close contacts with symptoms will be tested.
- Implemented private lab testing.
- Developed and disseminated pandemic planning guidance.
- Advised CHDs and HCCs to retain expired personal protective equipment until further until further notice.
- Continued development of public information resources.
- Developing infographics for first responders (fire, law enforcement and EMS) regarding infection control and personal protection for COVID-19.
- At the Governor's direction, a public-private partnership has been put in place between Memorial Healthcare in Broward and the National

AMERICAN OVERSIGHT

Guard to set up a mobile testing unit.
- At the direction of Governor DeSantis hiring additional epidemiologists from university health programs to help with workload.
- Governor DeSantis directed the Agency for Health Care Administration (AHCA) to extend all existing nursing home and assisted living facility licenses for 90 days to remove distraction from patient care.

AGENCY FOR HEALTH CARE ADMINISTRATION

- AHCA distributed a provider alert to licensed health care providers regarding the Division of Emergency Management's new Emergency Order tightening visitation restrictions at residential and long-term care facilities.
- AHCA, in coordination with the DEM and the Department, is hosting ongoing statewide calls for nursing homes, assisted living facilities, intermediate care facilities, the Agency for Persons with Disabilities, group homes, and adult family care homes in conjunction with the Florida Health Care Association. Secretary Mayhew and Surgeon General Rivkees are continuing to address critical issues impacting these providers such as restricting visitors and providing updates.
- AHCA, in coordination with DEM and the Department, is hosting ongoing statewide calls for hospitals in conjunction with the Florida Hospital Association. Secretary Mayhew and Surgeon General Rivkees to provide the most up-to-date information to hospital partners and residential facilitates caring for aging and vulnerable populations.
- After previously opening an event on the Emergency Status System (ESS) for hospitals to enter census information, emergency room status updates and isolation beds, AHCA expanded the ESS event to track nursing homes and assisted living facility bed capacity, effective March 15.
- The Agency for Health Care Administration (AHCA) will be granting a 90-day extension to all licenses for health care providers and regulated facilities.
- AHCA is distributing information regarding regulatory flexibilities created by waivers from the Centers for Medicare and Medicaid Services (CMS) related to skilled nursing facilities, critical access hospitals, home health agencies, durable medical equipment, provider enrollment, etc.
- AHCA participated in a collaborative call with the Florida Health Care Association, Florida Hospital Association and LeadingAge Florida to discuss patient transfer arrangements between health care facilities such as nursing homes and hospitals.
- The Florida Medicaid Program announced coverage of commercial testing for COVID-19 for dates of service back to February 4.
- AHCA submitted requests to CMS for flexibility for Florida's program under the federal declaration of a state of emergency.

AGENCY FOR PERSONS WITH DISABILITIES

- The agency's three state-run centers in Marianna, Gainesville and Chattahoochee, as well as APD-licensed group homes, are restricting visitors in compliance with the Executive Order to protect the health and safety of our customers.
- APD Adult Day Training programs across the state are screening visitors for possible exposure to COVID-19 using a visitor questionnaire. The questionnaire is also being used to screen visitors coming into APD Regional Offices.
- APD continues to provide an up-to-date status on COVID-19, best practices, preventative tips, and CDC guidance to APD providers, Waiver Support Coordinators, Stakeholders and APD employees.

DEPARTMENT OF ELDER AFFAIRS

- The Department of Elder Affairs (DOEA), in coordination with the Administration for Community Living (ACL), facilitated a virtual Town Hall meeting at the request of Hallandale Beach Mayor Joy Cooper. More than 2,700 seniors were online for the meeting. Charlotte Mather Taylor, Executive Director of the Aging and Disability Resource Center (ADRC) of Broward County, led the discussion with participation from ACL Representative Constantino Miskos, Chen Senior Medical Center, and representatives from Emergency Medical Services. Their primary topics of conversation centered on the work being done, specifically by the Area Agency on Aging, to continue to provide people resources and services to maximize support during COVID-19.
- Through Departmental Leadership and the Area Agency on Aging contract managers, DOEA provided ongoing technical assistance to the entire Aging Network regarding allowable flexibilities within programs to ensure continuity of services and the safety of elders. For example, we provided guidance to all Executive Directors regarding the safe delivery of home-delivered meals to prevent spread of respiratory infection.
- DOEA continues to provide updated information on current closures and possible future temporary closures of specific services at Congregate Meal Sites, Senior Centers and Adult Day Care Centers on our website homepage and all corresponding program pages. Clients are guided to contact the specific location for alternative services, they are provided the Area Agency on Aging helpline, and directed to the DOH website with any additional questions on COVID-19.
- "The Vision 2020: Looking Towards Your Age-Friendly Future Tour" to five communities across Florida originally planned for April 20th - April 24th and co-hosted by the Department and AARP has been postponed to protect the health and wellness of seniors, volunteers and staff.
- All Serving Health Insurance Needs of Elders (SHINE) participation in scheduled outreach events, presentations, and in-person SHINE/Senior Medicare Patrol (SMP) counseling has been suspended until further notice. SHINE volunteers and staff will continue to provide counseling services, but the services will be conducted over-the-phone with future considerations for the use of webinars and Facebook LIVE.
- DOEA Secretary Prudom held a conference call with The Comprehensive Assessment and Review for Long-term Care Services (CARES) supervisors to discuss the suspension of face-to-face assessments. CARES assessors will provide reviews through phone or tele-technology to reduce client/staff exposure and reduce spread.
- Through Departmental Leadership and the Area Agency on Aging contract managers, we provided ongoing technical assistance to the entire Aging Network regarding allowable flexibilities within programs to ensure continuity of services and the safety of elders. For example, we provided guidance to all Executive Directors regarding the provision on completing assessments for multiple program types, specifically for clients who have chosen to self-isolate.
- DOEA provided updated information on current closures and possible future temporary closures of specific services at Congregate Meal Sites, Senior Centers, and Adult Day Care Centers on our website homepage and all corresponding program pages. Clients are guided to contact the specific location for alternative services, provided the Area Agency on Aging helpline, and directed to the DOH website with any additional questions on COVID-19.

DEPARTMENT OF CHILDREN AND FAMILIES

- The Department of Children and Families' (DCF) Office of Child Welfare is sending regular communication about COVID-19 specifically to licensed child care providers, directing them to follow the CDC's Interim Guidance for Administrators of US Childcare Programs and K-12 Schools to Plan, Prepare, and Respond to Coronavirus Disease 2019 (COVID-19). An FAQ document for providers was also posted prominently on DCF's Child Care webpage.
- DCF's Office of Child Welfare is disseminating a survey to licensed child care providers to assess closures throughout the state. Currently, the decision to close is at the discretion of each individual facility.
- DCF Secretary Chad Poppell sent thorough communication to all DCF staff, contracted partners, and licensed facilities (including child care providers) about COVID-19, including precautionary measures (as outlined by the CDC) and temporary policy updates.
- DCF is working with AHCA, DOEA, and APD to compile and develop guidance for agency staff and stakeholders who work directly with Florida's elderly population and have a higher risk of being exposed to COVID-19.
- DCF is leading status update calls with both internal leadership and leadership from external contracted partners. For the time being, these calls will take place twice weekly, every Tuesday and Friday.

AMERICAN OVERSIGHT

- DCF General Services staff throughout the state are working with lessors and janitorial contractors to increase sanitizing measures in office buildings, especially restrooms and common areas. They also began taking inventory of sanitizing supplies (disinfecting wipes, Lysol spray, hand-sanitizer, etc.) and are ordering more as needed.
- DCF established strategies for COVID-19 prevention at all three state mental health treatment facilities, as well as the South Florida mental health facilities run by Wellpath Recovery Solutions, a contracted partner. They are reporting daily updates to ensure compliance with virus prevention and monitor potential outbreaks.
- DCF has established a visitation protocol for all state-owned and contracted mental health treatment facilities, as well as vendors and patient families, requiring all outside parties to complete a Visitors Viral Symptoms Screening prior to entering a facility. At this time, there are no cases of patients or facility staff testing positive for COVID-19.
- DCF's Office of Economic Self-Sufficiency is communicating with DEO regarding work requirements and CareerSource operations and availability.
- DCF's Office of Economic Self-Sufficiency implemented screening procedures, including a set of questions that must be asked prior to entry, at all economic self-sufficiency storefronts.

FLORIDA DEPARTMENT OF VETERANS' AFFAIRS

- Effective March 11, 2020, FDVA is restricting visitor access to its State Veterans' Nursing Homes and Domiciliary until further notice, with the exception of essential visitors, such as family members of those residents undergoing end-of-life care.
- The U.S. Department of Veterans Affairs (VA) has also temporarily restricted access to their nursing and community living center facilities to only essential visitors until further notice.
- All VA Medical Centers in Florida are implementing enhanced screening protocols at their facilities. VA Outpatient Clinics are also implementing enhanced screening protocols. Please plan to arrive at the facility well in advance of your appointment to allow additional time for the screening process.
- Veterans who are concerned they may have symptoms of Coronavirus (COVID-19) are encouraged to contact the VISN 8 Clinical Contact Center at 1-877-741-3400 (toll free). Clinical staff provide 24/7 virtual care and support, including nurse advice and triage. The service is available at no cost to veterans enrolled for care in the VA Sunshine Healthcare Network (VISN 8).
- All FDVA and VA facilities remain fully operational.

DEPARTMENT OF MILITARY AFFAIRS

- There have been over 200 Florida National Guardsmen placed on state active duty in support of COVID-19.
- The Florida National Guard is activating all of their medical professionals (Army Combat medic specialists and Air Force medical technicians) to support Florida Department of Health's drive-through screening operations. Guardsmen have reported in and formed Task Force Medical already.
- The Florida National Guard has activated soldiers to augment the State Logistics Readiness Center in Central Florida.

VOLUNTEER FLORIDA

- Volunteer Florida is working with state counterparts and FEMA to develop volunteer plans.
- Volunteer Florida's National Service Department has discussed using AmeriCorps members in food banks as feeding needs increase.
- Volunteer Florida is having conversations with Mass Care on the anticipated needs of volunteers. Together, we are working on a plan for volunteers with volunteer safety guidelines to ensure that we are protecting our service providers (volunteers and clients).
- Volunteer Florida has asked all Voluntary Organizations Active in Disaster (VOAD) partners to review their continuity of operations so that there is no service delivery disruption.

FLORIDA DEPARTMENT OF EDUCATION

- Commissioner of the Florida Department of Education (FDOE) Richard Corcoran provided strong recommendations for extending spring break following Centers for Disease Control and Prevention (CDC) issuing guidance specific to COVID-19 in Florida. As all Florida school districts and public charter schools have different schedules, please click here to see the recommended spring break changes for each district. In addition, the department also announced that the start of state testing will be delayed by a minimum of two weeks. To stay up to date on school closure information, visit: org/em-response.
- FDOE sent updated guidance to school districts and superintendents ahead of spring break. To view that memo, visit: fldoe.org/em-response.
- In an effort to be proactive, and only as a precautionary measure if COVID-19 evolves in Florida, Florida Virtual School (FLVS) has partnered with the Florida Department of Education to offer all school districts student support and teacher professional development tailored to the online learning environment. The Florida Department of Education in partnership with FLVS is training an additional 10,000 teachers statewide on the Virtual Teacher Training for COVID-19. Superintendents who are interested in offering their teachers the Virtual Teacher Training for COVID-19 should work with their County Virtual Principals to provide a list of teachers to FLVS through: https://www.flvs.net/FLVSTeacherTraining.
- Education Commissioner Corcoran is in constant communication with Florida Superintendents and districts to provide guidance on COVID-19 preparedness and response and will be holding weekly calls to update districts on preparation efforts.
- FDOE has sent weekly memos providing updates to school districts, superintendents, Florida Colleges, parents, teachers and stakeholders.
- FDOE launched a survey to school districts and public charter schools about their preparations, policies, and their capacity to serve their students virtually to help meet and determine any preparedness needs.

