AMERICAN OVERSIGHT

**PLEASE MAKE ARRANGEMENTS TO ATTEND OUR NEXT CONFERENCE CALL ON ELECTION INTEGRITY SCHEDULED FOR AUGUST 24, 2021 at 7:30pm**

Hello Fellow Legislators,

Once again, let me thank you for being in South Dakota and participating in the Cyber Symposium last week. I am honored to have had the opportunity to meet and spend time with you.

As we agreed, we will have a bi-monthly conference call to further discuss Election Integrity and continue to move the effort forward.

This meeting is only for sitting legislators. It is my hope that one of the candidates running for office will pick up this effort and pull together all those not elected, but that are interested, in the Election Integrity

AMERICAN OVERSIGHT

Coalition, to begin a similar effort.

We won't stop until we have answers.

Lastly, enjoy the picture we all took together; it turned out awesome! If there are other legislators interested in participating, please reach out to my Executive Assistant at: Debbie@ChaseForVA.com.

| **From:** | Ryan Hartwig |
| **To:** | Sonny Borrelli |
| **Subject:** | WiFi vulnerabilities at MCTEC as of yesterday |
| **Date:** | Saturday, February 6, 2021 5:37:49 PM |
| **Attachments:** | 2_6_2021 Maricopa County Wifi Public Scan_Final Version_this one.docx<br>scan data from 2_5_2021.docx |

Hi Sonny,

Mark Finchem gave me your contact info. I live in Phoenix, Arizona, in LD 30.

I have a group of volunteers, many with IT backgrounds who were watching the Nest cams this week at the Maricopa County Election Center.

And last night a friend of mine named **Aaron Wagner** went with me to the MCTEC around 10pm to scan the public WiFi (we stayed on public roads) and did not trespass. **Aaron has a CISSP IT security certificate.** This is his company. https://ncarizona.net/

There must have been people in the building, because not long after being there and scanning the public MC Wifi, **another WiFi Network changed its name to "fuckyou"**.

I'm attaching my statement. Let me know if you need it notarized. Share this with whoever you need to.

Also another IT professional named **Matt Van Bibber** lives in Pennsylvania and has been monitoring the Nest cams and will give a statement as well.

Thanks, call with any questions

AMERICAN OVERSIGHT

**Written 2/6/2021 by Ryan Hartwig**

On Friday February 5th, 2021 I, Ryan Hartwig was already this week speaking to many volunteers in a group chat about the issue of possible irregular behavior in the audit being performed of the ballots at the Maricopa County Tabulation Center and Election Center (MCTEC), located at 510 S 3rd Ave, Phoenix, AZ 85003.

Several members of our volunteer group have a background in IT and were concerned about the Nest cams not functioning properly during the audit. Staci Burk who resides in Arizona, and Matt Van Bibber, an IT professional from Pennsylvania, both witnessed irregularities with regards to the public Nest cams not working properly and also of employees looking at the cameras for inordinate periods of time, using smartphones while inside the tabulation center, etc. In a separate document they will submit their notarized statements.

Around 9:45pm on Friday February 5th, 2021, the volunteers in our group agreed we needed someone on the ground in Phoenix to do a public scan of the public WiFi being used at the election center. I called Aaron Wagner who I've known for at least 7 years, to assist me with this, as a volunteer. He has done IT consulting for family members in the past. Aaron Wagner holds an active CISSP certification, which stands for Certified Information Systems Security Professional (CISSP).

Aaron Wagner, CISSP
NET CONCEPTS AZ
3241 E. Shea Blvd., 179
Phoenix, AZ 85028
602.404.1520
https://ncarizona.net/

I drove to the MCTEC and arrived around 10:20pm. Aaron arrived shortly thereafter. Staying on public property, Aaron scanned the public wifi and assessed the vulnerabilities. He did NOT attempt to hack into or penetrate the hidden networks whatsoever and confirmed this multiple times with me. I also opened an app on my android phone named Wifi Analyzer and saw that there was a network with the name of MCPublic that was an open network.

Based on Aaron's scan, he saw an Apple TV, Xbox, and Nintendo Switch on the public county WiFi Network. At our location, there were no other buildings nearby except the election center, and there was an empty lot to our southwest and an electrical substation to our southeast.

Aaron also scanned and saw a 3Com SuperStack 3 Switch device on the network, which is an outdated piece of equipment from 2014, very vulnerable to manipulation by cyber attacks because of EOL (end of life). There was mention of whether or not it was a managed switch.

Generally speaking, Aaron saw vulnerabilities related to DoS attacks (Denial of Service). Port 80 and 443 were open, but not tested due to that would require authorization.

