David Kronig
1030 15th ST NW
Suite B255
Washington, DC 20005

Dear Mr. Kronig:

This letter is in response to your Freedom of Information Act (5 U.S.C. §552) request on February 23, 2026, which you sent to the Centers for Medicare & Medicaid Services. Within your correspondence, you requested all email communications from August 22, 2025, through the date the search was conducted between specific CMS officials and external individuals and entities: Anthony Mawson, Peter McCullough, Children's Health Defense, Brownstone Institute, Independent Medical Alliance, McCullough Foundation, Informed Consent Action Network, National Vaccine Information Center, Siri & Glimstad LLP, and Brueckner Spitler Shelts PLC.

After careful review of the documents submitted to me, a total of one hundred thirty-nine (139) pages, I have determined to release them to you, as enclosed. One hundred fourteen (114) pages are released to you in their entirety. Finally, I have also determined to deny you access to portions of twenty-five (25) pages, pursuant to exemption (b)(6) of the FOIA (5 U.S.C.§ 552 (b)(6)).

Exemption 6 of the FOIA permits a federal agency to withhold information contained in personnel, medical, and similar files the disclosure of which would "constitute a clearly unwarranted invasion of personal privacy." I have weighed the public interest in disclosure, which the Supreme Court has held to be limited in this context to the public interest that would be served by shedding light in the agency's performance of its statutory duties, against the harm to the privacy of the individual/s identified in these records. I have concluded, therefore, that the privacy interest of the subject individual/s outweighs the public interest in disclosure for this particular matter.

If you believe that the information withheld should not be exempt from disclosure, or this response constitutes an adverse determination, you may appeal. By filing an appeal, you preserve your rights under FOIA and give the agency a chance to reconsider your request and the agency's initial decision.

AMERICAN OVERSIGHT

Your appeal must be mailed within 90 days from the date of receipt of this letter, to:

Chief Operating Officer & Deputy Administrator
Centers for Medicare & Medicaid Services
Mail Stop DO-01-60
7500 Security Blvd.
Baltimore, Maryland 21244-1850

Please clearly mark both the envelope and your letter "Freedom of Information Act Appeal."

If you would like to discuss our response before filing an appeal to attempt to resolve your dispute without going through the appeals process, you may contact Kenyetta Stringfellow **OR** the CMS FOIA Public Liaison for assistance at:

Desiree Gaynor
CMS FOIA Public Liaison
Centers for Medicare & Medicaid Services
7500 Security Blvd., MS C5-11-06
Baltimore, Maryland 21244-1850
Telephone: (410) 786-5353 fax (443)-380-8871

If you are unable to resolve your FOIA dispute through our CMS FOIA Public Liaison, the Office of Government Information Services (OGIS), the federal FOIA Ombudsman's office, offers mediation services to help resolve disputes between FOIA requesters and federal agencies. The contact information for OGIS is:

Office of Government Information Services
National Archives and Records Administration
8601 Adelphi Road–OGIS
College Park, MD 20740-6001

Telephone: 202-741-5770
Toll-Free: 1-877-684-6448
E-mail: ogis@nara.gov
Fax: 202-741-5769

Sincerely,

Desiree Gaynor

Desiree Gaynor
Director, Division of FOIA Analysis – A
Freedom of Information Group

Sounds good.

Do you want to double check again with Corbin to make sure that same reasoning does not apply to Ervin Graves? I ask because I have met with them before on Medicaid community engagement requirements since their client Steady IQ is an automated income verification vendor that is working with states on community engagement.

Thanks,
Grant Thomas

I don't think so as long as their work intersects with CMS since the compelling reason for you to go with be to develop relationships that would benefit the agency.

To All Addressed FDA, CDC, and NIH Persons,

AMERICAN OVERSIGHT

Attached are the results of my 4th annual "2025 Worldwide Embalmer Blood Clot Survey" tracking the TIMING and PREVALENCE of these unusual and deadly WHITE FIBROUS CLOTS that embalmers and doctors have been finding in the veins and arteries of corpses and patients since 2021 after the rollout of the COVID-19 vaccines.

Unfortunately, this year's survey received a mere 59 responses compared to last year's survey which received 301 responses. This does not mean that the white fibrous clot problem has gone away. Rather, it is an indication that this deadly phenomenon is now being accepted as "the new normal" by both the funeral industry and medical community.

Although the number of responses are limited, the percentages fall in line with the results from my previous surveys. For example, the majority of embalmers (71%) still saw the white fibrous clots in 2025 in an average of 19% of their corpses. The majority of embalmers (also 71%) still saw the equally dangerous phenomenon of MICRO-CLOTTING in an average of 18% of their corpses.

These clotting phenomena are NOT rare.

Some embalmers also noticed an increase in INFANT DEATHS in 2025 when compared to the years prior to the Covid pandemic. And embalmers also noticed an increase in clotting in all age groups (particularly ages 36 years and up) in 2025 when compared to the years prior to the Covid pandemic.

It's a shame that the NIH, CDC, and FDA did not thoroughly investigate this deadly phenomenon when I and others brought it to your attention 4 years ago. I am sure that if you had conducted your own surveys with state Funeral Director Associations, then you would have received greater participation by those organizations than I did. I am also sure that you would have obtained the same results that I did because I conducted my surveys honestly without any bias built into the questions.

If you have any questions about this year's survey or the results of my 2022, 2023, or 2024 "Worldwide Embalmer Blood Clot Surveys," then please contact me via email or the phone number listed below.

As always, I stand by ready to assist.

Q3: What percentage of the corpses in the Year 2025 that you have embalmed have had the large whitish "fibrous" structures/clots? (Please select only one answer.)