STATE UNIVERSITY SYSTEM

- The State University System will continue to evaluate the effectiveness of remote learning and the need to teach remotely in order to protect our students and the university community.
- The State University System will continue to work with the Florida Department of Health and the Emergency Operations Center to determine if the initial two weeks of remote learning is sufficient.
- Effective immediately, all universities will make plans to transition to remote instruction as soon as possible.
- State universities with students who have returned from spring break, which includes Florida Gulf Coast University, Florida International University, Florida Polytechnic University, and the University of Florida, should implement a process to transition to remote instruction immediately and encourage students to return home for at least 2 weeks. Each university will provide detailed information to their students, faculty, and staff at the earliest possible time regarding this transition.
- State universities with students who are currently on spring break or about to be on break should direct their students to NOT return to campus for at least 2 weeks following the conclusion of spring break. This includes students at Florida Agricultural and Mechanical University, Florida Atlantic University, Florida State University, New College of Florida, the University of North Florida, the University of Central Florida, the University of South Florida, and the University of West Florida. Each university will provide detailed information to their students, faculty, and staff at the earliest possible time regarding this transition.
- All universities will continue to provide essential services, such as dining, counseling, health services, library services, etc., potentially on a limited basis or remotely. Each university with clinical and other non-classroom based programs will communicate directly with those students.
- All universities will continue to provide essential services, such as dining, counseling, health services, library services, etc., potentially on a limited basis or remotely. Each university with clinical and other non-classroom based programs will communicate directly with those students.
- RESIDENTIAL HOUSING - While students are encouraged to remain off-campus, each university should develop a plan for providing

AMERICAN OVERSIGHT

residential accommodations for students who need assistance or must remain in place.
- All state universities have implemented campus-wide critical incident or emergency management teams that are meeting regularly to prepare for the impacts of the COVID-19 virus.
- All universities are preparing to transition to remote instructional delivery for a two-week period during March and early April, depending on each institution's Spring Break, and are informing students not to return to campus during this period.
- The Board of Governors will be conducting its March meeting via conference call and will not have a face-to-face meeting at USF as was originally scheduled.
- For more information visit: https://www.flbog.edu/2020/03/11/state-university-system-statement-on-covid-19/.

FLORIDA DEPARTMENT OF CORRECTIONS

- Florida Department of Corrections (FDC) has no known or suspected cases of COVID-19 within its correctional institutions at this time.
- FDC Community Corrections officers are working with offenders on supervision to adjust reporting schedules to minimize congregating at probation offices and prevent the spread of COVID-19.
- FDC's Office of Health Services coordinates with the Department for guidance on any type of outbreak and is closely monitoring new information as it is disseminated from the Department and the CDC.
- FDC has suspended visitation at all correctional institutions statewide through April 5, 2020. The decision to reinstate the normal visitation schedule will be evaluated in consultation with the Department.
    - Inmates will continue to have access to mail, email, phone calls and video visitation.
    - Legal visits will not be impacted.
    - FDC has partnered with vendors to provide some complimentary phone and video visitation services.
- Anyone entering a correctional institution will be screened, and entrance will be restricted if they:
    - Have traveled internationally or on a cruise within the last 14 days.
    - Have signs or symptoms of a respiratory infection such as fever, cough or shortness of breath.
    - Have had contact with someone who has been or is under investigation for COVID-19.
- All non-critical inmate transfers have been suspended.
- FDC has a plan in place and dedicated staff members trained in the prevention and containment of infectious diseases.
- FDC initiated its Incident Command System in response to COVID-19.
- Education has been provided to staff, inmates and visitors to prevent the spread of any infectious disease, including COVID-19.
- Precautions are in place at facilities to protect inmates and staff from exposure to flu, COVID-19 or any other respiratory illness; preventative measures are being followed per CDC recommendations.

FLORIDA DEPARTMENT OF STATE

- The Division of Elections offers a toll-free Voter Assistance Hotline, 1.866.308.6739 (in English and Español), available Monday - Friday, 8:00 am - 5:00 pm ET, with extended hours during statewide elections. For hearing or speech impaired, please contact the Division using the Florida Relay Service, 1.800.955.8771 (TDD), 1.800.955.8770 (Voice), or 1.877.955.8773 (Español). Voters can also contact their local Supervisor of Elections
- The Florida Department of State is in constant communication with Supervisors of Elections regarding Tuesday's Presidential Preference Primary Election and is providing guidance and information to voters through traditional and social media messages:
- The Florida Department of State been informing voters of the various options Florida provides in order to cast their ballot ahead of Tuesday's election and on Election Day. Further, we have assured Florida's voters that otherwise healthy poll workers can work on Election Day. DOS has notified voters who have been ordered to self-isolate or who are experiencing symptoms of COVID-19 and who have not yet voted, of the option to have someone pick up their ballot for them.
    - As with any election, before a voter goes to the polls on Tuesday, they should check with their local Supervisor of Elections. Now more than ever, it is critical that we continue to provide voters with clear and consistent information regarding polling place locations. The most current and up-to-date polling place information (per 71, Florida Statutes) is going to be on the voter's respective **Supervisor of Elections website**.
    - The Division of Elections website provides prominent placement of the Voter Information Lookup where voters can check their voter status and find their polling place information. This polling place information is linked to the voters' respective Supervisor of Elections database. The most current and up-to-date polling place information (per 71, Florida Statutes) is going to be from the voter's respective **Supervisor of Elections.**
- The Florida Department of State continues to support and work with local Supervisors of Elections and Emergency Management officials to ensure the Supervisors needs are met regarding sanitization and cleaning needs for the Presidential Preference Primary Election on Tuesday.

FLORIDA DEPARTMENT OF TRANSPORTATION

- FDOT is coordinating with other state and local agencies to help ensure mobility around the temporary testing site in Broward County. Once the site is open, FDOT plans to publicize testing site information on highway advisory radio.
- FDOT completed a request to provide necessary supplies to harbor pilots working at seaports.
- At the direction of Governor DeSantis, Florida Department of Transportation (FDOT) Secretary Kevin J. Thibault, along with Surgeon General Dr. Scott Rivkees, hosted a conference call with all Florida ports and their governing bodies as well as all public use airports to discuss Florida's ongoing response to the COVID-19 virus.
- FDOT Secretary Thibault and staff from the department will host weekly conference calls with all passenger seaports and public use airports to provide updates related to COVID-19.
- FDOT is monitoring temporary lane closures near hospitals and Department of Health facilities. If congestion near these facilities and lane closures occur, FDOT will remove lane restrictions to help ensure mobility within the area.
- Pursuant to Executive Order 20-52 issued by Governor DeSantis, FDOT Secretary Thibault has suspended size and weight restrictions for divisible loads on any vehicles transporting emergency equipment, services, supplies, and necessary agricultural commodities on state roads.
- COVID-19 educational materials have been posted in FDOT facilities, which include welcome centers, service plazas and rest areas across the state.
- COVID-19 materials have been posted at all FDOT work sites across the state to help educate contractors, vendors, and stakeholders.
- FDOT toll collectors have been given additional training and are required to wear gloves as well as continue with enhanced cleansing.
- SunRail has posted COVID-19 educational materials inside all trains and on all platforms, focusing on areas near entrances and bathrooms.
- SunRail trains are being cleaned and sanitized daily and SunRail staff have been provided sanitizing towelettes and encouraged to wash their hands frequently throughout the day.

FLORIDA DEPARTMENT OF HIGHWAY SAFETY AND MOTOR VEHICLES

- At the direction of Governor Ron DeSantis, Florida Department of Highway Safety and Motor Vehicles Executive Director Terry L. Rhodes has issued an Emergency Order extending all Florida driver licenses and identification cards that will expire in the next 30 days.
- Pursuant to Executive Order 20-52, FLHSMV Executive Director Rhodes waived commercial truck hours of service regulations and other related regulations so that emergency supplies, equipment, commodities and resources can be moved more quickly and efficiently throughout the state.
- FLHSMV continues to encourage Floridians through social media and other channels to use convenient online options, rather than visiting an

AMERICAN OVERSIGHT

office location, to complete transactions for driver licenses, ID cards, motor vehicle or vessel registrations, and more.
- FLHSMV has been in regular communication with the Florida Tax Collectors Association as well as Tax Collectors across the state to provide the latest COVID-19 information and guidance from the Florida Department of Health and other state partners.

DEPARTMENT OF ECONOMIC OPPORTUNITY

- Governor DeSantis has requested the federal Small Business Administration (SBA) make the Economic Injury Disaster Loan program available for Florida's small businesses impacted by COVID-19. The Florida Department of Economic Opportunity (DEO) stands ready to assist Florida's small businesses in accessing this funding when available.
- Governor Ron DeSantis has activated the Business Damage Assessment survey to assess the impact of COVID-19 on Florida's local business operations. The survey, managed by DEO, will evaluate businesses affected by COVID-19 and the impacts the virus has had on the local economy so actions to implement appropriate relief programs can begin. The survey can be taken online at https://floridadisaster.biz/.

VISIT FLORIDA

- VISIT FLORIDA is wholly focused on providing health and safety information to travelers and Floridians. This includes the activation of Florida Now, which includes the latest updates from state emergency response professionals hosted on VisitFlorida.com.
- VISIT FLORIDA is planning for future marketing campaigns to ensure that Florida's tourism industry has a strong, unified voice following COVID-19
- To protect the health and safety of the traveling public and staff, VISIT FLORIDA's four welcome centers will be closed until further notice.
- VISIT FLORIDA is tracking traveler sentiment across online platforms and social media to monitor how COVID-19 may impact travel and travel booking to Florida.
- VISIT FLORIDA remains in close contact with industry partners and travel organizations and is communicating all new information as it becomes available.

DEPARTMENT OF REVENUE

- The Department of Revenue is advising child support customers who are scheduled for court hearings related to their child support cases to check with the local courts where the hearings are scheduled in case the courts have new requirements, such as appearing telephonically.
- The Department of Revenue's Child Support Program is working to reduce when customers are required to visit a local child support office and is providing new connect/customer service options.
- Efforts include rescheduling genetic testing sample collection appointments and postponing other types of appointments. The Program will soon be implementing the ability for parents to enter into written agreements over the phone, and the Program will be providing new fax, email and form drop-off processes.
- The Department of Revenue's General Tax Administration (GTA) program is working with its tax processing vendor to ensure continuity in tax data and payment processing.
- GTA is closely monitoring any future guidance issued by the Internal Revenue Service for potential corporate income tax due date extensions.
- The Department has increased messaging on preventative measures through the deployment of DOH/CDC posters, ensured hand sanitizer is available, and increased cleaning of high-traffic areas in our public areas of our service centers.

OFFICE OF INSURANCE REGULATION

- The Office of Insurance Regulation (OIR) Insurance Commissioner David Altmaier is actively engaged with insurers and key partners at the state and national level regarding COVID-19. Commissioner Altmaier is collaborating with other state insurance commissioners and the National Association of Insurance Commissioners to share information and resources.
- OIR has issued Informational Memorandum OIR-20-01M to all health insurers and health maintenance organizations, directing them to:
  - Use every channel available to them to communicate with their policyholders and share official CDC and Department of Health information;
  - Devote resources to inform consumers of available benefits, quickly respond to inquiries, and avoid and dispel misinformation;
  - Work with public health officials to do everything possible to prepare and respond; and
  - Consider all practicable options to reduce the barriers of cost-sharing for testing and treatment of COVID-19.
- OIR is reaching out to insurers regarding their response to COVID-19 and working with insurers to make sure they are properly communicating to consumers.
- OIR has activated its incident management team and has met to review disaster response procedures.
- OIR has issued Informational Memorandum OIR-20-02M as a reminder to all health insurers, health maintenance organizations and other health entities to allow for early prescription refills following the Governor's Executive Order 20-52 declaring a state of emergency in Florida.
- OIR has spoken with multiple insurers who are voluntarily waiving cost-sharing for consumers in an effort to remove barriers to testing for COVID-19.

