Washington, DC, 20005
foia@americanoversight.org

Dear Ms. Sloan:

This letter is the second and final partial initial agency decision to your September 4, 2019, request under the Freedom of Information Act (FOIA), 5 U.S.C. § 552, submitted to the Department of Veterans Affairs (VA), Veterans Health Administration (VHA) Central Office FOIA Office requesting the following records:

1. All email communications (including email messages, email attachments, calendar invitations, and calendar invitation attachments) sent by any of the VA officials and employees listed below regarding Spravato (esketamine) nasal spray:

    a. Richard A Stone, Executive in Charge, Veterans Health Administration.
    b. Steven L. Lieberman, Acting Principal Deputy Under Secretary for Health.
    c. Lawrence Connell, Chief of Staff, Veterans Health Administration
    d. Jon M. Jensen, Acting Deputy Chief of Staff
    e. Valerie Mattison Brown, Assistant Deputy Under Secretary for Health, Policy and Planning
    f. Maria Llorente, Acting Assistant Deputy Under Secretary for Health for Patient Care Services (PCS).
    g. Michael A. Valentino, Chief Consultant – Pharmacy Benefit Management Services (PBM), and anyone serving as his assistant or scheduler.
    h. Yasuharu Okuda, Acting Deputy Chief PCS Officer.
    i. Thomas Emmendorfer, Deputy Chief Consultant – PBM.
    j. Joseph Canzolino, Deputy Chief Consultant – Formulary Management.
    k. Timothy Stroup, Deputy Chief Consultant – PBM Strategic Planning.
    l. Virginia Torrise, Deputy Chief Consultant – PBM Professional Practice and Clinical Informatics.
    m. Louis Cobuzzi, Associate Chief Consultant – Planning Analysis and Policy Development.
    n. John Lowe, Associate Chief Consultant – Planning Analysis and Policy Development.
    o. Lynn Sanders, Associate Chief Consultant – Clinical Informatics and Pharmacy Re-engineering.
    p. Vaiyapuri Subramaniam, Associate Chief Consultant – Adverse Drug Events/United States Pharmacopeia 797/Policy.

AMERICAN OVERSIGHT

q. Matthew A. Fuller, National Clinical Pharmacy Program Manager, PBM.
r. Chester B. Good, Chair, Medical Advisory Panel, PBM.
s. David Carroll, Executive Director, Office of Mental Health and Suicide Prevention.
t. Lynda O'Neill, Contracting Officer, National Acquisition Center.
u. Craig Robinson, Associate Executive Director, National Acquisition Center

American Oversight believes that records containing the terms below are likely to be responsive records, and American Oversight requests that VA, at a minimum, employ these search terms to identify responsive records.
§ Spravato
§ esketamine
§ nasal spray
§ "treatment-resistant" AND depress*
§ stimulant AND suicide
- 4 - VA-19-1109
§ stimulant AND depress*
§ "J&J" AND drug
§ "J&J" AND suicide
§ "J&J" AND depress*
§ "J&J" AND buy
§ "Johnson & Johnson" AND drug
§ "Johnson & Johnson" AND suicide
§ "Johnson & Johnson" AND depress*
§ "Johnson & Johnson" AND buy
§ Janssen AND drug
§ Janssen AND suicide
§ Janssen AND depress*
§ Janssen AND buy

Please note that American Oversight is using the asterisk (*) to designate the standard use of "wildcards" in the search for responsive records. For example, a search for "depress*" would return both depression and depressant. If VA is unable to search for wildcards, please advise so that we may specifically include the variations that we would like searched. Please provide all responsive records from within the following date ranges:
§ March 5–26, 2019
§ June 10–28, 2019
§ August 14–28, 2019.

Your FOIA request was received in my office on September 4, 2019. As stated within the September 5, 2019 letter, line items t. Lynda O'Neill and u. Craig Robinson were referred to the Office of Acquisitions and Logistics, under FOIA tracking number 19-11257-F.

AMERICAN OVERSIGHT

On April 23, 2021, we requested further clarification regarding your request in which you provided a response to eliminate marketing emails; VA Media Summary and News Clips; Long excel spreadsheets/reports from pharmacy staff or other offices of all medications, that do not directly discuss the key search terms "Spravato, Ekestamine" regarding price and News Alerts from external sources.

At this time VHA is rendering its second and final partial initial agency decision. These documents resulted in an online search conducted by the VA Office of Information and Technology, responsive for Richard Stone, Executive in Charge; Steven L. Lieberman, Acting Principal Deputy Under Secretary for Health; Lawrence Connell, Chief of Staff; Jon M. Jenson, Acting Deputy Chief of Staff; Valerie Mattison Brown, Assistant Deputy Under Secretary for Health, Policy and Planning; Maria Llorente, Acting Assistant Deputy Under Secretary for Health for Patient Care Services (PCS); Michael A. Valentino, Chief Consultant; Thomas Emmendorfer, Deputy Chief Consultant; Virginia Torrise, Deputy Chief Consultant; Lynn Sanders, Associate Chief Consultant; Matthew A. Fuller, National Clinical Pharmacy Program Manager; Chester B. Good Chair, Medical Advisory Panel, PBM; and David Carroll, Executive Director, Office of Mental Health and Suicide Prevention, for the date range of March 5-26, 2019, June 10-28, 2019 and August 14-28, 2019. The search terms used were: Spravato, esketamine, nasal spray, treatment-resistant" AND depress, stimulant AND suicide, 4 - VA-19-1109, stimulant AND depress, J&J" AND drug, "J&J" AND suicide, "J&J" AND depress, "J&J" AND buy, "Johnson & Johnson" AND drug, "Johnson & Johnson" AND suicide, "Johnson & Johnson" AND depress*, "Johnson & Johnson" AND buy, Janssen AND drug, Janssen AND suicide, Janssen AND depress*, Janssen AND buy. Provided within this release is 2,775 pages of responsive records.

Upon my review I have found information protected under the FOIA, specifically, FOIA exemption 5, 5 U.S.C. § 552(b)(5), FOIA exemption 6, 5 U.S.C. § 552(b)(6).

FOIA Exemption 5 [5 U.S.C. § 552 (b)(5)] permits VA to withhold a document or information contained within a document as "pre-decisional" if two requirements are met. First, there must be an identifiable deliberative process. That is, the document must be a direct part of the deliberative process. Second, the agency generated the information or document as part of the agency decision process. Stated another way, VA may withhold information under Exemption 5 where the document or its content makes recommendations or expresses opinions about legal or policy matters during a decision-making process and the document is not the decision document or incorporated into the decision document. Additionally, in accordance with the FOIA Improvement Act of 2016, an agency shall withhold information under the FOIA only if the agency reasonably foresees that disclosure would harm an interest protected by an exemption or disclosure is prohibited by law. Stated another way, if the disclosure is not prohibited by law, the agency must state an articulable, foreseeable harm to the agency or its activities that could occur as a result of release of the document or information.

My review reveals pages that contain information that falls within the protection of Exemption 5. Specifically, information is being withheld under Exemption 5 as the

AMERICAN OVERSIGHT

documents contain open and frank pre-decisional communications between staff at various levels of the organization. Staff are providing feedback by voicing their opinions. There are several categories of documents that routinely are protected by the deliberative process privilege of Exemption 5. Among the protected documents are advisory opinions, recommendations, and deliberations comprising parts of a process by which governmental decisions and policies are formulated. They are protected because, by their very nature, their release would likely "stifle honest and frank communication within the agency." Materials of this nature go to the very heart of the privilege, for, as the Supreme Court has stated, "the deliberative process privilege rests on the obvious realization that officials will not communicate candidly among themselves if each remark is a potential item of discovery and front page news. Schell, 843 F.2d at 941 "A subordinate who wishes to provide information candidly should not fear that the public will be privy to his views merely because his superiors have not yet acted on his recommendations." In determining whether a document is pre-decisional, an agency does not necessarily have to point specifically to an agency final decision, but merely establish "what deliberative process is involved, and the role played by the documents in issue in the course of that process. Thus, so long as a document is generated as part of such a continuing process of agency decision making, courts have found Exemption 5 can be applicable. In a particularly instructive decision, Access Reports v. DOJ, the Court of Appeals for the District of Columbia Circuit emphasized the importance of identifying the larger process to which a document sometimes contributes. Further, "pre-decisional" documents are not only those circulated within the agency but can also be those from an agency lacking decisional authority that advises another agency possessing such authority. They even can be "documents which the agency decision maker herself prepared as part of her deliberation and decision-making process, or documents that do not end up being considered by the agency decision maker at all. Release of this information would inhibit employees from freely exchanging opinions resulting in harm to deliberative process itself. If employees believed that their open and frank feedback were to become public, staff would be less likely to freely communicate their opinions. See, e.g., Russell v. Dep't of the Air Force, 682 F.2d 1045, 1048 (D.C. Cir. 1982); Coastal States Gas Corp. v. DOE, 617 F.2d 854, 866 (D.C. Cir. 1980); Jordan v. DOJ, 591 F.2d 753, 772-73 (D.C. Cir. 1978) (en banc); Brown v. EEOC, No. 09-111, 2010 U.S. Dist. LEXIS 46466, at *9 (W.D. Ky. May 12, 2010) (holding that Exemption 5 was properly applied to prevent potential chilling effect on agency's discussions and undermining of agency's ability to perform its duties); Morley v. CIA, 699 F. Supp. 2d 244, 255-56 (D.D.C. 2010) (stating that privilege is "intended to prevent chilling future government employees from engaging in frank discussions during the deliberative process" (citing Coastal States, 617 F.2d at 866)), aff'd in pertinent part, vacated and remanded on other grounds, 466 Fed. App'x. 1 (D.C. Cir. 2012).

In addition, releasing the discussions within the emails requested would cause confusion to the public because the information conveyed was not part of final decisions made and therefore would do very little to add to the public's understanding of the operations and activities of the agency. See, AFGE v. HHS, 63 F. Supp. 2d 104, 108

AMERICAN OVERSIGHT

(D. Mass. 1999) (holding that release of pre-decisional documents "could cause harm by providing the public with erroneous information"), aff'd, No. 99-2208, 2000 U.S. App. LEXIS 10993 (1st Cir. May 18, 2000); Thus exemption 5 is applied to protect against public confusion that might result from disclosure of reasons or rationales that were not in fact ultimately the grounds for the agency's decision.

As emails containing pre-decisional content, the release of this information would cause injury to the deliberative process described in the above paragraphs. The deliberative process privilege of FOIA exemption 5 is invoked as I have determined that the release of this information to the public would negatively impact frank discussions within VHA and would protect against public confusion that might result from disclosure of reasons and rationales that were not consistent with VHA actions. Pages within this document have been withheld both in part and in full and pages have been marked (B5) to annotate the redaction applied.

FOIA Exemption 6 [5 U.S.C. § 552 (b)(6)] covers "personnel and medical files and similar files of which the disclosure would constitute a clearly unwarranted invasion of personal privacy." Stated another way, VA may withhold information under FOIA Exemption 6 where disclosure of the information, either by itself or in conjunction with other information available to either the public or the FOIA requester, would result in an unwarranted invasion of an individual's personal privacy without contributing significantly to the public's understanding of the activities of the federal government.

In United States Department of Justice v. Reporters committee for Freedom of the Press, 489 U.S. 749 (1989), we must determine if a privacy interest is involved, and determine if disclosure of the requested information would serve the public interest, and balance the personal privacy interest against the public interest. In evaluating the public interest in a given case, we must focus on the nature of the requested document and its relationship to the public interest generally. We must consider whether disclosure of the requested document, or portions thereof that have been withheld, would "open agency action to the light of public scrutiny" rather than focus on the particular purpose for which the document is being requested. See Reporters Committee, 489, U.S. at 772.

The coverage of FOIA Exemption 6 is absolute unless the FOIA requester can demonstrate a countervailing public interest in the requested information by demonstrating that the individual is in a position to provide the requested information to members of the general public and that the information requested contributes significantly to the public's understanding of the activities of the Federal government. Additionally, the requester must demonstrate how the public's need to understand the information significantly outweighs the privacy interest of the person to whom the information pertains. Upon consideration of the materials provided, it is recognized that you are in a position to provide the requested information to members of the general public however; I have not been able to identify a countervailing public interest of sufficient magnitude to outweigh the privacy interest in this case. Consequently, the names of non-VA employees, employee email addresses and

AMERICAN OVERSIGHT

phone numbers have been redacted under Exemption 6. Inserted is (b6) to identify the FOIA Exemption applied.

As noted above, a search for documents responsive to this request was conducted within the VA Office of Information and Technology on September 10, 2019. The following email accounts were not located by the VA OIT office to conduct a search for records responsive to your request: h. Yasuharu Okuda, Acting Deputy Chief PCS Officer, j. Joseph Canzolino, Deputy Chief Consultant – Formulary Management, k. Timothy Stroup, Deputy Chief Consultant – PBM Strategic Planning, m. Louis Cobuzzi, Associate Chief Consultant-Planning Analysis and Policy Development, n. John Lowe, Associate Chief Consultant – Planning Analysis and Policy and p. Vaiyapuri Subramaniam, Associate Chief Consultant – Adverse Drug Events/United States Pharmacopeia 797/Policy. Therefore, we are providing a "no records" response to these portions of your request, as noted above.

If you disagree with my determinations, please be advised you may appeal to:

Office of the General Counsel (024)
Department of Veterans Affairs
810 Vermont Avenue, N.W.
Washington, D.C. 20420
Email: ogcfoiaappeals@va.gov

If you should choose to file an appeal, your appeal must be postmarked or electronically transmitted no later than ninety (90) calendar days from the date of this letter. Please include a copy of this letter with your written appeal and clearly state why you disagree with the determinations set forth in this response.

You may also seek assistance and/or dispute resolution services for any other aspect of your FOIA request, excluding the release determination, from VHA's FOIA Public Liaison and/or Office of Government Information Services (OGIS) as provided below:

VHA FOIA Public Liaison:

Subject: POC for Spravato clinical implementation

Good Afternoon:
With advance apologies because I am not sure exactly where to address this question. A senior team from J &J was visiting with us to discuss several partnership opportunities. In our meeting, they commented on how quickly the two organizations have moved to make this drug available, and noted that the key Pharmacy leads have connected and an implementation plan is in place. However, given the complex process for administering this product, they asked if we might help identify the VA POC for the clinical implementation. Their field staff is ready to provide training and support, but are not sure what the VA's plans are in general, which locations might be targeted and who they should be interfacing with from the VA.

Dr. Boyd or Dr. Carroll, are either of you the right POC for this effort?

Thank you very much in advance for your assistance,

Deborah

Never count on my opinion or notes much. My notes are simply to capture votes and maybe help the presenters recall discussions (b6)). (b6) Or Jenn will likely review once I send them to her after I get everyone's edits. So if you want to tweak a little more, feel free. I'm leaving for the day, so I'll check to see if you made any further edits on Monday. Have a great weekend! ☺

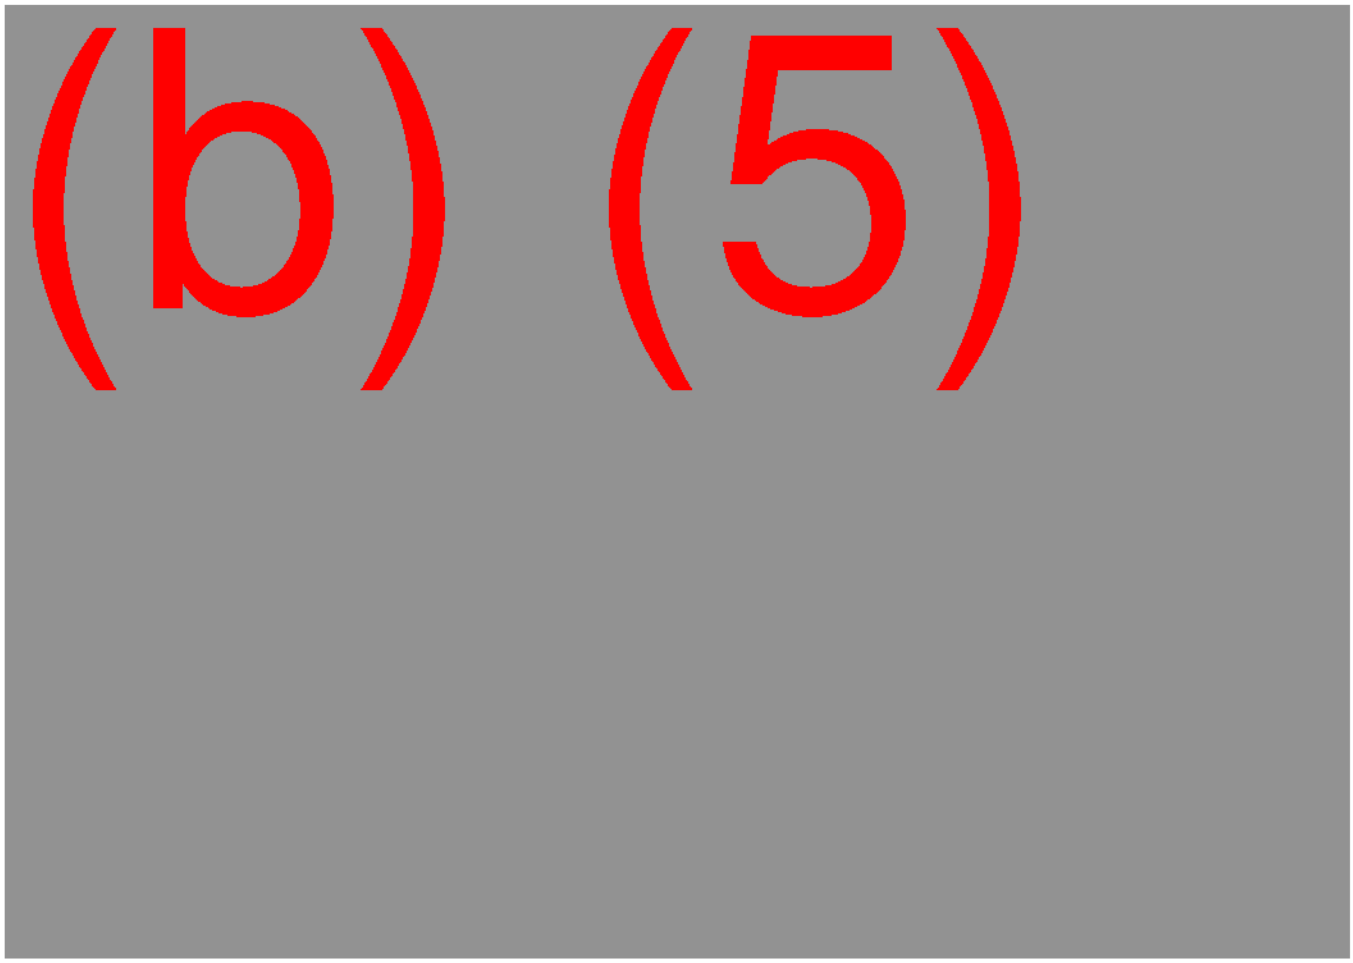
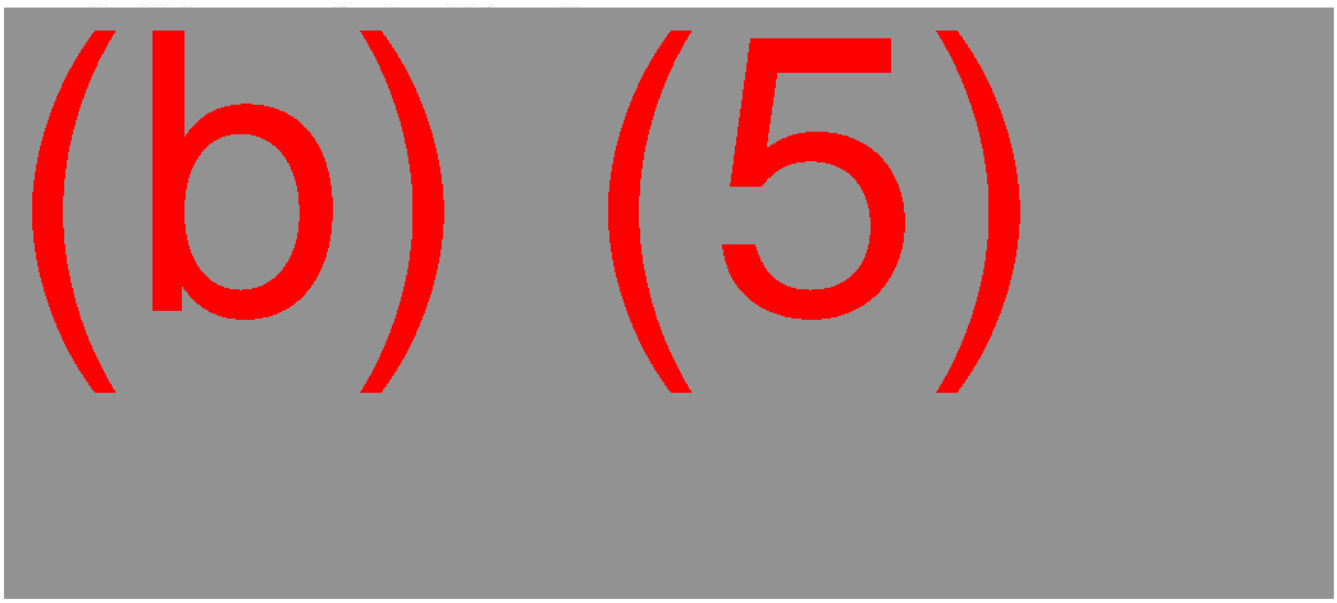
Subject: Planning for access to Spravato across VHA

Dear Dave &others –

I just finished a call with Tom Emmendorfer and Maria Llorente on our plans moving forward for ensuring access to Spravato across the VHA system. There are 2 main tasks that we (OMHSP) need to address by end of this week, as Jansen reports the medication will be available to the public on 3/18.



1. • Ensure all VA facilities enroll in the Spravato REMS program
2. • Ensure process for signature informed consent is in place for use with Spravato



Pharmacy is working with Jansen on obtaining medication supply, obtaining educational materials developed for patients and providers, and will work with us to develop the back end communications between MH and Pharmacy locally for appropriate/safe dispensing.

I will be asking for quick turn around on draft documents addressing our two tasks in the next 48 hours. Below are my notes from the call, for further context and to start to lay out our proposed plan. I welcome input and feedback – I have a lot of availability in my schedule tomorrow to discuss by phone further, if needed.

AMERICAN OVERSIGHT

Thanks,
Ilse

Subject: Planning for access to Spravato across VHA

Dear Dave &others –

I just finished a call with Tom Emmendorfer and Maria Llorente on our plans moving forward for ensuring access to Spravato across the VHA system. There are 2 main tasks that we (OMHSP) need to address by end of this week, as Jansen reports the medication will be available to the public on 3/18.

1. • Ensure all VA facilities enroll in the Spravato REMS program
2. • Ensure process for signature informed consent is in place for use with Spravato

Pharmacy is working with Jansen on obtaining medication supply, obtaining educational materials developed for patients and providers, and will work with us to develop the back end communications between MH and Pharmacy locally for appropriate/safe dispensing.

I will be asking for quick turn around on draft documents addressing our two tasks in the next 48 hours. Below are my notes from the call, for further context and to start to lay out our proposed plan. I welcome input and feedback – I have a lot of availability in my schedule tomorrow to discuss by phone further, if needed.

Thanks,

AMERICAN OVERSIGHT

Subject: Overlapping FDA Safety Meeting

Hi Matthew – I didn't realize that the FDA set up a call at 2 today and I have present our vaccine safety data. I will join Ilse's call as soon as I can which should be about 220 or so. If they ask about the MUE while I'm not on can you please update. I'm listing a couple of items below. Thanks!!

1. • Esketamine MUE Draft has been developed and is being internally reviewed. Will submit to Ilse by the end of the week
2. • VAMedSAFE REMS transmission team has been identified and procedures will be put into place. All is still dependent on meeting with Jansen
3. • Meeting with Jansen 6/5 (later this afternoon) to discuss VAMedSAFE submitting REMS for VA providers

Thanks,
Fran

FOR IMMEDIATE RELEASE
March 19, 2019

VA to make new nasal spray drug available for treatment-resistant depression

WASHINGTON — Today the U.S. Department of Veterans Affairs (VA) announced its health care providers will now be able to offer the newly approved Spravato naval spray for treatment-resistant depression.

The treatment will be made available to Veterans based on their individual medical needs combined with providers' clinical assessments.

The move follows the March 5 Food and Drug Administration (FDA) approval of Spravato (esketamine) nasal spray. Spravato was approved for use in conjunction with an oral antidepressant for the treatment of treatment-resistant depression in adults.

"We're pleased to be able to expand options for Veterans with depression who have not responded to other treatments," said VA Secretary Robert Wilkie. "It reflects our commitment to seek new ways to provide the best health care available for our nation's Veterans."

AMERICAN OVERSIGHT

Spravato will be available through a restricted distribution system under an FDA-approved Risk Evaluation and Mitigation Strategy (REMS). The purpose of the REMS is to mitigate the risks of serious adverse outcomes and the potential abuse and misuse of Spravato.

VA health care providers will monitor Veterans for serious adverse outcomes, such as sedation and difficulty with attention, judgment and thinking (dissociation), abuse and misuse, worsening of depression and suicidal thoughts and behaviors.

Veterans will self-administer Spravato nasal spray under the direct observation of a health care provider in a certified medical facility, and then must be monitored by a health care provider for at least two hours after receiving their dose. Spravato cannot be dispensed directly to Veterans for use at home.

For additional information on access to Mental Health Support for Veterans, visit VA Mental Health. Veterans in immediate crisis may call the Veterans Crisis Line at 800-273-8255 and press 1, text to 838255 or chat online at Veterans Crisis Line.

Yes, I am sensitive to the issue of double check. In my previous position we would get folks from the community or other VA's requesting transfer for ECT. When they arrived we sometimes found out they really did not meet criteria. I guess we need to do the best we can with what we are given.

Subject: RE: need input on language for national consult for community care TRD referral (ECT/rTMS/ketamine/Spravato)

I agree – that would be awesome! However, not likely feasible. We will have to front end educate on this point. The consult order will launch via a national memo, and in that we will link directly to CFU/protocol guidance and emphasize inclusion/exclusion criteria. You can help me drafting the

AMERICAN OVERSIGHT

language for that part. ☺ But I'm going to ask the consult person to what extent we can link to documents or pop up larger documents from inside the consult.

From what I understand in conversations with Community Care thus far, there is – cringing teeth – no way to ensure people actually meet criteria before a consult is entered nor after it is entered and sent out to the community. I continue to search for some sort of double check, but I have yet to find it.

Ilse

Subject: RE: need input on language for national consult for community care TRD referral (ECT/rTMS/ketamine/Spravato)

Hi Ilse,

For IV ketamine and IN esketamine I think it would be helpful if their respective CFU would "pop up" instead of just asking if they meet criteria (it is easy to "click" yes and proceed without meeting criteria). Otherwise, who will check that the patient meets the approved criteria? Just some quick thoughts.

Subject: need input on language for national consult for community care TRD referral (ECT/rTMS/ketamine/Spravato)

Hi everyone –

I am working on creation of a national consult order that would facilitate referral to care in the community for our newly developed Treatment Resistant Depression (TRD) Standard Episode of Care (SEOC). The TRD SEOC includes language that provides 6 months of care related to TRD and has been

AMERICAN OVERSIGHT

designed to cover ECT, rTMS, and "medications administered in a healthcare clinical setting" – i.e. IV ketamine and Spravato. This will allow us to ensure tracking and proper referral to community providers who actually have the ability to provide the desired treatment.

I would greatly appreciate your input on the language for this consult by next Wednesday, August 28th. Take a look at the draft language below and keep in mind that the fewer questions asked, the easier to complete and the more likely the information entered is accurate (b6) .

Happy to set up a call to discuss briefly with individuals or a larger group, as people are interested, please just let me know.

Once we finalize language, I will work with the Community Care team to ensure we get this deployed nationally. Updates on that process to follow.

Thanks,
Ilse

Subject: Need input on IV ketamine to IN esketamine conversion guidance
Importance: High

Hello everyone –

Below is a de-identified case summary of the patient (b6) is intending to treat on (b6) as our first IN esketamine patient. The team in (b6) has asked for additional clinical input and guidance from the national workgroup to specifically address the issues of conversion from maintenance IV ketamine to IN esketamine. This is an issue that will come up OFTEN among our early adopters, given they are IV ketamine sites now and will likely have many conversion patients.

The specific question is how best to monitor the patient for safety following the initial IN esketamine dose to ensure it has the same level of efficacy and duration of effect as the IV ketamine did previously. Inpatient? Close outpatient f/up?

Please provide your suggestions and feedback to the (b6) team (cc'd here) by COB Monday. The patient will be coming in for an outpatient appointment on Tue (b6) and they want to be able to discuss treatment plan accordingly.

Thanks so much,
Ilse

Subject: IV Ketamine case

Here's the case.

AMERICAN OVERSIGHT

61 year old white, divorced male who presented for worsening depression and SI with plan to hang himself on (b6) /19 admitted to Inpatient MH.

Since (b6) 2018, (b6) reported that he was isolative in his South End apartment. He reported chronic SI, which worsened in the weeks prior to admission.
PTA, he researched how to hang himself, constructed the noose, hung it and put his head/neck inside of the noose for about 5 seconds.
He stated that he was just "practicing" and once he experienced difficulty breathing, he stopped because "the will to live kicked in." He endorsed persistent poor sleep, anhedonia, and poor energy. He was not interested in ECT because he says that he has tried this before and the benefit did not last beyond 1 month.
Past psychiatric hospitalizations:
-7 prior (b6) admissions, most recently in (b6) 2018
-(b6) (b6) /04
-(b6) x2weeks "I thought he (staff person in detox) wanted me to hit him. That's what my thoughts were telling me."
-(b6) ECT x 2mos "It was probably a mistake. I haven't been right since, with my memory."
-(b6) x1 mo "hallucinations, talking to people that weren't there."
Medication trials:
Zoloft, Duloxetine, Paroxetine, Venlafaxine, Nefazodone, Fluoxetine, Trazodone, Depakote, Lithium, Haldol, Thorazine, Seroquel, and Zyprexa

The patient reported that his last use of drugs was cocaine/benzos once prior to admission. No other substance use. in (b6) . He had positive cocaine on his toxic screen on admission which he acknowledged as he felt so depressed.
DX: Major depression, recurrent, severe.

He was referred by inpatient psychiatrist for IV Ketamine as he was not responding to his usual antidepressants/ECT and was a high suicide risk.
Modified Antidepressant Treatment History Score: 23
PHQ-9 - 14
MADRS score: 39/60
SLUMS - 28

Due to suicidality and refractory depression, IV Ketamine infusion was recommended. He has received 6 index IV Ketamine Infusions and 2 Maintenance IV Ketamine infusions.

POST-KETAMINE ASSESSMENT AFTER #8 KETAMINE INFUSION ON (b6) 2019.
PHQ-9 - 2
Current MADRS score - 3/60
SLUMS - 30
CADSS - 0
HAM-A - 3
He is followed by outpatient psychiatrist and SPC as he is flagged HIGH RISK for suicide.
He is willing to switch to Intranasal Esketamine.
Given the pilot trial, would it be prudent to admit him the day before administration and observe for about a week as inpatient?

Priority:	Normal
Type:	Note

Good afternoon,
I'm so happy to hear you are willing to work on this module with us. We will also be working with a Mental Health Clinical Pharmacist who is now a National Program Manager for PBM, Matthew Fuller. I'd like to set up an initial meeting sometime the week of the 24th to discuss plans and timeline. I'll use the scheduling feature in Outlook to find a time that appears to work for everyone. If your Outlook isn't accurate and I select a date and time that doesn't work, please propose a new one. If there are others you'd like me to invite, please let me know.

In the meantime, I'll attach the TRD module our office developed back in 2012 so you can see what we did years ago. Perhaps we can use it as a building block.

Thanks,
Daina

Hi Dave,

We would welcome Michael's assistance in developing the TRD materials. Voluntell away!

Any suggestions for additional people who aren't as closely connected with Pharma to help balance things out?

Thanks,
Ilse

Can I suggest we use Michael Thase for this? He is much more of an expert and his only vice is he has worked for J&J but I am also a consultant for them so that may be a conflict as well. Let me know if you want me to voluntell Michael.

Subject: need help developing treatment resistant depression training content for VA

Hi Dave –

As you may have heard, I've been asked to help VHA stand up clinical implementation of intranasal esketamine. One of the big pieces of this is developing educational content that will be used for training psychiatrists and pharmacists. We are striving to develop VA specific, neutral (i.e. not Pharma created) educational content.

We are currently working on 2 key pieces: 1) an update of the Academic Detailing Treatment Resistant Depression materials, 2) materials describing the REMS requirements for Spravato.

We are seeking subject matter experts to help us work on item #1. Daina Wells (cc'd) from the National Academic Detailing Service will be leading the work on this. Given your leadership with the CPG for MDD, I wanted to reach out to you first and see who you might recommend help serve as a psychiatry SME for TRD material development and review.

I will be working on developing item #2 with the national esketamine implementation workgroup (which includes several of our VA ketamine SMEs).

Appreciate your help and input on this!

Best,

AMERICAN OVERSIGHT

Esketamine's trajectory to approval shows — step by step — how drugmakers can take advantage of shortcuts in the FDA process with the agency's blessing and maneuver through safety and efficacy reviews to bring a lucrative drug to market.

Step 1: In late 2013, Janssen got the FDA to designate esketamine a "breakthrough therapy" because it showed the potential to reverse depression rapidly — a holy grail for suicidal patients, such as those in an emergency room. That potential was based on a two-day study during which 30 patients were given esketamine intravenously. "Breakthrough therapy" status puts drugs on a fast track to approval, with more frequent input from the FDA.

AMERICAN OVERSIGHT

Step 2: But discussions between regulators and drug manufacturers can affect the amount and quality of evidence required by the agency. In the case of Spravato, they involved questions like, how many drugs must fail before a patient's depression is considered intractable or "treatment-resistant"? And how many successful clinical trials are necessary for FDA approval?

Step 3: Any prior agreements can leave the FDA's expert advisory committees hamstrung in reaching a verdict. Fiedorowicz abstained on Spravato because, though he considered Janssen's study design flawed, the FDA had approved it.

Hi,
We talked about this at the meeting… (b6)

The product still isn't in the supply chain, but sites can get their pharmacies certified now to help streamline the process if/when the product is needed for a patient.

PBM is working on a REMS document, but need a few more details to finalize that before we can push it out to the field.

PBM was involved with the creation of all of these documents in conjunction OMHSP

Subject: Memorandum: Certification with SPRAVATO™ Risk Evaluation and Mitigation Strategy (REMS)

Good Afternoon,

Please see the attached memorandum "Certification with SPRAVATO™ Risk Evaluation and Mitigation Strategy (REMS)."

1. The purpose of this memorandum and its attachments is to outline the procedures for the use of Spravato® (eskatamine) nasal spray which was approved by the Food and Drug Administration (FDA) on March 5, 2019, to be used in conjunction with an oral antidepressant, for the treatment of depression in adults who have tried other antidepressant medicines but have not benefited from them (see Attachment A for Esketamine Frequently Asked Questions).

2. Because of the risk of serious adverse outcomes resulting from sedation and dissociation caused by Spravato® administration, and the potential for abuse and misuse of the drug, it is only available through a restricted distribution system, under an FDA approved Risk Evaluation and Mitigation Strategy (REMS). Please see and follow instructions in Attachment B for REMS Healthcare Setting Certification Guidance.

3. All medical centers must become a Spravato® REMS certified Healthcare Setting and certified Pharmacy. *Within 30 days of this memorandum*, facilities should report completion of REMS Healthcare Setting certification to their VISN Chief Mental Health Officer, who should then report VISN-wide REMS certification by email to Dr. Ilse Wiechers at (b6) @va.gov.

4. There are resource requirements that facilities must plan to accommodate. Spravato® is intended for patient self-administration under the direct observation of a healthcare provider, and patients are required to be monitored by a healthcare provider for at least 2 hours after Spravato® administration. Spravato® must never be dispensed directly to a patient for home use.

5. • No special privileges are required to prescribe Spravato®.

6. Once educational materials from the manufacturer of Spravato® are made available to VA to review, the review and use of those materials will be consistent

I haven't heard any other feedback from MH.

The pharmacy portion and patient enrollment portion are available. They can't be done online. The forms need to be faxed in. The website won't be fully live for several months….this will all be noted in the PBM guidance which should be forthcoming soon.

Subject: RE: Memorandum: Certification with SPRAVATO™ Risk Evaluation and Mitigation Strategy (REMS)

I haven't heard any other feedback from MH.

The pharmacy portion and patient enrollment portion are available. They can't be done online. The forms need to be faxed in. The website won't be fully live for several months….this will all be noted in the PBM guidance which should be forthcoming soon.