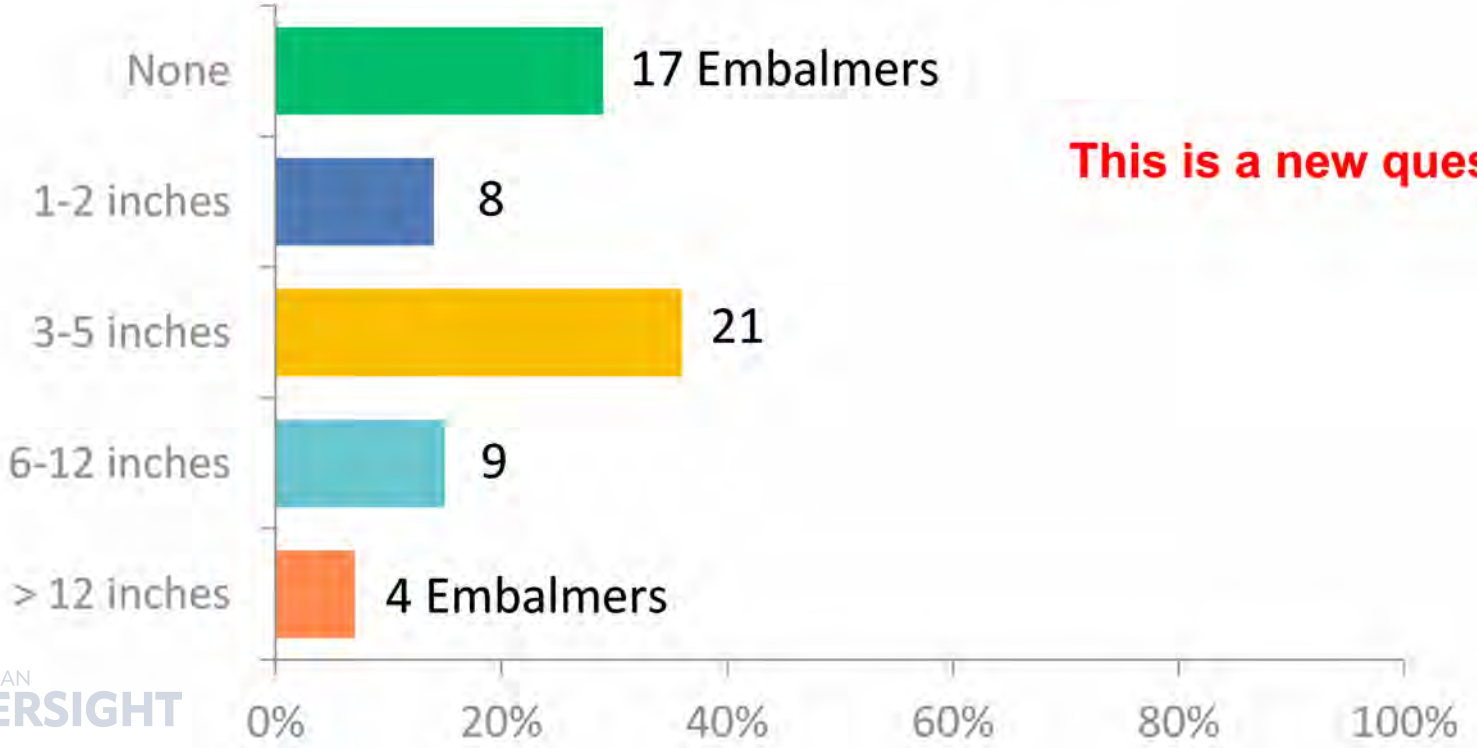

AVG. = 19% of Corpses in 2025 (down from 27% in 2024)

Note: Embalmers saw in 0% of Corpses Prior to Covid and Covid Vaccines.

AMERICAN OVERSIGHT

Powered by SurveyMonkey

Q4: What is the longest white fibrous structure/clot that you have seen/removed from a corpse in 2025?

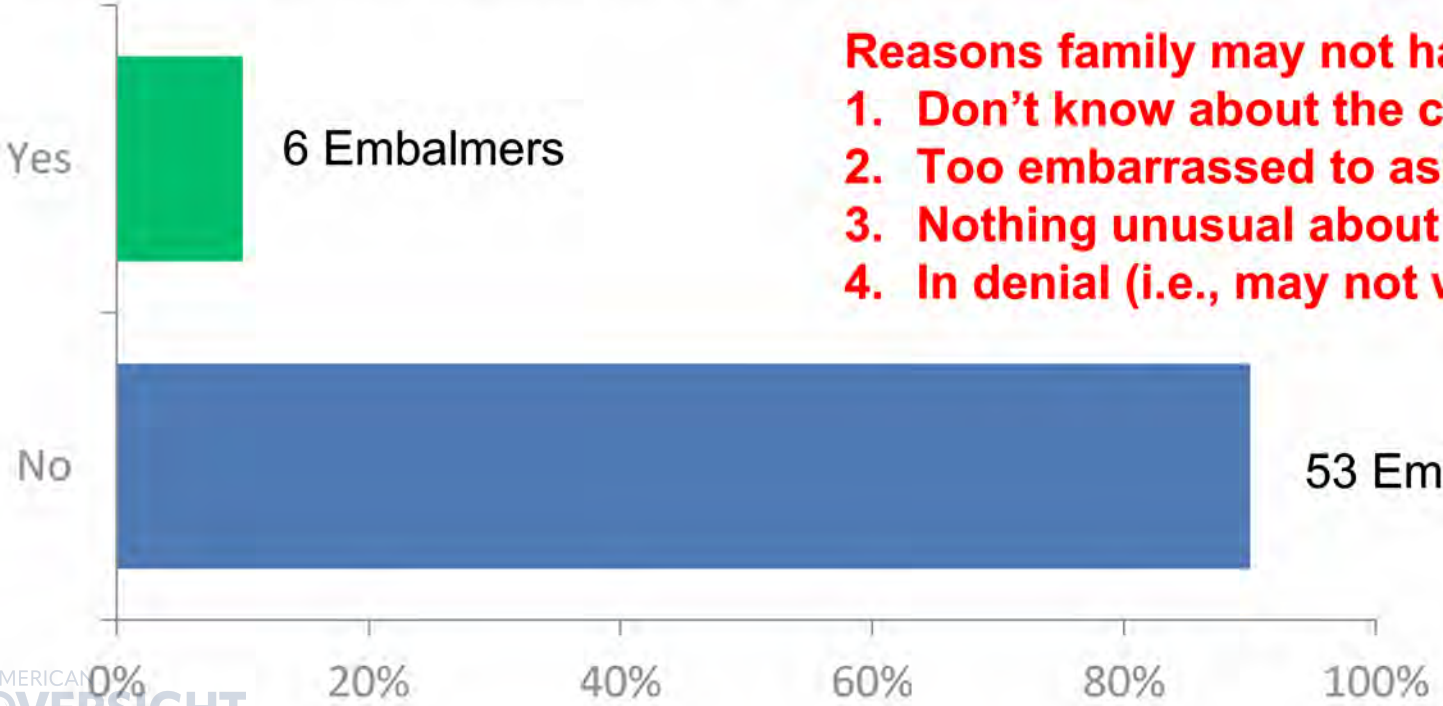

This is a new question.

AMERICAN OVERSIGHT

Powered by SurveyMonkey

Q5: Has a family member of the deceased ever asked you to look for the white fibrous structures/clots in their loved one, or asked if you found the white fibrous structures/clots in their loved one in 2025 or any year prior?

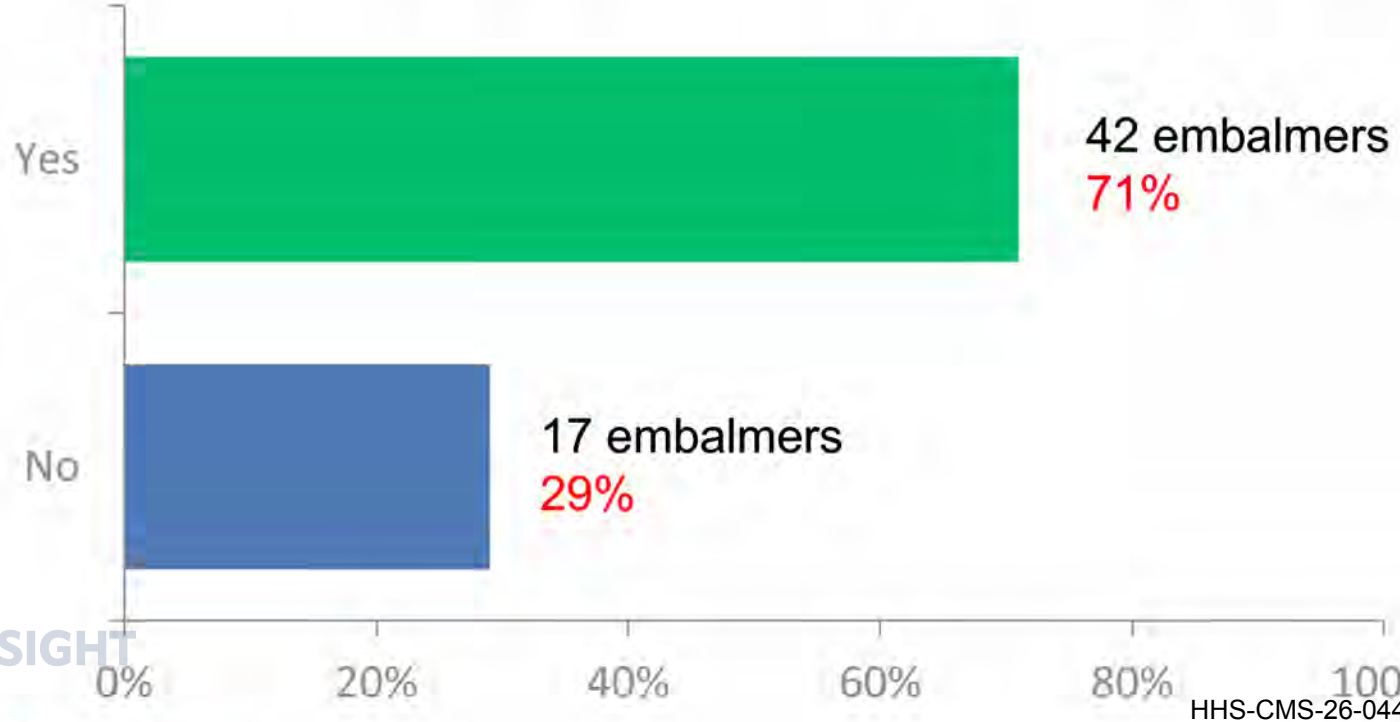

Reasons family may not have asked:

1. **Don't know about the clots**
2. **Too embarrassed to ask**
3. **Nothing unusual about the death**
4. **In denial (i.e., may not want to know)**

AMERICAN OVERSIGHT

Powered by SurveyMonkey

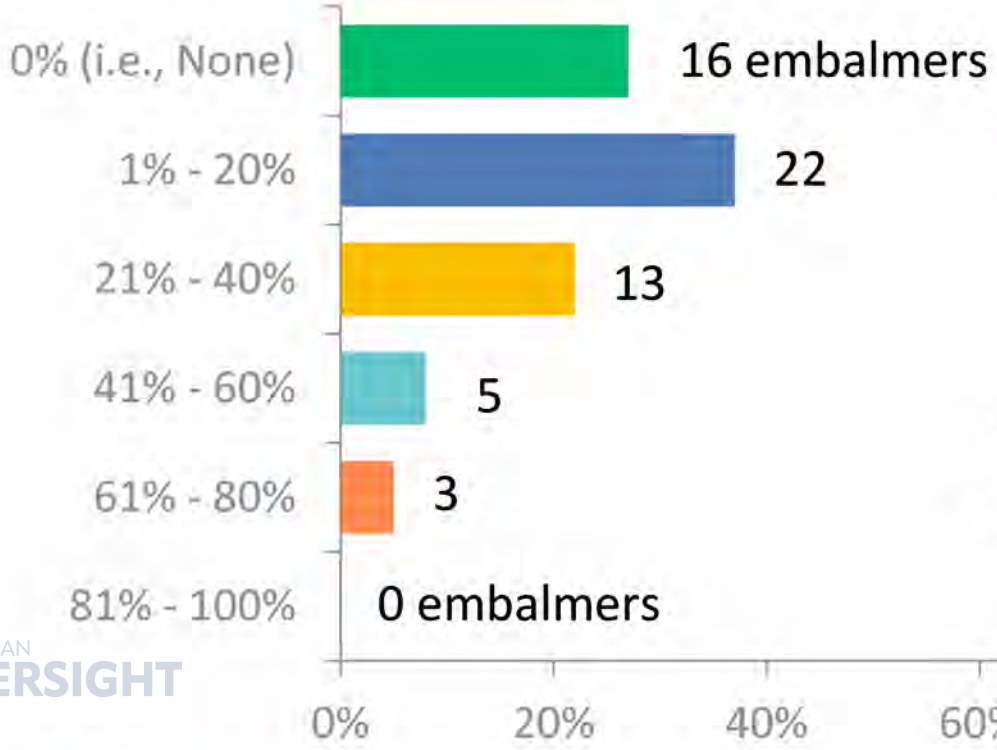

Q6: Have you seen evidence of “micro-clotting” (also known as “coffee grounds” or “dirty blood”) in the drainage from corpses in 2025?

AMERICAN OVERSIGHT

Powered by SurveyMonkey

Q7: What percentage of the corpses in Year 2025 that you have embalmed have had the micro-clotting/"coffee grounds"/"dirty blood"?

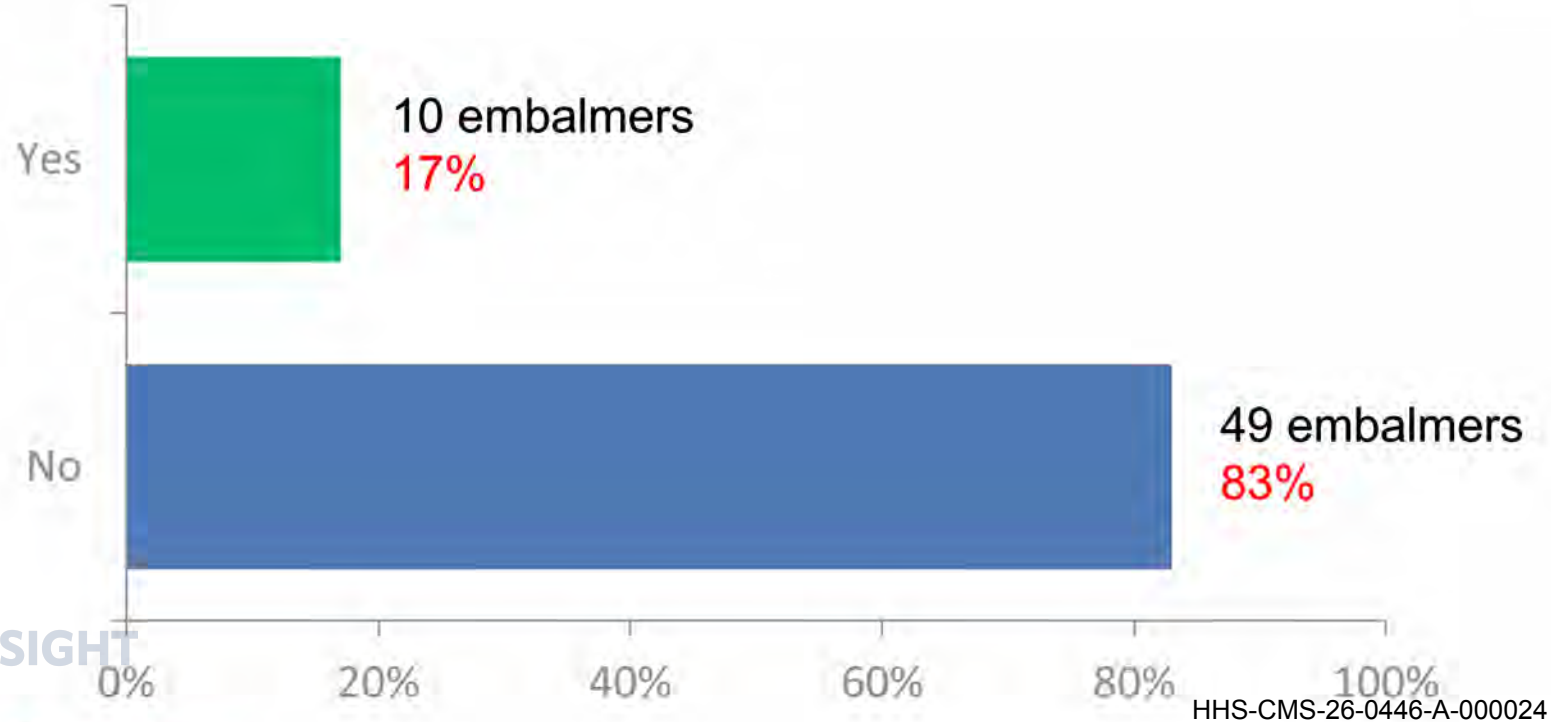

AVG. = 18% of Corpses in 2025

Note: Embalmers saw in <5% of Corpses Prior to Covid and Covid Vaccines.