FLORIDA DEPARTMENT OF LAW ENFORCEMENT

- Florida Department of Law Enforcement (FDLE) is working with state and local agencies and the Florida National Guard to set up testing collection sites in multiple locations across Florida.

- The Florida Department of Law Enforcement (FDLE) Regional Operations Centers are working with Regional Domestic Security Task Forces to prepare for any responses needed.

- FDLE's Office of Mutual Aid prepared and distributed a law enforcement guide on COVID-19 for law enforcement partners and state agencies and FDLE's General Counsel prepared a law enforcement guide for protocols in a quarantine.

- FDLE Commissioner Rick Swearingen sent an email to all members outlining simple ways to prevent the spread of COVID-19 as well as links to the Florida Department of Health and CDC websites. Signs have been posted in all FDLE Regions and at Headquarters with prevention information.

FLORIDA DEPARTMENT OF JUVENILE JUSTICE

- The Florida Department of Juvenile Justice's Office of Health Services developed COVID-19 guidance for all facilities serving DJJ youth. This guidance included Center for Disease Control criteria on how to assess and care for youth who are exhibiting fever and respiratory symptoms and environmental cleaning and disinfection recommendations.

- The Florida Department of Juvenile Justice has modified screening protocols and procedures for youth taken into custody by law enforcement who are brought to juvenile assessment centers and detention screening units to now include precautionary coronavirus screening questions and protocols. This modified screening protocol was shared with law enforcement partners statewide.

- The Florida Department of Juvenile Justice has developed a visitor screening tool which is now mandatory to use inside of our juvenile detention centers and residential commitment programs to ensure both the safety of the youth and staff in these programs. The

AMERICAN OVERSIGHT

Florida Department of Juvenile Justice has sent a notice to parents and guardians of youth in programs regarding the new visitor screening requirements.

- The Florida Department of Juvenile Justice has instituted additional screening measures for outside vendors who work within juvenile facilities and non-essential travel of staff members has been stopped. Visitors are limited to business-related visitors only (i.e., vendors, no personal visitors, no volunteers at this time). The department will work with these entities on alternatives to visiting programs to ensure critical services are not interrupted. Clinical personnel, however, are still permitted to visit youth for treatment purposes, and attorneys are still permitted to conduct legal visits with youth.

FLORIDA DEPARTMENT OF BUSINESS AND PROFESSIONAL REGULATION

- Governor DeSantis directed all agencies to suspend for 30 days licensing and registration renewal requirements for existing processional licenses (e.g. realtors).
- Governor DeSantis has directed the Department of Business and Professional Regulation Secretary Halsey Beshears, in coordination with the Florida Department of Health, to issue social distancing guidance to restaurants and bars.
- Governor DeSantis sent a letter to the federal Small Business Administration to turn on the SBA loan program for small businesses.
- The Florida Department of Business and Professional Regulation (DBPR) has suspended all official business visits, including inspections, that involve licenses located at a facility covered under the visitation restrictions implemented pursuant to FDEM Emergency Order 20-002.
- DBPR is incorporating informational comments on all on-site inspection reports issued to public lodging, public food service, and alcohol and tobacco license holders that will promote situational awareness of the current public health emergency and will direct parties to the FDOH COVID-19 webpage for guidance and resources related to prevention best practices. Copies of informational flyers from the FDOH COVID-19 toolkit will also be available for inspectors to distribute when interacting with managers of these premises.

FLORIDA DEPARTMENT OF MANAGEMENT SERVICES

- Governor DeSantis directed the Department of Management Services Secretary Jonathan Satter to allow state employees to donate and transfer their available leave time to other state employees to mitigate the impacts of school closures.
- The Florida Department of Management Services' (DMS) Emergency Support Function-7 (ESF-7) Logistics team continues to coordinate with the Department of Health and the Division of Emergency Management on identifying the equipment or supplies that may be necessary for a mass response to COVID-19.
- DMS' Division of Human Resource Management has provided guidance to agencies on implementing preventive actions in the workplace, reporting symptoms, using leave, utilizing health insurance benefits, and applying travel restrictions and telework policies.
- DMS' Division of State Group Insurance continues to coordinate with health plan providers to ensure that state employee health plan members receive the health benefits that can assist them and their dependents if needed.
- DMS' Division of Real Estate Development and Management (REDM) continues to provide guidance to agency facility managers across the state on steps to take to prevent workplace contamination and to pre-position environmental vendors to mobilize in the event a viricidal cleaning is needed.
- DMS' Division of Real Estate Development and Management continues to identify, purchase, and distribute additional hand sanitizing gel and cleaning supplies to state-maintained facilities.
- DMS' Division of State Technology-Public Safety Unit continues to coordinate with users and vendor of the Statewide Law Enforcement Radio System (SLERS) vendors to ensure the continuation of mission critical services if a reduction of staffing resources occurs.
- DMS' Division of State Technology-Public Safety Unit continues to coordinate with statewide public safety communications personnel on their plans to ensure emergency communications systems are not impacted by potential reductions in staffing resources.

FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION

- All State Parks have adjusted their operating hours to 8 a.m. to 5 p.m. daily. The Department continues to monitor new developments closely and will make further adjustments as necessary based on any new Department of Health or CDC guidance received to ensure protection of our staff and visitors. For the latest information on park operating hours and operational status, please visit floridastateparks.org.
- Currently all Florida State Parks and campgrounds, and Office of Resilience and Coastal Protection facilities (aquatic preserves and National Estuarine Research Reserves), remain open to the public. However, in an abundance of caution and consistent with Center for Disease Control and Prevention (CDC) guidance, DEP announced on March 13 that it is cancelling all events and activities at these facilities effective immediately and until further notice.
  - This includes DEP events and includes activities such as tours and visitor centers that involve large groups and/or or people in close proximity to others. People with questions regarding any privately scheduled event should check with the host of the event or the facility directly. For the latest closure and cancellation information, please visit floridastateparks.org.
- If your travel plans have changed and you need to modify camping or cabin reservations, please visit ReserveAmerica.com, call Reserve America at 1-800-326-3521 or TDD 888-433-0287 or text to 904-204-3216.

The State of Florida Issues Updates on COVID-19

TALLAHASSEE, Fla. — The State of Florida is responding to COVID-19. In an effort to keep Florida residents and visitors safe and aware regarding the status of the virus, the Florida Department of Health will issue this update every day, seven days per week.

Governor Ron DeSantis is in constant communication with Florida Division of Emergency Management Director Jared Moskowitz and State Surgeon General Dr. Scott Rivkees as the State of Florida continues to monitor and respond to the threat of COVID-19.

Today, in a briefing at the State Emergency Operations Center, Governor DeSantis announced the following:

- Governor DeSantis announced he is going to supplement federal Small Business Administration (SBA) loans. The Governor activated the Florida Small Business Emergency Loan Program. Up to $50 million has been allocated for the program.
- Governor Ron DeSantis directed the Department of Revenue to provide flexibility on the deadlines of taxes due such as corporate income tax and sales tax to assist businesses that are adversely impacted from COVID-19 mitigation measures.
- Floridians throughout the state are lending a hand to stop the spread of COVID-19:
  - Members of the Florida House of Representatives have been activated to their National Guard units**,**
  - The Players Championship donated thousands of pounds of food to Feeding Northeast Florida**,**
  - Miami-Dade County school administrators are handing out computers and mobile devices, and
  - Comcast agreed to provide free WiFi for the next 60 days to kids who do not have it.

- The Miami Dolphins, Jacksonville Jaguars and the Orange County Convention Center have agreed to open their parking lots to stage supplies and locate testing sites.
- Restaurants throughout the state including Jimmy John’s in Tallahassee and Toasted Restaurant in Orange County are providing children with free lunch throughout the week.
- Drive through testing sites are expected to open, throughout the state, in addition to the first proposed state site at Memorial Healthcare System in Broward. So far, sites are being developed in in Myers, Pensacola, West Palm Beach and Tallahassee.
- The Floridians who were at held at the Dobbins Air Reserve Base are on their way back to Florida; 15 Floridians have elected to stay at the base to care for their family members.
- On March 9, Governor DeSantis issued Executive Order 20-52, declaring a State of Emergency for COVID-19. By declaring a State of

AMERICAN OVERSIGHT

Emergency, Governor DeSantis is ensuring that state and local governments have the resources and flexibility they need to prepare and respond.

More Information on COVID-19

To find the most up-to-date information and guidance on COVID-19, please visit the Department of Health's dedicated COVID-19 webpage. For information and advisories from the Centers for Disease Control (CDC), please visit the CDC COVID-19 website. For more information about current travel advisories issued by the U.S. Department of State, please visit the travel advisory website.

For any other questions related to COVID-19 in Florida, please contact the Department's dedicated COVID-19 Call Center by calling **(866) 779-6121. The Call Center is available 24 hours per day**. Inquiries may also be emailed to **COVID-19@flhealth.gov.**

What you Should Know

COVID-19 can spread from person to person through small droplets from the nose or mouth, including when an individual coughs or sneezes. These droplets may land on objects and surfaces. Other people may contract COVID-19 by touching these objects or surfaces, then touching their eyes, nose or mouth.

Symptoms of COVID-19 are fever, cough and shortness of breath. Symptoms may appear in as few as two days or as many as 14 days following exposure. Most people recover from COVID-19 without needing special treatment. The elderly and those with underlying medical problems like high blood pressure, heart problems and diabetes are more likely to develop serious illness.

There is currently no vaccine to prevent COVID-19. The best way to prevent illness is to avoid being exposed to the virus. The Department recommends everyday preventive actions to help stop the spread of respiratory diseases, including:

- Avoiding close contact with people who are sick;
- Staying home when you are sick and avoiding contact with persons in poor health;
- Avoiding touching your eyes, nose and mouth with unwashed hands;
- Covering your cough or sneezing into a tissue, then disposing of the tissue;
- Washing your hands often with soap and water for at least 20 seconds, especially after going to the bathroom, before eating, after blowing your nose, coughing or sneezing;
- If soap and water are not readily available, use an alcohol-based hand sanitizer with at least 60% alcohol. Always wash hands with soap and water if hands are visibly dirty; and
- Cleaning and disinfecting frequently touched objects and surfaces using a regular household cleaning spray or wipe.

The CDC does not recommend that asymptomatic, healthy people wear a facemask to protect themselves from respiratory diseases, including COVID-19. Facemasks should be used by people who show symptoms of COVID-19 to help prevent the spread of the disease to others. The use of facemasks is also crucial for health workers and people who are taking care of someone in close settings (at home or in a health care facility).
A person that experiences a fever and symptoms of respiratory illness, such as fever, cough or shortness of breath, within 14 days after travel from any other destination with community transmission should call ahead to their health care provider and local CHD and mention their recent travel or close contact.

If a person has had close contact with someone showing these symptoms who has recently traveled from this area or been in contact with a person with laboratory-confirmed COVID-19, he or she should call ahead to a health care professional and the CHD. The health care provider will work with the Department to determine if the person should be tested for COVID-19.