Subject: RE: Memorandum: Certification with SPRAVATO™ Risk Evaluation and Mitigation Strategy (REMS)

Just FYI that my VISN MH lead has been in contact with other VISN MH leads….they don't want this drug right now. Not sure if any of you are getting pushback from MH.

Also, apparently the pharmacy registration portion isn't even available yet. Hines tried to register.

Hi,
We talked about this at the meeting… (b6) .

The product still isn't in the supply chain, but sites can get their pharmacies certified now to help streamline the process if/when the product is needed for a patient.

PBM is working on a REMS document, but need a few more details to finalize that before we can push it out to the field.

PBM was involved with the creation of all of these documents in conjunction OMHSP

Subject: Memorandum: Certification with SPRAVATO™ Risk Evaluation and Mitigation Strategy (REMS)

Good Afternoon,

Please see the attached memorandum "Certification with SPRAVATO™ Risk Evaluation and Mitigation Strategy (REMS)."

1. The purpose of this memorandum and its attachments is to outline the procedures for the use of Spravato® (eskatamine) nasal spray which was approved by the Food and Drug Administration (FDA) on March 5, 2019, to be used in conjunction with an oral antidepressant, for the treatment of depression in adults who have tried other antidepressant medicines but have not benefited from them (see Attachment A for Esketamine Frequently Asked Questions).

2. Because of the risk of serious adverse outcomes resulting from sedation and dissociation caused by Spravato® administration, and the potential for abuse and misuse of the drug, it is only available through a restricted distribution system, under an FDA approved Risk Evaluation and Mitigation Strategy (REMS). Please see and follow instructions in Attachment B for REMS Healthcare Setting Certification Guidance.

3. All medical centers must become a Spravato® REMS certified Healthcare Setting and certified Pharmacy. *Within 30 days of this memorandum*, facilities should report completion of REMS Healthcare Setting certification to their VISN Chief Mental Health Officer, who should then report VISN-wide REMS certification by email to Dr. Ilse Wiechers at (b6) va.gov.

4. There are resource requirements that facilities must plan to accommodate. Spravato® is intended for patient self-administration under the

AMERICAN OVERSIGHT

direct observation of a healthcare provider, and patients are required to be monitored by a healthcare provider for at least 2 hours after Spravato® administration. Spravato® must never be dispensed directly to a patient for home use.

5. • No special privileges are required to prescribe Spravato®.

6. Once educational materials from the manufacturer of Spravato® are made available to VA to review, the review and use of those materials will be consistent with VHA Directive, 1108.10, Promotion of Drugs and Drug-Related Supplies By Pharmaceutical Company Representatives (PCR) located at: https://www.va.gov/vhapublications/ViewPublication.asp?pub_ID=6435.

7. Please contact Ilse Wiechers, MD, Office of Mental Health and Suicide Prevention at(b6) @va.gov with any questions related to this request.

Agree also.

Many of the field comments we received on the draft monograph and Criteria for Use echoed similar concerns.

That is one of the reasons we couldn't get a formulary decision on our May conference call.

I anticipate a very lively discussion next week at our face-to-face formulary meeting!

Bloomberg: Trump Offers to Negotiate Price of J&J Anti-Depressant for VA (12 June, Justin Sink, 17.6M uvm; New York, NY)

President Donald Trump offered to help the Department of Veterans Affairs negotiate the acquisition of a new Johnson &Johnson drug to treat depression, a treatment he believes could result in an "incredible" drop in veteran suicide.

"I think they'll be very generous with you," Trump told Veterans Affairs Secretary Robert Wilkie during a Wednesday meeting on opioid abuse at the White House. "And if you like, I'll help you to negotiate."

Trump appeared to be referring to Spravato, a nasal spray sold by Johnson &Johnson that was approved for use treating adults with treatment-resistant depression by the Food and Drug Administration in March. The company said that in short and long-term clinical trials, those who used the drug and a newly initiated oral antidepressant saw sustained improvement in their symptoms compared to adults who received just the oral drug.

The president -- who said he had "read really quite a bit" about the drug -- said he believed it could work well enough to significantly reduce the rates of veteran suicide.

Spravato is a close chemical cousin to the anesthetic ketamine. When it was approved, J&J said it would cost $4,720 to $6,785 in the first month, and then decline in price to $2,360 to $3,540 monthly.

The treatment is the first major breakthrough for depression since Prozac in 1987, and could help usher in a new wave of therapies for a hard-to-treat condition. Existing options typically take weeks to work, and aren't effective for all patients.

"Give it to anybody that has the problem, because you have people calling and our folks do a great job on the phone -- but it's a telephone," Trump said. "You have people calling for help and if those people had that, I'm hearing like instantaneously they're in better shape."

Wilkie said the medicine was "very effective" and that the VA was currently "in the purchasing process" in hopes of having the drug in all VA hospitals by the end of the year.

If you or someone you know is having suicidal thoughts, The National Suicide Prevention Lifeline is: 1 (800) 273-8255.

The White House: Remarks by President Trump in Meeting on Opioids (12 June, Washington, DC)

AMERICAN OVERSIGHT

Roosevelt Room
3:30 P.M. EDT

THE PRESIDENT: Thank you very much. And I think what we do — this is a meeting on opioid and the tremendous effect that's taken place over the last little period of time. And I'm very proud of it and the people working so hard on it.

But I thought what I'd do is ask Secretary Wilkie to give a statement as to what just happened with respect to Choice and the VA, because I think it's a very, very big deal.

Robert?

SECRETARY WILKIE: Thank you, sir. June 6th was a doubly important day. You were celebrating the 75th anniversary of the Normandy landings. And for VA, we began to implement the Mission Act, which you signed last year.

On that day, 44,000 veterans came to us to ask for greater choice in their healthcare on day one. And we began to open up that aperture and provide them, for the first time, with urgent care across the country. So they now have what their fellow citizens have had for many years.

And we expect them to take greater advantage of it as we go along. We've contacted over 9 million veterans to tell them this is now available to them. And it is one of the great transformative steps in the history of our department.

THE PRESIDENT: Yes, it is. It's Choice.

SECRETARY WILKIE: And it's off to a very good — very good start.

THE PRESIDENT: VA Choice.

SECRETARY WILKIE: Yes, sir.

THE PRESIDENT: So, for 44 years, they've been trying to get it, and we got it. And they're loving it, I hear.

SECRETARY WILKIE: Yes. Yes, sir. With that many on the first day, that's a testament to —

THE PRESIDENT: That's a tremendous testament.

SECRETARY WILKIE: Yes, sir.

THE PRESIDENT: Congratulations.

SECRETARY WILKIE: Thank you, sir.

THE PRESIDENT: Come here. I'm proud of you. That's a fantastic job.

SECRETARY WILKIE: Thank you, sir. Thank you very much.

Agree also.

Many of the field comments we received on the draft monograph and Criteria for Use echoed similar concerns.

That is one of the reasons we couldn't get a formulary decision on our May conference call.

I anticipate a very lively discussion next week at our face-to-face formulary meeting!

Subject: RE: Media Summary- June 13, 2019

Agree also.

Many of the field comments we received on the draft monograph and Criteria for Use echoed similar concerns.

That is one of the reasons we couldn't get a formulary decision on our May conference call.

I anticipate a very lively discussion next week at our face-to-face formulary meeting!

Thank you Ilse. I agree with both your concerns and suggestion to meet next week. I will also discuss with Dr. Beck and ask for her guidance. Completely agree with step-wise and thoughtful implementation as per existing plan. Mike and I will be in Chicago next week Tues-Thurs, but maybe Friday morning?

Bloomberg: Trump Offers to Negotiate Price of J&J Anti-Depressant for VA (12 June, Justin Sink, 17.6M uvm; New York, NY)

President Donald Trump offered to help the Department of Veterans Affairs negotiate the acquisition of a new Johnson &Johnson drug to treat depression, a treatment he believes could result in an "incredible" drop in veteran suicide.

"I think they'll be very generous with you," Trump told Veterans Affairs Secretary Robert Wilkie during a Wednesday meeting on opioid abuse at the White House. "And if you like, I'll help you to negotiate."

Trump appeared to be referring to Spravato, a nasal spray sold by Johnson &Johnson that was approved for use treating adults with treatment-resistant depression by the Food and Drug Administration in March. The company said that in short and long-term clinical trials, those who used the drug and a newly initiated oral antidepressant saw sustained improvement in their symptoms compared to adults who received just the oral drug.

The president -- who said he had "read really quite a bit" about the drug -- said he believed it could work well enough to significantly reduce the rates of veteran suicide.

Spravato is a close chemical cousin to the anesthetic ketamine. When it was approved, J&J said it would cost $4,720 to $6,785 in the first month, and then decline in price to $2,360 to $3,540 monthly.

The treatment is the first major breakthrough for depression since Prozac in 1987, and could help usher in a new wave of therapies for a hard-to-treat condition. Existing options typically take weeks to work, and aren't effective for all patients.

"Give it to anybody that has the problem, because you have people calling and our folks do a great job on the phone -- but it's a telephone," Trump said. "You have people calling for help and if those people had that, I'm hearing like instantaneously they're in better shape."

Wilkie said the medicine was "very effective" and that the VA was currently "in the purchasing process" in hopes of having the drug in all VA hospitals by the end of the year.

If you or someone you know is having suicidal thoughts, The National Suicide Prevention Lifeline is: 1 (800) 273-8255.

The White House: Remarks by President Trump in Meeting on Opioids (12 June, Washington, DC)

Roosevelt Room
3:30 P.M. EDT

THE PRESIDENT: Thank you very much. And I think what we do — this is a meeting on opioid and the tremendous effect that's taken place over the last little period of time. And I'm very proud of it and the people working so hard on it.

AMERICAN OVERSIGHT

But I thought what I'd do is ask Secretary Wilkie to give a statement as to what just happened with respect to Choice and the VA, because I think it's a very, very big deal.

Robert?

SECRETARY WILKIE: Thank you, sir. June 6th was a doubly important day. You were celebrating the 75th anniversary of the Normandy landings. And for VA, we began to implement the Mission Act, which you signed last year.

On that day, 44,000 veterans came to us to ask for greater choice in their healthcare on day one. And we began to open up that aperture and provide them, for the first time, with urgent care across the country. So they now have what their fellow citizens have had for many years.

And we expect them to take greater advantage of it as we go along. We've contacted over 9 million veterans to tell them this is now available to them. And it is one of the great transformative steps in the history of our department.

THE PRESIDENT: Yes, it is. It's Choice.

SECRETARY WILKIE: And it's off to a very good — very good start.

THE PRESIDENT: VA Choice.

SECRETARY WILKIE: Yes, sir.

THE PRESIDENT: So, for 44 years, they've been trying to get it, and we got it. And they're loving it, I hear.

SECRETARY WILKIE: Yes. Yes, sir. With that many on the first day, that's a testament to —

THE PRESIDENT: That's a tremendous testament.

SECRETARY WILKIE: Yes, sir.

THE PRESIDENT: Congratulations.

SECRETARY WILKIE: Thank you, sir.

THE PRESIDENT: Come here. I'm proud of you. That's a fantastic job.

SECRETARY WILKIE: Thank you, sir. Thank you very much.

THE PRESIDENT: I'm proud of you. Thank you very much.

Kellyanne?

MS. CONWAY: Mr. President, thank you. The focus that the First Lady and you have placed on the opioid and drug demand, drug supply crisis roiling our nation is starting to produce positive results.

Our current Handbook allows promotion of drugs as long as it is consistent with our formulary objectives, so making this drug non-promotable is an additional restriction.
The rationale is that your office and my office reserve the right to educate VA staff about how this drug will be used in VA and how staff will be educated about that.

Mike –

I take the blame for the call mix up – I had things turned around in my head. You all had made clear you were meeting in Chicago. I'm going to try to hop back on when you bring the issue back to a vote and I've scheduled time to touch base with Jen tomorrow afternoon for a full debrief.

I think I'm okay with everything I heard, and suspect any additional revisions were all added to the caution/safety concerns, which as far as I'm concerned is warranted at this point. I'll just need to take a look at the final version once Matt has it available so we can start to planning accordingly with Early Adopter sites.

My only question is trying to discern how the not promotable by the manufacturer status differs from the existing directive 1108.10. I think I had already interpreted the directive to mean pharma reps couldn't be on VA campuses or talking with VA staff while on tour of duty. Clarity on that would be helpful so I can educate the field accordingly.

I very much appreciate the close partnership we've had on this work thus far. Looking forward to our continued work together!

Best,
Ilse

Thanks. I was unaware, although Teresa, was this the procedure that a group wanted to meet with us about that Dave recently declined in an email as he said he wanted to wait for more data?

Renee, hope your flight wasn't delayed and you are home as I am typing this

I do know that MH team has put together information for MH teams re both. In addition, the CPG's for both are upcoming and our stance on such.

I do not believe any of us in VACO were aware of the 60-minutes release.

AMERICAN OVERSIGHT

Good morning everyone,

I wasn't sure who would be the best POC for this request – so I am emailing everyone.

VISN 6 is experiencing a significant up-tick in service request from Veterans regarding the stellate ganglion block procedure, to include request to use 'Mission Act resources' if the facility doesn't offer the procedure.

Our VISN COS and VISN Mental Health Chief understand that a lot of these request are being driven by the 60 minutes segment, and that this story offered our Veterans and family members hope that relief is on the way for their persisting nightmares, anger, and fear (PTSD). Veterans are now actively calling their mental health doctors wanting this procedure within our region – and our doctors don't know what to say or how to move forward with these requests. Our clinicians are wanting specific guidance **before** Veterans go out on their own and get this procedure that VA considers 'experimental.'

In addition to SGB, Leadership would also like talking points for Spravato after the results of today's national formulary meeting. The focus of these talking points would be for our mental health doctors and what they should tell patients.

Links to the story's for quick reference.

1. • The stellate ganglion block procedure LINK
2. • Spravato (Ketamine-like drug) LINK

Just to reiterate this is not a request for media talking points. This is a request for talking points for our mental health teams to communicate with patients. (b) (5) [redacted] ices.

Thank you in advance.

Tara Ricks-Edger
Director of Communications
VISN 6 – U.S. Department of Veterans Affairs

"It is not the critic who counts; not the man who points out how the strong man stumbles, or where the doer of deeds could have done them better. The credit belongs to the man who is actually in the arena…who strives valiantly; who errs, who comes short again and again, because there is no effort without error and shortcoming; but who does actually strive to do the deeds; who knows great enthusiasms, the great devotions; who spends himself in a worthy cause; who at the best knows in the end the triumph of high achievement, and who at the worst, if he fails, at least fails while daring greatly, so that his place shall never be with those cold and timid souls who neither know victory nor defeat." - Theodore Roosevelt

Subject: RE: Leadership Requesting: Talking Points and Data Need for VA Mental Health Clinicians on Stellate Ganglion Block Procedure

How's this for proposed talking points? It combines the OCE and our response.

- • Thank you for contacting the Department of Veterans Affairs (VA) Veterans Health Administration (VHA) regarding the Stellate Ganglion Block (SGB) procedure.

- • VA is building a proactive and personalized health care system that honors Veterans' service and empowers them to achieve their greatest level of health and well-being. VA care is both patient-centered and patient-driven; we recommend Veterans speak to their providers about treatment options.

AMERICAN OVERSIGHT

- • SGB is an injection of an anesthetic medication into the neck that is most often used to treat pain in the head, neck and upper extremities. SGB is a generally safe procedure but serious complications can occur. The procedure is performed at several VA facilities by experienced anesthesiologists, primarily to treat chronic pain conditions. Specialized pain clinics are found at many VA facilities.

- • SGB is not considered an established, evidenced-based treatment for PTSD. Although there are reports of the potential effectiveness of SGB for PTSD, it's use for PTSD is still experimental.

- • Veterans with questions about PTSD treatment are encouraged to talk to a health care provider to learn about potential treatment options. VA-enrolled Veterans can contact their provider via secure message through My HealtheVet, by calling their provider's office, or by making an in-person appointment.

- • VA's National Center for PTSD continuously monitors the published literature and disseminates information rapidly to honor VA's commitment to provide Veterans treatments with proven effectiveness and safety.

- • Visit www.ptsd.va.gov for information about PTSD and its treatment.

Subject: Leadership Requesting: Talking Points and Data Need for VA Mental Health Clinicians on Stellate Ganglion Block Procedure
Importance: High

Good morning everyone,

I wasn't sure who would be the best POC for this request – so I am emailing everyone.

VISN 6 is experiencing a significant up-tick in service request from Veterans regarding the stellate ganglion block procedure, to include request to use 'Mission Act resources' if the facility doesn't offer the procedure.

Our VISN COS and VISN Mental Health Chief understand that a lot of these request are being driven by the 60 minutes segment, and that this story offered our Veterans and family members hope that relief is on the way for their persisting nightmares, anger, and fear (PTSD). Veterans are now actively calling their mental health doctors wanting this procedure within our region – and our doctors don't know what to say or how to move forward with these requests. Our clinicians are wanting specific guidance **before** Veterans go out on their own and get this procedure that VA considers 'experimental.'

AMERICAN OVERSIGHT

In addition to SGB, Leadership would also like talking points for Spravato after the results of today's national formulary meeting. The focus of these talking points would be for our mental health doctors and what they should tell patients.

Links to the story's for quick reference.

1. • The stellate ganglion block procedure LINK
2. • Spravato (Ketamine-like drug) LINK

Just to reiterate this is not a request for media talking points. This is a request for talking points for our mental health teams to communicate with patients. Leadership is concerned if we do not get ahead of this it will ulitmately turn into an access or care issue especially for the health and well-being of our Veterans receiving mental health and suicide prevention services.

Thank you in advance.

Tara Ricks-Edger
Director of Communications
VISN 6 – U.S. Department of Veterans Affairs

"It is not the critic who counts; not the man who points out how the strong man stumbles, or where the doer of deeds could have done them better. The credit belongs to the man who is actually in the arena…who strives valiantly; who errs, who comes short again and again, because there is no effort without error and shortcoming; but who does actually strive to do the deeds; who knows great enthusiasms, the great devotions; who spends himself in a worthy cause; who at the best knows in the end the triumph of high achievement, and who at the worst, if he fails, at least fails while daring greatly, so that his place shall never be with those cold and timid souls who neither know victory nor defeat." - Theodore Roosevelt

Andy, I think your text should be integrated into the bullet in which we say Veterans should talk to their providers. We should not tell Veterans to do this in two separate bullets.

Yes – an initial version should be ready today, and then need to work on a longer-term FAQ about SGB, and about how to manage off-label, novel requests for care. We will need other offices involved in that, including Whole Health. It is putting local leaders in an awkward place – needing to make decisions on community care referrals (or not) for novel procedures without clear guidance from VACO overall.

Subject: Leadership Requesting: Talking Points and Data Need for VA Mental Health Clinicians on Stellate Ganglion Block Procedure
Importance: High

Good morning everyone,

I wasn't sure who would be the best POC for this request – so I am emailing everyone.

VISN 6 is experiencing a significant up-tick in service request from Veterans regarding the stellate ganglion block procedure, to include request to use 'Mission Act resources' if the facility doesn't offer the procedure.

Our VISN COS and VISN Mental Health Chief understand that a lot of these request are being driven by the 60 minutes segment, and that this story offered our Veterans and family members hope that relief is on the way for their persisting nightmares, anger, and fear (PTSD). Veterans are now actively calling their mental health doctors wanting this procedure within our region – and our doctors don't know what to say or how to move forward with these requests. Our clinicians are wanting specific guidance **before** Veterans go out on their own and get this procedure that VA considers 'experimental.'

In addition to SGB, Leadership would also like talking points for Spravato after the results of today's national formulary meeting. The focus of these talking points would be for our mental health doctors and what they should tell patients.

Links to the story's for quick reference.

1. • The stellate ganglion block procedure LINK
2. • Spravato (Ketamine-like drug) LINK

Just to reiterate this is not a request for media talking points. This is a request for talking points for our mental health teams to communicate with patients. Leadership is concerned if we do not get ahead of this it will ulitmately turn into an access or care issue especially for the health and well-being of our Veterans receiving mental health and suicide prevention services.

Thank you in advance.

Tara Ricks-Edger
Director of Communications
VISN 6 – U.S. Department of Veterans Affairs

AMERICAN OVERSIGHT

"It is not the critic who counts; not the man who points out how the strong man stumbles, or where the doer of deeds could have done them better. The credit belongs to the man who is actually in the arena…who strives valiantly; who errs, who comes short again and again, because there is no effort without error and shortcoming; but who does actually strive to do the deeds; who knows great enthusiasms, the great devotions; who spends himself in a worthy cause; who at the best knows in the end the triumph of high achievement, and who at the worst, if he fails, at least fails while daring greatly, so that his place shall never be with those cold and timid souls who neither know victory nor defeat." - Theodore Roosevelt

Subject: Leadership Requesting: Talking Points and Data Need for VA Mental Health Clinicians on Stellate Ganglion Block Procedure
Importance: High

Good morning everyone,

I wasn't sure who would be the best POC for this request – so I am emailing everyone.

VISN 6 is experiencing a significant up-tick in service request from Veterans regarding the stellate ganglion block procedure, to include request to use 'Mission Act resources' if the facility doesn't offer the procedure.

Our VISN COS and VISN Mental Health Chief understand that a lot of these request are being driven by the 60 minutes segment, and that this story offered our Veterans and family members hope that relief is on the way for their persisting nightmares, anger, and fear (PTSD). Veterans are now actively calling their mental health doctors wanting this procedure within our region – and our doctors don't know what to say or how to move forward with these requests. Our clinicians are wanting specific guidance **before** Veterans go out on their own and get this procedure that VA considers 'experimental.'

In addition to SGB, Leadership would also like talking points for Spravato after the results of today's national formulary meeting. The focus of these talking points would be for our mental health doctors and what they should tell patients.

Links to the story's for quick reference.

1. • The stellate ganglion block procedure LINK
2. • Spravato (Ketamine-like drug) LINK

Just to reiterate this is not a request for media talking points. This is a request for talking points for our mental health teams to communicate with patients. Leadership is concerned if we do not get ahead of this it will ulitmately turn into an access or care issue especially for the health and well-being of our Veterans receiving mental health and suicide prevention services.

Thank you in advance.

AMERICAN OVERSIGHT

Stellate Ganglion Block Procedure
Importance: High

Good morning everyone,

I wasn't sure who would be the best POC for this request – so I am emailing everyone.

VISN 6 is experiencing a significant up-tick in service request from Veterans regarding the stellate ganglion block procedure, to include request to use 'Mission Act resources' if the facility doesn't offer the procedure.

Our VISN COS and VISN Mental Health Chief understand that a lot of these request are being driven by the 60 minutes segment, and that this story offered our Veterans and family members hope that relief is on the way for their persisting nightmares, anger, and fear (PTSD). Veterans are now actively calling their mental health doctors wanting this procedure within our region – and our doctors don't know what to say or how to move forward with these requests. Our clinicians are wanting specific guidance **before** Veterans go out on their own and get this procedure that VA considers 'experimental.'

In addition to SGB, Leadership would also like talking points for Spravato after the results of today's national formulary meeting. The focus of these talking points would be for our mental health doctors and what they should tell patients.

Links to the story's for quick reference.

1. • The stellate ganglion block procedure LINK
2. • Spravato (Ketamine-like drug) LINK

Just to reiterate this is not a request for media talking points. This is a request for talking points for our mental health teams to communicate with patients. Leadership is concerned if we do not get ahead of this it will ulitmately turn into an access or care issue especially for the health and well-being of our Veterans receiving mental health and suicide prevention services.

Thank you in advance.

Tara Ricks-Edger
Director of Communications
VISN 6 – U.S. Department of Veterans Affairs

"It is not the critic who counts; not the man who points out how the strong man stumbles, or where the doer of deeds could have done them better. The credit belongs to the man who is actually in the arena…who strives valiantly; who errs, who comes short again and again, because there is no effort without error and shortcoming; but who does actually strive to do the deeds; who knows great enthusiasms, the great devotions; who spends himself in a worthy cause; who at the best knows in the end the triumph of high achievement, and who at the worst, if he fails, at least fails while daring greatly, so that his place shall never be with those cold and timid souls who neither know victory nor defeat." - Theodore Roosevelt

DOAC Certificate Course

AMERICAN OVERSIGHT

- • DOACs Certificate Course is a series of 6 free standing courses that focuses exclusively on DOAC Management and offers 35 Home Study CE hours
- • Please contact (b6) va.gov with any questions.
- • Please Note: To access course and other resources on the VA Pharmacy Online Classroom Site, an account needs to be created. Instructions on how to create an account can be found on the landing page.

PBM 2019 Monthly Webinars Schedule (to date):

a. July 16th @ 3:10 PM ET Vancomycin Dosing and Monitoring Program-
b. Registration link: Vancomycin Dosing and Monitoring for Patients with Serious Infections due to Staphylococcus aureus
c. Refer to email dated 6/20 from (b6) va.gov for details. (ACPE, ACCME, JA IPCE, ACCME-NP, ACCME accredited)
d. August 20th @ 3:10 **Title**: Targeting Vancomycin AUC Goals and Associated Risks of Nephrotoxicity-Clinical Experience
e. Please Note: New Adobe Connect Link for 2019: http://va-eerc-ees.adobeconnect.com/pbmwebinar2019/

Previous 2019 Anticoagulation Related PBM Webinars in TMS (no accreditation)

- **VA 37549** *"Periprocedural Bridging in Patients on Oral Anticoagulation - recording only"*
- **VA 37817** *"PBM Monthly Series - Periprocedural Anticoagulation Therapy: Cases (Recorded)" (companion session to VA 37549)*
- **VA 38569** *"PBM-MAP-VPE monthly Webinar Series: Direct Oral Anticoagulants – Recording"*

PBM Ez Minutes Video Updates

- • The PBM Ez Minutes Video updates are short (8-10 minutes) sound bytes on decisions made by the PBM National Formulary Committee.
- • The May 2019 Ez Minutes Video update video includes an update on the drug of choice for severe malaria AND some updates to the PCSK9 Inhibitors CFU
- • Check the PBM Education SP Site to view all videos since Sept. 2017. An option to download the ~ 10 min video to desktop is available for faster viewing if needed.

Subject: June 2019 Document Posting and Decision Announcement

Dear VPEs, MAP, Chiefs of Pharmacy, VA Clinical Pharmacists and VHAPBH Pharmacy ADPACs,

This is to inform you of recent formulary decisions and of clinical documents that have been posted on the PBM INTRAnet site:

-

1. • **Drugs Added** to the VA National Formulary (and associated posted documents)
   - • Secnidazole (SOLOSEC) – PA-F, restricted to Women's Health
   - • Ceftazidime/avibactam (AVYCAZ) monograph addendum – PA-F, restricted to Infectious Diseases or facility authorized provider
   - • Amikacin liposomal inhalation solution (ARIKAYCE) PA-F Monograph and ALIS (ARIKAYCE) PA-F with CFU
   - • Tacrolimus Ointment, without prior authorization. Includes 0.03% and 0.10% strengths. (No associated documents.)
   - • Ovulation prediction kits (disposable) (no associated documents)
   - • Urine home pregnancy tests (no associated documents)
   - • Daunorubicin and Cytarabine Liposome (VYXEOS) Drug Monograph PA-F with CFU
   - • Daunorubicin and Cytarabine Liposome (VYXEOS) Criteria for Use
     Daunorubicin and Cytarabine Liposome is FDA approved for the treatment of newly diagnosed therapy-related AML (t-AML) or AML with myelodysplasia-related changes (AML-MRC). The monograph addendum highlights the investigations leading to approval.
   - • Venetoclax (VENCLEXTA) in AML - Monograph Addendum PA-F with CFU
   - • Venetoclax (VENCLEXTA) in CLL or SLL - Monograph Addendum PA-F with CFU
   - • Venetoclax (VENCLEXTA) Criteria for Use (rev. June 2019)
     Venetoclax indications have expanded to include the treatment of newly-diagnosed AML in combination with azacytidine or decitabine or low-dose cytarabine for patients ≥ 75 years or those ineligible for intensive induction chemotherapy. In addition, use in CLL/SLL has expanded to include treatment of those with or without del17p, as monotherapy, or in combination with rituximab or obinutuzumab.

2. • **Drugs Not Added** to the VA National Formulary (and associated posted documents)
   - • Cangrelor (KANGREAL) Drug Monograph
   - • Cenegermin (OXERVATE) Monograph and Cenegermin (OXERVATE) Criteria for Use
   - • Eravacycline (XERAVA) Monograph
   - • Omadacycline (NUZYRA) Monograph – *restricted to Infectious Diseases or facility authorized provider*

AMERICAN OVERSIGHT

- • Patisiran (Onpattro) NME Monograph
- • Inotersen (Tegsedi) NME Monograph
- • Patisiran Inotersen CFU
- • Tildrakizumab-asmn (ILUMYA) in Plaque Psoriasis Monograph
- • Bosutinib (BOSULIF) in Newly Diagnosed CML - Monograph Addendum

  Bosutinib is a 2nd generation tyrosine kinase inhibitor with recent approval in newly diagnosed chronic phase CML. The addendum highlights the investigations leading to this approval.

3. • **Drugs Removed** from the VA National Formulary
   - • Flunisolide Oral Inhaler (AEROSPAN)-product discontinued

4. • **Documents Archived**
   - none

5. • **Other** Announcements
   - Sacubitril Valsartan (ENTRESTO) Criteria for Use (Rev May 30 2019): revised ADHF criterion to monitor for minimum of 6 hours after *first* dose sacubitril/valsartan before being discharged from the hospital
   - Esketamine (SPRAVATO) – voted to be nonformulary in May 2019
     - Esketamine (SPRAVATO) Monograph and Esketamine (SPRAVATO) Criteria for Use have been posted
     - Esketamine (Spravato) has been added to the Non-Promotable List
       - • National Protocol Guidance for Intranasal Esketamine for Treatment Resistant Depression has been posted
   - • Two Plaque Psoriasis and Psoriatic Arthritis Clinical Guidances have been posted (criteria for use of interleukin inhibitors in psoriasis and psoriatic arthritis are still in process):
     - • Psoriasis and Psoriatic Arthritis Treatment Guide
     - • Anti-Tumor Necrosis Factor Biologics in Psoriasis and Psoriatic Arthritis Recommendations for Use.
   - • Tyrosine Kinase Inhibitor (TKI) Therapeutic Flow Chart for the Treatment of Chronic Phase CML (rev. June 2019)
   - • Empagliflozin (JARDIANCE) Criteria for Use (Updated June 2019) updates include use as second-line option in patients with type 2 diabetes and chronic kidney disease

6. • **Educational Opportunities and Resources**
   - • DOAC Certificate Course was released in Dec. 2018. Please refer to email from (b6) va.gov dated 12/6/18 for details. DOACs Certificate Course is a series of 6 free standing courses that focuses exclusively on DOAC Management and offers 35 Home Study CE hours. Please contact (b6) va.gov with any questions.
     a. • Please Note: To access course and other resources on the VA Pharmacy Online Classroom Site, an account needs to be created. Instructions on how to create an account can be found on the landing page.

AMERICAN OVERSIGHT

- • PBM 2019 Monthly Webinars Schedule (to date):
    a. • February 19th @ 3:10 PM ET: Periprocedural Anticoagulation Therapy: Cases
        1. • Taped link to January 2019 Webinar: Periprocedural Bridging in Patients on Oral Anticoagulation - recording only
    b. • May 21st @ 3:10 PM ET: PBM Updates in Anticoagulation Related Topics- Tracy Minichiello, MD and Lisa Longo, PharmD, BCPS
    c. • June 18th @ 3:10 Pm ET: Anticoagulation: Cases
    d. • Please Note: New Adobe Connect Link for 2019: http://va-eerc-ees.adobeconnect.com/pbmwebinar2019/

Subject: JAMA commentary on 'evolving issues in depression'

All,

Two copies of today's JAMA commentary are attached: one as published, one with my comments. Also attached is a esketamine cost projection analysis from a while back.

The JAMA commentary claims ketamine IV infusions are expensive and nasal esketamine is a cost-effective alternative. That comment looks out of place.

According to a ketamine directory website (https://ketamineclinicsdirectory.com/ketamine-infusion-cost/), a ketamine infusion for depression should cost $400-800 each for a typical series of 6 infusions. A quick survey of the web shows several ketamine infusion centers with prices in the $400-800 range, so it's a reasonable first-pass estimate. Assuming $800 unit cost per infusion, that's $4,800 for six treatments. Earlier, I sent a spreadsheet showing projected annual esketamine cost scenarios. Initial treatment of two treatments per week for four weeks at AWP pricing for the 56mg dose is $7,080. Notice the $800 infusion cost includes facility, staffing, and supplies where the AWP for esketamine doesn't. Activity-based costing isn't simple with VA's fiscal system.

> "…while ketamine intranasal is much less expensive but requires frequent administration…[the availability of nasal esketamine] will be modulated by availability of specialty centers for administration and insurance coverage."

(b6) .

(b6) .

Regards,

Bruce

Subject: RE: J&J updates

Tom,
The pharmacy enrollment form is attached. I also included the ordering summary. I didn't mention in the summary that the pharmacy enrollment is not operational on the website as this must be pending as they have the link on their site https://www.spravatorems.com/pharmacies. Either way, the printed form can be downloaded there as well.

Phillip

Subject: RE: J&J updates

Yes. The said that the facilities can be registered via the online portal. The pharmacy portion is not up and running yet, but they gave me a form that can be used to register the pharmacies. I don't think they can accept patient enrollment yet because the product still isn't available.

Phillip has a draft document in the works for the REMS requirements, so including him here so that he can send to you. We will just continue to tweak as the site rolls out.

AMERICAN OVERSIGHT

Phillip, can you also attach the pharmacy enrollment form that I sent yesterday? I am technologically challenged today.

Hi Jenn,

Did J&J get back to you about the Spravato REMS website so we could work on the guidelines to the VA medical facilities that includes expectations of the authorized representative, prescribers, pharmacies, ect…?

As of this morning (about 2 hours ago), the "Register" link is still not active on the Spravato® REMS website.

Tom

Hi Jenn,

At the next break, could you give me a call at (b6)

I have two ideas for the draft REMS document Phillip prepared and I just want to run them by you before we pick one of the options or maybe go with a different option altogether.

Tom,
The pharmacy enrollment form is attached. I also included the ordering summary. I didn't mention in the summary that the pharmacy enrollment is not operational on the website as this must be pending as they have the link on their site https://www.spravatorems.com/pharmacies. Either way, the printed form can be downloaded there as well.

Subject: RE: J&J updates

Yes. The said that the facilities can be registered via the online portal. The pharmacy portion is not up and running yet, but they gave me a form that can be used to register the pharmacies. I don't think they can accept patient enrollment yet because the product still isn't available.

Phillip has a draft document in the works for the REMS requirements, so including him here so that he can send to you. We will just continue to tweak as the site rolls out.

Phillip, can you also attach the pharmacy enrollment form that I sent yesterday? I am technologically challenged today.

Subject: J&J updates

Hi Jenn,

Did J&J get back to you about the Spravato REMS website so we could work on the guidelines to the VA medical facilities that includes expectations of the authorized representative, prescribers, pharmacies, ect…?

As of this morning (about 2 hours ago), the "Register" link is still not active on the Spravato® REMS website.

(b6)

Thanks for the note..From my perspective this looks accurate. I would add the following if you all think is helpful:

- • * We have an MOU that details out our collaboration – it is built on a 3 pronged approach – 1) outreach 2) precision medicine 3) research/data analytics. This work does not involve any exchange of funds…

I have also cc'd my supervisor – Dr. Carroll who leads our entire MH portfolio - in case he or other program offices should look at this for accuracy beyond my program office.

Subject: RE: is this document the most recent esketamine CFU?

Hi Bruce,

The CFU is posted. It can be accessed via this link. Esketamine (SPRAVATO) CFU.
Word document also attached.

Thanks.

Matthew

Subject: is this document the most recent esketamine CFU?

Matthew,

Is the attached document the final approved version? I lost track of all the changes we made on your laptop and in the final discussion.

Missy Durkee, copied above, is trying to move ahead with a local nasal esketamine protocol.

Regards,

Subject: RE: news story on esketamine and VA

PBM will issue final documents on Wednesday. While it's helpful to start a dialogue now, important details will follow later in the week. One of those docs will be the CFU with several specific in/exclusion criteria. You may want to defer the CFU vs generic PADR until after reading PBM's final CFU document.

Subject: RE: news story on esketamine and VA

We'll need to think about the PADR process and how to document Dr. Leinbach/Mankad's approval and build that into our SOP. I'll send an email to Dr. L and get the ball rolling to see if we're going to go CFU based or general padr.

Hi Ginny –

Hope all is well, and sorry to have missed you at the AD F2F in Orlando.

I'm sure you've heard the news about intranasal esketamine FDA approval. Wondering how I can help us start the process to get VHA policy sorted out for this. I worked closely with Todd and Fran on developing the IV ketamine guidance and would welcome the opportunity to work with PBM on this again now.