AMERICAN OVERSIGHT

Powered by SurveyMonkey

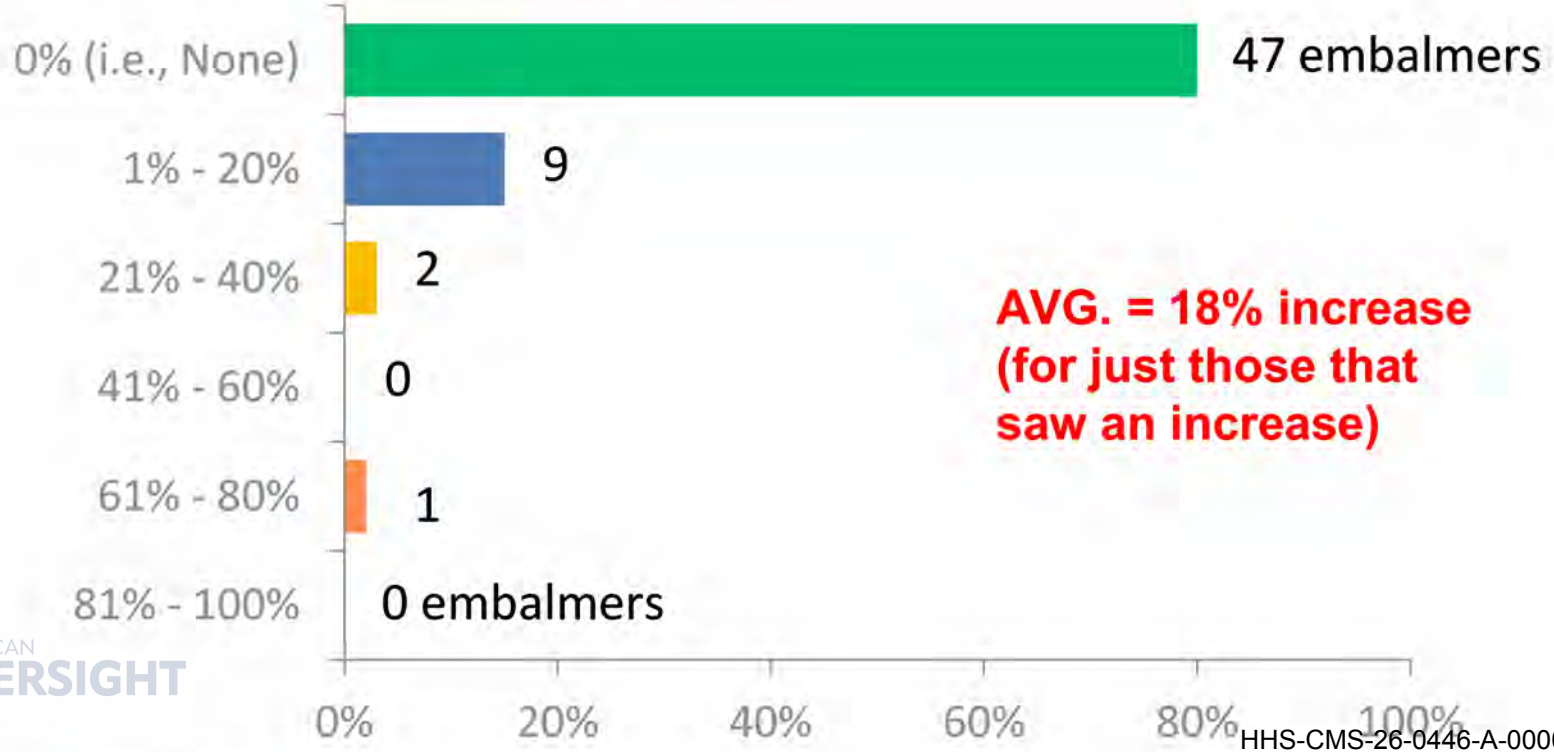

Q8: Have you noticed an increase in infant deaths, either at your funeral home or your local hospital morgue, in 2025 compared to the Years 2019 and prior?

AMERICAN OVERSIGHT

Powered by SurveyMonkey

Q9: What percentage increase in infant deaths did you see in 2025 compared to the Years 2019 and prior?

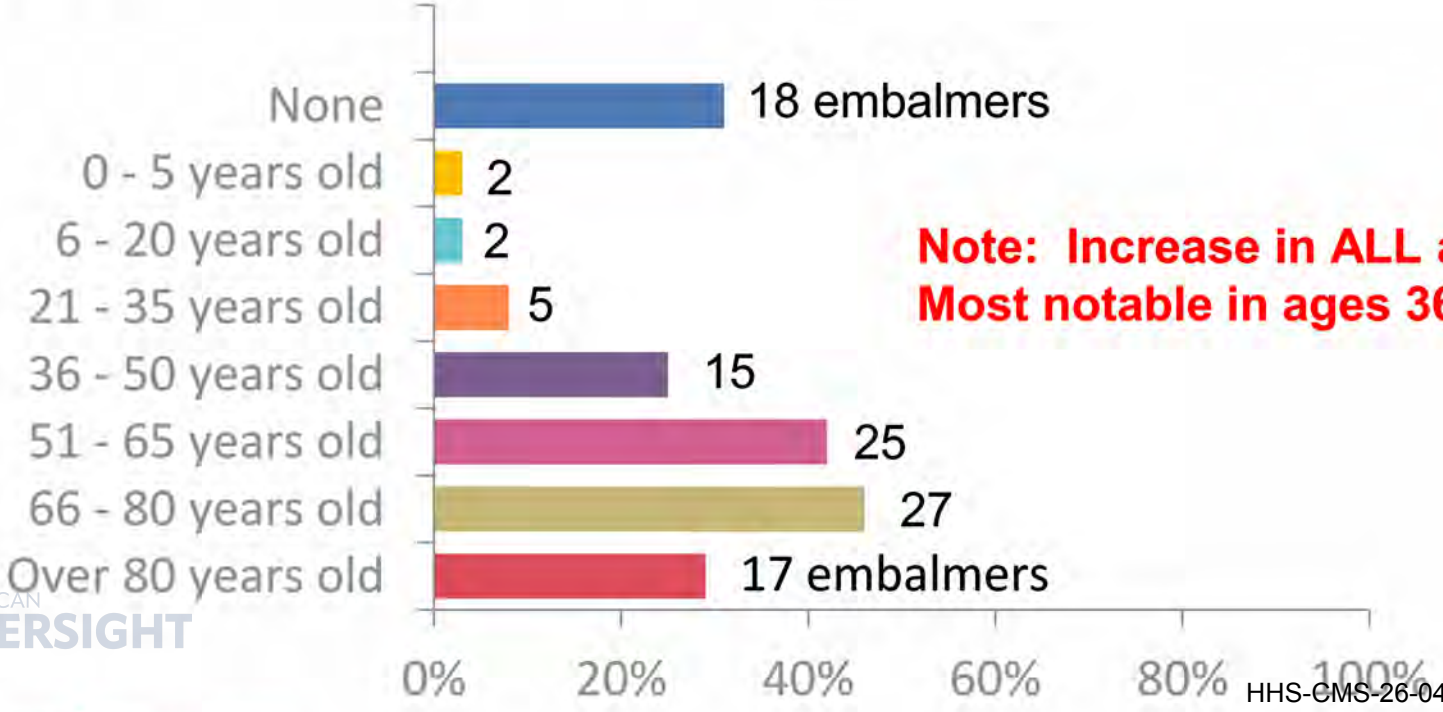

AVG. = 18% increase (for just those that saw an increase)

AMERICAN OVERSIGHT

Powered by SurveyMonkey

Q10: What age groups (CHECK ALL THAT APPLY) did you observe an increase in the number of clots (any type) in Year 2025 when compared to Years 2019 and prior?

Note: Increase in ALL age groups. Most notable in ages 36 and up.

Embalmers' "Comments"

(a selection from the 18 comments received)

AMERICAN OVERSIGHT

Powered by SurveyMonkey

MICHIGAN- Saw a heavy increase in the clots in 2021-2023. Since 2023, I have seen gradually less.

MICHIGAN- Today was the first day in months that I did an actual one-point embalming. A "one-point" embalming used to be common until.. 💉 We haven't noticed an increase in infant deaths where I work, but I know the crematorium in our area has seen an increase. Thank you for doing this.

MICHIGAN- I embalm 300+ per year. I have seen more deceased coming into the funeral homes fully dressed, CPR that has been preformed more then the previous 25 years of my career. People dropping over like never before.

AMERICAN OVERSIGHT

Powered by SurveyMonkey

ALABAMA- Unfortunately it seems like this issue has become the new normal and those I know are not talking about this as much as before. I have embalmed 4 bodies in the last 24 hours and all had clots but 2 had the white fibrous clots, one was about 12 inches long that I removed from the artery prior to embalming. I have been embalming well over 20 years and I didn't see white fibrous looking clots prior to 2021.