Actions the state has taken to prepare for and respond to COVID-19:

DEPARTMENT OF HEALTH

- At the direction of Governor DeSantis, State Surgeon General Dr. Scott Rivkees declared a Public Health Emergency for COVID-19 in Florida.
- Governor DeSantis announced that the State ordered an additional 2,500 test kits to supplement the adequate resources already available to test for COVID-19. These additional test kits will enable the Department of Health, working with Florida health care providers, to test up to an additional 625,000 individuals. The Governor also suspended non-essential in state and all out-of-state travel for state employees for 30 days.
- Established an Incident Management Team to coordinate response operations.
- Defined a high-level phased response strategy for COVID-19.
- Activated a dedicated incident command post for on-site response activities.
- Conducted three public health and health care stakeholder conference calls to provide statewide updates on the current outbreak situation, response actions and guidance for pandemic planning. Over five hundred participants joined the calls.
- Established a public call center for questions regarding COVID-19. The call center launched Monday, March 2.
- Developed and distributed COVID-19 presentation materials to County Health Departments (CHD) for use at community meetings.
- Activated the Joint Information Center in coordination with the Division of Emergency Management.
- Developed and implemented protocols for investigation, surveillance and monitoring for COVID-19 to rapidly detect and contain cases.
- Established mechanisms for monitoring and coordination with the Centers for Disease Control and Prevention (CDC) regarding epidemiological activities.
- Distributed CDC Interim Guidance for public health personnel evaluating Persons Under Investigation (PUI) and asymptomatic close contacts of confirmed cases at their home or non-home residential settings to CHDs.
- Approved and disseminated an updated Clinician Screening Tool for identifying COVID-19 PUIs.
- Distributed a health care provider letter regarding enhanced surveillance and preparedness for COVID-19 to associations, licensed providers, Health Care Coalitions and CHDs.
- Implemented testing at all three State Public Health Laboratories.
- Distributed updated CDC guidance for schools to CHDs and the Department of Education.
- Distributed updated laboratory guidance regarding implementation of testing at State Public Health Laboratories.
- Developing a laboratory surge plan.
- Developing a clinician-level briefing for medical audiences.
- Identifying and monitoring close contacts of presumptive cases. Any close contacts with symptoms will be tested.
- Implemented private lab testing.
- Developed and disseminated pandemic planning guidance.
- Advised CHDs and HCCs to retain expired personal protective equipment until further until further notice.
- Continued development of public information resources.
- Developing infographics for first responders (fire, law enforcement and EMS) regarding infection control and personal protection for COVID-19.
- At the Governor's direction, a public-private partnership has been put in place between Memorial Healthcare in Broward and the National

AMERICAN OVERSIGHT

Guard to set up a mobile testing unit.
- At the direction of Governor DeSantis hiring additional epidemiologists from university health programs to help with workload.
- Governor DeSantis directed the Agency for Health Care Administration (AHCA) to extend all existing nursing home and assisted living facility licenses for 90 days to remove distraction from patient care.

AGENCY FOR HEALTH CARE ADMINISTRATION

- AHCA distributed a provider alert to licensed health care providers regarding the Division of Emergency Management's new Emergency Order tightening visitation restrictions at residential and long-term care facilities.
- AHCA, in coordination with the DEM and the Department, is hosting ongoing statewide calls for nursing homes, assisted living facilities, intermediate care facilities, the Agency for Persons with Disabilities, group homes, and adult family care homes in conjunction with the Florida Health Care Association. Secretary Mayhew and Surgeon General Rivkees are continuing to address critical issues impacting these providers such as restricting visitors and providing updates.
- AHCA, in coordination with DEM and the Department, is hosting ongoing statewide calls for hospitals in conjunction with the Florida Hospital Association. Secretary Mayhew and Surgeon General Rivkees to provide the most up-to-date information to hospital partners and residential facilitates caring for aging and vulnerable populations.
- After previously opening an event on the Emergency Status System (ESS) for hospitals to enter census information, emergency room status updates and isolation beds, AHCA expanded the ESS event to track nursing homes and assisted living facility bed capacity, effective March 15.
- The Agency for Health Care Administration (AHCA) will be granting a 90-day extension to all licenses for health care providers and regulated facilities.
- AHCA is distributing information regarding regulatory flexibilities created by waivers from the Centers for Medicare and Medicaid Services (CMS) related to skilled nursing facilities, critical access hospitals, home health agencies, durable medical equipment, provider enrollment, etc.
- AHCA participated in a collaborative call with the Florida Health Care Association, Florida Hospital Association and LeadingAge Florida to discuss patient transfer arrangements between health care facilities such as nursing homes and hospitals.
- The Florida Medicaid Program announced coverage of commercial testing for COVID-19 for dates of service back to February 4.
- AHCA submitted requests to CMS for flexibility for Florida's program under the federal declaration of a state of emergency.

AGENCY FOR PERSONS WITH DISABILITIES

- The agency's three state-run centers in Marianna, Gainesville and Chattahoochee, as well as APD-licensed group homes, are restricting visitors in compliance with the Executive Order to protect the health and safety of our customers.
- APD Adult Day Training programs across the state are screening visitors for possible exposure to COVID-19 using a visitor questionnaire. The questionnaire is also being used to screen visitors coming into APD Regional Offices.
- APD continues to provide an up-to-date status on COVID-19, best practices, preventative tips, and CDC guidance to APD providers, Waiver Support Coordinators, Stakeholders and APD employees.

DEPARTMENT OF ELDER AFFAIRS

- The Department of Elder Affairs (DOEA), in coordination with the Administration for Community Living (ACL), facilitated a virtual Town Hall meeting at the request of Hallandale Beach Mayor Joy Cooper. More than 2,700 seniors were online for the meeting. Charlotte Mather Taylor, Executive Director of the Aging and Disability Resource Center (ADRC) of Broward County, led the discussion with participation from ACL Representative Constantino Miskos, Chen Senior Medical Center, and representatives from Emergency Medical Services. Their primary topics of conversation centered on the work being done, specifically by the Area Agency on Aging, to continue to provide people resources and services to maximize support during COVID-19.
- Through Departmental Leadership and the Area Agency on Aging contract managers, DOEA provided ongoing technical assistance to the entire Aging Network regarding allowable flexibilities within programs to ensure continuity of services and the safety of elders. For example, we provided guidance to all Executive Directors regarding the safe delivery of home-delivered meals to prevent spread of respiratory infection.
- DOEA continues to provide updated information on current closures and possible future temporary closures of specific services at Congregate Meal Sites, Senior Centers and Adult Day Care Centers on our website homepage and all corresponding program pages. Clients are guided to contact the specific location for alternative services, they are provided the Area Agency on Aging helpline, and directed to the DOH website with any additional questions on COVID-19.
- "The Vision 2020: Looking Towards Your Age-Friendly Future Tour" to five communities across Florida originally planned for April 20th - April 24th and co-hosted by the Department and AARP has been postponed to protect the health and wellness of seniors, volunteers and staff.
- All Serving Health Insurance Needs of Elders (SHINE) participation in scheduled outreach events, presentations, and in-person SHINE/Senior Medicare Patrol (SMP) counseling has been suspended until further notice. SHINE volunteers and staff will continue to provide counseling services, but the services will be conducted over-the-phone with future considerations for the use of webinars and Facebook LIVE.
- DOEA Secretary Prudom held a conference call with The Comprehensive Assessment and Review for Long-term Care Services (CARES) supervisors to discuss the suspension of face-to-face assessments. CARES assessors will provide reviews through phone or tele-technology to reduce client/staff exposure and reduce spread.
- Through Departmental Leadership and the Area Agency on Aging contract managers, we provided ongoing technical assistance to the entire Aging Network regarding allowable flexibilities within programs to ensure continuity of services and the safety of elders. For example, we provided guidance to all Executive Directors regarding the provision on completing assessments for multiple program types, specifically for clients who have chosen to self-isolate.
- DOEA provided updated information on current closures and possible future temporary closures of specific services at Congregate Meal Sites, Senior Centers, and Adult Day Care Centers on our website homepage and all corresponding program pages. Clients are guided to contact the specific location for alternative services, provided the Area Agency on Aging helpline, and directed to the DOH website with any additional questions on COVID-19.

DEPARTMENT OF CHILDREN AND FAMILIES

- The Department of Children and Families' (DCF) Office of Child Welfare is sending regular communication about COVID-19 specifically to licensed child care providers, directing them to follow the CDC's Interim Guidance for Administrators of US Childcare Programs and K-12 Schools to Plan, Prepare, and Respond to Coronavirus Disease 2019 (COVID-19). An FAQ document for providers was also posted prominently on DCF's Child Care webpage.
- DCF's Office of Child Welfare is disseminating a survey to licensed child care providers to assess closures throughout the state. Currently, the decision to close is at the discretion of each individual facility.
- DCF Secretary Chad Poppell sent thorough communication to all DCF staff, contracted partners, and licensed facilities (including child care providers) about COVID-19, including precautionary measures (as outlined by the CDC) and temporary policy updates.
- DCF is working with AHCA, DOEA, and APD to compile and develop guidance for agency staff and stakeholders who work directly with Florida's elderly population and have a higher risk of being exposed to COVID-19.
- DCF is leading status update calls with both internal leadership and leadership from external contracted partners. For the time being, these calls will take place twice weekly, every Tuesday and Friday.

AMERICAN OVERSIGHT

- DCF General Services staff throughout the state are working with lessors and janitorial contractors to increase sanitizing measures in office buildings, especially restrooms and common areas. They also began taking inventory of sanitizing supplies (disinfecting wipes, Lysol spray, hand-sanitizer, etc.) and are ordering more as needed.
- DCF established strategies for COVID-19 prevention at all three state mental health treatment facilities, as well as the South Florida mental health facilities run by Wellpath Recovery Solutions, a contracted partner. They are reporting daily updates to ensure compliance with virus prevention and monitor potential outbreaks.
- DCF has established a visitation protocol for all state-owned and contracted mental health treatment facilities, as well as vendors and patient families, requiring all outside parties to complete a Visitors Viral Symptoms Screening prior to entering a facility. At this time, there are no cases of patients or facility staff testing positive for COVID-19.
- DCF's Office of Economic Self-Sufficiency is communicating with DEO regarding work requirements and CareerSource operations and availability.
- DCF's Office of Economic Self-Sufficiency implemented screening procedures, including a set of questions that must be asked prior to entry, at all economic self-sufficiency storefronts.

FLORIDA DEPARTMENT OF VETERANS' AFFAIRS

- Effective March 11, 2020, FDVA is restricting visitor access to its State Veterans' Nursing Homes and Domiciliary until further notice, with the exception of essential visitors, such as family members of those residents undergoing end-of-life care.
- The U.S. Department of Veterans Affairs (VA) has also temporarily restricted access to their nursing and community living center facilities to only essential visitors until further notice.
- All VA Medical Centers in Florida are implementing enhanced screening protocols at their facilities. VA Outpatient Clinics are also implementing enhanced screening protocols. Please plan to arrive at the facility well in advance of your appointment to allow additional time for the screening process.
- Veterans who are concerned they may have symptoms of Coronavirus (COVID-19) are encouraged to contact the VISN 8 Clinical Contact Center at 1-877-741-3400 (toll free). Clinical staff provide 24/7 virtual care and support, including nurse advice and triage. The service is available at no cost to veterans enrolled for care in the VA Sunshine Healthcare Network (VISN 8).
- All FDVA and VA facilities remain fully operational.