Thanks,
Ilse

Mehul –

I was following the intranasal esketamine approval closely as well, and you are right, questions will start coming from patients and others soon. Currently we do not have anything drafted re intranasal, but I will start working with PBM and OMHSP to address this.

As for APA, I will indeed be there! Hope to be able to make it to the NC party.

Best,
Ilse

Subject: Intranasal esketamine draft guidelines

Hi Ilse,

We were wondering if VACO has any draft guidelines for the use of intranasal esketamine. It's a matter of time before the requests start coming in from patients and providers for this newly FDA-approved agent. We have seen the draft guidelines on intravenous ketamine for psychiatric disorders and had an opportunity to comment on those when they were being developed.

I'm including our ACOS/MH and psych clinical pharmacy specialist on this email.

Also, I imagine you will be going to APA in May given its proximity to your home. We will be hosting our second North Carolina party on Sunday night of APA. Anyone who has an NC connection is welcome to attend. I can send you details.

Subject: Inquires about SGB at VA Medical Centers
Importance: High

Good Afternoon Dr. Carroll,

We are still receiving inquiries about the availability of SGB at various VA facilities and within specific geographic regions. We have done our best to send prompt replies with general information about how patients can follow up with their VA providers for more information about PTSD treatments and to answer specific questions about CCI's collaboration with the providers at the Long Beach VA Healthcare System. The talking points your office is developing will be very helpful, so thank you in advance for sharing those details.

Who in 10N should I refer inquires to in cases where questions are related to services provided at VA medical centers? Some of the inquiries we are receiving do not fall under the purview of our office.

I wasn't sure who would be the best POC for this request – so I am emailing everyone.

AMERICAN OVERSIGHT

VISN 6 is experiencing a significant up-tick in service request from Veterans regarding the stellate ganglion block procedure, to include request to use 'Mission Act resources' if the facility doesn't offer the procedure.

Our VISN COS and VISN Mental Health Chief understand that a lot of these request are being driven by the 60 minutes segment, and that this story offered our Veterans and family members hope that relief is on the way for their persisting nightmares, anger, and fear (PTSD). Veterans are now actively calling their mental health doctors wanting this procedure within our region – and our doctors don't know what to say or how to move forward with these requests. Our clinicians are wanting specific guidance **before** Veterans go out on their own and get this procedure that VA considers 'experimental.'

In addition to SGB, Leadership would also like talking points for Spravato after the results of today's national formulary meeting. The focus of these talking points would be for our mental health doctors and what they should tell patients.

Links to the story's for quick reference.

1. • 1. The stellate ganglion block procedure LINK
2. • 2. Spravato (Ketamine-like drug) LINK

Just to reiterate this is not a request for media talking points. This is a request for talking points for our mental health teams to communicate with patients. Leadership is concerned if we do not get ahead of this it will ulitmately turn into an access or care issue especially for the health and well-being of our Veterans receiving mental health and suicide prevention services.

Thank you in advance.

Tara Ricks-Edger
Director of Communications
VISN 6 – U.S. Department of Veterans Affairs

"It is not the critic who counts; not the man who points out how the strong man stumbles, or where the doer of deeds could have done them better. The credit belongs to the man who is actually in the arena…who strives valiantly; who errs, who comes short again and again, because there is no effort without error and shortcoming; but who does actually strive to do the deeds; who knows great enthusiasms, the great devotions; who spends himself in a worthy cause; who at the best knows in the end the triumph of high achievement, and who at the worst, if he fails, at least fails while daring greatly, so that his place shall never be with those cold and timid souls who neither know victory nor defeat." - Theodore Roosevelt

As an FYI, there was an additional inquiry this afternoon from SVAC Majority inquiry: "Committee staff are under the assumption that this drug was rejected. Any previously cleared language would be much appreciated. We'd like to share something with them today, if possible."
Explained drug was not rejected, and then same info for NYT sent forward.

AMERICAN OVERSIGHT

Here's the information about the risk threshold for treatments and procedures requiring signature informed consent:

VHA Handbook 1004.01, Informed Consent for Clinical Treatments and Procedures, dated August 14, 2009 (Revised May 22, 2017).

(2) **Treatments and Procedures That Require Signature Consent.** Prior to undertaking certain treatments and procedures, the practitioner must document the informed consent process in detail (as specified in subpars. 13c(2)(a) and 13c(2)(b)) and obtain the patient's signature on a VA authorized consent form.
(a) The patient's signature consent must be obtained for treatments and procedures that:
1. Can be reasonably expected to produce significant pain or discomfort to the patient;
2. Can be reasonably expected to produce pain or discomfort to the patient that is substantial enough to require sedation, anesthesia, or narcotic analgesia;
3. Can be reasonably considered to have a significant risk of complication or morbidity;
4. Require injections of any substance into a joint space or body cavity (excluding the intravascular space); or
5. Are listed in Appendix A.

Here's the info. about the process for consent form development. 10NC and PCS have process in place to manage SME input.

VHA Handbook 1004.05, iMedConsent™, dated December 10, 2014.

10. CONTACTS:
b. **Clinical Content Concerns and Requests.**
(1) Concerns related to the clinical content in the iMedConsent™ program and requests for new content need to be reviewed and approved by the relevant Specialty Chief and submitted to the vendor using email (content@dialogmedical.com). Submission must include the name of the document (or proposed name if new content is being requested), the specialty (or proposed specialty), and a description of the concern or new content request.

(2) The vendor, Dialog Medical, evaluates content requests on a 90-day timeframe (estimated) to determine whether content modification or new content is needed. Dialog Medical provides a summary of actions taken in response to any field request to Patient Care Services for review.

(3) Patient Care Services, in conjunction with designated operational policy offices under the Deputy Under Secretary for Health for Operations and Management, is responsible for ensuring that consent form content is consistent with VHA policy and practice.

Institute for Clinical and Economic Review Issues Final Report and Policy Recommendations on Esketamine for Treatment-Resistant Depression

-- Independent appraisal committee votes that evidence is adequate to demonstrate clinical benefits of esketamine versus placebo, but concerns remain about the study criteria used to define treatment-resistant depression and the lack of longer-term data on esketamine's safety and effectiveness --

-- Esketamine's list price would require a 25-52% discount to reach a fair value-based price benchmark, and the potential short-term budget impact associated with treating the eligible patient population leads ICER to issue an Access and Affordability Alert --

BOSTON, June 20, 2019 - The Institute for Clinical and Economic Review (ICER) today released a Final Evidence Report and Report-at-a-Glance assessing the comparative clinical effectiveness and value of esketamine (Spravato™, Janssen), a nasal spray approved by the FDA in March as a therapy for treatment-resistant depression (TRD). Esketamine is one of the two mirror-image molecules (enantiomers) that make up ketamine, an anesthetic that is commonly used off-label to treat TRD.

ICER's report was reviewed at the May 2019 public meeting of the Midwest Comparative Effectiveness Public Advisory Council (Midwest CEPAC), one of ICER's three independent evidence appraisal committees. During the meeting, the CEPAC found that the evidence demonstrated esketamine plus background antidepressant to be clinically superior to background antidepressant alone. The CEPAC members found the evidence to be insufficient to demonstrate a difference in net health benefit between esketamine and ketamine, transcranial magnetic stimulation, electroconvulsive therapy, or augmentation with olanzapine.

During their deliberation, panel members weighed the therapies' other benefits and contextual considerations. They acknowledged that esketamine is intended to care for patients with a condition of high severity and a high lifetime burden of illness, and that esketamine offers a novel mechanism of action compared to other approved treatments for TRD, which may allow

AMERICAN OVERSIGHT

VA-19-1109-B-000213

successful treatment of many patients for who other available treatments have failed. Nevertheless, a majority of the panel felt that there is uncertainty about the long-term benefits and risks of esketamine, citing the lack of long-term trial evidence.

ICER's evaluation of long-term cost-effectiveness found that the fair value-based price benchmark for esketamine is between $17,700 and $25,200 per year, a range that would require a 25-52% discount from the announced list price of $32,400. Consistent with ICER's value-assessment framework, esketamine is deemed to deliver a "low value for money" because the treatment's incremental cost-effectiveness ratio, using the current list price, exceeds $175,000 per quality-adjusted life year (QALY) gained.

"Treatment-resistant forms of major depression are common and have large negative effects on patient quality of life, so new therapies are badly needed," said David Rind, MD, ICER's Chief Medical Officer. "It is hard to understand how a price exceeding usual cost-effectiveness thresholds is appropriate for a treatment that could be very widely used, particularly when that price is an order of magnitude higher than that of intravenous generic ketamine, a closely related therapy."

Affordability &Access Alert

Given that the clinical goal for uptake would exceed the potential budget impact threshold at the national level, ICER is issuing an Affordability and Access Alert as part of its final report on esketamine. Clinical experts queried at the public meeting suggested that esketamine would not be viewed as an appropriate treatment for all patients with TRD, but that roughly half of eligible patients may be offered the option during consultation with their physician. However, at esketamine's current list price, only 16% of eligible Americans with TRD could receive the treatment before crossing ICER's potential budget threshold of $819 million per year. Even if esketamine's price was lowered to ICER's value-based price benchmark range for long-term cost-effectiveness, only 20-30% of all eligible patients with TRD could be treated with esketamine before exceeding the potential budget impact threshold.

The purpose of an ICER Affordability and Access Alert is to signal to stakeholders and policy makers that the amount of added health care costs associated with a new service may be difficult for the health system to absorb over the short term without displacing other needed services or contributing to rapid growth in health care insurance costs that threaten sustainable access to high-value care for all patients.

Key Policy Recommendations

Following the voting session, a policy roundtable of experts - including clinicians, patient advocates, and payer representatives - convened to discuss the implications of the evidence for policy and practice. Key recommendations stemming from the roundtable discussion include:

- • Manufacturers and researchers should conduct studies directly comparing esketamine and other treatment options using standardized research protocols and outcomes that reflect what matters most to patients; this would allow real-world, long-term assessment of comparative effectiveness.

- • Given the considerable uncertainty that remains regarding the longer-term benefits

AMERICAN OVERSIGHT

and risks of esketamine, it is reasonable for insurers and other payers to develop prior authorization criteria to ensure that patients are carefully selected and managed by clinicians with the necessary expertise to ensure appropriate care.

- • Payers should develop mechanisms to adequately compensate clinicians for the expenses associated with monitoring and delivering esketamine within the specification of the REMS program.

ICER's detailed set of policy recommendations, including considerations for establishing prior authorization criteria, is available in the Final Evidence Report.

About ICER

The Institute for Clinical and Economic Review (ICER) is an independent non-profit research institute that produces reports analyzing the evidence on the effectiveness and value of drugs and other medical services. ICER's reports include evidence-based calculations of prices for new drugs that accurately reflect the degree of improvement expected in long-term patient outcomes, while also highlighting price levels that might contribute to unaffordable short-term cost growth for the overall health care system.

ICER's reports incorporate extensive input from all stakeholders and are the subject of public hearings through three core programs: the California Technology Assessment Forum (CTAF), the Midwest Comparative Effectiveness Public Advisory Council (Midwest CEPAC), and the New England Comparative Effectiveness Public Advisory Council (New England CEPAC). These independent panels review ICER's reports at public meetings to deliberate on the evidence and develop recommendations for how patients, clinicians, insurers, and policymakers can improve the quality and value of health care. For more information about ICER, please visit ICER's website.

Good afternoon, 10B.

We have an **urgent request for review/concurrence** of the attached news release. 10P wants to get this out ASAP – since FDA released last week and there is WH interest.

Please let me know if you have questions. Thank you.

Regards,
Mark

Priority:	Normal
Type:	Note

Good Morning Dave,

Monica is in my office. Mark LeDesma and Krystal Toles responded last night saying we need a message from Dr. Stone to accompany the FAQs. Monica is going to contact Krystal Toles to get clarification on what is needed (i.e. Does Dr. Stone want a couple of sentences and the FAQ to go out referencing that a memo will be coming out of 10N to the Network Directors in the next couple of days).

NOTE: Whatever is decided—some of the FAQ responses state further information will be provided on 3/18/2019…so if the FAQ does not go out today…then the FAQ document will need to be revised for the question.

Tom

Hi Ilse,

AMERICAN OVERSIGHT

The Esketamine FAQ document is ready. We will send the document out to the Pharmacy Community tomorrow am if you could have someone send it out to the Mental Health listservs. The header shows this is a joint document between our offices.

Thank you for everything you have done on this Ilse. I have been watching all the e-mails on imed consent, memos, and other documents. You are making a ton of progress in a short period of time!

Let me know if you need anything else.

Tom

Hi Jenn,

AMERICAN OVERSIGHT

This is all set for final review. Could you take a look at it? Some of the responses to the FAQ are we will provide an update on 3/18/2019.

If this looks good to you, I will get it converted to a PDF and share with Maria and Ilse and then it is ready to be distributed through normal channels.

Check one more item of the list to complete!

Thank you for everything!

Good Morning Dave,
Monica is in my office. Mark LeDesma and Krystal Toles responded last night saying we need a message from Dr. Stone to accompany the FAQs. Monica is going to contact Krystal Toles to get clarification on what is needed (i.e. Does Dr. Stone want a couple of sentences and the FAQ to go out referencing that a memo will be coming out of 10N to the Network Directors in the next couple of days).
NOTE: (b) (5) .

Subject: FW: HHS bought a nasal spray for depression - DRAFT News Release - REVISED
Ilse,
By chance, do you know if Spravato® has been discussed on any Mental Health leadership calls yet? If so, could you please add to the list below? Also, make sure you agree with my COMMS plan that needs to be executed yet.
DRAFT message to 10P4 Actions:

Thanks, Monica. I got a bit more clarity from 10B.
They want to make sure that we have an internal comms plan in place to help answer questions from providers and Veterans before they clear the release.
Regards,
Mark

Mark – I know Pharmacy and Mental Health are working on FAQs, but let’s defer to Tom and Dave to see what plans are in place for internal communication. Let us know if you/10B want more for external, other than responses to queries/FAQs. If a statement is needed, we are happy to work on something.

AMERICAN OVERSIGHT

Hi Jenn,

This is all set for final review. Could you take a look at it? Some of the responses to the FAQ are we will provide an update on 3/18/2019.

If this looks good to you, I will get it converted to a PDF and share with Maria and Ilse and then it is ready to be distributed through normal channels.

Check one more item of the list to complete!

Thank you for everything!

Subject: RE: HHS bought a nasal spray for depression - DRAFT News Release - REVISED

Thanks, Monica. I got a bit more clarity from 10B.

They want to make sure that we have an internal comms plan in place to help answer questions from providers and Veterans before they clear the release.

Regards,
Mark

All systems cleared for launch ☺

We have the green light to post and e-mail the FAQ.

Once it e-mailed, could you ask Marie to forward me the e-mail? I know I am in the groups, but my Outlook has two tabs now 'Focused' and 'Other' and some e-mails randomly show-up in 'Other'.

Thank you!

Tom

Subject: RE: HHS bought a nasal spray for depression - DRAFT News Release

VHA Comms:
As you may have seen in the news last week, there is a new drug coming on the market to treat depression. VA will offer this to Veterans. Please see attached draft press release for your expedited review. Our Pharmacy SMEs (Tom Emmendorfer and Mike Valentino) are on the cc: line to address any questions. I also understand there is internal communication in draft for communication to the field.

Hi Monica,

AMERICAN OVERSIGHT

I just want to make sure I'm not missing anything. Per 10B:

"We are unable to clear the press release without having an internal communication ready for review and in place. (b) (5) ?"

Are we providing the bullet points to show what we're internally communicating?

Regards,
Mark

Will do! We will work on that tomorrow am. I got everything prepped for Maria to review and clear…

Ilse,

If you wouldn't mind, could you check out that e-mail next? I want to try and get out of here at a reasonable hour today and as soon as we got that wrapped up…I am out of here ☺

Thank you so much!

Tom

Dr. Carroll et al.

I got word from 10B that Dr. Stone wants the message to also come from his level. Can 10P craft a message for Dr. Stone to use to send to the field along with the FAQ?

Adding Krystal, Kathleen and Susan to help coordinate in this effort.

Regards,
Mark

Regret being late to the discussion. As you know, we are working on a 10N memo which will give direction to facilities about what they need to do to prepare for providing Spravato. It will be a fairly operational (how to) type of communication, but it would be vehicle on which to include a FAQ document. Typically after the communication is sent to the Network Directors, we recirculate it to all relevant email groups which would help spread all of the relevant information.

According to our discussions, the Veteran has to come to the certified site, self/administer intranasal drug and then be monitored for 2 hours by the prescriber at the site. The Veteran cannot get the intranasal med mailed to him/her for self-administration outside a certified site.

No, this is not a self-administered medication. It must be administered by a provider and patient has to be observed after.

Good afternoon Monica and team. Do you format draft press releases prior to clearing to 10B2B media team? Given the high level attention and involvement, would like to clear this forward, but am unsure about format.

Please make any necessary changes and forward for VHA comms review and VHA 10B as there's a potential quote included to attribute to either Dr. Stone or SECVA.

Thank you, Cassie

AMERICAN OVERSIGHT

Good afternoon Monica and team. Do you format draft press releases prior to clearing to 10B2B media team? Given the high level attention and involvement, would like to clear this forward, but am unsure about format.

Please make any necessary changes and forward for VHA comms review and VHA 10B as there's a potential quote included to attribute to either Dr. Stone or SECVA.

Thank you, Cassie

Subject: HHS bought a nasal spray for depression

Good evening, need some information on a nasal spray used for depression? POTUS heard HHS recently purchased and he felt it would be great for us. That's all I got. Can you pull info on what it would be, if we purchase currently, if we are looking into it etc. would sure appreciate anything you could provide by 10am.

AMERICAN OVERSIGHT

Thanks Dr. Carroll for calling. Tom and I just talked with Dr. Carroll and the news release is correct. Patients will administer the drug under the provider's direct supervision. The text provided below under BLUF was submitted as context/background in the email thread.

Subject: RE: HHS bought a nasal spray for depression - DRAFT News Release

I shared this with our leadership team in 10NC who identified an apparent discrepancy in the communication. Perhaps not intended, it seems to be saying two different things – does the Veteran administer or does the provider. In the BLUF below in the email it states "Spravato® will be available to VA providers to administer to Veterans based on their clinical assessment…" However, in the news release it says "Veterans will self-administer Spravato® nasal spray under the direct observation…" Recommend clarity in advance of release. Thanks.

Good afternoon Monica and team. Do you format draft press releases prior to clearing to 10B2B media team? Given the high level attention and involvement, would like to clear this forward, but am unsure about format.
Please make any necessary changes and forward for VHA comms review and VHA 10B as there's a potential quote included to attribute to either Dr. Stone or SECVA.
Thank you, Cassie

The attached external press release has been developed in coordination with 10P4P and 10NC5. We left a place holder in for a potential quote from Dr. Stone.
Request clearance to 10P for review.

VHA Comms:
As you may have seen in the news last week, there is a new drug coming on the market to treat depression. VA will offer this to Veterans. Please see attached draft press release for your expedited review. Our Pharmacy SMEs (Tom Emmendorfer and Mike Valentino) are on the cc: line to address any questions. I also understand there is internal communication in draft for communication to the field.

Good afternoon Monica and team. Do you format draft press releases prior to clearing to 10B2B media team? Given the high level attention and involvement, would like to clear this forward, but am unsure about format.

Please make any necessary changes and forward for VHA comms review and VHA 10B as there’s a potential quote included to attribute to either Dr. Stone or SECVA.

Thank you, Cassie

I shared this with our leadership team in 10NC who identified an apparent discrepancy in the communication. Perhaps not intended, it seems to be saying two different things – (b) (5)

Recommend clarity in advance of release. Thanks.

Good afternoon Monica and team. Do you format draft press releases prior to clearing to 10B2B media team? Given the high level attention and involvement, would like to clear this forward, but am unsure about format.
Please make any necessary changes and forward for VHA comms review and VHA 10B as there's a potential quote included to attribute to either Dr. Stone or SECVA.
Thank you, Cassie

Good afternoon Monica and team. Do you format draft press releases prior to clearing to 10B2B media team? Given the high level attention and involvement, would like to clear this forward, but am unsure about format.

Please make any necessary changes and forward for VHA comms review and VHA 10B as there's a potential quote included to attribute to either Dr. Stone or SECVA.

Thank you, Cassie

AMERICAN OVERSIGHT

Thanks Dr. Carroll for calling. Tom and I just talked with Dr. Carroll and the news release is correct. Patients will administer the drug under the provider's direct supervision. The text provided below under BLUF was submitted as context/background in the email thread.

VHA Comms:
As you may have seen in the news last week, there is a new drug coming on the market to treat depression. VA will offer this to Veterans. Please see attached draft press release for your expedited review. Our Pharmacy SMEs (Tom Emmendorfer and Mike Valentino) are on the cc: line to address any questions. I also understand there is internal communication in draft for communication to the field.

Good afternoon Monica and team. Do you format draft press releases prior to clearing to 10B2B media team? Given the high level attention and involvement, would like to clear this forward, but am unsure about format.

Please make any necessary changes and forward for VHA comms review and VHA 10B as there's a potential quote included to attribute to either Dr. Stone or SECVA.

Thank you, Cassie

Subject: FW: HHS bought a nasal spray for depression

The attached external press release has been developed in coordination with 10P4P and 10NC5. We left a place holder in for a potential quote from Dr. Stone.

Request clearance to 10P for review.

Subject: HHS bought a nasal spray for depression

Good evening, need some information on a nasal spray used for depression? POTUS heard HHS recently purchased and he felt it would be great for us. That's all I got. Can you pull info on what it would be, if we purchase currently, if we are looking into it etc. would sure appreciate anything you could provide by 10am.

Good afternoon Monica and team. Do you format draft press releases prior to clearing to 10B2B media team? Given the high level attention and involvement, would like to clear this forward, but am unsure about format.

Please make any necessary changes and forward for VHA comms review and VHA 10B as there's a potential quote included to attribute to either Dr. Stone or SECVA.

Thank you, Cassie

VHA Comms:
As you may have seen in the news last week, there is a new drug coming on the market to treat depression. VA will offer this to Veterans. Please see attached draft press release for your expedited review. Our Pharmacy SMEs (Tom Emmendorfer and Mike Valentino) are on the cc: line to address any questions. I also understand there is internal communication in draft for communication to the field.

Good afternoon Monica and team. Do you format draft press releases prior to clearing to 10B2B media team? Given the high level attention and involvement, would like to clear this forward, but am unsure about format.

Please make any necessary changes and forward for VHA comms review and VHA 10B as there's a potential quote included to attribute to either Dr. Stone or SECVA.

Thank you, Cassie

Good afternoon Monica and team. Do you format draft press releases prior to clearing to 10B2B media team? Given the high level attention and involvement, would like to clear this forward, but am unsure about format.

Please make any necessary changes and forward for VHA comms review and VHA 10B as there's a potential quote included to attribute to either Dr. Stone or SECVA.

Thank you, Cassie

Hi Cassie,

Jenn and I are on the phone together and we are working on the request now. I called Jon about 30 minutes ago to make sure what we are working on…is what they are looking for….we will send the info as soon as we are done.

Thank you,

Tom

AMERICAN OVERSIGHT

<{b6} va.gov>; Beck, Lucille B. <{b6} va.gov>
Subject: FW: HHS bought a nasal spray for depression

Good evening Tom and Jennifer. I am reaching out to you per Mike's Out of Office regarding the SECVA request for information for tomorrow morning (Jon Jensen email).

Sorry for the late outreach, but since information is requested for early tomorrow morning, trying to cover all bases to gain insight. Jennifer, the number in the Out of Office for Mike does not appear to be yours so I did not leave a voice mail message.

This may be a MH / Dave Carrol question regarding awareness and efficacy and potential VA interest, but want to be sure we weigh-in with any relevant information.

Thank you for any assistance, Cassie

Subject: RE: HHS bought a nasal spray for depression

Thanks Jon. While this is not what SECVA needs for tomorrow, it may be useful. I just read an article on this yesterday in the NY Times (see link below). It's a nasal spray version of the drug ketamine called esketamine. It was developed by a branch of J&J and is to be marketed under the name Spravato.

There is a National Institute of Mental Health Chief / researcher involved so no surprise with HHS backing. I am not aware of VA pursuit, but will see if Mike/Tom and Dave C have additional more relevant insight.

Below are the sites reporting use in FY15 from the assessment we did of the field back in fall 2016. The 2019 assessment went to the field in Feb and we are working to gather the final data from sites now. Hope to have updated data about sites using IV ketamine for treatment of MH conditions sometime later this month.

Subject: HHS bought a nasal spray for depression

Good evening, need some information on a nasal spray used for depression? POTUS heard HHS recently purchased and he felt it would be great for us. That's all I got. Can you pull info on what it would be, if we purchase currently, if we are looking into it etc. would sure appreciate anything you could provide by 10am.

That's a very good point. The list just gives the city location. There is no site listed in New Haven CT.

I am not sure about VAMC participation in the study, but I'd bet that we have some academic affiliates who were participants. Hence there may be some of our staff psychiatrists who had experience from their non-VA work. VA Connecticut/Yale is almost certainly one of those.

AMERICAN OVERSIGHT

I think it would be helpful as those sites may be more likely to have early interest in administration. Also, per the FDA clinical trials site, there were more than 90 participating locations for the clinical trial. Do you know if any VA medical centers participated in the clinical trial?

Hi Dave,

The briefing went very well. By chance, do you have a list of known VA medical facilities that are using intravenous ketamine for the treatment of refractory depression?

Thank you,

Tom

I've already reached out to Ginny Torrise in PBM to see if they are starting to work on national guidance around this, like Todd Semla developed re IV ketamine. I worked with him on that process and would be willing to do the same for the intranasal.
Also, I've already received a question from the field about this today (from Chief of Mental Health at Durham VA) wanting to know what VA is going to do about this. The questions from Veterans themselves are not likely far behind.
Also, around the product itself, I talked with people involved with the drug development at J&J a while ago (at the ketamine conference I attended for VA at Cold Spring Harbor). I suspect they will have the needed support up and ready to go very quickly - they've been waiting on this for a long time.

What do we know about this? My only info came from a New York Times article posted this morning. Although FDA approved it, I'm not sure when it will be available or the supports are in place for its use (e.g., the requirement to enter patient response information into a national database). Thanks.

Will do.

I've spoken to several private ketamine clinics in recent years, and the only physician type missing on your list that I have heard about is ED physicians. I also know of several clinics using APRNs under the supervision of one of those physicians listed below.

Subject: RE: HHS bought a nasal spray for depression

Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

We do not have information on that. I can follow up on the responses to the Somatic Treatment Field Assessment and reach out to facilities that report providing IV ketamine and ask them.

Yes – self reported data from the field.

Attached is a copy of the full Somatic Treatment Field Assessment – ketamine for MH is section III.

Below are the sites reporting use in FY15 from the assessment we did of the field back in fall 2016. The 2019 assessment went to the field in Feb and we are working to gather the final data from sites now. Hope to have updated data about sites using IV ketamine for treatment of MH conditions sometime later this month.

Subject: RE: HHS bought a nasal spray for depression
Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

We do not have information on that. I can follow up on the responses to the Somatic Treatment Field Assessment and reach out to facilities that report providing IV ketamine and ask them.

Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

We do not have information on that. I can follow up on the responses to the Somatic Treatment Field Assessment and reach out to facilities that report providing IV ketamine and ask them.

Hi Ilse,

Dave and I spoke this morning after the briefing to Dr. Stone. Action items

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.
    - • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.
    - • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

Bill,

I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.

Thank you!

Tom

Hi Mike,

On the way in this morning, I thought it may be good to send you a few bullet points on Spravato (just in case Dr Stone has any questions). Also, If you want me to hand out any of the materials that were hyperlinked in slides, just let me know I will have the materials with me at the meeting…otherwise, I will just keep the documents in my folder.

I printed 5 copies of your slides to bring down to the briefing as well.

Quick summary of points for Spravato:

Subject:	RE: HHS bought a nasal spray for depression
Date:	2019/03/11 09:30:43
Priority:	Normal
Type:	Note

Tom,
We don't really have a good way to pull the data on IV ketamine use. That is in part why we conducted the somatic treatment field assessment back in 2016 and now again this past month. I'll have data on reported number of patients treated with IV ketamine from the recent survey sometime soon. But the number reportedly treated in FY15 was 43 Veterans.
Ilse

Ilse,
This is great work. Could the PERC run a query for IV Ketamine users for treatment refractory depression?
We are getting requests for these data as well.
Thank you,
Tom

Great work, Ilse! Gives the agency the overall potential demand (and costing), and suspect sites will want to know their potential local demand. Really appreciate the great work by PBM to coordinate this work and Dr. Llorente.

Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

Below are the sites reporting use in FY15 from the assessment we did of the field back in fall 2016. The 2019 assessment went to the field in Feb and we are working to gather the final data from sites now. Hope to have updated data about sites using IV ketamine for treatment of MH conditions sometime later this month.

Thank you very much. Could some of these be individuals for whom a sedating antidepressant was added for sleep (trazadone added to SSRIs, for example?). Those prescriptions would be treating a side effect, rather than a reflection of a treatment resistance.

Will do.

I've spoken to several private ketamine clinics in recent years, and the only physician type missing on your list that I have heard about is ED physicians. I also know of several clinics using APRNs under the supervision of one of those physicians listed below.

Subject: RE: HHS bought a nasal spray for depression
Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

We do not have information on that. I can follow up on the responses to the Somatic Treatment Field Assessment and reach out to facilities that report providing IV ketamine and ask them.

AMERICAN OVERSIGHT

Hi Ilse,
Dave and I spoke this morning after the briefing to Dr. Stone. Action items

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.
  - • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.
  - • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

Bill,
I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.
Thank you!

Tom

Subject: FW: HHS bought a nasal spray for depression

Hi Jenn,

Could you have someone pull the ketamine PPV purchases for the last Fisal Year? I know we cannot tie that back to what is being used as part of protocol….but I just want to have it.

Also, could you call the J&J Federal Account Manager and found out if any health care system is able to buy this yet and the answers to the other questions you asked him last night?

Thank you!

Tom

Hi Jenn,

One other item that we talked about last night that may come up this am. National Formulary review process. I can describe that process. If we need to move this review up—how long do you think it would take for the Formulary Committee to review Spravato?

I will send everyone the materials I am going to bring down to morning report with me. I can take about 6 copies and check with Maria when she gets in to see if she wants to join me.

Good evening, need some information on a nasal spray used for depression? POTUS heard HHS recently purchased and he felt it would be great for us. That's all I got. Can you pull info on what it would be, if we purchase currently, if we are looking into it etc. would sure appreciate anything you could provide by 10am.

ECT data is below. This on captures ECT provided at VA facilities. There are likely some number of patients who need ECT and receive care at the 85 facilities that do not provide service on site, who subsequently get referred to care in the community for their ECT.
FY15
# of facilities providing on site ECT = 55 out of 140
# of unique Veterans receiving ECT = 849
FY17 (most recent year we have data)
# of facilities providing on site ECT = unknown
# of unique Veterans receiving ECT = 852

AMERICAN OVERSIGHT

I asked NEPEC to re-run the # of uniques for FY18 and I’ll have # of facilities later this month once we have the completed Somatic Treatment Field Assessment.

I will have PERC rerun the national numbers with and without trazodone. And I have facility reported data on ECT use and also know NEPEC has pulled data based on CPT codes in the past. I’ll work on getting those as well.

I agree. I wonder if low dose trazodone could be excluded.
Also, do we know how many patients receive ECT? That group would ostensibly meet criteria for this modality of treatment as well.

Subject: RE: HHS bought a nasal spray for depression
Yes, our methods are overly inclusive in capturing antidepressant Rx, and some of the “trials” with a class could be things like low dose trazodone for insomnia. I don’t have a great way to exclude that, other than to completely remove certain drugs from the data run. That might make sense for trazodone, but not for things like mirtazapine or TCAs, where I suspect we have substantial use for both sleep and depression treatment.

Thank you very much. Could some of these be individuals for whom a sedating antidepressant was added for sleep (trazadone added to SSRIs, for example?). Those prescriptions would be treating a side effect, rather than a reflection of a treatment resistance.

Will do.

I’ve spoken to several private ketamine clinics in recent years, and the only physician

AMERICAN OVERSIGHT

type missing on your list that I have heard about is ED physicians. I also know of several clinics using APRNs under the supervision of one of those physicians listed below.

Subject: RE: HHS bought a nasal spray for depression
Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

Hi Ilse,
Dave and I spoke this morning after the briefing to Dr. Stone. Action items

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.
    - • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.
    - • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

AMERICAN OVERSIGHT

Bill,
I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.
Thank you!

Tom

Hi Ilse,

Dave and I spoke this morning after the briefing to Dr. Stone. Action items

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.

AMERICAN OVERSIGHT

- ○ • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.
  - ○ • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

Bill,

I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.

Thank you!

Tom

This product is likely more hype than hope as compared to ketamine (the "es" in the name essentially means it is one half of the ketamine molecule). And we already use ketamine in VA. And it is cheap!

Subject: RE: HHS bought a nasal spray for depression

AMERICAN OVERSIGHT

Washington Post article today reported that the spray was just approved by the FDA scientific panel for severe depressionwhen other drugs have not been effective.
The drug has some potentially serious side effects and the panel's recommendation is to administer in controlled environments with patient surveillance.

Hi Cassie,

Jenn and I are on the phone together and we are working on the request now. I called Jon about 30 minutes ago to make sure what we are working on…is what they are looking for….we will send the info as soon as we are done.

Thank you,

Tom

Good evening Tom and Jennifer. I am reaching out to you per Mike's Out of Office regarding the SECVA request for information for tomorrow morning (Jon Jensen email).

Sorry for the late outreach, but since information is requested for early tomorrow morning, trying to cover all bases to gain insight. Jennifer, the number in the Out of Office for Mike does not appear to be yours so I did not leave a voice mail message.

This may be a MH / Dave Carrol question regarding awareness and efficacy and potential VA interest, but want to be sure we weigh-in with any relevant information.

Thank you for any assistance, Cassie

Thanks Jon. While this is not what SECVA needs for tomorrow, it may be useful. I just read an article on this yesterday in the NY Times (see link below). It's a nasal spray version of the drug ketamine called esketamine. It was developed by a branch of J&J and is to be marketed under the name Spravato.

There is a National Institute of Mental Health Chief / researcher involved so no surprise with HHS backing. I am not aware of VA pursuit, but will see if Mike/Tom and Dave C have additional more relevant insight.

They don't know yet. He said they are waiting for the info to be updated in daily med and then will come up with a date. Interestingly, it will be available through McKesson. He wants to set up a time to talk about the operational side of it, but it will have to wait until after the meeting next week, unless you think I need to talk to him sooner in light of these questions…..Let me know

Hi Jon,

AMERICAN OVERSIGHT

I hope all is going well. Below is the information that Jenn, Mike, and I pulled together for you. Let us know if you need anything else.

Tom

Bottom Line Up Front:
Spravato® will be available to VA providers to administer to Veterans based on their clinical assessment and the individual medical needs of our nation's Veterans.

Background Information:

- • The Food and Drug Administration (FDA) approved Spravato® on March 5, 2019.
- • Spravato's® chemical name is esketamine which is a S(+) enantiomer, a slightly different version of ketamine, and provides similar therapeutic effects to ketamine.
- • Intravenous ketamine has been used for several years in the United States for treatment refractory depression based on the body of medical evidence published in the literature.
- • Intravenous ketamine is FDA approved as an anesthetic agent for diagnostic and surgical procedures that do not require skeletal muscle relaxation and has been used for several decades.
- • Intravenous ketamine has been used for several years in the United States for treatment resistant depression and intractable neuropathic pain based on the body of medical evidence published in the literature.
- • VA Pharmacy Benefits Management (PBM) Services has developed a national protocol for the use of intravenous ketamine in treatment resistant depression and severe suicidal ideation which was published in December 2017 (attached).
- • VA PBM developed Guidance on Off Label Prescribing of drugs in August 2013 and the national protocol for the use of intravenous ketamine is consistent with this guidance (attached).
- • Spravato® is a Schedule III Controlled Substance and cannot be dispensed as an outpatient prescription for a patient to take home.
- • The patient self-administers Spravato® nasal spray under the supervision of a health care provider in a certified doctor's office or clinic, and the spray cannot be taken home.
- • Unlike ketamine which VA medical facilities can purchase unrestricted through the pharmaceutical prime vendor with next day delivery, Spravato® is only available through a restricted distribution system, under an FDA approved Risk Evaluation and Mitigation Strategy (REMS).
- • Spravato® must be administered in a certified medical office where the health care provider can monitor the patient.
- • Spravato® labeling contains a Boxed Warning that cautions that patients are at risk for sedation and difficulty with attention, judgment and thinking (dissociation), abuse and misuse, and suicidal thoughts and behaviors after administration of the drug.
- • Because of the risk of sedation and dissociation, patients must be monitored by a health care provider for at least two hours after receiving their Spravato® dose.