AMERICAN OVERSIGHT

At one point, we believe someone inside realized we were there doing a public scan because one of the networks changed names to “fuckyou”.

Other observations and questions from Aaron Wagner that he conveyed to me are the following:

1. There are a large amount of wireless networks. A corporate network should not be “Netgearxx”. There were two “Mcxx” networks (Maricopa County).
2. Who created the “fuckyou” SSIDI wifi network name?
3. Who would control APs (Access Points) during an audit? Is that network still up? Who would create a network like that in a county building or business
4. The issue of the old equipment from 2014 (3Com superstack)
5. Why would gaming systems be connected to a network at a tabulation center? It’s likely the networks are on HP equipment (3com being acquired by HP). Why are Foreign APs (access points) allowed to be installed?
6. Consumer Routers are notorious for having vulnerabilities. Consumer routers appear to be in use along with “main” network. Old un-patched wireless access points are vulnerable. Corporate wireless products can suffer the same issues. https://routersecurity.org/bugs.php
7. Aaron is very confident they are not just using the HP equipment. He is fairly certain those other wireless networks were coming from the tabulation center.
8. All networks were encrypted aside from guest and one hidden. It isn't likely tabulation machines on those networks. Getting into those networks would not be legal. Network accessed was public and open for anyone and everyone. Network isolation not configured. Point is, are there wireless networks? YES

**Other insights from Aaron Wagner, CISSP:**

> Something else to consider, USB sticks don't have to be storage. A USB stick could also be a wireless card. I could bring a router and plug it into a hot ethernet port and blam I have a network where data can be sent to the cloud. With so many wireless networks bleeding through you don't have an "air gapped" network. With a public WiFi that was strong enough to bleed through the walls and connected across the street, they could connect the machines easily. They use consumer printers, there was a printer on that network. Not having network isolation means options.
>
> It’s a tabulation center that’s supposed to be air-gapped. You can’t have a public wifi. Those tabulation machines run windows. It’s not a handicapped operating system that can’t use network cards. You could make a really scaled back version of linux that has no capabilities of talking to a network card. We’re dealing with Windows machines that we know have the capability of acting as a full windows desktop.

Myself, Ryan, and Aaron Wagner left the area surrounding the Maricopa County Elections and Tabulation Center around 11:30pm and each drove home separately.

**From:** T mothy Schwartz
**Subject:** Additional info re ated to last night s email report.
**Date:** Tuesday August 24 2021 6:37:37 AM

---

Good morning!
Because of concerns that my report may get censured and not reach you, **PLEASE CONFIRM RECEIPT OF MY REPORT**. Thank you!

Added notes from last night's email...
Some of the duplicates names at the same house 'may' have a key to unlocking the voter fraud problem! Some of the residents I canvassed told me things like "**those people have NEVER LIVED AT THIS HOUSE !!**
When I checked their names in the database later, they had been removed! **Yet as you can see, I've provided visual proof that at the time I conducted this canvas, those people were definitely associated with that address, which brings me to the following conclusion: those people were padded into those addresses specifically for the 2020 election! After the election, they were conveniently removed!!!**
This would explain why Cyber ninjas reported that a large number of voters had been removed after the election....
This should be looked into closer, with a microscope. Nuff said...

The pic below was included in yesterday's report, however my edits hid the name of the contact, so I've redone it for better readability and copied it below.