DEPARTMENT OF MILITARY AFFAIRS

- There have been over 200 Florida National Guardsmen placed on state active duty in support of COVID-19.
- The Florida National Guard is activating all of their medical professionals (Army Combat medic specialists and Air Force medical technicians) to support Florida Department of Health's drive-through screening operations. Guardsmen have reported in and formed Task Force Medical already.
- The Florida National Guard has activated soldiers to augment the State Logistics Readiness Center in Central Florida.

VOLUNTEER FLORIDA

- Volunteer Florida is working with state counterparts and FEMA to develop volunteer plans.
- Volunteer Florida's National Service Department has discussed using AmeriCorps members in food banks as feeding needs increase.
- Volunteer Florida is having conversations with Mass Care on the anticipated needs of volunteers. Together, we are working on a plan for volunteers with volunteer safety guidelines to ensure that we are protecting our service providers (volunteers and clients).
- Volunteer Florida has asked all Voluntary Organizations Active in Disaster (VOAD) partners to review their continuity of operations so that there is no service delivery disruption.

FLORIDA DEPARTMENT OF EDUCATION

- Commissioner of the Florida Department of Education (FDOE) Richard Corcoran provided strong recommendations for extending spring break following Centers for Disease Control and Prevention (CDC) issuing guidance specific to COVID-19 in Florida. As all Florida school districts and public charter schools have different schedules, please click here to see the recommended spring break changes for each district. In addition, the department also announced that the start of state testing will be delayed by a minimum of two weeks. To stay up to date on school closure information, visit: org/em-response.
- FDOE sent updated guidance to school districts and superintendents ahead of spring break. To view that memo, visit: fldoe.org/em-response.
- In an effort to be proactive, and only as a precautionary measure if COVID-19 evolves in Florida, Florida Virtual School (FLVS) has partnered with the Florida Department of Education to offer all school districts student support and teacher professional development tailored to the online learning environment. The Florida Department of Education in partnership with FLVS is training an additional 10,000 teachers statewide on the Virtual Teacher Training for COVID-19. Superintendents who are interested in offering their teachers the Virtual Teacher Training for COVID-19 should work with their County Virtual Principals to provide a list of teachers to FLVS through: https://www.flvs.net/FLVSTeacherTraining.
- Education Commissioner Corcoran is in constant communication with Florida Superintendents and districts to provide guidance on COVID-19 preparedness and response and will be holding weekly calls to update districts on preparation efforts.
- FDOE has sent weekly memos providing updates to school districts, superintendents, Florida Colleges, parents, teachers and stakeholders.
- FDOE launched a survey to school districts and public charter schools about their preparations, policies, and their capacity to serve their students virtually to help meet and determine any preparedness needs.

STATE UNIVERSITY SYSTEM

- The State University System will continue to evaluate the effectiveness of remote learning and the need to teach remotely in order to protect our students and the university community.
- The State University System will continue to work with the Florida Department of Health and the Emergency Operations Center to determine if the initial two weeks of remote learning is sufficient.
- Effective immediately, all universities will make plans to transition to remote instruction as soon as possible.
- State universities with students who have returned from spring break, which includes Florida Gulf Coast University, Florida International University, Florida Polytechnic University, and the University of Florida, should implement a process to transition to remote instruction immediately and encourage students to return home for at least 2 weeks. Each university will provide detailed information to their students, faculty, and staff at the earliest possible time regarding this transition.
- State universities with students who are currently on spring break or about to be on break should direct their students to NOT return to campus for at least 2 weeks following the conclusion of spring break. This includes students at Florida Agricultural and Mechanical University, Florida Atlantic University, Florida State University, New College of Florida, the University of North Florida, the University of Central Florida, the University of South Florida, and the University of West Florida. Each university will provide detailed information to their students, faculty, and staff at the earliest possible time regarding this transition.
- All universities will continue to provide essential services, such as dining, counseling, health services, library services, etc., potentially on a limited basis or remotely. Each university with clinical and other non-classroom based programs will communicate directly with those students.
- All universities will continue to provide essential services, such as dining, counseling, health services, library services, etc., potentially on a limited basis or remotely. Each university with clinical and other non-classroom based programs will communicate directly with those students.
- RESIDENTIAL HOUSING - While students are encouraged to remain off-campus, each university should develop a plan for providing

AMERICAN OVERSIGHT

residential accommodations for students who need assistance or must remain in place.

- All state universities have implemented campus-wide critical incident or emergency management teams that are meeting regularly to prepare for the impacts of the COVID-19 virus.
- All universities are preparing to transition to remote instructional delivery for a two-week period during March and early April, depending on each institution's Spring Break, and are informing students not to return to campus during this period.
- The Board of Governors will be conducting its March meeting via conference call and will not have a face-to-face meeting at USF as was originally scheduled.
- For more information visit: https://www.flbog.edu/2020/03/11/state-university-system-statement-on-covid-19/.

FLORIDA DEPARTMENT OF CORRECTIONS

- Florida Department of Corrections (FDC) has no known or suspected cases of COVID-19 within its correctional institutions at this time.
- FDC Community Corrections officers are working with offenders on supervision to adjust reporting schedules to minimize congregating at probation offices and prevent the spread of COVID-19.
- FDC's Office of Health Services coordinates with the Department for guidance on any type of outbreak and is closely monitoring new information as it is disseminated from the Department and the CDC.
- FDC has suspended visitation at all correctional institutions statewide through April 5, 2020. The decision to reinstate the normal visitation schedule will be evaluated in consultation with the Department.
    - Inmates will continue to have access to mail, email, phone calls and video visitation.
    - Legal visits will not be impacted.
    - FDC has partnered with vendors to provide some complimentary phone and video visitation services.
- Anyone entering a correctional institution will be screened, and entrance will be restricted if they:
    - Have traveled internationally or on a cruise within the last 14 days.
    - Have signs or symptoms of a respiratory infection such as fever, cough or shortness of breath.
    - Have had contact with someone who has been or is under investigation for COVID-19.
- All non-critical inmate transfers have been suspended.
- FDC has a plan in place and dedicated staff members trained in the prevention and containment of infectious diseases.
- FDC initiated its Incident Command System in response to COVID-19.
- Education has been provided to staff, inmates and visitors to prevent the spread of any infectious disease, including COVID-19.
- Precautions are in place at facilities to protect inmates and staff from exposure to flu, COVID-19 or any other respiratory illness; preventative measures are being followed per CDC recommendations.

FLORIDA DEPARTMENT OF STATE

- The Division of Elections offers a toll-free Voter Assistance Hotline, 1.866.308.6739 (in English and Español), available Monday - Friday, 8:00 am - 5:00 pm ET, with extended hours during statewide elections. For hearing or speech impaired, please contact the Division using the Florida Relay Service, 1.800.955.8771 (TDD), 1.800.955.8770 (Voice), or 1.877.955.8773 (Español). Voters can also contact their local Supervisor of Elections
- The Florida Department of State is in constant communication with Supervisors of Elections regarding Tuesday's Presidential Preference Primary Election and is providing guidance and information to voters through traditional and social media messages:
- The Florida Department of State been informing voters of the various options Florida provides in order to cast their ballot ahead of Tuesday's election and on Election Day. Further, we have assured Florida's voters that otherwise healthy poll workers can work on Election Day. DOS has notified voters who have been ordered to self-isolate or who are experiencing symptoms of COVID-19 and who have not yet voted, of the option to have someone pick up their ballot for them.
    - As with any election, before a voter goes to the polls on Tuesday, they should check with their local Supervisor of Elections. Now more than ever, it is critical that we continue to provide voters with clear and consistent information regarding polling place locations. The most current and up-to-date polling place information (per 71, Florida Statutes) is going to be on the voter's respective **Supervisor of Elections website**.
    - The Division of Elections website provides prominent placement of the Voter Information Lookup where voters can check their voter status and find their polling place information. This polling place information is linked to the voters' respective Supervisor of Elections database. The most current and up-to-date polling place information (per 71, Florida Statutes) is going to be from the voter's respective **Supervisor of Elections.**
- The Florida Department of State continues to support and work with local Supervisors of Elections and Emergency Management officials to ensure the Supervisors needs are met regarding sanitization and cleaning needs for the Presidential Preference Primary Election on Tuesday.

FLORIDA DEPARTMENT OF TRANSPORTATION

- FDOT is coordinating with other state and local agencies to help ensure mobility around the temporary testing site in Broward County. Once the site is open, FDOT plans to publicize testing site information on highway advisory radio.
- FDOT completed a request to provide necessary supplies to harbor pilots working at seaports.
- At the direction of Governor DeSantis, Florida Department of Transportation (FDOT) Secretary Kevin J. Thibault, along with Surgeon General Dr. Scott Rivkees, hosted a conference call with all Florida ports and their governing bodies as well as all public use airports to discuss Florida's ongoing response to the COVID-19 virus.
- FDOT Secretary Thibault and staff from the department will host weekly conference calls with all passenger seaports and public use airports to provide updates related to COVID-19.
- FDOT is monitoring temporary lane closures near hospitals and Department of Health facilities. If congestion near these facilities and lane closures occur, FDOT will remove lane restrictions to help ensure mobility within the area.
- Pursuant to Executive Order 20-52 issued by Governor DeSantis, FDOT Secretary Thibault has suspended size and weight restrictions for divisible loads on any vehicles transporting emergency equipment, services, supplies, and necessary agricultural commodities on state roads.
- COVID-19 educational materials have been posted in FDOT facilities, which include welcome centers, service plazas and rest areas across the state.
- COVID-19 materials have been posted at all FDOT work sites across the state to help educate contractors, vendors, and stakeholders.
- FDOT toll collectors have been given additional training and are required to wear gloves as well as continue with enhanced cleansing.
- SunRail has posted COVID-19 educational materials inside all trains and on all platforms, focusing on areas near entrances and bathrooms.
- SunRail trains are being cleaned and sanitized daily and SunRail staff have been provided sanitizing towelettes and encouraged to wash their hands frequently throughout the day.

FLORIDA DEPARTMENT OF HIGHWAY SAFETY AND MOTOR VEHICLES

- At the direction of Governor Ron DeSantis, Florida Department of Highway Safety and Motor Vehicles Executive Director Terry L. Rhodes has issued an Emergency Order extending all Florida driver licenses and identification cards that will expire in the next 30 days.
- Pursuant to Executive Order 20-52, FLHSMV Executive Director Rhodes waived commercial truck hours of service regulations and other related regulations so that emergency supplies, equipment, commodities and resources can be moved more quickly and efficiently throughout the state.
- FLHSMV continues to encourage Floridians through social media and other channels to use convenient online options, rather than visiting an

AMERICAN OVERSIGHT

office location, to complete transactions for driver licenses, ID cards, motor vehicle or vessel registrations, and more.
- FLHSMV has been in regular communication with the Florida Tax Collectors Association as well as Tax Collectors across the state to provide the latest COVID-19 information and guidance from the Florida Department of Health and other state partners.

DEPARTMENT OF ECONOMIC OPPORTUNITY

- Governor DeSantis has requested the federal Small Business Administration (SBA) make the Economic Injury Disaster Loan program available for Florida's small businesses impacted by COVID-19. The Florida Department of Economic Opportunity (DEO) stands ready to assist Florida's small businesses in accessing this funding when available.
- Governor Ron DeSantis has activated the Business Damage Assessment survey to assess the impact of COVID-19 on Florida's local business operations. The survey, managed by DEO, will evaluate businesses affected by COVID-19 and the impacts the virus has had on the local economy so actions to implement appropriate relief programs can begin. The survey can be taken online at https://floridadisaster.biz/.