Hi Ilse,

Dave and I spoke this morning after the briefing to Dr. Stone. Action items

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.
    - • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.
    - • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

Bill,

I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.

Thank you!

Tom

Below are the sites reporting use in FY15 from the assessment we did of the field back in fall 2016. The 2019 assessment went to the field in Feb and we are working to gather the final data from sites now. Hope to have updated data about sites using IV ketamine for treatment of MH conditions sometime later this month.

Good evening, need some information on a nasal spray used for depression? POTUS heard HHS recently purchased and he felt it would be great for us. That's all I got. Can you pull info on what it would be, if we purchase currently, if we are looking into it etc. would sure appreciate anything you could provide by 10am.

Subject: RE: HHS bought a nasal spray for depression

Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

AMERICAN OVERSIGHT

Hi Ilse,

Dave and I spoke this morning after the briefing to Dr. Stone. Action items

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.
    - • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.
    - • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

Bill,

I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.

Thank you!

Tom

Subject: HHS bought a nasal spray for depression

Good evening, need some information on a nasal spray used for depression? POTUS heard HHS recently purchased and he felt it would be great for us. That's all I got. Can you pull info on what it would be, if we purchase currently, if we are looking into it etc. would sure appreciate anything you could provide by 10am.

Will do.

I've spoken to several private ketamine clinics in recent years, and the only physician type missing on your list that I have heard about is ED physicians. I also know of several clinics using APRNs under the supervision of one of those physicians listed below.

Subject: RE: HHS bought a nasal spray for depression

Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

We do not have information on that. I can follow up on the responses to the Somatic Treatment Field Assessment and reach out to facilities that report providing IV ketamine and ask them.

Hi Ilse,

Dave and I spoke this morning after the briefing to Dr. Stone. Action items

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.
    - • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.
    - • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

Bill,

I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.

Thank you!

Tom

Just spoke to Dr Stone. We need to get something a little earlier than 10. As soon as you can would be fantastic.
Secva has asked for an update.

Subject: HHS bought a nasal spray for depression

Good evening, need some information on a nasal spray used for depression? POTUS heard HHS recently purchased and he felt it would be great for us. That's all I got. Can you pull info on what it would be, if we purchase currently, if we are looking into it etc. would sure appreciate anything you could provide by 10am.

I will have PERC rerun the national numbers with and without trazodone. And I have facility reported data on ECT use and also know NEPEC has pulled data based on CPT codes in the past. I'll work on getting those as well.

Will do.

I've spoken to several private ketamine clinics in recent years, and the only physician type missing on your list that I have heard about is ED physicians. I also know of several clinics using APRNs under the supervision of one of those physicians listed below.

Subject: RE: HHS bought a nasal spray for depression

Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

Hi Ilse,

Dave and I spoke this morning after the briefing to Dr. Stone. Action items

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.
    - • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.
    - • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

Bill,

I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.

Thank you!

Tom

Subject: HHS bought a nasal spray for depression

Good evening, need some information on a nasal spray used for depression? POTUS heard HHS recently purchased and he felt it would be great for us. That's all I got. Can you pull info on what it would be, if we purchase currently, if we are looking into it etc. would sure appreciate anything you could provide by 10am.

Tom,
We don't really have a good way to pull the data on IV ketamine use. That is in part why we conducted the somatic treatment field assessment back in 2016 and now again this past month. I'll have data on reported number of patients treated with IV ketamine from the recent survey sometime soon. But the number reportedly treated in FY15 was 43 Veterans.

Ilse,

This is great work. Could the PERC run a query for IV Ketamine users for treatment refractory depression?

We are getting requests for these data as well.

Thank you,

Tom

Great work, Ilse! Gives the agency the overall potential demand (and costing), and suspect sites will want to know their potential local demand. Really appreciate the great work by PBM to coordinate this work and Dr. Llorente.

Hello everyone –

Here is what I've been able to pull together with PERC to answer the request "define the universe of patients that may meet the criteria for prescribing of Spravato®."

(b) (5)

If this seems like a reasonable approach, we will run this data by homestation, which will give us the #s for each VAMC.

Will do.

I've spoken to several private ketamine clinics in recent years, and the only physician type missing on your list that I have heard about is ED physicians. I also know of several clinics using APRNs under the supervision of one of those physicians listed below.

Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

Hi Ilse,

Dave and I spoke this morning after the briefing to Dr. Stone. Action items

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.
    - • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.
    - • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

Bill,

I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.

AMERICAN OVERSIGHT

Good evening, need some information on a nasal spray used for depression? POTUS heard HHS recently purchased and he felt it would be great for us. That's all I got. Can you pull info on what it would be, if we purchase currently, if we are looking into it etc. would sure appreciate anything you could provide by 10am.

AMERICAN OVERSIGHT

ECT data is below. This on captures ECT provided at VA facilities. There are likely some number of patients who need ECT and receive care at the 85 facilities that do not provide service on site, who subsequently get referred to care in the community for their ECT.

FY15
# of facilities providing on site ECT = 55 out of 140
# of unique Veterans receiving ECT = 849

FY17 (most recent year we have data)
# of facilities providing on site ECT = unknown
# of unique Veterans receiving ECT = 852

I asked NEPEC to re-run the # of uniques for FY18 and I'll have # of facilities later this month once we have the completed Somatic Treatment Field Assessment.

Will do.

I've spoken to several private ketamine clinics in recent years, and the only physician type missing on your list that I have heard about is ED physicians. I also know of several clinics using APRNs under the supervision of one of those physicians listed below.

Subject: RE: HHS bought a nasal spray for depression

Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

We do not have information on that. I can follow up on the responses to the Somatic Treatment Field Assessment and reach out to facilities that report providing IV ketamine and ask them.

Tom –

I'll reach out to Ethics to get things started. Happy to look at draft documents whenever you and Jenn have something ready to share.

Best,
Ilse

Hi Ilse,

Dave and I spoke this morning after the briefing to Dr. Stone. Action items

AMERICAN OVERSIGHT

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.
    - • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.
    - • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

Bill,

I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.

Thank you!

Tom

Yes – self reported data from the field.

Attached is a copy of the full Somatic Treatment Field Assessment – ketamine for MH is section III.

Hi Ilse,

Thank you very much for the information below!

Will the updated data also include any info on number of Veterans that have received ketamine for treatment of MH conditions?

Below are the sites reporting use in FY15 from the assessment we did of the field back in fall 2016. The 2019 assessment went to the field in Feb and we are working to gather the final data from sites now. Hope to have updated data about sites using IV ketamine for treatment of MH conditions sometime later this month.

AMERICAN OVERSIGHT

Hi Dave,

The briefing went very well. By chance, do you have a list of known VA medical facilities that are using intravenous ketamine for the treatment of refractory depression?

Thank you,

Tom

ECT data is below. This on captures ECT provided at VA facilities. There are likely some number of patients who need ECT and receive care at the 85 facilities that do not provide service on site, who subsequently get referred to care in the community for their ECT.

FY15
# of facilities providing on site ECT = 55 out of 140

AMERICAN OVERSIGHT

# of unique Veterans receiving ECT = 849

FY17 (most recent year we have data)
# of facilities providing on site ECT = unknown
# of unique Veterans receiving ECT = 852

I asked NEPEC to re-run the # of uniques for FY18 and I'll have # of facilities later this month once we have the completed Somatic Treatment Field Assessment.

Will do.

I've spoken to several private ketamine clinics in recent years, and the only physician type missing on your list that I have heard about is ED physicians. I also know of several clinics using APRNs under the supervision of one of those physicians listed below.

Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

We do not have information on that. I can follow up on the responses to the Somatic Treatment Field Assessment and reach out to facilities that report providing IV ketamine and ask them.

Hi Ilse,

Dave and I spoke this morning after the briefing to Dr. Stone. Action items

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.
    - • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.

AMERICAN OVERSIGHT

- • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

Bill,

I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.

Thank you!

Tom

Yes – self reported data from the field.

Attached is a copy of the full Somatic Treatment Field Assessment – ketamine for MH is section III.

Below are the sites reporting use in FY15 from the assessment we did of the field back in fall 2016. The 2019 assessment went to the field in Feb and we are working to gather the final data from sites now. Hope to have updated data about sites using IV ketamine for treatment of MH conditions sometime later this month.

ECT data is below. This on captures ECT provided at VA facilities. There are likely some number of patients who need ECT and receive care at the 85 facilities that do not provide service on site, who subsequently get referred to care in the community for their ECT.

FY15
# of facilities providing on site ECT = 55 out of 140
# of unique Veterans receiving ECT = 849

FY17 (most recent year we have data)
# of facilities providing on site ECT = unknown
# of unique Veterans receiving ECT = 852

I asked NEPEC to re-run the # of uniques for FY18 and I'll have # of facilities later this month once we have the completed Somatic Treatment Field Assessment.

I will have PERC rerun the national numbers with and without trazodone. And I have facility reported data on ECT use and also know NEPEC has pulled data based on CPT codes in the past. I'll work on getting those as well.

Subject: RE: HHS bought a nasal spray for depression

I agree. I wonder if low dose trazodone could be excluded.
Also, do we know how many patients receive ECT? That group would ostensibly meet criteria for this modality of treatment as well.

Will do.

I've spoken to several private ketamine clinics in recent years, and the only physician type missing on your list that I have heard about is ED physicians. I also know of several clinics using APRNs under the supervision of one of those physicians listed below.

Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

Hi Ilse,

Dave and I spoke this morning after the briefing to Dr. Stone. Action items

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.
    - • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.
    - • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

Bill,

I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.

Thank you!

Tom

Below are the sites reporting use in FY15 from the assessment we did of the field back in fall 2016. The 2019 assessment went to the field in Feb and we are working to gather the final data from sites now. Hope to have updated data about sites using IV ketamine for treatment of MH conditions sometime later this month.

What do we know about this? My only info came from a New York Times article posted this morning. Although FDA approved it, I'm not sure when it will be available or the supports are in place for its use (e.g., the requirement to enter patient response information into a national database). Thanks.

This medication is chemically similar to ketamine, can only be administered in medical office due to possible adverse effects. My understanding is that the patient will have to be monitored for approx 2 hours.

Subject: RE: HHS bought a nasal spray for depression

Washington Post article today reported that the spray was just approved by the FDA scientific panel for severe depressionwhen other drugs have not been effective.
The drug has some potentially serious side effects and the panel's recommendation is to administer in controlled environments with patient surveillance.

Subject: FW: HHS bought a nasal spray for depression

Good evening Tom and Jennifer. I am reaching out to you per Mike's Out of Office regarding the SECVA request for information for tomorrow morning (Jon Jensen email).

Sorry for the late outreach, but since information is requested for early tomorrow morning, trying to cover all bases to gain insight. Jennifer, the number in the Out of Office for Mike does not appear to be yours so I did not leave a voice mail message.

This may be a MH / Dave Carrol question regarding awareness and efficacy and potential VA interest, but want to be sure we weigh-in with any relevant information.

Thank you for any assistance, Cassie

Subject: RE: HHS bought a nasal spray for depression

Thanks Jon. While this is not what SECVA needs for tomorrow, it may be useful. I just read an article on this yesterday in the NY Times (see link below). It's a nasal spray version of the drug ketamine called esketamine. It was developed by a branch of J&J and is to be marketed under the name Spravato.

There is a National Institute of Mental Health Chief / researcher involved so no surprise with HHS backing. I am not aware of VA pursuit, but will see if Mike/Tom and Dave C have additional more relevant insight.

This might be a place where the VA could run a comparative effectiveness study. The only difference between ketamine and esketamine is a racemic v. enantiomeric drug (and the nasal v. IV administration). Unless the asymmetric carbon affects receptor binding they could be entirely equivalent. I have not seen the pricing, but I would guess ketamine is significantly less expensive.

Ilse,

This is great work. Could the PERC run a query for IV Ketamine users for treatment refractory depression?

We are getting requests for these data as well.

Thank you,

Tom

Great work, Ilse! Gives the agency the overall potential demand (and costing), and suspect sites will want to know their potential local demand. Really appreciate the great work by PBM to coordinate this work and Dr. Llorente.

Hello everyone –

Here is what I've been able to pull together with PERC to answer the request "define the universe of patients that may meet the criteria for prescribing of Spravato®."

(b) (5)

If this seems like a reasonable approach, we will run this data by homestation, which will give us the #s for each VAMC.

Will do.

I've spoken to several private ketamine clinics in recent years, and the only physician type missing on your list that I have heard about is ED physicians. I also know of several clinics using APRNs under the supervision of one of those physicians listed below.

Yes, if you could. My understanding is that in private sector, psychiatrists, anesthesiologists, neurologists, and pain medicine providers may administer. This is in part because IV ketamine is also used for intractable pain.

Hi Ilse,

Dave and I spoke this morning after the briefing to Dr. Stone. Action items

- • Mental Health and PBM to start working together with the Comms team to develop internal/external communication.
    - • NEXT STEPS: Jenn Z. and I can work with you on the communication. Jenn and I will send you over a draft document to review.
- • iMed Consent: At morning report-Ethics asked if Spravato will need an iMed Consent.
    - • NEXT STEPS: Could you contact Ethics and work with them to determine and develop an imed consent (if needed) for Spravato?

Bill,

I adding you to the e-mail as well as we will need your assistance with getting the external communication through the process.

Noted, and reasonable. Considering an existing evidence-based treatment for TRD prior to moving to esketamine or ketamine is totally reasonable. That said, not all patients are going to be willing to try ECT, but I think having that discussion with them should be part of a process of walking through treatment steps.

Hi Mike,

I believe they are referring to the SUSTAIN-1 trial that showed that: those patients in stable remission or with stable response who continued treatment with esketamine plus an oral antidepressant experienced a statistically significantly longer time to relapse of depressive symptoms than patients on placebo nasal spray plus an oral antidepressant. However, as noted in the FDA briefing document, the faster rate of relapse in those patients who were randomized to placebo nasal spray plus and oral antidepressant could reflect functional unblinding, with subjects realizing that they are no longer on esketamine after switching to placebo. Hope this helps.

Matthew

2.10 - FiercePharma: J&J depression drug Spravato gets half-hearted backing from VA doctors despite Trump's zeal (24 June, Eric Sagonowsky, 121k uvm; Washington, DC)

Despite unconventional support from President Donald Trump, Johnson &Johnson's Spravato didn't win broad backing at the U.S. Department of Veterans Affairs. Agency clinicians instead approved the depression spray's use on a limited basis, requiring patients to try other options first.

A team of VA clinicians last week voted against putting the drug on the VA's formulary, an agency spokeswoman said. Instead, the VA will require a process similar to prior authorizations for patients seeking treatment with the med. Aside from that limitation, the drug also carries strict administration requirements, such as a stipulation that doctors must monitor patients for two hours after dosing.

AMERICAN OVERSIGHT

Spravato is an altered form of ketamine, which is used legally in anesthesia and illegally as a street drug. The med, also known as esketamine, won FDA approval earlier this year in patients who have tried and failed on at least two other depression medications.

“These evidence-based processes will ensure the medication is prioritized for use in veterans who have not previously responded to adequate trials of other available treatments for major depression,” a VA spokeswoman told FiercePharma.

A J&J representative said the company is "committed to working with public and private payers, including the U.S. Department of Veteran Affairs, to ensure access to Spravato for patients who need it."

"We firmly believe that people suffering from treatment-resistant depression, including our nation’s veterans, deserve the opportunity to benefit from this breakthrough medicine," she added.

The run-up to the VA vote generated considerable media attention, particularly after Trump praised the drug in a meeting this month with Veterans Affairs Secretary Robert Wilkie. Trump told Wilkie he believed J&J would be “generous” on pricing, and that the drug could lead to an “incredible” reduction in veteran suicides, Bloomberg reported. He also offered to negotiate the drug’s price.

Adding to the scrutiny was a recent report by the Guardian and the Center for Public Integrity that the VA hurried its review and potential implementation of the med based on interest from the president.

Reacting in a statement to those headlines, House Committee on Veterans' Affairs chairman Mark Takano said he's "incredibly alarmed by reporting today that suggests Spravato, a controversial new drug, is being rushed through critical reviews and may be prescribed to veterans before fully vetting the potential risks and benefits."

The drug’s price has also generated criticism. Spravato costs $4,720 to $6,785 before discounts for the first month, and up to $3,450 for additional months. Last week, cost watchdog ICER called the drug overpriced, saying the company would have to slash its price by 25% to 52% to make it cost-effective, while a J&J spokeswoman said the analysis “underestimates the proven short- and long-term benefits” of the drug.

Spravato won approval in March and is one of several new or upcoming launches J&J has touted as a potential blockbuster.

One also has to look at SUSTAIN-1 and the underlying hypothesis being tested to frame this correctly. In the initial efficacy trials the hypothesis was that adding de novo esketamine to a de novo antidepressant would provide benefit in terms of less depression symptoms. One trial confirmed this hypothesis, and two did not.

In the SUSTAIN-1 trial, the underlying hypothesis being tested is in a highly selected population of responders (those who had had efficacy already demonstrated) would continuation of esketamine benefit (versus anti-depressant alone). That trial showed a benefit, essentially telling us that those who already have a benefit from therapy continue to benefit with prolonged use. This trial has more practical implications for those already on esketamine rather than telling us about de novo efficacy.

But, there are some substantive things to consider along the way:

1. • The SUSTAIN-1 patient population is a very selected group of high responders (e.g., >or + to 50% responders on MADRS) either in stable remission or having a stable response
2. • The prespecified primary analysis stated that they looked at those in stable remission (not stable response) and that part of the study only included 176 individuals (Figure 1)
3. • The preponderance of participants in stable remission were younger (average age around mid 40's) and mostly (white, European) women—about a third were men (i.e., in the stable remission group there were a total of 59 men [see Table 1)
4. • The average duration of MDD was about 110 to 112 weeks (stable remission patients) with most (about 79%) having had 2 or fewer oral antidepressants before screening (Table 1)

So, in this younger group of mostly white, European women with long durations of depression (more than 2 years) who were often tried on only 1 or 2 antidepressant drugs (about 74-79% in the stable remission group) during those episodes the continuation of esketmaine on highly selected and substantial responders had a benefit in terms of the number of relapses. While this could be considered

AMERICAN OVERSIGHT

"long term" follow-up findings, the study's small population (particularly with such a small numbers of males) does not equate to "proven" benefits of the drug, at least not In my calculation, in a population similar to our VA population. "Proven" drugs, for depression anyway, have long term use, with widespread clinical experience, in large diverse populations—or at the very least large properly conducted RCTs to base evidence upon. Moreover, while not seen in this study, this has to be viewed in the context of the prior efficacy studies (modest findings given the 2 negative "short-term" trials) and the potential, cumulative suicide signal.

Just my two cents.

Hi Mike,

Hard to answer – depends on your definition of "long-term". It (SUSTAIN-1) was certainly longer than the three TRANSFORM trials which were all 28 day in duration.
A couple of comments – only one non replicated study, small sample size, change in subjects' perception of treatment assignment may have been influenced by acute subjective effects (unblinding), uncertain if result generalize to esketamine naïve population (enriched population).

Thanks Matthew.

I went back and looked at how long SUSTAIN-1 went on. I mistakenly thought it was much shorter than it actually was, hence my question. To me, "long-term" means years not months or weeks.

Since most of the differences in relapse in SUSTAIN-1 occurred within 2-4 weeks, is it really valid for J&J to state there are long-term benefits?

Is it at least debatable or is it case closed?

Hi Mike,

I believe they are referring to the SUSTAIN-1 trial that showed that: those patients in stable remission or with stable response who continued treatment with esketamine plus an oral antidepressant experienced a statistically significantly longer time to relapse of depressive symptoms than patients on placebo nasal spray plus an oral antidepressant. However, as noted in the FDA briefing document, the faster rate of relapse in those patients who were randomized to placebo nasal spray plus and oral antidepressant could reflect functional unblinding, with subjects realizing that they are no longer on esketamine after switching to placebo. Hope this helps.

Before VA went to spend money on an esketamine CSP – which would take years to report results – we are very likely to find useful information from esketamine use. Assuming Fran has the CPRS template note in place, we should have better information than most naturalistic real-world retrospective studies. Data from that use could inform the need for a CSP, or further refine CSP hypotheses.

The functional unblinding mentioned below by Matthew F is very important. The IV ketamine effect sizes change depending upon the control group. Saline control yields a rather large effect size, IV midazolam less so.

Any VA study should include an active control. Returning to history from decades ago, alprazolam looked more like an antidepressant when compared only to amitriptyline. When compared to a TCA, lorazepam, and placebo, the two benzos performed similarly, beating placebo but not performing as well as the TCA. It was the end of company's "unique triazolo-ring structure" marketing campaign. That shift also helped psychiatry see alprazolam as just another benzodiazepine, making it seem less like an antidepressant.

Recent residency graduates are unaware alprazolam ever was considered an antidepressant. (b6)

Thanks Matthew.

I went back and looked at how long SUSTAIN-1 went on.

I thought it was much shorter than it actually was (hence my question….to me "long-term" means years or at least months, not weeks).

Since most of the differences in relapse in SUSTAIN-1 occurred within 2-4 weeks, is it valid for them to say this proves long-term benefit?

Mike

Hi Mike,

I believe they are referring to the SUSTAIN-1 trial that showed that: those patients in stable remission or with stable response who continued treatment with esketamine plus an oral antidepressant experienced a statistically significantly longer time to relapse of depressive symptoms than patients on placebo nasal spray plus an oral antidepressant. However, as noted in the FDA briefing document, the faster rate of relapse in those patients who were randomized to placebo nasal spray plus and oral antidepressant could reflect functional unblinding, with subjects realizing that they are no longer on esketamine after switching to placebo. Hope this helps.

Subject: From today's news clips

Hmm…..

What "…..proven…..long-term benefits of the drug" could J&J be referencing in the quote at the end of the article?

Mike

2.10 - FiercePharma: J&J depression drug Spravato gets half-hearted backing from VA doctors despite Trump's zeal (24 June, Eric Sagonowsky, 121k uvm; Washington, DC)

Despite unconventional support from President Donald Trump, Johnson &Johnson's Spravato didn't win broad backing at the U.S. Department of Veterans Affairs. Agency clinicians instead approved the depression spray's use on a limited basis, requiring patients to try other options first.

A team of VA clinicians last week voted against putting the drug on the VA's formulary, an agency spokeswoman said. Instead, the VA will require a process similar to prior authorizations for patients seeking treatment with the med. Aside from that limitation, the drug also carries strict administration requirements, such as a stipulation that doctors must monitor patients for two hours after dosing.

Spravato is an altered form of ketamine, which is used legally in anesthesia and illegally as a street drug. The med, also known as esketamine, won FDA approval earlier this year in patients who have tried and failed on at least two other depression medications.

"These evidence-based processes will ensure the medication is prioritized for use in veterans who have not previously responded to adequate trials of other available treatments for major depression," a VA spokeswoman told FiercePharma.

A J&J representative said the company is "committed to working with public and private payers, including the U.S. Department of Veteran Affairs, to ensure access to Spravato for patients who need it."

"We firmly believe that people suffering from treatment-resistant depression, including our nation's veterans, deserve the opportunity to benefit from this breakthrough medicine," she added.

The run-up to the VA vote generated considerable media attention, particularly after Trump praised the drug in a meeting this month with Veterans Affairs Secretary Robert Wilkie. Trump told Wilkie he believed J&J would be "generous" on pricing, and that the drug could lead to an

AMERICAN OVERSIGHT

“incredible” reduction in veteran suicides, Bloomberg reported. He also offered to negotiate the drug’s price.

Adding to the scrutiny was a recent report by the Guardian and the Center for Public Integrity that the VA hurried its review and potential implementation of the med based on interest from the president.

Reacting in a statement to those headlines, House Committee on Veterans' Affairs chairman Mark Takano said he's "incredibly alarmed by reporting today that suggests Spravato, a controversial new drug, is being rushed through critical reviews and may be prescribed to veterans before fully vetting the potential risks and benefits."

The drug’s price has also generated criticism. Spravato costs $4,720 to $6,785 before discounts for the first month, and up to $3,450 for additional months. Last week, cost watchdog ICER called the drug overpriced, saying the company would have to slash its price by 25% to 52% to make it cost-effective, while a J&J spokeswoman said the analysis “underestimates the proven short- and long-term benefits” of the drug.

Spravato won approval in March and is one of several new or upcoming launches J&J has touted as a potential blockbuster.

Matthew,

You are most welcome. I can safely say I've learned more about ketamine in the last 3 months than I ever knew before, and picked up some valuable info on depression along the way.

I'm confident we'll revisit esketamine as the company plans additional indications. All of this knowledge will be useful the next time around.

Regards,

Bruce

Subject: RE: EZ minutes

Hi Matthew,

A couple of thoughts..

I was interested in making sure the providers were aware the steps they needed to be do i.e. ….how to complete the forms etc. in order to prescribe esketamine. In addition to that, depending on space, explaining what you believe providers need to know about the drug PRIOR to ordering it which would of course include providing a brief overview of the evidence. What would you want providers to know and as a result, what decisions were made by the VA National Formulary Committee supporting the evidence.

I think a more detailed discussion might be more suited for the Ez Minutes Video which would be taped in late July. For that, I would review your slides, draft a script, send it to Dan (moderator) to add his spin and then have you review the script. Of course, I would be interested in letting the field know that VA Med SAFE was also monitoring the usage etc. if permitted.

Ez Minutes Newsletter is scheduled to be released Tues, Aug. 7th. The date for taping of the July Ez Minutes video is pending.

Open to thoughts/suggestions. If you have a date of the webinar that you spoke about, we could easily leverage that information.

AMERICAN OVERSIGHT

If you OR someone else would like to use the PBM Monthly Webinar platform to explain the agent to the field, I could make that happen. Right now, Aug. 20th might be available (will know in about a week) but Sept 17th is wide open.

https://www.military.com/daily-news/2019/06/25/trump-touts-mission-act-record-phone-call-thousands-veterans.html

Excerpt from President Trumps Mission Act phone call:

He also touted the newly available medication Spravato, a ketamine-based nasal spray made by Janssen Pharmaceuticals, a Johnson &Johnson subsidiary, that was fast-tracked earlier this year by the FDA for patients with treatment-resistant depression.

VA is in the process of treating some patients with the novel medication, which is based on an anesthetic (and well-known party drug) ketamine.

"I thought it was so fantastic," Trump said. "I heard about it -- I remember I read something, I saw something, and I immediately called [Wilkie] and said, please call the head of the company, of Johnson &Johnson, and let's see what we can do for the vets."

PBM anticipates that the review of the product will be completed by the national formulary committee in May 2019. PBM is working on REMS guidance for the field as we do with every other REMS product, and that should be ready as soon as J&J has the program fully implemented. This product will be available through McKesson once the facility and pharmacy are REMS certified.

More to come once the product is available.

Subject: FW: esketamine?

I called Janssen, they won't have the med available until the end of this month at the earliest. There is a REMS program: https://www.spravatorems.com/.
I'm not sure what the VA has planned for this med as far as VA Criteria For Use or a special ordering pathway. Adding the clinical email group.

AMERICAN OVERSIGHT

I have a patient with severe treatment resistant depression who is asking about esketamine. It appears that there is a REMS process. Is this something we can do within the VA?
If not, are you familiar with local providers we can refer to?

Thanks.

Great work all!
Agree with same procedure re the other sites.
I unfortunately will be at the airport but please send me an invite for Wed - will dial in schedule permitting. Thank you!
As soon as we are firm with Boston, I want to give Dr. Stone heads' up - appreciate it.
Teresa

Subject: esketamine updates

Hi everyone –

This morning at the MAP/VPE Committee meeting the following determinations regarding esketamine were approved:

1. • Nonformulary status confirmed (both MAP and VPE had voted to approve this status at their individual May meetings).
2. • Approved Do not promote status – what this means (from Mike Valentino): "Our current Handbook allows promotion of drugs as long as it is consistent with our formulary objectives, so making this drug non-promotable is an additional restriction. The rationale is that your office and my office reserve the right to educate VA staff about how this drug will be used in VA and how staff will be educated about that. We don't need the manufacturer sending conflicting messages." Take home: Jansen cannot promote at VA.
3. • Extended the data collection mandate of the Medication Use Evaluation (MUE) to include both IV ketamine and IN esketamine. We currently have an operational MUE for IV ketamine, but it is not mandatory to use it. Now it will be. What this means is we will be gathering more robust data on safety and efficacy on BOTH ketamine and esketamine, which will facilitate comparisons (right now we have no idea how they compare).
4. • Approved Criteria for Use (CFU), with multiple revisions on the most recent draft considered. I'm awaiting the final version, but most of the changes as I heard them discussed added content that bolstered safety and monitoring concerns.
5. • Approved National Protocol Guidance, also with multiple revisions of a similar nature to those made to the CFU.

I will be talking with Jen Zacher tomorrow afternoon to fully debrief and review everything that transpired. I will work with her determine how best to share these updates with both our Pharmacy and Mental Health colleagues in the field.

Best,
Ilse

Subject: FW: esketamine site visits - travel proposal

Hi Mike,
So, Ilse mentioned that she was sending this proposal to OMHSP when I spoke with her on Friday. She wants to set up several site visits to the VA sites that will be piloting esketamine, and also some community sites that are already doing ketamine/esketamine in order to strengthen the plan for implementation within VA. She would like for a PBM rep to come on the visits with her so that the pharmacy perspective is covered. I told her that while I didn't have an issue with sending someone from my staff, I wanted to discuss with you before committing…..

Looks like her proposal got approved, so was wondering what your thoughts were about sending someone out with her? Matthew Fuller is the most obvious choice from my staff, but was thinking that it might help to have Michelle or Jeanne go on at least one trip too to look at it from a pharmacy operations standpoint and how the controlled substance is being monitoring/dispensed in clinics.

I've got the green light to move forward with the site visits. Most urgent in terms of planning is Cleveland, since I will be there visiting family in a month and hoped to swing by the VA for a day during that visit. I've already back channeled with Matthew and he has a hold on the days on his calendar, to be on the safe side.

I'll work to nail down dates with the other sites in the next week, but you can see the locations and tentative dates in the word doc attached. That may help you identify some staff on your end.

Subject: esketamine site visits - travel proposal

Dear Dave –

I have developed a proposal with budget for a series of 5 esketamine site visits, to include a total of 9 sites (6 VA sites, 2 academic sites, 1 community provider site). Details can be found in the attached document, but highlights are below.

- • Requesting OMHSP funding for 2 people to attend each site visit
- • Schedule in document serves as an example of the amount of time spent at sites. Final dates and details of which site is visited on which date TBD following coordination with local sites.
- • PBM anticipates sending a representative along with us to these site visits, and will fund travel for their representative.
- • Total estimated budget expenses: **$12,622**

AMERICAN OVERSIGHT

Please let me know if you have any questions about the proposal, I would be happy to talk with you about it further if you like.

Thanks,
Ilse

Subject: FW: esketamine site visits - travel proposal

I've got the green light to move forward with the site visits. Most urgent in terms of planning is Cleveland, since I will be there visiting family in a month and hoped to swing by the VA for a day during that visit. I've already back channeled with Matthew and he has a hold on the days on his calendar, to be on the safe side.

I'll work to nail down dates with the other sites in the next week, but you can see the locations and tentative dates in the word doc attached. That may help you identify some staff on your end.

Ilse

AMERICAN OVERSIGHT

Cc: Gavin, Stacy <(b6) va.gov>
Subject: esketamine site visits - travel proposal

Dear Dave –

I have developed a proposal with budget for a series of 5 esketamine site visits, to include a total of 9 sites (6 VA sites, 2 academic sites, 1 community provider site). Details can be found in the attached document, but highlights are below.

- • Requesting OMHSP funding for 2 people to attend each site visit
- • Schedule in document serves as an example of the amount of time spent at sites. Final dates and details of which site is visited on which date TBD following coordination with local sites.
- • PBM anticipates sending a representative along with us to these site visits, and will fund travel for their representative.
- • Total estimated budget expenses: **$12,622**

Please let me know if you have any questions about the proposal, I would be happy to talk with you about it further if you like.

Thanks,
Ilse

Jenn,

AMERICAN OVERSIGHT

As you know, the short term esketamine trial resulting in its approval treated pts who had not adequately responded to at least two different antidepressant of adequate dose and duration. Would it be helpful for us to take a look at this pt population in the VA so that we have it ready for presentation? If so, should I ask Ashir, Fran, someone else? Thanks.

Matthew

Subject: RE: esketamine question

I'm very interested to see what we find.
According to the literature, about 1/3 of pts with MDD are considered "treatment-resistant". Is there a way we can capture this as a way a validating our data? Ie pts with treatment-resistance/total # of pts with MDD? Thoughts?

Thanks Matthew – this helps a great deal!

One final questions…For the highlighted section below. How far back do we look? Are you okay with going back 24 months from the index date of MDD and capturing the 2 trials in succession?

From: Fuller, Matthew A. (PBM)
Sent: Tuesday, March 26, 2019 4:14 PM
To: Cunningham, Fran <(b6) va.gov>
Subject: RE: esketamine question

Hi Fran,

We are interested in treatment resistant depression. However, I doubt providers will list it that way. If you are using ICD-10 codes I would use F32.xx, if you are using ICD-9 codes I would use 296.xx.
Current dx = currently depressed and have had at least two trials of antidepressants in succession either as individual agents or in combination.
An adequate trial can be defined as 8 or 12 weeks so we will look at both.
Hope this helps.

Matthew

Subject: RE: esketamine question
Importance: High

Thanks Matthew – I'm finishing the Abstract for the analysis and I have a couple of questions.

1. • We have all depression defined in our depression dx cohort. Do you have specific dx codes that you want us to use for major depressive disorder only?
2. • We will identify "current dx of major depressive disorder" as patients with a dx in the most recent 12 months. How far back do you want to look for the >/= 2 antidepressants? I think it should be more than just the most recent 12 months… I was thinking the MDD index date this year and looking within the previous 12 or 24 months for the medications but will go with your guidance.
3. • Within that time period we will at look at patients that were on the agents for 8 weeks duration only or 12 weeks duration only. Please let me know if this is what we agreed to or if it's too rigid.

Hi Matthew – Here are the codes we have for MDD.
Icd10 for MDD: F32 (single episode), F33 (recurrent)

From: Cunningham, Fran
Sent: Tuesday, March 26, 2019 3:56 PM
To: Fuller, Matthew A. (PBM) <(b6) va.gov>
Subject: RE: esketamine question
Importance: High

Thanks Matthew – I'm finishing the Abstract for the analysis and I have a couple of questions.

1. • We have all depression defined in our depression dx cohort. Do you have specific dx codes that you want us to use for major depressive disorder only?
2. • We will identify "current dx of major depressive disorder" as patients with a dx in the most recent 12 months. How far back do you want to look for the >/= 2 antidepressants? I think it should be more than just the most recent 12 months… I was thinking the MDD index date this year and looking within the previous 12 or 24 months for the medications but will go with your guidance.
3. • Within that time period we will at look at patients that were on the agents for 8 weeks duration only or 12 weeks duration only. Please let me know if this is what we agreed to or if it's too rigid.

Hi Fran,

Below is a list of antidepressants and the minimum dosage we want to use for our data pull. Thanks.

Matthew

Amitriptyline 150 mg
Amoxapine 300 mg
Bupropion 300 mg
Citalopram 40 mg
Clomipramine 150 mg
Desipramine 150 mg
Desvenlafaxine 100 mg
Doxepin 150 mg
Duloxetine 60 mg
Escitalopram 20 mg
Fluoxetine 40 mg
Fluvoxamine 150 mg
Imipramine 150 mg
Levomilnacipran 60 mg
Maprotiline 150 mg
Mirtazapine 45 mg
Nefazodone 300 mg
Nortriptyline 75 mg
Paroxetine 40 mg
Protriptyline 30 mg
Sertraline 200 mg
Trazodone 400 mg
Trimipramine 150 mg
Venlafaxine 225 mg
Vilazodone 20 mg
Vortioxetine 20 mg

Hi Jennifer and Matthew – We can definitely have Tom set up a call to discuss the overall esketamine project in detail. In the meantime Matthew we can chat briefly to get the ball rolling on what patients to look at so we don't lose time. Please let me know if you're free this morning. I just finished my 830 meeting and am free until 10.

Thanks,
Fran

Subject: esketamine question

Jenn,

As you know, the short term esketamine trial resulting in its approval treated pts who had not adequately responded to at least two different antidepressant of adequate dose and duration. Would it be helpful for us to take a look at this pt population in the VA so that we have it ready for presentation? If so, should I ask Ashir, Fran, someone else? Thanks.

Hi Audrey,

I believe you are referring to the implementation plan that Dr Wiechers presented (i.e. round 1, 2 and 3 sites). The plan that she presented is being rolled out nation wide with round 1 sites (those using IV ketamine + volunteers) going first followed by round 2 and 3 sites at a later date. In May 2019 the PBM MAP/VPE committee voted to keep esketamine nonformulary with CFU. The CFU and National protocol guidance have been developed and were approved this month. Therefore, while implementation will take place over time, sites can use as a nonformulary agent but will require following REMS and VA CFU. Hope this helps.