LOUISIANA- It's not a problem. Just politics as usual.

CANADA- Regarding the white fibrous clots, my observation is that they never seemed to exist prior to the covid vaccine. I find these white fibrous clots do not break down like clots before the vaccines, such as grape jelly clots.

AMERICAN OVERSIGHT

Powered by SurveyMonkey

CANADA - I think this survey is stupid. There have always been clots and should be thought of in relation to bad lifestyle habits. Not due to the use of vaccines. No one wants another Pandemic. Its obvious that vaccines prevent that.

ENGLAND - I've been finding most of the clots in deceased that have died from cancers & strokes now. Lots of cancers coming through now in younger people (30-50's) age range A lot of infant deaths here in the UK now go directly to the crematoriums, Bypassing funeral directors altogether. It's only by conversing with the coroners/crematorium/burial staff that you get to see that infant mortality is still way above average, Especially for miscarriages.

AMERICA OVERSIGHT

Powered by SurveyMonkey

ENGLAND - After finding the greatest amount of clots that I have discovered to date from one deceased, The Deceased son was approached & asked if his father had been vaccinated for Covid. He stated that he hadn't & was reluctant to take such things, He was however undergoing an experimental mRNA therapeutic for Parkinson's disease. Anecdotal evidence perhaps, But but may be early indications of things to come.?

Answered: 10 Skipped: 19

#	RESPONSES	DATE
1	There has not been a significant change in types of clotting.	12/12/2025 3:53 PM
2	This has been happening for the past 15 years i have been embalming in bodies that are refrigerated	12/11/2025 1:19 PM
3	Your questions are regarding the year 2025. I saw the majority of these issues in late 2023 throughout early 2025, as well. More micro-clotting than white fibrous overall.	11/20/2025 10:40 AM
4	Saw a heavy increase in the clots in 2021-2023. Since 2023, I have seen gradually less	11/20/2025 12:31 AM
5	Today was the first day in months that I did an actual one point embalming. A "one point" embalming used to be common until..💉 We haven't noticed an increase in infant deaths where I work..but I know the crematorium in our area has seen an increase. Thank you for doing this.	11/19/2025 9:26 PM
6	I have noticed smaller fibrous clots that look like spiders or starfish. There not much longer than a inch unless you stretch the fibrous tendrils out but there are multiple tendrils attached together in a simi central location.	11/19/2025 9:03 PM
7	I embalm 300+ per year. I have seen more deceased coming into the funeral homes fully dressed, cpr that has been preformed more then the previous 25 years of my career. People dropping over like never before.	11/19/2025 3:27 PM
8	They are white fibrous clots that will not break apart you could almost stretch them like a rubber band.	11/19/2025 2:44 PM
9	I have noticed that many more cancers than before. Most of those die before the body even shows signs of cancer, such as loss of hair, body weight or visible tumors. I have gotten used to younger people coming into the funeral home that died at work or at home without being on hospice. Most of the bodies I embalm now have clotting unlike prior to the pandemic. I have spoken with other embalmers that are reporting the same findings. Unfortunately it seems like this issue has become the new normal and those I know are not talking about this as much as before. I have embalmed 4 bodies in the last 24 hours and all had clots but 2 had the white fibrous clots, one was about 12 inches long that I removed from the artery prior to embalming. I have been embalming well over 20 years and I didn't see white fibrous looking clots prior to 2021.	11/19/2025 2:08 PM

#	RESPONSES	DATE
1	White fibrous clots were noted well before 2025. They have been noted in early 2000 when I began working as an embalmer.	11/23/2025 9:38 AM
2	I only began embalming in 2020 so I cannot really comment on the pre 2019 observations but in working alongside seasoned embalmers, comments have indicated that the above mentioned are definitely present primarily since 2019-2020 and were not observed prior to this time period.	11/19/2025 10:42 PM
3	I think this survey is stupid. There have always been clots and should be thought of in relation to bad lifestyle habits. Not due to the use of vaccines. No one wants another Pandemic. Its obvious that vaccines prevent that.	11/19/2025 10:16 AM
4	These fibrous clots your talking about were here long before Covid /2019 i have been an embalmer for the past 34 years and i have seen the same thing over the years. Nothing has changed if that's what your asking about. Normal blood clots as usual, nothing more.	11/19/2025 10:10 AM
5	regarding the white fibrous clots, my observation is that they never seemed to exist prior to the covid vaccine. I find these white fibrous clots do not break down like clots before the vaccines, such as grape jelly clots.	11/13/2025 7:22 PM

CC:	James.delemos@utsouthwestern.edu; "Carlton, Stephanie (CMS/OA)" <stephanie.carlton@cms.hhs.gov>; claine@acponline.org
Subject:	Sepsis is an iatrogenic disease induced by dirty vaccines

All,

Regarding:

The Effect of Severe Sepsis and Septic Shock Management Bundle (SEP-1) Compliance and Implementation on Mortality Among Patients With Sepsis

Sepsis is an allergic reaction to bacterial or viral proteins (1â€"3). Vaccines contain viral and bacterial proteins. When injected, they cause IgE mediated sensitization. Upon infection, there is an inappropriate allergic host response to infection that results in anaphylaxis/anaphylactic shock that is diagnosed as sepsis/septic shock (4). Sepsis/Septic shock is slow-rolling anaphylaxis due to a ramp in antigen exposure as the pathogen actively replicates over time. Anaphylaxis on the other hand due to say food allergy, involves a step change in passive antigen exposure.

Quick background: I know the Secretary of HHS, Robert F Kennedy Jr. He invited me to write many articles for childrenshealthdefense.org. My son was diagnosed with (b)(6) (b)(6) Our doctors had no answers for cause or cure. Therefore I studied immunology (my background is in engineering) and published my findings (5). I was the first to identify Kounis Syndrome in COVID. Was invited by Prof. Kounis to coauthor (6).

President Trumpâ€™s executive order establishing the MAHA commission (7) demands the determination of root cause for chronic diseases. Make America Healthy Again is not limited to chronic diseases alone. The root cause of sepsis needs to be understood and addressed.

Thimerosal is used as a preservative in vaccine vials because pathogen contamination is unavoidable. However, thimerosal only inactivates the pathogens but the antigens are still in the vial. Similarly, alcohol swab of injection site before administration of the injection, only kills bacteria but the antigens are still on the skin. Upon injection these bacterial antigens on the skin surface and those in the solution drawn from the vial, are all injected. All injected antigens result in IgE mediated sensitization to those antigens (8â€"14,14â€"17,17,18). Adjuvants in vaccines ensure IgE mediated sensitization to even nanogram level antigen presence.

Sepsis is an iatrogenic disease. You should stop causing it. Avoid all injections into healthy people.

Thanks,

AMERICAN OVERSIGHT

Vinu

Subject: You're Invited: IMA Holiday Reception in Washington, DC

Dear John ,

We are pleased to invite you to the **Independent Medical Alliance Holiday Reception** in Washington, DC on Thursday, December 4th. This gathering brings together congressional offices, executive-branch officials, policy leaders, healthcare organizations, and members of the broader public-policy community to celebrate the season!

We would be delighted to have you join us. Please RSVP to Lynne@IMAHealth.org.

IMA Holiday Reception
Thursday, December 4, 6:00 PM
Location: Conservative Partnership Institute
300 Independence Ave, SE, Washington DC

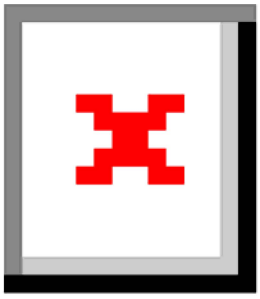

Light refreshments will be served

About the IMA
The Independent Medical Alliance (IMA) is a national association of independent doctors, researchers, and healthcare providers who support a restoration of honest, transparent, and patient-centered healthcare. Our members are active in shaping healthcare reform at HHS, including serving on ACIP and other important roles, and rallying public support for much needed policy reforms in Washington and across the 50 states. Learn more at IMAHealth.org.