VISIT FLORIDA

- VISIT FLORIDA is wholly focused on providing health and safety information to travelers and Floridians. This includes the activation of Florida Now, which includes the latest updates from state emergency response professionals hosted on VisitFlorida.com.
- VISIT FLORIDA is planning for future marketing campaigns to ensure that Florida's tourism industry has a strong, unified voice following COVID-19
- To protect the health and safety of the traveling public and staff, VISIT FLORIDA's four welcome centers will be closed until further notice.
- VISIT FLORIDA is tracking traveler sentiment across online platforms and social media to monitor how COVID-19 may impact travel and travel booking to Florida.
- VISIT FLORIDA remains in close contact with industry partners and travel organizations and is communicating all new information as it becomes available.

DEPARTMENT OF REVENUE

- The Department of Revenue is advising child support customers who are scheduled for court hearings related to their child support cases to check with the local courts where the hearings are scheduled in case the courts have new requirements, such as appearing telephonically.
- The Department of Revenue's Child Support Program is working to reduce when customers are required to visit a local child support office and is providing new connect/customer service options.
- Efforts include rescheduling genetic testing sample collection appointments and postponing other types of appointments. The Program will soon be implementing the ability for parents to enter into written agreements over the phone, and the Program will be providing new fax, email and form drop-off processes.
- The Department of Revenue's General Tax Administration (GTA) program is working with its tax processing vendor to ensure continuity in tax data and payment processing.
- GTA is closely monitoring any future guidance issued by the Internal Revenue Service for potential corporate income tax due date extensions.
- The Department has increased messaging on preventative measures through the deployment of DOH/CDC posters, ensured hand sanitizer is available, and increased cleaning of high-traffic areas in our public areas of our service centers.

OFFICE OF INSURANCE REGULATION

- The Office of Insurance Regulation (OIR) Insurance Commissioner David Altmaier is actively engaged with insurers and key partners at the state and national level regarding COVID-19. Commissioner Altmaier is collaborating with other state insurance commissioners and the National Association of Insurance Commissioners to share information and resources.
- OIR has issued Informational Memorandum OIR-20-01M to all health insurers and health maintenance organizations, directing them to:
  - Use every channel available to them to communicate with their policyholders and share official CDC and Department of Health information;
  - Devote resources to inform consumers of available benefits, quickly respond to inquiries, and avoid and dispel misinformation;
  - Work with public health officials to do everything possible to prepare and respond; and
  - Consider all practicable options to reduce the barriers of cost-sharing for testing and treatment of COVID-19.
- OIR is reaching out to insurers regarding their response to COVID-19 and working with insurers to make sure they are properly communicating to consumers.
- OIR has activated its incident management team and has met to review disaster response procedures.
- OIR has issued Informational Memorandum OIR-20-02M as a reminder to all health insurers, health maintenance organizations and other health entities to allow for early prescription refills following the Governor's Executive Order 20-52 declaring a state of emergency in Florida.
- OIR has spoken with multiple insurers who are voluntarily waiving cost-sharing for consumers in an effort to remove barriers to testing for COVID-19.

FLORIDA DEPARTMENT OF LAW ENFORCEMENT

- Florida Department of Law Enforcement (FDLE) is working with state and local agencies and the Florida National Guard to set up testing collection sites in multiple locations across Florida.

- The Florida Department of Law Enforcement (FDLE) Regional Operations Centers are working with Regional Domestic Security Task Forces to prepare for any responses needed.

- FDLE's Office of Mutual Aid prepared and distributed a law enforcement guide on COVID-19 for law enforcement partners and state agencies and FDLE's General Counsel prepared a law enforcement guide for protocols in a quarantine.

- FDLE Commissioner Rick Swearingen sent an email to all members outlining simple ways to prevent the spread of COVID-19 as well as links to the Florida Department of Health and CDC websites. Signs have been posted in all FDLE Regions and at Headquarters with prevention information.

FLORIDA DEPARTMENT OF JUVENILE JUSTICE

- The Florida Department of Juvenile Justice's Office of Health Services developed COVID-19 guidance for all facilities serving DJJ youth. This guidance included Center for Disease Control criteria on how to assess and care for youth who are exhibiting fever and respiratory symptoms and environmental cleaning and disinfection recommendations.

- The Florida Department of Juvenile Justice has modified screening protocols and procedures for youth taken into custody by law enforcement who are brought to juvenile assessment centers and detention screening units to now include precautionary coronavirus screening questions and protocols. This modified screening protocol was shared with law enforcement partners statewide.

- The Florida Department of Juvenile Justice has developed a visitor screening tool which is now mandatory to use inside of our juvenile detention centers and residential commitment programs to ensure both the safety of the youth and staff in these programs. The

AMERICAN OVERSIGHT

Florida Department of Juvenile Justice has sent a notice to parents and guardians of youth in programs regarding the new visitor screening requirements.

- The Florida Department of Juvenile Justice has instituted additional screening measures for outside vendors who work within juvenile facilities and non-essential travel of staff members has been stopped. Visitors are limited to business-related visitors only (i.e., vendors, no personal visitors, no volunteers at this time). The department will work with these entities on alternatives to visiting programs to ensure critical services are not interrupted. Clinical personnel, however, are still permitted to visit youth for treatment purposes, and attorneys are still permitted to conduct legal visits with youth.

FLORIDA DEPARTMENT OF BUSINESS AND PROFESSIONAL REGULATION

- Governor DeSantis directed all agencies to suspend for 30 days licensing and registration renewal requirements for existing processional licenses (e.g. realtors).
- Governor DeSantis has directed the Department of Business and Professional Regulation Secretary Halsey Beshears, in coordination with the Florida Department of Health, to issue social distancing guidance to restaurants and bars.
- Governor DeSantis sent a letter to the federal Small Business Administration to turn on the SBA loan program for small businesses.
- The Florida Department of Business and Professional Regulation (DBPR) has suspended all official business visits, including inspections, that involve licenses located at a facility covered under the visitation restrictions implemented pursuant to FDEM Emergency Order 20-002.
- DBPR is incorporating informational comments on all on-site inspection reports issued to public lodging, public food service, and alcohol and tobacco license holders that will promote situational awareness of the current public health emergency and will direct parties to the FDOH COVID-19 webpage for guidance and resources related to prevention best practices. Copies of informational flyers from the FDOH COVID-19 toolkit will also be available for inspectors to distribute when interacting with managers of these premises.

FLORIDA DEPARTMENT OF MANAGEMENT SERVICES

- Governor DeSantis directed the Department of Management Services Secretary Jonathan Satter to allow state employees to donate and transfer their available leave time to other state employees to mitigate the impacts of school closures.
- The Florida Department of Management Services' (DMS) Emergency Support Function-7 (ESF-7) Logistics team continues to coordinate with the Department of Health and the Division of Emergency Management on identifying the equipment or supplies that may be necessary for a mass response to COVID-19.
- DMS' Division of Human Resource Management has provided guidance to agencies on implementing preventive actions in the workplace, reporting symptoms, using leave, utilizing health insurance benefits, and applying travel restrictions and telework policies.
- DMS' Division of State Group Insurance continues to coordinate with health plan providers to ensure that state employee health plan members receive the health benefits that can assist them and their dependents if needed.
- DMS' Division of Real Estate Development and Management (REDM) continues to provide guidance to agency facility managers across the state on steps to take to prevent workplace contamination and to pre-position environmental vendors to mobilize in the event a viricidal cleaning is needed.
- DMS' Division of Real Estate Development and Management continues to identify, purchase, and distribute additional hand sanitizing gel and cleaning supplies to state-maintained facilities.
- DMS' Division of State Technology-Public Safety Unit continues to coordinate with users and vendor of the Statewide Law Enforcement Radio System (SLERS) vendors to ensure the continuation of mission critical services if a reduction of staffing resources occurs.
- DMS' Division of State Technology-Public Safety Unit continues to coordinate with statewide public safety communications personnel on their plans to ensure emergency communications systems are not impacted by potential reductions in staffing resources.

FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION

- All State Parks have adjusted their operating hours to 8 a.m. to 5 p.m. daily. The Department continues to monitor new developments closely and will make further adjustments as necessary based on any new Department of Health or CDC guidance received to ensure protection of our staff and visitors. For the latest information on park operating hours and operational status, please visit floridastateparks.org.
- Currently all Florida State Parks and campgrounds, and Office of Resilience and Coastal Protection facilities (aquatic preserves and National Estuarine Research Reserves), remain open to the public. However, in an abundance of caution and consistent with Center for Disease Control and Prevention (CDC) guidance, DEP announced on March 13 that it is cancelling all events and activities at these facilities effective immediately and until further notice.
  - This includes DEP events and includes activities such as tours and visitor centers that involve large groups and/or or people in close proximity to others. People with questions regarding any privately scheduled event should check with the host of the event or the facility directly. For the latest closure and cancellation information, please visit floridastateparks.org.
- If your travel plans have changed and you need to modify camping or cabin reservations, please visit ReserveAmerica.com, call Reserve America at 1-800-326-3521 or TDD 888-433-0287 or text to 904-204-3216.

Subject: Updated HCP Risk Assessment

Hi Scott,

We want to alert you to the release of CDC's updated **Interim U.S. Guidance for Risk Assessment and Public Health Management of Healthcare Personnel with Potential Exposure in a Healthcare Setting to Patients with Coronavirus Disease (COVID-19)** now available here: https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html

There are several changes we want to highlight in the new guidance compared to the old guidance:

1. **In regards to conducting risk assessments for healthcare personnel (HCP) for areas with community transmission**: For areas within the U.S. that are demonstrating community transmission, all healthcare personnel (HCP) are considered at some risk for COVID-19 whether through patient interactions or from general community interactions. In these instances, devoting resources to contact tracing and retrospective risk assessment could divert resources from other important infection prevention and control activities. Instead, facilities may decide to shift their emphasis to more routine

AMERICAN OVERSIGHT

practices, which includes asking HCP to report recognized exposures, regularly monitor themselves for fever and symptoms of respiratory infection and not reporting to work when ill. Facilities should develop a plan for how they will screen for symptoms and evaluate ill HCP.

2. **In regards to HCP furlough:** The old guidance recommended work restrictions for HCP with medium or high risk exposure. In the new guidance, facilities could consider allowing asymptomatic HCP who have had an exposure to a COVID-19 patient to continue to work after consultation with their occupational health program. These HCP should still report temperature and absence of symptoms each day prior to starting work. Facilities could have exposed HCP wear a facemask while at work for the 14 days after the exposure event if there is a sufficient supply of facemasks. If HCP develop even mild symptoms consistent with COVID-19, they must cease patient care activities, don a facemask (if not already wearing), and notify their supervisor or occupational health services prior to leaving work.
3. **If a risk assessment is pursued for exposed HCP:**

    a. Table 1. *Epidemiologic Risk Classification for Asymptomatic Healthcare Personnel Following Exposure to Patients with Coronavirus Disease (COVID-19) or their Secretions/Excretions in a Healthcare Setting, and their Associated Monitoring and Work Restriction Recommendations* has been simplified with a focus on presence/absence of source control measures; use of personal protective equipment (PPE) by HCP; and degree of contact with the patient (i.e., prolonged versus brief).
    b. In addition, for those who are assessed as requiring "self-monitoring with delegated supervision" the requirement to actively verify absence of fever and respiratory symptoms when healthcare personnel (HCP) report for work is now optional.
    c. The category of HCP who fully adhered to recommended PPE was removed from Table 1. but is still addressed under section III, #3. These HCP should still perform self-monitoring with delegated supervision as described under the low-risk exposure category.

Please let us know if you have any questions. We are always happy to chat.