Good morning Matthew,

My name is Audrey Wadhwani I'm a pharmacy resident at the Roseburg VA in Oregon. The Chief of Pharmacy here, Dan Neal, has asked me to reach out to you after listening to the Esketamine presentation a couple weeks ago. We would like to know what we should tell our medical staff and patients when they ask if they can prescribe/use this medication. Do we information them that this medication will not be available for use until 2020 after pilot VA's complete their trial?

Thank you for your time,

Audrey

Already have that covered Mike. Fran and I are working with the REMS program so that MedSAFE will submit all of the REMS documents on behalf of VA through MedSAFE/the MUET. That will force the MUET as mandatory and will also allow us to force collection of all the data points that we need....We already met with the J&J REMS coordinator to get the ball rolling.

Is that what you are talking about or something else???

Not particularly Matt.

AMERICAN OVERSIGHT

If it comes up, you might want to give an update on the formulary actions:

- • CFU, monograph, etc. drafted, disseminated to the field and discussed at length at the last formulary meeting
- • On the agenda for this month's meeting and we anticipate the documents will be finalized and that a formulary decision "might" be made
- • Discussions pending about mandatory data collection and submission to PBM for IN esketamine and IV ketamine administration to assess comparative safety and efficacy

I know the last bullet is likely news to you both but I am fairly certain this will come up at next week's meeting. (b6) . I envision we could do this like we did with the coverage with evidence development we did with Drotrecogan Alfa (SP?) i.e. Xigris.

Mike

Not particularly Matt.

If it comes up, you might want to give an update on the formulary actions:

- • CFU, monograph, etc. drafted, disseminated to the field and discussed at length at the last formulary meeting
- • On the agenda for this month's meeting and we anticipate the documents will be finalized and that a formulary decision "might" be made
- • Discussions pending about mandatory data collection and submission to PBM for IN esketamine and IV ketamine administration to assess comparative safety and efficacy

I know the last bullet is likely news to you both but I am fairly certain this will come up at next week's meeting. (b6) I envision we could do this like we did with the coverage with evidence development we did with Drotrecogan Alfa (SP?) i.e. Xigris.

Mike

Hi Mike and Jenn,

Is there anything in particular you would like me to say on behalf of PBM during welcome?

Matthew

Hi everyone –

A quick reminder of the call in information for those able to join tomorrow. Please use the MODERATOR code listed below, as I anticipate we may need to mute the audience due to large number of participants.

Matthew – I will turn it over to you for slides 18-19 on updates re PBM policies. Please feel free to edit those slides if you like and send me revised slides tomorrow by 1 pm ET.

I will be en route to the airport with others - my apologies but please express my appreciation to all. Look forward to hearing any outcome to call.

Also, would like to give comms a heads' up about Boston as initial site - a good news story. Who do you all work with usually?

Thanks again! Great work/heavy lift.

Teresa

Good morning! I did not know if you all received this invite? If someone from pharmacy could represent us on the call that would be most appreciated. Thanks so much! I will not be able to dial in due to Joint Commission's visit. Take care. I hope that everyone has a good day!

Sondralyn

Esketamine Community of Practice

Second Wednesday of the month at 2 pm ET/11 am PT

Join Skype Meeting (Trouble Joining? Try Skype Web App)

Join audio by VANTS at 1-800-767-1750, participant code 45914#

The Esketamine Community of Practice is a monthly teleconference that supports the clinical implementation of intranasal esketamine for treatment resistant depression across VHA. The

AMERICAN OVERSIGHT

teleconference is open to everyone, but participation is strongly encouraged for leadership, providers, and staff working in mental health, pharmacy, and nursing at esketamine early adopter sites.

Calls will discuss progress in implementation, troubleshoot systems barriers, and develop best practices. Calls will also serve as a key venue for the Office of Mental Health and Suicide Prevention to convey updates on policies and guidance related to esketamine to the field.

For questions about this call or esketamine clinical implementation in general, please contact Dr. Ilse Wiechers with the Office of Mental Health and Suicide Prevention (b6) @va.gov

Perfect – thanks so much. If you could also say something to highlight Dr. Boyd's support and enthusiasm for this work, that would be much appreciated.

Ilse

Subject: RE: Esketamine Community of Practice

Hi Ilse. FYI, I am tracking and will be on the call at 2:00 (ET). I will likely join right at 2:00 (have another call at 1:30). Let me know if you have any particular messages that you want me to give. My current thought is to address the following

- • Thanks for being willing to join this important work
- • Reflects VA's commitment to bring the latest and best science into practice
- • Acknowledging that there is much yet to learn
- • We are committed to safety and quality and will proceed in a way to honor both
- • First steps and first experience will guide further implementation plans
- • Your active engagement and dialogue is critically important

Thanks
Dave

Esketamine Community of Practice

Second Wednesday of the month at 2 pm ET/11 am PT

Join Skype Meeting (Trouble Joining? Try Skype Web App)

Join audio by VANTS at 1-800-767-1750, participant code 45914#

The Esketamine Community of Practice is a monthly teleconference that supports the clinical implementation of intranasal esketamine for treatment resistant depression across VHA. The teleconference is open to everyone, but participation is strongly encouraged for leadership, providers, and staff working in mental health, pharmacy, and nursing at esketamine early adopter sites.

Calls will discuss progress in implementation, troubleshoot systems barriers, and develop best practices. Calls will also serve as a key venue for the Office of Mental Health and Suicide Prevention to convey updates on policies and guidance related to esketamine to the field.

For questions about this call or esketamine clinical implementation in general, please contact Dr. Ilse Wiechers with the Office of Mental Health and Suicide Prevention at Ilse.Wiechers@va.gov

Subject: RE: Esketamine Clinical Implementation Workgroup meeting

I'm ready with the old version that doesn't have the updated CFU/guidance info but covers the majority of information. I can discuss the current form and let them know we will be adding a couple of items from the CFU/guidance.

From: Wiechers, Ilse <(b6) va.gov>
Date: Tuesday, Jun 25, 2019, 2:18 PM
To: Fuller, Matthew A. (PBM) <(b6) va.gov>
Cc: Cunningham, Fran <(b6) va.gov>
Subject: RE: Esketamine Clinical Implementation Workgroup meeting

I had planned to have Fran and her team join the larger national Community of Practice call on Wed July 10th to walk through the MUE (and hopefully you can join that as well for the CFU/protocol update too, now that I think of it…)

I'm not sure if Fran will be ready for next Wed to share the MUE with the smaller implementation workgroup, but I'm going to cc her here and see what she thinks.

Ilse

AMERICAN OVERSIGHT

Hi Ilse,

Yes, I plan to join the call and can talk about the CFU and protocol guidance. Since the MAP/VPE committee voted to require completion of the VAMedSAFE safety form for the esketamine MUE as a condition of use, will Fran be talking about this on the call as well? I know you had that planned but could not recall when. Thanks.

Matthew

Hi Matthew –

I wanted to check and see if you are able to attend the workgroup meeting next Wednesday. I was hoping you could provide an update to everyone on the finalized versions of the CFU and national protocol guidance.

This will be our first meeting of the national workgroup and the 13 Early Adopter sites.

Ilse

AMERICAN OVERSIGHT

When: Wednesday, July 03, 2019 11:00 AM-12:00 PM (UTC-08:00) Pacific Time (US &Canada).
Where: Skype Meeting

This invitation is for the monthly call of the Esketamine Clinical Implementation Workgroup. Initial participants will include the National Workgroup members and teams from the Round 1 Early Adopter sites. Ideally, Early Adopter sites will have representation on the call from Mental Health, Pharmacy, and Nursing. We encourage as many members of the front-line staff and providers engaged in esketamine treatment as well as facility leadership to participate in these calls. Participation by VISN MH and Pharmacy teams is also welcome.

Initial invites are being sent to MH and Pharmacy service line leads and POC at Early Adopter sites, as well as VISN CMHOs and VPEs for the associated VISNs. ***Please forward to additional staff and providers at your sites, as appropriate***.

The call will occur on the **first Wed @ 11 am PT / 2 pm ET**, tentatively through the end of calendar year 2019, with additional calls based on assessment of need and group discussion. ***Please use Skype*** to join for audio and for shared desktop functionality (link and call in # below).

Please contact Dr. Ilse Wiechers(b6) va.gov) with any questions.

Hi Rob,

AMERICAN OVERSIGHT

The MAP felt that if a pt was prescribed an opiate for a medication condition and the Utox was positive that would not preclude them from receiving esketamine. They did not require that the pt be willing to stop the opiate. Regarding the benzo/non-benzo restriction; we currently have in the DRAFT protocol guidance the following language: (b) (5) [redacted]

Matthew

Subject: RE: esketamine and cocominant medications

Yes, that is the article that I am referring to. When you look in the supplement it gets more specific about what they excluded. It wasn't just patients with drugs of abuse. It included patients prescribed medications like opiates unless they were willing to stop it.

The purpose of this toolkit is to enable organizations to implement the National CLAS Standards and improve health equity. It is organized according to the enhanced National CLAS Standards, and provides practical tools and examples of CLAS, in addition to efforts to implement the National CLAS Standards that can be adapted for use by health care organizations. It is intended for organizations that have already decided to pursue CLAS, to improve equity and eliminate health care disparities; it is not a decision guide about whether to implement National CLAS Standards.

Good Morning,
I was wondering if anyone else has had strong pushback from pharmacy and the field on this? When the Somatic Treatment Survey came out, none of our facilities expressed an interest in providing Ketamine treatment. Besides the fast turnaround, the VISN Pharmacy Exec expressed the following concerns –

1. (b6)

Thank you both for your input.

Mitch, I am not aware of any requests.

Matthew, Dr. Hosanagar at Ann Arbor mentioned he received a memo yesterday on esketamine. I'm not sure of the content, but it may be the news release I found online.
https://www.va.gov/opa/pressrel/pressrelease.cfm?id=5220

I'll wait for any additional reviews to guide the MUE going forward.

FOR IMMEDIATE RELEASE
March 19, 2019

VA to make new nasal spray drug available for treatment-resistant depression

WASHINGTON — Today the U.S. Department of Veterans Affairs (VA) announced its health care providers will now be able to offer the newly approved Spravato nasal spray for treatment-resistant depression.

The treatment will be made available to Veterans based on their individual medical needs combined with providers' clinical assessments.

The move follows the March 5 Food and Drug Administration (FDA) approval of Spravato (esketamine) nasal spray. Spravato was approved for use in conjunction with an oral antidepressant for the treatment of treatment-resistant depression in adults.

"We're pleased to be able to expand options for Veterans with depression who have not responded to other treatments," said VA Secretary Robert Wilkie. "It reflects our commitment to seek new ways to provide the best health care available for our nation's Veterans."

Spravato will be available through a restricted distribution system under an FDA-approved Risk Evaluation and Mitigation Strategy (REMS). The purpose of the REMS is to mitigate the risks of serious adverse outcomes and the potential abuse and misuse of Spravato.

VA health care providers will monitor Veterans for serious adverse outcomes, such as sedation and difficulty with attention, judgment and thinking (dissociation), abuse and misuse, worsening of depression and suicidal thoughts and behaviors.

Veterans will self-administer Spravato nasal spray under the direct observation of a health care provider in a certified medical facility, and then must be monitored by a health care provider for at least two hours after receiving their dose. Spravato cannot be dispensed directly to Veterans for use at home.

For additional information on access to Mental Health Support for Veterans, visit VA Mental Health. Veterans in immediate crisis may call the Veterans Crisis Line at 800-273-8255 and press 1, text to 838255 or chat online at Veterans Crisis Line.

Hi everyone

Tom, thanks for adding me to the conversation. VHA Policy is that our providers may not prescribe, complete forms, or recommend medical cannabis. A VHA pharmacy could not provide the product nor pay for it. So this comes down to whether a community care provider can fill out those forms and the Veteran goes to the State run location to purchase the product. Would this be allowed? I can see a visit being coded for whatever issues the Veteran is seeking coverage for (in this case PTSD) and the act of

AMERICAN OVERSIGHT

recommending/prescribing cannabis is unknown to us as a payor. The provider gets paid and the Veteran gains access to the State approved program cannabis product (albeit they pay for that product).

Hi Cheryl/Ilse,

I have added Larry Mole to the e-mail to see if an authorized community care provider is allowed to follow a different set of rules in regards to prescribing marijuana than VA providers.

If not, I have added Dave Bricker from Office of Community Care to the e-mail as someone from OCC and assuming this a TriWest PC3 provider to ensure the appropriate action is taken.

Someone from OCC may want to review the process of reporting these type of prescribing practices with the VA Medical facilities thru the appropriate OCC channels…

Subject: RE: esketamine

We will have a C6 center that takes calls from those that are distant eligible and not seeing VA. There will be nurses and providers integrated to essentially do the same level of care coordination that is being done with the local office of community care teams. Thus there is clinical involvement from the VA side.

When a request for services for this care is received, a consult would need to be entered by someone with delegation of authority to approve the care.
This SEOC would then be applied.

Good morning!

The PBM Formulary group will be publishing the esketamine monograph, CFU and are participating with Office of Mental Health and Suicide Prevention (OMHSP) in developing the national protocol guidance. It's recommended to wait until the CFU and protocol guidance are complete before moving forward with a local SOP.

Thank you,

Hello Laura,
It is projected that the review will be completed between May and June.

The drug is not commercially launched yet, it should be available next week. It will be available through McKesson once sites certify with the REMS. The REMS site isn't live yet, so PBM will send more information out on what to do once it is available.

Subject: RE: Esketamine

Matthew, that is so frustrating. How does that happen? This has to be confusing to the field, etc. Have you asked Pete and Jenn since this would sidestep our usual processes?

Hi Lindsey,

Thanks for your question. Formulary status for esketamine has not been determined. Esketamine is currently be reviewed by VA PBM. It should be presented to the MAP/VPE committee in the next several months for decision making. Thanks.

Matthew

I was curious about this posting we received in VA Stories of Note: March 16-March 22 today.
Military.com (San Francisco), Mar. 20: VA to Offer New Ketamine-Based Nasal Spray for Depression
The newest FDA-approved medication to treat severe depression, a nasal spray based on the anesthetic (and misused hallucinogenic party drug) ketamine, will soon be available to veterans treated within the Department of Veterans Affairs.

Clicking the link, the article reads as if it was added to the formulary, but the formulary email from yesterday does not include it. We are afraid that people are going to start asking for it and we have no guidance. Any insight?

Jenn,

Thanks for the update. I will plan on moving esketamine to high priority. Given all the "interest" around this product I too thought it would be better for a F2F meeting but will now target the May call unless I hear otherwise.

Regarding aripiprazole LAI; it really does not matter what product we use. I suggest we go with the least expensive.(b) (6)
(b) (6)

Also, I will be driving all day Sunday and Monday. If something comes up in the interim please text me on my cell. Thanks.

Matthew

Subject: RE: Esketamine

Hi,
Sorry – the day got crazy….

So, I know I will see you next week, but wanted to give you a few updates…..

1. •(b) (6) ..do you think you can target moving this to a high priority and reviewing on the May calls? I told Mike V my preference was June because there are a lot of logistical issues so a face to face meeting would be easier, but I got asked to try for May. June will be the fall back. I will fill you in on the rest when I see you.
2. • I spoke with Otsuka regarding the Aristada/Maintena issue on Friday. They told me that if we add Aristada at a parity formulary placement, the will likely lower the amount of discount that they are offering, but they won't go to full FSS price. They didn't really quantify, just gave me some vague numbers, but I will try to have some idea of the cost and will jump in when you present. They also said that if VA was willing to make some kind of initiative to call out the fact that only certain injections (including Maintena) are indicated for bipolar, they might steepen

AMERICAN OVERSIGHT

their discount, but again, they didn't commit to numbers. Personally, I don't think we need to do anything on that topic, but open to your thoughts....

See you next week.

Subject: RE: Esketamine

The questions being asked are reasonable. Prior to the internal urgency, there was a tremendous amount of public media coverage of this medication. We received feedback that patients were contacting their primary care providers and asking when they might be able to come in for a prescription. So, the information is important to be able to address veteran inquiries, that then translate into provider inquiries. Further, it is important for everyone to understand the risk mitigation aspects.

That having been said, in so far as this treatment may also prove to be of benefit (albeit it may only be a handful of patients), we should assist facilities.

Because of the added logistics (cardiovascular monitoring), designated space for administration, choosing appropriate patients, consenting process, required education, and need for certification of the clinical setting, pharmacy, and patient enrollment, it makes a lot of sense to provide the information quickly so that the prep work can be started for those facilities who will be offering this unique service.

Lastly, if the facility is not able to offer the service (I think I saw at least one comment to that effect), they may be able to identify community providers who will offer the treatments, and the heads up information may facilitate working with community care contract providers.

Just a few thoughts.
Maria

Subject: RE: Esketamine

Good morning!

The PBM Formulary group will be publishing the esketamine monograph, CFU and are participating with Office of Mental Health and Suicide Prevention (OMHSP) in developing the national protocol guidance. It's recommended to wait until the CFU and protocol guidance are complete before moving forward with a local SOP.

Thank you,

Tera

Subject: Esketamine

Good morning,

AMERICAN OVERSIGHT

I know that we recently received guidance on REMS enrollment, ordering summary for the VA, and a draft of the CFU/monograph for intranasal esketamine. But has any site already developed a SOP or MCM? If so, would you mind sharing?

Thank you! Enjoy the rest of your week!

Ok. How will this work? Will academic detailing update and send to me to edit or do I need to track down the old module and create a new one? Thanks.

Subject: Don't kill the messenger.....

Hi,
Had a call with Ilse and the Academic Detailing crew.....based on all the esketamine buzz, Academic Detailing is going to move up the priority on updating their treatment resistant depression module. Instead of just looking at esketamine, it is going to look at everything.....I think there is an old module that just needs updates. They are apparently short-staffed, and Ilse and I asked them to have this done by the new year, so I graciously volunteered you to assist....they told me that wanted someone knowledgeable that can write.

Just didn't want you to be blindsided!

Subject: RE: Spravato/esketamine approval

Hi Abbie,

Please see the answers to your other questions.

Q: What is the estimated cost to the VA for Spravato/esketamine prescription per veteran?

A: The frequency of administration, dosage and duration of therapy will vary from patient to patient, so it is not possible to provide a cost per Veteran.

Q: How will the VA monitor its use nationwide?

A: VA will collect and aggregate effectiveness and safety data on each administration of the product.

This information will be reviewed with VA subject matter experts to continually assess this product's place in therapy for treatment resistant depression.

Subject: FW: Spravato/esketamine approval

Good morning,

We have received additional questions on Spravato/esketamine. Is it possible to receive responses by noon?

There are two new questions highlighted below. For everyone awareness I am copying the statement that was cleared last week.

After reviewing the available published evidence regarding the safety and effectiveness of esketamine (Spravato), a team of VA clinicians approved on June 20 the use of esketamine (Spravato) on a non-formulary basis. This process is similar to "prior authorization" formulary designations used in non-VA health care systems, and will enable VA psychiatrists to offer esketamine to patients when clinically indicated.

In addition, VA developed clinical and procedural guidance and other tools to promote thoughtful patient selection and safe administration practices, in keeping with the FDA-approved indications for esketamine use and safety requirements. These evidence-based processes will ensure the medication is prioritized for use in Veterans who have not previously responded to adequate trials of other available treatments for major depression.

VA will closely monitor the use of esketamine in Veterans to more fully understand its relative safety and effectiveness as compared to other available treatments. Based on this information, VA may revise its clinical guidance and formulary status if warranted.

This decision reflects VA's commitment to seek new ways to provide the best health care available for our nation's Veterans.

Thanks,
Jill

Subject: [EXTERNAL] Re: Spravato/esketamine approval

Thanks so much for this, Susan.

Does VA have any idea of how much esketamine will cost per dosage or course?

Is there an existing contract with a particular producer of the drug? If so, what was the amount of that contract?

Thanks again,

Abbie Bennett

Subject: RE: Spravato/esketamine approval

Hi Abbie,

Please see the answers to your other questions.

Q: What is the estimated cost to the VA for Spravato/esketamine prescription per veteran?

AMERICAN OVERSIGHT

A: The frequency of administration, dosage and duration of therapy will vary from patient to patient, so it is not possible to provide a cost per Veteran.

Q: How will the VA monitor its use nationwide?

A: VA will collect and aggregate effectiveness and safety data on each administration of the product.

This information will be reviewed with VA subject matter experts to continually assess this product's place in therapy for treatment resistant depression.

Regards,

Susan Carter

Subject: RE: Anti-Depression Drug

Below is the statement we put out.
After reviewing the available published evidence regarding the safety and effectiveness of esketamine (Spravato), a team of VA clinicians approved on June 20 the use of esketamine (Spravato) on a non-formulary basis. This process is similar to "prior authorization" formulary designations used in non-VA health care systems, and will enable VA psychiatrists to offer esketamine to patients when clinically indicated.

In addition, VA developed clinical and procedural guidance and other tools to promote thoughtful patient selection and safe administration practices, in keeping with the FDA-approved indications for esketamine use and safety requirements. These evidence-based processes will ensure the medication is prioritized for use in Veterans who have not previously responded to adequate trials of other available treatments for major depression.

AMERICAN OVERSIGHT

VA will closely monitor the use of esketamine in Veterans to more fully understand its relative safety and effectiveness as compared to other available treatments. Based on this information, VA may revise its clinical guidance and formulary status if warranted.

This decision reflects VA's commitment to seek new ways to provide the best health care available for our nation's Veterans.

What are the ramifications of this and what is this committee? I told the President we had a successful application of the drug in Boston.

I think you are right on. I also think that it may be valuable to remind people that gearing up for implementation will take time. There are many steps, many people involved – i.e., so although it may seem somewhat premature now, by the time the medication is available everything will be in place. Thanks.

Subject: RE: ACTION - FW: Memorandum: Certification with SPRAVATO™ Risk Evaluation and Mitigation Strategy (REMS)

Dear Jonathan –

Thanks for being in touch with your questions. Our efforts here are to ensure that access to this medication, when clinically appropriate for use, is available to Veterans regardless of location. My aim is to ensure we have processes and procedures in place that are consistent across the VHA system to ensure safe use of this medication.

This memo to ensure REMS certification is step 1 of a multistep process. I am working now with SMEs on developing national guidance for clinical procedures for administration of the medication, including safety monitoring. By asking all facilities to certify with the FDA REMS, we are hoping to minimize the barriers to access for when clinical use is possible.

AMERICAN OVERSIGHT

The Spravato® formulary review will be on the May 2019 National Formulary Committee agenda. Prior to the National Formulary Committee review, VA providers will be able to prescribe Spravato® based on their clinical assessment and the individual medical needs of the Veteran.

Please let me know if you have any additional questions.

Best,
Ilse

Subject: FW: ACTION - FW: Memorandum: Certification with SPRAVATO™ Risk Evaluation and Mitigation Strategy (REMS)

Good morning,

Are you able to provide any context here? It appears that we are being required to register as a provider of a drug that is not yet on our formulary. As a service chief, I am being asked to certify that I have procedures in place to administer this medication, when I am not even sure we are ready to prescribe it.

(b6)

Any information is helpful. Thank you. Jonathan

Subject: Memorandum: Certification with SPRAVATO™ Risk Evaluation and Mitigation Strategy (REMS)

Good Afternoon,

Please see the attached memorandum "Certification with SPRAVATO™ Risk Evaluation and Mitigation Strategy (REMS)."

1. The purpose of this memorandum and its attachments is to outline the procedures for the use of Spravato® (eskatamine) nasal spray which was approved by the Food and Drug Administration (FDA) on March 5, 2019, to be used in conjunction with an oral antidepressant, for the treatment of depression in adults who have tried other antidepressant medicines but have not benefited from them (see Attachment A for Esketamine Frequently Asked Questions).

AMERICAN OVERSIGHT

2. Because of the risk of serious adverse outcomes resulting from sedation and dissociation caused by Spravato® administration, and the potential for abuse and misuse of the drug, it is only available through a restricted distribution system, under an FDA approved Risk Evaluation and Mitigation Strategy (REMS). Please see and follow instructions in Attachment B for REMS Healthcare Setting Certification Guidance.

3. All medical centers must become a Spravato® REMS certified Healthcare Setting and certified Pharmacy. *Within 30 days of this memorandum*, facilities should report completion of REMS Healthcare Setting certification to their VISN Chief Mental Health Officer, who should then report VISN-wide REMS certification by email to Dr. Ilse Wiechers at *(b)(6)* @va.gov.

4. There are resource requirements that facilities must plan to accommodate. Spravato® is intended for patient self-administration under the direct observation of a healthcare provider, and patients are required to be monitored by a healthcare provider for at least 2 hours after Spravato® administration. Spravato® must never be dispensed directly to a patient for home use.

5. • No special privileges are required to prescribe Spravato®.

6. Once educational materials from the manufacturer of Spravato® are made available to VA to review, the review and use of those materials will be consistent with VHA Directive, 1108.10, Promotion of Drugs and Drug-Related Supplies By Pharmaceutical Company Representatives (PCR) located at: https://www.va.gov/vhapublications/ViewPublication.asp?pub_ID=6435.

7. Please contact Ilse Wiechers, MD, Office of Mental Health and Suicide Prevention at *(b)(6)* @va.gov with any questions related to this request.

Renee Oshinski

Subject: RE: a request for our collaboration with the VA

Hi(b6)
Attached is the updated VA data request document with changes made based on our discussion on this a few days ago. When we spoke, we had discussed using "price paid" instead of "cost", for anti-depressant use. I have stuck to using costs here since these are essentially costs to the VA that would come from reimbursed claims, and can be different therapies for different patients. Please let me know if you think otherwise.

The attached document now specifies a suggested time-duration for the VA to use to look up TRD patient population and associated health care resource use, and specifies resource use to be depression management-related. Mortality and utility-specific requests have now been removed since we believe the VA will not have any data on these estimates.

Thank You.

AMERICAN OVERSIGHT

Hi (b6)

I believe this can be done. It is still early days for Xarelto, which can be a good thing actually since we can model this scenario alongside our main analysis. For esketamine, as you mentioned, population characteristics such as age and gender mix, comorbidities, and cost parameters would be the ones we can change to fit a VA setting. Will speak to the modeling group about this and revert by the end of this week.

(b6)

On Apr 1, 2019, at 6:06 PM, (b6) (b)(6) wrote:

Hi guys,

In a recent conversation with the VA we decided to try a pilot effort in "customizing" one of our reports to their population and their costs. This pilot is intended to serve as a proof of concept, so it doesn't have to be perfect, but here's what we were thinking: for esketamine or Xarelto/Vascepa, which parameter inputs would we want the VA to provide in order to give them model results that reflected their system/population -- but they would have to be data points that they can find easily in their medical records/utilization records. What comes to my mind are things like level of comorbidities/severity; age; cost and mix of comparators; cost of events like hospitalization, ER visit, etc.

Can you let me know whether you think it would be possible to get an Excel chart or something similar with a list of these data elements so we could give it to the VA, have them fill it out, and then use it to run a "VA" scenario analysis? There is no specific timeline for this so it's not like we have to squeeze it in during a busy phase for the modelers or us, but let me know what you think about how big an ask this would be. Thanks!

Hi AJ -

We'd appreciate a briefing on VA's process to consider, deliberate and add drugs to its formulary. In particular, we'd like an overview of the drug Spravato - we understand it's under consideration. Sometime in the next two weeks would be great.

Thanks,
Dahlia

Hi AJ -

We'd appreciate a briefing on VA's process to consider, deliberate and add drugs to its formulary. In particular, we'd like an overview of the drug Spravato - we understand it's under consideration. Sometime in the next two weeks would be great.

Thanks,
Dahlia

Hi Jenn and Pete,

I've been asked to brief the SVAC and HVAC majority and minority staff (i.e., 4 corners) about our formulary process and about the esketamine review.

I've drafted some slides and hope you can review them, correct any inaccuracies (especially about the composition of the MAP and VPE committees), add anything you think would he helpful (considering that they want me to use as FEW slides as possible) and send back to me?

Thanks in advance

Mike

Subject: [EXTERNAL] Briefing on formulary process

Hi AJ -

We'd appreciate a briefing on VA's process to consider, deliberate and add drugs to its formulary. In particular, we'd like an overview of the drug Spravato - we understand it's under consideration. Sometime in the next two weeks would be great.

Thanks,
Dahlia

Subject: FW: 26 August Veterans Affairs Media Summary and News Clips

Morning,

The below are submitted FYSA:

August 24th:

- • President orders VA to purchase new drug – esketamine (1.4, 1.7), VA opens research center for Burn Pit related illness, Veterans have to ravel to cochlear implants, Physician Assistants fight for right to follow patients care in hospice facilities,

August 25th:

- • Exoskeleton helps Veteran walk again, local VAMC agrotherapy program, foundation raise funds for therapy golf course for Veterans, local VAMC honors women Veterans, local VAMC garden helps address food instability

August 26th:

- • Article highlighting "My Life My Story"

Dennis

August 24th

1.4 - The Atlantic: Trump Orders 'a Lot' of Ketamine for Depressed Veterans (23 August, James Hamblin, 22.4M uvm; Washington, DC)
President Donald Trump said on Wednesday that the government will purchase "a lot" of the drug esketamine, a derivative of ketamine. Though ketamine is known as a recreational hallucinogen, Trump asserted that a new nasal-spray derivative would be of great benefit to veterans with depression. As he left the White House for a veterans' conference in Kentucky, he told reporters that he had instructed the Department of Veterans Affairs to make a large purchase—overriding a recent decision by the doctors who manage the hospitals' formulary of which drugs are to be prescribed.

1.7 - Government Executive: Trump Told the VA to Order 'a Lot' of Ketamine for Vets (23 August, James Hamblin, 250k uvm; Washington, DC)
President Donald Trump said on Wednesday that the government will purchase "a lot" of the drug esketamine, a derivative of ketamine. Though ketamine is known as a recreational hallucinogen, Trump asserted that a new nasal-spray derivative would be of great benefit to veterans with depression.

Hyperlink to Above

1.5 - Military.com: After Mandate from Congress, VA Opens Research Center for Burn Pit-Related Illnesses (23 August, Patricia Kime, 4.3M uvm; San Francisco, CA)
The Department of Veterans Affairs is increasing its focus on health conditions linked to burn pits and other airborne pollution in combat zones, establishing a "center of excellence" to better understand the extent of related illnesses and treatments for affected veterans.

AMERICAN OVERSIGHT

2.1 - Reuters: VA facilities offering cochlear implants to vets are few and far between (23 August, Lisa Rapaport, 24.6M uvm; New York, NY)
Even though American veterans are at high risk for the type of hearing loss that may be improved with cochlear implants, many of them live hours from a VA facility that provides cochlear implant services, a U.S. study suggests.

Hyperlink to Above

2.3 - Medscape: PAs Fight for Right to Follow Patients Into Hospice (23 August, Ingrid Hein, 8.9M uvm; New York, NY)
"Every day I see someone we should have seen sooner," said Judy Knudson, PA-C, MPAS, Hospice and Palliative Medicine, University of Colorado Hospital, Aurora. She recalls a Veterans Affairs (VA) patient she saw briefly after treatment. His cancer therapy was ending, and he was preparing to die.

Hyperlink to Above

August 25th

2.6 - Kearney Hub: Device helps Lawter, a paraplegic, take first steps in 25 years (24 August, Mary Jane Skala, 71k uvm; Kearney, NE)
Tammy Lawter struggled to hold back tears. Paralyzed from the chest down 25 years ago, she slowly took her first steps this summer with the assistance of a device called an Indego Exoskeleton. “I couldn’t feel my legs, so it was kind of weird, but it felt really good,” she said. “It was tempting to stare at my feet to see if they were moving. I was trying hard not to cry, but if I cried, I knew I wouldn’t be able to see.”

Hyperlink to Above

6.1 - U.S. News &World Report (AP): Veterans Program Yields More Than Just Honey (24 August, Michelle James, 23.3M uvm; Washington, DC)
For 10 days, Ed Forney chatted with each visitor who passed by his table at the West Virginia Grown Country Store at the State Fair of West Virginia. Forney's display attracted a lot of attention, too. Turns out, fairgoers have quite the sweet tooth and there isn't much sweeter — even at the state fair, where food lurks around every corner — than a bottle of honey.

Hyperlink to Above

6.3 - WSAW (CBS-7, Video): Simcakoski Foundation raises money for therapy golf course for veterans (24 August, Stella Porter, 212k uvm; Wausau, WI)
About 150 golfers hit the links at the Glacier Wood Golf Club in Iola on Saturday, playing a round to raise money for the Simcakoski Foundation as a part of their second annual golf outing. The foundation works to help veterans receive proper mental healthcare.

Hyperlink to Above

6.5 - WYOU (CBS-22, Video): Female veterans honored for their service (24 August, Morgan Parrish, 117k uvm; Wilkes Barre, PA)

AMERICAN OVERSIGHT

Pennsylvania is home to the fourth-largest veteran population in the country. Female veterans, who account for roughly eight percent of that population, were honored Saturday morning for their service. Dozens of community members gathered at the Wilkes-Barre VA Center Saturday morning for a women veterans town hall and expo.

Hyperlink to Above

6.11 - The Sheridan Press: Feeding communities: Program helps bridge gap for affordable food (24 August, Claire Schnatterbeck, 18k uvm; Sheridan, WY)
When looking for food on a slim budget, people don't usually turn to the fruit and vegetable section of a grocery store or seek organic produce. Sometimes, when food instability is affecting families, healthy food and cheap food seem mutually exclusive. However, the Cent$able Nutrition program through University of Wyoming Extension at Sheridan College is looking...

AMERICAN OVERSIGHT

1. Top Stories

1.1 - The New York Times (AP): AP Fact Check: Trump's Swerves on Economy, Guns and Migrants (24 August, 98.3M uvm; New York, NY)
President Donald Trump can't seem to get his facts straight when it comes to Barack Obama. From the economy to veterans and immigration, Trump routinely claims achievements of the former president as fully his own or distorts the truth to undermine the Democrat's legacy. On problems uniquely his own, Trump deflects.

Hyperlink to Above

1.2 - WPEC (CBS-12, Video): Report finds local VA leaders 'lacked awareness' ahead of veteran's suicide (25 August, Jay O'Brien, 442k uvm; West Palm Beach, FL)
A recent report from government investigators found leaders at the West Palm Beach Veteran's Administration Hospital "lacked awareness" about aspects of patient safety, in the wake of a soldier's suicide in March 2019. Additionally, the report found several lapses in protocol by hospital staff, including security cameras that were out of work "for years."

Hyperlink to Above

1.3 - Charleston Gazette-Mail: Veteran's death ruled homicide amid investigation into deaths at VA hospital (24 August, Lacie Pierson, 202k uvm; Charleston, WV)
A Ritchie County woman says her father was one of about 10 patients who died at the Veterans Affairs medical center in Clarksburg after they were wrongfully injected with insulin by a person who is known to federal administrators through an investigation into the deaths. A deputy medical examiner with the U.S. Department of Defense ruled the death of Felix "Kirk" McDermott a homicide…

2. Improving Customer Service

2.1 - KDKA (CBS-2, Video): Westmoreland County Man's Death Ruled A Homicide After VA Hospital Treatment In West Virginia (24 August, Bob Allen, 1.2M uvm; Pittsburgh, PA)
The death of a military veteran from Ruffs Dale in Westmoreland County is the subject of a wrongful death lawsuit following treatment at a veterans hospital. Retired Sergeant Felix McDermott died April 8, 2018, at the Loius A. Johnson VA Medical Center in Clarksburg, West Virginia after he was injected with a fatal dose of insulin while at the center, the complaint said.

Hyperlink to Above

2.2 - Daily Press: Aug. 24 Letters: Unions, ship building and the electoral college (23 August, 370k uvm; Newport News, VA)
VA union fight: It is often said that those who do not know their history, are doomed to repeat it. This is a dangerous time in our country for many groups of people. One group that should not be overlooked is labor unions. Unions help level the playing field. Labor unions are the reason we have child labor laws, health benefits, livable wages, weekends off, eight-hour work days, and safe working conditions.

2.3 - The Columbian: **Seeking care for mental health a top frustration for vets** (24 August, Tatiana Parafiniuk-Talesnick, 309k uvm; Vancouver, WA)
Oregon veterans may be at lower risk for depression or sadness, but they are more likely to die from suicide and opioid overdose than nonveterans, according to a recent state study on veteran health. “We’re just so focused on the mission,” Laura Follett, a Springfield resident and a 15-year Navy veteran, said. “We’re not necessarily focused on ourselves, you know?”