This email is sent by the Independent Medical Alliance, 2001 L St. NW Suite 500, Washington, DC 20036. For media inquiries, please contact press@imahealth.org.

If you prefer not to receive occasional event invitations or updates from IMA, simply reply with "unsubscribe" to be removed from future outreach.

Subject: Bill Watson with Spectrum Antimicrobials in DC this week

Dear Dr. Oz,

I wanted to inquire about introducing you to my colleague Bill Watson, one of the founders of Spectrum Antimicrobials, who is in DC this week. I've known Bill for several years and have been evaluating Spectrum's technology and providing occasional guidance on the development of their anti-infective platform.

Spectrum Antimicrobials is, to my knowledge, the first company to successfully harness the therapeutic potential of chlorine-based antiseptics for direct application to human tissue while mitigating the cytotoxicity typically associated with agents such as chlorine dioxide and the various hypochlorites. Their patented hypochlorous-acid chemistries appear to resolve the longstanding stability and efficacy limitations of earlier-generation formulations. Notably, many of their chemistries maintain >90% stability for 1–2 years and retain antimicrobial potency even in the presence of blood, pus, mucus, tears, saliva, and other organic soils.

With its features, Spectrum's platform could transform wound care, especially for chronic wounds in older adults, which are currently difficult and expensive to treat. Preliminary clinical experience indicates that Spectrum's products may accelerate complete wound resolution to a matter of two to four months at a fraction of traditional treatment costs. Their approach could meaningfully reduce reliance on skin grafting, wound VAC systems, hyperbaric oxygen therapy, and prolonged hospitalizations.

Independent from the company, many physicians using the products are also reporting early evidence that the formulations effectively oxidize and disrupt biofilms directly within the wound bed, reducing the need for surgical debridement in over 60% of observed cases. Simple mechanical removal using gauze or swabs has often replaced the use of scalpels and curettes, allowing better preservation of healthy granulation tissue. There is no other effective product to remove biofilms internationally.

The technology platform extends far beyond wound care. Additional applications under evaluation include surgical site infection prevention, dentistry, urology (including UTIs), orthopedic procedures, and respiratory infections. One Spectrum product has already received FDA 510(k) clearance, and the company plans to file four INDs in 2026 covering indications in wound care, cystic fibrosis, UTIs, and advanced hand hygiene/pre-operative skin prep/surgical scrub use indication.

I recognize how busy you are, and I would not raise this if I didn't believe it could be a high-value opportunity for CMS and Medicaid, where chronic wound care, cellulitis, post-amputation management, UTIs, COPD, and surgical site infections represent enormous clinical and financial burdens.

If possible, I encourage you to spend some quality time with him.

Bill will be staying at the Hamilton Hotel all week and can also be reached on his cell at (b)(6) (b)(6) Bill's email address is bwatson@spectrumantimicrobials.com. Also, if you have any questions, you can call or email me any time.

All my best,

Brian Hooker

Subject: CHD Appreciation Dinner Invitation, Tuesday, July 15, 2025

Dear Dr. Oz

Thank you so much for meeting with the Credibl team and me earlier this week. Your input is extremely valuable to us as Credibl and Children's Health Defense move forward specifically with Louisiana Medicaid data, with other states to follow, to address the chronic disease epidemic in US children.

On another topic, Children's Health Defense is hosting a dinner in DC next Tuesday, July 15 at 6:00 p.m. ET, at Butterworths, and we would be honored if you and a guest would be able to attend. This event is an appreciation dinner for the participants in a Senate PSI Subcommittee Hearing "Voices of the Vaccine Injured" which will be held earlier that day (Hart Senate Office Building, Rm. 216 at 3:00 p.m. ET). Sen. Ron Johnson is presiding over the hearing and will be attending our appreciation dinner as well as the witnesses testifying in the hearing.

AMERICAN OVERSIGHT

I've attached the dinner invitation to this email and we'd love to have you join us. We're hoping that Secretary Kennedy and Dr. Bhattacharya will be joining us as well.

All my best,

Brian

Sounds good.

Do you want to double check again with Corbin to make sure that same reasoning does not apply to Ervin Graves? I ask because I have met with them before on Medicaid community engagement requirements since their client Steady IQ is an automated income verification vendor that is working with states on community engagement.

Dear Caprice ,

We are pleased to invite you to the Independent Medical Alliance Holiday Reception in Washington, DC on Thursday, December 4th. This gathering brings together congressional offices, executive-branch officials, policy leaders, healthcare organizations, and members of the broader public-policy community to celebrate the season!

We would be delighted to have you join us. Please RSVP to Lynne@IMAHealth.org <https://click.sleadtrack.com/link?messageId=%3C0b5fbe87-5675-sl78-4bd8-836d-5b99d46a42d8%40imamaha.com%3E&url=mailto%3ALynne%40IMAHealth.org> .

IMA Holiday Reception
Thursday, December 4, 6:00 PM
Location: Conservative Partnership Institute
300 Independence Ave, SE, Washington DC

Light refreshments will be served

<https://imahealth.org/wp-content/uploads/2025/11/dec-4-2025.jpg>

About the IMA
The Independent Medical Alliance (IMA) is a national association of independent doctors, researchers, and healthcare providers who support a restoration of honest, transparent, and patient-centered healthcare. Our members are active in shaping healthcare reform at HHS, including serving on ACIP and other important roles, and rallying public support for much needed policy reforms in Washington and across the 50 states. Subject: Tennessee Funeral Directors Association (TFDA) Acknowledges White Fibrous Clots are REAL and PREVALENT at Annual Convention!

To All Addressed FDA, CDC, and NIH Persons,

As you can see below, my 8 June 2025 appearance as Guest Speaker at the Tennessee Funeral Directors Association is starting to get media attention. The existence and prevalence of the WHITE FIBROUS CLOTS is becoming more widely known to the public.

AMERICAN OVERSIGHT

Now would a great time for your 3-letter organizations to hop onboard too to publicly acknowledge the existence and prevalence of these horrific and deadly clots, and to start earnestly looking at the close association of these unusual clots to both the Covid virus and the Covid mRNA vaccines.

My offer still stands. I volunteer my services for free to help you investigate these clots and conduct your own surveys with funeral directors, embalmers, vascular surgeons, cardiologists, endovascular specialists, and other Cath Lab workers.

BREAKING: Tennessee Funeral Directors Association Confirms White Fibrous Clots Are Real and Prevalent

Former USAF Major Tom Haviland Joins to Discuss the First State-Level Acknowledgment of White Fibrous Clots

NICOLAS HULSCHER, MPH

AMERICAN OVERSIGHT

JUN
16

READ IN APP

By **Nicolas Hulscher, MPH**

Former USAF Major Tom Haviland joins me to discuss his **presentation** at the 2025 Tennessee Funeral Directors Association (TFDA) Conventionâ€"marking the first time a U.S. state funeral directors association has publicly acknowledged that white fibrous clots are real, prevalent, and ongoing.

Invited by TFDA President Taylor Moore, Haviland conducted an in-person survey with 28 embalmers and funeral directors during the convention in Franklin, TN:

- **64%** reported seeing white fibrous clots in corpses during the **first half of 2025**
- The white clots appeared in an average of **17% of all corpses**
- **70%** reported signs of micro-clotting (â€œcoffee groundsâ€□ or â€œdirty bloodâ€□)
- **39%** of embalmers observed an increase in infant deaths, with an average **14% rise** over pre-2020 levels

These results were not only documented on paper but **confirmed on video**, as multiple embalmers raised their hands during Havilandâ€™s presentation to verify that they had personally observed the white fibrous clots. Many stated they had never seen such clots before the COVID-19 era.

This public acknowledgment demands immediate investigation into the potential link between the COVID-19 mRNA injections, SARS-CoV-2 infection, and the formation of these anomalous clots. It's time our public health agencies respond.