Best,

Elizabeth, Shelley, and Sarah

Subject: Updated HCP Risk Assessment

Hi Scott,

We want to alert you to the release of CDC's updated **Interim U.S. Guidance for Risk Assessment and Public Health Management of Healthcare Personnel with Potential Exposure in a Healthcare Setting to Patients with Coronavirus Disease (COVID-19)** now available here: https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html

There are several changes we want to highlight in the new guidance compared to the old guidance:

1. **In regards to conducting risk assessments for healthcare personnel (HCP) for areas with community transmission**: For areas within the U.S. that are demonstrating community transmission, all healthcare personnel (HCP) are considered at some risk for COVID-19 whether through patient interactions or from general community interactions. In these instances, devoting resources to contact tracing and retrospective risk assessment could divert resources from other important infection prevention and control activities. Instead, facilities may decide to shift their emphasis to more routine

AMERICAN OVERSIGHT

practices, which includes asking HCP to report recognized exposures, regularly monitor themselves for fever and symptoms of respiratory infection and not reporting to work when ill. Facilities should develop a plan for how they will screen for symptoms and evaluate ill HCP.

2. **In regards to HCP furlough:** The old guidance recommended work restrictions for HCP with medium or high risk exposure. In the new guidance, facilities could consider allowing asymptomatic HCP who have had an exposure to a COVID-19 patient to continue to work after consultation with their occupational health program. These HCP should still report temperature and absence of symptoms each day prior to starting work. Facilities could have exposed HCP wear a facemask while at work for the 14 days after the exposure event if there is a sufficient supply of facemasks. If HCP develop even mild symptoms consistent with COVID-19, they must cease patient care activities, don a facemask (if not already wearing), and notify their supervisor or occupational health services prior to leaving work.
3. **If a risk assessment is pursued for exposed HCP:**

    a. Table 1. *Epidemiologic Risk Classification for Asymptomatic Healthcare Personnel Following Exposure to Patients with Coronavirus Disease (COVID-19) or their Secretions/Excretions in a Healthcare Setting, and their Associated Monitoring and Work Restriction Recommendations* has been simplified with a focus on presence/absence of source control measures; use of personal protective equipment (PPE) by HCP; and degree of contact with the patient (i.e., prolonged versus brief).
    b. In addition, for those who are assessed as requiring "self-monitoring with delegated supervision" the requirement to actively verify absence of fever and respiratory symptoms when healthcare personnel (HCP) report for work is now optional.
    c. The category of HCP who fully adhered to recommended PPE was removed from Table 1. but is still addressed under section III, #3. These HCP should still perform self-monitoring with delegated supervision as described under the low-risk exposure category.

Please let us know if you have any questions. We are always happy to chat.

Best,

Elizabeth, Shelley, and Sarah

Long Term Care Partners,

Hope things are well with you all. As I am sure you are aware, the Department has activated an incident management team for responding to the novel coronavirus COVID-19. While we have no cases in Florida, we are taking this opportunity to review pandemic preparedness plans should this outbreak escalate to a global pandemic.

Older populations and people with underlying health issues appear to be at increased risk for this virus. We believe it is important that long-term care facilities begin planning now and ensuring they have protocols in place for a pandemic scenario. Specific actions include:

- Criteria and protocols for closing units or the entire facility to new admissions when the pandemic virus is in the facility
- Criteria and protocols for enforcing visitor limitations
- A plan for cohorting symptomatic residents or groups
- An occupational health plan for addressing staff absences
- Plans for increased cleaning of common surfaces

The linked checklist is an excellent resource for long-term care and other residential facilities to assist them with pandemic planning. While the document references influenza, coronavirus is a respiratory disease and most of the same activities apply. Link: https://www.cdc.gov/flu/pandemic-resources/pdf/longtermcare.pdf

AMERICAN OVERSIGHT

John J. Lanza, MD, PhD, MPH, FAAP, FHPS
Director and Health Officer
Florida Department of Health in
Escambia County
www.EscambiaHealth.com
Office: 850-595-6500 xt1000

Cell: 850-528-5201

Follow us on Twitter: @HealthyEscambia

Mission: “To protect, promote, and improve the health of all people in Florida through integrated state, county, and community efforts.”
Vision: "To be the Healthiest State in the Nation”
Values: ICARE (Innovation, Collaboration, Accountability, Responsiveness, Excellence)

“Children are one third of our population and all of our future.” The Report of the Select Panel for the Promotion of Child Health to the United States Congress, 1981

“I have a dream that my four little children will one day live in a nation where they will not be judged by the color of their skin, but by the content of their character.” Martin Luther King, Jr.

PLEASE NOTE: Florida has a very broad public records law. Most written communications to or from state officials
regarding state business are public records available to the public and media upon request. Your email

communication may therefore be subject to public disclosure.

--

Ann Hill, Executive Director
Emerald Coast Healthcare Coalition
850-585-1679

John J. Lanza, MD, PhD, MPH, FAAP, FHPS
Director and Health Officer
Florida Department of Health in
Escambia County
www.EscambiaHealth.com
Office: 850-595-6500 xt1000

Cell: 850-528-5201

Follow us on Twitter: @HealthyEscambia

Mission: “To protect, promote, and improve the health of all people in Florida through integrated state, county, and community efforts.”
Vision: "To be the Healthiest State in the Nation”
Values: ICARE (Innovation, Collaboration, Accountability, Responsiveness, Excellence)

“Children are one third of our population and all of our future.” The Report of the Select Panel for the Promotion of Child Health to the United States Congress, 1981

“I have a dream that my four little children will one day live in a nation where they will not be judged by the color of their skin, but by the content of their character.” Martin Luther King, Jr.

PLEASE NOTE: Florida has a very broad public records law. Most written communications to or from state officials
regarding state business are public records available to the public and media upon request. Your email

communication may therefore be subject to public disclosure.

--

Ann Hill, Executive Director
Emerald Coast Healthcare Coalition

Subject: Gentle Reminder-Time Sensitive Request Due Today, 3/3/2020: Request for Primary and Secondary Point of Contact for any Supply Chain Issues within your State.
Date: Tuesday, March 3, 2020 3:09:00 PM

Good Afternoon, We are following up with you on the request below. This is a gentle reminder to provide the outlined information by COB today, March 3, 2020. You can send all responses to **eocsctfmccmlno@cdc.gov .**

If you have any questions, you may contact Jaime Jones-Wormley, CDC State Coordination Task Force Liaison to the Medical Care and Countermeasures Task Force at **eocsctfmccmlno@cdc.gov .**

We appreciate all you are doing to support COVID-19!

Thank you, Devi Hawkins-Prather

State Coordination Task Force (SCTF)
Regional Coordination Team - eocsctftfcoord@cdc.gov
Center for Preparedness and Response (CPR)
404-232-0480

> **From:** Cantrell, Kimberly (CDC/DDPHSIS/CSTLTS/OD)
> **Sent:** Friday, February 28, 2020 1:31 PM

> **Cc:** CDC IMS State Coordination Task Force (SCTF) TF Coordinations TM <eocsctftfcoord@cdc.gov>
> **Subject:** Time Sensitive Request Due 3/3/2020: Request for Primary and Secondary Point of Contact for any Supply Chain Issues within your State.
>
> Greetings PHEP Directors & State Epidemiologists –
>
> The outbreak of COVID-19 in China has led to a disruption in the global supply chain of personal

AMERICAN OVERSIGHT

protective equipment (PPE). CDC recognizes that healthcare facilities may experience temporary shortages even if they do not care for patients with COVID-19. CDC has released guidance for optimizing the use of N95 respirators, which includes some recommendations that may be applicable to other types of PPE, including surgical masks. CDC also has guidance regarding who needs and does not need PPE to help prevent excessive use of PPE.

As you are aware, this is a delicate system with many factors. When CDC receives notifications from healthcare systems about supply chain shortages, we encourage the Healthcare Coalition Partners to work together to problem solve within the coalition and/or wider state system. Further we encourage the healthcare systems to reach out to the state health department to collaborate and problem solve.

We have heard from the healthcare system partners that have contacted us that they are unsure whom to contact in the state health department about supply chain shortages in their facilities. As a way to help mitigate this, **we are asking you to reply to eocsctfmccmlno@cdc.gov no later than March 3, 2020, with an identified primary and secondary point of contact for any supply chain issues within your state.**
Please provide the following information:

- **Name/Agency**
- **Title**
- **Email Address**
- **24/7 phone number**

If you have any questions, you may contact Jaime Jones-Wormley, CDC State Coordination Task Force Liaison to the Medical Care and Countermeasures Task Force at eocsctfmccmlno@cdc.gov.

Thank you for your efforts to support the COVID-19 response.

Subject:	HAB Communication Survey from CDC
Date:	Monday, March 2, 2020 12:22:20 PM
Attachments:	HAB Risk Communicaiton Partner Survey_FINAL.docx

Dear colleagues,

We want to hear from you as we plan and develop HAB communication resources to support your work! **Please respond to this survey by March 13** to provide input on the HAB topics, audiences, and communication materials you are most interested in:
https://www.surveymonkey.com/r/Q6FLRY9

Please limit your response to one per state. We would like to hear from everyone that is interested in responding, but we ask that each state compile input from multiple people into one response to the survey. I've attached a Word document version of the survey in case that makes compiling your input easier. The survey should take about 10 minutes or less, and your insight is much appreciated.

Please feel free to reach out with any questions or comments.

Thank you,

Amy Jacobi, MPH
Health Communication Specialist
Waterborne Disease Prevention Branch

AMERICAN OVERSIGHT

1. Please put a checkmark next to each audience you are interested in communicating with about HAB health risks.

☐General public

☐ Recreational water users

☐ People who fish

☐ People who harvest shellfish

☐ People who wade and swim

☐ People who participate in water sports (boating, jet skiing, kayaking, etc.)

☐ Dog owners

☐ Livestock owners

☐ One Health partners – professionals working in human health, animal health, or environmental fields

☐ Health care providers

☐ Veterinarians

☐ Water utility managers

☐ Recreational water mangers

☐ Public health department staff

☐ Policymakers

☐ Community leaders

☐ Tribal leaders

☐ People whose source of drinking water is surface water

☐ People served by public water systems

☐ People served by private surface water systems

☐ Media outlets and journalists

☐ Homeowner Associations

☐ Other (please specify)

AMERICAN OVERSIGHT

2. Please list the top three audiences you are most interested in communicating with about HAB health risks, with **1 being the audience you are most interested in** communicating with.

    1.
    2.
    3.

3. Please put a checkmark next to each channel you use to disseminate HAB messages.

    ☐ Websites

    ☐ Social media (Facebook, Twitter, Instagram, etc.)

    ☐ Webinars

    ☐ Email newsletters

    ☐ Fact sheets

    ☐ Posters

    ☐ Brochures

    ☐ Advisory signs near water bodies

    ☐ Radio

    ☐ Newspapers

    ☐ TV

    ☐ Training or conferences

    ☐ Other (please specify)

4. Please list the top 3 channels you are most interested in using to disseminate HAB health risk messages, with **1 being the channel you are most interested in using.**
    1.
    2.
    3.

5. Please put a checkmark next to each topic you are interested in CDC developing messages and communication resources for.

AMERICAN OVERSIGHT

☐ HABs in recreational water

☐ HABs in drinking water

☐ HABs and private surface water

☐ Marine HABs

☐ Freshwater HABs

☐ HABs as a One Health issue

☐ Identification, diagnosis, and treatment of HAB-associated illnesses

☐ Easily understandable information about HABs and health impacts

☐ HAB-associated pet illnesses

☐ HAB-associated livestock illnesses

☐ Key HAB-associated illness prevention messages

☐ HAB-associated foodborne illness

☐ Long-term health risks of HAB exposure

☐ Benthic HABs

☐ BMAA and neurodegenerative diseases

☐ HABs and irrigation water

☐ One Health Harmful Algal Bloom System (OHHABS) surveillance

☐ Social and economic impacts of HABs

☐ Current public health work and research related to HABs

☐ Other (please specify)

6. Please list the top 3 health-related HAB topics you are most interested in disseminating information about, with **1 being the topic you are most interested in** disseminating information about.
   1.
   2.
   3.