Hyperlink to Above

2.4 - MetroNews: **Manchin, Capito call for investigations after claims of suspicious deaths at Clarksburg VA hospital** (23 August, Jeff Jenkins, 242k uvm; Charleston, WV)
Both U.S. Senators Joe Manchin and Shelley Moore Capito are calling for full investigations after learning of a claim that a patient at the VA Medical Center in Clarksburg was the victim of homicide while in the care of the hospital while also learning there may have been a number of other deaths with similar circumstances.

Hyperlink to Above

2.5 - KTVQ (CBS-2): **Montana VA announces new Chief of Staff** (24 August, 169k uvm; Billings, MT)
The Montana VA Health Care System welcomed Dr. JP Maganito as the new Chief of Staff on July 21, 2019. Dr. Maganito originally joined the Montana VA Health Care System, Fort Harrison in 2012, serving as the Staff Gynecologist and Occupational Health Medical Officer where he became the Women’s Health Medical Director until 2015.

Hyperlink to Above

2.6 - Kearney Hub: **Device helps Lawter, a paraplegic, take first steps in 25 years** (24 August, Mary Jane Skala, 71k uvm; Kearney, NE)
Tammy Lawter struggled to hold back tears. Paralyzed from the chest down 25 years ago, she slowly took her first steps this summer with the assistance of a device called an Indego Exoskeleton. “I couldn’t feel my legs, so it was kind of weird, but it felt really good,” she said. “It was tempting to stare at my feet to see if they were moving. Hyperlink to Above

2.7 - The Daily Sentinel: **Opioid Epidemic** (25 August, Joe Vaccarelli, 53k uvm; Grand Junction, CO)
Two years ago, Dr. Bill Hilty could count the opioid overdoses he'd see in a year on one hand. But as local hospitals, health care providers and dentists have reduced the number of opioids prescribed to patients, Hilty, the emergency department medical director for St. Mary's Medical Center, now sees an average of three overdoses per week coming into the hospital.

Hyperlink to Above

2.8 - The News-Review: **DeFazio discusses local healthcare challenges at town hall** (24 August, Carisa Cegavske, 50k uvm; Roseburg, OR)

AMERICAN OVERSIGHT

The federal government needs to do more to help the Roseburg Veterans Affairs Medical Center recruit and retain health care professionals, U.S. Rep. Peter DeFazio, D-Springfield, said Friday at a town hall meeting at Umpqua Community College. DeFazio spoke about a range of healthcare topics including the Affordable Care Act, Medicare for All and the problems that led to the closure of the VA's emergency department.

Hyperlink to Above

2.9 - WBOY (NBC-12): Filing against VA Medical Center in Clarksburg claims patient was the victim of homicide (23 August, Clarksburg, WV)
A lawyer representing the estate of a U.S. Army veteran who died from low blood sugar while at the Louis A. Johnson VA Medical Center in Clarksburg has filed a notice of claim with the U.S. Department of Veterans Affairs, alleging that the veteran died as a result of homicide. The claim also alleges that nine to 10 other patients died at the VA under similar circumstances.

Hyperlink to Above

3. Business Transformation

3.1 - Times & Democrat: New veterans' clinic coming (24 August, Dionne Gleaton, 158k uvm; Orangeburg, SC)
Dorn Veterans Affairs Medical Center is planning to build a new outpatient clinic in Orangeburg, just one of several construction projects for which the center has $160 million in funding. "A lessor has been selected for the Orangeburg CBOC (Community-Based Outpatient Clinic). This selection is undergoing legal review before award. The Orangeburg CBOC was approved for 24,000 square feet.

1. Top Stories

1.1 - The New York Times (AP): AP Fact Check: Trump's Swerves on Economy, Guns and Migrants (24 August, 98.3M uvm; New York, NY)

WASHINGTON — President Donald Trump can't seem to get his facts straight when it comes to Barack Obama.

From the economy to veterans and immigration, Trump routinely claims achievements of the former president as fully his own or distorts the truth to undermine the Democrat's legacy. On problems uniquely his own, Trump deflects.

This past week was no different.

Fresh off vacation in Bedminster, New Jersey, and mindful of the 2020 campaign, Trump insisted that economists don't believe his trade disputes with China could spur recession even though most analysts believe a downturn could start in the next two years. He also claimed progress on veterans' health care under his watch that didn't happen and blamed Obama for a policy of separating migrant children from their parents that he himself started.

Trump repeatedly pointed to mental illness, not access to guns, as a main culprit behind the recent mass shootings in Texas and Ohio. That's oversimplifying the issue.

A recap, also covering fuel economy standards and judges:

[…]

TRUMP: "My administration has worked aggressively to boost veterans employment, and we're setting records. ... Veterans unemployment has reached the lowest level ever recorded." — remarks Wednesday at AMVETS convention in Louisville, Kentucky.

THE FACTS: It's true that the unemployment rate for veterans fell to 2.3% in April, matching the low set in May 2000 under President Bill Clinton. But this figure is volatile on a monthly basis, not adjusted for seasonal changes, and has since risen. The figure stood at 3.4% in July, according to the Labor Department.

Veterans' unemployment has fallen mostly for the same reasons that joblessness has dropped generally: strong hiring and steady economic growth over the past decade dating to the Obama administration.

[…]

VETERANS

TRUMP: "We are modernizing your medical records to begin a seamless transition from the Department of Defense into the VA — something that they just said they couldn't do. You know that, right? They said, 'We can't do it. It's just too complicated.' We did it." — AMVETS convention.

AMERICAN OVERSIGHT

THE FACTS: No, it's not done. The Department of Veterans Affairs last year signed a $10 billion contract with Cerner Corp., the same company that is overhauling the Pentagon's electronic health records; some $6 billion more will be needed for IT upgrades and program staff. But a full rollout of the new VA health records is expected to take 10 years.

The aim of the new system is to provide veterans easy access to their health records upon leaving active-duty service and when they receive medical treatment at a VA facility or a private doctor referred under the VA's Choice private-sector program.

The contract, one of the largest in VA's history, has drawn concern from lawmakers that it could be plagued with problems and ultimately prove ineffective.

___

TRUMP: "The VA is now providing same-day emergency mental health care and mental health screenings to every patient that walks through the door." — AMVETS convention.

THE FACTS: Same-day mental health service started at VA before Trump took office in January 2017.

VA's effort to provide same-day primary and mental-health care when medically necessary at every VA medical center was publicized in April 2016, during the Obama administration. By late 2016, the department's blog announced that goal would be achieved by year's end.

A Dec. 23, 2016, article in the Harvard Business Review cites new same-day services at all VA hospitals as evidence of notable progress at the department. Former VA Secretary David Shulkin told Congress in late January 2017 the services already were fully in place.

___

TRUMP: "Veterans Choice, as you've been trying to get that for 44 years, they say — 44 years. I guess it's longer than that; probably earlier than that. But for 44 years, at least, that we know of. And you got it." — AMVETS convention.

THE FACTS: You wouldn't know from Trump's boasting that it was Obama who won passage of the Veterans Choice program, which gives veterans the option to see private doctors outside the VA medical system at government expense. Congress approved the program in 2014, and Obama signed it into law. Trump expanded it. Its ultimate scope remains uncertain, in part because of questions of money.

1.2 - WPEC (CBS-12, Video): Report finds local VA leaders 'lacked awareness' ahead of veteran's suicide (25 August, Jay O'Brien, 442k uvm; West Palm Beach, FL)

A recent report from government investigators found leaders at the West Palm Beach Veteran's Administration Hospital "lacked awareness" about aspects of patient safety, in the wake of a

soldier's suicide in March 2019. Additionally, the report found several lapses in protocol by hospital staff, including security cameras that were out of work "for years."

In a statement to CBS 12 News, the West Palm Beach VA said that "since the time of the review, the West Palm Beach VA Medical Center has taken action on all of the OIG's recommendations."

U.S. Army Sergeant Brieux Dash took his own life inside the West Palm Beach VA Hospital on March 14, 2019. After his death, Sgt. Dash's family told CBS 12 News they believe he was suffering from PTSD. Sgt. Dash served two tours in Iraq.

An investigation into the hospital by the VA's Office of the Inspector General (OIG) began five days later, naming an undisclosed patient's suicide as the purpose of the inquiry. The report was released August 22, 2019.

Investigators found that the unnamed patient received appropriate mental health care, after he was admitted to the hospital under Florida's Baker Act. Dash was admitted to the VA hospital under the Baker Act in the same time frame as the unnamed patient, after family contacted authorities saying they were concerned for his safety, according to his family.

However, the 48 page report also details that hospital staff lacked appropriate mental health training at the time they were treating Dash. Federal investigators found that less than half of hospital staff who required certain mental health training underwent the training.

"Only 44 percent of employees required to have [Mental Health Environment Care Checklist] training were in compliance," says the report.

Additionally, investigators found that security and patient safety cameras in one of the hospital's mental health units were not operational. The cameras, intended to monitor all patients, had not worked "for at least three years" due to a network crash in 2016, according to the OIG report.

"Had the cameras been functional and monitored as required by policy, an employee may have seen the patient preparing for the event,"
the report adds.

"You guys are supposed to be taking care of him," said Sherron Permashwar, Sgt. Dash's Aunt. "What happened?"

"We appreciate the Office of Inspector General's (OIG) oversight, which focuses on an event that occurred in March 2019. Any time an unexpected death occurs at a VA facility, a comprehensive review is conducted to see if changes in policies and procedures are warranted. OIG reviews are opportunities to strengthen our processes and the way we deliver care to America's Veterans," said a spokesperson for the West Palm Beach VA in a statement to CBS 12 News.

"We encourage any Veteran, family member or friend concerned about a Veteran's mental health to contact the Veterans Crisis Line at 1-800-273-8255 and press 1 or text 838255. Trained professionals are also available to chat at www.veteranscrisisline.net. The lines are available 24 hours a day, 7 days a week a week," added the VA spokesperson.

AMERICAN OVERSIGHT

1.3 - Charleston Gazette-Mail: **Veteran's death ruled homicide amid investigation into deaths at VA hospital** (24 August, Lacie Pierson, 202k uvm; Charleston, WV)

A Ritchie County woman says her father was one of about 10 patients who died at the Veterans Affairs medical center in Clarksburg after they were wrongfully injected with insulin by a person who is known to federal administrators through an investigation into the deaths.

A deputy medical examiner with the U.S. Department of Defense ruled the death of Felix "Kirk" McDermott a homicide during an investigation by the VA Inspector General's Office into the suspicious deaths of patients at the Louis A. Johnson VA Hospital, according to a statement of claim submitted to the U.S. Department of Veterans Affairs.

Investigators for Veterans Affairs have identified a person of interest in the case, but they have not disclosed the identity of that person to McDermott's family, and no criminal charges have been filed in the case, according to the claim.

The claim doesn't indicate whether the person of interest was an employee at the hospital.

The Gazette-Mail obtained a copy of the claim, filed by McDermott's daughter, Melanie Proctor. The claim addresses only the circumstances surrounding McDermott's death, but it refers to the investigation into his and other deaths.

According to the claim, medical staff did not tell McDermott's family how he died on April 9, 2018, when he was a patient being treated for pneumonia.

McDermott was a Vietnam veteran, and he retired as a sergeant to end a 20-year career in the U.S. Army. He subsequently served in the Pennsylvania National Guard.

"If the medical examiner's conclusion is correct, Felix 'Kirk' McDermott was murdered while he was in the care and custody of the Louis A. Johnson VA Medical Center despite the VAMC being on notice of the previous wrongful injections," said Proctor's attorney, Tony O'Dell, with Tiano O'Dell PLLC in Charleston.

O'Dell said on Friday that he was not aware of any claims filed on behalf of the other potential victims in the case.

The Gazette-Mail reached out to the Veterans Affairs Office of the Inspector General for comment, but an office representative declined to comment as to whether there was an investigation, citing office policy.

Sen. Joe Manchin, D-W.Va., issued a statement Friday, after news reports about the investigation were released, saying the reports were "shocking if accurate."

"I am appalled that these crimes were not only committed, but that our Veterans who have sacrificed so much for our country, were the victims," Manchin wrote. "As a member of the Senate Veterans Affairs Committee I will do everything in my power to investigate these accusations and get to the bottom of what happened. These families and loved ones deserve answers as soon as possible and I will make sure they get them."

AMERICAN OVERSIGHT

Proctor, who is the executor of McDermott's estate, is seeking monetary damages, including $7,500 for funeral expenses.

If McDermott's family and the government can't resolve the claim within six months, the family will have the ability to file a lawsuit in federal court.

McDermott died after he was injected with insulin while he was a patient at the hospital in April 2018, O'Dell said in the claim.

At the time of McDermott's death, employees at the hospital were aware of the "unexpected and suspicious" deaths from unexplained severe hypoglycemia.

"Each of these nine or ten patients had received a large and wrongful injection of insulin in the abdomen that was neither ordered by a doctor or medically necessary," the claim states.

McDermott did not suffer from diabetes, nor had he ever been diagnosed or taken medication for the condition, O'Dell said.

The other patients whose deaths are subject to the investigation also died as a result of being wrongfully injected with insulin in their abdomens, O'Dell said in the claim.

McDermott was admitted to the Clarksburg VA medical center on April 6, 2018, for pneumonia. At the time of his admission, he had been diagnosed with dementia and experienced a physical disability as a result of a stroke.

During his initial stay at the facility, McDermott's health condition improved, but he unexpectedly developed shortness of breath during the morning of April 9, 2018, O'Dell said.

A blood test showed McDermott was suffering from hypoglycemia, meaning his blood sugar was "critically and profoundly" low, and medical efforts to raise it were unsuccessful.

"His condition continued to worsen, and he died from severe hypoglycemia at roughly 9:00 a.m. on the morning of April 9, 2018," O'Dell said. "Employees of the VAMC never explained to Ret. Army Sgt. McDermott's family the unexplained diagnosis of hypoglycemia."

McDermott's family arranged funeral services for him, and he was buried on April 13, 2018.

On Oct. 23, 2018, McDermott's remains were disinterred and taken to Dover Air Force Base, Delaware, for an autopsy as part of the investigation into the suspicious deaths at the Clarksburg VA hospital. The deputy medical examiner who performed the autopsy determined that his cause of death was the insulin administration and said McDermott's manner of death was a homicide.

It was during the process of this investigation that Proctor and the rest of McDermott's family learned there was evidence that her father might have died as a result of the insulin injection and that her father was one of the last known victims to have died in that manner.

"It was not until months later [after McDermott died] that government investigators contacted Ret. Army Sgt. McDermott's daughter Melanie Proctor and advised her of the earlier deaths and their belief that her father's death was not a result of natural causes," O'Dell said.

2.1 - KDKA (CBS-2, Video): Westmoreland County Man's Death Ruled A Homicide After VA Hospital Treatment In West Virginia (24 August, Bob Allen, 1.2M uvm; Pittsburgh, PA)

CLARKSBURG, W. Va. (KDKA) — The death of a military veteran from Ruffs Dale in Westmoreland County is the subject of a wrongful death lawsuit following treatment at a veterans hospital.

Retired Sergeant Felix McDermott died April 8, 2018, at the Loius A. Johnson VA Medical Center in Clarksburg, West Virginia after he was injected with a fatal dose of insulin while at the center, the complaint said.

He was admitted three days before his death because developed aspiration pneumonia.

McDermott was one of nine or 10 patients at the center that died as a result of unexplained low blood sugar, the complaint reads.

The complaint said each person received a large and wrongful injection of insulin in the abdomen that wasn't ordered by a doctor or medically necessary.

"It's all very disturbing that people can serve their country that are being killed either extremely negligently, grossly negligently or intentionally," the McDermott family attorney Tony O'Dell said.

The complaint said McDermott did not have diabetes, though he suffered from dementia and was physically disable because of a previous stroke.

McDermott's family was not told about how low blood sugar caused his death. They learned months later after government investigators contacted McDermott's daughter, telling her about the early deaths and a belief how her father's death was not from natural causes.

The inspector general ordered McDermott's remains exhumed in October 2018, and they were flown to Dover Air Force Base for an autopsy.

The complaint says an autopsy revealed there were no hospital orders for the administration of insulin, and McDermott was wrongfully, negligently or intentionally injected.

The autopsy also revealed McDermott received an insulin shot in the left side of his abdomen, was not diabetic and had no history of insulin use.

The report indicated that the retired sergeant's medical condition was clearly improving when he was injected with insulin.

His death was ruled a homicide, and the VA investigators have a person of interest in the death.

AMERICAN OVERSIGHT

“Each time one of these deaths happened, they had an obligation,” O’Dell said. “They had an obligation to run it to ground to find out what happened, why it happened, how it can be prevented.”

McDermott was a Vietnam veteran and was a member of the U.S. Army and Pennsylvania National Guard.

2.2 - Daily Press: **Aug. 24 Letters: Unions, ship building and the electoral college** (23 August, 370k uvm; Newport News, VA)

VA union fight
It is often said that those who do not know their history, are doomed to repeat it.

This is a dangerous time in our country for many groups of people. One group that should not be overlooked is labor unions.

Unions help level the playing field. Labor unions are the reason we have child labor laws, health benefits, livable wages, weekends off, eight-hour work days, and safe working conditions. Unions are the reason that when we go to work, the doors are not locked from the outside to keep us from leaving during a shift - which happened during the Triangle Shirtwaist factory fire.

Currently, Veteran Affairs Secretary Robert Wilkie is plotting to cripple the union for VA workers by attacking workers’ collective bargaining agreement - the document that safeguards whistleblowers and protects them from retaliation, that guarantees employees are adequately trained, and that protects workplace safety.

A third of VA workers are veterans. An attack on VA workers is an attack on veterans. An attack on AFGE (American Federation of Government Employees) is an attack on VA workers. If you believe that all workers deserve to be treated with dignity, fairness, and respect, please join us in this fight.

Contact your lawmakers, wear Red every Wednesday in a show of solidarity (#RedforFeds), and stand up to #SaveOurVA before it is too late.

2.3 - The Columbian: **Seeking care for mental health a top frustration for vets** (24 August, Tatiana Parafiniuk-Talesnick, 309k uvm; Vancouver, WA)

AMERICAN OVERSIGHT

EUGENE, Ore. — Oregon veterans may be at lower risk for depression or sadness, but they are more likely to die from suicide and opioid overdose than nonveterans, according to a recent state study on veteran health.

“We’re just so focused on the mission,” Laura Follett, a Springfield resident and a 15-year Navy veteran, said. “We’re not necessarily focused on ourselves, you know?”

Follett is one of about 310,000 veterans in Oregon — a group that makes up 10 percent of the adult population. Navigating the medical system is far from the only obstacle for veterans in need of health care. One in four Oregon veterans experience frustration in seeking care for mental health or substance use issues, according to the 200-page health study funded by the Oregon Health Authority and the Oregon Department of Veterans Affairs.

The study is made up of 3,915 veterans from across the state who completed an online questionnaire and 63 veterans who participated in focus groups. The project set out to describe the type and availability of behavioral health services for veterans in Oregon, provide findings regarding facilitators of and barriers to the use of behavioral health services for veterans, and to make recommendations that may result in improved accessibility of behavioral health services by veterans in Oregon.

Some of the notable findings include:

• 1 out of 3 veterans surveyed who felt they needed behavioral health care didn’t seek services because they felt uncomfortable or unsafe.

• Specific needs and expectations of veteran subgroups vary in ways that affect how those veterans seek care. Tribal representatives report a need for services that meet cultural needs with an emphasis on a preference for traditional healing methods and peer support as the most important factors in care-seeking behavior for tribal veterans.

• Sexual harassment and assault impacts service members of all genders, including at least 50 percent of female veterans. Interviewees reported a need for more community-based, gender-specific options in Oregon, particularly for military sexual trauma.

• Oregon veterans ages 18-34 are at the highest risk for suicide. Lane County has the second-highest rate of veteran suicide of all Oregon counties. In 2016, 79 people died by suicide in Lane County — around a fourth of those who died were veterans.

Out of the study’s key findings it offered 19 recommendations to help improve veteran care.

Following one of the study’s recommendations that OHA, ODVA, and the VA Health Care Systems in Oregon should collaborate to develop a cohesive, well-researched, and targeted education and outreach effort to destigmatize behavioral health issues and treatment, OHA and ODVA are taking a statewide tour to learn more from particular communities over the next several months.

As part of the statewide tour, in Eugene the first hour of a community forum will be reserved for LGBTQI-identifying people. This relates to the recommendation that VHA and Vet Centers make plans to build capacity for cultural competency practices with measurable objectives that address the unique needs of groups of veterans, such as tribal, LGBTQI and women.

2.4 - MetroNews: Manchin, Capito call for investigations after claims of suspicious deaths at Clarksburg VA hospital (23 August, Jeff Jenkins, 242k uvm; Charleston, WV)

CLARKSBURG, W.Va. — Both U.S. Senators Joe Manchin and Shelley Moore Capito are calling for full investigations after learning of a claim that a patient at the VA Medical Center in Clarksburg was the victim of homicide while in the care of the hospital while also learning there may have been a number of other deaths with similar circumstances.

The Clarksburg Exponent first reported the claim, which is a six-month notice of a pending lawsuit against the federal government, Friday. Charleston attorney Tony O'Dell filed a notice of claim with the U.S. Department of Veterans Affairs on behalf of the family of Retired Army Sgt. Felix Kirk McDermott.

McDermott was 82 when he died at the Louis A. Johnson VA Medical Center in April 2018. Federal investigators ordered his body exhumed later that year. The Armed Forces Medical Examiner later ruled the death a homicide, according to the report.

Manchin and Capito both responded Friday.

"This report is shocking and if accurate, I am appalled that these crimes were not only committed but that our Veterans, who have sacrificed so much for our country, were the victims," Manchin said in a released statement. "As a member of the Senate Veterans Affairs Committee I will do everything in my power to investigate these accusations and get to the bottom of what happened. These families and loved ones deserve answers as soon as possible and I will make sure they get them."

Capito told the Exponent the report was "sickening and troubling."

"My office has reached out to the VA to learn more details, and I will do everything I can to make sure this is fully investigated," Capito said.

O'Dell, who represents McDermott's sister Melanie Proctor, wrote in his recently filed claim that his client was told her brother's death was not the only suspicious death at the medical center in Clarksburg.

"During its investigation, VA investigators advised Melanie Proctor … that there was evidence that nine or ten other patients of the Louis A. Johnson VA Medical Center had been wrongfully injected with insulin in their abdomen, thereby causing their deaths. Ms. Proctor was further advised that her father was one of the last known victims," O'Dell wrote reported in the Exponent.

There's been no comment from the Department of Veterans Affairs or the Clarksburg VA Medical Center.

2.5 - KTVQ (CBS-2): **Montana VA announces new Chief of Staff** (24 August, 169k uvm; Billings, MT)

HELENA — The Montana VA Health Care System welcomed Dr. JP Maganito as the new Chief of Staff on July 21, 2019.

Dr. Maganito originally joined the Montana VA Health Care System, Fort Harrison in 2012, serving as the Staff Gynecologist and Occupational Health Medical Officer where he became the Women's Health Medical Director until 2015.

During his time at the VA, he was involved in multiple process improvement and women's health committees helping increase access to care for our Veterans.

After finishing his internship and residency at Botsford Hospital in Farmington Hills, Michigan in 2009, he became and has maintained his board certification with the American Osteopathic Board of Obstetrics and Gynecologists.

He earned his Doctor of Osteopathic Medicine degree from Des Moines University College of Osteopathic Medicine and Surgery. While earning his doctorate, he simultaneously finished his Masters in Public Health and Masters in Healthcare Administration at Des Moines University College of Health Sciences – Division of Health Management. He's also certified as a health education specialist and computer information specialist.

He had left the VA in 2015 in pursuit of subspecialty training as a Female Pelvic Medicine and Reconstructive Surgery fellow with plans to return to the VA to apply this training in serving the Women Veterans.

He has spent the past few years as a lead Medical Director and became the Chief Medical Officer of Blue Cross Blue Shield of Montana whereby he was responsible for providing executive medical leadership as a spokesperson on medical affairs, management, policy, and procedure.

He is a graduate of the Montana Medical Association Physician Leadership Effectiveness Program in 2016 and was recently accepted as a fellow for the American Hospital Insurance Plan Physician Executive Leadership Program for 2020.

With his involvement in our local community and the State of Montana, Dr. Maganito is honored and looks forward to returning to the VA to apply all the experience he has learned both clinically, surgically, and administratively to represent and serve, not only those who have worked tirelessly within the VA system, but more importantly those who so nobly serve this country, our Veterans.

The Montana VA Health Care System serves over 47,000 enrolled Veterans across Montana—an area roughly 147,000 square miles in size. Veterans are cared for by a staff of nearly 1,200 at 17 sites of care across the state.

2.6 - Kearney Hub: **Device helps Lawter, a paraplegic, take first steps in 25 years** (24 August, Mary Jane Skala, 71k uvm; Kearney, NE)

AMERICAN OVERSIGHT

Tammy Lawter struggled to hold back tears.

Paralyzed from the chest down 25 years ago, she slowly took her first steps this summer with the assistance of a device called an Indego Exoskeleton.

“I couldn’t feel my legs, so it was kind of weird, but it felt really good,” she said. “It was tempting to stare at my feet to see if they were moving. I was trying hard not to cry, but if I cried, I knew I wouldn’t be able to see.”

It was a life-changing moment for Lawter, director of Kearney’s Friends Program and a U.S. Army veteran. When she brings home her own Indego Exoskeleton later this year, it will allow her to do ordinary things like stand at the stove to cook, stand at the sink to wash dishes, and walk in the winter at Hilltop Mall.

“It gets old and tiring sitting in a chair all day,” she said. “This is an opportunity to stand up and walk and improve my health while doing it.”

It all began at the National Veterans Wheelchair Games in 2018 when, at an expo, Lawter saw a man who had been paralyzed for 28 years walking with the assistance of a ReWalk device. The ReWalk provides battery-powered hip and knee motion that allows a person to stand up and walk.

Instantly, she knew it was something she had to try.

‘A death grip’

With permission from the VA hospital in Grand Island, Lawter tried the ReWalk at the Veterans Administration Hospital last year in Minneapolis, where she is treated for her spinal cord injuries. She did not have enough bone density to use the 78-pound ReWalk, but she qualified to try the Indego Exoskeleton, an alternative, which weighs just 28 pounds.

She returned to Minneapolis in July for the three-to-five week training session on the Indego Exoskeleton. She spent the first day learning how to put on its five pieces. “Everything in the military is made for men, so they had to do a lot of adjustment because I had hips. The company had to redo some of the pieces,” she said.

Then, assisted by two physical therapists, she practiced standing up and sitting down. “The robot has a vibration, so when I stand up, I have to lean forward and wait three seconds as it vibrates. Then the machine will stand you straight up,” she said. “But there are different vibrations. If I lean too far forward, I fall forward.”

Because she was injured so badly in 1994, her balance is off-kilter, and she had not walked in so long that walking was new to her. “I had a death grip on the walker. I thought I’d fall forward. I had to learn that I could actually hold onto the walker and move,” she said.

A setback

The next day, she relaxed a bit and was able to walk 193 steps from the physical therapy room down the hallway and back to the room. She fought back tears. “It was a wonderful feeling to take those steps,” she said.

AMERICAN OVERSIGHT

The next day, more adjustments were necessary, so she took just 53 steps, but she was mastering the machine quickly and hoped to take it home. Then came a setback. After lunch, she noticed a lump the size of a goose egg on her ankle. Doctors discovered an old fracture. They put her foot in a boot that she will wear for four weeks, so the Indego device is on hold for now. She returned to Kearney last week.

“When it heals, I’m going back up there,” she said. “By the end of the year, I’m going to do the training and bring that device home. I feel really blessed that I can do this.”

She eagerly anticipates its benefits. “It will be nice to be a little higher. It’ll be nice to do a few dishes and reach all the dusty places that nobody wants to reach,” she said. “I want to be able to go to the grocery store and reach up. All the items that were at chest level before my accident are way up high now. I will be able to reach up and grab them.”

The device’s battery has a span of between eight and 10 hours. It is recharged by plugging it into a socket. The VA will pay its $60,000 cost.

A military career

Born in Fort Morgan, Colo., Lawter grew up in Kearney and graduated from Kearney High School in 1984. She went to Kearney State College on a swimming scholarship, but after two years, she joined the U.S. Army and spent two years on active duty at Fort Stewart, Ga.

The day she was discharged, she joined the South Carolina Army National Guard for four years. At the University of South Carolina at Spartanburg, she earned a bachelor’s degree in interdisciplinary studies with a focus on math, political science, sociology and business administration.

Upon graduation, she was also commissioned as a second lieutenant in the Army’s Medical Service Corps and expected to make the military her career. “I like helping people, and I thought if I ever left the service, there would always be jobs available in medicine,” she said.

Life-changing accident

Those plans were shattered in February 1994 when she was severely injured in a traffic accident in Florence, S.C. She was ejected from the vehicle, landed on her back and severed her spinal cord. Instantly, she became a paraplegic. She spent the next eight months in the hospital.

“It was hard to accept that I would never walk again. I had dedicated eight years to the military, and now I had to figure out what else I could do. I have a great support system with my family and friends, so I did not dwell on the negative. I just focused on finding something else I really liked doing,” she said.

Two therapists recommended that she participate in sports activity despite her injury. For Lawter, who played volleyball and softball and ran track in high school, this was good news.

NVWG games

AMERICAN OVERSIGHT

After being released from the hospital in late 1994, Lawter was headed home to Nebraska when she stopped to watch the National Veterans Wheelchair Games in Kansas City. Each year, 700 veterans from the U.S., England, Puerto Rico and Guam compete in 21 events.

“Everyone was having a good time,” she said. She had heard about the games’ basketball and wheelchair races, but not the 19 other events.

The following summer, Lawter began competing at the NVWG and does so every year. She now focuses on 9-ball pool, shot put, discus, javelin and power lifting. In 1995, just 15 women competed among 400 men, but 150 women participate now, she said. Since 2013, the Challenge Athlete Foundation/Operation Rebound has sponsored her participation.

She also attends the National Disabled Veterans Winter Sports Clinic every year. At home, she stays fit by lifting weights and using a stationery hand cycle.

Lawter, mother of two grown sons, will bring home her Indego Exoskeleton from Minneapolis later this year. “Whether it’s me or a robot walking or standing, I don’t care,” she said. “When I stand up and I can talk to people face to face, it feels normal. Being able to do something without the wheelchair makes me feel like everyone else again.”

2.7 - The Daily Sentinel: **Opioid Epidemic** (25 August, Joe Vaccarelli, 53k uvm; Grand Junction, CO)

Two years ago, Dr. Bill Hilty could count the opioid overdoses he'd see in a year on one hand.

But as local hospitals, health care providers and dentists have reduced the number of opioids prescribed to patients, Hilty, the emergency department medical director for St. Mary's Medical Center, now sees an average of three overdoses per week coming into the hospital.

Many patients are saved. Some are already dead when they arrive, while a few, Hilty said, go without oxygen for such a length of time that they will have brain damage if they can be saved.

"These are young kids from a variety of socio-economic groups," Hilty said. "It's sad."

The opioid epidemic has swung like a pendulum in the past decade, starting with the medical field overprescribing pain pills to the point where many were prosecuted, including some professionals with ties to Mesa County.

Upon recognizing the problem, a reduction of pills led some patients to seek alternative narcotics on the street. Today, local law enforcement says people are leaping straight to opiates such as heroin -without ever getting hooked on pain pills.

Meanwhile, area health care providers are still looking for ways to reduce the number of pills prescribed by searching for pain management alternatives, joining state programs and obtaining grants to improve the situation close to home.

[…]

AMERICAN OVERSIGHT

CURBING ABUSE

The Grand Junction Veterans Affairs Medical Center often deals with veterans who have long-term chronic pain, including some who have taken opioids for several years. The hospital opened a wellness center on campus in early 2018 focused on working with veterans to improve their physical issues through therapy.

Dr. Ben Atwater, the director of the wellness center, said many veterans are receptive to staying away from opioids.

"It does not mean all patients are off opioids, but we try to identify patients who are at high risk for opioid abuse," Atwater said.

Aside from overdoses, Atwater noted that overuse can result in slowed breathing, a buildup of tolerance, reduction of testosterone in men and, in some cases, increased pain.

In the dental field, Dr. John Poovey, a dentist with JP Dental and Implant Center in Grand Junction, said he used to see patients come in with addictions to the point that he had to press charges against one who tried to falsify a prescription for Vicodin.

While dentists don't prescribe as many opioids across Colorado as doctors, physician assistants and nurse practitioners, 90% of prescriptions dispensed by dentists over a one-year period from August 2017-18 were opioids.

For physicians, that number was less than 50%, according to the Colorado Prescription Drug Monitoring Program.

Poovey said after reading studies in the British Journal of Medicine and through the American Medical Association, he started using ibuprofen and Tylenol to treat pain after oral surgeries instead of opiates.

"I'm trying to minimize their exposure to opioids as much as possible with protocols and taking a heavy hand with suspicion for addiction," he said.

Jackman feels scrutiny over opioids began when physicians were dissatisfied with their work and were noticing overdoses and deaths related to the issue. In the past five years, that scrutiny has advanced to the political and public level.

"I think the epidemic has increased scrutiny. I think physicians have been decrying the situation of how pain is being treated," Jackman said.

He traces the start of opioid issues to when doctors were trained on pain as a vital sign that needed to be treated. Physicians were also rated by patients on how they helped them manage their pain, which gave doctors incentive to prescribe pain medicine, Jackman said.

Now, he said it can be difficult for those who are not addicted to opioids to get drugs for chronic pain. He said continuing education will help level things out in the future.

AMERICAN OVERSIGHT

"I think we're all at fault, but there is a lot of education that needs to take place so patients understand they don't need these pills long term," he said. "These are all new frontiers that people weren't getting trained on in med school until recently."

Back to Top

2.8 - The News-Review: **DeFazio discusses local healthcare challenges at town hall** (24 August, Carisa Cegavske, 50k uvm; Roseburg, OR)

The federal government needs to do more to help the Roseburg Veterans Affairs Medical Center recruit and retain health care professionals, U.S. Rep. Peter DeFazio, D-Springfield, said Friday at a town hall meeting at Umpqua Community College.

DeFazio spoke about a range of healthcare topics including the Affordable Care Act, Medicare for All and the problems that led to the closure of the VA's emergency department. He was joined onstage by the directors of the Roseburg VA and Mercy Medical Center, along with other local healthcare leaders.

Prior to the town hall, DeFazio visited The News-Review, where he spoke about the recent entrance of Republican candidate Alek Skarlatos to the race for the congressional seat he holds.

"I recognize his heroism in the terrorist incident on the train. I applaud his third-place finish in Dancing with the Stars. I'm not very good at that. But representing the Fourth District of Oregon in the United States Congress, those aren't exactly stellar qualifications," he said. "It's a very complicated job."

He said he's in a senior position and that means he can do a lot for his district.

"For someone to come along whose experience is not at all relevant and think that they could better represent the Fourth District I think is a very big leap," he said.

DeFazio has held the seat for more than 30 years. He serves a divided district, one of few purple districts in the country. Democratic presidential candidate Hillary Clinton won the district by just 554 votes over President Trump in the 2016 election, while DeFazio held onto his seat with 62,000 more votes than his Republican challenger Art Robinson.

At Friday's town hall, DeFazio said Americans need to improve on the Affordable Care Act and have a serious debate about Medicare for All. He said Republicans have attempted to repeal the Affordable Care Act but haven't proposed a replacement.

"The day that the health care act is repealed, 21 million Americans would lose their insurance, 450,000 here in Oregon," he said. And the insurance of 133 million Americans with pre-existing conditions would be at risk, he said.

"We're really at a very critical point regarding health care here in the United States of America. It's going to be an ongoing and major issue and it's really important down here in Douglas County," DeFazio said.

AMERICAN OVERSIGHT

Asked by an audience member if he supports Medicare for All, DeFazio noted he co-sponsored the Medicare for All bill. Medicare has issues, but its overhead costs are 3% compared with 26% for private insurance, he said.

“We could do away with an awful lot of bureaucracy. Next time you go see your personal physician, ask ‘em how many people they have on staff to deal with billing,” he said.

The directors of Mercy and the Roseburg VA said a key struggle is the recruitment and retention of healthcare professionals.

DeFazio said the VA Central Office should do more to help the local VA provide incentives that could bring medical staff here and convince them to stay.

“There are tools that we should and could be able to access to help the VA recruit here locally,” DeFazio said.

During his meeting with The News-Review, DeFazio said the Trump administration is pushing very hard for privatizing the VA.

“I have yet to find a veterans group that supports that idea,” he said. “We need targeted care at our veterans facilities and most veterans or many veterans want to seek care in an environment where they understand the unique needs of the veterans and where they’re with other veterans.”

Roseburg VA Director Keith Allen said at the town hall that the hospital had to shut down its emergency room this month, several months ahead of a predicted December closure, because some lab technicians quit in July.

It’s been downsized to a daytime, five-day-a-week urgent care.

“It wasn’t something that we just did on a whim. It was something we did because we could not provide safe care,” he said.