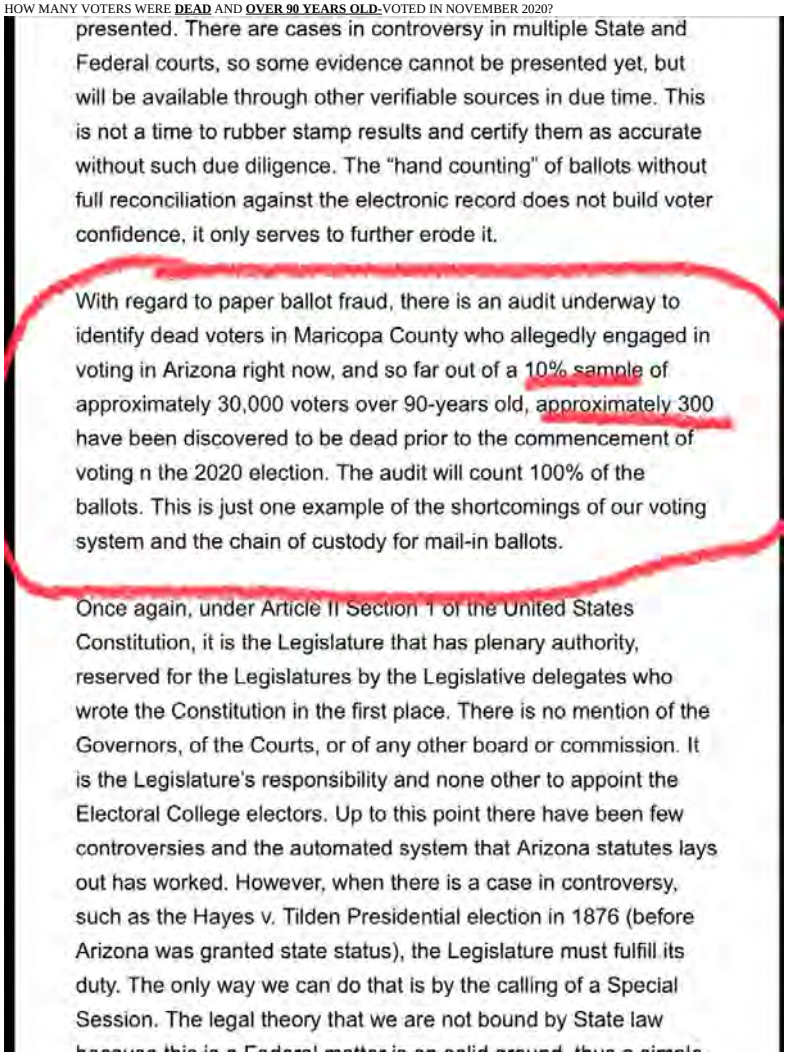
HOW MANY VOTERS WERE **DEAD** AND **OVER 90 YEARS OLD**-VOTED IN NOVEMBER 2020?



presented. There are cases in controversy in multiple State and Federal courts, so some evidence cannot be presented yet, but will be available through other verifiable sources in due time. This is not a time to rubber stamp results and certify them as accurate without such due diligence. The "hand counting" of ballots without full reconciliation against the electronic record does not build voter confidence, it only serves to further erode it.

With regard to paper ballot fraud, there is an audit underway to identify dead voters in Maricopa County who allegedly engaged in voting in Arizona right now, and so far out of a 10% sample of approximately 30,000 voters over 90-years old, approximately 300 have been discovered to be dead prior to the commencement of voting n the 2020 election. The audit will count 100% of the ballots. This is just one example of the shortcomings of our voting system and the chain of custody for mail-in ballots.

Once again, under Article II Section 1 of the United States Constitution, it is the Legislature that has plenary authority, reserved for the Legislatures by the Legislative delegates who wrote the Constitution in the first place. There is no mention of the Governors, of the Courts, or of any other board or commission. It is the Legislature's responsibility and none other to appoint the Electoral College electors. Up to this point there have been few controversies and the automated system that Arizona statutes lays out has worked. However, when there is a case in controversy, such as the Hayes v. Tilden Presidential election in 1876 (before Arizona was granted state status), the Legislature must fulfill its duty. The only way we can do that is by the calling of a Special Session. The legal theory that we are not bound by State law

CARLOS ESTRADA DOES NOT LIVE HERE! FRAUD.

Good morning!
Because of concerns that my report may get censured and not reach you, **PLEASE CONFIRM RECEIPT OF MY REPORT**. Thank you!

Added notes from last night's email...
Some of the duplicates names at the same house 'may' have a key to unlocking the voter fraud problem! Some of the residents I canvassed told me things like "**those people have NEVER LIVED AT THIS HOUSE !!**
When I checked their names in the database later, they had been removed! **Yet as you can see, I've provided visual proof that at the time I conducted this canvas, those people were definitely associated with that address, which brings me to the following conclusion those people were padded into those addresses specifically for the 2020 election! ---

I would like to assist with the effort of recounting ballots in connection with the Maricopa County election audit. I've been a hard working volunteer for the Republican Party for 40 years. I firmly believe in Election Integrity and am profoundly grateful that we are finally getting the opportunity to give the American people what they deserve, a window to see if the 2020 election was handled the way it was supposed to be. As a "juror" in the process, I reserve no judgement "for or against", only the desire the the process is handled equitably.

Because of my history and long experience being at MCTEC after every election to work with hand counting the ballots, I believe I can be of assistance working with management to help others if I'm needed to assist.

I will fit in wherever I'm needed.

**Date:** Friday, April 9, 2021 11:41:47 AM

---

Bob--This was brought to our attention in mid-March by Lake Havasu. It will have a significant harmful effect in AZ. Congressman Gosar wrote to the administration regarding this problem and brought it up to the conference and the Western Caucus, which focuses on rural issues.

A resolution from the State Legislature would help as well.