7. Please put a checkmark next to each type of risk communication resource you would find useful.

AMERICAN OVERSIGHT

☐ **General information** about the health impacts of HABs for all audiences.

☐ **Information** about the health impacts of HABs for **specific audiences** such as healthcare providers, veterinarians, animal owners, media, community leaders, and One Health partners.

☐ **Communication planning tools** such as guidance on identifying and analyzing audiences, setting communication goals, and choosing communication channels for HAB messaging.

☐ **Risk communication coordination tools** such as guidance on defining roles and responsibilities and requesting support from federal agencies during a HAB event.

☐ **HAB risk identification tools** such as guidance for the public on possible signs of a HAB, a list of labs that can test for HAB toxins, and decision matrices on when to issue and lift advisories.

☐ **Message and channel recommendations by audience**, such as for animal owners, veterinarians, healthcare providers, media, community leaders, and One Health partners.

☐ **Outreach templates and resources**, such as advisory templates, press release templates, sample news article, social media graphics and messages, fact sheets, posters, presentation templates, PSAs, and reference cards.

☐ **Tools for developing HAB messages** such as message development worksheets and scoring guides for communication materials.

☐ **Tools for evaluating HAB advisories and messages** such as evaluation planning guides, survey templates, and discussion guides.

☐ Other (please specify)

8. Please list the top 3 risk communication resources you are most interested in, with 1 being the resource you are most interested in.
   1.
   2.
   3.

9. Which format would you prefer HAB communication resources from CDC be available in?

   ☐ HTML - content available on a website without needing to download documents

   ☐ PDF - downloadable and printable documents

   ☐ Both HTML and PDF

AMERICAN OVERSIGHT

10. **How can CDC best support you with HAB risk communications?** Please include any risk communication needs you have and ideas about the types of messages, materials, or tools that may be helpful. Your suggestions on how to improve existing CDC materials and risk communication support are also welcome and appreciated.

Subject:	Helpful documents for submitting COVID-19 cases via CSV upload
Date:	Tuesday, March 3, 2020 2:55:18 PM
Attachments:	Instructions on Submission of CSV Files_2020Feb25.docx PUI_CRF_Short_Form_CSV_Template.csv Copy of 2019-nCoV Data Dictionary PUI and CRF_2020Feb29v2_highlight.xlsx

Hi, Dr. Rubino,

I got your name from Scott Pritchard and wanted to email you proactively to provide a few helpful documents as you prepare to format your first CSV file for COVID-19 case reporting. These attachments provide helpful information about where and how frequently to send your file, and the attached template provides a clear picture of how your file should formatted. The attached data dictionary in Excel format may also be helpful as you develop your own data collection module.

We would love to schedule a quick 20-minute call with you to discuss these documents and answer any questions you may have.

Please let me know if you might have time to chat tomorrow, **March 4th**.

Regards,
Ginny Bowen

Virginia B. (Ginny) Bowen, PhD, MHS
Lieutenant Commander, U.S. Public Health Service
Deputy Team Lead, Case-Tracking Team
Epidemiology Task Force, CDC COVID-19 Response
Mail: 1600 Clifton Rd., NE; US 12-2; Atlanta, GA 30329

Instructions on Submission of CSV Files for the 'Human Infection of 2019 Novel Coronavirus Person Under Investigation (PUI) and Case Report Form' to CDC

While data on persons under investigation and laboratory-confirmed cases are most expediently provided to CDC through direct data entry in DCIPHER, CDC is able to receive exported data from other data management systems via a comma delimited file (CSV) if the following conditions are met:

1. The data contained within the CSV file are directly mapped and aligned to the data dictionary provided by CDC for the PUI and Case Report Form (available here). This includes:
    a. Naming conventions of data elements must match
    b. Variable types and response sets must match
    c. The number and order of variables. All variables must be included in the jurisdiction-provided CSV file in the same order as the CDC-provided CSV template;[a] extra variables not included in the CDC-provided template or data dictionary should not be sent to CDC

2. Data are sent as a CSV file by 9am Eastern Time daily to CDC via SAMs. If data are sent by 9am EST, and meet the criteria in #1, above, data will be imported into DCIPHER by 2pm EST daily.[b]
    a. If data are sent after 9am Eastern Time, they will not be included in any DCIPHER imports until the following day. This may result in laboratory testing delays, as CDC may not test laboratory samples without the priority PUI or case data (defined below). The priority PUI and case data are needed in order to identify samples for laboratory testing, and link samples and their results back to specific PUIs or cases.
    b. If data are not sent in the format outlined in #1, above, data will be returned to the reporting jurisdiction to correct the CSV formatting. This may result in laboratory testing delays, as CDC may not test laboratory samples without the priority PUI or case data (defined below).

3. Data should include cumulative PUI and case data, such that each day, the number of submitted records represents the full universe of PUIs and cases for the reporting jurisdiction.

4. Once it is determined that a jurisdiction has provided the CSV file in the correct format, there should be no changes to the CSV format for any future submissions of this file. Any changes to the format of the CSV file may result in return of the submitted data to the reporting jurisdiction, and subsequent delays in laboratory testing of samples. Consistency is key.

Instructions on how to submit data via SAMS are as follows:
Please upload the CSV file to the folder "COVID-19-Upload" at https://transfer2.cdc.gov or sams.cdc.gov. This upload requires level 2 SAMS access.

Please name your file as following: **NCOV2019_PUICASELIST_ST _YYYYMMDDHHMM**, where ST is the jurisdictional abbreviation; YYYYMMDD is the Date format for year, month, day; HHMM is the military time (24:00) of upload.

Please let eocevent333@cdc.gov know which SAMS box you will be sending your CSV file to.

AMERICAN OVERSIGHT

While CDC encourages reporting jurisdictions to provide all updated information on PUIs and cases as it becomes available, the following variables should be prioritized for submission at the time at which a PUI or laboratory-confirmed case is first reported. Please note that even if only information on the priority dataset are populated, the submitted CSV file must contain all data elements in the correct order, as noted in #1, above.

The priority dataset includes the following data elements (variable names in parentheses):

- CDC 2019-nCoV ID (cdc_ncov2019_id) **(required field)**
- Reporting jurisdiction (state) **(required field)**
- Current status of the person as PUI or laboratory-confirmed case (current_status)
- Report date of PUI to CDC (pui_cdcreport_dt)
- Report date of case to CDC (case_cdcreport_dt)
- Sex (sex)
- Age (age) and Age Units (ageunit)
- Symptoms present during course of illness (sympstatus)
- If symptomatic, onset date (onset_dt)
- Hospitalization status (hosp_yn)
- ICU Admission status (icu_yn)
- Death (death_yn)
- If female, currently pregnant (pregnant_yn)
- Travel to mainland China (exp_China)
- Travel to other non-US country (exp_othcountry)
- Travel to other non-US country, specify (exp_othcountry_spec)
- Household contact with a COVID-19 case patient (exp_house)
- Community contact with a COVID-19 case patient (exp_community)
- Any healthcare contact with a COVID-19 case patient (exp_health)
- Healthcare contact with a COVID-19 case patient, healthcare worker (exp_health_hcw)
- Exposure to a cluster of patients with ARDS with unknown etiology (exp_cluster)
- Specimen type (see series on specimen type)
- Specimen ID (see series on specimen ID)
- Specimen sent to CDC (see series on specimen sent to CDC)

CDC is available to answer questions about correct CSV formatting and data import into DCIPHER. For inquiries, please email eocevent118@cdc.gov and eocevent333@cdc.gov.

[a]Please note that the order of variables in the data dictionary may vary slightly from the order of variables in the CSV provided template. The data dictionary is necessary in order to identify appropriate naming conventions, variable types, and response sets, but the CDC-provided CSV template should be used to determine order of variables in the CSV file containing jurisdictional data sent to CDC.
[b]The initial data submission may take some additional processing time to assess the match between the jurisdictionally-provided CSV file and the CDC-provided data dictionary. Once the mapping has been confirmed to be accurate, CDC will operate on the schedule noted for data uploads.

Subject: Hepatitis A - all impacted states call

Date: Tuesday, February 18, 2020 3:11:10 PM

Hi everyone,

Just a quick reminder that the hepatitis A call for all impacted states is scheduled for this **Friday, February 21 at 2pm ET**. We don't have a specific topic scheduled. We want to give you an opportunity to have an open forum to discuss and share any recent questions, challenges, or successes you've had in your outbreaks. If you have any topics that you know you'd like to discuss, please email in advance.

AMERICAN OVERSIGHT

If you're busy with COVID-19, we understand if you're unable to join. However, we want to continue to support the hepatitis A response however is most helpful. Please let us know if you have any questions or concerns.

Thanks,

Hepatitis A Outbreak Response Team

Agenda

Roll call – Due to the large size, please have one representative from each jurisdiction to say "present". We will **not** be asking for case counts, hospitalizations, and deaths on this call.

Subject: Hepatitis A Regional Call - HHS Regions 4 & 6

Date: Monday, February 3, 2020 12:14:56 PM

Hi Everyone,

We're still planning to hold the hepatitis A regional call this week, but understand that health departments may be overwhelmed with responding or preparing to respond to the novel Coronavirus. Please let me know today or tomorrow if a representative from your health department is planning to call in on Thursday. We want to be respectful of your time and competing priorities, so if there's not a "quorum" I'm happy to cancel the call and talk to anyone individually if specific issues have come up.

Thanks,
Megan

Subject: HHS Announces Initial Funding to Jurisdictions Supporting COVID-19 Response
Date: Wednesday, March 4, 2020 2:23:12 PM

Dear Partner –

Today, the U.S. Department of Health and Human Services (HHS), through the Centers for Disease Control and Prevention (CDC) is announcing upcoming action to provide initial resources to a limited number of state and local jurisdictions in support of our nation's response to the coronavirus disease 2019 (COVID-19).

"State and local governments are the backbone of our public health system. They have been essential partners in the ongoing work to contain and mitigate the spread of COVID-19 in the United States," said HHS Secretary Alex Azar. "The Trump Administration is acting swiftly through every avenue we have to ensure state and local governments have the support they need to combat this outbreak."

"CDC is committed to working with state, local, tribal and territorial public health departments to mitigate community spread of novel coronavirus in this nation," said CDC Director Robert R. Redfield, M.D. "Our partners are on the front lines of this response and we support their efforts to increase needed public health capacity to confront the challenges this virus presents."

Using funds provided to CDC through the HHS Secretary's Transfer, CDC will:

- Award an initial $25 million cooperative agreement to the states and local jurisdictions who have borne the largest burden of response and preparedness activities to date. This is an initial award for those jurisdictions who require immediate assistance for activities such as monitoring of travelers, data management, lab equipment, supplies, staffing, shipping, infection control, and surge staffing. Once supplemental funding is provided, support will be provided to all states and local jurisdictions for a variety of critical public health activities.
- Award an initial $10 million cooperative agreement to state and local jurisdictions to begin implementation of coronavirus surveillance across the U.S., building on existing influenza activities and other surveillance systems. This initial award is for a limited number of jurisdictions. Once supplemental funding is provided, additional support will be provided to all states and local jurisdictions to enhancing testing and surveillance.

CDC will use existing networks to reach out to state and local jurisdictions to access this initial funding.

For more information about COVID-19, please visit CDC's website: https://www.cdc.gov/coronavirus/2019-ncov/index.html

Sincerely,
Darcie