Under the newly implemented Mission Act, veterans can access urgent care in the community, but it has to be in-network. Currently, the only in-network urgent care in Douglas County is in Canyonville, and it doesn’t offer weekend hours.

Allen said he’s working to hire replacements so he can open the urgent care seven days a week.

Mercy Director Kelly Morgan said the key to recruiting and retaining medical personnel is to offer training to local people who want to stay here. He said a proposed Allied Health College, which has already received two-thirds of the necessary funding from the state and city governments, would provide the needed workers for both hospitals.

“We think this is one of the best things we could possibly do, not only to help the economy but also really solve our issue for access for the residents of Douglas County as well as for rural Oregon,” he said.

Morgan also said the Affordable Care Act ensured coverage for many local people who didn’t have it before.

AMERICAN OVERSIGHT

“From the hospital’s perspective and from the doctor’s perspective, the Affordable Care Act was the best thing that ever happened to us,” he said.

Without it, a lot of people came to the emergency department, couldn’t pay for it and the hospital wrote off millions of dollars in bills each year. That doesn’t happen anymore, he said.

2.9 - WBOY (NBC-12): Filing against VA Medical Center in Clarksburg claims patient was the victim of homicide (23 August, Clarksburg, WV)

A lawyer representing the estate of a U.S. Army veteran who died from low blood sugar while at the Louis A. Johnson VA Medical Center in Clarksburg has filed a notice of claim with the U.S. Department of Veterans Affairs, alleging that the veteran died as a result of homicide. The claim also alleges that nine to 10 other patients died at the VA under similar circumstances.

Tony O’Dell, an attorney with Tiano O’Dell in Charleston, filed the claim this week on behalf of Melanie Proctor, who is the daughter of Ret. Sgt. Felix Kirk McDermott and the administratrix of his estate.

The following information comes from the claim filed this week, which you can read in its entirety here.

McDermott, 82, of Ellenboro, was admitted to the VA on April 6, 2018 after developing pneumonia, and his condition improved. McDermott was not diagnosed with diabetes and did not have a history of ever taking any medication for the treatment of diabetes. During his stay at the VA, McDermott’s blood glucose levels were monitored by a daily fingerstick test. His levels were all shown to be in the normal range. During his stay at the VA, there were no doctor’s orders for McDermott to receive insulin.

On April 9, while still at the VA, McDermott unexpectedly developed shortness of breath. VA staff found that McDermott’s blood sugar level was very low, a condition known as hypoglycemia. Medical efforts to raise his blood sugar level were unsuccessful, and McDermott died later that morning.

McDermott’s family was told only that he died, but his cause of death was not explained to them. His body was sent to a funeral home, and he was buried on April 13.

In October 2018, inspectors with the VA Office of the Inspector General contacted Proctor and told her there was evidence that the deaths of her father and nine or 10 other patients of the Clarksburg VA were the result of being wrongfully injected with insulin in their abdomens, with her father being one of the last known victims. At that time, McDermott’s body was disinterred and sent to Dover Air Force Base for an autopsy.

The autopsy showed that McDermott had been injected with insulin in his left abdomen and that there were no hospital orders for the injection. Following the autopsy and investigation, the Armed Forces Medical Examiner ruled McDermott’s death a homicide. Investigators told McDermott’s family that they do have a person of interest in the deaths of multiple VA patients.

AMERICAN OVERSIGHT

The claim lists a series of ways the VA was negligent in relation to McDermott's death:

- Knowing that nine to 10 other patients died under similar circumstances prior to McDermott being admitted, he and his family should have been alerted so that they could make informed decisions about his care
- By failing to adequately staff the hospital
- By failing to investigate the causes of the previous deaths
- By failing to properly reconcile medications
- By failing to properly train staff

The claim, which is the precursor to a lawsuit, asks for $1 million for personal injury and $5 million for wrongful death, along with funeral costs and loss of income.

When asked for comment, officials at the Louis A. Johnson VA Medical Center referred us to the Department of Veterans Affairs Office of the Inspector General, which we have not heard back from yet.

West Virginia's U.S. Senators each issued statements on the situation.

"This report is shocking and if accurate, I am appalled that these crimes were not only committed but that our Veterans, who have sacrificed so much for our country, were the victims. As a member of the Senate Veterans Affairs Committee I will do everything in my power to investigate these accusations and get to the bottom of what happened. These families and loved ones deserve answers as soon as possible and I will make sure they get them."

SEN. JOE MANCHIN-D

"This news is sickening and troubling. My office has reached out to the VA to learn more details, and I will do everything I can to make sure this is fully investigated."

SEN. SHELLEY MOORE CAPITO-R

"Congressman McKinley is aware of an ongoing investigation at Clarksburg by the Veterans Administration Office of the Inspector General. We hope to get more answers about this situation as that investigation progresses," said Amanda Hyman, Communications Director for U.S. Rep. David McKinley-R.

The investigation was opened in July 2018 after the leadership of the Clarksburg VA alerted investigators to "unexplained diagnosis of severe low blood sugar in several patients," government sources said.

McDermott retired from the U.S. Army as a sergeant after 20 years of active duty, during which time he served in Vietnam. Following his retirement, he spent time in the Pennsylvania National Guard.

3. Business Transformation

AMERICAN OVERSIGHT

3.1 - Times & Democrat: New veterans' clinic coming (24 August, Dionne Gleaton, 158k uvm; Orangeburg, SC)

Dorn Veterans Affairs Medical Center is planning to build a new outpatient clinic in Orangeburg, just one of several construction projects for which the center has $160 million in funding.

“A lessor has been selected for the Orangeburg CBOC (Community-Based Outpatient Clinic). This selection is undergoing legal review before award. The Orangeburg CBOC was approved for 24,000 square feet. The Columbia VA Health Care System currently has $160 million in funding for projects that are in design or construction,” said Christopher Zell, chief of engineering at the Dorn VA Medical Center.

Synethia Taylor, facilities planner at the Dorn VA Medical Center, said the clinic is being built for a reason.

“The impetus for development in this community rests on the Columbia VA Health Care System’s commitment to veterans in the South Carolina market. The VHA (Veterans Health Administration) continues to transform and, in doing so, provide additional options for veterans to receive care in their communities close to their homes and by individuals that honor their service,” Taylor said.

She said that the percentage of VHA enrollees is expected to increase.

“Population growth in the Orangeburg submarket has been projected to decrease in the next 10 years. However, the percentage of enrollees in VHA is projected to steadily grow. Projections from 2013 suggested an overall 49 percent growth in enrollees. This projection means there are approximately 3,410 new enrollees projected in this market.

“There is currently a clinic located in Orangeburg and with the projected growth in veterans utilizing the VHA system for their needs, we have designed a replacement CBOC that will house state-of-the-art equipment and utilize new modalities to provide the veterans with the care they deserve,” Taylor said.

The Columbia VA Health Care System hosted a town hall meeting in Orangeburg in July.

It was during a February 2018 forum that the Dorn VA Medical Center announced it was adding an $8.9 million, three-and-a-half deck parking garage with 280 parking spaces, along with two full-time, 15-passenger handicapped-accessible shuttles to move veterans across the center’s 93-acre campus as needed.

Zell said, “The parking garage is 90 percent complete and is scheduled to open mid-September. There are currently two shuttles in operation.”

The center had also been awarded a 16-suite Fisher House through the Rockville, Maryland-based Fisher House Foundation, or FHF.

Zell said the Columbia VA Health Care System and FHF are currently crafting the site development plan for the project.

AMERICAN OVERSIGHT

“The Fisher House Foundation has notified the Columbia VA Health Care System that it has been approved for development of the Fisher House site on the northwest corner of the campus in calendar year 2020,” he said.

The center’s remodeling effort also includes the renovation of Building 10, a 20,000-square-foot facility built in 1930, which will be turned into a primary campus.

“The primary care design for Building 10 is complete. Construction advisement is scheduled by the end of September,” Zell said, noting that a 7,000-square-foot police headquarters is currently under construction and is anticipated to be complete between October and December of this year.

A Red Coat Ambassador program, which includes employees who are throughout the lobby answering veterans’ questions and escorting them to appointments, is also underway.

Jill Bonkowske, program supervisor, said, “The program was implemented in December 2018. Initially we were approved for 10 positions but have since been approved for 20. We have 19 on board and are in the process of hiring for the last position.”

She added, “The ambassadors are the first impression of the VA and enhance the veterans’ experience in our facility. In the first six months, our ambassadors have walked 5,891,953 steps, or 2,790 miles, while helping 48,239 veterans and visitors.”

The center is also providing cardiac intervention services as part of its medical care.

Tanya Henry, acute medicine nurse manager at Dorn VA Medical Center, said the Columbia VA Health Care system was approved for initiation of the Percutaneous Coronary Intervention (PCI) program in August 2018.

“We had our first PCA in December 2018. To date, we have successfully completed 37 PCIs, which has saved the facility a significant amount of money by not sending these cases out into the community. We have one interventional cardiologist and there is currently a part-time Department of Defense vascular surgeon on board through the Surgical Service Line,” Henry said.

No additional operating rooms have been added to any floors to complete any PCIs because the center currently has two functioning cardiac catheterization laboratories, she said.

Dr. Bernard DeKoning, chief of staff at the center, said that mental health care is also among the services provided at the center.

“Mental health continues to comprise a significant portion of our telehealth services,” he said.

4. DOD Cooperation / Electronic Health Records / MISSION Act Implementation

5. Suicide Prevention

5.1 - The Community Voice: Sept. is suicide prevention month (23 August, Irene Hilsendager, 2k uvm; Rohnert Park, CA)

Is suicide contagious? Suicide is the tenth leading cause of death in the United States for all ages.

However, it seems suicide deaths for teenagers has increased as of late even though suicide has taken the lives of over 44,000 in the United States. Every year the highest suicide rate is in the United States and among them are Caucasian, American Indians and Alaska Natives.

Around 32 percent of high school students have feelings of sadness and hopelessness. 17 percent said they considered attempting suicide, 14 percent made a suicide plan and seven percent tried to kill themselves.

There is one suicide for every 25 suicide attempts and one suicide for every four suicide attempts in the elderly. Alaska is the largest state in the United States for having the highest suicide rate with Montana having the highest suicide among the US states. California had a 10.5 suicide rate per 100,000 people individually.

Researching suicide rates by countries, it seems the Eastern European countries are on top. The lowest rates are in the Caribbean Islands.

Now according to the WHO, the suicide rate in South Korea is the tenth highest in the world. Many are among the elderly. In Japan the leading cause of death in men are the ages of 24-44 and in women 15-34. With a high culture tolerance for suicide Japanese families think suicide is honorable and many elders end their lives after retirement as a way out so as to not burden their children with financial problems.

AMERICAN OVERSIGHT

A new report shows a troubling trend of veterans committing suicides on VA hospital campuses, especially after receiving inadequate care from VA facilities.

Is the Department of Veterans' Affairs offering enough services in the mental health department?

While rates of suicide were among the highest for younger veterans-18-34 and lower and vets ages 55-and older, vets ages 55 and older accounted for 58.1 percent of all veteran suicide deaths a few years back.

Veteran suicide presents a challenge to the Pentagon and the military services claims they have instituted programs to save lives and promote prevention.

In many cases, family and friends are affected by a suicide loss and feelings of shame and stigma prevent them from talking freely. A fact that gets thrown around is suicide is often the result of untreated mental health conditions. Suicidal thoughts should not be considered normal and should get looked at as a more serious issue.

There are warning signs, but sometimes family and close friends think it's just a phase especially for teenagers. Do you ever hear someone say, "I wish I wasn't here?" Is the increased use of drugs and alcohol, has the behavior become more aggressive, have they withdrawn from friends, etc. Are there severe mood swings and do they draw things about death?

If there is immediate danger such as giving away possessions, saying good bye to friends, the mood shifts become very calm as they already have their plan in action and make sure there are no weapons around.

If you are not sure about the sign you are seeing, get in touch with a mental health professional immediately.

Other risk factors can be access to fire arms, a chronic medical illness, prolonged stress, a recent tragedy or loss and even agitation and sleep deprivation will trigger things.

Teens are willing to try anything, or peer pressure is a factor. In Broward County in southern Florida, a huge epidemic has arisen in the past two years. There is a new designer drug on the market called "flakka" It is found to have the same class of chemicals as in bath salts. It is a synthetic drug that can be snorted, smoked, injected and even ingested.

"Flakka" comes in a crystalline rock form and is sold online, manufactured in drug labs in China and can be ordered to be delivered to your home. This drug is highly addictive both physically and psychologically. It is as potent as crystal meth, bath salts and cocaine. User become very aggressive, hallucinate, loss of memory and acting impulsive.

Affects may include hypertension with an elevated heart rate and a hypermetabolic state that can lead to hyperthermia. In some parts of the country flakka is called gravel because of its white crystal chunks. Flakka can be much more dangerous than cocaine. Probably what has brought flakka the most attention is it gives the user the strength and fury of someone with extreme strength. A dose of flakka can go for only $3 to $5 which makes it a cheap alternative to cocaine.

AMERICAN OVERSIGHT

Flakka resembles white or pink gravel or grains of sand. It is foul smelling and also comes as a powder. Those who use it can sweat profusely, are disoriented, paranoia, extreme agitations, panic attacks and feel everyone is after them, slurred speech and these effects can occur five to fifteen minutes after ingesting.

If someone exhibits bizarre or harmful behaviors after taking flakka, call 911 immediately. Do not engage with the person because they will most likely become violent.

Flakka is made from synthetic version of an amphetamine-like stimulant in the cathinone class called alpha-PVP. Cathinone's are chemicals gotten from khet plants originating in the Middle East and Somalia where the leaves are chewed for a buzz.

Is the medical community prepared for this epidemic? After being addicted, will suicides increase among the young set of people? Parents beware of crystals in your homes. The CDC says suicide rates are increasing.

6. Women Veterans / Homelessness / Benefits / Cemeteries

6.1 - U.S. News & World Report (AP): Veterans Program Yields More Than Just Honey (24 August, Michelle James, 23.3M uvm; Washington, DC)

BECKLEY, W.Va. (AP) — For 10 days, Ed Forney chatted with each visitor who passed by his table at the West Virginia Grown Country Store at the State Fair of West Virginia.

Forney's display attracted a lot of attention, too.

Turns out, fairgoers have quite the sweet tooth and there isn't much sweeter — even at the state fair, where food lurks around every corner — than a bottle of honey.

But it wasn't just the honey, or the samples Forney offered, that drew the crowd.

The signs around his display helped quite a bit, as people stopped by to learn more about, and purchase, "West Virginia Veteran Produced Honey."

Although Forney is the face fairgoers and many others might associate with veteran-produced honey, he is actually one of more than 300 veterans in the West Virginia Veterans & Warriors to Agriculture Program.

Forney, a U.S. Army veteran who resides in Hedgesville in Berkeley County, explains his wife Cheryl retired from the WVU Medical Center where she spent a lot of her time working in the trauma center.

"After she retired she got into beekeeping for relaxation," he said.

As the two built an apiary on their farm, he said they began to look into establishing a veteran's beekeeping program in the eastern panhandle.

AMERICAN OVERSIGHT

That was 2012, which coincided with the establishment of the state's Veterans & Warriors Program.

Instead of creating a program, Forney joined one as a participant.

"I was one of the very first folks to sign up for it," he said.

A few days later, representatives from the Department of Agriculture visited his farm to view his apiary and asked if he would train other veterans.

"We had no idea what we were getting into, but we said we would volunteer," he said.

Although the program was up and running for several years before West Virginia Department of Agriculture Commissioner Kent Leonhardt took office in 2017, Forney said it was after the change of guard that things began to take off.

"We saw major changes," he said. "He (Leonhardt) is a veteran and is the driving force behind the program. So it's been much better communication and a much better partnership. Now that he's at the helm, there's more structure."

There are several reasons for the beekeeping program. One is that it provides a form of therapy for veterans who might be suffering from PTSD.

Leonhardt, a retired Marine lieutenant colonel, actually brings beekeeping experience to the job and said he knows first-hand how calming it can be.

He said those beehives were especially useful when he was on active duty, serving as a liaison to the National Security Agency in the early 1990s.

"I had beehives in my backyard and if I had a very stressful day, I'd get one of those 5-gallon buckets, turn it upside down and I'd watch the bees come and go," he said. "You wouldn't believe the calming effect watching how those bees would struggle, laden with pollen, just to get back to the hive and distribute it into the combs."

That's what Forney said drew him and his wife to beekeeping, and now other veterans to the program.

"If you've ever had a garden, you may go out working for 'an hour,' and then four hours later you realize, 'My goodness, it's been four hours,' because you relax so much," he said. "That's the thing."

The men say they hear stories like that often. Stories about how the program has helped people forget their troubles. How it has saved their lives.

"We have people like Eric (Grandon) who say they owe their lives to the program," Leonhardt said of a Clay County veteran who served in recent Middle East wars. "He found this has become a business for him. He now has a hive at the Culture Center in Charleston and he says he owes it to the program that he didn't put a gun to his head."

Forney added, "I've been his mentor since the beginning and it's life-changing. Not just a little bit, but completely life-changing for his family."

AMERICAN OVERSIGHT

Through beekeepers like Forney, the WVDA offers training to the veterans in the program, and also purchases and provides extraction equipment so that participants can make a go of a business at home.

That's another part of the program.

"What we're doing is setting up a structure that allows a veteran to start a business in West Virginia," Leonhardt said. "Some people do it as a part-time business. Some people do it as a full-time business like Ed does. But the idea is to grow West Virginia agriculture at the same time we're helping people who need some help."

Forney explains veterans purchase their own bees, labels and bottles, and their new business often becomes a family affair as they work together to produce and sell honey.

In some cases, Forney sells it for them if a veteran, for example, struggles with crowds or simply doesn't want to set up and sell.

But in all cases, veterans keep 100 percent of the profits from the honey they produce.

And beekeeping isn't the only program that falls under the Veterans & Warriors umbrella as, since the legislature funded it for $250,000 in 2018, agrotherapy has been introduced at the Huntington VA.

That program trains veterans in various areas of agriculture.

Also, Leonhardt said the department hopes to set up a mentoring program that places veterans with farms that don't have an heir. He said the goal is that farm might continue when an owner passes away or retires.

Leonhardt and Forney both said they're excited about the direction of Veterans & Warriors and of the beekeeping program itself, which has received attention throughout the country and as far away as Angola.

They encourage other veterans who might be struggling or who might be interested in learning more, to reach out for more information.

"This veterans program is one of those tools we use to bring everybody together," Leonhardt said. "It's a common goal that people feel passionate about. For me it's very important, being a veteran.

"We want people to talk to us," he continued, adding the program is not treatment for PTSD and offers no medical advice, but can provide a connection to help. "Sometimes all they (someone in crisis) need to hear is just a voice on the other end of the phone."

For more information on the West Virginia Veterans & Warriors to Agriculture program call 304-558-2210 or visit www.agriculture.wv.gov.

AMERICAN OVERSIGHT

6.2 - Connecting Vets: **New platform creates digital memorials for all veterans in national cemeteries** (23 August, Abbie Bennett, 5.8M uvm; Washington, DC)

A new searchable online tool from the Department of Veterans Affairs and National Cemetery Administration allows creates digital memorials for fallen service members buried in national cemeteries across the United States.

The Veterans Legacy Memorial is an online memorial space managed by the National Cemetery Administration, which oversees the 136 national cemeteries where 3.7 million veterans are interred.

The VLM creates a profile page for each service member.

To find a memorial profile, go to vlm.cem.va.gov and search the name of your veteran, using their first and last name.

You can narrow your search by providing the veteran's branch of service and the cemetery name, along with other information.

Each veteran's page includes their name, dates of birth and death, last rank held, service branch, cemetery, address and contact information for the cemetery, section of the cemetery they are interred in and the date of their internment.

Upcoming features will include the ability to leave tribute messages, photographs and more to individual profiles.

"Veterans Legacy Memorial ensures 'no veteran ever dies' by honoring the legacy of our nation's veterans, not just in our cemeteries, but in a new and innovative digital setting," VA Secretary Robert Wilkie said in a statement announcing the new tool. "It enhances the onsite national cemetery experience and extends the experience to those who otherwise are unable to physically visit the cemetery."

For more information, go to va.gov/remember. For assistance using the VLM, click here.

6.3 - WSAW (CBS-7, Video): **Simcakoski Foundation raises money for therapy golf course for veterans** (24 August, Stella Porter, 212k uvm; Wausau, WI)

IOLA, Wis. (WSAW)-- About 150 golfers hit the links at the Glacier Wood Golf Club in Iola on Saturday, playing a round to raise money for the Simcakoski Foundation as a part of their second annual golf outing.

The foundation works to help veterans receive proper mental healthcare.

"Our hope is, I guess, is to help veterans with PTSD and mental health issues, help them not just take the opiates and pills, but have alternative methods for them," said Linda Simcakoski.

Founded by the family of u-s marine Jason Simcakoski-- who died after being over prescribed opioids at the Tomah VA Hospital.

AMERICAN OVERSIGHT

The foundation has worked with lawmakers to create Jason's Law-- which reduces the number of opioids prescribed to veterans.

"We're hoping to raise 30,000 dollars, and I think we're going to be able to hit the goal," said Jason's father and President of the foundation, Marv Simcakoski.

Jason's buddies from the marines came from all over to support the cause in memory of their friend.

"We have one coming from Louisiana, we have one from Oklahoma, one from Ohio, and then one from Wisconsin here," said Jason's mother Linda.

The money raised today will go towards helping other veterans heal through golf, just as Jason did.

"We took over the V.A. 9-hole golf course in Tomah, which is going to be a therapy course, and we're re-doing the greens, and we're sticking money into that golf course," said Jason's father.

Closed for years, the group hopes to bring the golf course back as an outlet for veterans going through a tough time.

"We want something for veterans when they are patients at the VA.clinic and other places in Wisconsin that they can go and golf for free, and it gives them alternative therapy, besides medicine," he said.

Because golf is something that helped Jason when he was a patient.

"It gave him a chance to get out with me, just to get out and get some sunlight and talk and relax instead of being in a building," Simcakoski said.

The foundation plans to have the therapy golf course ready by spring 2020.

6.4 - The Herald-Dispatch: **VA to host event on overdose awareness** (24 August, 135k uvm; Huntington, WV)

International Overdose Awareness Day, a global event held each year to raise awareness of overdoses and reduce the stigma of a drug-related death, acknowledges the impact of drug use and the risk of opioid overdose, including individuals directly impacted, family and friends.

The Hershel "Woody" Williams Veterans Affairs Medical Center will host an Overdose Awareness Information Fair from 9 to 11 a.m. and 1 to 3 p.m. Wednesday, Aug. 28, in the main lobby of the medical center. Educational materials will be available regarding local VA resources and programs to assist veterans in need.

VA initiatives are in place to prevent drug overdose through education, proper disposal of unused medication and access to naloxone (Narcan), a lifesaving medication that is an antidote to opioids that can prevent fatal opioid overdose. Staff will be available to discuss risk reduction strategies as well as treatment options for at-risk veterans.

AMERICAN OVERSIGHT

Aug. 28 also has been designated "Wear Purple" day for all U.S. Department of Veterans Affairs staff to bring more awareness of overdoses and reduce the stigma of a drug-related death.

6.5 - WYOU (CBS-22, Video): Female veterans honored for their service (24 August, Morgan Parrish, 117k uvm; Wilkes Barre, PA)

Pennsylvania is home to the fourth-largest veteran population in the country.

Female veterans, who account for roughly eight percent of that population, were honored Saturday morning for their service.

Dozens of community members gathered at the Wilkes-Barre VA Center Saturday morning for a women veterans town hall and expo. The goal? To honor women veterans for their service as well as update them on programs and services they may have earned.

“2016 we actually opened our women’s clinic here which is a self-contained clinic. It gives them the privacy that they want. We have children coming in with their moms,” Patricia Conroy, women veterans program manager for the center said.

In terms of healthcare, the Wilkes-Barre VA provides primary care, behavioral healthcare, as well as all of the pharmacy services throughout the facility.

“Anything a woman veteran may need in her care,” Sumit Ghosh, medical director of women’s health at the center said.

Veterans tell Eyewitness News it’s also important to remind people that women veterans’ needs are equally as important as men’s.

“Historically if you thought of a veteran, you thought of maybe the WW2, you thought of a male veteran. You thought of a male Vietnam veteran. Females are veterans as well. They have served this country throughout our entire history. This is nothing new,” Conroy said.

“It is stereotypical to a degree. A lot of generational gender gaps but ultimately, it’s just speaking out beyond that and saying ‘no I did serve. I am also a soldier and I have served in the military’,” Lisa Kaye, director of the Monroe County Veterans Affairs said.

Kaye is a U.S. Army veteran who served three years active duty and one year in the National Guard. She says she experiences first-hand what it’s like to not be taken seriously as a veteran.

“You see an Army veteran license plate or sticker on the back of a vehicle, they automatically assume you must be a male driver,” Kaye said.

Leaders say they hope the expo will raise awareness in the area on how important it is to help our female veterans in need and also to make sure they always feel appreciated.

“We may think that we know what our veterans’ needs are, but there is nothing like having the veterans speak to what her needs may be,” Ghosh said.

AMERICAN OVERSIGHT

This event is the third in a series of town hall and expos put on by the governor's advisory council for veterans services and the Department of Military and Veterans Affairs.

6.6 - KBAK (CBS-29): VA launches online memorial to honor deceased veterans of Bakersfield National Cemetery (24 August, 104k uvm; Bakersfield, CA)

The VA has launched a new online program to honored deceased veterans.

This week, the Bakersfield National Cemetery launched the Veterans Legacy Memorial.

The memorial is the country first digital platform dedicated to the preservation of the memory of the 7,000 veterans buried at the cemetery.

Each veteran will have a memorial page on the site.

The public will be able to search the site for where veterans are buried, as well as read about the basic details of their lives and service.

For more information check out their website.

6.7 - WCBD (NBC-2): Vietnam veteran evicted from apartment; people seen rummaging through belongings (23 August, 83k uvm; Mount Pleasant, SC)

MYRTLE BEACH, S.C. (WBTW) – A Carolina Forest veteran is headed to New York after an eviction.

Veterans Outreach Program Specialist Chris Aranda, with the Department of Veterans Affairs, told WBTW the veteran, identified as Tom, was released from the hospital around 3 p.m. on Wednesday and was dropped off at a homeless shelter.

When VA members went to the shelter, the veteran wasn't there, Aranda said. The members went looking for the veteran and found him on Oak Street.

The veteran stayed in a hotel overnight, where he was able to shower and sleep in a bed, Aranda added. On Thursday, volunteers from various vet organizations helped the veteran load the rest of his things before he heads to New York to stay with family and friends.

"Very unfortunate event that he came home to this, but veteran community stepped up once again and ensured we leave no veteran behind," Aranda said.

WBTW is not using the veteran's last name for his protection.

Sterling Management, which runs Canterbury Appartments said to us in a partial statement "Due to the nature and sensitivity of the matter, it is taking us time to ensure we're delivering

AMERICAN OVERSIGHT

facts in a thoughtful manner. It is the customary practice of Sterling Management to respect the privacy of its tenants and not to comment on specific situations involving its tenants."

News13's Elisia Alonso spoke to the veteran and volunteers.

"I will never leave a veteran behind. If there's a veteran in need, if there's a veteran in the street, if a veteran just needs a meal – I'm there," said Chase McCarthy.

Some volunteers stayed overnight to protect Tom's property.

"We basically just stayed here to make sure that what was left of his property was, that nobody else looted or messed with anything else. A lot of his stuff had already been taken. To my understanding it had been here a few days already," said Chuck Hooks.

On Wednesday, WBTW reported that pictures on social media have people talking after the veteran was evicted from his apartment.

Christopher Trinemeyer, who is the Assistant Director for Operation Veteran Reintegration, has been looking after the 72-year-old Vietnam veteran.

Images show the veteran's belongings sitting out after the former marine was apparently evicted from his apartment at the Canterbury Apartments.

Trinemeyer said the veteran suffered a heart attack at around the same time he got the eviction notice and only recently got out of the hospital.

Several neighbors told WBTW that some people are stealing items that belong to the veteran.

"To see somebody's whole life just, you know, sitting there in the rain — I mean, it's a huge amount of empathy that I have for another human being to — especially talking to him," Trinemeyer said. "He was like, I don't want to go see it today, I don't want to do it tonight. he was like, I will do it in the morning. we're like, okay."

6.8 - Chillicothe Gazette: **Local veteran awarded degree after leaving university 40 years ago** (24 August, Toria Barnhart, 49k uvm; Chillicothe, OH)

One local veteran has dedicated his time to learning through audited classes and his children's textbooks after he was forced to leave university behind. But earlier this month, he finally received his degree after waiting for more than 40 years.

Larry McKillip, a 74-year-old U.S. Navy veteran, was surprised by his family and faculty at the University of Louisville with his associates degree earlier this month. McKillip left the university in 1977 after his mother, who cared for his father, was diagnosed with cancer.

"I am so grateful to the university for what they have done," McKillip said. "This is something that I've wanted for so long."

Choosing a path

AMERICAN OVERSIGHT

While McKillip's family describes him as a lifelong learner, he says that it wasn't always the case. In high school, McKillip never applied himself to his coursework. So after graduating in 1966, he enlisted in the Navy.

For five years, McKillip served as an active duty medic. He worked in Vietnam providing care to civilians and soldiers. Through the military, McKillip became disciplined and developed a plan for his future.

Once discharged, McKillip used the GI Bill to attend the University of Louisville where he was pursuing a bachelor's degree in educational recreation. With his degree, McKillip aspired to work in a Veterans Affairs medical center directly with his peers.

As he progressed through the first semester of his senior year, McKillip learned that his mother had been diagnosed with cancer. At the time, his mom was also the primary caretaker for his father who had a form of muscular dystrophy.

McKillip decided to leave college and return home to Ohio to help care for his ailing parents. But because McKillip left the university before the semester finished, the stipulations of the GI Bill required he pay the tuition back. More than five years passed before he was ready to return to the University of Louisville. And once the time came, McKillip was considered an out-of-state resident and couldn't afford the increased fees.

"Sometimes life happens and it just doesn't work out," he said.

Instead, McKillip began to work at the Chillicothe VA Medical Center. For more than 36 years he worked at the center starting in acute nursing and eventually moved into recreation. Although McKillip didn't have an official degree in recreation, he was still able to take what he had learned from his time at college and apply it to his career.

He worked with residents at the center on therapy for issues related to dependency on drugs and alcohol. McKillip also spent time with the veterans in different workshops or groups to reminisce or socialize.

While working at the VA, McKillip also spent time auditing classes online or at local colleges. In some ways, it was to show his family that although he didn't have a degree, he was still committed to higher education.

And when McKillip's children were of age he ensured that all four of them attended university - and graduated. When they came home after finishing each semester, he asked that they also bring their textbooks. Then, McKillip read about abnormal psychology, statistics and more just as his children did in the classroom.

"I've always enjoyed learning new things," he said. "But part of it was that I wanted to be fulfilled."

McKillip retired from the VA in 2006 and stopped auditing classes before that. But he still continues to read about topics that fascinate him. McKillip's son-in-law Jason Beavers believes that McKillip partook in these courses to keep his mind engaged.

But McKillip's love for learning was halted three years ago when he was diagnosed with stage four esophageal cancer. During that time, he was completely focused on taking his medication

AMERICAN OVERSIGHT

and staying healthy. And by 2019, McKillip recalls giving up any hope of receiving his degree or pursuing any other education.

Amending the past
When Beavers learned of McKillip's diagnosis, he wanted to do something to honor the man who had given so much to others. Beavers reached out to the University of Louisville to see if they would be able to grant McKillip an honorary bachelor's degree for the time he spent at the college.

Staff at the university informed Beavers that they did not issue honorary degrees. Beavers gave up hope. But he soon learned that McKillip had earned enough credits to receive an associate degree in his own right.

"It wasn't something that was awarded as an honorary thing, but as something he had done on his own initiative and gumption," Beavers said. "We knew that would help make that missing piece from his past feel filled in."

After the announcement, Beavers and his wife, his mother-in-law, Linda McKillip, and staff at the university worked to surprise McKillip. The family told McKillip that they were taking a vacation to Louisville with a pit stop at the university. Once there, the University of Louisville Alumni Office, President Neeli Bendapudi and provost Beth Boehm held a special ceremony to declare McKillip an adopted alumnus and present him his degree.

“Some lives are exemplified by service,” Bendapudi said at the ceremony. “Service to others, service above self, service selflessly. And that, I think, truly exemplifies this man.”

Through his experience, McKillip wants nontraditional students, and others who may have given up on their degrees, to continue working towards their academic goals and learn of other programs designed to help them be successful.

After decades of waiting, McKillip is finally able to feel closure in his academic accomplishments with the newfound confidence that the label of college graduate brings. And although he now has his degree, McKillip plans to continue his passion for learning.

6.9 - Palm Beach Daily News: **Handyman spent 50 years working in Palm Beach; now he’s living in a group home** (23 August, Wendy Rhodes, 48k uvm; Palm Beach, FL)

Roger Colvard, recently diagnosed with terminal bone cancer, says he feels ‘abandoned’

One day, Roger Colvard lived in a $17 million mansion. The next, he was homeless.

Colvard didn’t exactly live inside the mansion — he lived in a two-room apartment above the garage until July 28. The house, named Southways, had been owned by the Gallant family for 50 years — the same amount of time Colvard said he worked as a handyman in Palm Beach.

Colvard’s boss and friend, Antoinette “Toni” Gallant died last summer, at which time her son Steven Gallant took over care of the estate. The 14,000-square-foot historic mansion was then sold, and Colvard was told he had to leave.

AMERICAN OVERSIGHT

The apartment was simple, and the 75-year-old Army veteran had to climb a steep set of narrow stairs to get to it, but it was home. There was no kitchenette and no air conditioning. It was bright, but the walls were grimy and the bathroom fixtures corroded. A 10-inch box television was perched next to a small table with 11 bottles of pain pills that Colvard refused to take.

The pills were prescribed to ease the pain of terminal bone cancer — a diagnosis he received after riding his blue bicycle to see his doctor at the VA Medical Center in Riviera Beach. Two to five years, they told him.

Not long after receiving that news is when Colvard found out he had two weeks to vacate his apartment.

Gallant said he allowed Colvard to remain living in the apartment after his mother died for $250 a month rent. The agreement, Gallant said, was that Colvard would make $12 an hour as a handyman for the property, but would not get paid until his bill exceeded the $250 rent. “It’s kind of an off-and-on part-time job,” Gallant said. “We let him live here. There are many weeks we didn’t ask him to do anything.”

Colvard said he feels like he is “being kicked to the curb” after being a dedicated worker and friend to Toni Gallant, who he loved with all his heart.

“I used to play piano for her,” he said, adding that she even bought him an electric piano because she loved to hear him play. “I gave her the best Hoffman’s chocolates and flowers. She made me happy. She made me feel good, and I really loved her for that.”

Colvard said he would hold Toni Gallant’s hand when she took walks around the courtyard, because he couldn’t stand the thought that she might slip and fall.

Chasing love

It was for the love of a woman that Colvard first came Florida in 1969, after serving in the Army since 1964. Originally from California, he moved between Florida, New York and Massachusetts, working for families like the Kennedys, Mr. and Mrs. Benjamin Goodale, the Pulitzers and the Gallants, he said. He survived melanoma and three surgeries that left his nose disfigured, but said he always had friends to help him.

Ruth Yaeger Lane, who was Colvard’s boss when he worked at the mansion that Estée Lauder subsequently purchased, once bought him a $27,500 piano just to hear him play, he said.

Lane died in 1985, Colvard said, and he was devastated until he developed a special relationship with Lilly Pulitzer, who he said became his “closest friend in Palm Beach.”

For 30 years he did odds jobs for Pulitzer. “She’d call me up when a rat got in the house,” he said. “Once there were two, and she said, ‘I want you to catch them for me, but I don’t want you to hurt them and I don’t want you to kill them. Give them some food, give them some water, and leave them.’”

Eventually, “time caught up with her” Colvard said of Pulitzer, who died in 2013. “I’ve said more prayers for her than anybody,” he said, his voice dropping.

AMERICAN OVERSIGHT

Liza Pulitzer, Lilly's Pulitzer's daughter, said she doesn't remember a time when Colvard wasn't around. "They really had a special relationship, those guys," she said of Colvard and her mother. "Mom cared so much about him. She would have never, ever fired him in his lifetime."

Pulitzer said that Colvard and her mom used to run errands together: the hardware store, Kentucky Fried Chicken, anywhere they could just take off on a mini adventure. She said she is heartbroken to see Colvard feeling so scared and alone.

"When you age out, it's frightening," she said. "You want to know that you mean something to someone. Any of us getting kicked out to the curbside has got to be a terrifying thing."

Tough luck

Colvard said his monthly VA benefit of $1,100 doesn't go far, and he is not eligible for Social Security because his income was largely under the table. He gets $16 a month in food stamps.