AMERICAN OVERSIGHT

You can find all of Tom Haviland and Laura Kasnerâ€™s work from the past three years on their Substack: **Clotastrophe**

Clotastrophe
Photos of the white fibrous clots that embalmers have been finding in the deceased
By Laura Kasner

According to **Dr. Kevin McCairn et alâ€™s intensive biochemical and microscopic analysis**, the white fibrous clots appear to be amyloidogenic fibrin aggregatesâ€”abnormal, protease-resistant protein structures likely formed through pathological remodeling of fibrin in the presence of spike protein. The clots exhibit dense, rubbery morphology, strong autofluorescence, beta-sheet-rich domains confirmed by Thioflavin T staining, and ultrastructural features consistent with amyloid fibrils under electron microscopy. Elemental analysis confirmed their organic, protein-based composition, and PCR detected human origin with preliminary markers suggestive of recombinant spike protein exposure.

Guest Post by Tom Haviland

TFDA Invited Me to Speak

The President of the Tennessee Funeral Directors Association, Mr. Taylor Moore, reached out to me in December 2024 while Laura and I were conducting our â€œ2024 Worldwide Embalmer Blood Clot Survey,â€ to invite me to speak at their TFDA Annua Convention on June 8th, 2025. I quickly said â€œyesâ€ to this golden opportunity to meet many funeral directors and embalmers in person, brief them on the results of our surveys over the last 3 years, and give them the latest information on our scientific teamâ€™s analysis of â€œhowâ€ the white fibrous clots are forming.

The TFDA Convention took place this past weekend at a large hotel and conference center in Franklin, TN just south of Nashville. On Saturday night, I, Laura, and Lauraâ€™s sister Leslie attended a reception where we met about 60 people, about half of whom are funeral directors and embalmers, while the other half were spouses, friends, and vendors.

AMERICAN OVERSIGHT

When I started talking about the white fibrous clots with one of the first embalmers that I met, he quickly pulled out his phone and showed me a long white fibrous clot that he had just removed from a corpse in May.

In fact, most of the funeral directors and embalmers at the reception seemed to be genuinely interested in talking about the clots. Several of them came up to me and said that even their wife would be coming to hear me speak on Sunday, including one wife who works at a Tennessee hospital. I got the distinct feeling that there would be plenty of people in the room on Sunday for my presentation.

On Sunday, the room was indeed jam-packed as I gave my 55-minute presentation. Just like lecturing embalmer, Mr. Wallace Hooker, did at a 2022 Ohio Embalmers Association conference, I asked the Tennessee embalmers, by a show of hands, to let the room know whether or not they had seen the white fibrous clots over the last few years. As you will see in this video clip (less than 1 min.) quite a few of the embalmers kept their hands raised, indicating that they have indeed seen these horrific and dangerous clots. This VIDEO EVIDENCE from actual funeral directors and embalmers is POSITIVE PROOF THAT THE WHITE FIBROUS CLOTS ARE NOT A HOAX!

Another Survey

While I was at the 2025 TFDA Convention, I also took the opportunity to run a survey with the Tennessee funeral directors and embalmers so that they could give us a â€œfirst lookâ€□ at what they are seeing in their embalming rooms during the first half of 2025.

I tallied the results of that paper survey on Sunday night, then reported those results to the TFDA membership on Monday morning at the Convention.

Here are the results:

Tennessee FDA Embalmer Blood Clot Survey...
194KB â'™ PDF file

AMERICAN OVERSIGHT

Download

As you can see in the survey results, about two-thirds of the embalmers are STILL seeing the white fibrous clots in the first half of 2025. And they are seeing these deadly clots in an average of 17% of their corpses. While the 17% represents a decrease from the 27% reported in our latest â€œ2024 Worldwide Embalmer Blood Clot Survey,â€ which is a trend in the right direction, this means that the Tennessee embalmers are STILL seeing the white fibrous clots in one out of every six corpses!

Similarly, 70% of the Tennessee embalmers continue to see the equally dangerous phenomenon known as micro-clotting (which the embalmers call â€œcoffee groundsâ€ or â€œdirty bloodâ€) in an average of 17% of their corpses as well. As we have previously discussed, micro-clotting occurs in very small blood vessels, and it can block the exchange of oxygen at the lungs, and then the carrying of that oxygen to all major organs of your body including the brain and the eyes.

Also of concern, 39% of the Tennessee embalmers saw an increase in â€œinfant deathsâ€ in the first half of 2025 when compared to the pre-pandemic years of 2019 and prior. The average amount of that increase was a disturbing 14%. Our question on age stratification also yielded a disturbing result. The Tennessee embalmers are still seeing a large number of 36 to 50 year-olds with clots winding up on their embalming tables in 2025 when compared to the years of 2019 and prior.

A Sincere Thank You

I want to thank TFDA President, Mr. Taylor Moore, for having the courage to invite me to speak to the Tennessee funeral directors and embalmers about this critically important blood clotting issue.

If more US state Funeral Director Associations (and vascular surgeons, cardiologists, and Cath Lab workers) would step forward as well to acknowledge this serious issue, then thereâ€™s a good chance that we might be able to mitigate the death and disability being caused by these horrific clots.

AMERICAN OVERSIGHT

And thereâ€™s also a good chance that it might lead to certain mRNA â€œvaccinesâ€ being taken off the market forever.

I would be remiss for not including a recent photo sent to me by embalmer, Richard Hirschman - *Laura Kasner*

â€œBe careful for nothing; but in every thing by prayer and supplication with thanksgiving let your requests be made known unto God.â€

To All Addressed FDA, CDC, and NIH Persons,

Your organizations need to start investigating this phenomenon and it's potential link to the Covid mRNA vaccines NOW!

AMERICAN OVERSIGHT

I was a Guest Speaker at the Tennessee Funeral Directors Association (TFDA) 2025 Annual Convention this past weekend in Franklin, TN. I was invited there to speak about the unusual "white fibrous clots" that embalmers have been finding in the veins and arteries of corpses over the last 5 years. My below Substack article captures the important details of what took place.

This is a BIG DEAL because it's the first time that a US state Funeral Director Association has officially acknowledged that both the "white fibrous clots" and "micro-clotting" are a serious issue, and as you will see, we now have VIDEO EVIDENCE of multiple embalmers at the convention raising their hands to acknowledge that they are indeed seeing these horrific clots.

I strongly urge the FDA and CDC to take immediate action to investigate the probable link between the Covid-19 mRNA vaccines and the formation of these very unusual clots that embalmers with 20 and 30 years of experience have never seen before until the years of Covid-19 and the Covid-19 vaccines. In fact, I think it would be wise to completely stop the Covid-19 vaccination program until it can be determined whether the Covid-19 vaccines are the culprit or not.

Please feel free to contact me anytime at (b)(6) @sbcglobal.net or phone (937)-702-9135.

As a concerned American citizen, I stand ready to assist.

Sincerely,

Thomas Haviland
USAF Major, Ret.

Subject: Tennessee Funeral Directors Association (TFDA) Acknowledges White Fibrous Clots are REAL and PREVALENT at Annual Convention!

To All Addressed FDA, CDC, and NIH Persons,

Your organizations need to start investigating this phenomenon and it's potential link to the Covid mRNA vaccines NOW!

AMERICAN OVERSIGHT

I was a Guest Speaker at the Tennessee Funeral Directors Association (TFDA) 2025 Annual Convention this past weekend in Franklin, TN. I was invited there to speak about the unusual "white fibrous clots" that embalmers have been finding in the veins and arteries of corpses over the last 5 years. My below Substack article captures the important details of what took place.

This is a BIG DEAL because it's the first time that a US state Funeral Director Association has officially acknowledged that both the "white fibrous clots" and "micro-clotting" are a serious issue, and as you will see, we now have VIDEO EVIDENCE of multiple embalmers at the convention raising their hands to acknowledge that they are indeed seeing these horrific clots.

I strongly urge the FDA and CDC to take immediate action to investigate the probable link between the Covid-19 mRNA vaccines and the formation of these very unusual clots that embalmers with 20 and 30 years of experience have never seen before until the years of Covid-19 and the Covid-19 vaccines. In fact, I think it would be wise to completely stop the Covid-19 vaccination program until it can be determined whether the Covid-19 vaccines are the culprit or not.

Please feel free to contact me anytime at (b)(6) @sbcglobal.net or phone (937)-702-9135.

As a concerned American citizen, I stand ready to assist.

Sincerely,

Thomas Haviland

Guest Post by Tom Haviland

TFDA Invited Me to Speak

The President of the Tennessee Funeral Directors Association, Mr. Taylor Moore, reached out to me in December 2024 while Laura and I were conducting our â€œ2024 Worldwide Embalmer Blood Clot Survey,â€ to invite me to speak at their TFDA Annua Convention on June 8th, 2025. I quickly said â€œyesâ€ to this golden opportunity to meet many funeral directors and embalmers in person, brief them on the results of our surveys over the last 3 years, and give them the latest information on our scientific teamâ€™s analysis of â€œhowâ€ the white fibrous clots are forming.

The TFDA Convention took place this past weekend at a large hotel and conference center in Franklin, TN just south of Nashville. On Saturday night, I, Laura, and Lauraâ€™s sister Leslie attended a reception where we met about 60 people, about half of whom are funeral directors and embalmers, while the other half were spouses, friends, and vendors.

AMERICAN OVERSIGHT

When I started talking about the white fibrous clots with one of the first embalmers that I met, he quickly pulled out his phone and showed me a long white fibrous clot that he had just removed from a corpse in May.

In fact, most of the funeral directors and embalmers at the reception seemed to be genuinely interested in talking about the clots. Several of them came up to me and said that even their wife would be coming to hear me speak on Sunday, including one wife who works at a Tennessee hospital. I got the distinct feeling that there would be plenty of people in the room on Sunday for my presentation.

On Sunday, the room was indeed jam-packed as I gave my 55-minute presentation. Just like lecturing embalmer, Mr. Wallace Hooker, did at a 2022 Ohio Embalmers Association conference, I asked the Tennessee embalmers, by a show of hands, to let the room know whether or not they had seen the white fibrous clots over the last few years. As you will see in this video clip (less than 1 min.) quite a few of the embalmers kept their hands raised, indicating that they have indeed seen these horrific and dangerous clots. This VIDEO EVIDENCE from actual funeral directors and embalmers is POSITIVE PROOF THAT THE WHITE FIBROUS CLOTS ARE NOT A HOAX!

Another Survey

While I was at the 2025 TFDA Convention, I also took the opportunity to run a survey with the Tennessee funeral directors and embalmers so that they could give us a â€œfirst lookâ€□ at what they are seeing in their embalming rooms during the first half of 2025.

I tallied the results of that paper survey on Sunday night, then reported those results to the TFDA membership on Monday morning at the Convention.

Here are the results:

Tennessee FDA Embalmer Blood Clot Survey...
194KB â'™ PDF file

AMERICAN OVERSIGHT

Download

As you can see in the survey results, about two-thirds of the embalmers are STILL seeing the white fibrous clots in the first half of 2025. And they are seeing these deadly clots in an average of 17% of their corpses. While the 17% represents a decrease from the 27% reported in our latest â€œ2024 Worldwide Embalmer Blood Clot Survey,â€ which is a trend in the right direction, this means that the Tennessee embalmers are STILL seeing the white fibrous clots in one out of every six corpses!

Similarly, 70% of the Tennessee embalmers continue to see the equally dangerous phenomenon known as micro-clotting (which the embalmers call â€œcoffee groundsâ€ or â€œdirty bloodâ€) in an average of 17% of their corpses as well. As we have previously discussed, micro-clotting occurs in very small blood vessels, and it can block the exchange of oxygen at the lungs, and then the carrying of that oxygen to all major organs of your body including the brain and the eyes.

Also of concern, 39% of the Tennessee embalmers saw an increase in â€œinfant deathsâ€ in the first half of 2025 when compared to the pre-pandemic years of 2019 and prior. The average amount of that increase was a disturbing 14%. Our question on age stratification also yielded a disturbing result. The Tennessee embalmers are still seeing a large number of 36 to 50 year-olds with clots winding up on their embalming tables in 2025 when compared to the years of 2019 and prior.

A Sincere Thank You

I want to thank TFDA President, Mr. Taylor Moore, for having the courage to invite me to speak to the Tennessee funeral directors and embalmers about this critically important blood clotting issue.

If more US state Funeral Director Associations (and vascular surgeons, cardiologists, and Cath Lab workers) would step forward as well to acknowledge this serious issue, then thereâ€™s a good chance that we might be able to mitigate the death and disability being caused by these horrific clots.

AMERICAN OVERSIGHT

And thereâ€™s also a good chance that it might lead to certain mRNA â€œvaccinesâ€ being taken off the market forever.

> I would be remiss for not including a recent photo sent to me by embalmer, Richard Hirschman - *Laura Kasner*

â€œBe careful for nothing; but in every thing by prayer and supplication with thanksgiving let your requests be made known unto God.â€

Dear Emily,

We are pleased to invite you to the **Independent Medical Alliance Holiday Reception** in Washington, DC on Thursday, December 4th. This gathering brings together congressional offices, executive-branch officials, policy leaders, healthcare organizations, and members of the broader public-policy community to celebrate the season!

We would be delighted to have you join us. Please RSVP to Lynne@IMAHealth.org.

IMA Holiday Reception
Thursday, December 4, 6:00 PM
Location: Conservative Partnership Institute
300 Independence Ave, SE, Washington DC

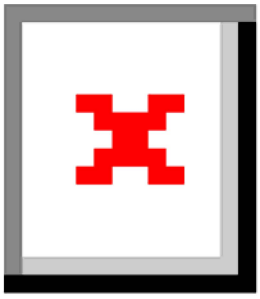

Light refreshments will be served

About the IMA
The Independent Medical Alliance (IMA) is a national association of independent doctors, researchers, and healthcare providers who support a restoration of honest, transparent, and patient-centered healthcare. Our members are active in shaping healthcare reform at HHS, including serving on ACIP and other important roles, and rallying public support for much needed policy reforms in Washington and across the 50 states. Learn more at IMAHealth.org.

Dear Dr. Oz

Thank you so much for meeting with the Credibl team and me earlier this week. Your input is extremely valuable to us as Credibl and Children's Health Defense move forward specifically with Louisiana Medicaid data, with other states to follow, to address the chronic disease epidemic in US children.

On another topic, Children's Health Defense is hosting a dinner in DC next Tuesday, July 15 at 6:00 p.m. ET, at Butterworths, and we would be honored if you and a guest would be able to attend. This event is an appreciation dinner for the participants in a Senate PSI Subcommittee Hearing "Voices of the Vaccine Injured" which will be held earlier that day (Hart Senate Office Building, Rm. 216 at 3:00 p.m. ET). Sen. Ron Johnson is presiding over the hearing and will be attending our appreciation dinner as well as the witnesses testifying in the hearing.

I've attached the dinner invitation to this email and we'd love to have you join us. We're hoping that Secretary Kennedy and Dr. Bhattacharya will be joining us as well.

All my best,

Brian

AMERICAN OVERSIGHT

About the IMA
The Independent Medical Alliance (IMA) is a national association of independent doctors, researchers, and healthcare providers who support a restoration of honest, transparent, and patient-centered healthcare. Our members are active in shaping healthcare reform at HHS, including serving on ACIP and

other important roles, and rallying public support for much needed policy reforms in Washington and across the 50 states. Learn more at IMAHealth.org <https://click.sleadtrack.com/link?messageId=%3C0b5fbe87-5675-sl78-4bd8-836d-5b99d46a42d8%40imamaha.com%3E&url=http%3A%2F%2Fwww.IMAHealth.org> .