"I'm not really happy," he said the day after he left his Palm Beach apartment. "I'm going to have to sleep outside tonight. I hope I have a heart attack. If I could push a button, I wish I could just go away. I feel abandoned."

A week later, Colvard moved into a five-bedroom house in West Palm Beach with four other men, thanks to the the assistance of a Palm Springs charity called Faith, Hope Love and Charity, Inc. The organization paid $650 for the first month's rent, but Colvard said he will not be able to afford to stay after this month.

He subsists on big pots of spaghetti and pasta sauce that he said he can make last for days.

"I've looked for work in Palm Beach," he said, frustrated that he can't earn enough to get himself back to the town he loves. "Forget it. The only work I can get is walking the dog."

6.10 - NorthCentralPA.com: Student Loan Debt for Totally and Permanently Disabled Veterans to be Forgiven (25 August, 32k uvm; Williamsport, PA)

LOUISVILLE, KY— Today, President Donald J. Trump signed a Presidential Memorandum that will significantly streamline the process to erase federal student loan debt for totally and permanently disabled veterans. Through a process called Total and Permanent Disability (TPD) Discharge, veterans will now have their student loan debt discharged unless they decide to opt-out of the process. The Department anticipates notifying more than 25,000 eligible veterans and continuing the discharge process on a quarterly basis.

The memorandum issued today builds on improvements to the TPD discharge process implemented by U.S. Secretary of Education Betsy DeVos and U.S. Secretary of Veterans Affairs Robert Wilkie. In April 2018, the Department established a data matching process with the VA to identify totally and permanently disabled veterans who are eligible for student loan relief. Since April 2018, this process has resulted in Secretary DeVos providing more than $650 million in student loan relief to more than 22,000 eligible veterans.

AMERICAN OVERSIGHT

"Supporting and caring for those who have sacrificed much in service to our country is a priority for President Trump and the entire Administration," said Secretary DeVos. "I appreciate the President's strong leadership on this issue and his willingness to provide much-needed student loan relief. We will continue to prioritize the needs of our nation's veterans and provide them the help and support they have earned and deserve."

Veterans will still have the right to weigh their options and to decline loan discharge within 60 days of notification of their eligibility. Veterans may elect to decline loan relief either because of potential tax liability in some states, or because receiving loan relief could make it more difficult to take future student loans. Eligible veterans who do not opt out of the program will have their remaining student loan balance discharged and will be reimbursed for payments made following the date of their disability discharge.

Back to Top

6.11 - The Sheridan Press: Feeding communities: Program helps bridge gap for affordable food (24 August, Claire Schnatterbeck, 18k uvm; Sheridan, WY)

When looking for food on a slim budget, people don't usually turn to the fruit and vegetable section of a grocery store or seek organic produce. Sometimes, when food instability is affecting families, healthy food and cheap food seem mutually exclusive.

However, the Cent$able Nutrition program through University of Wyoming Extension at Sheridan College is looking to bridge the gap between money-savvy and health-savvy nutrition with educational programs and a new community garden.

The garden is the brainchild of Lori Dickinson, a community educator for the Cent$able Nutrition program.

The program works with people dealing with food insecurity and offers interactive class on cooking, healthy eating and saving money.

As part of the education arm of the Supplemental Nutrition Assistance Program, the nutrition program receives federal funding. SNAP supports better nutrition for low-income households.

While Dickinson mostly does direct education, the new community garden is branching off by incorporating community involvement.

"We tried to reach demographics that could utilize it," Dickinson said.

The garden is divided into two sections, one half gardened by youth community members and the other half by veterans in the recreation therapy program at the Sheridan Veterans Affairs Health Care System. All of the produce is donated to the soup kitchen, food pantry, SNAP table at the Sheridan Farmers Market on Thursdays or veterans in the community.

Dickinson has a social work background so, for her, partnering with different groups in the community has been very important for the project. Volunteers come from many groups, including Girl Scouts, Boy Scouts, Volunteers of America Northern Rockies Milestones Youth Home, 4-H, youth that require community service and veterans. The extension program is also in the agriculture building at Sheridan College, so being able to connect with ag experts for the

AMERICAN OVERSIGHT

garden has been fruitful. So far, volunteers have put in more than 90 hours of time in the garden.

“It’s really important to instill in youth the concept of altruism and giving back,” Dickinson said. “They can learn in the process and have fun and still give back to the community and people who can really use it.”

Reed Novak is involved in 4-H and has been working in the garden since the beginning. He enjoys “digging through the soil and smelling the fresh plant life,” volunteering and the satisfaction of watching plants grow to share with others.

“I would encourage people to get into gardening too because it’s fun and it’s also rewarding,” Novak said.

The volunteers have worked to grow a variety of produce, ranging from many different types of squash to corn to jalapeños to Brussels sprouts, just to name a few. So far, the garden has yielded almost 100 pounds of produce that has been donated.

Hesid Brandow is the temporary local food and agriculture organizer and operates the SNAP booth at the farmers market where some of the produce is donated. The booth allows people to swipe their SNAP card and purchase SNAP bucks to use at the farmers market. Brandow understands the importance of promoting healthy food to people with food insecurity and coming together with community partners.

“Whenever we can come together to provide good, wholesome food for our community, everyone wins,” Brandow said. “Food is becoming increasingly important…and for people who are just trying to survive month to month and get the healthiest, best food for their family with their benefits programs…SNAP at the farmers market really increase the chances that what people are getting are going the be healthy foods that are going to increase the nutritional value of their household, and so put in that context it’s pretty obvious why this is a good thing for our community and why we should all care.”

In addition, the involvement of the SVAHCS recreation therapy program with the garden has proved beneficial for community building and recreation. The therapy program finds things that veterans have an interest in, or might have an interest in, and allows those interests to help further the therapy they may need. Veterans — particularly those in the inpatient program who have had a brain injury or post-traumatic stress disorder — are involved with the program to find things that help heal them in a different way than traditional therapy.

Kristina Miller, the public affairs officer at the VA, said community partnerships are important for veterans, including involvement with the garden.

“There was a veteran who hadn’t gardened since he was a kid…this was reconnecting with those positive memories. Allowing them to remember that there are things they can do that aren’t meditation or traditional therapy may be what they need to be accepted in the community,” Miller said. “Anyone who has touched a plant or pulled a weed can appreciate the value in planting something and seeing it grow and being a part of its development.”

Veterans have also participated with the direct education aspect of Cent$able nutrition through classes on eating healthy on a budget, food safety and receiving cookbooks.

AMERICAN OVERSIGHT

Brian Mealor is the director of the Sheridan Research and Extension Center, which houses the agricultural experiment station, offices for UW distance education and the UW extension programs like Cent$able nutrition. He feels that the garden could serve as a model for community engagement with encouraging healthy eating among demographics with food instability.

“I think hands-on, truly engaged programs like what Lori [Dickinson] is doing is the best way to do that extension and for people to learn about the importance of good nutrition and healthy eating habits and then tie that in with the ability to grow your own food and know the origin of where that food came from. It’s really a win-win on both sides. It’s taking the traditional model of extension and doing it a little bit differently.”

For Dickinson, the process of putting together the garden and growing it together with community partners is just as important as the product.

“There is a great need in this community to help people who have food insecurity,” Dickinson said. “It’s important to not only help them in the moment but to help them learn healthy life skills that can help them in the long run.”

Back to Top

6.12 - My Buckhannon: ‘This would mean everything to my mom’: Vietnam veteran receives diploma 60 years after high school graduation (24 August, Beth Christian Broschart, Buckhannon, WV)

MARTINSBURG – Some people wait their entire lives to have their deepest wishes come true with no luck.

Fortunately, the dream of a U.S. Army Vietnam Veteran and Purple Heart recipient with ties to Buckhannon was recently granted in July when he was 78 years old.

Floyd Nimrod Covey lived in Upshur County and was enrolled in high school when he was drafted to serve his country in the Vietnam War; in fact, while serving his country, he missed his high school graduation.

Covey, who now resides in the Martinsburg VA Medical Center, told some of the staff members he really wished he had graduated high school, saying his mother was disappointed that he never finished high school and received his diploma.

Upshur County Schools Superintendent Dr. Sara Stankus and assistant superintendent Dr. Debra Harrison packed up and traveled to Martinsburg on July 8 to present Covey with his high school diploma and celebrate with those gathered at the VA Center.

“During a time in his life while others were graduating, he was unable to,” Stankus told My Buckhannon when she had returned from the special trip to Martinsburg.

The ceremony was orchestrated by cooperation between VA staff members and Upshur County Schools.

AMERICAN OVERSIGHT

When staff members heard Covey's story, they stepped in to help him achieve that goal. The West Virginia Department of Veterans Assistance has a two-page form to help veterans who served in World War II, the Korean War or the Vietnam Conflict earn their high school diploma.

The application lists three requirements: the applicant must have served in the U.S. Armed Forces between Sept. 16, 1940 and Dec. 31, 1946, June 27, 1950 and Jan. 31, 1955 or between Feb. 28, 1961 and May 7, 1975; they must have been discharged from the Armed Forces under honorable conditions; and they must not have previously received a high school diploma.

West Virginia State Code 18-2-34 provides that veterans who left school prior to their graduation and served in the referenced wars will be awarded their high school diploma in either the county where they currently reside or in the county where the veteran would have originally received his diploma.

So, Covey completed his paperwork and was approved to receive his diploma. Members of the Upshur County School system called Covey and invited him to attend graduation and walk in the May 24 ceremony held at West Virginia Wesleyan College. Covey initially planned to attend the ceremony; however, he had a medical issue that prevented him from attending.

Since Covey could not travel to Buckhannon, Upshur County School personnel traveled to Covey.

Harrison said it was a pleasure to share this milestone with Covey.

"We drove four hours to meet with Covey," she said. "To see the tears in his eyes and to hear him talk about how he would give anything if his mother could have been there – her dream was that her son would be a high school graduate," she said.

"This was the best feeling that meant so much for him – finally achieving this milestone," Harrison added. "He was there in his cap and gown and he was so proud."

Stankus said the tears just flowed from Covey's eyes.

The superintendent said she and Harrison felt so blessed to be a part of sharing that moment with Covey.

"When we drove down, we didn't know how it would be, but the staff made him a cake to celebrate," Stankus said. "All of the residents on his floor came out to celebrate with him and see him graduate and see him be presented with his diploma. Even the administrator came to share the event."

Stankus said Covey was presented with a quilt, adding that they are usually patriotic-themed but said his had birds since they're one of his favorite things.

Harrison said going to Martinsburg and presenting Covey with his high school diploma was "some of the most rewarding time she has spent since taking on her current position."

Stankus said following the ceremony, U.S. Senator Joe Manchin presented Covey with a Letter of Commendation on his graduation.

AMERICAN OVERSIGHT

"Covey's story was also on the Today Show," she said. "I'm so excited he received his diploma. His social worker printed off all on the comments on his accomplishment from Facebook and shared them with Covey. There were more than 1,000 reactions. It was amazing."

Covey said he was pleased with finally receiving his diploma and added he kept thinking about his mother. He said he told everyone, "This would mean everything to my mom."

6.13 - Cherokee Tribune & Ledger News: Veteran-focused community eyed near national cemetery (23 August, Donald Campbell, Canton, GA)

Dozens turned out this week to learn more about a proposed community geared toward veterans that would sit on 500 acres next to Georgia National Cemetery.

The community room at Fire Station No. 22 in the BridgeMill community was packed with members of the public Wednesday evening to hear from developer Peter Sanders. For two hours, Sanders presented his proposed plans and answered questions from those attending the meeting.

According to Sanders, the Freedom development, as the project is being called, would include:

♦ A museum/living history center;

♦ A lodge and convention center;

♦ An 18-hole golf course with military monuments at each hole, along with an additional nine holes that that are handicap accessible;

♦ A section of low-cost housing catering to veterans; and,

♦ A more traditional residential development that would also be veteran-centric.

Being roughly halfway between Interstates 75 and 575, the conference center would be attractive for companies and organizations to hold meetings, Sanders said.

A major goal of the development is to give back to charities helping veterans, with revenue coming in to be donated out to organizations serving veterans, Sanders said.

Sanders said there would be two access points, to Freedome one on Scott Hudgens Drive and the other on Ga. Highway 20 with a traffic light approximately halfway up the incline and a roundabout on Scott Hudgens Drive to control traffic at the entrances.

The golf course would be a combination of public and private, as there would be times when companies holding conferences at the lodge could take to the course while paying a higher rate. The course would also be open to residents of the development and members of the public much of the time, with veterans paying the lowest rates to play, Sanders said.

AMERICAN OVERSIGHT

Freedom would be built in several phases, according to Sanders, with the golf course and lodge being the first focus of construction. He did not present a timeline for construction and said the project is in early planning stages.

James Mitchum, director of the Georgia National Cemetery had a prepared statement for the meeting. He explained that the Department of Veterans Affairs and the National Cemetery Administration are neither in support of or opposed to the development.

Mitchum did list a handful of concerns the cemetery and the VA had, including increased traffic in the area, the amount of noise generated during construction, errant golf balls making their way onto the cemetery grounds and that Freedom's main theme of recognizing and remembering America's veterans might create an implied relationship between the development and the VA.

A number of area veterans, including Robert Judd who is a member of the Marine Corps League spoke in favor of the development.

Judd said he and a number of other veterans in the Marine Corps League like what the plan involves, particularly the museum and living history center.

Several residents said a traffic light at the suggested location on Highway 20, would be a mistake because tractor-trailers coming down the incline from the west would have a hard time stopping, while westbound trucks going up the incline would lose their momentum and make it virtually impossible for them to climb the rest of the way up.

Some residents at the meeting questioned the non-profit status of the project, while others said there is inadequate water service in the area.

6.14 - KOAM (CBS-7, Video): "Wreath Ride" spurs patriotic convoy (24 August, Kate Kelley, Pittsburg, KS)

FORT SCOTT, Kan. - Hundreds of bikers line Main Street, gearing up for a ride to support Wreaths Across America, but this year is particularly special because they're joined by all eight military wrapped CFI trucks, all driven by veterans themselves.

"That's why I volunteer to drive this truck, because of what the truck represents, not only for the company, for myself, but for our country, what stands behind it. It's something that doesn't go away," expressed Scott Bell, an army veteran and CFI driver.

"I've lost a lot of shipmates over the years through accidents. We had a couple KIA's, so it's a big deal," explained Mike Slack, a navy veteran and CFI driver.

Each driver's registration fee goes towards purchasing a wreath, to honor more than 6,000 veterans on their graves at Fort Scott National Cemetery.

"There's so many graves out there that don't ever get anything put on them. Some of them have never seen anything on them in years, and knowing that we helped get a wreath put on that

AMERICAN OVERSIGHT

person's grave, it's a pretty good feeling," said Kevin Wagner, Volunteer Coordinator with Fort Scott National Cemetery Wreath's Across America project.

"It's just a great honor to be able to show support for the veterans that have paid that ultimate sacrifice and bring a little bit back to them," said Jeff Thurlow, a driver advocate for CFI.

Whether they're driving on 18 wheels or two, all of these drivers are committed to the same thing: preserving the memory of veterans.

"My step dad passed away in 2012, and we wanted a wreath for his grave, so it's just a good way to pay tribute," said Rich Murray, a biker from Nevada, Missouri.

"In the end, we're all a family. We're all brothers, and that's what brings everybody together," said Bell.

At 11 a.m. on December 14, all the wreaths purchased with funds from this event will be placed on veteran graves at Fort Scott Cemetery.

7.1 - U.S. News & World Report (AP): Veterans Band Together to Give Vietnam Vet a Proper Burial (24 August, Mark Rice, 23.3M uvm; Washington, DC)

COLUMBUS, Ga. (AP) — Billy Harold Watts was a decorated and disabled Vietnam War veteran. He had six children, 14 grandchildren and six great-grandchildren.

After collapsing in early June while home alone in Marion County, the 70-year-old lost his battle with lung cancer on Father's Day in a Columbus hospice.

Estranged from his family, no next-of-kin was found before he was buried in a pauper's grave.

But through a remarkable series of events, his family was eventually reached and local veterans were alerted. They, along with other caring folks in the community, rallied together to have his body exhumed for a proper burial: a funeral with military honors in his hometown of Oxford, Mississippi.

"It was just a blessing after a blessing at the end of all of this," said daughter-in-law Carla Watts of Jackson, Tennessee.

Billy served for three years active-duty in the U.S. Marines Corps. He earned two Purple Hearts, a National Defense Service Medal, a Vietnamese Service Medal, a Vietnamese Campaign Medal and a Combat Action Ribbon. He was a private when he was honorably discharged in 1970 at age 21.

Although he wasn't diagnosed, Billy had symptoms associated with post-traumatic stress disorder and was "highly medicated by the VA," Carla said. "When we cleaned Billy's house out, we took 26 bottles of narcotics to the sheriff's department and turned them in."

From the article Matthew sent:
"Already, many concerns have been raised about the drug's safety and efficacy, its suspicious fast-track approval through FDA review, and VA's contracting process," House VA Committee Chair Mark Takano said in a statement the day the Guardian article was released. "Today's reporting raises additional concerns that VA's own process for objective review is being undercut by undue influences. Questions remain about the ultimate impact on the health and safety of veterans, who should not be made into a 'test case' while the clinical community continues to gather data about this treatment.

Have any media outlets reported the esketamine do not promote decision? Seems to me that our do not promote decision addresses the possibility of 'undue influence' regarding esketamine.

The article Pete sent doesn't mention Dr. Thase receiving research support from Janssen. It should have.

You all have a great weekend.

Political Issues Related to VA's Limited Approval of Esketamine for Depression
by Stephen Spotswood

August 16, 2019
WASHINGTON—A VA panel this summer opted not to add the new depression medication esketamine, Spravato, to the department's formulary in the usual way. This came despite strong support from President Donald Trump and an effort by VA officials to fast-track the drug for approved use at VA facilities.
Instead, the panel voted to allow VA physicians to prescribe the ketamine derivative on a pre-approved, case-by-case basis and also required physicians adhere to the Food and Drug Administration's limited distribution requirements. According to those requirements, Spravato can only be prescribed following failure by at least two other medications.
The drug will need to be administered by a physician who will be required to observe the patient after dosing. The patient also will need to be on another antidepressant medication while taking Spravato.
In the week prior to the VA panel's vote, Trump met with VA Secretary Robert Wilkie and others to discuss the ongoing opioid abuse crisis, during which he brought up Spravato and its reported success in treating depression.
Trump told those present that that he had previously spoken with Wilkie about the drug and told him to "Corner the market on it and give it to anybody that has the problem. You have people calling—and our folks do a great job on the phone, but it's a telephone. You have people calling, looking for help. And if those people had that, I'm hearing like instantaneously they're in much better shape," according to a transcript of the meeting released by the White House.
Asked for an update on VA's progress with Spravato, Wilkie told the president, "We are working with Johnson &Johnson to distribute it. We should have it in all our VA hospitals by the end of the year. But it's in the purchasing process right now."
Trump told Wilkie that he expected Johnson &Johnson, to be "very generous to you. And if you'd like, I'll help you negotiate. Because, seriously, I just said 'Corner the market.'"

Under Scrutiny

This support by the president and the fast-tracking of the drug through FDA approval is now coming under scrutiny by legislators and the press, with questions being asked about possible unethical influence being asserted on VA by the Mar-a-Lago Trio—a group of unofficial advisers to Trump who are at the center of a number of lawsuits.
The three men—Ike Perlmutter, CEO of Marvel Entertainment; Dr. Bruce Moskowitz, an internal medicine specialist; and Marc Sherman, a private attorney—reportedly had a hand in using their relationship to the president to direct policy and personnel decisions at VA. Questions have been raised about possible financial benefit to them.
Among their several contacts with VA officials, they reportedly pushed for the department to partner with Johnson &Johnson in 2017 on a campaign around veteran suicide awareness. This resulted in the #BeThere campaign in 2017, according to media reports.
This connection between Spravato's manufacturer and the ongoing Mar-a-Lago controversy was cited in an article in *The Guardian* in June. That article, along with questions raised by physicians and

AMERICAN OVERSIGHT

researchers about the trials FDA considered in approving Spravato has legislators demanding answers from VA.

"Already, many concerns have been raised about the drug's safety and efficacy, its suspicious fast-track approval through FDA review, and VA's contracting process," House VA Committee Chair Mark Takano said in a statement the day the *Guardian* article was released. "Today's reporting raises additional concerns that VA's own process for objective review is being undercut by undue influences. Questions remain about the ultimate impact on the health and safety of veterans, who should not be made into a 'test case' while the clinical community continues to gather data about this treatment.

"We demand that VA provide documents and information about its review and contracting process to adequately address critical questions—including whether VA officials were pressured by the White House or the Mar-a-Lago 'three' to prescribe this drug to veterans. Spravato should not be added to VA's formulary until we have more answers about what this means for our nation's veterans."

Representatives from Janssen Pharmaceuticals—the subsidiary of Johnson &Johnson that developed Spravato—released a statement conveying their deep disappointment with "recent misleading media coverage" around the drug.

"Treatment-resistant depression is a critical unmet health need that carries significant economic, emotional and functional burden. ... Spravato offers significant and sustained improvement in symptoms of depression, bringing hope to patients who have cycled through multiple medicines without relief," the company said in their statement. "We firmly believe that people suffering from TRD, including our nation's veterans, deserve the opportunity to benefit from this breakthrough medicine."

VA has estimated that 10-15% of the 20 million veterans has major depression requiring psychotherapy or antidepressants. About one-third of those are considered treatment-resistant, having tried multiple antidepressants without success.

U.S. MEDICINE NEWS UPDATE

Debate Continues on Esketamine Efficacy and Safety for Depression Treatment

PHILADELPHIA - Is esketamine a revolutionary treatment for depression or just another moderately effective adjunctive medication with some potentially serious risks? The VA's Medical Advisory Panel leaned toward the latter position when it decided in June to approve the use of esketamine on a non-formulary basis for individuals who have previously failed at least two trials of other anti-depressants. The formulary committee's decision has done little to tamp down debate about the drug, however.

Guidelines Reduced Morality in Veterans at High Risk of Recurrent Stroke

INDIANAPOLIS - Meticulously following clinical guidelines in VA patients who suffered transient ischemic attack or nonsevere ischemic stroke reduced by nearly one-third their risk of death within a year, according to a new study. Yet, in the cohort study led by researchers at Richard L. Roudebush VAMC, of 8,076 patients with those cardiovascular events from October 2010 until September 2011, only 15.3% were recipients of so-called without-fail care.

Ensuring Community Providers Meet Veteran Suicide Prevention Standards

WASHINGTON - As leaders from across multiple federal agencies begin work on a roadmap to combat veteran suicide, they are searching for ways to turn existing efforts in towns, cities, counties and neighborhoods across the country into a net that can help catch struggling veterans. What remains unclear is if those local organizations, especially non-VA healthcare providers, are fully trained and ready to provide the level of care these veterans need.

VA Study Shows Benefit of PCSK9 Inhibitors After Maximizing Other Therapies

HOUSTON - Veterans who have experienced acute coronary syndrome within the past year face a substantial risk of a repeat event. Proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitors significantly reduce that risk, but determining who would benefit most and when they should be initiated has been challenging. Researchers determined that the inhibitors clearly have a role in reducing mortality in high-risk veterans with acute coronary syndrome.

13. The delivery of good medical care is to do as much nothing as possible.

"Laws of the House of God" ~Samuel Shem

An editorial idea that was rattling around in my skull had to do with my concern that medicine has become too focused on "doing things" to patients in support of a warped (in my opinion) economic profit model of medicine. Physicians are incentivized and encouraged to favor profitable prescriptions and procedures with little regard to the outcomes that result in their patients from these therapeutic activities that we inflict upon them. As I perused the internet with this dark and rather cumbersome idea in mind, I stumbled upon an old friend from my formative years as a medical student,

AMERICAN OVERSIGHT

III, MD COL (ret), MC, USA

intern and resident. That friend was a book I had read multiple times to help me cope with the stresses that are inherent to becoming a physician.

Subject: [EXTERNAL] Task &Purpose media query: President Trump says the VA is buying a product from Johnson and Johnson to combat veterans suicide

AMERICAN OVERSIGHT

Good afternoon Ms. Carter,

Thank you for taking my call!

President Trump told reporters today that the VA is buying a new product from Johnson and Johnson that has proven to be effective in combating veterans suicide:

"There's a product that's made right now that just came out by Johnson and Johnson, which has a tremendously positive – pretty short-term – but nevertheless a positive effect.

"I've instructed the head of the VA to go out and buy a lot of it, and we are buying a lot of it. Hopefully, we're getting it at a very good cost. And this is a – I guess it's a form of a stimulant, where if somebody is really in trouble, from the standpoint of suicide, it can do something.

"It's pretty well know, just came out. It's made, I believe, by Johnson and Johnson, and we have calls in now to Johnson and Johnson. Those calls – we've been dealing with them for two months and buying a lot of it."

Can the VA say:

1. What is the product?
2. How exactly does it work to reduce veterans suicides?
3. Has it been approved by the FDA?
4. How can veterans get this product?
5. What results has this product shown in reducing veterans suicides?

My deadline is today. Please feel free to email or call me at 703-697-6623.

Thank you.

Cleared. Please note collaboration with PBM and 10P4M. Thanks.

Q1: What is the product?
A1: Esketamine (Spravato)

Q2: How exactly does it work to reduce veterans suicides? Mental Health 10NC5
A2: Spravato was approved by the Food and Drug Administration (FDA) to be used in conjunction with an oral antidepressant for the treatment of treatment resistant depression (TRD). If Spravato treatment of Veterans with TRD is successful, it is expected to have a

AMERICAN OVERSIGHT

positive impact on death by suicide. Spravato has not been FDA approved for treatment of acute suicidality.

Q3: Has it been approved by the FDA?
A3: Yes. It was approved on March 5, 2019

Q4: How can veterans get this product?
A4: Spravato is available to Veterans enrolled for VA care based on an individualized treatment plan developed by their provider in collaboration with the Veteran.

Q5: What results has this product shown in reducing veterans suicides?
A5: Spravato has not been in use long enough to assess it's effectiveness and safety. VA will closely monitor the use of Spravato in Veterans to more fully understand its relative safety and effectiveness as compared to other available treatments.

President Trump told reporters today that the VA is buying a new product from Johnson and Johnson that has proven to be effective in combating veterans suicide:

"There's a product that's made right now that just came out by Johnson and Johnson, which has a tremendously positive – pretty short-term – but nevertheless a positive effect.

"I've instructed the head of the VA to go out and buy a lot of it, and we are buying a lot of it. Hopefully, we're getting it at a very good cost. And this is a – I guess it's a form of a stimulant, where if somebody is really in trouble, from the standpoint of suicide, it can do something.

"It's pretty well know, just came out. It's made, I believe, by Johnson and Johnson, and we have calls in now to Johnson and Johnson. Those calls – we've been dealing with them for two months and buying a lot of it."

Can the VA say:

1. What is the product?
2. How exactly does it work to reduce veterans suicides?
3. Has it been approved by the FDA?
4. How can veterans get this product?
5. What results has this product shown in reducing veterans suicides?

My deadline is today. Please feel free to email or call me at *(b)(6)*

Thank you.

Jeff Schogol

Dennis /10P – Hot -This is another Spravato/esketamine query from the president's recent comment earlier today.
Seeking written responses to the following questions

Deadline is today

Q1: What is the product?
A1: Esketamine (Spravato)

Q2: How exactly does it work to reduce veterans suicides? Mental Health 10NC5
A1: Spravato was approved by the FDA for Treatment Resistant Depression (TRD). If Spravato treatment of Veterans with TRD is successful, it is expected to have a positive impact on death by suicide.

Q3: Has it been approved by the FDA?
A3: Yes (please insert date). It was approved on March 5, 2019

Q4: How can veterans get this product?
A4: Spravato is available to Veterans enrolled for VA care based on an individualized treatment plan developed by their provider in collaboration with the Veteran

Q5: What results has this product shown in reducing veterans suicides?
A5: Spravato has not been in use long enough to assess it's effectiveness and safety

Subject: [EXTERNAL] Task &Purpose media query: President Trump says the VA is buying a product from Johnson and Johnson to combat veterans suicide

Good afternoon Ms. Carter,

Thank you for taking my call!

President Trump told reporters today that the VA is buying a new product from Johnson and Johnson that has proven to be effective in combating veterans suicide:

AMERICAN OVERSIGHT

"There's a product that's made right now that just came out by Johnson and Johnson, which has a tremendously positive – pretty short-term – but nevertheless a positive effect.

"I've instructed the head of the VA to go out and buy a lot of it, and we are buying a lot of it. Hopefully, we're getting it at a very good cost. And this is a – I guess it's a form of a stimulant, where if somebody is really in trouble, from the standpoint of suicide, it can do something.

"It's pretty well know, just came out. It's made, I believe, by Johnson and Johnson, and we have calls in now to Johnson and Johnson. Those calls – we've been dealing with them for two months and buying a lot of it."

Can the VA say:

1. What is the product?
2. How exactly does it work to reduce veterans suicides?
3. Has it been approved by the FDA?
4. How can veterans get this product?
5. What results has this product shown in reducing veterans suicides?

My deadline is today. Please feel free to email or call me at (b)(6)

Thank you.

Jeff Schogol

I see no mention of REMS on the questionnaire, so I consider completing and sending it 100% OPTIONAL.

Jen,

Can you confirm with J&J that there is no requirement for customers to send them this information and if that is the case, let them know we are going to advise sites NOT to complete and send in the form?

Mike

Subject: FW: [EXTERNAL] SPRAVATO (esketamine hydrochloride) CIII REMS - Know Your Customer Questionnaire Required

One of my sites has now registered for the SPRAVATO REMS program. Apparently, they received another questionnaire after they received their confirmation. I really don't see how some of this is relevant, especially Question 32. I'm assuming you guys may be working on additional specific guidance, but I see no need to disclose our prescription information.

Thanks,

Mark A. Slagle, PharmD, BCPS

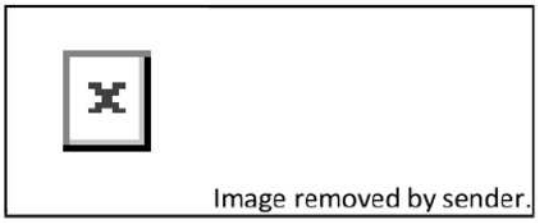
Subject: FW: [EXTERNAL] SPRAVATO (esketamine hydrochloride) CIII REMS - Know Your Customer Questionnaire Required



Mark,
Is there another path for the VA here? I registered the facility and the pharmacy this morning, they sent me confirmation of both. Now this arrived, looking at the questionnaire, it doesn't seem to be tailored to the VA clinic where this would be coordinated and procedures followed. This doesn't seem like things we answer as a facility or pharmacy to order, and question 32 wouldn't be something I'd report to anyone outside the VA.
Appreciate any help.
Brian

AMERICAN OVERSIGHT

Dear Brian Kuehl,

Welcome to the SPRAVATO REMS.

Attached is the Janssen "Know Your Customer Questionnaire" which needs to be completed prior to ordering SPRAVATO.

Please fax the completed form to 1-877-778-0091

Thank you for your participation in the program. If you have any questions, please contact the SPRAVATO REMS Monday through Friday, 8:00 AM to 8:00 PM ET at 1-855-382-6022 to speak with a REMS team member.

Please retain a copy of this notification for your records.

Please see full Prescribing Information, including Boxed WARNING, and Medication Guide for SPRAVATO

Sincerely,

The SPRAVATO REMS

Subject: [EXTERNAL] RE: VA Pharmacy Benefits Management Group

Good Morning Mike –

I am following up and asking about the status of Spravato and if it will be added to VA's Formulary? The media is reporting the following.

This week a VA committee will meet to decide whether to add the drug to its formulary – the list of drugs that must be available to VA pharmacies. If Spravato is placed on the formulary, it could be a real boon for marketing.

If the drug is not put on the formulary, doctors can still prescribe it "off-formulary" but the drug will lack the VA's imprimatur. For veterans whose ranks are plagued by depression and suicides, much is at stake too. A drug that offers fast and lasting answer for treatment-resistant depression would be a godsend.

Thanks for your review of this issue.

H(b6)

Nothing has changed about the VA National Formulary process....it is exactly the same as it has been for the past decade or so.

In regard to the MISSION act, VA beneficiaries have the option of having urgent and emergent prescriptions written by authorized non-VA community providers filed in non-VA community pharmacies. All non-emergent, non-urgent prescriptions are sent to VA for fulfillment. Non-VA providers are required to follow the VA National Formulary process just like VA providers are required to do.

If you want to talk about any of this in more depth, I'd be happy to participate on a phone call or meeting. I should point out that the Office of Community Care has the lead on all non-VA care, so anything specific about that should be referred to them.

Mike

Good Afternoon Michael:
I wanted to reintroduce myself as I am now working for TREA:(b6) Veterans and Military Policy. You may remember me when I worked as the Executive Secretary in the Office of the Secretary and I retired in January 2013. A short bio is attached for your review.

I am looking to reconnect with officials in the PBMG as TREA reviews pharmacy benefits under the MISSION Act as well as looks at the VA Formulary. Please let me know if you can provide me with information on both of these topics. I would be pleased to schedule a phone call or set up a meeting with you or any member of PBMG to exchange information on these matters.

My contact information is below and my cell # is (b)(6) I look forward to talking with you or meeting you in the near future.

Best Regards,
(b6)

Jen,

We have all hands on deck to support you and your team. So far we have put together a comprehensive support plan to meet questions like this and others for our call on Monday.

The following websites are all active and inclusive of clinical information and a variety of resources for HCP, treatment center, and REMs:
- www.spravatohcp.com
- www.spravatotreatmentcenter.com
- www.spravatorems.com

AMERICAN OVERSIGHT

We want to be certain that all aspects of the 3 prong REMS are clearly defined and that you feel comfortable with how to build processes around them. Would you like for us to invite our REMS expert to the call?

I have attached the current approved value proposition deck and we are working very hard to get a veteran centric educational tool updated with appropriate legal and FDA language for your use as well. This will not be available by Friday but it is in the top of our queue. We can discuss this on Monday as well.

I have said this many times, but always worth saying! J&J is fully committed to ensuring that VA leadership has an opportunity to review, comment, and approve all branded/unbranded educational materials prior to any exposure to VA stakeholders and patients. We will comply with all policies. We look forward to doing whatever it takes to support you and the patients we collectively serve.

Thanks,

Subject: [EXTERNAL] RE: Spravato

Hi Jen,

This is the response from my risk management leader:

That's a great question and one we had significant discussions with the FDA on.

Will pharmacy be able to query the REMS database to assure that a patient has been registered before they dispense the drug to be administered?
Answer:

- • Currently our SPRAVATO REMS does not require pharmacies to verify patient registration and enrollment
- • However, pharmacies must verify that the healthcare setting must be REMS certified, prior to dispensing patient specific product.
- • Patients cannot enroll themselves into the REMS program, their prescribing doctors at a REMS certified Healthcare Setting are required to enroll them.

I believe the last bullet speaks to how your team, or the designated treatment site, will capture when this takes place and assure that this has occurred prior to administration of the drug.

Does this answer your question?

Hi Jen,

I know that we both had several asks with very tight timelines and we want to be sure to meet them. There has been significant work by the entire team and we would like to fill you in on progress.

I suggest we hop on a call to talk through the 4 primary areas we have identified as crucial components to a successful launch for the treatment experience for our veterans.

- • Clinical Needs (Focused on education with HCPs)
- • REMS (3 components: Hospital/ Clinic REMS certification, Pharmacy REMS certification, and Patient Enrollment REMS program)
- • Setting up treatment centers
- • Patient Journey

I know that you are traveling and we can make ourselves available whenever you have some free time. What works best for you?

Thanks,

Suspect reference to intranasal ketamine. What kind of information do you prefer? Could refer her to COS/CMO re PBM decision on this or the local MH lead.
Teresa

I think she may be referring to Spravato.

Good afternoon Darin,

I was very honored to be on the conference call today with Pres Trump &VA Sec Robert Wilkie, and other Veterans, regarding the VA Mission Act.

As a Veterans Advocate, it is important to me to get as much info as possible when it comes to Veterans issues.

With that being said, I heard something about a spray to help our Depressed &Suicidal Veterans.

Could you please send me more information on that, as being out here in the field, there is always a great delay in getting up-to-date information, and each day that we can save the life of a Veteran....is priceless.

Thanks again....and have a blessed day!

(b6) USMC-USMCR 20 years, Gulf War Veteran &Veterans Advocate.

Yeah, you can send the info to her. Not sure exactly what she wants.

There's lots of open source info on the drug e.g. https://www.nytimes.com/2019/03/08/health/depression-drugs-ketamine.html

And this: https://www.statnews.com/2019/06/21/va-declines-broad-coverage-for-new-jj-depression-drug-touted-by-trump/

Any idea what she is looking for other than General Info?
